| PUAFER011 Manage facility emergency response teams.....                                                            | 531 |
| Assessment Requirements for PUAFER011 Manage facility emergency response teams                                     | 535 |
| PUAFIR001 Coordinate state aerial operations.....                                                                  | 537 |
| Assessment Requirements for PUAFIR001 Coordinate state aerial operations .....                                     | 541 |
| PUAFIR002 Manage aviation resources for an incident.....                                                           | 545 |
| Assessment Requirements for PUAFIR002 Manage aviation resources for an incident ..                                 | 550 |
| PUAFIR003 Manage aviation support operations at air base .....                                                     | 554 |
| Assessment Requirements for PUAFIR003 Manage aviation support operations at air base                               | 558 |
| PUAFIR004 Manage complex aerial operations for an incident.....                                                    | 562 |
| Assessment Requirements for PUAFIR004 Manage complex aerial operations for an incident.....                        | 568 |
| PUAFIR005 Observe fire from an aircraft.....                                                                       | 572 |
| Assessment Requirements for PUAFIR005 Observe fire from an aircraft .....                                          | 576 |
| PUAFIR006 Observe non-fire incident from an aircraft .....                                                         | 579 |
| Assessment Requirements for PUAFIR006 Observe non-fire incident from an aircraft..                                 | 583 |
| PUAFIR007 Operate aerial drip torch .....                                                                          | 586 |
| Assessment Requirements for PUAFIR007 Operate aerial drip torch .....                                              | 590 |
| PUAFIR008 Operate aerial ignition equipment in an aircraft.....                                                    | 592 |
| Assessment Requirements for PUAFIR008 Operate aerial ignition equipment in an aircraft .....                       | 596 |
| PUAFIR009 Operate airborne intelligence system .....                                                               | 599 |
| Assessment Requirements for PUAFIR009 Operate airborne intelligence system.....                                    | 602 |
| PUAFIR010 Operate small equipment to prepare and load product into aircraft.....                                   | 604 |
| Assessment Requirements for PUAFIR010 Operate small equipment to prepare and load product into aircraft.....       | 607 |
| PUAFIR011 Operate state air desk .....                                                                             | 609 |
| Assessment Requirements for PUAFIR011 Operate state air desk.....                                                  | 612 |
| PUAFIR012 Supervise aerial firefighting operations .....                                                           | 614 |
| Assessment Requirements for PUAFIR012 Supervise aerial firefighting operations.....                                | 619 |
| PUAFIR013 Supervise incendiary operations during aerial ignition.....                                              | 622 |
| Assessment Requirements for PUAFIR013 Supervise incendiary operations during aerial ignition .....                 | 627 |
| PUAFIR014 Supervise preparation and loading of product into aircraft .....                                         | 630 |
| Assessment Requirements for PUAFIR014 Supervise preparation and loading of product into aircraft.....              | 634 |
| PUAFIR015 Undertake helicopter winch operations .....                                                              | 637 |
| Assessment Requirements for PUAFIR015 Undertake helicopter winch operations.....                                   | 641 |
| PUAFIR016 Undertake hover-exit operations from helicopter.....                                                     | 643 |
| Assessment Requirements for PUAFIR016 Undertake hover-exit operations from helicopter .....                        | 647 |
| PUAFIR017 Work safely around aircraft .....                                                                        | 650 |
| Assessment Requirements for PUAFIR017 Work safely around aircraft.....                                             | 653 |
| PUAFIR018 Navigate from an aircraft.....                                                                           | 655 |
| Assessment Requirements for PUAFIR018 Navigate from an aircraft .....                                              | 658 |
| PUAFIR201 Assist with prescribed burning .....                                                                     | 661 |
| Assessment Requirements for PUAFIR201 Assist with prescribed burning.....                                          | 665 |
| PUAFIR202 Use Class A foam in wildfire operations and non-structural applications ...                              | 667 |
| Assessment Requirements for PUAFIR202 Use Class A foam in wildfire operations and non-structural applications..... | 672 |

|                                                                                                              |     |

| PUAFIR204 Respond to wildfire .....                                                                          | 686 |
| Assessment Requirements for PUA FIR204 Respond to wildfire.....                                              | 690 |
| PUAFIR205 Respond to aviation incident (specialist).....                                                     | 693 |
| Assessment Requirements for PUA FIR205 Respond to aviation incident (specialist) .....                       | 696 |
| PUAFIR206 Check installed fire safety systems .....                                                          | 699 |
| Assessment Requirements for PUA FIR206 Check installed fire safety systems .....                             | 701 |
| PUAFIR207 Operate breathing apparatus open circuit .....                                                     | 703 |
| Assessment Requirements for PUA FIR207 Operate breathing apparatus open circuit .....                        | 707 |
| PUAFIR208 Participate in community safety activities .....                                                   | 709 |
| Assessment Requirements for PUA FIR208 Participate in community safety activities.....                       | 712 |
| PUAFIR210 Prevent injury.....                                                                                | 714 |
| Assessment Requirements for PUA FIR210 Prevent injury .....                                                  | 717 |
| PUAFIR212 Rappel from helicopter .....                                                                       | 719 |
| Assessment Requirements for PUA FIR212 Rappel from helicopter .....                                          | 723 |
| PUAFIR220 Respond to isolated structure fire.....                                                            | 725 |
| Assessment Requirements for PUA FIR220 Respond to isolated structure fire .....                              | 729 |
| PUAFIR301 Undertake community safety activities .....                                                        | 731 |
| Assessment Requirements for PUA FIR301 Undertake community safety activities.....                            | 734 |
| PUAFIR302 Suppress urban fire.....                                                                           | 736 |
| Assessment Requirements for PUA FIR302 Suppress urban fire .....                                             | 742 |
| PUAFIR303 Suppress wildfire.....                                                                             | 745 |
| Assessment Requirements for PUA FIR303 Suppress wildfire .....                                               | 749 |
| PUAFIR304 Respond to marine emergencies .....                                                                | 752 |
| Assessment Requirements for PUA FIR304 Respond to marine emergencies .....                                   | 757 |
| PUAFIR305 Respond to aviation incidents (general) .....                                                      | 759 |
| Assessment Requirements for PUA FIR305 Respond to aviation incidents (general).....                          | 762 |
| PUAFIR306 Identify, detect and monitor hazardous materials at an incident.....                               | 764 |
| Assessment Requirements for PUA FIR306 Identify, detect and monitor hazardous materials at an incident ..... | 769 |
| PUAFIR307 Operate aerial appliance .....                                                                     | 772 |
| Assessment Requirements for PUA FIR307 Operate aerial appliance .....                                        | 775 |
| PUAFIR308 Employ personal protection at a hazardous materials incident .....                                 | 777 |
| Assessment Requirements for PUA FIR308 Employ personal protection at a hazardous materials incident.....     | 781 |
| PUAFIR309 Operate pumps .....                                                                                | 783 |
| Assessment Requirements for PUA FIR309 Operate pumps.....                                                    | 787 |
| PUAFIR310 Operate specialist appliance.....                                                                  | 789 |
| Assessment Requirements for PUA FIR310 Operate specialist appliance .....                                    | 792 |
| PUAFIR311 Dispatch rappel personnel and equipment from a helicopter.....                                     | 794 |
| Assessment Requirements for PUA FIR311 Dispatch rappel personnel and equipment from a helicopter .....       | 799 |
| PUAFIR314 Utilise installed fire safety systems .....                                                        | 802 |
| Assessment Requirements for PUA FIR314 Utilise installed fire safety systems .....                           | 805 |
| PUAFIR323 Take local weather observations.....                                                               | 807 |
| Assessment Requirements for PUA FIR323 Take local weather observations .....                                 | 810 |
| PUAFIR324 Render hazardous materials incidents safe .....                                                    | 812 |
| Assessment Requirements for PUA FIR324 Render hazardous materials incidents safe .....                       | 818 |
| PUAFIR325 Operate heavy plant in fire control operations .....                                               | 821 |
| Assessment Requirements for PUA FIR325 Operate heavy plant in fire control operations.....                   | 824 |
| PUAFIR326 Push trees with machines in forest fire control operations .....                                   | 827 |

|                                                                                                                      |     |
|----------------------------------------------------------------------------------------------------------------------|-----|
| Assessment Requirements for PUAFIR326 Push trees with machines in forest fire control operations .....               | 831 |
| PUAFIR401 Obtain incident intelligence.....                                                                          | 834 |
| Assessment Requirements for PUAFIR401 Obtain incident intelligence .....                                             | 837 |
| PUAFIR402 Conduct simple prescribed burns.....                                                                       | 839 |
| Assessment Requirements for PUAFIR402 Conduct simple prescribed burns .....                                          | 844 |
| PUAFIR403 Assess building plans .....                                                                                | 847 |
| Assessment Requirements for PUAFIR403 Assess building plans.....                                                     | 850 |
| PUAFIR404 Inspect dangerous goods facilities .....                                                                   | 852 |
| Assessment Requirements for PUAFIR404 Inspect dangerous goods facilities .....                                       | 857 |
| PUAFIR405 Collect, analyse and provide regulatory information .....                                                  | 860 |
| Assessment Requirements for PUAFIR405 Collect, analyse and provide regulatory information.....                       | 863 |
| PUAFIR406 Develop simple prescribed burn plans .....                                                                 | 865 |
| Assessment Requirements for PUAFIR406 Develop simple prescribed burn plans.....                                      | 870 |
| PUAFIR407 Interpret and analyse fire weather information.....                                                        | 873 |
| Assessment Requirements for PUAFIR407 Interpret and analyse fire weather information.....                            | 876 |
| PUAFIR410 Provide safety advice at a rural/land management incident .....                                            | 878 |
| Assessment Requirements for PUAFIR410 Provide safety advice at a rural/land management incident.....                 | 882 |
| PUAFIR411 Provide safety advice at an urban incident.....                                                            | 884 |
| Assessment Requirements for PUAFIR411 Provide safety advice at an urban incident .....                               | 889 |
| PUAFIR417 Supervise machinery use in wildfire operations.....                                                        | 892 |
| Assessment Requirements for PUAFIR417 Supervise machinery use in wildfire operations.....                            | 896 |
| PUAFIR418 Supervise specialist response to aviation accidents and incidents .....                                    | 899 |
| Assessment Requirements for PUAFIR418 Supervise specialist response to aviation accidents and incidents.....         | 902 |
| PUAFIR501 Conduct fire investigation and analysis activities .....                                                   | 905 |
| Assessment Requirements for PUAFIR501 Conduct fire investigation and analysis activities .....                       | 909 |
| PUAFIR502 Develop incident control strategies.....                                                                   | 911 |
| Assessment Requirements for PUAFIR502 Develop incident control strategies .....                                      | 914 |
| PUAFIR503 Coordinate human resource management activities.....                                                       | 917 |
| Assessment Requirements for PUAFIR503 Coordinate human resource management activities .....                          | 921 |
| PUAFIR504 Assist with formulation and implementation of plans and policies .....                                     | 923 |
| Assessment Requirements for PUAFIR504 Assist with formulation and implementation of plans and policies .....         | 926 |
| PUAFIR505 Administer cost centre's financial resources .....                                                         | 928 |
| Assessment Requirements for PUAFIR505 Administer cost centre's financial resources .....                             | 931 |
| PUAFIR506 Conduct complex prescribed burns.....                                                                      | 933 |
| Assessment Requirements for PUAFIR506 Conduct complex prescribed burns .....                                         | 940 |
| PUAFIR507 Inspect building fire safety systems.....                                                                  | 943 |
| Assessment Requirements for PUAFIR507 Inspect building fire safety systems .....                                     | 947 |
| PUAFIR508 Develop and analyse the behaviour and suppression options for a wildfire.....                              | 949 |
| Assessment Requirements for PUAFIR508 Develop and analyse the behaviour and suppression options for a wildfire ..... | 952 |
| PUAFIR509 Implement prevention strategies .....                                                                      | 955 |
| Assessment Requirements for PUAFIR509 Implement prevention strategies .....                                          | 958 |
| PUAFIR510 Inspect for legislative compliance .....                                                                   | 960 |
| Assessment Requirements for PUAFIR510 Inspect for legislative compliance.....                                        | 963 |
| PUAFIR515 Develop complex prescribed burn plans .....                                                                | 965 |
| Assessment Requirements for PUAFIR515 Develop complex prescribed burn plans.....                                     | 971 |

|                                                                                                                          |      |
|--------------------------------------------------------------------------------------------------------------------------|------|
| PUAFIR516 Assess and evaluate a facility's fire and incident safety management systems                                   | 974  |
| Assessment Requirements for PUAFIR516 Assess and evaluate a facility's fire and incident safety management systems.....  | 979  |
| PUAFIR517 Conduct an inspection of a performance based design building .....                                             | 981  |
| Assessment Requirements for PUAFIR517 Conduct an inspection of a performance based design building .....                 | 984  |
| PUAFIR518 Conduct and record a Bushfire Attack Level (BAL) assessment .....                                              | 986  |
| Assessment Requirements for PUAFIR518 Conduct and record a Bushfire Attack Level (BAL) assessment.....                   | 990  |
| PUAFIR601 Develop and administer organisational policies, procedures and practices .....                                 | 993  |
| Assessment Requirements for PUAFIR601 Develop and administer organisational policies, procedures and practices.....      | 996  |
| PUAFIR602 Manage the implementation of community safety strategies .....                                                 | 998  |
| Assessment Requirements for PUAFIR602 Manage the implementation of community safety strategies .....                     | 1001 |
| PUAFIR603 Determine origin and cause of wildfire .....                                                                   | 1003 |
| Assessment Requirements for PUAFIR603 Determine origin and cause of wildfire.....                                        | 1008 |
| PUAFIR604 Determine origin and cause of structure fire.....                                                              | 1011 |
| Assessment Requirements for PUAFIR604 Determine origin and cause of structure fire                                       | 1015 |
| PUAFIR605 Determine origin and cause of mobile property fire .....                                                       | 1018 |
| Assessment Requirements for PUAFIR605 Determine origin and cause of mobile property fire .....                           | 1022 |
| PUAFIR606 Apply principles of combustion and fire dynamics to fire scene investigation                                   | 1025 |
| Assessment Requirements for PUAFIR606 Apply principles of combustion and fire dynamics to fire scene investigation ..... | 1028 |
| PUAFIR607 Apply electrical/electronic knowledge to fire investigations .....                                             | 1031 |
| Assessment Requirements for PUAFIR607 Apply electrical/electronic knowledge to fire investigations .....                 | 1035 |
| PUAFIR608 Investigate fatal fires.....                                                                                   | 1038 |
| Assessment Requirements for PUAFIR608 Investigate fatal fires .....                                                      | 1041 |
| PUAFIR609 Collect, record and coordinate the analysis of physical evidence .....                                         | 1043 |
| Assessment Requirements for PUAFIR609 Collect, record and coordinate the analysis of physical evidence.....              | 1047 |
| PUAFIR610 Manage imaging and electronic data.....                                                                        | 1049 |
| Assessment Requirements for PUAFIR610 Manage imaging and electronic data .....                                           | 1052 |
| PUAFIR611 Process and analyse fire scene data and laboratory results .....                                               | 1054 |
| Assessment Requirements for PUAFIR611 Process and analyse fire scene data and laboratory results.....                    | 1057 |
| PUAFIR612 Undertake post incident analysis .....                                                                         | 1059 |
| Assessment Requirements for PUAFIR612 Undertake post incident analysis.....                                              | 1063 |
| PUALAW001 Protect and preserve incident scene.....                                                                       | 1065 |

# PUA20119 Certificate II in Public Safety (Aquatic Rescue)

## Modification History

**Release 1.** This is the first release of this qualification in the PUA - Public Safety Training Package.

## Qualification Description

The PUA20119 Certificate II in Public Safety (Aquatic Rescue) is designed for introductory level participants in aquatic rescue activities. This will include rescuing, resuscitating and performing basic first aid in aquatic incidents that may involve oceans, rivers, swimming pools and vessels operating in coastal areas.

The role of an aquatic rescuer is to recognise and rescue a person experiencing difficulty in the water, to identify and use different types of rescue equipment and to communicate with community members and other agencies in the event of an aquatic emergency. This may include undertaking basic patrol duties and developing surf awareness to be able to participate in lifesaving operations.

This qualification includes the units of competency required by aquatic rescuers to perform a range of activities such as responding to rescue incidents and conducting patrols. It typically involves working as a team member, under guidance, in aquatic rescue operations.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

A total of 8 units of competency comprising

- **6 core units** listed below; plus
- **2 elective units** from the general elective units listed

Choose a minimum of 1 elective unit from the elective list below.

Select the remaining 1 elective unit from the elective unit list below or elsewhere in this training package or another endorsed training package or accredited course.

All elective units selected from outside this qualification must be from an equivalent qualification level or higher.

Elective units selected from outside the qualification must not duplicate content already covered by units in this qualification.

Where imported units are selected, care must be taken to ensure that all prerequisite units

specified are complied with.

Prerequisites attached to any of the units must be obtained and are additional to the number of units required for this qualification.

Where a prerequisite is attached to a unit it is identified by the symbol  $\perp$ .

By default, all prerequisites listed with  $\perp$  become part of the core and elective units of this qualification.

### Core units

|           |                                                  |
|-----------|--------------------------------------------------|
| HLTAID002 | Provide basic emergency life support             |
| PUACOM001 | Communicate in the workplace                     |
| PUASAR012 | Apply surf awareness and self-rescue skills      |
| PUASAR013 | Participate in an aquatic rescue operation       |
| PUATEA001 | Work in a team                                   |
| PUATEA004 | Work effectively in a public safety organisation |

### General elective units

|           |                                                               |
|-----------|---------------------------------------------------------------|
| MARF029   | Meet work, health and safety requirements                     |
| MARF006   | Observe personal safety and social responsibility             |
| MARF008   | Prevent and fight fires on board a vessel                     |
| MARK008   | Manoeuvre a vessel up to 24 metres within near coastal waters |
| PUACOM002 | Provide services to clients                                   |
| PUAEQU001 | Prepare, maintain and test response equipment                 |
| PUAOPE009 | Navigate in an aquatic environment                            |
| PUAOPE013 | Operate communications systems and equipment                  |
| PUASES012 | Work as a team member in an emergency operations centre       |
| PUAVEH001 | Drive vehicles under operational conditions                   |

|            |                                                                 |
|------------|-----------------------------------------------------------------|
| PUAWHS001  | Follow defined work, health and safety policies and procedures  |
| SISCAQU002 | Perform basic water rescues                                     |
| SISCAQU006 | Supervise clients in aquatic locations                          |
| SISCAQU012 | Assist participants with a disability during aquatic activities |

## Qualification Mapping Information

This qualification replaces but is not equivalent to PUA21012 Certificate II in Public Safety (Aquatic Rescue)

## PUA20219 Certificate II in Public Safety (SES)

### Modification History

**Release 1.** This is the first release of this qualification in the PUA - Public Safety Training Package.

### Qualification Description

The PUA20219 Certificate II in Public Safety (SES) is designed for introductory level community, volunteer and emergency service organisational personnel to develop the knowledge and skills required to assist in emergency response situations.

State Emergency Services (SES) assist with emergency responses to floods, storms, earthquakes and tsunamis. They also assist in road accidents, search and rescue operations and often play a support role during major bushfire responses. The SES also assists in the development and implementation of local emergency management plans and the provision of community education programs.

This qualification includes the units of competency required by SES personnel to perform a range of varied activities including responding to disasters and assisting in search and rescue operations. It typically involves working as a team member, under direction, in responding to incidents, selecting equipment and applying contingency measures.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

### Entry Requirements

There are no entry requirements for this qualification.

### Packaging Rules

A total of 10 units of competency comprising

- **6 core units** listed below; plus
- **4 elective units** from the general elective units listed

Choose a minimum of 2 elective units from the elective unit list below

Select the remaining 2 units from either the elective list below or elsewhere within this training package or another endorsed training package or accredited course.

All elective units selected from outside this qualification must be from an equivalent qualification level or higher.

Elective units selected must not duplicate content already covered by other units in this qualification.

Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with.

Prerequisites attached to any of the units must be undertaken and are additional to the number of units required for this qualification.

Where a prerequisite is attached to a unit it is identified by this symbol ⊏.

By default, all prerequisites listed with ⊏ become part of the core and elective units of this qualification.

### Core units

|           |                                                                |
|-----------|----------------------------------------------------------------|
| PUACOM001 | Communicate in the workplace                                   |
| PUACOM002 | Provide services to clients                                    |
| PUAWHS001 | Follow defined work, health and safety policies and procedures |
| PUATEA001 | Work in a team                                                 |
| PUATEA004 | Work effectively in a public safety organisation               |
| PUAOPE013 | Operate communications systems and equipment                   |

# PUA20619 Certificate II in Public Safety (Firefighting and Emergency Operations)

## Modification History

**Release 2.0** This is the second release of this qualification in the PUA - Public Safety Training Package.

Editorial adjustments and electives updated.

**Release 1.0** This is the first release of this qualification in the PUA - Public Safety Training Package.

## Qualification Description

The PUA20619 Certificate II in Public Safety (Firefighting and Emergency Operations) is designed for introductory level firefighting and emergency response professionals who respond to disasters and/or incidents that endanger life, property and the environment, as a member of a firefighting team.

The role of a firefighter at this level is to suppress and extinguish fires, undertake rescue, respond to hazardous materials incidents, to protect lives and to prevent the destruction of property and the environment. To prevent fires from starting and to improve community safety, a firefighter's duties may include participating in community education programs about fire and community safety and contributing to fire inspections of locations to verify adherence to local fire regulations.

This qualification includes the units of competency required by firefighters to respond to urban fire incidents and to perform a range of other related activities. At this level, firefighters generally work under supervision and have limited discretion in selecting equipment, and determining tactics

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

A total of 11 units of competency comprising

- **8 core units** listed below; plus
- **3 elective units** from the elective units listed

Choose a minimum of 1 elective unit from the elective unit list below.

Choose the remaining 2 elective units from the elective unit lists below or elsewhere within this training package or another endorsed training package or accredited course.

All elective units selected from outside this qualification must contribute to the vocational outcome of the qualification. Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with. Prerequisites attached to any of the units must be obtained and are additional to the number of units required for this qualification.

Where a prerequisite is attached to a unit it is identified by the symbol ⊏.

**Note:**

Refer to the PUA Training Package Companion Volume Implementation Guide for information on fire prerequisites.

# PUA30319 Certificate III in Public Safety (Aquatic Search and Rescue)

## Modification History

**Release 1.** This is the first release of this qualification in the PUA – Public Safety Training Package.

## Qualification Description

The PUA30319 Certificate III in Public Safety (Aquatic Search and Rescue) is designed for participants performing aquatic search and rescue operations. Aquatic search and rescue personnel can participate in the search and rescue for missing persons either in the water, or on nearby land.

The role of an aquatic search and rescue team member is to prepare for search and rescue operations, recognise when a rescue response is required, perform complex patient rescues including the search and rescue of a missing person and demonstrate recovery and stand down processes. This may include undertaking patrol duties and surf awareness to be able to participate in lifesaving operations.

This qualification includes the units of competency required by aquatic search and rescue personnel to perform a range of activities such as responding to search and rescue incidents and undertaking recovery operations. It typically involves working as a team member, under guidance, in aquatic search and rescue operations.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

A total of 11 units of competency comprising

- **6 core units** listed below; plus
- **5 elective units** from the general elective units listed

Choose a minimum of 3 elective units from the list below.

Choose the remaining 2 elective units from either the elective unit lists below or elsewhere within this training package or another endorsed training package or accredited course.

All elective units selected from outside this qualification must be from an equivalent qualification level or higher.

Elective units selected from outside the qualification must not duplicate content already covered by units in this qualification.

Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with.

Prerequisites attached to any of the units must be obtained and are additional to the number of units required for this qualification.

Where a prerequisite is attached to a unit it is identified by the symbol ⊥ .

By default, all prerequisites listed with ⊥ become part of the core and elective units of this qualification.

### Core units

|           |                                                  |
|-----------|--------------------------------------------------|
| HLTAID003 | Provide first aid                                |
| PUACOM001 | Communicate in the workplace                     |
| PUAOPE013 | Operate communications systems and equipment     |
| PUASAR011 | Search as a member of an aquatic search team     |
| PUATEA004 | Work effectively in a public safety organisation |
| PUAWHS002 | Maintain safety at an incident scene             |

### General elective units

|           |                                                                                     |

## PUA30420 Certificate III in Public Safety (SES Rescue)

### Modification History

**Release 2.0** This is the second release of this qualification in the PUA – Public Safety Training Package.

Electives updated.

**Release 1.0** This is the first release of this qualification in the PUA – Public Safety Training Package.

### Qualification Description

The PUA30420 Certificate III in Public Safety (SES Rescue) is designed for experienced community, volunteer and emergency service organisational personnel to develop the knowledge and skills required to assist in emergency response rescue situations.

State Emergency Services (SES) assist with emergency responses to floods, storms, earthquakes and tsunamis. They also assist in road accidents, search and rescue operations and often play a support role during major bushfire responses. The SES also assists in the development and implementation of local emergency management plans and the provision of community education programs.

This qualification includes the units of competency required by SES personnel to perform a range of activities including participating in the application of rescue techniques during search and rescue operations, responding to disasters, assisting in search and rescue operations, identifying and mitigating hazards, maintaining communication, selecting and using equipment and responding to incidents with rescue objectives. It typically involves working as a team member, under direction, in responding to incidents.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

### Entry Requirements

There are no entry requirements for this qualification.

### Packaging Rules

A total of 11 units of competency comprising

- **4 core units** listed below; plus
- **7 elective units** from the general elective units listed

Choose a minimum of 5 elective units from the general and technical elective unit lists, at least 1 unit must be from the technical units listed.

Select the remaining 2 elective units from the lists below or elsewhere within this training package or another endorsed training package or accredited course.

All elective units selected from outside this qualification must contribute to the vocational outcome of the qualification. Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with. Prerequisites attached to any of the units must be undertaken and are additional to the number of units required for this qualification.

Where a prerequisite is attached to a unit it is identified by this symbol ⊏.

**Note:**

Refer to the PUA Training Package Companion Volume Implementation Guide for information on fire prerequisites.

# PUA30619 Certificate III in Public Safety (Firefighting and Emergency Operations)

## Modification History

**Release 2.0** This is the second release of this qualification in the PUA – Public Safety Training Package.

Editorial adjustments and upgrade to electives.

**Release 1.0** This is the first release of this qualification in the PUA - Public Safety Training Package.

## Qualification Description

The PUA30619 Certificate III in Public Safety (Firefighting and Emergency Operations) is designed for experienced firefighting and emergency response professionals who respond to disasters and/or incidents that endanger life, property and the environment.

The role of a firefighter is to suppress and extinguish fires, undertake rescues, respond to hazardous materials incidents, protect lives and to prevent the destruction of property and the environment. At this level, firefighters are expected to make informed, timely and confident decisions working as a member of a firefighting team under limited supervision.

To prevent fires from starting and to improve community safety a firefighter's duties may include conducting community education programs about fire safety and undertaking fire inspections of locations to verify adherence to local fire regulations.

This qualification includes the units of competency required by firefighters to suppress urban fires and respond to hazardous materials and to perform a range of other related activities. It typically involves some discretion in selecting equipment and determining tactics.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

A total of 11 units of competency comprising

- **7 core units** listed below; plus

- **4 elective units** from the general elective units listed

Choose a minimum of 2 elective units the elective list below.

Choose the remaining 2 elective units from the elective unit list below or elsewhere within this training package or another endorsed training package, or accredited course.

All elective units selected from outside this qualification must contribute to the vocational outcome of the qualification. Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with. Prerequisites attached to any of the units must be obtained and are additional to the number of units required for this qualification.

Where a prerequisite is attached to a unit it is identified by the symbol ⊏ .

**Note:**

Refer to the PUA Training Package Companion Volume Implementation Guide for information on fire prerequisites.

# PUA30719 Certificate III in Public Safety (Firefighting Operations)

## Modification History

**Release 2.0** This is the second release of this qualification in the PUA – Public Safety Training Package.

Editorial adjustments and electives updated.

**Release 1.0** This is the first release of this qualification in the PUA – Public Safety Training Package.

## Qualification Description

The PUA30719 Certificate III in Public Safety (Firefighting Operations) is designed for experienced firefighting professionals who respond to disasters or incidents endangering life, property and the environment. This includes the use of firefighting assets and making informed, timely and confident decisions at an incident as a member of a firefighting team.

The role of a firefighter is to suppress and extinguish fires, to protect lives and to prevent the destruction of property and the environment. To prevent fires from starting, a firefighter's duties may include conducting community education programs about fire safety and undertaking fire inspections of locations to verify adherence to local fire regulations.

This qualification includes the units of competency required by firefighters to suppress wildfires or urban fires and to perform a range of other related activities. It typically involves some discretion in selecting equipment, services and contingency measures.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

A total of 12 units of competency comprising

- **3 core units** listed below; plus
- **9 elective units** from the elective units listed

Choose a minimum of 7 elective units from the elective unit lists below.

A minimum of 1 elective unit must be from Group A that relates to either urban fire or fire and land management agencies

Only 1 elective unit may be chosen from Group B

Only 2 elective units may be chosen from Group C

Choose the 2 remaining elective units from the elective unit lists below or elsewhere in this training package or another endorsed training package or accredited course.

All elective units selected from outside this qualification must contribute to the vocational outcome of the qualification. Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with. Prerequisites attached to any of the units must be obtained and are additional to the number of units required for this qualification.

Where a prerequisite is attached to a unit it is identified by the symbol ⊏.

# PUA30819 Certificate III in Public Safety (Emergency Communications Centre Operations)

## Modification History

**Release 2.0** This is the second release of this qualification in the PUA – Public Safety Training Package.

Minor upgrade to Group A: Work, Health and Safety electives.

**Release 1.0** This is the first release of this qualification in the PUA – Public Safety Training Package.

## Qualification Description

The PUA30819 Certificate III in Public Safety (Emergency Communications Centre Operations) provides individuals with general and specialist skills to operate effectively in a range of emergency communication centres roles.

The role of an operator in an emergency communications centre is to receive incident information, enter details into the computer aided dispatch system, and alert the most appropriate resources to respond to the incident. This may include the dissemination of information to members of the public and emergency services agencies.

The qualification includes the units of competency required by emergency communication centre operators to perform a range of activities such as communicating with callers and providing support to emergency service personnel at incidents.

Individuals working at this level will apply knowledge and skills to demonstrate autonomy and judgement and to take limited responsibility in known and stable contexts within established parameters. Emergency communication centre operations typically involve work as a team member, under limited supervision, in emergency communication centre operations.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

A total of 11 units of competency comprising

- **3 core units** listed below; plus
- **8 elective units** selected from the general or specialist elective unit lists below using a minimum of 6 elective units

1 elective unit from Group A Work, Health and Safety elective units listed

1 elective unit from Group B Teamwork elective units listed

1 elective unit from Group C Emergency communication centre specialist elective units listed

The additional units are to be selected from the general or specialist elective unit lists below.

Imported elective units must contribute to the vocational outcomes of the qualification. Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with.

Elective units selected from outside the qualification must not duplicate content already covered by units in this qualification.

Prerequisites attached to any of the units must be obtained and are additional to the number of units required for this qualification.

Where a prerequisite is attached to a unit it is identified by the symbol  $\perp$ .

### **General Elective Stream**

At least 3 elective units from Groups D, E, F and/or G elective units listed below; and

No more than 2 elective units from Group H general units listed below or 2 imported units.

### **Call Taking Specialist Stream**

1 elective unit from the Group D Call Taking specialist elective units listed; and

At least 2 elective units from the Group E Call Taking general elective units listed; and

No more than 2 elective units from Group H general units listed below or 2 imported units.

### **Dispatch Specialist Stream**

2 elective units from Group F Dispatch specialist elective units listed; and

At least 1 elective unit from Group G Dispatch general elective units listed; and

No more than 2 elective units from Group H general units listed below or 2 imported units.

### Additional qualification advice

Where a defined specialist stream is completed, the resultant testamur should be titled;

- Certificate III in Public Safety (Emergency Communications Centre Operations - Call Taking)
- Certificate III in Public Safety (Emergency Communications Centre Operations - Dispatch)

### Core units

PUACOM001 Communicate in the workplace

PUAECO001 Operate telephony systems

PUAECO002 Process emergency incident calls and enquiries

**Group A: Work, Health and Safety**

BSBWHS301 Maintain workplace safety

BSBWHS307 Apply knowledge of WHS legislation in the workplace

BSBWHS308 Participate in WHS hazard identification, risk assessment and risk control

BSBWHS309 Participate effectively in WHS communication and consultation processes

PUAWHS001 Follow defined work, health and safety policies and procedures

**Group B: Team work**

PUASES012 Work as a team member in an emergency operations centre

PUATEA001 Work in a team

**Group C: Emergency communications centre**

PUAECO004 Operate computer aided dispatch system

PUAECO006 Read and interpret maps

**Group D: Call taking specialist**

PUAECO004 Operate computer aided dispatch system

PUAECO006 Read and interpret maps

**Group E: Call taking general**

BSBCUE203 Conduct customer engagement

BSBCUE301 Use multiple information systems

BSBCUE307 Work effectively in customer engagement

BSBWOR203 Work effectively with others

PUATEA002 Work autonomously

PUATEA004 Work effectively in a public safety organisation

**Group F: Dispatch specialist**

PUAECO003 Operate and control radio networks

PUAECO005 Dispatch resources from within an emergency communications centre

### **Group G: Dispatch general**

- PUATEA002 Work autonomously
- PUATEA004 Work effectively in a public safety organisation

### **Group H: General**

- BSBWOR201 Manage personal stress in the workplace
- HLTAID002 Provide basic emergency life support
- HLTAID003 Provide first aid
- HLTWHS006 Manage personal stressors in the work environment
- PUAECO007 Respond to and maintain monitored automatic notification system
- PUAECO008 Receive and action notification of uncontrolled hazardous materials situations
- PUAEME001 Provide emergency care
- PUAFIR323 Take local weather observations
- PUAOPE013 Operate communications systems and equipment

## PUA30919 Certificate III in Public Safety (Biosecurity Emergency Response Operations)

### Modification History

**Release 1.** This is the first release of this qualification in the PUA - Public Safety Training Package.

### Qualification Description

The PUA30919 Certificate III in Public Safety (Biosecurity Emergency Response Operations) provides individuals with the skills and knowledge to work in a biosecurity emergency response. Pests and diseases entering, emerging, establishing or spreading in Australia pose a risk to the economy, environment and community. Biosecurity involves the mitigation and management of these risks.

The role of a biosecurity emergency responder is to carry out actions within a biosecurity emergency response to an animal, plant, aquatic, environmental or other biosecurity threat. Biosecurity emergency responder's duties may include activities in the field and/or working in an operations centre (the term operations centre is used in accordance with the Biosecurity Incident Management System).

This qualification includes the units of competency required by biosecurity emergency responders to work safely and effectively as part of a response team. The range of activities that may be performed include contributing to response planning, implementing disease or pest surveillance and associated sampling protocols, ensuring effective quarantine and movement controls and undertaking disease or pest control procedures at infected premises.

Individuals will demonstrate autonomy and judgement whilst following instructions in known and stable contexts within established parameters.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

### Entry Requirements

There are no entry requirements for this qualification.

### Packaging Rules

A total of 10 units of competency comprising

- **5 core units** listed below; plus
- **5 elective units** from the general elective units listed

Choose a minimum of 3 elective units from the list below

Select the remaining 2 elective units from the elective unit list below or elsewhere within this training package or another endorsed training package or accredited course.

All elective units selected from outside this qualification must be from an equivalent qualification level or higher and must contribute to the vocational outcome of the qualification.

Elective units selected from outside the qualification must not duplicate content already covered by units in this qualification.

Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with.

Where a prerequisite is attached to a unit it is identified by the symbol  $\perp$ .

### **Core units**

|           |                                                                 |
|-----------|-----------------------------------------------------------------|
| AHCBER301 | Work effectively in an emergency disease or plant pest response |
| PUACOM001 | Communicate in the workplace                                    |
| PUACOM003 | Manage information                                              |
| PUATEA001 | Work in a team                                                  |
| PUAWHS001 | Follow defined work, health and safety policies and procedures  |

### **General elective units**

|           |                                                                                   |

# PUA31419 Certificate III in Public Safety (Community Safety)

## Modification History

**Release 2.0** This is the second release of this qualification in the PUA – Public Safety Training Package.

Electives updated.

**Release 1.0** This is the first release of this qualification in the PUA - Public Safety Training Package.

## Qualification Description

The PUA31419 Certificate III in Public Safety (Community Safety) is designed for emergency service and public safety personnel who participate in developing and delivering community safety programs. Community safety programs seek to build and enhance community resilience and health and wellbeing as it relates to feeling protected from threats, harm, risks or injury.

The role of community safety personnel is to build community safety partnerships, improve individual and community resilience, actively partner and listen to communities, understand community needs and deliver outcomes for at risk communities. This may include implementing community safety advertising, creating awareness campaigns and developing relationships with a diverse range of community members.

This qualification includes the units of competency required by community safety personnel to perform a range of activities such as delivering programs and campaigns that improve community resilience whilst engaging with a broad range of community members. It typically involves some discretion in the delivery of community safety programs.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

A total of 12 units of competency comprising

- **3 core units** listed below; plus
- **9 elective units** from the general elective units listed

Choose a minimum of 7 elective units from the elective unit lists below

Select the remaining 2 elective units from the elective unit lists or elsewhere within this training package or another endorsed training package or accredited course.

All elective units selected from outside this qualification must contribute to the vocational outcome of the qualification. Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with. Prerequisites attached to any of the units must be obtained and are additional to the number of units required for this qualification.

Where a prerequisite is attached to a unit it is identified by the symbol ⊥ .

**Note:**

Refer to the PUA Training Package Companion Volume Implementation Guide for information on fire prerequisites.

**Core units**

|           |                                                  |

# PUA40119 Certificate IV in Public Safety (Emergency Communications Centre Operations)

## Modification History

**Release 2.0** This is the second release of this qualification in the PUA Public Safety Training Package.

Minor upgrade to Group A: Work, Health and Safety and Group C: General electives.

**Release 1.0** This is the first release of this qualification in the PUA Public Safety Training Package.

## Qualification Description

The PUA40119 Certificate IV in Public Safety (Emergency Communications Centre Operations) provides individuals with general and specialist skills to operate effectively in an emergency communication centre supervisory role. The qualification includes the units of competency required by individuals who have a senior operator, team leader or supervisory role within an emergency communications centre.

The role of a supervisor in an Emergency Communications Centre is to manage the flow of timely and accurate information in response to emergency and non-emergency situations. This may include the dissemination of information to members of the public and emergency services agencies.

Individuals working at this level will apply knowledge and skills to demonstrate autonomy, judgement and limited responsibility in known or changing contexts and within established parameters.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

A total of 11 units of competency comprising

- **3 core units** listed below; plus
- **8 elective units** from the general elective unit lists below

Select at least 6 elective units from the elective lists below

1 elective unit from Group A

1 elective unit from Group B

At least 4 elective units from Group C and/or D, of which no more than 3 elective units may be selected from Group D.

Select the remaining 2 elective units from the elective unit lists below or from elsewhere within this training package or from another endorsed training package or from an accredited course.

Elective units selected from outside the qualification must not duplicate content already covered by units in this qualification.

Imported elective units must contribute to the vocational outcomes of the qualification. Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with.

Prerequisites attached to any of the units must be obtained and are additional to the number of units required for this qualification.

Where a prerequisite is attached to a unit it is identified by the symbol  $\perp$ .

### **Core units**

PUAECO009      Coordinate emergency communications centre operations

PUAECO010      Maintain standards of emergency service delivery

PUACOM001      Communicate in the workplace

### **Group A: Work, Health and Safety**

BSBWHS401      Implement and monitor WHS policies, procedures and programs to meet legislative requirements

BSBWHS412      Assist with workplace compliance with WHS laws

BSBWHS413      Contribute to implementation and maintenance of WHS consultation and participation processes

BSBWHS414      Contribute to WHS risk management

BSBWHS416      Contribute to workplace incident response

### **Group B: Supervision**

BSBMGT401      Show leadership in the workplace

PUATEA003      Lead, manage and develop teams

# PUA40219 Certificate IV in Public Safety (SES Leadership)

## Modification History

**Release 2.0** This is the second release of this qualification in the PUA – Public Safety Training Package.

Electives updated.

**Release 1.0** This is the first release of this qualification in the PUA Public Safety Training Package.

## Qualification Description

The PUA40219 Certificate IV in Public Safety (SES Leadership) is designed for experienced community, volunteer and emergency service organisational personnel to develop the knowledge and skills required to lead in emergency response situations.

State Emergency Services (SES) assist with emergency responses to floods, storms, earthquakes and tsunamis. They also assist in road accidents, search and rescue operations and often play a support role during major bushfire responses. The SES also assists in the development and implementation of local emergency management plans and the provision of community education programs.

This qualification includes the units of competency required by SES personnel to perform a range of leadership activities in responding to disasters and search and rescue operations. It typically involves leadership of teams, selecting equipment and resources and applying contingency measures.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

A total of 12 units of competency comprising

- **5 core units** listed below; plus
- **7 elective units** from the general elective units listed

Choose a minimum of 5 elective units from the elective unit list below.

Choose the remaining 2 elective units from either the elective list below or from elsewhere within this training package or another endorsed training package or accredited course.

All elective units selected from outside this qualification must contribute to the vocational

outcome of the qualification. Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with. Prerequisites attached to any of the units must be undertaken and are additional to the number of units required for this qualification.

Where a prerequisite is attached to a unit it is identified by this symbol ⊐.

**Note:**

Refer to the PUA Training Package Companion Volume Implementation Guide for information on fire prerequisites.

# PUA40319 Certificate IV in Public Safety (Firefighting Supervision)

## Modification History

**Release 2.0** This is the second release of this qualification in the PUA – Public Safety Training Package.

Editorial and upgrade to electives.

**Release 1.0** This is the first release of this qualification in the PUA - Public Safety Training Package.

## Qualification Description

The PUA40319 Certificate IV in Public Safety (Firefighting Supervision) is designed for firefighting professionals who lead firefighting teams. This will include the coordination of resources and the supervision of personnel at an incident.

The role of a firefighter at this level is to manage incidents, protect lives and prevent the destruction of property and the environment. To prevent incidents from occurring and to improve community safety a firefighter's duties may include conducting community education programs about fire and community safety and undertaking fire inspections of locations to verify adherence to local fire regulations.

This qualification includes the units of competency required by firefighters to control an incident and to perform a range of related activities. It typically involves some discretion in selecting equipment, services and contingency measures.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

A total of 11 units of competency comprising

- **3 core units** listed below; plus
- **8 elective units** from the elective unit lists

Choose a minimum of 6 elective units from the elective unit lists below.

1 elective unit (maximum) may be chosen from Group B

2 elective units (maximum) in total may be chosen from Groups B and C

Choose the remaining 2 elective units from the elective unit lists below or elsewhere within this training package or another endorsed training package, or accredited course.

All elective units selected from outside this qualification must contribute to the vocational outcome of the qualification. Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with. Prerequisites attached to any of the units must be obtained and are additional to the number of units required for this qualification.

Where a prerequisite is attached to a unit it is identified by the symbol ⊥.

**Note:**

Refer to the PUA Training Package Companion Volume Implementation Guide for information on fire prerequisites.

## PUA40419 Certificate IV in Public Safety (Biosecurity Emergency Response Leadership)

### Modification History

**Release 1.** This is the first release of this qualification in the PUA Public Safety Training Package.

### Qualification Description

The PUA40419 Certificate IV in Public Safety (Biosecurity Emergency Response Leadership) provides individuals with the skills and knowledge to perform a leadership role in a biosecurity emergency response. Pests and diseases entering, emerging, establishing or spreading in Australia pose a risk to the economy, environment and community. Biosecurity involves the mitigation and management of these risks.

The role of a biosecurity emergency response leader is to supervise, direct and oversee teams undertaking assigned actions within a response to an animal, plant, aquatic, environmental or other biosecurity threat. Biosecurity emergency response leader's duties may include leading field teams undertaking activities such as investigations, movement controls or infected premises operations and/or leading teams within an operations centre (the term operations centre is used in accordance with the Biosecurity Incident Management System).

This qualification includes the units of competency required by biosecurity emergency response leaders to direct and oversee teams of biosecurity emergency responders, ensuring all team activities safely, effectively and efficiently implement the relevant aspects of the incident action plan. The range of activities may include coordination of, and contribution to, planning and operational strategy development and logistics relevant to response activities, ensuring appropriate information management, communication with relevant stakeholders and managing the human resource aspects of the team.

Individuals will demonstrate autonomy and judgement in known or changing contexts within established parameters.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

### Entry Requirements

There are no entry requirements for this qualification.

### Packaging Rules

A total of 11 units of competency comprising

- **5 core units** listed below; plus

- **6 elective units** from the general elective units listed

Choose a minimum of 4 elective units from the elective unit list below.

Select the remaining 2 elective units from the elective unit list below or elsewhere within this training package or another endorsed training package or accredited course.

All elective units selected from outside this qualification must be from an equivalent qualification level or higher and must contribute to the vocational outcome of the qualification.

Elective units selected from outside the qualification must not duplicate content already covered by units in this qualification.

Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with.

Where a prerequisite is attached to a unit it is identified by the symbol  $\perp$ .

### **Core units**

# PUA41019 Certificate IV in Public Safety (Leadership)

## Modification History

**Release 2.0** This is the second release of this qualification in the PUA – Public Safety Training Package.

Electives updated.

**Release 1.0** This is the first release of this qualification in the PUA Public Safety Training Package.

## Qualification Description

The PUA41019 Certificate IV in Public Safety (Leadership) is designed for emergency service and public safety personnel who undertake work in collaborative leadership roles. Individuals in emergency service and public safety leadership positions will be required to manage personnel, supplies and equipment as well as incidents and/or disasters as they arise.

The role of a public safety leader involves the ability to implement change by inspiring individuals, teams and organisations, establishing and sharing a clear vision, providing information and methods to realise that vision whilst balancing the conflicting interests of key stakeholders. This may include negotiating with other organisations, communicating with personnel, consensus building and developing strategic plans.

This qualification includes the units of competency required by emergency service and public safety personnel to perform in a range of leadership activities based on decision making, prioritisation, problem solving and guidance in difficult situations. It typically involves leading teams and/or organisations.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

A total of 12 units of competency comprising

- **5 core units** listed below, plus
- **7 elective units** from the general and technical elective units listed

Choose 5 elective units from the elective unit lists below, a minimum of 1 must be from the technical elective units listed.

Select the remaining 2 elective units from either the elective units listed below or elsewhere

within this training package or another endorsed training package or accredited course.

All elective units selected from outside this qualification must contribute to the vocational outcome of the qualification. Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with. Prerequisites attached to any of the units must be obtained and are additional to the number of units required for this qualification.

Where a prerequisite is attached to a unit it is identified by the symbol ⊐.

**Note:**

Refer to the PUA Training Package Companion Volume Implementation Guide for information on fire prerequisites.

**Core units**

# PUA41120 Certificate IV in Public Safety (Community Safety)

## Modification History

**Release 1.0** This is the first release of this qualification in the PUA – Public Safety Training Package.

## Qualification Description

The PUA41120 Certificate IV in Public Safety (Community Safety) is designed for emergency service and public safety personnel who develop, implement and deliver community safety programs. Community safety programs seek to build and enhance community resilience, health and wellbeing as it relates to feeling protected from threats, harm, risks or injury.

The role of community safety personnel is to build community safety partnerships, improve individual and community resilience, actively partner and listen to communities, understand community needs and deliver outcomes for at risk communities. This may include implementing community safety advertising, creating awareness campaigns and developing relationships with a diverse range of community members.

This qualification includes the units of competency required by community safety personnel to perform a range of activities such as delivering programs and campaigns that improve community resilience whilst engaging with a broad range of community members and working closely with local governments. It typically involves discretion in the development and delivery of community safety programs.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

A total of 12 units of competency comprising

- **4 core units** listed below; plus
- **8 elective units** from the general elective units listed

Choose a minimum of 6 elective units from the elective unit list below.

Select the remaining 2 elective units from elsewhere in this training package or another endorsed training package or accredited course.

All elective units selected from outside this qualification must contribute to the vocational outcome of the qualification. Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with. Prerequisites attached to any of the units

must be obtained and are additional to the number of units required for this qualification.

Where a prerequisite is attached to a unit it is identified by the symbol ⊥.

**Note:**

Refer to the PUA Training Package Companion Volume Implementation Guide for information on fire prerequisites.

**Core units**

|           |                                                         |
|-----------|---------------------------------------------------------|

# PUA42619 Certificate IV in Public Safety (Aquatic Search and Rescue Management)

## Modification History

**Release 1.** This is the first release of this qualification in the PUA Public Safety Training Package.

## Qualification Description

The PUA42619 Certificate IV in Public Safety (Aquatic Search and Rescue Management) is designed for aquatic search and rescue personnel undertaking management duties. Aquatic search and rescue personnel can manage the search and rescue for missing persons either in the water, or on nearby land.

The role of aquatic search and rescue management personnel is to organise and manage search and rescue aquatic personnel on the scene, ensure approved rescue techniques are utilised and to liaise with members of the community. This may include communicating with other rescue personnel and agencies.

This qualification includes the units of competency required by aquatic search and rescue personnel to perform a range of management activities such as providing oversight of search and rescue incidents and recovery operations. It typically involves leading teams as a manager in aquatic search and rescue operations.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

A total of 12 units of competency comprising

- **5 core units** listed below; plus
- **7 elective units** from the general elective units listed

Choose a minimum of 5 elective units from the elective unit list.

Select 2 elective units from the elective unit list below or elsewhere within this training package or another endorsed training package or accredited course.

All elective units selected from outside this qualification must be from an equivalent qualification level or higher.

Elective units selected from outside the qualification must not duplicate content already covered

by units in this qualification.

Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with.

Prerequisites attached to any of the units must be obtained and are additional to the number of units required for this qualification.

Where a prerequisite is attached to a unit it is identified by the symbol  $\perp$ .

By default, all prerequisites listed with  $\perp$  become part of the core and elective units of this qualification.

### **Core units**

# PUA50120 Diploma of Public Safety (Emergency Management)

## Modification History

**Release 1.0** This is the first release of this qualification in the PUA Public Safety Training Package.

## Qualification Description

The PUA50120 Diploma of Public Safety (Emergency Management) is designed for personnel undertaking emergency management responsibilities at an incident, emergency or disaster. This will include the coordination of resources, personnel and entities as well as the coordination of activities with other organisations.

The role of personnel is to assist in the management for an incident, emergency or disaster. Personnel undertaking emergency management responsibilities may work in multi-organisational teams.

This qualification includes the units of competency required by personnel for performing a range of activities such as planning and the coordination of activities for an incident, emergency or disaster. This supports prevention of, preparedness for, response to and recovery from such events.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

A total of 10 units of competency comprising

- **5 core units** listed below; plus
- **5 elective units** from the general elective units listed

Choose a minimum of 3 elective units from the general elective unit list below.

Choose 2 elective units from the elective unit list below or elsewhere within this training package or another endorsed training package or any accredited course.

All elective units selected from outside this qualification must contribute to the vocational outcome of the qualification. Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with. Prerequisites attached to any of the units must be obtained and are additional to the number of units required for this qualification.

Where a prerequisite is attached to a unit it is identified by the symbol  $\perp$ .

**Note:**

Refer to the PUA Training Package Companion Volume Implementation Guide for information on fire prerequisites.

**Core units**

|           |                                                  |
|-----------|--------------------------------------------------|

# PUA50219 Diploma of Public Safety (Biosecurity Emergency Response Management)

## Modification History

**Release 3.0** This is the third release of this qualification in the PUA – Public Safety Training Package.

Electives updated.

**Release 2.0** This is the second release of this qualification in the PUA – Public Safety Training Package.

Minor upgrade to electives.

**Release 1.0** This is the first release of this qualification in the PUA – Public Safety Training Package.

## Qualification Description

The PUA50219 Diploma of Public Safety (Biosecurity Emergency Response Management) provides individuals with the skills and knowledge to manage a biosecurity emergency response. Pests and diseases entering, emerging, establishing or spreading in Australia pose a risk to the economy, environment and community. Biosecurity involves the mitigation and management of these risks.

The role of a biosecurity emergency response manager is to manage multiple teams to develop and carry out an appropriate response to an animal, plant, aquatic, environmental or other biosecurity threat. Biosecurity emergency response manager's duties may include directing and managing multiple teams undertaking coordinated biosecurity response functions such as field operations, planning, logistics, public information and/or finance and administration.

This qualification includes the units of competency required by biosecurity emergency response managers to manage multiple teams of biosecurity emergency responders, whilst ensuring all response activities are safely, effectively and efficiently implemented to meet all relevant aspects of the incident action plan. The range of activities may include formulating strategic plans, undertaking multi-organisation liaison and high level communication activities, overseeing complex resource coordination activities and taking overarching responsibility for safety, financial and human resource management within the relevant aspects of the role.

Individuals will demonstrate a high degree of autonomy, judgement and management responsibility in complex and changing contexts within broad but established parameters.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

A total of 11 units of competency comprising

- **5 core units** listed below; plus
- **6 elective units** from the general elective units listed

Choose a minimum of 4 elective units from the general elective unit list below.

Select the remaining 2 elective units from the elective unit list below or elsewhere within this training package or another endorsed training package or any accredited course.

All elective units selected from outside this qualification must contribute to the vocational outcome of the qualification. Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with. Prerequisites attached to any of the units must be obtained and are additional to the number of units required for this qualification.

Where a prerequisite is attached to a unit it is identified by the symbol  $\perp$ .

### Note:

Refer to the PUA Training Package Companion Volume Implementation Guide for information on fire prerequisites.

# PUA50419 Diploma of Public Safety (SES Operations Management)

## Modification History

**Release 2.0** This is the second release of this qualification in the PUA – Public Safety Training Package.

Electives updated.

**Release 1.0** This is the first release of this qualification in the PUA Public Safety Training Package.

## Qualification Description

The PUA50419 Diploma of Public Safety (SES Operations Management) is designed for experienced community, volunteer and emergency service organisational personnel to develop the knowledge and skills required to manage SES operations in emergency response situations.

State Emergency Services (SES) assist with emergency responses to floods, storms, earthquakes and tsunamis. They also assist in road accidents, search and rescue operations and often play a support role during major bushfire responses. The SES also assists in the development and implementation of local emergency management plans and the provision of community education programs.

This qualification includes the units of competency required by SES personnel to perform a range of management activities in responding to disasters and search and rescue operations. It typically involves the management of teams, equipment, resources and contingency measures.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

There are no entry requirements for this qualification.

# PUA50519 Diploma of Public Safety (Firefighting Management)

## Modification History

**Release 2.0** This is the second release of this qualification in the PUA – Public Safety Training Package.

Editorial adjustments and upgrade to electives.

**Release 1.0** This is the first release of this qualification in the PUA – Public Safety Training Package.

## Qualification Description

The PUA50519 Diploma of Public Safety (Firefighting Management) is designed for firefighting professionals undertaking a diverse range of management responsibilities. This will include the management of resources, personnel and stakeholders as well as the coordination of activities with other agencies.

The role of a firefighter at this level is to manage emergency incidents, protect lives and prevent the destruction of property and the environment. To prevent incidents from occurring and to improve community safety a firefighter's duties may include conducting community education programs about fire and community safety and undertaking fire inspections of locations to verify adherence to local fire regulations.

This qualification includes the units of competency required by firefighters to manage operations and a multi-team sector and to perform a range of related fire management activities. It typically involves the management of equipment, services and contingency measures.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

A total of 13 units of competency comprising

- **7 core units** listed below; plus
- **6 elective units** from the general elective units listed

Choose a minimum of 4 elective units from the elective unit lists below.

2 elective units (maximum) may be chosen from Group B

Choose the remaining 2 technical elective units from the elective unit lists below or elsewhere within this training package or another endorsed training package or accredited course.

All elective units selected from outside this qualification must contribute to the vocational outcome of the qualification. Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with. Prerequisites attached to any of the units must be obtained and are additional to the number of units required for this qualification.

Where a prerequisite is attached to a unit it is identified by the symbol ⊥ .

# PUA50919 Diploma of Public Safety (Search and Rescue - Coordination)

## Modification History

**Release 2.0** This is the second release of this qualification in the PUA – Public Safety Training Package.

Electives updated.

**Release 1.0** This is the first release of this qualification in the PUA Public Safety Training Package.

## Qualification Description

The PUA50919 Diploma of Public Safety (Aquatic Search and Rescue Coordination) is designed for aquatic search and rescue coordination personnel. Aquatic search and rescue personnel can manage the search and rescue for missing persons either in the water, or on nearby land.

The role of aquatic search and rescue coordination personnel is to organise and coordinate search and rescue aquatic personnel on the scene, ensure rescue techniques are implemented and to liaise with Incident Controllers and/or other agency personnel. This may include coordinating and communicating with a variety of community members.

This qualification includes the units of competency required by aquatic search and rescue personnel to perform a range of coordination activities such as directing search and rescue incidents and recovery operations. It typically involves the coordination of teams, inclusive of other agency personnel, in aquatic search and rescue operations.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

A total of 11 units of competency comprising

- **6 core units** listed below; plus
- **5 elective units** from the general elective units listed

Choose 3 elective units from the general elective unit list below.

Select the remaining 2 elective units from the elective unit list below or elsewhere within this training package or another endorsed training package or accredited course.

All elective units selected from outside this qualification must contribute to the vocational

outcome of the qualification. Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with. Prerequisites attached to any of the units must be obtained and are additional to the number of units required for this qualification.

Where a prerequisite is attached to a unit it is identified by the symbol ⊥.

**Note:**

Refer to the PUA Training Package Companion Volume Implementation Guide for information on fire prerequisites.

# PUA51019 Diploma of Public Safety (Community Safety)

## Modification History

**Release 2.0** This is the second release of this qualification in the PUA – Public Safety Training Package.

Electives updated.

**Release 1.0** This is the first release of this qualification in the PUA Public Safety Training Package.

## Qualification Description

The PUA51019 Diploma of Public Safety (Community Safety) is designed for emergency service and public safety personnel who coordinate community safety programs. Community safety programs seek to build and enhance community resilience, health and wellbeing as it relates to feeling protected from threats, harm, risks or injury.

The role of community safety personnel is to build community safety partnerships, improve individual and community resilience, actively partner and listen to communities, understand community needs and deliver outcomes for at risk communities. This may include implementing community safety advertising, creating awareness campaigns and developing relationships with a diverse range of community members.

This qualification includes the units of competency required by community safety personnel to perform a range of activities such as coordinating programs and campaigns that improve community resilience whilst engaging with a broad range of community members and working closely with local governments and other agencies. It typically involves discretion in the coordination of the development and delivery of community safety programs.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

A total of 12 units of competency comprising

- **1 core unit** listed below; plus
- **11 elective units** from the elective units listed

Choose a minimum of 9 elective units from the elective unit list below, 2 units must be from the technical units listed.

Select the remaining 2 elective units from the elective unit lists below or elsewhere within this training package or another endorsed training package or accredited course.

All elective units selected from outside this qualification must contribute to the vocational outcome of the qualification. # PUA60120 Advanced Diploma of Public Safety (Emergency Management)

## Modification History

**Release 1.0** This is the first release of this qualification in the PUA Public Safety Training Package.

## Qualification Description

The PUA60120 Advanced Diploma of Public Safety (Emergency Management) is designed for personnel undertaking senior emergency management responsibilities at an organisational level. This will include the management of community programs, stakeholder engagement and the negotiation of interagency memorandums of understanding.

The role of senior personnel in the management of and planning for an incident, emergency or disaster may include undertaking senior management responsibilities for managing multi-organisational teams and activities.

This qualification includes the units of competency required by senior personnel to perform a range of activities such as working with the community and other key entities prior to, during and after an incident, emergency or disaster. This involves prevention of, preparedness for, response to and recovery from such events.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

Prior to commencing this qualification individuals must be able to demonstrate the skills and knowledge to

- contribute to and assist with the management of an incident, emergency or disaster
- coordinate resources, personnel, entities and activities with other organisations
- take personal responsibility and demonstrate autonomy in performing technical operations
- make judgements required to organise self and plan, coordinate and evaluate the work of teams

These skills and knowledge may have been acquired through completion of the core units in the Diploma of Public Safety (Emergency Management) or relevant industry experience of no less than five years in the emergency management environment.

## Packaging Rules

A total of 15 units of competency comprising

- **10 core units** listed below, plus
- **5 elective units** from the general elective units listed

Choose a minimum of 3 elective units from the general elective unit list below.

Choose 2 elective units from the elective unit list below or elsewhere within this training package or another endorsed training package or accredited course.

All elective units selected from outside this qualification must contribute to the vocational outcome of the qualification. Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with. Prerequisites attached to any of the units must be obtained and are additional to the number of units required for this qualification.

Where a prerequisite is attached to a unit it is identified by the symbol  $\perp$ .

# PUA60219 Advanced Diploma of Public Safety (Search and Rescue Management)

## Modification History

**Release 2.0** This is the second release of this qualification in the PUA – Public Safety Training Package.

Electives updated.

**Release 1.0** This is the first release of this qualification in the PUA – Public Safety Training Package.

## Qualification Description

The PUA60219 Advanced Diploma of Public Safety (Aquatic Search and Rescue Management) is designed for senior management personnel in aquatic search and rescue organisations. Aquatic search and rescue personnel can manage the search and rescue for missing persons either in the water, or on nearby land.

The role of senior management personnel in aquatic search and rescue organisations is to develop and implement strategic plans, initiate and review policies and procedures, lead search and rescue aquatic personnel, implement advanced rescue methods and techniques and liaise with key stakeholders. This may include the management of financial budgets and ensuring compliance requirements are met.

This qualification includes the units of competency required by senior aquatic search and rescue management personnel to perform a range of activities such as the leadership of search and rescue organisations. It typically involves managing aquatic search and rescue organisations with oversight of personnel, budgets, planning and resourcing.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

A total of 10 units of competency comprising

- **7 core units** listed below; plus
- **3 elective units** from the general elective units listed

Choose a minimum of 2 elective unit from the general elective unit list below.

Select the remaining 1 unit from the elective unit list below or elsewhere within this training

package or another endorsed training package or accredited course.

All elective units selected from outside this qualification must contribute to the vocational outcome of the qualification. Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with. Prerequisites attached to any of the units must be obtained and are additional to the number of units required for this qualification.

Where a prerequisite is attached to a unit it is identified by the symbol ⊏.

**Note:**

Refer to the PUA Training Package Companion Volume Implementation Guide for information on fire prerequisites.

# PUA60519 Advanced Diploma of Public Safety (Firefighting Management)

## Modification History

**Release 2.0** This is the second release of this qualification in the PUA – Public Safety Training Package.

Editorial adjustments and upgrade to electives.

**Release 1.0** This is the first release of this qualification in the PUA Public Safety Training Package.

## Qualification Description

The PUA60519 Advanced Diploma of Public Safety (Firefighting Management) is designed for firefighting professionals performing senior management responsibilities such as developing and implementing strategic plans, performing policy reviews and undertaking stakeholder engagement with government and non-government agencies.

The role of a firefighter at this level is to manage larger and/or complex emergency incidents, to protect lives and to prevent the destruction of property and the environment. To prevent incidents from occurring and to improve community safety, a firefighter's duties may include managing community safety and education strategies or programs and managing fire safety strategies and programs to ensure adherence to local fire regulations.

This qualification includes the units of competency required by firefighters to perform senior firefighting management activities both in the workplace and in dealing with a variety of hazards. It typically involves the management of human resources, equipment, services and contingency measures.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

A total of 11 units of competency are required for this qualification, comprising

- **4 core units** listed below; plus

- **7 elective units** from the elective units listed

Choose a minimum of 5 elective units from the elective unit lists below

A minimum of 1 elective unit must be chosen from Group A that relates to either fire and land management or air service fire operation agencies.

Choose the remaining 1 elective unit from Group B or the elective unit lists below or elsewhere within this training package or another endorsed training package or accredited course.

All elective units selected from outside this qualification must contribute to the vocational outcome of the qualification. Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with. Prerequisites attached to any of the units must be obtained and are additional to the number of units required for this qualification.

# PUA60719 Advanced Diploma of Public Safety (Community Safety)

## Modification History

**Release 2.0** This is the second release of this qualification in the PUA – Public Safety Training Package.

Electives updated.

**Release 1.0** This is the first release of this qualification in the PUA Public Safety Training Package.

## Qualification Description

The PUA60719 Diploma of Public Safety (Community Safety) is designed for emergency service and public safety personnel who perform in senior management roles with responsibility for community safety programs. Community safety programs seek to build and enhance community resilience, health and wellbeing as it relates to feeling protected from threats, harm, risks or injury.

The role of community safety personnel is to build community safety partnerships, improve individual and community resilience, actively partner and listen to communities, understand community needs and deliver outcomes for at risk communities. This may include planning and managing community safety advertising and awareness campaigns and developing relationships with a diverse range of stakeholders and community members.

This qualification includes the units of competency required by community safety personnel to perform a range of activities such as strategically planning and managing programs and campaigns that improve community resilience whilst engaging with a broad range of community members and working closely with local governments and other agencies. It typically involves the management of community safety programs including budgets, personnel and resources.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

# PUA60919 Advanced Diploma of Public Safety (Fire Investigation)

## Modification History

**Release 2.0** This is the second release of this qualification in the PUA – Public Safety Training Package.

Editorial adjustments and upgrade to electives.

**Release 1.0** This is the first release of this qualification in the PUA Public Safety Training Package.

## Qualification Description

The PUA60919 Advanced Diploma of Public Safety (Fire Investigation) is designed for firefighting professionals performing fire investigations. Fire investigation is the analysis of the origin and cause of unexplained or suspicious fires using basic fire science skills and knowledge.

The role of a fire investigator is to analyse fire related incidents to determine whether a crime has been committed. This includes reviewing the remains of a fire and seeking to obtain information to reconstruct the sequence of events leading up to the incident. Fires can involve a variety of ignition sources and fuels therefore, fire investigators need to have a working understanding of areas such as construction, electricity and mechanical devices.

This qualification includes the units of competency required by fire investigators to perform a range of activities such as conducting investigations, analysing fire origin and cause and attending judicial hearings. It typically involves the use of specialised equipment, resources and services.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

There are no entry requirements for this qualification.

## Packaging Rules

A total of 15 units of competency is required for this qualification, comprising

- **12 core units** listed below; plus
- **3 elective units** from the general elective units listed

Choose a minimum of 1 elective unit from Group A related to either fire and land management or air service fire operation agencies.

Choose the remaining 2 elective units from Group B or elsewhere within this training package or another endorsed training package or accredited course.

All elective units selected from outside this qualification must contribute to the vocational outcome of the qualification. Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with. Prerequisites attached to any of the units must be obtained and are additional to the number of units required for this qualification.

Where a prerequisite is attached to a unit it is identified by the symbol ⊏.

**Note:**

Refer to the PUA Training Package Companion Volume Implementation Guide for information on fire prerequisites.

**Core units**

CPPSEC3028A    Compile investigative report

POLFOR021    Use and maintain specialist forensic equipment

PSPREG012    Gather information through interviews

PUAFIR605    Determine origin and cause of mobile property fire  
⊏ PUALAW001 Protect and preserve incident scene  
⊏ PUALAW002 Conduct initial investigation at incident scene

PUAFIR606    Apply principles of combustion and fire dynamics to fire scene investigation

PUAFIR607    Apply electrical/electronic knowledge to fire investigations  
⊏ PUAFIR605 Determine origin and cause of mobile property fire  
⊏ PUAFIR609 Collect, record and coordinate the analysis of physical evidence  
\* and one of the following:  
⊏ PUAFIR603 Determine origin and cause of wildfire  
⊏ PUAFIR604 Determine origin and cause of structure fire

PUAFIR608    Investigate fatal fires  
⊏ PUAFIR605 Determine origin and cause of mobile property fire  
⊏ PUAFIR609 Collect, record and coordinate the analysis of physical evidence  
\* and one of the following:

- └ PUAFIR603 Determine origin and cause of wildfire
  - └ PUAFIR604 Determine origin and cause of structure fire
- PUAFIR609 Collect, record and coordinate the analysis of physical evidence
  - └ PUALAW001 Protect and preserve incident scene
- PUAFIR610 Manage imaging and electronic data
- PUALAW003 Give evidence in a judicial or quasi-judicial setting
- PUALAW004 Represent the organisation in a judicial or quasi-judicial setting
- PUAWHS002 Maintain safety at an incident scene
  - └ PUAFIR210 Prevent injury

**Group A: Elective units**

- PUAFIR603 Determine origin and cause of wildfire
  - └ PUAFIR303 Suppress wildfire
  - └ PUALAW001 Protect and preserve incident scene
  - └ PUALAW002 Conduct initial investigation at incident scene
- PUAFIR604 Determine origin and cause of structure fire
  - └ PUAFIR302 Suppress urban fire
  - └ PUALAW001 Protect and preserve incident scene
  - └ PUALAW002 Conduct initial investigation at incident scene

**Group B: Elective units**

- DEFFOR005 Compile and submit electronic media forensic documentation
- PUACOM016 Manage media requirements at major incident
- PUAFIR001 Coordinate state aerial operations
- PUAFIR004 Manage complex aerial operations for an incident response
- PUAFIR611 Process and analyse fire scene data and laboratory results
  - └ PUAFIR609 Collect, record and coordinate the analysis of physical evidence
- PUAFIR612 Undertake post incident analysis

- └ CPPSEC3028A Compile investigative report
- └ PUAFIR605 Determine origin and cause of mobile property fire
- \*and one of the following:
- └ PUAFIR603 Determine origin and cause of wildfire
- └ PUAFIR604 Determine origin and cause of structure fire

## Qualification Mapping Information

This qualification replaces and is equivalent to PUA60913 Advanced Diploma of Public Safety (Fire Investigation)

# PUA80119 Graduate Diploma of Crisis Leadership

## Modification History

**Release 1.** This is the first release of this qualification in the PUA Public Safety Training Package.

## Qualification Description

This course is intended to provide participants with the knowledge skills required to lead in a crisis. The course will challenge participants to explore their own leadership styles and rethink traditional models of leadership in the context of rapidly changing crisis environments. It is designed for those with significant knowledge and experience of working in emergency management leadership roles in a variety of settings.

In these roles, they are required to undertake research; write papers and reports; communicate with diverse audiences; undertake risk assessments; plan, implement, audit and lead programs; problem solve and make high level judgements about organisational and community needs during all phases of a crisis. Typically, they have full responsibility and accountability for team and/or organisational output.

Competency in this qualification requires the demonstration of crisis leadership skills and knowledge of

- leadership models and strategies suitable for implementation during all phases of a crisis
- personal attributes that exemplify leadership whilst responsible for wide ranging accountabilities in a crisis
- leading team processes during time critical decision making
- creating innovative solutions to crisis situations using structured approaches based on situational awareness and analysis
- commanding and leading resources during a crisis
- leading and participating in multi-organisational/agency settings
- designing research and implementing programs that demonstrate reflective and situational awareness
- leading programs that address psychological and/or stress impacts

No licensing, legislative or certification requirements apply to this qualification at the time of publication.

## Entry Requirements

Candidates may enter the qualification through several paths including

- undergraduate degree
- advanced diploma in a relevant field of study with a minimum of two years' work experience
- other documented evidence deemed to be equivalent to an undergraduate degree five years'

workplace experience including leadership and management responsibility and/or complexity in emergency management and/or public safety.

## Packaging Rules

A total of 9 units of competency comprising

- **7 core units** listed below; plus
- **2 elective units** from the general elective units listed

Choose 2 elective units from the elective unit list below or elsewhere within this training package or another endorsed training package or accredited course.

All elective units selected from outside this qualification must be from an equivalent qualification level or higher.

Elective units selected from outside the qualification must not duplicate content already covered by units in this qualification.

Where imported units are selected, care must be taken to ensure that all prerequisite units specified are complied with.

Prerequisites attached to any of the units must be obtained and are additional to the number of units required for this qualification.

Where a prerequisite is attached to a unit it is identified by the symbol ⊥ .

### Core units

|           |                                                     |
|-----------|-----------------------------------------------------|
| PUAECL007 | Define crisis context                               |
| PUAECL006 | Recognise personal effectiveness in a crisis        |
| PUAECL005 | Support communities for crisis                      |
| PUAECL004 | Lead in a crisis                                    |
| PUAECL003 | Deliver value in crisis                             |
| PUAECL002 | Lead and manage programs that develop resilience    |
| PUAECL001 | Evaluate societal threats, uncertainty and surprise |

### Elective units

|           |                                                                      |
|-----------|----------------------------------------------------------------------|
| BSBLDR802 | Lead the strategic planning process for an organisation              |

## PUAAMS001 Work in an aviation environment

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit involves the skills and knowledge required to work effectively as a crew member in accordance with organisational policies and procedures. Team members and crews may be members from a range of government and/or non-government organisations and/or agencies.

The unit is applicable to members of Air Search and Rescue working in the air.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

Aviation Marine Search and Rescue

### Unit Sector

Aviation Marine Search and Rescue

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

**1 Work effectively as a member of a search and rescue crew**

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Crew functions and responsibilities are determined, in accordance with organisational policies and procedures
- 1.2** Contact and/or call out arrangements and requirements are determined from organisational documents and personal employment

- 1.3 Factors which impede or disqualify personnel from performing safe and effective aircrew duties are determined
  - 1.4 Communication equipment, terminology and procedures are utilised to ensure safe and effective operations during flight
  - 1.5 In flight performance is maintained
- 2 **Work safely in an aviation environment**
  - 2.1 Safety procedures for working in and around aircraft are followed
  - 2.2 Cabin and/or load security and dangerous good requirements are determined and followed, in consultation with the pilot in command
  - 2.3 Appropriate manual handling strategies are applied when loading the aircraft
  - 2.4 In flight hazards are identified and risks are managed, in accordance with safety procedures
- 3 **Respond to aircraft emergency situations**
  - 3.1 Aircraft cabin, load and occupants are prepared for impact
  - 3.2 Firefighting equipment is used to protect occupants and the aircraft from fire
  - 3.3 Escape and/or evacuation plan is implemented, as required
  - 3.4 Emergency and ongoing care is provided to injured occupants
  - 3.5 Survival plan is implemented, in accordance with organisational policies and procedures
- 4 **Complete documentation**
  - 4.1 Manifests, load sheets and other pre-flight documents are completed
  - 4.2 In flight operations log is completed, in accordance with organisational procedures
  - 4.3 Debriefing documents and other post flight reports are completed and submitted to relevant personnel

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAAMS001B Work in an aviation environment and PUAAMS001A Work in an aviation environment.

# Assessment Requirements for PUAAMS001 Work in an aviation environment

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- communicating information
- completing search and rescue documentation
- implementing organisational policies and procedures including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- operating aircraft doors, aircraft intercom systems, aviation survival equipment and firefighting equipment
- performing safely as a crew member in an aviation environment
- reporting and/or rectifying human factors to reduce the likelihood of errors that may occur
- working as a member of a search and rescue crew

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- air traffic control procedures and terminology
- aircraft accidental hazards and response
- airside safety and aircraft safety
- aviation meteorology
- aviation technology and communication procedures
- communication techniques
- emergency care requirements
- facility emergency response plans
- hazardous goods including petroleum fuels
- human factors which impede or exclude safe performance including in flight hazards
- manual handling hazards and techniques
- organisational documentation including pre and post flight records
- organisational policies and procedures including WHS/OHS legislated requirements and risk mitigation
- safety procedures for working in and around aircrafts

- survival equipment

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment including
  - appropriate training facility and an aircraft used in industry
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operations manuals.

## PUAAMS002 Search as a member of an air search team

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit involves the skills and knowledge required to conduct air search observation duties during an air search operation in accordance with organisational policies and procedures.

The unit is applicable to members of air search and rescue teams working in the air. Team members and crews may be members of a range of government or non-government organisations and/or agencies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

Aviation Marine Search and Rescue

### Unit Sector

Aviation Marine Search and Rescue

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare for search operations**

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Operational briefing is obtained from relevant search and rescue authority
- 1.2** Aircraft is configured and loaded, in accordance with requirements and pilot in command instructions

- |                                     |            |                                                                                                     |
|-------------------------------------|------------|-----------------------------------------------------------------------------------------------------|
|                                     | <b>1.3</b> | Involvement in briefings is undertaken, in accordance with organisational policies and procedures   |
|                                     | <b>1.4</b> | Incident information is used to determine personal equipment needed for search operation            |
| <b>2 Conduct search operations</b>  | <b>2.1</b> | Scanning distance is identified                                                                     |
|                                     | <b>2.2</b> | Search briefing is reviewed en route to task area                                                   |
|                                     | <b>2.3</b> | Impediments to effective observation techniques are identified and appropriate adjustments are made |
|                                     | <b>2.4</b> | Observation technique is applied to ensure effective scanning of identified area of interest        |
|                                     | <b>2.5</b> | Search equipment is operated to maximise sighting and identification effectiveness                  |
| <b>3 Investigate sightings</b>      | <b>3.1</b> | Sightings are reported and maintained                                                               |
|                                     | <b>3.2</b> | Sightings are investigated                                                                          |
|                                     | <b>3.3</b> | Sightings are logged and communicated to relevant search and rescue authority                       |
| <b>4 Communicate outcome search</b> | <b>4.1</b> | Emergency signals from target are identified and recognised                                         |
|                                     | <b>4.2</b> | Communications are logged and reported to relevant search and rescue authority                      |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAAMS002B Search as a member of an air search team and PUAAMS002A Search as a member of an air search team.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAAMS002 Search as a member of an air search team

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying organisational policies and procedures including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- communicating information clearly within the search team
- conducting search operations
- investigating sightings
- making decisions based on available information
- preparing for search operations
- selecting and using available technology appropriate to the search task

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- aircraft configuration
- communication techniques
- factors which may indicate evidence of a search target
- observation techniques and procedures including impediments to effective observation techniques
- organisational documentation, policies and procedures including WHS/OHS legislated requirements and risk mitigation
- physiology of sight
- search and rescue authorities
- search planning including search equipment
- signals and/or message equipment and procedures

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of

assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment including
  - appropriate training facility and an aircraft used in industry
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operations manuals

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

## PUAAMS003 Conduct stores dropping operations

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit involves the skills and knowledge required to prepare and carryout stores dropping operations in a search and rescue context, in accordance with organisational policies and procedures. It does not cover the competency to control and position the aircraft for dropping operations.

The unit is applicable to members of Air Search and Rescue teams working in the air carrying out the drop master or load master's role. Team members and crews may be members of a range of government or non-government organisations and/or agencies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable

### Competency Field

Aviation Marine Search and Rescue

### Unit Sector

Aviation Marine Search and Rescue

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Configure aircraft

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Stores are prepared prior to loading on aircraft, in accordance with organisational policies and procedures

**1.2** Search briefing is obtained from relevant Search and

Rescue (SAR) authority

- 1.3** Aircraft is configured for drop operations, in accordance with applicable flight manual
  - 1.4** Protective surfaces are installed and protective tape applied
  - 1.5** Stores are checked and secured
  - 1.6** Principles of internal loading of cargo are complied with and applied when loading the aircraft
- 2 Locate target**
  - 2.1** Distance estimation methods are employed to identify target position
  - 2.2** Initial target marking smoke is prepared and dispatched to mark target area
  - 2.3** Visual sighting of target is maintained during stores dropping
- 3 Dispatch stores**
  - 3.1** Reference markers are dispatched under the pilot's directions
  - 3.2** Stores are dispatched under the pilot's directions
  - 3.3** Visual sighting of target is maintained during stores dropping
- 4 Reconfigure aircraft**
  - 4.1** Equipment is removed and checked for serviceability and faulty equipment is reported to relevant personnel
  - 4.2** Items of stores used are annotated on the incident form

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAAMS003B Conduct stores dropping operations.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAAMS003 Conduct stores dropping operations

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying organisational policies and procedures including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) legislated requirements
- checking ancillary search and rescue equipment for serviceability
- configuring and reconfiguring aircraft
- despatching stores
- handling pyrotechnic devices in a safe manner
- locating target
- operating safely around aircraft
- safely preparing, securing and despatching stores under the pilot's direction
- working as a team member in a crewed environment

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- actions to be carried out in the event of inflight emergencies
- burn times of pyrotechnic markers
- distance estimation methods
- frequencies of electronic markers
- general operation of light emitting markers
- hand signals relayed by other crew members during stores dropping operation
- inherent dangers of handling pyrotechnic devices
- maximum and minimum weight of a loaded helibox
- organisational documentation, policies and procedures
- principles of teamwork
- procedures for arming pyrotechnic markers and general operation of electronic markers
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) legislated requirements including risk mitigation and WHS/OHS considerations as they pertain to operating within an aircraft during stores dropping operations

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

## PUAAMS006 Coordinate search and rescue resources

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit involves the skills and knowledge required to identify, procure and task human and physical resources for Search and Rescue (SAR), in accordance with organisational policies and procedures.

The unit is applicable to individuals undertaking limited search and rescue activities in support of national SAR authorities. Team members and crews may be members of a range of government or non-government organisations and/or agencies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

Aviation Marine Search and Rescue

### Unit Sector

Aviation Marine Search and Rescue

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Obtain required resources

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |            |                                                                                                           |
|------------|-----------------------------------------------------------------------------------------------------------|
| <b>1.1</b> | Tasks are prioritised and analysed to determine resource requirements, in accordance with the rescue plan |
| <b>1.2</b> | Availability of required resources is determined using intelligence gathering methods                     |

- 1.3 Strategies for obtaining required resources are identified and resources are obtained as determined by the necessities of the search and rescue activity, in accordance with organisational policies and procedures
- 2 Organise resources
  - 2.1 Resources are assessed and allocated, in accordance with their suitability for the task, equipment carried and availability consistent with organisational policies and procedures
  - 2.2 Resources are coordinated to ensure timely completion of tasks within physical and environmental constraints
  - 2.3 Personnel are encouraged and motivated to complete tasks consistent with organisational policies and procedures
  - 2.4 Personnel needs are continually reviewed, in accordance with organisational policies and procedures
  - 2.5 Support considerations for personnel are taken into account, in accordance with organisational policies and procedures
  - 2.6 Resource needs are continually reviewed based on available intelligence
- 3 Liaise with supporting authorities
  - 3.1 Contacts are identified in supporting authorities to facilitate liaison and cooperation
  - 3.2 Details of contacts, resources and/or services are recorded and maintained, in accordance with organisational policies and procedures
  - 3.3 Role and support capabilities of other search and rescue authorities are determined through liaison and consultation and exchange of information, in accordance with organisational policies and procedures
  - 3.4 Procedures for activation, deactivation and advising other search and rescue authorities and/or organisations and agencies are initiated, in accordance with organisational policies

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAAMS006B Coordinate search and rescue resources.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAAMS006 Coordinate search and rescue resources

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- accessing databases for contact names and numbers for resource allocations
- allocating assets to suit situation
- applying organisational policies and procedures including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- assessing capabilities and limitations of assets and continually reviewing resources
- collecting and analysing information
- communicating and consulting with a range of individuals using a range of methods
- identifying and obtaining resources
- liaising with supporting authorities
- organising and/or seconding resources
- working as part of a team including successfully negotiation outcomes

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and include knowledge of

- assets that are suitable for land, maritime and coastal searches
- equipment and performance of resources available for Search and Rescue (SAR)
- intelligence gathering methods
- organisational documentation, policies and procedures including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) legislated requirements, risk mitigation, personnel entitlements, administrative procedures and policy relating to secondment of Australian Defence Force assets for SAR operations
- physical and environmental constraints
- resources including human resource requirements
- roles and responsibilities within rescue coordination centres
- state of technical maintenance for search and rescue resources

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Note: On the job assessment will not entail additional resources. However, rosters may need to be amended for simulation e.g. Search and Rescue Exercise (SAREX).

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operations manuals.

# PUAAMS007 Coordinate search and rescue operations

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to coordinate a Search and Rescue (SAR) incident, in accordance with organisational policies and procedures.

The unit is applicable to individuals undertaking limited search and rescue activities in support of national Search and Rescue (SAR) authorities. Team members and crews may be members of a range of government and/or non-government agencies or organisations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable

## Competency Field

Aviation Marine Search and Rescue

## Unit Sector

Aviation Marine Search and Rescue

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Prepare search plan

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Search and rescue assets and potential assets are identified and recorded in databases
- 1.2** Strategic and tactical objectives are identified, in accordance with search and rescue unit plans

- 1.3 Strategies to achieve objectives are identified
  - 1.4 Hazards are identified, risks assessed and control measures implemented
  - 1.5 Information management strategies are identified and applied
  - 1.6 Search and rescue procedures and policies are communicated to personnel, groups and other organisations, in accordance with the needs of those people
- 2 **Apply datum search planning principles**
  - 2.1 Last known and/or most probable position of missing person is established from available data
  - 2.2 Initial search procedures are implemented, in accordance with search and rescue organisational policies
  - 2.3 Calculations are made to establish intended track, area or position, in accordance with planned route
  - 2.4 Time frame for survival of the missing persons is calculated
  - 2.5 Physical and environmental factors are determined to assist in decision making
  - 2.6 Search area is calculated consistent with organisational policies and procedures
  - 2.7 Search pattern and track spacing is determined
  - 2.8 Probability of detection factor for the missing person is calculated
  - 2.9 Acceptability of probability of detection factor is evaluated
  - 2.10 Search area is recalculated or redefined, determined by availability of assets, changing weather conditions and search time available
- 3 **Apply rescue planning principles**
  - 3.1 Nature of problem and/or distress is determined, in accordance with the available information
  - 3.2 Rescue resources are identified, mobilised and monitored

- |                                         |            |                                                                                                                              |
|-----------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------|
|                                         | <b>3.3</b> | Operational risks are assessed and minimised                                                                                 |
|                                         | <b>3.4</b> | Survivor delivery points are identified, in accordance with requirements and capability of the rescue platform               |
|                                         | <b>3.5</b> | Physical, geographic and medical factors are considered for rescue and delivery, in accordance with situational requirements |
|                                         | <b>3.6</b> | Time factors are considered, in accordance with situational requirements                                                     |
|                                         | <b>3.7</b> | Chosen solution is evaluated and reported against determined criteria                                                        |
| <b>4 Evaluate operational direction</b> | <b>4.1</b> | Search and rescue plan is implemented and amended as dictated by the requirements of the situation                           |
|                                         | <b>4.2</b> | Process of continual evaluation is applied                                                                                   |
|                                         | <b>4.3</b> | Contingency planning is conducted, in accordance with organisational policies and procedures                                 |
|                                         | <b>4.4</b> | Regular briefings and debriefings are conducted with relevant personnel                                                      |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

# Assessment Requirements for PUAAMS007 Coordinate search and rescue operations

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying datum search planning principles
- collecting and analysing information
- communicating and consulting with a range of individuals using approved methods
- communicating information
- developing search area to suit available assets including determining a search pattern and track spacing
- evaluating operational directions
- following organisational policies and procedures including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- identifying potential search patterns and their use for terrains
- planning for results
- preparing search and rescue plans and making recommendations based on research to those in charge
- using initiative to achieve goals
- utilising rescue planning principles

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- communication techniques
- coronial requirements in relation to search and rescue
- environmental factors
- hypothermia and hyperthermia factors
- industry standards including national and international search and rescue manuals or reference texts
- legislation relevant to the operation, incident, response and organisation
- operational, corporate and strategic plans

- organisational policies and procedures including operating procedures, performance standards, quality standards, Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements and risk mitigation
- personnel practices and guidelines
- physiological factors
- potential rescue platform capabilities and limitations
- risk management principles
- safe work practices
- team building and coaching concepts

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

# PUAAMS008 Manage search and rescue operations

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to manage search and rescue operations in accordance with organisational policies and procedures.

The unit is applicable to individuals undertaking limited search and rescue activities in support of national Search and Rescue (SAR) authorities. Team members and crews may be members of a range of government and/or non-government agencies or organisations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Aviation Marine Search and Rescue

## Unit Sector

Aviation Marine Search and Rescue

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Develop strategies

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Search and rescue parameters are identified based on information available

**1.2** Search and rescue strategy is developed based on information available

- 1.3 Resources are identified, in accordance with strategy based on available information
      - 1.4 Strategy is evaluated and reviewed as determined by the input of information and review of available resources
- 2 Coordinate team members**
  - 2.1 Team members are informed of the scenario and strategy determined from outcome of review of information and resource requirements
  - 2.2 Team members are briefed on their roles and responsibilities and the way the team will operate
  - 2.3 Tasks are allocated to team members commensurate with their roles in the team and level of competence
  - 2.4 Confirmation is gained from team members of an understanding of the scenario, their role and the roles of others in the team
  - 2.5 Performance of team members is monitored and reviewed, as the scenario unfolds, to determine ongoing requirements
  - 2.6 Feedback from team members is received and relayed to others
- 3 Liaise with internal and external authorities, agencies and organisations**
  - 3.1 Briefings are provided to appropriate personnel, in accordance with organisational policies and procedures
  - 3.2 Resources are monitored and reviewed to determine changing requirements
  - 3.3 Guidance and support are provided and sought from authorities, organisations and agencies, in accordance with requirements
- 4 Manage communications systems**
  - 4.1 Communications systems are identified as appropriate to the situation and strategy
  - 4.2 Communication systems are selected, in accordance with requirements
  - 4.3 Communication systems are managed to provide optimum capability
- 5 Manage search and rescue records**
  - 5.1 Records are managed to ensure quality and attention to detail

- 5.2 Intended audience for written report is identified and expectations are negotiated
- 5.3 Content of report is accurate and written in a concise and logical manner
- 5.4 Report is disseminated to the intended audience in a timely manner

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

records must include

- databases
- logs and files

## Unit Mapping Information

This unit replaces and is equivalent to PUAAMS008B Manage search and rescue operations.

# Assessment Requirements for PUAAMS008 Manage search and rescue operations

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- communicating and consulting with a range of individuals including conducting briefings
- conveying strategies and plans to team members
- coordinating team members
- developing strategies to undertake search and rescue operations based on information available
- following organisational policies and procedures
- liaising with internal and external authorities, agencies and organisations
- making search and rescue operational decisions
- managing communication systems
- managing search and rescue records
- successfully negotiating outcomes
- utilising negotiation techniques
- writing reports and maintaining records

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and include knowledge of

- coaching and team building concepts including guidance and support
- communication systems available within the rescue coordination centre
- communication techniques including briefings
- equipment and resources for search and rescue operations
- management techniques
- organisational documentation including reports and report
- organisational policies, procedures and protocols
- personal abilities and competence levels

- personnel entitlements and administrative procedures
- search and rescue resource capabilities and limitations
- team member capabilities
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
  - Note: the roster may need to be amended if simulation e.g. search and rescue exercise is selected as the method of assessment
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operations manuals.

# PUABIO001 Conduct planning in a biosecurity emergency response

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit involves the skills and knowledge required to conduct biosecurity emergency response planning and to contribute to outputs (e.g. incident action plans, resourcing requirements and tracking, operational situation reports, maps and status boards) produced by personnel with responsibility for the outputs.

This could be part of a continuous activity with a daily, weekly or longer cycle. Individuals working within any functional area within a Control Centre or Forward Command Post undertaking emergency response planning tasks as part of a team, will typically work under supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Biosecurity

## Unit Sector

Biosecurity

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Contribute to the planning process**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1.1 Planning tasks specific to the biosecurity emergency response are identified**

- 1.2 Individual role and responsibilities within the biosecurity emergency response team are identified, in accordance with organisational procedures and in consultation with approved personnel
    - 1.3 Biosecurity emergency response planning tasks and outputs are identified
    - 1.4 Timelines and potential constraints with the biosecurity emergency response planning processes are identified
    - 1.5 Legislative requirements, industry standards, codes of practice and safe work practices for health and wellbeing are identified and implemented, in accordance with organisational procedures
- 2 **Perform planning activities**
  - 2.1 Sources of biosecurity emergency response planning information are identified and used, in accordance with organisational procedures
  - 2.2 An information collection plan is followed and implemented, as required
  - 2.3 Information is prepared in the required format for biosecurity emergency response planning task outputs
  - 2.4 Biosecurity emergency response planning task outputs are recorded and documented, in accordance with organisational procedures, using approved incident management system templates and technology
  - 2.5 Biosecurity emergency response planning task outputs are disseminated to approved personnel, in accordance with organisational procedures and requirements
  - 2.6 Visual displays are updated to reflect current biosecurity emergency response situation
- 3 **Review planning activities**
  - 3.1 Immediate supervisor is briefed when biosecurity emergency response planning tasks are completed
  - 3.2 Feedback on quality and timeliness of biosecurity emergency response planning tasks is assessed
  - 3.3 Biosecurity emergency response planning documentation managed, in accordance with organisational procedures and requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

New unit, no equivalent unit.

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUABIO001 Conduct planning in a biosecurity emergency response

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) guidelines
- developing collection plans
- finding and using sources of biosecurity emergency response functional area information
- identifying biosecurity emergency response roles and responsibilities
- meeting legislation, industry standards, codes of practice and regulation requirements
- planning task outputs for biosecurity emergency response are produced within identified timelines
- producing inputs and outputs that meet identified functional area requirements
- using organisational documentation
- working with incident management systems including tools and templates

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- biosecurity emergency response planning inputs and outputs for the functional area
- biosecurity emergency response planning processes for relevant functional area
- biosecurity emergency response planning timelines
- biosecurity emergency response roles and responsibilities
- collection plans
- difference between levels of biosecurity emergency response planning tasks – strategic, tactical and operational
- dissemination of information using briefing and debriefing processes
- documentation and reporting requirements
- incident management systems including response planning guides and templates
- legislation, industry standards, codes of practice and regulations
- organisational documentation
- organisational policies and procedures
- sources of biosecurity emergency response functional area information

- types of visual displays
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

## PUACOM001 Communicate in the workplace

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to interact with people internally and externally through verbal, non-verbal and written communication and to follow verbal and written instructions in the work place. It includes communicating verbally and non-verbally with clients, giving and receiving instructions, taking part in group discussions, participating in informal meetings and preparing to process routine correspondence and records.

The unit is applicable to all personnel but has a specific focus on the communication skills required by individuals at entry level in public safety organisations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

Community

### Unit Sector

Public Safety

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### **1 Communicate verbally**

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Language used in communications is clear, concise and appropriate to client, assignment and organisational requirements

- |                                                                                |            |                                                                                                                         |
|--------------------------------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------|
|                                                                                | <b>1.2</b> | Active listening skills and questioning techniques are used to clarify issues                                           |
|                                                                                | <b>1.3</b> | Established communication methods are used for routine and non-routine communications                                   |
| <b>2 Communicate non-verbally</b>                                              | <b>2.1</b> | Non-verbal communication is positive, culturally appropriate and tailored to the audience                               |
|                                                                                | <b>2.2</b> | Non-verbal communication is consistent with verbal communication                                                        |
| <b>3 Communicate with clients</b>                                              | <b>3.1</b> | Questioning, learning and summarising skills are used to establish client needs                                         |
|                                                                                | <b>3.2</b> | Client needs are addressed, in accordance with organisational policy and procedures                                     |
|                                                                                | <b>3.3</b> | Confidentiality is observed, in accordance with organisational policies and procedures                                  |
| <b>4 Give and receive instructions</b>                                         | <b>4.1</b> | Instructions received are acted upon within an agreed time frame to meet organisational needs                           |
|                                                                                | <b>4.2</b> | Difficulties and/or problem areas are identified and communicated to appropriate personnel in a timely manner           |
|                                                                                | <b>4.3</b> | Clarification of instructions is sought from appropriate personnel                                                      |
|                                                                                | <b>4.4</b> | Instructions are relayed clearly, concisely and accurately and confirmation is obtained                                 |
| <b>5 Take part in group discussions and informal meetings</b>                  | <b>5.1</b> | Contributions are made when in small informal group activities and meetings to facilitate organisational outcomes       |
|                                                                                | <b>5.2</b> | Responses are sought from and provided to other group members in a constructive way                                     |
|                                                                                | <b>5.3</b> | Views and opinions of individuals or group are obtained, acknowledged and accurately represented to others, as required |
| <b>6 Prepare and process routine written correspondence, notes and records</b> | <b>6.1</b> | Information and ideas are presented in a format, language and time frame to meet organisational requirements            |

- 6.2 Presentation of written documents meets organisational standards of style and accuracy
- 6.3 Documents are processed to comply with organisational policies and procedures and legislative requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUACOM001C Communicate in the workplace.

# Assessment Requirements for PUACOM001 Communicate in the workplace

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- communicating in the work place including in group settings, with clients, giving and receiving instructions
- complying with organisational policies and procedures including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- following written instructions
- interacting with clients
- preparing and processing routine written correspondence, notes and records
- taking part in group discussions and informal meetings
- using information technology
- using verbal and non-verbal communication techniques

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- client needs
- group communication techniques
- modes and methods of communication
- non-verbal and verbal communication techniques
- organisational documentation, policies and procedures including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- routine correspondence and reports
- small group dynamics
- types of instructions
- meeting requirements
- written communication techniques

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
  - with a combination of oral and/or written communication
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, regulations, equipment specifications, codes of practice and operation manuals.

## PUACOM002 Provide services to clients

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to interact with internal and external clients. It includes identifying and determining client needs and expectations and managing their expectations.

The unit is applicable to personnel who have a requirement to communicate with clients as part of their public safety role. This may include personnel who have a specific client contact role, as well as those in operational roles who meet members of the public as part of their duties.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

Communication

### Unit Sector

Public Safety

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### **1 Identify client needs and expectations**

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Current and potential clients are identified

**1.2** Public Safety needs and expectations are discussed and clarified with clients

- |                                                           |            |                                                                                                                      |
|-----------------------------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------|
|                                                           | <b>1.3</b> | Range of possible organisational responses are communicated to the client in a timely manner                         |
|                                                           | <b>1.4</b> | Client is informed of options for further action, in accordance with organisational procedures                       |
| <b>2 Determine and implement response to client needs</b> | <b>2.1</b> | Appropriate decision making processes are established with client and pertinent stakeholders                         |
|                                                           | <b>2.2</b> | Options are identified, in accordance with organisational procedures                                                 |
|                                                           | <b>2.3</b> | Decision making criteria is identified taking into account client needs and organisational context                   |
|                                                           | <b>2.4</b> | Decision making criteria are applied to options to identify a range of relevant outcomes                             |
|                                                           | <b>2.5</b> | Appropriate response is selected and implemented, in accordance with organisational procedures                       |
|                                                           | <b>2.6</b> | Client needs are recognised, in accordance with anti-discrimination and other organisational policies and procedures |
| <b>3 Manage client expectations</b>                       | <b>3.1</b> | Courtesy, consideration and sensitivity are applied to all clients                                                   |
|                                                           | <b>3.2</b> | Documentation is obtained, completed and processed, in accordance with organisational policies and procedures        |
|                                                           | <b>3.3</b> | Organisational policy and procedures relating to confidentiality are implemented                                     |
|                                                           | <b>3.4</b> | Assistance is sought to manage clients' expectations, in accordance with organisational procedures                   |
|                                                           | <b>3.5</b> | Clients are referred, where appropriate, to other personnel to ensure their needs are managed                        |

## PUACOM003 Manage information

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to manage information to support the achievement of organisation's objectives. It includes identifying information needs and sources, collecting and analysing information and using information management systems to record and support results.

The unit is applicable to personnel who have responsibility for ensuring that information is collected and disseminated to team members and that data and information is stored in organisational information systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

Information

### Unit Sector

Public Safety

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### **1 Identify information needs and sources**

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |            |                                                                                      |
|------------|--------------------------------------------------------------------------------------|
| <b>1.1</b> | Information needs of individuals and teams are determined and sources are identified |
| <b>1.2</b> | Information held by the organisation is reviewed to                                  |

|                                             |            |                                                                                                                                                       |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUACOM003B Manage information.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUACOM003 Manage information

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- collating and disseminating information
- collecting, analysing, synthesising and evaluating information
- communicating with personnel
- following organisational policies and procedures including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- identifying information needs and sources
- meeting information presentation requirements
- presenting written information
- recording information
- undertaking the analysis and evaluation of information
- using management information systems to store and retrieve data
- working with organisational information collection techniques and methods

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- analysis and display techniques
- analysis and evaluation of information
- information collection techniques and methods
- information collection, collation and dissemination processes
- information management systems including storage requirements and methods
- organisational documentation, policies and procedures including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- organisational objectives
- presentation of information
- privacy principles
- report requirements

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, regulations, equipment specifications, codes of practice and operation manuals.

# PUACOM005 Foster a positive organisational image in the community

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to enable two-way communication with the community and to promote a positive public image. It includes promoting and representing the organisation in the community and advising and involving the community in public safety activities.

The unit is applicable to personnel who are required to take an active community engagement and educational role.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

## PUACOM006 Plan and conduct a public awareness program

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to develop awareness in the local community about public safety and an understanding of an organisation's services, facilities and activities. It includes planning and conducting public awareness and information presentations; visiting facilities or specific locations of interest; evaluating and/or reviewing presentations and demonstration activities; storing resources and completing records.

The unit is applicable to personnel who are required to take an active community engagement and education role.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUACOM005 Foster a positive organisational image in the community

### Competency Field

Community Safety

### Unit Sector

Public Safety

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Plan public awareness and information presentation**

- 1.1** Details of audience requirements are confirmed to ensure the presentation meets client expectations
- 1.2** Objectives of the presentation and respective roles of those involved are determined in consultation with relevant personnel
- 1.3** Presentation is structured to meet the needs of the audience, anticipated questions and subject matter to be presented
- 1.4** Subject matter is clarified to confirm information is current and accurate
- 1.5** Equipment, aids and resources for the audience are identified and organised

#### **2 Conduct public awareness and information presentation**

- 2.1** Information is accurate, culturally appropriate and is presented clearly and logically
- 2.2** Aids and equipment are used to help the audience understand the information being presented
- 2.3** Presentations are conducted using recognised principles of group learning appropriate to audience characteristics
- 2.4** Feedback from audience and observers is used to assist in assessment of performance and program content
- 2.5** Publications suitable to audience and sources of additional information are provided
- 2.6** Questions asked are answered and supplemented with relevant information
- 2.7** Queries outside area of responsibility or expertise are referred to relevant area and/or personnel

#### **3 Conduct visits to facilities and specific locations of interest**

- 3.1** Facilities, locations and/or equipment are prepared, prior to demonstration or tour to promote a positive public image, to meet organisational standards and Work, Health and Safety/Occupational Health and Safety

|                                                               |                                                                                                                                                       |
|---------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                               | (WHS/OHS) guidelines                                                                                                                                  |
|                                                               | 3.2 Information given is accurate and provides comprehensive coverage of the facility, its location and equipment being discussed and/or demonstrated |
| 4 <b>Store resources and complete records</b>                 | 4.1 Equipment and resources are stored, in accordance with organisational procedures                                                                  |
|                                                               | 4.2 Records of presentations and/or demonstrations are completed, in accordance with organisational procedures and requirements                       |
| 5 <b>Evaluate and review presentations and demonstrations</b> | 5.1 Improvements to own delivery of presentations are sought and recorded                                                                             |
|                                                               | 5.2 Recommendations for improvement to presentations and/or demonstrations and associated resources are made to relevant personnel                    |

## Foundation Skills

## PUACOM007 Liaise with other organisations

### Modification History

**Release 2.0** This is the second release of this unit of competency in the PUA Public Safety Training Package.

Clarification of text, addition of Performance Criteria and minor changes to Knowledge and Performance Evidence.

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to develop networks and relationships and to liaise with other organisations. It includes establishing networks and relationships and communicating and interacting with other organisations.

The unit applies to personnel who formally liaise on behalf of their own organisation with other organisations to increase response effectiveness and community safety. It should be noted that this unit does not address all of the functions of an incident management liaison officer.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUACOM005 Foster a positive organisational image in the community

### Competency Field

Community Safety

### Unit Sector

Public Safety

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Establish networks and relationships**

- 1.1** Formal and informal network opportunities are identified that will support ongoing and future liaisons and collaboration
- 1.2** Relationships are developed which provide identifiable benefits to the organisation from shared expertise, information and resources
- 1.3** Meetings and forums that support mutual cooperation are participated in
- 1.4** Consultation with affected and interested parties is undertaken to support organisational goals and objectives

#### **2 Communicate and interact with other organisations**

- 2.1** Information is provided to other organisations in a clear, concise and comprehensive manner
- 2.2** Communication with other organisations is conducted in accordance with organisational policies and procedures
- 2.3** Information gathered from other organisations is used for improvement of services and to avoid duplication of effort
- 2.4** Meeting outcomes are documented and disseminated

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUACOM007B Liaise with other organisations.

## Links

Companion Volume Implementation Guides are found in VETNet -

# Assessment Requirements for PUACOM007 Liaise with other organisations

## Modification History

**Release 2.0** This is the second release of this qualification in the PUA Public Safety Training Package.

Clarification of text, addition of Performance Criteria and minor changes to Knowledge and Performance Evidence.

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- communicating, liaising and interacting with other organisations
- documenting and disseminating meeting outcomes
- following organisational policies and procedures
- networking and developing relationships
- participating in meetings and forums
- providing accurate and clear information.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- confidentiality requirements and privacy principles
- goals and objectives of own organisation and other organisations, agencies and sectors
- interorganisational cooperation and collaboration techniques
- key roles and responsibilities in own and other organisations
- organisational documentation, policies and procedures
- protocols and procedures for meetings.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of exercises and/or case studies
- appropriate materials and equipment currently used in industry
- applicable documentation including organisational procedures, standards, equipment specifications, regulations, codes of practice and operational manuals.

# PUACOM008 Develop and organise public safety awareness programs

## Modification History

**Release 2.0** This is the second release of this unit of competency in the PUA Public Safety Training Package.

Clarification of text, addition/deletion of Performance Criteria and minor changes to Knowledge and Performance Evidence.

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to develop, implement and evaluate public safety awareness programs. It includes determining scope of program and developing, implementing and evaluating the effectiveness of public safety awareness programs.

The unit applies to personnel who formally liaise with other organisations to increase response effectiveness and community safety.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUACOM006 Plan and conduct a public awareness program

## Competency Field

Community Safety

## Unit Sector

Public Safety

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Determine scope of program

- 1.1 Research and analysis is undertaken to determine need for a public safety awareness program
- 1.2 Target audience and their characteristics are defined to inform public safety awareness program planning
- 1.3 Public safety awareness program aims and objectives are specified and performance measures are identified

#### 2 Develop program

- 2.1 Program type, implementation and support requirements to meet needs of target audience and organisational objectives are determined
- 2.2 Sponsorship and joint venture opportunities are investigated to maximise public safety awareness program effectiveness
- 2.3 Resource options to implement public safety awareness programs are developed and preferred options are selected
- 2.4 Resources are accessed to develop public safety awareness program
- 2.5 Pilot public safety awareness program is conducted and its effectiveness is assessed and changes are made, as required
- 2.6 Constraints and opportunities for implementing public safety awareness programs are identified

#### 3 Implement program

- 3.1 Production of resources is managed to ensure that materials are available in sufficient quantities
- 3.2 Public safety awareness program is managed to meet agreed performance indicators within budget
- 3.3 Ongoing monitoring of public safety awareness program is undertaken during implementation phase

#### 4 Evaluate effectiveness of program

- 4.1 Public safety awareness program evaluation is conducted against performance measures

- 4.2** Adjustments are made to public safety awareness program to reflect evaluation outcomes and feedback received

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## PUACOM010 Promote the organisation's mission and services

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to build networks which facilitate the promotion and representation of the organisation's mission and services. It includes building networks and developing working relationships whilst representing and promoting the organisation's mission and services.

The unit is applicable to public safety managers with a broad and strategic role in promoting the organisation's mission and services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

## PUACOM012 Liaise with media at a local level

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to liaise with media at an incident and for providing information about local events. It includes determining media requirements for providing information to publicise an event.

The unit is applicable to personnel of local public safety groups who are delegated the responsibility to liaise with media in both emergency and non-emergency situations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

Communication

### Unit Sector

Public Safety

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### **1 Determine media requirements**

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Organisational procedures are followed when liaising with the media
- 1.2** Media's potential interest is assessed and arrangements are made to meet their needs

- |                                       |            |                                                                                                                                   |
|---------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------|
|                                       | <b>1.3</b> | Operational responsibilities are balanced against provision of information to the media                                           |
| <b>2 Provide information to media</b> | <b>2.1</b> | A positive image of the organisation is maintained when liaising with the media                                                   |
|                                       | <b>2.2</b> | Every opportunity is used to promote the organisation, its services and personnel, in accordance with organisational requirements |
|                                       | <b>2.3</b> | Information is supplied to the media when operational situation permits                                                           |
| <b>3 Publicise an event</b>           | <b>3.1</b> | Relationship is established with media contacts, in accordance with organisational requirements                                   |
|                                       | <b>3.2</b> | Event details and support materials are gathered and presented in a logical and concise manner to the media                       |
|                                       | <b>3.3</b> | Information provided to media is recorded and maintained, in accordance with organisational requirements                          |

- provision of relevant and succinct information
- requirements of different media
- role of media in disseminating information

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, regulations, codes of practice and operation manuals.

# PUACOM013 Administer a local public safety group

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to administer a local public safety group such as a State Emergency Services (SES) unit, a surf lifesaving club, a local brigade or a volunteer marine rescue unit.

The unit is applicable to volunteer non-accountant managers of local public safety groups. It includes managing administrative functions for distributing organisational information, preparing strategic plans, administering organisational finances and arranging and conducting audits.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Community Program

## Unit Sector

Public Safety

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Manage administrative functions**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |            |                                                                                                     |
|------------|-----------------------------------------------------------------------------------------------------|
| <b>1.1</b> | Administrative functions are scheduled and allocated to self and/or others to meet agreed deadlines |
| <b>1.2</b> | Records are maintained, in accordance with organisational procedures                                |

- |                                                |            |                                                                                                                                           |
|------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------|
|                                                | <b>1.3</b> | Records are completed clearly, accurately and legibly                                                                                     |
|                                                | <b>1.4</b> | Records are filed accurately and systematically                                                                                           |
| <b>2 Distribute organisational information</b> | <b>2.1</b> | Organisational information and instructions are communicated, in accordance with organisational procedures, to others on an ongoing basis |
|                                                | <b>2.2</b> | Information is directed to appropriate personnel                                                                                          |
|                                                | <b>2.3</b> | Communication is clear, unambiguous and relevant to the subject and target audience                                                       |
| <b>3 Prepare strategic plans</b>               | <b>3.1</b> | Strategic outcomes are established in the context of the organisation's direction                                                         |
|                                                | <b>3.2</b> | Plans to meet the strategic outcomes are developed and implemented                                                                        |
|                                                | <b>3.3</b> | Strategic plans are regularly reviewed and updated to incorporate changing circumstances                                                  |
| <b>4 Administer organisation finances</b>      | <b>4.1</b> | A budget is prepared, considering local needs and funding limitations                                                                     |
|                                                | <b>4.2</b> | Budget is administered, in accordance with organisational financial policies and procedures                                               |
|                                                | <b>4.3</b> | Expenditure is controlled to meet budget outcomes                                                                                         |
|                                                | <b>4.4</b> | Financial records are maintained, in accordance with organisational financial policies and procedures                                     |
|                                                | <b>4.5</b> | Standards of financial probity are adhered to, in accordance with organisational financial policies and procedures                        |
| <b>5 Arrange and conduct audits</b>            | <b>5.1</b> | Financial audits are arranged, in accordance with organisational procedures                                                               |
|                                                | <b>5.2</b> | Safety audits are periodically conducted, in accordance with organisational procedures and Work, Health and Safety guidelines             |
|                                                | <b>5.3</b> | Equipment stocktakes are conducted, in accordance with organisational procedures                                                          |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUACOM013B Administer a local public safety group.

# Assessment Requirements for PUACOM013 Administer a local public safety group

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- administering organisation finances
- arranging and conducting audits
- distributing organisational information
- evaluating resource usage
- following organisational policies and procedures including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- interpreting and monitoring financial reports
- managing administrative functions
- monitoring resource allocation and usage
- operating recognised filing system
- performing equipment stocktakes
- planning work activities and setting priorities
- preparing budgets and strategic plans
- producing resource reports
- undertaking safety audits

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- administrative functions including preparation of correspondence, requests for information are actioned, authorisation of equipment requisitions and expenditure and maintenance of records and the collection of statistics
- equipment and stock handling
- finance and budget processes
- financial records and reports
- legislative requirements
- management information systems

- organisational documentation, policies and procedures including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements and budget development and financial management procedures
- privacy principles
- resources
- safety audit and risk mitigation processes
- strategic plans
- tools to keep records and produce resource reports

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, regulations, codes of practice and operation manuals.

|                                                               | <b>1.4</b> | Community members and organisations are consulted, where appropriate, during the identification and/or inspection process                  |
| <b>2 Assess hazard information to determine level of risk</b> | <b>2.1</b> | Level of risk is determined using organisational risk management procedures and processes                                                  |
|                                                               | <b>2.2</b> | Liaison is undertaken with external organisations, as required, in accordance with organisational procedures                               |
| <b>3 Implement risk mitigation guidelines</b>                 | <b>3.1</b> | Risk mitigation strategy is selected from a pre-determined list and implemented, in accordance with the organisational procedures          |
|                                                               | <b>3.2</b> | Risk reduction activities are conducted, in accordance with organisational procedures                                                      |
|                                                               | <b>3.3</b> | Mitigation guidelines are implemented with minimum damage to the environment, in accordance with legislation and organisational procedures |
| <b>4 Evaluate mitigation strategies</b>                       | <b>4.1</b> | Feedback is provided to stakeholders on risk mitigation procedures and processes                                                           |
|                                                               | <b>4.2</b> | Mitigation strategies are evaluated for effectiveness and community acceptance                                                             |
|                                                               | <b>4.3</b> | Issues are documented and reported to supervisor, in accordance with organisational procedures                                             |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUACOM015B Conduct community safety activities.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUACOM015 Conduct community safety activities

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- advising on risk mitigation strategies
- analysing feedback
- communicating information orally and/or in writing
- completing documentation
- conducting community safety inspections
- evaluating hazard information to determine level of risk
- identifying specific hazards within area of responsibility that may impact on life, property, process and the environment
- implementing risk management procedures
- liaising with community groups and stakeholders
- reporting information to relevant personnel
- working with organisational policies and procedures including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- communication techniques
- community stakeholders
- hazards that may impact on life, property, process and environment
- legislation and regulations
- organisational documentation, policies and procedures including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- organisational risk identification and management including hazard reduction, isolation, removal and management
- report requirements
- risk management and risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUACOM016 Manage media requirements at major incident

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to design and develop marketing communication plans, manage the media and provide information about a major incident. It includes assessing scene for media requirements, developing a media strategy, providing information to the media and promoting the organisation via the media.

The unit applies to public safety personnel who have been delegated media liaison responsibilities during major incidents, either at the scene or at a command centre.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable

## Competency Field

Community Safety

## Unit Sector

Public Safety

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Assess scene for media requirements**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Restricted and special access areas are clearly defined for media personnel to ensure safety of the operation and to prevent contamination of evidence
- 1.2** Media access to personnel, volunteers, victims and casualties is controlled in accordance with organisational

- procedures
- 1.3 Provision of information to the media is identified and reviewed to comply with organisational media requirements
  - 1.4 Media personnel and stakeholders are briefed and monitored for compliance with Work Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- 2 Develop media strategy**
- 2.1 Media plan and arrangements are developed to meet media requirements
  - 2.2 Organisational media representative is selected and briefed
  - 2.3 Media briefing area is allocated with required resources
  - 2.4 Media cooperation is gained to coordinate information flow and for approved dissemination of information to and from the public
  - 2.5 Media strategy is reviewed and modified at regular intervals to suit incident level and operational demands
  - 2.6 Approval is gained for release of information and warnings, as required
  - 2.7 Information briefing sessions and tours are scheduled at appropriate times to minimise impact on operational activities and requirements
- 3 Provide information to media**
- 3.1 Organisational policies and procedures are followed when liaising with the media
  - 3.2 Media updates are provided in accordance with operational requirements
  - 3.3 Interview and photograph opportunities are scheduled and conducted to provide information, as required
  - 3.4 Other organisations at the incident are consulted to ensure a consistent presentation of information to the media
  - 3.5 Accurate records of media enquiries and interviews are maintained

- |                                             |            |                                                                                                                                                                                              |
|---------------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                             | <b>3.6</b> | Two way communication arrangements between the organisation and media is maintained                                                                                                          |
| <b>4 Promote organisation via the media</b> | <b>4.1</b> | Work, activities and achievements of the organisation, volunteers and other organisational personnel are promoted throughout the incident to assist in maintaining morale and public profile |
|                                             | <b>4.2</b> | Professional standards are maintained in accordance with organisational requirements                                                                                                         |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is not equivalent to PUACOM009 Manage media requirements at major incident.

## Links

# Assessment Requirements for PUACOM016 Manage media requirements at major incident

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- assessing scene and organisational requirements
- communicating facts in a clear and concise manner
- developing a media strategy
- following organisational policies and procedures
- liaising with media and other organisational personnel
- maintaining professional standards
- promoting the organisation via the media
- providing information to the media.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- legal and organisational requirements relating to privacy, confidentiality, libel, accuracy and discrimination
- local, regional and national media requirements
- news worthiness of information
- organisational documentation, policies and procedures
- requirements of different media including social media, newspapers, magazines, radio and television
- role of media in disseminating information
- sources of information including from monitoring media
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training

Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of exercises and/or case studies
- appropriate materials and equipment currently used in industry
- applicable documentation including organisational procedures, standards, equipment specifications, regulations, codes of practice and operational manuals.

# PUAECL001 Evaluate societal threats, uncertainty and surprise

## Modification History

**Release 1.** This is the first release of this unit of competency in the Public Safety Training Package.

## Application

This unit describes the skills and knowledge required to evaluate societal threats, surprise and uncertainty based on research, intelligence gathering, policy guidelines and planning outcomes. It applies to roles with responsibility for risk mitigation, crisis preparedness, crisis response and recovery functions for communities and/or organisations.

A crisis includes varying events of significant disruption that can have broad effects on relationships among community and/or organisation members. It is characterised by high levels of adversity, ambiguity, uncertainty, opportunity and change. Leaders in a crisis need to independently make sense of uncertain situations, creatively seek solutions and apply judgment and decision making in highly pressurised environments.

Emergency services leaders work in highly autonomous roles, within collegiate environments, that require the ability to exercise and display initiative and to design, plan, conduct and report research activities. Emergency service leadership roles are complex requiring the individual to make ethical decisions in variable, evolving and dynamic circumstances.

No licensing, legislative or certification requirements apply to unit at the time of publication.

## Pre-requisite Unit

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

**1 Scan internal and external environment**

- 1.1** Identify and evaluate information needs and intelligence sources that can be utilised
- 1.2** Design methods for scanning internal and external environments, including creating objectives, collection methods, collation techniques and identification of scope and limitations
- 1.3** Observe and record information, in accordance with authorised methods, using crisis information management systems
- 1.4** Apply analytics to synthesise information on internal and external societal environment threats
- 1.5** Seek, discover and review elements of uncertainty and surprise that can exist in internal and external societal environments
- 1.6** Evaluate competing understandings of an evolving reality

**2 Identify need for research**

- 2.1** Identify threats or emerging issues related to internal and external societal environment that can be researched
- 2.2** Justify the need and level of research required to undertake evaluation of internal and external societal environment
- 2.3** Articulate research questions that will be used
- 2.4** Establish and articulate the authorising environment for research to proceed in accordance policy guidelines
- 2.5** Communicate research purpose to key stakeholders and/or participants

**3 Design and conduct research**

- 3.1** Establish investigation scope for research in accordance planning outcomes
- 3.2** Develop and/or justify research methods
- 3.3** Undertake an investigation into internal and external societal environment threats and/or uncertainty using nominated research methods

**4 Analyse research data**

- 4.1** Analyse collected and collated data, in accordance with nominated research methods

- |                                        |            |                                                                                                           |
|----------------------------------------|------------|-----------------------------------------------------------------------------------------------------------|
|                                        | <b>4.2</b> | Validate and test research questions, in accordance with nominated research methods                       |
|                                        | <b>4.3</b> | Corroborate findings within a corpus of knowledge                                                         |
| <b>5 Disseminate research findings</b> | <b>5.1</b> | Prepare short reports, policy guidelines and/or recommendations, in accordance with research requirements |
|                                        | <b>5.2</b> | Prepare extensive reports and/or papers, in accordance with research requirements                         |
|                                        | <b>5.3</b> | Disseminate research outcomes to key stakeholders and/or participants                                     |

## PUAECL002 Lead and manage programs that develop resilience

### Modification History

**Release 1.** This is the first release of this unit of competency in the Public Safety Training Package.

### Application

This unit describes the skills and knowledge required to lead and manage programs that build resilience so that communities and organisations are better placed to manage adversity or disruptive events. It applies to roles in the public, private and non-government sectors involved in any aspect of building community or organisational resilience.

A crisis includes varying events of significant disruption having broad effects on relationships among the community and/or organisation members. It is characterised by high levels of adversity, ambiguity, uncertainty, opportunity and change. Leaders in a crisis need to independently and collaboratively make sense of uncertain situations, creatively seek solutions and apply judgment and decision making in highly pressurised environments.

Emergency service leaders typically work autonomously, within collegiate environments, that require the ability to build and develop relationships and partnerships with a broad range of formal and informal groups. Emergency service leadership roles are complex requiring the individual to make ethical decisions in variable, evolving and dynamic circumstances.

No licensing, legislative or certification requirements apply to the unit at the time of publication.

### Pre-requisite Unit

outcomes.

demonstrate achievement of the element.

**1 Enhance a culture of adaption in response to crisis**

- 1.1** Advocate the case for community and/or organisational resilience to key internal and external stakeholders
- 1.2** Establish a strategic vision and commitment to mitigate, prepare, respond and recover from a significant crisis
- 1.3** Design governance structures to encourage change, adaptation and diversity within a community and/or organisation
- 1.4** Design a program that develops a culture of continuous learning through engagement
- 1.5** Foster a resilience perspective in organisational and/or community development programs and activities through the leadership of an engagement program

**2 Establish strategic partnerships and arrangements**

- 2.1** Identify and engage key stakeholders, as part of planning and strategic objective setting
- 2.2** Develop, implement and lead relationships, partnerships and agreements to support the achievement of resilience outcomes
- 2.3** Conduct, monitor, review and adapt activities that reinforce and sustain relationships, partnerships and agreements

**3 Develop strategic and integrated risk management**

- 3.1** Identify and integrate high consequence and low likelihood risks related to significant crisis into a community or organisational strategy, management and capability building arrangement
- 3.2** Identify supply chain vulnerabilities and interdependencies, and evaluate the strategies to manage the associated threats and opportunities
- 3.3** Review resilience related objectives and outcomes as part of the community's or organisation's assurance and risk management program

**4 Promote a culture of resilience performance, change readiness and capability building**

- 4.1** Promote individual team and organisational learning and communications relevant to enhancing resilience within business as usual capabilities

- 4.2 Identify and apply improved resilience practices based on evidence and/or research findings
- 4.3 Measure leadership accountability related to resilience and the management of subsequent performance

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

# Assessment Requirements for PUAECL002 Lead and manage programs that develop resilience

## Modification History

**Release 1.** This is the first release of this unit of competency in the Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- auditing organisational or program certification and accreditation
- developing and implementing policies and procedures related to resilience programs
- ensuring resilience program quality
- identifying risk management and risk issue registers
- identifying vision, aims, objectives and goals of resilience program
- implementing service agreements and contracts
- managing leadership tasks and contingencies
- participating in joint operating groups, support packages, exercises, evaluations, and lessons management programs
- performing strategic communication and engagement activities
- reviewing and/or organising staff training and accreditation
- undertaking governance arrangements
- working across strategic planning activities
- working on program audits

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- audits, attestation and accreditation requirements
- business continuity management
- communication methods and protocols
- debrief techniques
- evaluation methods and tools
- exercise and scenario management
- governance requirements for programs
- management of leadership tasks and contingencies
- methodologies for lessons management, after action review and continuous improvement

- organisational development and psychology
- quality assurance
- resilience theory
- risk management
- state, national and international standards
- supply chains and their vulnerabilities

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect crisis conditions.

There must be evidence that the candidate has through work in embedded crisis activities

- increased the resilience of a sector of industry, organisation and/or community in a crisis
- lead and/or managed organisational resilience in a crisis

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or other simulations
- appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

## PUAECL003 Deliver value in crisis

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit describes the skills and knowledge required to create leadership value through the legitimate use of authority, operational accountability and capability, decision making and actions in a time of crisis. It applies to roles with responsibility for risk mitigation, crisis preparedness, crisis response and recovery functions for communities and/or organisations.

A crisis includes varying events of significant disruption having broad effects on relationships among community and/or organisation members. It is characterised by high levels of adversity, ambiguity, uncertainty, opportunity and change. Leaders in a crisis need to independently and collaboratively make sense of uncertain situations, creatively seek solutions and apply judgment and decision making in highly pressurised environments.

Emergency service leaders typically work autonomously, within collegiate environments, that require the ability to develop and build on relationships and/or partnerships for mandated action within informal and formal groups. Emergency service leadership roles are complex requiring the individual to make ethical decisions in variable, evolving and dynamic circumstances.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable

### Competency Field

Emergency Management

### Unit Sector

Not applicable

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Define value and its sources

- 1.1 Identify and anticipate negative crisis outcomes
- 1.2 Assess courses of action for their likely success, value contribution and level of authority required
- 1.3 Create intent and in doing so, identify crisis related objectives whilst maximising value
- 1.4 Prioritise value contribution and actions that can be taken during leadership of a crisis
- 1.5 Access and engage existing sources of value
- 1.6 Identify crisis leadership strategies to develop and retain trust in the building of value with teams, communities and organisations

#### 2 Identify and use legitimacy and support to authorise action

- 2.1 Scan political, legislative, regulatory and policy environments to identify and evaluate any legitimacy gaps
- 2.2 Identify and demonstrate how public normative views of crisis leadership can support action
- 2.3 Identify and demonstrate how legislative, regulatory and policy environments authorise crisis operating environments to sustain and influence the creation of leadership value
- 2.4 Create and develop a plan of opportunities for public engagement and certification of actions
- 2.5 Identify and harness solutions to the interest associated with enacting legitimacy and the likely and associated application of scrutiny to the crisis

#### 3 Scope, develop and rationalise operational capability

- 3.1 Assess, from a strategic leadership standpoint, the objectives and whole of crisis need for capability and resources
- 3.2 Develop an initial operating framework to ensure actions and capability are mobilised within required

timeframes

- |   |                                                                  |                                                                                                                                                                                     |
|---|------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|   | 3.3                                                              | Provide sound reasoning regarding deployment of operational capability to key stakeholders                                                                                          |
|   | 3.4                                                              | Display adaptive capacity and reflect on actions to deliver accurate and sound options and/or decisions during all phases of a crisis                                               |
|   | 3.5                                                              | Identify and evaluate need for human resource acquisition to support rationalisation and delegation of determined responsibility and management functions in all phases of a crisis |

# Assessment Requirements for PUAECL003 Deliver value in crisis

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- collecting, maintaining and properly storing information, intelligence and records associated with decision making
- demonstrating objectivity and informed decision making during a crisis
- documenting plans to mitigate and/or respond to crisis outcomes and/or altered operational decisions
- facilitating scrutiny of activities during a crisis
- identifying and undertaking legitimising actions during all phases of a crisis
- identifying and using the resources of a crisis management team
- identifying potential negative crisis outcomes and their origins
- implementing legislative and/or regulatory instruments or operational delegations
- making decisions in the absence of legislative, regulatory or delegated enablers
- managing leadership tasks and contingencies
- managing relationships with key stakeholders including scrutiny of activities and decision making processes
- recording activities and decisions
- reviewing and ensuring compliance to legislative, regulatory, procedural and organisational guideline requirements
- selecting suitable options and channels to engage the community in a crisis

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- crisis management plans and arrangements including national, state and territory emergency management frameworks
- evaluation methods and tools
- leadership theories and models
- legislation, regulations, instruments, procedures and guidelines and compliance requirements
- management of leadership task and contingencies
- risk management processes

- sources of public and/or leadership value
- stakeholder engagement processes and management strategies
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect crisis conditions.

Assessment of this unit will require an exercise that closely simulates work practices and replicates the range of crisis leadership activities likely to be encountered by the individual, alone or as part of a team, within a community and/or organisational context.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or other simulations
- appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operational manuals.

## PUAECL004 Lead in a crisis

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit describes the skills and knowledge required to lead sophisticated responses in a crisis. It applies to government and non-government roles with assigned accountability or responsibility for mitigation, preparedness and response and recovery functions for communities and/or organisations.

A crisis includes varying events of significant disruption having broad effects on relationships among communities and/or organisations. It is characterised by high levels of ambiguity, uncertainty, opportunity and change. Leaders in a crisis need to independently make sense of uncertain situations, creatively seek solutions and apply judgment and decision making in highly pressurised environments.

Emergency service leaders typically work autonomously, within collegiate environments, that require the ability to build and develop relationships and partnerships with a broad range of formal and informal groups. Emergency service leadership roles are complex requiring the individual to make ethical decisions in variable, evolving and dynamic circumstances.

No licensing, legislative or certification requirements apply to the unit at the time of publication.

# Assessment Requirements for PUAECL004 Lead in a crisis

## Modification History

**Release 1.** This is the first release of this unit of competency in the Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- communicating with external and internal stakeholders
- defining direction in complex group operations including
  - commanding tactical tasks
  - decision making through fostering fellowship and team building activities
  - maintaining a strategic focus under stress
  - making decisions based on limited information
  - problem solving using heuristic logic
- demonstrating accountability for actions and decisions taken in a crisis
- displaying crisis leadership through self-awareness, self-coaching and emotional awareness
- making decisions that display responsibility for the wellbeing of life and/or property
- managing leadership tasks and contingencies
- providing advice to internal and external stakeholders
- providing role clarity and direction
- resolving conflict
- supporting social and peer group activities
- undertaking leadership command of others
- utilising supporting, counselling, briefing and debriefing strategies

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- leadership models
- management of leadership tasks and contingencies
- models of conflict resolution, decision making and leadership evaluation
- physiology and psychology of stress and fatigue
- situational awareness
- strategies for reintegration to normal living
- support, counselling, briefing and debriefing strategies

- trauma and post traumatic effects in self and others
- trust building strategies

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment of this unit will require an exercise that closely simulates work practices and replicates the range of crisis leadership activities likely to be encountered by the individual, alone or as part of a team, within a community and/or organisational context.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or other simulations
- appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

## PUAECL005 Support communities for crisis

### Modification History

**Release 1.** This is the first release of this unit of competency in the Public Safety Training Package.

### Application

This unit describes the skills and knowledge required to build resilience so that communities and organisations are better placed to manage threats and opportunities in a crisis. It applies to government and non-government roles with assigned accountability or responsibility for mitigation, preparedness and response and recovery functions of communities and/or organisations.

A crisis includes varying events of significant disruption having a broad effect on relationships among communities and/or organisations. It is characterised by high levels of adverse ambiguity, uncertainty, opportunity and change. Leaders in a crisis need to independently make sense of uncertain situations, creatively seek solutions and apply judgment and decision making in highly pressurised environments.

Emergency service leaders typically work autonomously, within collegiate environments, that require the ability to build and develop relationships and partnerships for mandated action within a broad range of informal and formal groups. Emergency service leadership roles are complex requiring the individual to make ethical decisions in variable, evolving and dynamic circumstances.

No licensing, legislative or certification requirements apply to unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

Emergency Management

### Unit Sector

Not applicable

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Initiate, build and maintain relationships**

- 1.1.** Demonstrate the strategies that can be used when identifying leaders and connectors within a community and/or organisation during a crisis
- 1.2.** Debate the importance of cultivating relationships with leaders, community members and/or organisations that is based on an awareness of strengths, interests, sensitivities, dependencies and responsibilities
- 1.3.** Ascertain what relationships with voluntary associations and community organisations, regulators, suppliers and industry associations must be created and maintained during all phases of a crisis
- 1.4** Design a program that builds trust and collaborative leadership and provide a justification for the model

#### **2 Establish and grow partnerships with agencies and organisations**

- 2.1.** Identify relationship and partnership synergies that can be used during and following a crisis that displays an awareness of potential interests, sensitivities, dependencies and responsibilities
- 2.2.** Nominate and assess models for building meaningful relationships and partnerships using various communication methods
- 2.3.** Identify how to lead and maintain strategic partnerships based on trust, collaborative goals and agreed parameters

#### **3 Support communities**

- 3.1.** Map community and organisational strengths, challenges and assets in all phases of a disaster
- 3.2.** Demonstrate how to support and lead communities and/or organisations in deciding on their priority actions during a crisis
- 3.3.** Create a plan of action to support communities and/or organisations to identify resilience activities following a crisis

#### **4 Design and facilitate implementation of**

- 4.1** Design a model that demonstrates how to leverage social infrastructure networks and assets in support of

strategies

resilience activities

- 4.2** Identify and implement adaptive resilience strategies to address community and/or organisational needs

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This is a new unit.

# Assessment Requirements for PUAECL005 Support communities for crisis

## Modification History

**Release 1.** This is the first release of this unit of competency in the Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- adhering to legislative, regulatory and procedural guidelines
- communicating and consulting in an appropriately sensitive and engaging way with a community in crisis
- demonstrating leadership in community decision making
- developing and maintaining strategic relationships with organisations, community groups and individuals
- facilitating community involvement in mapping strengths, opportunities, assets and challenges
- identifying and reporting on community strengths, challenges and limitations
- managing leadership tasks and contingencies
- participating in community engagement activities, including meetings
- providing written strategies and plans
- reflecting critically on the qualities required to build and maintain relationships and partnerships
- undertaking community liaison in a business or event crisis
- working collaboratively to build strategic partnerships with other agencies and organisations

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- change and/or transformation in communities or organisations
- collaborative leadership
- community and organisational resilience theory
- community and organisational vulnerabilities and environments
- infrastructure and asset dependencies and interdependencies
- management of leadership tasks and contingencies
- participatory action research that builds community understanding including individual, community and organisational asset mapping, community profiling and assessment of

- community recovery needs
- public discourse and using formal and informal information flows and structures such as traditional media, social media platforms, leadership groupings, emergent community groups and social networks
- public participation including engagement theory and practice
- service arrangements including
  - emergency management arrangements
  - legislative or regulatory frameworks
  - mutual aid agreements
  - recovery programs at local, state and territory levels
- social and organisational psychology during and following traumatic events
- social structure, network analysis and social capital
- structure, processes and characteristics of community based organisations
- theory, models and tools for shifting culture and generating new resilient and innovative pathways and solutions

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

Assessment of this unit will require an exercise that closely simulates work practices and replicates the range of crisis leadership activities likely to be encountered by the individual, alone or as part of a team, within a community and/or organisational context.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or other simulations
- appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operational manuals.

## PUAECL006 Recognise personal effectiveness in a crisis

### Modification History

**Release 1.** This is the first release of this unit of competency in the Public Safety Training Package.

### Application

This unit describes the skills and knowledge required to lead and work with others in complex and uncertain circumstances, where threats and surprise can induce stress and anxiety in team members. It applies to roles with responsibility for risk mitigation, crisis preparedness, crisis response and recovery functions for communities and/or organisations.

A crisis includes varying events of significant disruption having broad effects on relationships among community and/or organisation members. It is characterised by high levels of adversity, ambiguity, uncertainty, opportunity and change. Leaders in a crisis need to independently make sense of uncertain situations, creatively seek solutions and apply judgment and decision making in highly pressurised environments.

Emergency services leaders work autonomously, within collegiate environments, that require the ability to build and develop relationships and partnerships for mandated action within a broad range of informal and formal groups. Emergency service leadership roles are complex requiring the individual to make ethical decisions in variable, evolving and dynamic circumstances.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

# Assessment Requirements for PUAECL006 Recognise personal effectiveness in a crisis

## Modification History

**Release 1.** This is the first release of this unit of competency in the Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- adapting to time limited and high stake decision making situations
- facilitating and demonstrating actions that create trust
- identifying alternative perspectives
- identifying barriers, preferences and appropriate methods for personal communication
- identifying personal strengths and weaknesses that impact leadership
- leading proactively and positively group decision making processes
- managing leadership tasks and contingencies
- seeking, receiving and reflecting on feedback from others
- self-assessing personal beliefs and decision making processes
- using formalised strategies that enhance leadership performance

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- ecology of cultural behaviour and thought patterns in groups including group thinking
- emotional responses to stimuli
- evidence based practices
- management of leadership tasks and contingencies
- models of emotional intelligence
- personal and group decision making theories
- personality and psychological assessment tools
- theories of trust

## Assessment Conditions

## PUAECL007 Define crisis context

### Modification History

**Release 1.** This is the first release of this unit of competency in the Public Safety Training Package.

### Application

This unit describes the skills and knowledge required to perform in a leadership role during phases of a crisis. It applies to roles assigned with accountability and/or responsibility for crisis mitigation, preparedness and response and recovery within communities and/or organisations.

A crisis is defined as an event of significant disruption having a broad effect on relationships among communities and/or organisations. It is characterised by high levels of adversity, ambiguity, uncertainty, opportunity and change. Leaders in the preparation, mitigation and recovery phases of crises have key roles in influencing and supporting stakeholders and communities. They need to independently make sense of uncertain situations, creatively seek solutions and apply judgment and decision making in highly pressurised environments.

Emergency service leaders typically work autonomously within collegiate environments that require the ability to build and develop relationships and partnerships with a broad range of formal and informal groups. Emergency service leadership roles are complex requiring the individual to make ethical decisions in variable, evolving and dynamic circumstances.

No licensing, legislative or certification requirements apply to the unit at the time of publication.

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- recording and relaying information accurately
- communicating orally and in writing
- following organisational policies and procedures including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- identifying telephony system faults and undertaking testing of system
- implementing organisational instructions
- using telephony equipment and systems including setting up, backup, accessing lines, system functions and terminating calls
- using telephony systems in time critical environments

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- fault identification and reporting and/or actioning requirements
- functions including conference calls, quick dial, hold, transfers, terminating calls and direct lines
- operations prioritisation
- organisational documentation, policies, procedures and protocols including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) practices and guidelines
- organisational instructions
- telephone communication techniques
- telephony backup arrangements and business continuity systems
- telephony equipment and its use including setup
- types of incoming and outgoing calls

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include

requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations that includes emergency and non-emergency situations, particularly in a stress environment involving emergency communications. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - backup systems and telephony systems
- applicable documentation including organisational policies and procedures, industry standards, regulations, codes of practice, equipment specifications, operations and systems manuals.

## PUAECO002 Process emergency incident calls and enquiries

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit involves the skills and knowledge required to process emergency incident calls and enquiries. It includes receiving incoming incident calls and/or enquiries, providing information to callers in possible danger, locating an incident, requesting assistance and operating equipment.

The unit applies to individuals who process emergency calls for assistance and non-emergency enquiries in an emergency communications centre.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

Emergency Communications

### Unit Sector

Not applicable

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Receive incoming incident calls/enquiries

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |     |                                                                                                                             |
|-----|-----------------------------------------------------------------------------------------------------------------------------|
| 1.1 | Emergency incident calls are answered promptly using standard agency answering protocols                                    |
| 1.2 | Information about the caller, incident or enquiry is established, in accordance with organisational policies and procedures |

- 1.3 Factors which may affect the caller's ability to provide accurate information are assessed and considered
    - 1.4 Type of incident call or enquiry is determined accurately and call authenticity is determined, in accordance with organisational protocols
    - 1.5 Details of the incident call or enquiry are obtained and accurately logged, in accordance with organisational policies and procedures
    - 1.6 Appropriate response is established through consultation with relevant personnel, in accordance with organisational procedures
- 2 **Provide information to callers in possible danger**
  - 2.1 Potential danger to caller is assessed accurately
  - 2.2 Safety information appropriate to the situation and caller's needs is communicated clearly
- 3 **Locate an incident**
  - 3.1 Organisation's area of operational responsibility is identified
  - 3.2 Appropriate directories, maps and databases are used to find incident location
  - 3.3 Calls or enquiries are concluded, in accordance with organisational policies and procedures
- 4 **Action received request**
  - 4.1 Action emergency incident request or call
  - 4.2 Information is summarised and communicated using clear and appropriate language, in accordance with organisational policies and procedures
  - 4.3 Follow up procedures and notifications to other emergency services or agencies are implemented, as required
- 5 **Operate equipment**
  - 5.1 Appropriate equipment is chosen for the task, context and needs of incident
  - 5.2 Equipment is used and operated safely, in accordance with organisational procedures and instructions
  - 5.3 Faulty equipment is identified and reported, in accordance with organisational policies and procedures and alternative strategies are employed, as required

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAECO002A Process emergency incident calls and enquiries.

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAECO002 Process emergency incident calls and enquiries

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- answering incident calls or enquiries promptly using standard organisational or agency answering protocols including using techniques to obtain information in as short a time as possible
- communicating orally and in writing
- concluding calls or enquiries and confirming response
- identifying and reporting and/or actioning faults using organisational instructions
- implementing and following organisational policies, procedures and protocols to support response decisions
- locating an incident
- logging incident calls and enquiry details
- providing information to callers in possible danger
- reading and interpreting maps to identify location of incident
- reassuring callers and supplying pre-arrival instructions
- recognising the difference between emergency and non-emergency incident calls and enquiries
- summarising, recording and relaying information accurately to emergency services and/or agencies
- taking appropriate action to process incident calls and enquiries
- using codes, abbreviations or specialist terminology in transmission of information

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- alternative strategies for when equipment is faulty
- codes, abbreviations or specialist terminology used by the organisation when receiving and responding to incoming incident calls and enquiries
- communications and dispatch equipment used in the management of incidents and

- non-operational enquiries
- directories and databases
- factors that may impact on a caller's ability to provide information, understand directions and reach safety
- fault identification and reporting and/or actioning requirements
- information including environmental factors, operational readiness, risks associated with incident, topography and weather conditions
- methods of establishing information of caller, incident or enquiry including using active listening skills, clarifying, giving full attention to caller, maintaining contact with caller, prompts, summarising and using open questions
- methods of identifying geographical area of operations and map reading techniques
- organisational documentation, policies, procedures and protocols
- organisational instructions
- organisational, emergency service and/or agency resources

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations that includes emergency and non-emergency situations across a range of different callers, types of emergencies and level of activity. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - backup telephony systems
  - directories, maps and databases to find incident locations
- applicable documentation including organisational policies and procedures, industry standards, regulations, codes of practice, equipment specifications, operations and systems manuals.

# PUAECO003 Operate and control radio networks

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to operate and control radio networks. It includes using radio networks and identifying faults in radio networks.

The unit applies to individuals who operate and control radio networks within an emergency communications centre, respond to organisational requests, and support operational events.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Emergency Communications

## Unit Sector

Emergency Communications

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Use radio networks

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Radio network is accessed, in accordance with organisational procedures
- 1.2** Radio equipment is operated, in accordance with organisational instructions
- 1.3** Channels, frequencies and talk groups are allocated, selected and deselected, in accordance with

organisational policies and procedures

- 1.4** Relevant codes, terminology, call signs and abbreviations are used to receive and transmit information, in accordance with organisational procedures
  - 1.5** Organisational radio communication protocols are followed to transmit and receive messages
  - 1.6** Radio contact is monitored, in accordance with organisational procedures
  - 1.7** Networks are controlled and coordinated to ensure equitable access and prioritisation of operations
  - 1.8** Networks are operated, in accordance with organisational operational requirements and legislation
  - 1.9** Equipment is used safely, in accordance with organisational policies, procedures and instructions
- 2 Identify faults in the radio network**
  - 2.1** Technical faults in the radio network are identified and appropriate action is taken, in accordance with organisational procedures
  - 2.2** Backup arrangements or alternative systems are utilised when primary system fails or as required

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAECO003A Operate and control radio networks.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet -

# Assessment Requirements for PUAECO003 Operate and control radio networks

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying organisational policies and procedures including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- communicating clearly and concisely
- controlling and coordinating radio networks and systems
- ensuring equitable access and prioritisation of operations
- following communication protocols
- identifying technical faults in radio network
- responding to calls from the field including transmitting and receiving messages
- using approved codes, terminology, call signs and abbreviations
- using radio networks and equipment including allocating, selecting and deselecting channels, frequencies and talk groups, receiving and transmitting messages

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- backup and alternative systems, arrangements and networks
- basic principles of radio operation
- communication protocols and voice procedures
- fault identification and report or action requirements
- legislation and regulations related to the operation of radio networks
- organisational instructions
- organisational policies and procedures including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) practices and guidelines
- principal components of radio equipment
- radio networks and systems
- radio procedures including call signs, vehicle codes, codes, terminology, pro-words and abbreviations
- suitable channels, frequencies and talk groups

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

# PUAECO004 Operate computer aided dispatch system

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to operate and identify faults in the organisation's computer aided dispatch system. It includes operating a Computer Aided Dispatch (CAD) system and identifying faults in the CAD.

The unit applies to emergency communications centre personnel who use a variety of computer aided dispatch systems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Emergency Communications

## Unit Sector

Not applicable

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Operate computer aided dispatch system**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Computer Aided Dispatch (CAD) system, log on and shift change protocols are implemented, in accordance with organisational procedures
- 1.2** CAD and other interfaces and associated equipment are set up, in accordance with organisational instructions

and is navigated for optimum operation

**1.3** CAD is interrogated to retrieve required information

**1.4** Data is accurately recorded, in accordance with organisational procedures

**1.5** Relevant data and/or information is continually monitored, maintained and updated, in accordance with organisational protocols

**1.6** Entries are checked for accuracy and corrective action is taken, in accordance with organisational procedures and system capacity

**1.7** Incident completion processes are implemented in CAD, in accordance with organisational procedures

**1.8** Equipment is used safely, in accordance with organisational procedures and instructions

**2 Identify faults in computer aided dispatch system**

**2.1** Technical faults in CAD are identified and appropriate action is taken, in accordance with organisational procedures

**2.2** Backup systems are utilised when primary system fails

**2.3** Deficiencies or opportunities for improvement are reported, in accordance with organisational policies and procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

# Assessment Requirements for PUAECO004 Operate computer aided dispatch system

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- acting to identify technical faults including referring to appropriate personnel, if required
- assessing and prioritising information
- identifying and reporting technical faults in Computer Aided Dispatch (CAD)
- implementing backup arrangements
- monitoring, maintaining and updating data and/or information
- operating CAD during peak activity
- recording and relaying data and information accurately
- retrieving information
- setting up, operating and adapting to different programs and/or databases

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- backup arrangements
- codes, terminology and abbreviations
- computer operations and functions
- corrective action procedures
- fault identification and report or action requirements
- organisational documentation, policies and procedures
- organisational instructions
- shift change and break protocols
- specific program and database operations
- techniques to identify computer aided dispatch system technical faults and report requirements

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include

requirements in the Standards for Registered Training Organisations current at the time of assessment.

## PUAECO005 Dispatch resources from within an emergency communications centre

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to dispatch resources from within an emergency communications centre. It includes determining an appropriate response, dispatching resources, and providing ongoing support to operations.

The unit applies to individuals working in an emergency communications centre required to dispatch emergency response resources to emergency incidents and other events.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

Emergency Communications

### Unit Sector

Not applicable

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Determine appropriate response

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Information required to determine an appropriate response to an incident is identified, in accordance with organisational policies and procedures
- 1.2** Sources of information are accessed and relevant

information is retrieved, in accordance with organisational procedures

**1.3** Availability of resources is determined

**1.4** Organisational response procedures are applied to ensure appropriate resources are matched to incident

**1.5** Requests for assistance are prioritised, in accordance with organisational protocols and legislation

## **2 Dispatch resources**

**2.1** Equipment and systems are used to locate, allocate and dispatch resources, in accordance with organisational procedures

**2.2** Resource dispatch announcements are made accurately in an organised, concise and complete manner using clear and appropriate language, in accordance with organisational procedures

**2.3** Public safety agencies and organisations are notified, in accordance with operational procedures

**2.4** Communication with dispatched resources is established and recorded

**2.5** Additional information is disseminated to responding resources and personnel

**2.6** Resource dispatch follow up procedures are implemented, in accordance with organisational procedures

**2.7** Administrative duties and support tasks are completed promptly, in accordance with organisational policies and procedures

**2.8** Incident information is recorded, maintained and updated, in accordance with organisational procedures and requirements

**2.9** Backup or business continuity systems are used, as required, in accordance with organisational policies and procedures

## **3 Provide ongoing support to operations**

**3.1** Status of resources are monitored, in accordance with organisational requirements

**3.2** Public safety agencies and organisations are notified, in accordance with operational procedures

- 3.3 Field requests are monitored, prioritised and actioned, in accordance with organisational procedures
- 3.4 Additional resources are allocated, as required
- 3.5 Resource information is maintained and updated, in accordance with organisational procedures
- 3.6 Communication with personnel in the field is maintained and recorded, in accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

# Assessment Requirements for PUAECO005 Dispatch resources from within an emergency communications centre

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- accessing information and dispatching resources including additional resources
- actioning, maintaining and recording field requests
- communicating and liaising with colleagues and stakeholders
- determining response to incident
- disseminating information and making decisions to prioritise requests for assistance
- following organisational policies and procedures
- implementing follow up procedures
- liaising with other organisations and agencies
- maintaining communication with emergency resources or organisations/agencies using approved communication protocols
- monitoring status of resources
- operating a range of equipment and systems including backup and business redundancy systems
- performing administrative duties and support tasks
- receiving, recording and relaying information
- using clear and concise language

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- backup and business continuity arrangements
- communication techniques when responding to an incident
- equipment and systems used to locate, allocate and dispatch resources
- follow up procedures
- functions of other authorities, regulators and public safety agencies or organisations
- incident information to be recorded and updated from incident commander or controller and time stamping of manual records, if maintained
- legislation, industry standards and regulations

- organisational documentation, policies, procedures, protocols and guidelines including directives and multi-organisational or agency agreements and mobilisation and operational procedures and guidelines
- resources required

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

## PUAECO006 Read and interpret maps

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit involves the skills and knowledge required to read and interpret maps. It includes identifying incident location from a caller, locating incidents using mapping systems, and using coordinates.

The unit applies to emergency communications personnel who locate emergency incidents and other public safety and service roles where the ability to read and interpret maps in rural and urban areas is required.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

Emergency Communications

### Unit Sector

Not applicable

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### **1 Identify incident location from caller**

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |            |                                                                                    |
|------------|------------------------------------------------------------------------------------|
| <b>1.1</b> | Ascertain incident location using communication techniques                         |
| <b>1.2</b> | Receive and integrate information and reports from a variety of identified sources |

- |                                                 |            |                                                                                    |
|-------------------------------------------------|------------|------------------------------------------------------------------------------------|
|                                                 | <b>1.3</b> | Identify and locate map features                                                   |
| <b>2 Locate incidents using mapping systems</b> | <b>2.1</b> | Enter coordinates into mapping system using information provided                   |
|                                                 | <b>2.2</b> | Locate incident by analysing map features                                          |
|                                                 | <b>2.3</b> | Verify location with caller using system information                               |
|                                                 | <b>2.4</b> | Save location to the mapping system, in accordance with organisational procedures  |
|                                                 | <b>2.5</b> | Provide directional information on request                                         |
| <b>3 Use coordinates</b>                        | <b>3.1</b> | Translate and interpret coordinates from provided information                      |
|                                                 | <b>3.2</b> | Convert coordinates into mapping location                                          |
|                                                 | <b>3.3</b> | Determine relevant reference points from given coordinates                         |
|                                                 | <b>3.4</b> | Record location into relevant system, in accordance with organisational procedures |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is not equivalent to PUAECO006A Read and interpret maps.

# Assessment Requirements for PUAECO006 Read and interpret maps

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- accurately recording information
- calculating map coordinates from a variety of data and information
- determining and accurately relaying location of an incident determining response
- identifying features on a map
- implementing organisational policies, procedures and protocols
- using communication techniques
- working with directional information techniques

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- communication techniques
- coordinates for mapping including grid reference and latitude and longitude (decimal degrees, minutes and seconds)
- directional information
- map features
- marginal map information meanings including key information, map scale and symbols, markings and notations
- organisational documentation, policies, procedures and protocols
- requirements for working with directional information
- sources of information types of maps, systems and standards

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include

requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations and must be undertaken in support of emergency communications centre operations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - resources required under normal operational conditions in disaster backup conditions and in field or incident management system conditions
- applicable documentation including organisational policies and procedures, industry standards, regulations, codes of practice, equipment specifications, systems and operations manuals.

## PUAECO007 Respond to and maintain monitored automatic notification system

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to respond to and maintain monitored automatic notification systems. It includes responding to automatic notifications, and completing follow up activities.

The unit applies to personnel required to monitor various types of alarm systems and devices in public safety, business and community safety environments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

Emergency Communications

### Unit Sector

Not applicable

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Respond to automatic notification

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1 Acknowledge and confirm automatic notification
- 1.2 Undertake appropriate response to activation

|                                             |            |                                                                                                   |
|---------------------------------------------|------------|---------------------------------------------------------------------------------------------------|
|                                             | <b>1.3</b> | Take appropriate action for issues identified by responding agency                                |
| <b>2 Complete follow up activities</b>      | <b>2.1</b> | Collect and record automatic notification information in appropriate databases                    |
|                                             | <b>2.2</b> | Maintain databases for currency and accuracy                                                      |
| <b>3 Maintenance and testing activities</b> | <b>3.1</b> | Liaise with scene, in accordance with organisational procedures, to manage maintenance activities |
|                                             | <b>3.2</b> | Liaise with scene, in accordance with organisational procedures, to manage testing activities     |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is not equivalent to PUAECO007A Respond to and maintain monitored alarm systems.

# Assessment Requirements for PUAECO007 Respond to and maintain monitored automatic notification system

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- completing follow up activities
- liaising with scene about maintenance and testing activities
- recording and relaying information
- responding to alarm activation
- taking appropriate action including notifying organisations or agencies, personnel, building owners or occupiers and network providers including monitoring companies, organisations and/or agencies
- using databases
- working with alarm codes and protocols

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- alarm codes and protocols
- follow up activities
- maintenance and test activities
- maintenance of alarm monitoring equipment
- organisational documents, policies, procedures and protocols
- remedial actions
- responses to alarm activations
- scene liaison requirements
- terminology and abbreviations
- types of alarm systems and their potential faults
- types of databases

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include

requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

# PUAECO008 Receive and action notification of uncontrolled hazardous materials situations

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to receive and action notification of uncontrolled hazardous materials situations. It includes gathering information in relation to a call or enquiry, analysing information gathered, and transmitting appropriate information to attending personnel.

Hazardous material is a generic term used to refer to an incident involving dangerous goods and/or hazardous substances that poses an unreasonable risk to life, property and the environment. A hazardous substance is any substance that has one or more hazardous property including explosiveness, flammability, ability to oxidise (accelerate a fire) and human toxicity (acute or chronic).

Dangerous goods or hazardous goods are solids, liquids, or gases that can harm people, other living organisms, property or the environment; they are often subject to chemical regulations.

The unit applies to individuals who receive and process calls for assistance in an emergency communications centre where they gather, analyse and transmit information on hazardous materials and/or dangerous goods.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Emergency communications

## Unit Sector

Not applicable

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Gather information in relation to a call or enquiry**

#### **2 Analyse information gathered**

#### **3 Transmit appropriate information to attending personnel**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Question, prompt or interrogate caller about the potential hazardous materials situation

**1.2** Identify hazardous materials using a range of sources based on information received from the caller

**2.1** Gather information about the dangerous good or hazardous substance using a range of sources

**2.2** Assess and interpret information obtained from the caller to determine the level of immediate risk to personnel and to the public

**2.3** Apply information accessed about appropriate safety precautions and remedial action to the current situation

**3.1** Transmit relevant information about the hazardous material, potential risk and safety precautions to attending personnel

**3.2** Record, in accordance with organisational procedures, transmitted information

**3.3** Make arrangements for the dispatch of resources appropriate for use in a hazardous materials situation, in accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is not equivalent to PUAECO008A Receive and action notification of uncontrolled hazardous materials situations.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAECO008 Receive and action notification of uncontrolled hazardous materials situations

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying definitions of hazardous substances or dangerous goods to information received
- gathering and analysing information gathered about uncontrolled hazardous materials or dangerous goods situation or substance
- identifying specific hazardous materials at scene
- implementing organisational policies, procedures and guidelines
- obtaining sufficient information and interpreting it in relation to a hazardous materials and/or dangerous goods situation from caller and transmitting to attending personnel
- operating communications centre equipment

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- definitions and types of dangerous goods, hazardous substances and specific hazardous materials
- nature and properties of specific hazardous materials
- organisational documentation, policies and procedures
- organisational response protocols to hazardous materials incidents
- resources including types of personal protective clothing and equipment
- roles of other organisations and agencies attending hazardous materials and/or dangerous goods situations
- sources of hazardous material and dangerous goods information

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include

requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Competency must be demonstrated during emergency communications centre operations or simulated operations that include a range of different hazardous materials situations.

Assessment must confirm the ability to interrogate callers to determine whether hazardous materials are present at a scene and to obtain sufficient and relevant information to be able to confirm the type of hazard present, using a range of documentation.

Assessment must also confirm the ability to access information about a hazardous material, undertake safety considerations using a range of documentation and to transmit this to personnel in the field.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - organisational protocols and documentation, backup systems, databases and reference material for hazardous materials identification
- applicable documentation including organisational policies and procedures, industry standards, regulations, codes of practice, equipment specifications, operations and systems manuals.

# PUAECO009 Coordinate emergency communications centre operations

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to coordinate emergency communications centre operations. It includes coordinating availability and deployment of resources, supporting emergency communications centre team, managing emergency communications, collecting and analysing data and preparing reports.

The unit applies to senior operators, team leaders or shift supervisors of an emergency communications centre.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Emergency Communications

## Unit Sector

Not applicable

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Coordinate availability and deployment of resources**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1.1 Monitor and adjust allocation and deployment of resources to meet incident or operational requirements**

- |                                                          |            |                                                                                                                                           |
|----------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------|
|                                                          | <b>1.2</b> | Assist emergency communications centre operators by making incident resourcing decisions prior to the arrival of resources at an incident |
|                                                          | <b>1.3</b> | Maintain coordination and liaison with support services and other agencies to optimise incident resourcing                                |
|                                                          | <b>1.4</b> | Manage and action external requests and notifications, in accordance with organisational procedures                                       |
| <b>2 Support emergency communications centre team</b>    | <b>2.1</b> | Allocate, supervise and review shift activities of the team                                                                               |
|                                                          | <b>2.2</b> | Manage situations that arise during routine and peak periods, including responsibility for assigned personnel                             |
|                                                          | <b>2.3</b> | Maintain liaison with senior management and on call personnel                                                                             |
|                                                          | <b>2.4</b> | Maintain rosters, in accordance with level of responsibility                                                                              |
|                                                          | <b>2.5</b> | Manage shift changes to facilitate effective hand over                                                                                    |
|                                                          | <b>2.6</b> | Monitor welfare and safety of personnel and take appropriate action, as required                                                          |
| <b>3 Manage emergency communications centre facility</b> | <b>3.1</b> | Maintain physical resources and equipment required for the operations of the centre, in accordance with organisational procedures         |
|                                                          | <b>3.2</b> | Implement equipment maintenance processes and procedures                                                                                  |
|                                                          | <b>3.3</b> | Analyse and respond to system faults and equipment failures                                                                               |
| <b>4 Collect and analyse data, and prepare reports</b>   | <b>4.1</b> | Monitor completion of incident records by emergency communications centre operators and act to address any identified gaps                |
|                                                          | <b>4.2</b> | Collect and maintain statistical data                                                                                                     |
|                                                          | <b>4.3</b> | Collate data and prepare reports for senior operational staff and managers                                                                |
|                                                          | <b>4.4</b> | Prepare evidence for relevant authorities, organisations or agencies                                                                      |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAECO009A Coordinate emergency communications centre operations.

# Assessment Requirements for PUAECO009 Coordinate emergency communications centre operations

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- analysing data using research tools
- collating information and writing reports
- coordinating availability and deployment of resources
- implementing organisational policies and procedures
- investigating complaints and issues
- maintaining day to day functions of an emergency communications centre during periods of activity including rostering personnel
- making decisions, prioritising actions and liaising with senior personnel
- managing self and others within stressful environment by supporting emergency communications centre team
- managing time whilst working under limited supervision
- operating and troubleshooting equipment and systems
- providing continuous feedback to emergency communications centre personnel
- responding to system faults and equipment failures

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- data sources
- equipment used in emergency communication centres
- incident management systems used in emergency communication centres
- maintenance arrangements for systems and equipment
- memorandums of understanding and service level agreements
- operating systems
- organisational administrative guidelines including delivery standards, benchmarks and quality assurance measures
- organisational policies and procedures
- resource deployment

- roster methodology
- system faults and equipment failures welfare and support procedures for emergency communications centre personnel

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations during emergency communications centre operations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations including
  - operations that involve emergency and non-emergency situations
- relevant and appropriate materials, equipment, tools, systems and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational policies and procedures, industry standards, regulations, codes of practice, maintenance schedules, equipment specifications, operations and systems manuals.

# PUAECO010 Maintain standards of emergency service delivery

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to maintain standards of emergency service delivery. It includes ensuring service delivery coverage is maintained and ensuring service delivery standards are met.

The unit applies to senior operators, team leaders or shift supervisors in an emergency communications centre who are responsible for ensuring that service delivery standards are maintained to meet performance requirements or service level agreements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Emergency Communications

## Unit Sector

Not applicable

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Ensure service delivery coverage is maintained**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Identify threats and events that are likely to impact on the emergency communications centre's ability to maintain service
- 1.2** Manage emergency communications centre functions, activities and resources to ensure service delivery is

|          |                                                  |            |                                                                                                            |

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- communicating with peers and organisational or agency management personnel
- ensuring service delivery coverage and standards are maintained
- identifying potential for loss of service delivery or threats and events that may impact resource availability
- implementing organisational policies and procedures
- interpreting warnings and forecasts and predicting impact on emergency communication centre operations and resource availability
- liaising with relevant organisations and agencies to meet service delivery requirements
- maintaining emergency communication centre's staffing levels and welfare requirements during peak times
- managing emergency communication centre's functions during peak times
- managing resources to maintain delivery service
- recording incident information

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- considerations for the redistribution of resources
- inter and intra organisational or agency liaison and response protocols
- mobilisation of resources including capability and availability of reserves
- organisational policies and procedures
- service delivery coverage and standards including emergency communications centre staffing levels

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of

assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations that includes emergency and non-emergency situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - access to a Computer Aided Dispatch (CAD) system
- applicable documentation including organisational policies and procedures, industry standards, regulations, codes of practice, equipment specifications, service delivery standards and agreements, operations and systems manuals.

# PUAECO011 Support logistics in the field

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to support logistics in the field. It includes confirming logistics requirements, and procuring and deploying logistics.

The unit applies to individuals overseeing field logistic support activities within an emergency communications centre.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Emergency Communications

## Unit Sector

Not applicable

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Confirm logistics requirements**

#### **2 Procure logistics**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Clarify, document and log resource requirements

**1.2** Confirm location of resources

**1.3** Verify and confirm authority of requests

**2.1** Interrogate databases

- 2.2 Maintain currency of databases
  - 2.3 Use organisational or agency reference material to procure logistics
  - 2.4 Contact other organisations or agencies for resources, as required
  - 2.5 Locate appropriate resources
  - 2.6 Advise field of procured resources and update log
- 3 Deploy logistics
  - 3.1 Determine and arrange for deployment methods
  - 3.2 Track deployed logistics
  - 3.3 Investigate and action feedback from the field
  - 3.4 Complete documentation, in accordance with organisational processes

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAECO011A Support logistics in the field.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAECO011 Support logistics in the field

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- accessing documentation and resources from information systems
- clarifying resource requirements from the field
- confirming, procuring, deploying and reporting on logistics
- following organisational policies and procedures
- meeting demands requested from the field
- operating under general direction and limited supervision
- using databases

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- field feedback requirements
- organisational documentation, policies and procedures including processes for procuring and deploying resources
- predetermined supplier and contractor lists
- reference materials
- types of incidents, information system, databases and resources available

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy

requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations during emergency communications centre operations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including

## PUAEME001 Provide emergency care

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to provide emergency care pending the arrival of appropriately qualified personnel. It includes identifying need for emergency care, ensuring personal safety of carer and casualty, reassuring casualty, assessing casualty and implementing emergency care procedures, working cooperatively with personnel from other organisations, recovering and restoring first aid equipment and completing documentation.

The unit is applicable to all public safety personnel who are required to provide initial lifesaving emergency care at an incident. It is not designed for personnel whose primary response role is one of emergency care, first aid or pre-hospital care.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

There are no prerequisites

### Competency Field

Emergency Care

### Unit Sector

Public Safety

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### **1 Identify need for emergency care**

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1.1 Initial assessment is made of extent and nature of emergency care required**

|                                                                             |            |                                                                                                                                                                   |
|-----------------------------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                             | <b>1.2</b> | Initial assessment is communicated to appropriate personnel, in accordance with organisational policies and procedures                                            |
| <b>2 Ensure personal safety of carer and casualty</b>                       | <b>2.1</b> | Hygiene is maintained for protection of self and casualty                                                                                                         |
|                                                                             | <b>2.2</b> | Hazards to the carer are identified and appropriate action is taken to safeguard against injury                                                                   |
| <b>3 Reassure casualty</b>                                                  | <b>3.1</b> | A calm, caring and reassuring manner is adopted in interaction with the casualty and others at the scene                                                          |
|                                                                             | <b>3.2</b> | Casualty is made comfortable using available resources                                                                                                            |
| <b>4 Assess casualty and implement emergency care procedures</b>            | <b>4.1</b> | Casualty is assessed for Danger Response Airway Breathing Circulation (DRABC)                                                                                     |
|                                                                             | <b>4.2</b> | Vital signs are continually monitored, recorded and any changes considered in planning treatment are reported, as appropriate                                     |
|                                                                             | <b>4.3</b> | Treatment appropriate to casualty's injuries are provided, in accordance with approved first aid techniques and standards                                         |
|                                                                             | <b>4.4</b> | First aid equipment is operated, in accordance with organisational policies, procedures, protocols and manufacturers' instructions                                |
|                                                                             | <b>4.5</b> | Casualty's condition is monitored and reported, in accordance with organisational policies and procedures and treatment is modified, as required                  |
|                                                                             | <b>4.6</b> | Treatment is maintained until qualified medical help takes over                                                                                                   |
| <b>5 Work cooperatively with personnel from other organisations</b>         | <b>5.1</b> | Clear and comprehensive reports are provided to personnel involved in ongoing casualty care                                                                       |
|                                                                             | <b>5.2</b> | Members of other emergency services are assisted in their tasks, in accordance with organisational procedures and personal level of responsibility and competence |
| <b>6 Recover and restore first aid equipment and complete documentation</b> | <b>6.1</b> | First aid equipment is recovered, cleaned, inspected and/or tested, stored, restocked and resupplied and medical waste is disposed of safely, in accordance with  |

organisational policies and procedures

- 6.2** First aid equipment faults are rectified and/or reported, in accordance with organisational policies and procedures
- 6.3** Documentation is completed and processed, in accordance with organisational procedures and legislative and regulatory requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAEME001B Provide emergency care.

# Assessment Requirements for PUAEME001 Provide emergency care

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- assessing casualty and implementing emergency care procedures
- communicating information to casualties and others
- completing documentation
- ensuring personal safety of carer and casualty
- following organisational policies and procedures
- identifying need for emergency care
- providing verbal and/or written reports to paramedical personnel
- reassuring casualty
- recovering and restoring first aid equipment
- remaining calm in difficult situations and when under time pressure
- working cooperatively with others in a team and with personnel from other organisations

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- causes and management of unconsciousness
- communication techniques
- industry standards including Australian Resuscitation Council guidelines
- management of burns, fractures and soft tissue injuries
- organisational documentation, policies and procedures
- organisational guidelines for lifting and carrying
- organisational guidelines for personal hygiene
- personal level of responsibility
- principles of initial casualty management
- priorities for life support in emergencies including the Danger, Response, Airway, Breathing ventilation and Circulation assessments (DRABC) model

- systems of the body including respiratory, skeletal, digestive, circulatory, nervous, urinary and skin
- techniques for applying resuscitation, controlling bleeding and undertaking casualty assessment
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

## PUAEME002 Manage injuries at emergency incident

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to manage injuries at an emergency which may include the use of equipment. It includes assessing the scene and the casualty, implementing emergency management procedures, moving the casualty and completing required documentation.

The unit is applicable to all public safety personnel who are required to provide a basic level of ongoing injury management at an incident beyond critical live saving techniques. It is not designed for personnel whose primary response role is one of emergency care, first aid or pre-hospital care.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

PUAEME001 Provide emergency care

### Competency Field

Emergency Care

### Unit Sector

Public Safety

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Assess scene

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Initial assessment is made of the extent and nature of emergency care required

- |                                                    |            |                                                                                                                                                      |
|----------------------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                    | <b>1.2</b> | Hazards are identified, risks are assessed and appropriate action is taken to safeguard against injury                                               |
|                                                    | <b>1.3</b> | Identify and communicate additional or specific resource requirements to relevant personnel                                                          |
| <b>2 Assess casualty</b>                           | <b>2.1</b> | Identified injuries are managed, in accordance with approved emergency care and management plan                                                      |
|                                                    | <b>2.2</b> | Treatment is monitored, assessed and management plan is amended, in response to change in condition of the casualty and/or environment               |
|                                                    | <b>2.3</b> | Additional or specific resources are identified and communicated to authorised personnel                                                             |
| <b>3 Implement emergency management procedures</b> | <b>3.1</b> | Immediate lifesaving treatment is administered as determined, in accordance with organisational procedures                                           |
|                                                    | <b>3.2</b> | Signs and symptoms of shock are recognised and managed                                                                                               |
|                                                    | <b>3.3</b> | Vital signs are monitored and recorded at regular intervals                                                                                          |
|                                                    | <b>3.4</b> | Equipment is used according to casualty's condition and availability, in accordance with organisational procedures and manufacturers' specifications |
| <b>4 Move casualty</b>                             | <b>4.1</b> | Moving casualty to a safer location is assessed                                                                                                      |
|                                                    | <b>4.2</b> | Casualty is moved, in accordance with organisational procedures and operational protocols                                                            |
|                                                    | <b>4.3</b> | Continual assessment of casualty is conducted, in accordance with organisational procedures                                                          |
|                                                    | <b>4.4</b> | Treatment is maintained while moving patient                                                                                                         |
| <b>5 Complete documentation</b>                    | <b>5.1</b> | Details of casualty condition and response to treatment are accurately recorded, in accordance with organisational procedures                        |
|                                                    | <b>5.2</b> | Handover of casualty and documentation to medical personnel is conducted, in accordance with organisational procedures                               |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

# Assessment Requirements for PUAEME002 Manage injuries at emergency incident

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- assessing casualty for injuries
- assessing hazards and evaluating risks when assessing an emergency
- communicating with casualties and others
- completing organisational documentation
- following organisational policies and procedures
- identifying and communicating resources required
- implementing emergency management procedures including administering lifesaving treatment and developing and amending management plans in response to treatment maintaining treatment and continual monitoring whilst casualty is moved
- monitoring and recording vital signs
- performing casualty handover including documentation to medical personnel
- providing reports to paramedical personnel
- selecting and operating equipment including oxygen resuscitation, defibrillation, first aid kit, stretchers, spinal immobilisation collards, spinal immobilisation frames and/or devices, fracture immobilisation devices and stokes litter

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- casualty injury assessment, management plans and treatments
- communication techniques and protocols
- current practices and procedures in emergency care
- equipment and manufacturers' operating instructions
- immediate lifesaving treatments including crush injury syndrome, contraindications, wound management, basic toxicology, environmental exposure, spinal injuries and head injuries
- organisational documentation, policies and procedures

- potential risks when moving a casualty
- resuscitation techniques
- signs, symptoms and management of shock including absolute, hypovolaemic and/or relative treatments for assessed injury
- vital signs, how to monitor and record
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including hazards and risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - oxygen resuscitation, defibrillation, first aid kit, stretchers, spinal immobilisation, collards, spinal immobilisation frames/devices, fracture immobilisation devices and stokes litter
- access may be required to shore based transport, an ambulance and/or helicopter depending on context applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

## PUAEME003 Administer oxygen in an emergency

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package

### Application

This unit of competency involves the skills and knowledge required to administer oxygen and ventilate the lungs in an emergency situation in accordance with industry standards and regulatory body guidelines. It includes assessing casualty and developing a management plan, checking, recovering and restoring equipment, maintaining unobstructed airway, resuscitating casualty and using oxygen to provide therapy.

The unit is applicable to public safety personnel who attend incidents where the use of oxygen in either lifesaving or the ongoing management of a casualty is appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

PUAEME001 Provide emergency care

### Competency Field

Emergency Care

### Unit Sector

Public Safety

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### **1 Assess casualty and develop management plan**

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Assessment of casualty is undertaken including vital signs, details of incident, medical and/or casualty history, physical appearance and other signs and symptoms

- 1.2 Management plan is developed taking into account available equipment, condition of patient and specific conditions
    - 1.3 Casualty is assisted to a comfortable position suitable for implementation of management plan, where possible
    - 1.4 Casualty is encouraged and reassured, as required, to aid in the facilitation of effective treatment
    - 1.5 Medical aid is arranged as soon as possible, consistent with maintaining casualty safety
- 2 Check equipment**
  - 2.1 Pre-use check of safety and potential effectiveness of equipment is undertaken, in accordance with operating procedures, industry standards and regulatory requirements
  - 2.2 Minor equipment faults are diagnosed and repairs are carried out, in accordance with organisational procedures and manufacturers' guidelines
  - 2.3 Equipment faults and defects are reported and/or recorded, in accordance with organisational procedures
- 3 Maintain unobstructed airway**
  - 3.1 Airway is cleared and maintained using non-intervention techniques, where possible
  - 3.2 Steps are taken to reduce risk to self or others of contamination from the casualty's body fluids
  - 3.3 Suction apparatus is safely inserted into pharynx and suction initiated using approved techniques to avoid injuring casualty
- 4 Resuscitate casualty and use oxygen**
  - 4.1 Face masks and other barriers are used, in accordance with organisational procedures and industry standards
  - 4.2 Oxygen therapy is used in the ventilation of casualty
- 5 Recover and restore equipment**
  - 5.1 Equipment is cleaned, discarded or disinfected, restocked and/or replenished and stored safely, in accordance with organisational procedures
  - 5.2 Report is forwarded to appropriate personnel, in accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAEME003C Administer oxygen in an emergency situation.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAEME003 Administer oxygen in an emergency

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- assessing casualty and developing management plan
- assisting casualty to a comfortable position
- communicating with casualty to provide reassurance and comfort
- following organisational policies and procedures
- implementing approved techniques when using suction apparatus
- performing pre-use safety check of equipment and recording faults
- recovering and restoring equipment
- reducing risk to self and/or others of contamination from body fluids
- resuscitating casualty using appropriate barriers
- using non-intervention techniques when clearing and maintaining unobstructed airway
- using oxygen to provide therapy
- working with oxygen equipment and following medically endorsed protocols and manufacturers' guidelines

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- airways
- communication techniques
- correct use of barriers
- correct use of oxygen equipment
- equipment safety checks
- industry standards including Australian Resuscitation Council Standards guidelines
- legislation covering the administration of oxygen
- manufacturers' specifications non-intervention techniques when clearing airway
- organisational documentation, policies and procedures

- potential hazards
- precautions for safe storage and handling of oxygen equipment
- principles of operating equipment and identifying faults
- resuscitation techniques
- signs and symptoms of chronic obstructed breathing including vital signs, physical appearance, obstructed airway and respiratory noises
- techniques for maintenance of unobstructed airway
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

# PUAEME004 Provide emergency care for suspected spinal injury

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package

## Application

This unit of competency involves the skills and knowledge required to minimise further injury to a casualty when applying first aid and waiting for emergency medical aid. It includes recognition and management of a suspected spinal injury, immobilising cervical spine, evaluating the need to move a casualty, preparing a casualty for transport, transporting and monitoring a casualty and performing a casualty handover.

The unit is applicable to personnel from emergency services, volunteer organisations or organisations which provide a first aid service in an environment where there is a risk of spinal injuries.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

HLTAID003 Provide first aid

## Competency Field

Emergency Care

## Unit Sector

Public Safety

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Identify suspected spinal injury**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1.1 Signs and symptoms from a conscious casualty that may suggest a spinal injury are identified**

- 1.2 Signs of life in an unconscious casualty are confirmed
  - 1.3 Basic life support protocols are followed with care for casualty's spine where casualty exhibits no signs of life
  - 1.4 Likely causes of unconsciousness that may suggest a spinal injury are identified
  - 1.5 Emergency medical aid is requested
- 2 Immobilise cervical spine**
  - 2.1 Casualty is communicated with to provide reassurance and to explain need to minimise movement of their spine
  - 2.2 Casualty is measured and appropriately sized cervical collar is selected
  - 2.3 Cervical collar is applied ensuring correct location and tension is applied
  - 2.4 Conscious standing casualty is assisted to supine position, in accordance with organisational procedures and availability of personnel
- 3 Evaluate need to move casualty**
  - 3.1 Potential hazards to first aider and to casualty are identified
  - 3.2 Risk of not moving the casualty while waiting for medical aid to arrive is evaluated
  - 3.3 Plan to move casualty is developed, in accordance with organisational procedures
- 4 Prepare casualty for transport**
  - 4.1 Casualty is communicated with to provide reassurance and the need to immobilise the casualty for transport is explained
  - 4.2 Equipment to immobilise the casualty's spine is selected
  - 4.3 Immobilisation equipment is applied, in accordance with organisational procedures and manufacturers' instructions
- 5 Transport and monitor casualty**
  - 5.1 Casualty is transported away from hazard, ensuring smooth movements are used by the team
  - 5.2 Team is directed in coordinated lifting, movement and lowering of casualty

- |                                    |                                                                                       |
|------------------------------------|---------------------------------------------------------------------------------------|
| <b>6 Perform casualty handover</b> | <b>5.3</b> Casualty is monitored during transportation                                |
|                                    | <b>6.1</b> Details of incident are communicated to medical personnel                  |
|                                    | <b>6.2</b> Assistance is given to medical personnel, as requested                     |
|                                    | <b>6.3</b> Debriefing with supervisor and/or other operational staff is undertaken    |
|                                    | <b>6.4</b> Documentation is completed, in accordance with organisational requirements |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAEME004A Provide emergency care for suspected spinal injury.

# Assessment Requirements for PUAEME004 Provide emergency care for suspected spinal injury

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all requirements of the elements and performance criteria on at least one occasion and includes

- assessing and monitoring vital signs of casualty including level of consciousness, breathing rate, pulse rate, skin colour and temperature and remaining with casualty
- assessing hazards and evaluating associated risks when determining need to move casualty
- communicating with casualty to provide reassurance
- completing organisational documentation
- complying with organisational policies and procedures including Work, Health and Safety (OHS)/Occupational Health and Safety (OHS) requirements
- following basic life support protocols
- identifying suspected spinal injury in both a conscious and unconscious casualty
- immobilising cervical spine including measuring and selecting appropriately sized cervical collar and fitting it correctly
- performing casualty handover to medical personnel
- preparing casualty for transport including selecting and applying appropriate immobilisation equipment including scoop stretchers, spine boards and strapping and stokes baskets
- transporting and monitoring casualty
- using safe manual handling skills

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- basic life support protocols
- common causes of spinal injuries
- communication techniques
- manufacturers' operating instructions
- organisational documentation, policies and procedures including Work, Health and Safety (OHS)/Occupational Health and Safety (OHS) requirements and risk mitigation
- potential hazards
- risks associated with moving a casualty with a suspected spinal injury

- safe manual handling techniques
- signs and symptoms of suspected spinal injury
- techniques for manual stabilisation
- types of spinal immobilisation equipment available including cervical collars, scoop stretchers, spine boards and strapping and stokes baskets
- vital signs of casualty

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Competency should be demonstrated in a range of first aid incidents or scenarios requiring management of suspected spinal injuries.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - equipment used in managing suspected spinal injuries
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

## PUAEME005 Provide pain management

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package

### Application

This unit of competency involves the skills and knowledge required to administer restricted analgesics to provide pain management as part of a medically supervised first responder organisation. It includes identifying the need for analgesia; accessing, preparing and administering restricted pain relief such as analgesics and aspirin according to medically endorsed protocols; performing casualty handovers and completing analgesic use requirements.

The unit is applicable for personnel from emergency services, volunteer organisations or organisations that provide a medically supervised first aid service. Licensing requirements for the storage and administration of drugs may apply.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

HLTAID003 Provide first aid

### Competency Field

Emergency Care

### Unit Sector

Public Safety

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Identify need for analgesia

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |            |                                                           |
|------------|-----------------------------------------------------------|
| <b>1.1</b> | Casualty's need for pain relief is identified             |
| <b>1.2</b> | Available options to relieve casualty's pain are reviewed |

- |                                              |            |                                                                                                                                               |
|----------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
|                                              | <b>1.3</b> | Contraindications and precautions for use of analgesic drug are identified and appropriate use for casualty is confirmed                      |
|                                              | <b>1.4</b> | Appropriate dosage for casualty is confirmed, in accordance with organisational procedures, industry standards and protocols                  |
|                                              | <b>1.5</b> | Emergency medical assistance is requested, as required                                                                                        |
| <b>2 Access and prepare analgesic</b>        | <b>2.1</b> | Secure storage of analgesic drug is accessed, in accordance with organisational procedures                                                    |
|                                              | <b>2.2</b> | Analgesic documentation is completed, in accordance with organisational procedures                                                            |
|                                              | <b>2.3</b> | Retrieval of correct drug within its expiry date is confirmed, in accordance with organisational procedures                                   |
|                                              | <b>2.4</b> | Analgesic drug is prepared, in accordance with industry standards and organisational procedures                                               |
| <b>3 Administer analgesic</b>                | <b>3.1</b> | Purpose of the analgesic drug is explained to casualty                                                                                        |
|                                              | <b>3.2</b> | Casualty is advised as to use of the analgesic drug and its potential impact                                                                  |
|                                              | <b>3.3</b> | Casualty consent to administer treatment is obtained                                                                                          |
|                                              | <b>3.4</b> | Analgesic drug is administered, in accordance with industry standards and protocols                                                           |
|                                              | <b>3.5</b> | Casualty is continuously monitored whilst administering analgesic drug                                                                        |
| <b>4 Perform casualty handover</b>           | <b>4.1</b> | Details of incident including analgesic drug administration are communicated to medical personnel                                             |
|                                              | <b>4.2</b> | Written record of treatment including analgesic drug and dosage is supplied to medical personnel in accordance with organisational procedures |
| <b>5 Complete analgesic use requirements</b> | <b>5.1</b> | Unused analgesic drugs are disposed of, in accordance with organisational procedures                                                          |
|                                              | <b>5.2</b> | Details of drugs use is recorded in log, in accordance with organisational procedures                                                         |
|                                              | <b>5.3</b> | Debriefing and/or evaluation of incident is undertaken,                                                                                       |

in accordance with organisational procedures

# Assessment Requirements for PUAEME005 Provide pain management

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all requirements of the elements and performance criteria on at least one occasion and includes

- accessing and preparing appropriate dosage of analgesic including checking for contraindications and precautions prior to administering and identifying appropriate use of analgesic drug for the casualty
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- communicating with casualty to provide comfort and instruction about the analgesic drug
- completing written logs and documentation
- complying with legislation and industry standards
- following medically endorsed protocols
- identifying situations for use of analgesic drugs during first aid
- monitoring casualty whilst analgesic drug is administered including assessing vital signs including level of consciousness, breathing rate, pulse rate, skin colour and temperature
- reporting casualty condition and analgesic administration during handover
- requesting ambulance and/or medical assistance
- safely administering analgesic drug
- safely securing analgesic drugs in storage facility

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all requirements of the elements and performance criteria and includes knowledge of

- communication techniques and protocols
- contraindications and precautions for use of analgesic drugs
- legislation for storage and administration of restricted drugs
- manufacturers' guidelines
- options for pain relief and/or management
- organisational documentation, policies and procedures
- organisational protocols and procedures covering storage, administering and administration of restricted drugs including permits and/or licences

- principles of casualty pain assessment and management
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - permits and/or licences for the storage and use of restricted analgesic drugs
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals

## PUAEMR001 Establish context for emergency risk assessment

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to determine an emergency risk assessment's objectives, scope, stakeholders and risk criteria. It includes identifying emergency risk assessment objectives and scope by research and consultation with stakeholders, clarifying roles and requirements with stakeholders to develop risk criteria and monitoring and reviewing an assessment.

The unit is applicable to personnel required to initiate an emergency risk assessment with a community or part of a community. Such assessments are conducted at local, regional or state level by local governments, emergency management committees, public safety agencies, major event managers or other organisations that need to understand emergency risk to a community.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

Emergency Management

### Unit Sector

Not applicable

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### **1 Identify objectives and scope by research and**

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1.1 Objectives and scope are identified using emergency risk management standards and guidelines**

**consultation**

- |                                                           |            |                                                                                                                                  |

|                                                           | <b>1.2</b> | Stakeholder roles and required scope inputs are determined, in accordance with organisational policies and procedures            |
|                                                           | <b>1.3</b> | Budget, timeframe and schedule for research and consultation are determined, in accordance with organisational policies          |
|                                                           | <b>1.4</b> | Community information is obtained, in accordance with organisational policies and procedures                                     |
| <b>2 Identify and consult with stakeholders</b>           | <b>2.1</b> | Stakeholders are identified, in accordance with organisational policies and communication procedures                             |
|                                                           | <b>2.2</b> | Existing and potential liaison networks are identified and evaluated for relevance                                               |
|                                                           | <b>2.3</b> | Stakeholder networks are developed using a range of strategies                                                                   |
|                                                           | <b>2.4</b> | Communication and consultation are established, in accordance with organisational policies and procedures                        |
|                                                           | <b>2.5</b> | Communication options are evaluated and selected to develop a communication plan                                                 |
| <b>3 Clarify roles and requirements with stakeholders</b> | <b>3.1</b> | Stakeholder roles and their participation are clearly defined and emphasised in seeking their cooperation                        |
|                                                           | <b>3.2</b> | Stakeholders are informed of the aims, objectives, risk management context and structure within which they must operate          |
|                                                           | <b>3.3</b> | Stakeholder needs are determined with conflicting requirements being identified, recorded and communicated to relevant personnel |
| <b>4 Develop risk criteria with stakeholders</b>          | <b>4.1</b> | Social, environmental, financial and timeframe constraints are identified in consultation with stakeholders                      |
|                                                           | <b>4.2</b> | Legal, technical and political considerations are identified in consultation with stakeholders                                   |
|                                                           | <b>4.3</b> | Reasons and selection of criteria are negotiated and agreed with stakeholders                                                    |

- |                             |            |                                                                                                                                     |
|-----------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------|
|                             | <b>4.4</b> | Risk criteria and practical constraints are determined taking into account the community's acceptance of risk                       |
|                             | <b>4.5</b> | Community expectations of acceptable risk are established                                                                           |
| <b>5 Monitor and review</b> | <b>5.1</b> | Hazard and risk assessment context and evaluation criteria are monitored, in accordance with organisational policies and procedures |
|                             | <b>5.2</b> | Risk assessment evaluation criteria are reviewed, in accordance with industry standards and guidelines                              |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAEMR022 Establish context for emergency risk assessment.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAEMR001 Establish context for emergency risk assessment

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least two separate occasions and includes

- analysing stakeholder acceptance of risk
- clarifying roles and requirements with stakeholders
- communicating and consulting in a group context
- communicating with relevant personnel
- developing risk criteria with stakeholders
- documenting emergency risk assessment process outcomes
- facilitating of group stakeholder processes
- following organisational policies and procedures including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- identifying and consulting with stakeholders
- identifying objectives and scope by research and consultation
- implementing risk assessment control measures
- monitoring and reviewing emergency risk assessment
- negotiating with stakeholders
- researching geographic, demographic and socio-economic analysis
- solving problems in accordance with organisational policies and procedures

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and include knowledge of

- community demographic information including
  - cultural makeup and mix
  - demographic measures
  - local economy and industry makeup and interdependencies
  - socio-economic measures
- emergency risk management concepts and principles

- hazards and practical constraints including
  - arrangements, roles and responsibilities set down in existing facility emergency response plan
  - availability of technical expertise, technology and equipment
  - budgets, time, availability and capability of personnel
  - land use planning policy, authority and regulation
  - legislation covering emergency management, environmental management, safety standards and local government regulations
  - limited community knowledge of emergency risk management processes and benefits
  - political, social and cultural considerations
- industry standards and guidelines
- legislative and regulatory requirements relevant to emergency risk management
- organisational documentation, policies and procedures including
  - arrangements specified in legislation
  - existing disaster plans, agreements or memoranda of understanding
  - facility emergency response plan
  - organisational or jurisdictional emergency risk management policies or procedures
  - Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- risk criteria including
  - how likelihood will be defined
  - how the level of risk is to be determined
  - level at which risk becomes acceptable or tolerable
  - nature and types of causes and consequences that can occur and how they will be measured
  - risk mitigation processes
  - timeframes of the likelihood and/or consequences
  - views of stakeholders
  - whether combinations of multiple risks should be considered and if so how and which combinations should be considered
- stakeholders including
  - client, community and industry groups
  - decision makers
  - elected officials
  - non-government organisations
  - public
  - public and private sector organisations
  - staff

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include

requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operational manuals.

## PUAEMR002 Assess emergency risk

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to identify, analyse and evaluate risks to determine which need treatment, and the treatment priorities. It includes identifying, analysing and evaluating risk and monitoring and reviewing emergency risks to a community.

The unit applies to personnel undertaking an emergency risk assessment with a community or part of a community. Such assessments are conducted at local, regional or state level by local governments, emergency management committees, public safety agencies, major event managers or other organisations that need to understand emergency risk to a community.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

PUAEMR001 Establish context for emergency risk assessment

### Competency Field

Emergency Management

### Unit Sector

Not applicable

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Identify risk

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Sources of risk are identified by considering the interaction of hazards, communities and the environment

- |                             |            |                                                                                                                            |
|-----------------------------|------------|----------------------------------------------------------------------------------------------------------------------------|
|                             | <b>1.2</b> | Elements at risk are identified, in accordance with organisational policies and procedures                                 |
|                             | <b>1.3</b> | Stakeholders are consulted throughout the risk assessment process                                                          |
|                             | <b>1.4</b> | Risk statements describing consequences are documented, in accordance with organisational policies and procedures          |
| <b>2 Analyse risk</b>       | <b>2.1</b> | Risks are analysed by considering the likelihood of consequences occurring                                                 |
|                             | <b>2.2</b> | Vulnerability of communities and environments is determined by analysing their susceptibility and resilience to risks      |
|                             | <b>2.3</b> | Risks are rated, in accordance with organisational procedures and agreed risk probability criteria                         |
| <b>3 Evaluate risk</b>      | <b>3.1</b> | Risks requiring additional analysis or treatment are determined and documented                                             |
|                             | <b>3.2</b> | Tolerability and acceptability of risks are agreed with stakeholders                                                       |
|                             | <b>3.3</b> | Risk treatments are prioritised using agreed risk criteria                                                                 |
| <b>4 Monitor and review</b> | <b>4.1</b> | Hazard and risks assessments are monitored, in accordance with relevant standards and guidelines                           |
|                             | <b>4.2</b> | Evaluated risks assessments are reviewed and reported, in accordance with industry standards and organisational guidelines |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAEMR023 Assess emergency risk.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAEMR002 Assess emergency risk

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- analysing qualitative and quantitative risk
- analysing risk and probability
- demonstrating appropriate methods to identify risk, producing risk statements and applying risk criteria in consultation with stakeholders
- evaluating risk
- following organisational policies and procedures including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- identifying hazards and associated risks
- identifying sources of risk to the social, built, economic and natural environments
- identifying stakeholders including negotiating with stakeholders
- monitoring and reviewing existing emergency risk assessments
- using analysis techniques
- using emergency risk modelling processes to estimate risk

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- application of analysis techniques including spatial analysis
- concepts of credible consequence level, likelihood rating, confidence rating and as low as reasonably practicable principles
- consultation with stakeholders about risk criteria
- emergency risk management concepts and principles including industry standards
- jurisdiction or organisational emergency risk management principles and guidelines
- methods to identify risk including tolerable and acceptable risks
- organisational documentation, policies and procedures including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements and facility emergency response plans
- production of risk statements

- research, demographic and economic analysis techniques
- risk criteria including
  - how likelihood will be defined
  - level at which risk becomes acceptable or tolerable
  - nature and types of causes and consequences that can occur and how they are measured
  - risk mitigation and how the level of risk is to be determined
  - timeframe of the likelihood or consequences
  - view of stakeholders
  - whether combinations of multiple risks should be considered and if so how and which combinations should be considered
- risk identification tools
- risk statements and risk register
- sources of risk including
  - built environment failures
  - commercial and legal relationships
  - disease including plant, animal or human
  - economic systems and relationships
  - human behaviour
  - natural events
  - political circumstances
  - technology and technical issues, management activities and controls
- structure of risk criteria and the application of scenario dynamics including how a hazard creates consequences

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry

- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operational manuals.

## PUAEMR003 Develop treatment options for emergency risk

### Modification History

**Release 2.0** This is the second release of this unit of competency in the PUA Public Safety Training Package.

Previously deleted unit reinstated.

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to determine a range of treatment options which can be used to reduce emergency risk. It includes identifying, evaluating and recommending treatment options and developing treatment plans.

The unit applies to personnel who are part of a working group developing treatment options during an emergency risk assessment with a community group.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

Emergency Management

### Unit Sector

Not applicable

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Identify treatment options

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Emergency risk treatment objectives are identified, in consultation with stakeholders

- |                                      |            |                                                                                                                                                      |
|--------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                      | <b>1.2</b> | Existing emergency risk treatment options are identified through research and stakeholder consultation                                               |
|                                      | <b>1.3</b> | Range of potential emergency risk treatment options are identified through research and stakeholder consultation                                     |
| <b>2 Evaluate treatment options</b>  | <b>2.1</b> | Evaluation methods are agreed with stakeholders, in accordance with organisational procedures                                                        |
|                                      | <b>2.2</b> | Feedback on likely implications and impact of emergency risk treatment options is obtained from stakeholders                                         |
|                                      | <b>2.3</b> | Residual emergency risks are assessed for tolerability or acceptance                                                                                 |
|                                      | <b>2.4</b> | Cost benefit analysis is completed for each risk treatment option, in accordance with organisational procedures                                      |
| <b>3 Recommend treatment options</b> | <b>3.1</b> | Recommended treatment options including implementation responsibilities are agreed, in consultation with stakeholders                                |
|                                      | <b>3.2</b> | Recommended treatment options and residual emergency risks are documented, in accordance with organisational policies and procedures                 |
|                                      | <b>3.3</b> | Recommended treatment options are submitted for approval, in accordance with organisational policies and procedures                                  |
| <b>4 Develop treatment plan</b>      | <b>4.1</b> | Treatment options, resources, milestones, budgets, reporting procedures, roles and responsibilities for implementation are identified                |
|                                      | <b>4.2</b> | Communication and project management strategies are developed with stakeholders, in accordance with organisational procedures                        |
|                                      | <b>4.3</b> | Treatment plan implementation issues are identified and contingencies are developed, as required                                                     |
|                                      | <b>4.4</b> | An agreed treatment plan is documented and submitted for approval to authorised personnel, in accordance with organisational policies and procedures |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAEMR024 Develop treatment options for emergency risk.

## Links

Companion Volume Implementation Guides are found in VETNet -

# Assessment Requirements for PUAEMR003 Develop treatment options for emergency risk

## Modification History

**Release 2.0** This is the second release of this unit of competency in the PUA Public Safety Training Package.

Previously deleted unit reinstated.

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least two occasions and includes

- determining residual risks
- developing treatment plans
- evaluating treatment options
- following organisational policies and procedures including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- identifying treatment options for emergency risk including conducting cost benefit analysis for each risk treatment option
- researching potential treatment options including recommending treatment options
- using evaluation methods
- working with stakeholders to generate an agreed list of recommended treatment options

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- emergency risk management concepts and principles including industry standards
- evaluation methods including
  - analysis of treatment effectiveness
  - first pass cost benefit analysis
  - legal, regulatory and compliance impact
  - potential to create new or secondary risks
  - stakeholder acceptability
- legislative and regulatory requirements relevant to emergency risk management
- organisational documentation, policies and procedures including
  - arrangements specified in legislation

- existing disaster plans, agreements or memoranda of understanding
- facility emergency response plan
- organisational or jurisdictional emergency risk management policies or procedures
- WHS/OHS requirements including risk mitigation
- potential stakeholders
- range of options for treating emergency risk
- risk treatment options including
  - a hazard impacting on elements at risk
  - avoidance of the risk
  - changing the consequences of an identified hazard impact
  - changing the likelihood of an initiating event or source of risk occurring
  - removing a risk source
  - retaining the risk based on an informed decision
  - sharing the risk
- submissions
- techniques to facilitate evaluating residual risk including cost benefit analysis for each risk treatment option

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Candidates must demonstrate an ability to work with stakeholders and generate an agreed list of recommended treatment options in an appropriate format. They are expected to present evidence from at least two different contexts, one of which may be simulated.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operational manuals.

## PUAEMR004 Manage risk treatment implementation

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to communicate, facilitate and review implementation of selected risk treatments. It includes confirming implementation context, developing implementation plan, communicating the treatment plan, facilitating treatment plan implementation and monitoring and reviewing treatment plan implementation.

The unit applies to managers or members of project teams responsible for implementing a risk treatment plan who are working at local, regional or state level organisations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

Emergency Management

### Unit Sector

Not applicable

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Confirm implementation context

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Project drivers, triggers, risks, risk management contexts, treatment options, priorities and practical constraints are clarified

**1.2** Applicable policies and procedures are identified

- |                                                           |            |                                                                                                                                                       |
|-----------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                           | <b>1.3</b> | Key stakeholders are identified along with their potential interests, sensitivities, roles and responsibilities                                       |
| <b>2 Develop implementation plan</b>                      | <b>2.1</b> | Risks to be treated and current treatment options are confirmed, in accordance with organisational policies and procedures                            |
|                                                           | <b>2.2</b> | Performance criteria for assessing the effectiveness of treatment implementation are established, in consultation with stakeholders                   |
|                                                           | <b>2.3</b> | Treatment actions, resources required, milestones, budget, reporting procedures and roles and responsibilities of project team members are identified |
|                                                           | <b>2.4</b> | Implementation issues are identified and contingencies are developed, as required, in accordance with organisational policies                         |
|                                                           | <b>2.5</b> | An agreed treatment plan is documented and submitted for approval, in accordance with organisational policies and procedures                          |
| <b>3 Communicate the treatment plan</b>                   | <b>3.1</b> | Processes to effectively consult and communicate are selected for implementation                                                                      |
|                                                           | <b>3.2</b> | Consultation plan is developed and implemented, in accordance with organisational procedures                                                          |
| <b>4 Facilitate treatment plan implementation</b>         | <b>4.1</b> | Treatment tasks and activities are allocated, in accordance with the implementation plan                                                              |
|                                                           | <b>4.2</b> | Communication between working group members is maintained                                                                                             |
|                                                           | <b>4.3</b> | Stakeholders are kept informed of progress, performance and any proposed variations in strategy or implementation                                     |
|                                                           | <b>4.4</b> | Agreed treatment plan variations are planned, assessed and presented to accommodate changed circumstances or to achieve more effective outcomes       |
| <b>5 Monitor and review treatment plan implementation</b> | <b>5.1</b> | A review process is established, in accordance with organisational policies and in consultation with stakeholders                                     |
|                                                           | <b>5.2</b> | Effectiveness of treatment activities, adequacy of resources, project progress and expenditure are                                                    |

monitored against plans and are recorded and reported

- 5.3 Implementation plans are adjusted, as required, following the review process
- 5.4 Adjustments to implementation plans are communicated to stakeholders, in accordance with treatment plan
- 5.5 Residual risk is re-evaluated after treatment to determine whether to accept the risk or reassess the risk, in accordance with the treatment plan

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAEMR025 Manage risk treatment implementation.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAEMR004 Manage risk treatment implementation

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least two separate occasions and includes

- applying a range of media communication and methods to communicate with stakeholders
- communicating treatment plan
- confirming implementation context
- developing implementation plan
- facilitating treatment plan implementation
- following organisational policies and procedures including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- identifying practical constraints for existing control measures with stakeholders
- monitoring and reviewing treatment plan implementation
- stakeholder networking and relationship building
- working with stakeholder groups

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- analytical, problem solving and decision making techniques to facilitate monitoring progress against targets
- emergency risk management concepts and principles including industry standards
- jurisdiction and organisational documentation and reporting procedures
- jurisdictional and organisational responsibilities for implementing risk treatment options
- legislative and regulatory requirements relevant to implementing risk treatments
- options for communicating with stakeholders
- organisational policies and procedures including
  - arrangements in legislation
  - existing disaster plans, agreements and/or memorandums of understanding
  - facility emergency response plan

- local planning regulations, development controls and environmental plans
- organisational or jurisdictional emergency risk management policies or procedures
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including risk mitigation
- performance criteria for assessing treatment implementation including
  - continuous monitoring of maintenance of equity
  - continued involvement of stakeholders
  - cost effectiveness of treatment
  - evaluation in terms of actual risk reduction
  - evaluation of need for redefinition of policy
  - feedback mechanism
  - consideration of change that takes place over time
- practical constraint requirements and context including
  - arrangements, roles and responsibilities set down in existing facility emergency response plans
  - availability of technical expertise, technology and equipment
  - budgets, time, availability and capability of people
  - land use planning
  - legislation covering emergency and environmental management, safety standards and local government regulations
  - limited community knowledge of emergency risk management processes and benefits
  - political, social and cultural considerations

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Candidates must demonstrate that they have developed criteria to monitor implementation progress, report on progress and communicate and consult with stakeholders. They must present evidence from at least two different contexts, one of which may be simulated.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations

- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operational manuals.

## PUAEMR005 Treat operational risk

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to identify, plan and implement treatment options to reduce risk. It includes making risk decisions by identifying, assessing and implementing risk control measures, treatment options and monitoring and reviewing risk mitigation processes.

The unit applies to personnel working in a relatively simple and routine workplace in which organisational policy and procedures are used. They would normally have local supervisory and/or management responsibility and will apply appropriate solutions to a variety of predictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

PUAEMR027 Assess operational risk

### Competency Field

Emergency Management

### Unit Sector

Not applicable

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Make risk decisions

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Hazards are identified and risks are assessed, in accordance with operational policies and procedures

|                                                |            |                                                                                                                                                                                      |
|------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                | <b>1.2</b> | Risk that is determined as unacceptable is documented and noted for treatment                                                                                                        |
| <b>2 Identify and select treatment options</b> | <b>2.1</b> | Treatment options of known risks are identified and confirmed, in accordance with organisational standards, guidelines and supervisor's guidance                                     |
|                                                | <b>2.2</b> | Treatment options under consideration are evaluated for effectiveness within the given context                                                                                       |
|                                                | <b>2.3</b> | Selected treatment options are documented and communicated, in accordance with organisational policies and procedures                                                                |
| <b>3 Implement treatment options</b>           | <b>3.1</b> | Treatment plans incorporating selected options are implemented, in accordance with organisational policies and procedures                                                            |
|                                                | <b>3.2</b> | Treatment plans are communicated within the workplace, in accordance with organisational policies and procedures                                                                     |
| <b>4 Monitor and review risks and process</b>  | <b>4.1</b> | Effectiveness and efficiency of the treatment plan is monitored, reviewed and recorded, in accordance with organisational policies and procedures, to ensure compliance and validity |
|                                                | <b>4.2</b> | Residual risk is calculated and communicated to supervisors, so that a decision can be made whether to accept the risk or re-establish the risk management process                   |
|                                                | <b>4.3</b> | Treatments are adjusted and communicated following the review process                                                                                                                |

# Assessment Requirements for PUAEMR005 Treat operational risk

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least three separate occasions and includes

- communicating with personnel at all levels of organisation and risk management specialists
- following organisational policies and procedures including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- implementing and monitoring designated actions
- implementing treatment options including identifying and selecting treatment options
- interpreting information and data to identify areas for improvement
- making observations and recording outcomes accurately
- managing simple project implementation
- monitoring and reviewing risks mitigation processes
- undertaking basic research to access relevant information and data
- using consultation and negotiation skills in relation to developing plans

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- duty of care
- communication techniques
- legislation including regulations, codes of practice, associated standards and guidance material
- organisational documentation, policies, procedures including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- guidelines relevant to risk
- risk assessment including
  - benefits to individual and organisation
  - cost benefits from implementation of treatment
  - cost of implementing treatment option
- risk management terminology and language relevant to industry standards including

- acceptable risk
- residual risk
- unacceptable risk
- specified methods or tools for use in the identification and analysis of risk
- team work principles and strategies
- techniques and methods used to identify or analyse risk management information
- techniques for giving and receiving feedback in a constructive manner
- treatment options for risks including
  - avoidance of risk
  - changing consequences of an identified hazard impact
  - changing likelihood of an initiating event or source of risk occurring
  - hazard impacting on elements at risk
  - removing a risk source
  - retaining risk based on an informed decision
  - risk mitigation
  - sharing risk
  - treatment options may
- treatment plans including
  - budgeting
  - expected outcome of treatments
  - performance measures
  - responsibilities
  - review process to be used
  - schedules

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment must confirm the ability to define and identify risk language, definitions and terminology. Evidence must also be provided of stakeholder involvement throughout the treatment process and that an informed analysis and selection of treatment options has been

undertaken using the methodology and procedures approved by the organisation.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operational manuals.

## PUAEMR006 Assess operational risk

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit involves the skills and knowledge required to identify and assess risk in an operational environment. It includes establishing the risk context by identify, analysing and evaluating risk.

The unit of competency applies to personnel at a relatively simple and routine level, in which they are using established organisational policy and procedures. Personnel would normally have local supervisory or management responsibility and apply appropriate solutions to a variety of predictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

Emergency Management

### Unit Sector

Not applicable

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### 1 Establish the risk context

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |            |                                                                                                                                        |
|------------|----------------------------------------------------------------------------------------------------------------------------------------|
| <b>1.1</b> | Risk assessment objectives and scope are identified using organisational risk management procedures, industry standards and guidelines |
| <b>1.2</b> | Risk criteria are identified and confirmed, in accordance with organisational policies, procedures or with                             |

|                        |                                                                                                                              |
|------------------------|------------------------------------------------------------------------------------------------------------------------------|
|                        | supervisor's guidance                                                                                                        |
|                        | 1.3 Structure for planning required to conduct a risk assessment is determined                                               |
|                        | 1.4 Stakeholder aims and objectives are identified and recorded, in accordance with organisational procedures and guidelines |
| <b>2 Identify risk</b> | 2.1 Sources of risk which affect the situation or objectives are identified and recorded, in consultation with stakeholders  |
|                        | 2.2 Risks are identified using a specified methodology or tool, in accordance with organisational procedures and guidelines  |
|                        | 2.3 Risk statements describing consequences are generated, in accordance with organisational procedures                      |
| <b>3 Analyse risk</b>  | 3.1 Risks are analysed by estimating the likelihood of consequences, in accordance with organisational procedures            |
|                        | 3.2 Levels of risk are determined, documented and communicated, in accordance with organisational policies and procedures    |
| <b>4 Evaluate risk</b> | 4.1 Levels of risks are prioritised for control, in consultation with stakeholders                                           |
|                        | 4.2 Risk assessment rating is compared to established risk evaluation criteria and is communicated to the supervisor         |
|                        | 4.3 Risks are monitored and reviewed until appropriate treatment measures have been implemented                              |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to PUAEMR027 Assess operational risk.

# Assessment Requirements for PUAEMR006 Assess operational risk

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least three separate occasions and includes

- analysing organisational information and data
- communicating with stakeholders
- contributing to the assessment of resources
- establishing risk context and identifying, analysing and evaluating risk
- following organisational policies and procedures including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- interpreting information and data to identify areas for improvement
- making observations including interactions between personnel, their activities, equipment, environment and systems
- preparing detailed reports for a range of target groups including WHS/OHS or risk committee, WHS/OHS representatives, managers and supervisors
- undertaking basic research including accessing information and data
- using consultation and negotiation skills in relation to developing plans and implementing and monitoring designated actions

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and include knowledge of

- communication techniques including language style and active listening
- concept of duty of care in emergency risk management
- organisational documentation, policies, procedures and guidelines including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- principles of operational risk assessment
- risk management terminology and language
- risk profiles or criteria including
  - how likelihood will be defined
  - level at which risk becomes acceptable or tolerable

- nature and types of causes and consequences that can occur and how they will be measured
- risk mitigation and how level of risk is determined
- roles and responsibilities in assessing risk
- timeframes of likelihood or consequences
- views of stakeholders
- whether combinations of multiple risks should be considered and if so how and which combinations should be considered
- specified methods and tools used in the identification and analysis of risk
- structure and forms of legislation including regulations, codes of practice, industry standards and guidance material
- techniques and methods used to identify and analyse information

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment must confirm the ability to define and identify risk language, definitions and terminology. Evidence must also be provided of stakeholder involvement throughout the process and that an informed analysis of the risks has been undertaken using tools and methodology approved by the organisation.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operational manuals.

## PUAEMR007 Develop emergency management plans

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to develop new or revised emergency management plans within an organisation. These plans may focus on one or more aspects of emergency management i.e. prevention, preparedness, response and/or recovery.

It includes establishing and planning context and framework, developing agreed processes and methodology and undertaking risk research and analysis. It also includes developing and refining planning parameters, documenting emergency plans, validating and implementing planning outcomes as well as monitoring and reviewing planning processes and outcomes.

The unit applies to personnel responsible for developing emergency management plans within an organisation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

Emergency Management

### Unit Sector

Not applicable

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### **1 Establish planning context and framework**

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Authority to plan is confirmed by legislation, direction, organisational or other managerial agreement

- |                                                            |            |                                                                                                                                                                              |
|------------------------------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                            | <b>1.2</b> | Planning environment is clarified by analysing emergency management plan drivers and risk assessments                                                                        |
|                                                            | <b>1.3</b> | Legislative, regulatory and organisational requirements, policy, procedures, existing arrangements and plans impacting on the planning framework are identified and analysed |
|                                                            | <b>1.4</b> | Interests, sensitivities, roles and responsibilities of key stakeholders are identified                                                                                      |
|                                                            | <b>1.5</b> | Planning purpose, aims, objectives and governance frameworks are developed and refined with stakeholders                                                                     |
| <b>2 Develop agreed planning processes and methodology</b> | <b>2.1</b> | A project scope is developed considering emergency management plan constraints                                                                                               |
|                                                            | <b>2.2</b> | Processes for negotiating outcomes, making decisions, reporting, monitoring progress and quality are agreed, in accordance with organisational procedures                    |
|                                                            | <b>2.3</b> | Consultation and communication plan is developed and implemented, in accordance with organisational procedures                                                               |
|                                                            | <b>2.4</b> | Sources of expertise are identified to contribute specialised information and analysis, as required                                                                          |
|                                                            | <b>2.5</b> | Emergency management plan structure is agreed in consultation with stakeholders, in accordance with organisational procedures                                                |
|                                                            | <b>2.6</b> | Project plan is prepared and approved in consultation with stakeholders, in accordance with organisational procedures                                                        |
| <b>3 Undertake risk research and analysis</b>              | <b>3.1</b> | Project scope is reviewed in response to new information or changes in resources and planning environment                                                                    |
|                                                            | <b>3.2</b> | Analysis and research tools are used in developing emergency management plan                                                                                                 |
|                                                            | <b>3.3</b> | Emergency risk information register is built or updated using credible emergency management sources                                                                          |
|                                                            | <b>3.4</b> | Emergency risk management strategies are assessed                                                                                                                            |

- |                                                    |            |                                                                                                                                                                                            |
|----------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                    | <b>3.5</b> | Organisational vulnerability is determined by analysing susceptibility and resilience to risks                                                                                             |
|                                                    | <b>3.6</b> | Emergency management plan is confirmed as appropriate risk treatment                                                                                                                       |
| <b>4 Develop and/or refine planning parameters</b> | <b>4.1</b> | Emergency management plan arrangements are reviewed or developed to identify potential gaps or duplication in roles and responsibilities                                                   |
|                                                    | <b>4.2</b> | Emergency management plan strategies and tactics are identified and confirmed, in consultation with stakeholders                                                                           |
|                                                    | <b>4.3</b> | Resources and services including potential critical shortfalls are identified                                                                                                              |
|                                                    | <b>4.4</b> | Financial and contractual arrangements for accessing or acquiring resources and services are developed, in accordance with organisational procedures                                       |
|                                                    | <b>4.5</b> | Arrangements for the command, control and coordination of emergency response or recovery operations are confirmed                                                                          |
|                                                    | <b>4.6</b> | Contingencies to address potential problems are developed with relevant organisations and service providers, in accordance with organisational policies and procedures                     |
|                                                    | <b>4.7</b> | Organisational implications of new or revised plans are identified and assessed                                                                                                            |
| <b>5 Document emergency plan</b>                   | <b>5.1</b> | Emergency management plan is iteratively developed in consultation with stakeholders                                                                                                       |
|                                                    | <b>5.2</b> | Emergency management plan is prepared, in accordance with organisational procedures and industry standards and is consistent with broader jurisdictional emergency management arrangements |
|                                                    | <b>5.3</b> | Language used is clear, concise and appropriate for documentation purpose and audience                                                                                                     |
|                                                    | <b>5.4</b> | Planning records, supporting documentation and contact information is maintained, in accordance with organisational procedures and industry standards                                      |
| <b>6 Validate and implement</b>                    | <b>6.1</b> | Compatibility, links and interactions between the                                                                                                                                          |

|                                                           |                                                                                                                                                                      |
|-----------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>planning outcomes</b>                                  | emergency management plan and other organisational documentation is reviewed                                                                                         |
|                                                           | <b>6.2</b> Specific benefits of the emergency management plan are promoted to stakeholders and other organisations to establish support                              |
| <b>7 Monitor and review planning process and outcomes</b> | <b>7.1</b> Maintenance and audit schedule is implemented, in accordance with organisational policies and procedures                                                  |
|                                                           | <b>7.2</b> Deficiencies identified during audit, activation or implementation of the emergency management plan are analysed and are reported to authorised personnel |
|                                                           | <b>7.3</b> Emergency management plan amendments are negotiated, documented and authorised, in accordance with organisational procedures                              |
|                                                           | <b>7.4</b> Opportunities for improving emergency planning processes are reported to authorised personnel                                                             |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAEMR028 Develop emergency management plans.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAEMR007 Develop emergency management plans

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least two occasions and includes

- developing or refining planning parameters
- developing emergency planning processes in cooperation with stakeholders
- documenting and applying emergency response plans
- establishing planning context and framework
- following organisational policies and procedures including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- explaining planning process and promoting its benefits to stakeholders and communities
- locating and interpreting risk information
- monitoring and reviewing planning process and outcomes including evaluating planning processes and outcomes with stakeholders
- negotiating outcomes
- providing risk management information, advice and opinions
- recognising and working with emergency management plan constraints
- undertaking risk research and analysis including using emergency risk information registers and emergency management research tools
- validating and implementing planning outcomes
- working cooperatively and with stakeholders in developing plans

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- emergency response plans
- emergency management drivers
- emergency risk management plan constraints including
  - arrangements, roles and responsibilities set down in existing emergency management plans
  - availability of technical expertise, technology and equipment
  - budgets, time, availability and capability of personnel

- land use planning, building codes and other regulations
- legislation covering emergency management, environmental management, safety standards and local government regulations
- limited organisational knowledge of emergency risk management processes and benefits
- emergency risk management terminology, concepts and principles
- emergency risk management tools
- fundamentals of emergency management planning
- fundamentals of risk management and risk mitigation including industry standards
- group dynamics and strategies for team building and stakeholder liaison
- legislative and regulatory obligations
- organisational documentation, policies and procedures including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- potential stakeholders
- research tools and risk analysis techniques including risk management registers

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Competency should be demonstrated in at least two different contexts throughout the life of an emergency planning project or during components of a number of projects, one of which may be simulated.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operational manuals.

## PUAEMR009 Facilitate emergency risk assessment

### Modification History

**Release 2.0** This is the second release of this unit of competency in the PUA Public Safety Training Package.

Clarification of text, addition/deletion of Performance Criteria and minor changes to Knowledge and Performance Evidence.

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to facilitate the development of an agreed list of prioritised risks, using an emergency risk management process developed in cooperation with the community, that is consistent with standards. It includes identifying, defining and engaging with entities, establishing context and risk criteria, identifying and analysing risk, evaluating risks, promoting ongoing commitment to process and outcomes and monitoring and reviewing processes and outcomes.

The unit applies to personnel who facilitate emergency risk assessments with a community or part of a community and who will act as a project manager or facilitator for working groups that are used to conduct emergency risk assessments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

Emergency Management

### Unit Sector

Not applicable

### Elements and Performance Criteria

#### ELEMENTS

#### PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

## **1 Identify, define and engage entities**

- 1.1** Entities are defined and identified
- 1.2** Known risks, stakeholder/entity analysis, specialist expertise and community and organisational sources of information are used to identify communication and consultation networks that may be useful
- 1.3** Working group is established with an appropriate balance of expertise, representation and authority included
- 1.4** Emergency risk principles, terminology and processes are explained to and further developed with the community
- 1.5** Implementation of emergency risk management processes are negotiated with relevant entities
- 1.6** Communication strategies are selected to develop a communication plan

## **2 Establish context and risk criteria**

- 2.1** Legislative, regulatory and organisational requirements including policies, procedures, standards and desired outcomes are identified
- 2.2** Objectives, expectations and scope of risk assessment are identified using emergency risk management standards and guidelines
- 2.3** Information on community characteristics, safety expectations, risk perceptions, roles and the requirements of entities is collected
- 2.4** Practical constraints, existing treatment strategies and expectations are reviewed when developing the risk criteria
- 2.5** Draft criteria and supporting explanations are circulated for comment
- 2.6** Processes for accountability and communication of accurate and consistent information to entities are developed and applied

## **3 Identify and analyse risks**

- 3.1** Sources of risk are identified through interaction of hazards, communities and the environment

- 3.2 Community elements at risk are identified
  - 3.3 Risk vulnerability of communities and the environment is determined according to likelihood, consequence and confidence
  - 3.4 Risk statements describing consequences are analysed and documented
  - 3.5 Risks are analysed in accordance with organisational procedures
  - 3.6 Risks and risk statements are rated and prioritised in accordance with agreed risk criteria
  - 3.7 Entities are consulted and feedback is documented
  - 3.8 Promotion of the emergency risk project is authorised before being communicated to others
- 4 **Evaluate risks**
  - 4.1 Risks requiring additional analysis or treatment are determined
  - 4.2 Tolerability and acceptability of risks are agreed with entities
- 5 **Promote ongoing commitment to process and outcomes**
  - 5.1 Consultation is undertaken throughout all stages of the emergency risk process
  - 5.2 Various communication and engagement strategies are used in accordance with organisational procedures and community expectations
  - 5.3 Stages of the risk assessment process, decisions taken and outcomes are documented
  - 5.4 Information is provided to the community taking into consideration language, literacy and cultural needs
- 6 **Monitor and review process and outcomes**
  - 6.1 Emergency risk assessment is completed and documented
  - 6.2 Data and contact information for entities is reviewed regularly and updated
  - 6.3 Review of the risk register is undertaken in accordance with the schedule or in response to emergency risk

drivers or triggers

- 6.4 Opportunities for improving the emergency risk assessment plan and processes are reported and action is taken
- 6.5 Allocated tasks are completed on time, whilst encouraging entities to help achieve common goals
- 6.6 Documentation, records, confidentiality and privacy of information is maintained

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAEMR009B Facilitate emergency risk assessment.

## Links

Companion Volume Implementation Guides are found in VETNet -

# Assessment Requirements for PUAEMR009 Facilitate emergency risk assessment

## Modification History

**Release 2.0** This is the second release of this unit of competency in the PUA Public Safety Training Package.

Clarification of text, addition/deletion of Performance Criteria and minor changes to Knowledge and Performance Evidence.

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all requirements of the elements and performance criteria on at least one occasion and includes

- applying organisational policies and procedures
- calculating probability and consequences from sources of risk for vulnerable communities and the environment
- communicating emergency risk management concepts and processes and promoting its benefits to entities
- defining and engaging the community
- demonstrating decision making techniques
- establishing context and risk criteria
- evaluating environmental assets throughout risk assessment during risk assessment
- identifying, analysing and evaluating risks
- locating and interpreting community information
- monitoring and reviewing emergency risk assessment processes and outcomes
- promoting commitment and ownership for emergency risk assessment processes and outcomes
- summarising and explaining key information.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all requirements of the elements and performance criteria and includes knowledge of

- community entities
- emergency risk management concepts, plans and principles
- evaluation methods and techniques
- how to identify and define entities

- how to locate and interpret entity information
- organisational documentation, policies and procedures
- practical constraints including political, social, environmental and cultural considerations
- risk assessment standards
- risk criteria
- sources of risk for vulnerable communities and the environment.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of exercises and/or case studies
- appropriate materials and equipment currently used in industry
- applicable documentation including organisational procedures, standards, equipment specifications, regulations, codes of practice and operational manuals.

# PUAEMR010 Plan and implement a treatment measure

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to plan and implement a treatment measure within the scope and capability of a single agency, organisation or service provider following an emergency risk assessment with a community. It includes developing, implementing and monitoring a treatment plan as well reviewing the implementation of treatment measures.

The unit applies to personnel responsible for implementing a risk treatment plan that is within the responsibility of their organisation.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Emergency Management

## Unit Sector

Not applicable

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Develop treatment plan

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Risks to be treated and current relevance of treatment measure options are confirmed, in accordance with organisational procedures

- |                                                               |            |                                                                                                                                                                  |
|---------------------------------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                               | <b>1.2</b> | Key stakeholders are identified along with their potential interests, sensitivities, roles and responsibilities                                                  |
|                                                               | <b>1.3</b> | Criteria for assessing effectiveness of treatment plan implementation is determined, in consultation with stakeholders                                           |
|                                                               | <b>1.4</b> | Treatment plan measures, resources, milestones, budget, reporting procedures and roles and responsibilities of project team members are identified               |
|                                                               | <b>1.5</b> | Treatment plan implementation issues are identified and contingencies are developed, as required                                                                 |
|                                                               | <b>1.6</b> | Treatment plan is documented and submitted for approval, in accordance with organisational policies and procedures                                               |
| <b>2 Implement and monitor treatment plan</b>                 | <b>2.1</b> | Roles and responsibilities are allocated and communication and reporting procedures are confirmed                                                                |
|                                                               | <b>2.2</b> | Consultation and communication strategies, treatment measures and adequacy of resources are monitored and reported, in accordance with organisational procedures |
|                                                               | <b>2.3</b> | Treatment plan variations are approved by supervisor or manager and are documented                                                                               |
|                                                               | <b>2.4</b> | Accurate records of meetings and communication with stakeholders and project team members are maintained                                                         |
|                                                               | <b>2.5</b> | Treatment measures are completed, in accordance with organisational procedures                                                                                   |
| <b>3 Review implementation of treatment measures and plan</b> | <b>3.1</b> | Treatment plan implementation is assessed using agreed assessment criteria and stakeholder input                                                                 |
|                                                               | <b>3.2</b> | Planning processes are reviewed and opportunities for improvements are identified                                                                                |
|                                                               | <b>3.3</b> | Treatment plan reporting requirements are completed, in accordance with organisational procedures                                                                |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAEMR029 Plan and implement a treatment measure.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAEMR010 Plan and implement a treatment measure

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least two separate occasions and includes

- developing treatment plans
- engaging with stakeholders including
  - communicating with key stakeholders
  - summarising and explaining key information
  - valuing diversity of views and perceptions of risks
- following organisational policies and procedures including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- identifying implementation issues and developing and documenting contingencies
- implementing and monitoring treatment plans
- making accurate records of treatment measures
- managing treatment measures and plans
- review treatment plan implementation including evaluating treatment measures
- utilising available resources

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- assessment criteria including
  - benefits of outcomes compared with costs of treatments
  - benefits to personnel, enterprises, communities, environment and governments including their agencies
  - improved resilience of community and/or organisation through improved systems
  - reduction of vulnerability
- communication methods and techniques
- culture, structure and responsibility for treatments of key response and recovery organisations or agencies

- jurisdictional, organisational and operational responsibilities for implementing risk treatment options
- legislative and regulatory requirements for implementing risk treatments
- organisational documentation, policies and procedures including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements and risk mitigation
- organisational requirements for submission and approval of treatment plans
- processes for planning treatment measures
- report requirements of treatment outcomes
- strategies for assessing treatment measures

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Competency should be demonstrated in at least two different contexts throughout the life of a treatment project or during the components of a number of projects, one of which may be simulated.

Assessment must confirm the ability to

- develop an implementation plan in cooperation with stakeholders
- establish, conduct and finalise a treatment project that has broad stakeholder and organisational support that produces effective treatment outcomes
- evaluate treatment measures
- gain organisational approval for treatment measure plan
- identify implementation issues and develop or document contingencies
- maintain momentum and achieve project outcomes using available resources
- work with stakeholders to monitor treatment implementation

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operational manuals.

## PUAEMR014 Deliver recovery services

### Modification History

**Release 2.0** This is the second release of this unit of competency in the PUA Public Safety Training Package.

Clarification of text, addition/deletion of Performance Criteria and minor changes to Knowledge and Performance Evidence.

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to deliver administrative, technical and/or professional services in a recovery service. This is provided by individuals working within a recovery framework of existing emergency management legislation, regulations, plans and arrangements. It includes clarifying service delivery requirements, implementing an action plan for service delivery and delivering recovery services.

The range of services provided will vary markedly with the scale and type of emergency and will address aspects of recovery in the social, built, economic and natural environments. Please note that the unit is not applicable to individuals performing management roles in the delivery of a recovery service.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

Emergency Management

### Unit Sector

Not applicable

### Elements and Performance Criteria

#### ELEMENTS

#### PERFORMANCE CRITERIA

Elements describe the essential Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

### **1 Clarify service delivery requirements**

- 1.1** Nature of role is established within overall emergency recovery strategy and service delivery model
- 1.2** Scope, limits and priorities for recovery services are clarified with entities
- 1.3** Range of information to be collected during recovery service delivery is confirmed
- 1.4** Communication is established with recovery services manager and other providers to ensure integration of delivery and collection of information

### **2 Implement action plan for service delivery**

- 2.1** Service delivery action plan is communicated to relevant entities
- 2.2** Service delivery implications of potential short, medium and long term recovery issues are considered
- 2.3** Contingencies to address likely recovery issues are communicated with entities
- 2.4** Service delivery action plan is implemented in consultation with relevant entities

### **3 Deliver recovery services**

- 3.1** Team members are briefed and assigned tasks and roles consistent with their capability and capacity
- 3.2** Services are delivered in accordance with the recovery framework
- 3.3** Services are delivered in cooperation with other service providers to ensure seamless delivery
- 3.4** Requests for services outside assigned scope are referred to appropriate service providers
- 3.5** Established protocols and administration systems are used to track jobs and expenditure
- 3.6** Confidentiality of information is maintained in accordance with organisational procedures
- 3.7** Quality and progress of service delivery is monitored and adjusted within agreed scope
- 3.8** Information about community needs, service level activity and suggested improvements to delivery is

collected and reported to the recovery services manager

### 3.9 Team members are debriefed

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAEMR014A Deliver recovery services.

## Links

# Assessment Requirements for PUAEMR014 Deliver recovery services

## Modification History

**Release 2.0** This is the second release of this unit of competency in the PUA Public Safety Training Package.

Clarification of text, addition/deletion of Performance Criteria and minor changes to Knowledge and Performance Evidence.

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- assigning tasks and roles consistent with capability and capacity
- collecting accurate information about community needs and services
- communicating with recovery managers, other service providers and the community
- conducting data collection, evaluation and needs analysis
- delivering recovery services safely and efficiently
- demonstrating decision making in recovery services
- following organisational policies and procedures
- identifying risks and hazards for recovery services
- implementing an action plan for recovery service delivery
- participating in briefings and debriefings with team members
- recognising recovery needs and monitoring and reporting on service delivery within agreed scope
- understanding and confirming recovery service delivery requirements
- using interpersonal skills including diplomacy, tact, negotiation and conflict resolution
- working as a team member.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- approaches and strategies for community development
- common impacts of emergencies on communities and individuals
- community contexts
- delegations and administrative processes within recovery service organisations

- disaster recovery funding arrangements
- event specific recommendations to recovery service delivery
- fundamentals of recovery operations
- issues relating to recovery services delivery including transition to business as usual
- jurisdictional recovery assistance programs relevant to recovery service role
- legislative and regulatory framework and local, state and territory emergency management arrangements
- organisational documentation, policies and procedures
- strategies for briefings and debriefings
- types of service providers and delivery.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of exercises and/or case studies
- appropriate materials and equipment currently used in industry including
- applicable documentation including organisational procedures, standards, equipment specifications, regulations, codes of practice and operational manuals.

# PUAEMR019 Contribute to an emergency management process

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package

## Application

This unit of competency involves the skills and knowledge required to contribute to developing an emergency risk assessment and treatment plan for a community. It includes clarifying community contacts, applying emergency risk management methodology, developing risk statements and treatment options and promoting emergency risk management ownership.

The unit applies to personnel who are contributing to emergency risk assessments with a community or part of a community and is relevant to individuals with specific expertise who may be invited to participate in an emergency risk assessment working group.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable

## Competency Field

Emergency Management

## Unit Sector

Not applicable

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Clarify community context

1.1

Known risks, safety concerns and expectations of emergency risk management processes are identified

1.2

Legislation, policies, procedures and existing emergency management documentation and arrangements are

|                                                        |            |                                                                                                                                                           |
|--------------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                        |            | identified                                                                                                                                                |
|                                                        | <b>1.3</b> | Contributions to the development of a community profile are encouraged                                                                                    |
| <b>2 Apply emergency risk management methodology</b>   | <b>2.1</b> | Organisational responsibilities, roles, resources, limits of authority, scope of community knowledge and expertise are explained to project group members |
|                                                        | <b>2.2</b> | Sources of useful and credible risk related information are identified and applied to the methodology                                                     |
|                                                        | <b>2.3</b> | Consultation and communication strategies are developed in accordance with emergency risk management methodology                                          |
|                                                        | <b>2.4</b> | Processes for accountability and communication of accurate and consistent information to entities are developed and applied                               |
|                                                        | <b>2.5</b> | Accuracy and currency of data source is validated                                                                                                         |
| <b>3 Develop risk statements and treatment options</b> | <b>3.1</b> | Additional information is sought from specialist entities regarding information gaps and conflicting data or views                                        |
|                                                        | <b>3.2</b> | Risk statements are developed using sources of risk, elements at risk and vulnerability                                                                   |
|                                                        | <b>3.3</b> | Risk statements are analysed considering levels of likelihood, consequence and confidence                                                                 |
|                                                        | <b>3.4</b> | Input is provided to assess effectiveness of existing treatment strategies                                                                                |
|                                                        | <b>3.5</b> | Risk treatment options are developed considering practical constraints                                                                                    |
|                                                        | <b>3.6</b> | Feedback on risks and treatment options is obtained from internal and external community entities                                                         |
|                                                        | <b>3.7</b> | Recommendations are developed with relevant entities and are submitted for approval                                                                       |
|                                                        | <b>3.8</b> | Promotion of emergency risk project is approved before being communicated to others                                                                       |
| <b>4 Promote emergency risk management ownership</b>   | <b>4.1</b> | Management is kept informed of project progress, proposed variations in strategy, decisions and recommendations                                           |

- 4.2 Resource variations are negotiated with authorised personnel
- 4.3 Stages of emergency risk management processes, decisions and outcomes are documented
- 4.4 Opportunities for improving emergency risk management processes are identified and reported to authorised personnel
- 4.5 Allocated tasks are monitored and completed on time, whilst encouraging entities to help achieve common goals
- 4.6 Documentation, records, confidentiality and privacy of information are maintained

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is not equivalent to PUAEMR008 Contribute to an emergency risk management process.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAEMR019 Contribute to an emergency management process

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- analysing risks, implications and impacts of proposed treatments
- clarifying community context
- communicating and consulting with entities
- delivering constructive input and gaining organisational and/or community support
- demonstrating decision making techniques
- determining and applying emergency risk management methodology
- developing risk statements and treatment options
- following organisational policies and procedures
- informing the organisation and community of emergency risk management processes
- participating and contributing to emergency risk management processes
- promoting emergency risk management ownership.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- communication and consultation strategies
- concepts, principles, standards and guidelines of emergency risk management
- emergency management risk processes
- organisational documentation, policies and procedures
- political, social, environmental and cultural considerations
- practical constraints
- roles and responsibilities of emergency risk management project group members
- sources of useful and credible information
- treatment options.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of exercises and/or case studies
- appropriate materials and equipment currently used in industry
- applicable documentation including organisational procedures, standards, equipment specifications, regulations, codes of practice and operational manuals.

## PUAEMR020 Coordinate emergency planning

### Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to collaboratively develop new or undertake the revision of existing emergency plans in an emergency management context. Such plans may focus on comprehensive aspects of emergency management for prevention, preparedness, response and/or recovery. It includes establishing the emergency planning context and framework, developing agreed planning processes and methodology, undertaking research and analysis for emergency management planning, developing and refining emergency management planning outcomes, documenting the emergency plan and validating the plan.

The unit applies to personnel involved in emergency planning within or by emergency service organisations, government agencies, private sector businesses, critical infrastructure owners and operators, community groups, not for profit organisations, community event committees, and educational institutions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable

### Competency Field

Emergency Management

### Unit Sector

Not applicable

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |                                                                    |                                                                                                                                                                                      |
|--------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>1 Establish emergency planning context and framework</b>        | <b>1.1</b> Authority to plan is confirmed with reference to legislation, organisational direction, community and/or managerial agreement                                             |
|                                                                    | <b>1.2</b> Planning environment is clarified by analysing emergency management planning principles                                                                                   |
|                                                                    | <b>1.3</b> Considerations impacting planning frameworks are identified and analysed                                                                                                  |
|                                                                    | <b>1.4</b> Entities and their potential interests, sensitivities and roles and responsibilities are identified                                                                       |
|                                                                    | <b>1.5</b> Emergency planning team is established with an appropriate balance of expertise, entity representation and authority to achieve desired outcomes                          |
| <b>2 Develop agreed planning processes and methodology</b>         | <b>2.1</b> Project planning scope is developed considering emergency management planning constraints, emergency management plan aims and objectives and entity profiles              |
|                                                                    | <b>2.2</b> Processes for negotiating outcomes, key performance indicators, information management, reporting, accountability and decision making strategies are developed and agreed |
|                                                                    | <b>2.3</b> Strategies for the planning process are developed and implemented                                                                                                         |
|                                                                    | <b>2.4</b> Sources of expertise are identified to contribute specialised information and analysis to the planning process, as required                                               |
| <b>3 Undertake research and analysis for emergency planning</b>    | <b>3.1</b> Emergency plan is regularly reviewed in response to latest information, changes in resources and the planning environment                                                 |
|                                                                    | <b>3.2</b> Appropriate research tools and consultation strategies for emergency response planning are chosen                                                                         |
|                                                                    | <b>3.3</b> Emergency planning is risk informed and planning is based on a risk management study                                                                                      |
| <b>4 Develop and refine emergency management planning outcomes</b> | <b>4.1</b> Emergency management arrangements are reviewed to identify gaps or duplication in roles and responsibilities                                                              |
|                                                                    | <b>4.2</b> Broad categories and types of resources and services                                                                                                                      |

required, including potential critical shortfalls, are identified

- 4.3** Financial and contractual arrangements for accessing or acquiring resources and services are developed
- 4.4** Arrangements for command, control and coordination of emergency response and/or recovery are addressed in the emergency management plan
- 4.5** Implications of a new or revised emergency management plan are identified in consultation with entities

## **5 Document emergency plan**

- 5.1** Emergency plan is prepared
- 5.2** Clear and concise language, appropriate for entities and target audience, is used in documentation
- 5.3** Emergency management planning records and supporting documentation are maintained

## **6 Validate plan**

- 6.1** Maintenance and audit schedules are implemented in consultation with relevant personnel and entities
- 6.2** Emergency management plan effectiveness is tested
- 6.3** Review outcomes are used to refine the emergency plan in consultation with relevant entities
- 6.4** Plan endorsement is obtained

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is not equivalent to PUAEMR021 Facilitate emergency planning processes.

# Assessment Requirements for PUAEMR020 Coordinate emergency planning

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- developing and refining emergency planning processes and outcomes
- documenting and validating an emergency plan
- ensuring maintenance and audit schedules are maintained
- establishing emergency planning context and framework
- establishing emergency planning project team expertise
- following organisational policies and procedures
- implementing consultation strategies
- maintaining records and supporting documentation
- participating in emergency planning processes
- undertaking research and analysis
- using agreed emergency planning processes and methodology
- working and consulting with entities to develop an emergency plan.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- availability and capability of personnel
- community information including entity profiles
- considerations that may impact on the emergency management planning framework
- constraints to planning processes
- emergency plan impact, processes, outcomes and benefits for entities
- emergency planning terminology, concepts and principles
- fundamentals of emergency planning
- jurisdictional emergency management arrangements and relevant legislation and plans
- limitations of entity knowledge about emergency planning processes and benefits
- organisational documentation, policies and procedures
- political, social, environmental and cultural considerations

- research tools and methodologies.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of exercises and/or case studies
- appropriate materials and equipment currently used in industry
- applicable documentation including organisational procedures, standards, equipment specifications, regulations, codes of practice and operational manuals.

## PUAEMR032 Design emergency management exercises

### Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to design, develop and document activities that exercise one or more of the elements of emergency management arrangements. It includes determining exercise need and purpose by designing and planning exercise activities, assessing exercise risks and identifying logistics requirements.

Emergency management exercises may be used to simulate emergency events in order to train personnel, review and test planning processes, identify needs and/or weaknesses, demonstrate capabilities and to practice people in working together. The design skills in this unit can be applied to any context in which an emergency management exercise is appropriate.

The unit applies to personnel with responsibility for designing emergency management exercises. No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable

### Competency Field

Emergency Management

### Unit Sector

Not applicable

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### **1 Determine exercise need and purpose**

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1.1** Exercise entities are identified and engaged

- |                                              |            |                                                                                                                                           |
|----------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------|
|                                              | <b>1.2</b> | Governance arrangements for the exercise are confirmed                                                                                    |
|                                              | <b>1.3</b> | Need and purpose of the exercise is identified and documented in consultation with entities                                               |
|                                              | <b>1.4</b> | Exercise aim and objectives are confirmed and documented                                                                                  |
|                                              | <b>1.5</b> | Exercise scope is determined based on operational outcomes, results of training needs analysis, previous exercises and evaluation reports |
| <b>2 Design and plan exercise activities</b> | <b>2.1</b> | Exercise planning teams are established                                                                                                   |
|                                              | <b>2.2</b> | Governance and planning meetings are held, agreements and decisions are made and outcomes are documented and communicated to entities     |
|                                              | <b>2.3</b> | Design planning processes are undertaken with entities to meet exercise aims, objectives and components                                   |
|                                              | <b>2.4</b> | Exercise style and activities, consistent with aims and objectives, are identified in consultation with entities                          |
|                                              | <b>2.5</b> | An exercise plan and component parts is developed and documented                                                                          |
|                                              | <b>2.6</b> | Evaluation strategy is documented in accordance with exercise aim and objectives                                                          |
| <b>3 Assess exercise risks</b>               | <b>3.1</b> | Risk and safety considerations are identified and included in the planning process                                                        |
|                                              | <b>3.2</b> | Activities which mitigate or reduce risks associated with conducting exercise activities are designed                                     |
|                                              | <b>3.3</b> | Exercise risk and safety management plan is prepared                                                                                      |
| <b>4 Identify logistics requirements</b>     | <b>4.1</b> | Physical, virtual, human and budget resources to support the exercise are identified and secured                                          |
|                                              | <b>4.2</b> | Briefing requirements for exercise management personnel and participants are identified                                                   |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is not equivalent to PUAEMR013 Design emergency management exercises.

# Assessment Requirements for PUAEMR032 Design emergency management exercises

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- delivering briefings
- demonstrating decision making
- designing and planning activities and processes for emergency management exercises including
  - determining emergency management exercise needs, aim and objectives
  - developing measurable and achievable objectives related to emergency management exercise
  - establishing an exercise planning team
  - managing exercise planning activities
  - planning resource allocation
  - preparing exercise documentation including plans and evaluations
  - undertaking governance and planning meetings.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- components of emergency management exercises including
  - aim and objectives
  - authorities, permissions and exercise governance
  - budget and logistics requirements
  - evaluation or assessment plan
  - evidence collection tools and templates
  - exercise location risk and safety management plan
  - schedule of activities
  - scope or purpose statement
- emergency management exercise concepts, principles and arrangements
- legislative and regulatory arrangements for using resources including land, buildings,

- equipment and volunteers
- organisational documentation, policies and procedures
- relevant incident, disaster, emergency management principles
- risk and safety management principles.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions. Assessment must include two different exercises styles, with one being a multi-organisational exercise.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of exercises and/or case studies
- appropriate materials and equipment currently used in industry
- applicable documentation including organisational procedures, standards, equipment specifications, regulations, codes of practice and operational manuals.

## PUAEMR033 Determine treatment options

### Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to determine a range of treatment options for responding to emergency risks. It includes establishing project and working groups, confirming risks to be considered, identifying and evaluating treatment options, recommending treatment options for each risk, promoting ongoing commitment and ownership of processes and outcomes as well as monitoring and reviewing processes.

The unit applies to personnel who are part of a working group that develops treatment options during an emergency risk assessment with a community.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

|                                                                     | <b>7.2</b> | Treatment options are monitored and reviewed in accordance with risk scope                                 |
|                                                                     | <b>7.3</b> | Opportunities for improving emergency risk management processes are reported to authorised personnel       |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is not equivalent to PUAEMR012 Determine treatment options.

## Links

Companion Volume Implementation Guides are found in VETNet -

<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAEMR033 Determine treatment options

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- accessing specialised expertise in determining risk treatment
- completing documentation
- demonstrating decision making techniques
- determining risks to be considered and producing recommendations
- following organisational policies and procedures
- identifying, evaluating and recommending treatment options for each risk
- maintaining momentum and achieving project outcomes using available resources
- managing meetings including negotiating and communicating with entities and community groups
- obtaining feedback and monitoring and reviewing treatment processes and outcomes
- promoting commitment and ownership of treatment processes and outcomes
- researching and analysing to determine potential treatment options
- using specialised information
- working with entities and community groups.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- characteristics and demographics of communities
- communication and negotiation techniques
- concept of community capital
- cross benefit analysis of treatment options
- emergency risk management concepts and principles
- evaluation methods and techniques of treatment options
- organisational documentation, policies and procedures
- political, social, environmental and cultural considerations
- practical constraints

- sources of risk and options for treating
- specialised information, if required
- standards
- types of entities.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of exercises and/or case studies
- an agreed set of treatment options for a given set of risks
- appropriate materials and equipment currently used in industry
- applicable documentation including organisational procedures, standards, equipment specifications, regulations, codes of practice and operational manuals.

## PUAEMR034 Establish and manage a recovery centre

### Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to establish and manage a recovery centre to provide comprehensive recovery services. It includes establishing a recovery centre, managing human resources and physical resources, coordinating information flow and recovery services and managing recovery centre closure and transition to mainstream services.

The mix of recovery and/or outreach services provided may change throughout the life of a centre to reflect a changing emphasis from short term relief to long term recovery. This may involve management of centre infrastructure, promotion of the centre, management of personnel in a stressful environment, coordination of service providers and the management of administration, information and financial requirements.

The unit applies to personnel with responsibility for managing a recovery centre.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable

### Competency Field

Emergency Management

### Unit Sector

Not applicable

### Elements and Performance Criteria

#### ELEMENTS

#### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Establish recovery centre**

**1.1** Recovery plans, arrangements and procedures are

located and implementation is agreed upon by entities

- 1.2 Recovery centre useability is assessed in consultation with lead organisation, recovery coordinator and/or committee for scale of emergency and possible impacts
- 1.3 Initial resource needs for the recovery centre are assessed and suppliers are selected
- 1.4 Financial and administrative procedures and task delegations are clarified and approved
- 1.5 Links with existing and emerging entities are established in consultation with lead organisation, recovery coordinator and/or committee to determine the level of involvement with the recovery centre
- 1.6 Regular communication with the recovery committee manager and entities is established and maintained
- 1.7 Centre layout is designed and/or organised to optimise efficiency, privacy, security and safety of personnel and the public

## **2 Manage human resources sustainably**

- 2.1 Capacity and capability of available personnel is assessed and roles and responsibilities are assigned
- 2.2 Regular operational briefings are provided to update personnel
- 2.3 Screening, inducting and integrating new personnel is established
- 2.4 Monitoring wellbeing within the recovery centre is implemented in accordance with organisational policies and procedures
- 2.5 Contingency plans and rosters for personnel are adjusted to meet changing needs and circumstances

## **3 Manage physical resources**

- 3.1 Recovery centre assets register is established and maintained
- 3.2 Recovery centre maintenance is organised and regularly reviewed
- 3.3 Records of consumables and equipment used are maintained
- 3.4 Expenditure is tracked and administered in accordance

- with organisational financial procedures
- 3.5 Risks are regularly assessed and contingency plans are developed for expansion and back up of resources
- 4 Coordinate information flow on recovery services**
- 4.1 Entities are identified and a communication plan is developed and distributed
- 4.2 Accurate and timely service delivery information is provided to entities and the community
- 4.3 Community information is received, analysed and reported to the recovery coordinator
- 4.4 Key decisions, rationale and service activity levels are recorded to enable evaluation and reporting
- 4.5 Arrangements for the management of media and VIP visits are implemented
- 5 Manage recovery centre closure and transition to mainstream services**
- 5.1 Transition of recovery centre arrangements are negotiated and publicised to the community, lead organisation, entities, recovery coordinator and/or committee
- 5.2 Files and information records are verified, updated and retained, as required
- 5.3 Statistical and financial reporting of recovery services delivered is prepared and provided to relevant entities
- 5.4 Equipment and materials audit is undertaken against the recovery centre assets register, damages and losses are reported and resources are released or returned to providers
- 5.5 Operational debriefing is implemented
- 5.6 Arrangements to ensure smooth closure of the recovery centre are made in consultation with lead organisations, and agencies, recovery coordinator and/or committee
- 5.7 Evaluation report is completed on recovery service delivery and is provided to lead organisations and agencies

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is not equivalent to PUAEMR015 Establish and manage a recovery centre.

# Assessment Requirements for PUAEMR034 Establish and manage a recovery centre

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- analysing recovery centre financial reports
- applying organisational policies and procedures
- demonstrating decision making
- establishing and managing a recovery centre including
  - allocation and use of equipment
  - appropriate layout of recovery centre and promotion of services
  - daily operations
  - evaluating delivery services
  - maintaining accurate files and records
  - monitoring and adjusting recovery services to suit changing needs
  - recovery centre closure and transition to mainstream services
  - resource management
  - shortages of resources
- implementing recovery plans
- monitoring health and wellbeing of individuals within the recovery centre
- undertaking briefings and debriefings
- using interpersonal skills including diplomacy, tact, negotiation and conflict resolution
- working with competing and conflicting priorities.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- characteristics of similar emergency events including related impacts, recovery needs and possible issues
- communication methods for individuals with diverse needs, perspectives and cultural backgrounds
- communication strategies for promoting recovery centre services

- design and/or layout principles for recovery centres including essential equipment, systems, consumables and initial resource requirements
- disaster recovery funding arrangements
- lessons management
- organisational documentation, policies and procedures
- principles of recovery management
- recovery frameworks
- recovery plans and arrangements
- reporting requirements for establishing and managing a recovery centre
- specific needs and sensitivities of communities including cultural, language, religious, physical and dietary requirements.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

## PUAEMR035 Facilitate community involvement in recovery

### Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to facilitate community involvement in event specific recovery planning. It includes initiating the recovery process, engaging the community to enhance existing community structures and networks, providing community feedback to the recovery committee, facilitating community implementation of an event specific recovery plan and monitoring and reviewing community recovery.

The unit applies to personnel who work in disaster recovery. Recovery support may include strengthening ongoing community capacity and enhancing the social, economic, environmental and physical infrastructure of the community and resolving local and external issues hindering recovery.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable

### Competency Field

Emergency Management

### Unit Sector

|                                                                                 | <b>1.2</b> Roles and responsibilities are assigned                                                                                                               |
|                                                                                 | <b>1.3</b> Key entities and their potential interests, sensitivities and dependencies are identified                                                             |
| <b>2 Engage community to enhance existing community structures and networks</b> | <b>2.1</b> Communication and consultation methods are identified and used to provide the community with information for their needs                              |
|                                                                                 | <b>2.2</b> Community capacity to engage in recovery activities and community capital, is assessed and gaps are identified                                        |
|                                                                                 | <b>2.3</b> Key relationships, alliances and networks are developed and maintained                                                                                |
|                                                                                 | <b>2.4</b> Entities, including communities, are provided with opportunities to raise, examine, comment on and contribute to issues, concerns and decision making |
|                                                                                 | <b>2.5</b> Support is provided to the community through the identification, assessment and prioritising of community needs and goals                             |
| <b>3 Provide community feedback to recovery committee</b>                       | <b>3.1</b> Community contribution, feedback and needs are collated and reported to the recovery committee                                                        |
|                                                                                 | <b>3.2</b> Guidance is provided to support the development of recovery strategies to address community concerns and needs                                        |
| <b>4 Facilitate community implementation of event specific recovery plan</b>    | <b>4.1</b> Agreed community led strategies and activities are implemented                                                                                        |
|                                                                                 | <b>4.2</b> Recovery committees' strategic approach is shared with the community                                                                                  |
|                                                                                 | <b>4.3</b> Resources are acquired with preference for using local networks for recovery projects                                                                 |
|                                                                                 | <b>4.4</b> Strategies for accessing additional resources are considered                                                                                          |
|                                                                                 | <b>4.5</b> Recovery strategies, activities and adequacy of resources and expenditure are monitored against recovery                                              |

environment

- 4.6 Changed circumstances are identified which may require a variation to the recovery plan
- 4.7 Ownership is promoted by informing the community and entities about recovery progress, specific activities and any variations in recovery strategies and their implementation
- 4.8 Recovery process, including decisions and outcomes, are documented

## 5 Monitor and review community's recovery

- 5.1 Recovery activity efficacy is monitored and reviewed
- 5.2 Transition plan to business as usual is developed and reviewed in accordance with community expectations and changing needs
- 5.3 Long term community sustainability is promoted
- 5.4 Audit and reporting requirements are undertaken in accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is not equivalent to PUAEMR016 Facilitate community involvement in recovery.

## Links

# Assessment Requirements for PUAEMR035 Facilitate community involvement in recovery

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- arranging and planning for community's sustainable recovery
- communicating and consulting with entities and networks
- contributing to the development of recovery strategies
- cultivating strategic relationships with key entities and networks
- demonstrating decision making in community involvement in recovery
- developing and reviewing transition plans
- following organisational policies and procedures
- identifying community needs, issues and concerns
- implementing community engagement processes
- leading and motivating teams and entities
- providing expertise and resources to support the community
- undertaking audit and reporting requirements.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- collection and analysis of information on impacts, needs and issues to inform recovery planning
- communication methods and processes for community audiences
- community profile, entities and networks
- community recovery principles
- disaster recovery funding arrangements
- emergency management arrangements and recovery services
- organisational documentation, policies and procedures
- physical and mental wellbeing strategies
- provision of information to entities and networks
- risk mitigation

- similar emergency events and related impacts, recovery needs and issues.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of exercises and/or case studies
- appropriate materials and equipment currently used in industry
- applicable documentation including organisational procedures, standards, equipment specifications, regulations, codes of practice and operational manuals.

# PUAEMR036 Manage and evaluate emergency management exercises

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to manage and evaluate exercises designed to practice one or more elements of the emergency management arrangements. It includes reviewing exercise preparation to any context in which an emergency management exercise is appropriate and evaluating outcomes against exercise objectives.

Emergency management exercises may be used to simulate emergency events in order to train personnel, review and test planning processes, identify needs and/or weaknesses, demonstrate capabilities and to practice people in working together.

The unit applies to personnel who are responsible for implementing and evaluating predesigned emergency management exercises.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

PUAEMR032 Design emergency management exercises

## Competency Field

Emergency Management

## Unit Sector

Not applicable

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |                                                        |                                                                                                                                                                                                                          |
|--------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>1 Review exercise preparation</b>                   | <b>1.1</b> Pre-exercise documentation to prepare organisations and individuals for their participation in exercise activity is communicated and actioned                                                                 |
|                                                        | <b>1.2</b> Permissions, authorities, clearances, budget and approvals are identified and confirmed                                                                                                                       |
|                                                        | <b>1.3</b> Physical, virtual, human and logistical requirements are identified and organised                                                                                                                             |
|                                                        | <b>1.4</b> Communication plan and exercise requirements are prepared, in consultation with entities, and required technology is identified and accessed                                                                  |
| <b>2 Manage exercise activities</b>                    | <b>2.1</b> Exercise management team is formed in accordance with exercise plan                                                                                                                                           |
|                                                        | <b>2.2</b> Communication and consultation is established and maintained with management personnel and participants throughout the exercise                                                                               |
|                                                        | <b>2.3</b> Exercise site preparation and familiarisation activities are undertaken in accordance with the exercise plan                                                                                                  |
|                                                        | <b>2.4</b> Briefings are delivered to participants detailing exercise aims and objectives, key aspects of the scenario, roles and responsibilities, any safety issues during the exercise and communication arrangements |
|                                                        | <b>2.5</b> Management of logistics requirements for exercise activities are confirmed                                                                                                                                    |
|                                                        | <b>2.6</b> Exercise plan is used to initiate and facilitate conduct and direction of the exercise                                                                                                                        |
|                                                        | <b>2.7</b> Exercise hazards are identified, risks are continually assessed and control measures are implemented                                                                                                          |
| <b>3 Evaluate outcomes against exercise objectives</b> | <b>3.1</b> Post exercise debriefings are conducted and a lessons management process is undertaken with feedback about identified lessons documented                                                                      |
|                                                        | <b>3.2</b> Exercise evaluation report including recommendations is prepared and distributed to relevant entities                                                                                                         |
|                                                        | <b>3.3</b> Tracking strategies are developed for the implementation of the Corrective Action Plan                                                                                                                        |

## Foundation Skills

# Assessment Requirements for PUAEMR036 Manage and evaluate emergency management exercises

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- building networks and relationships
- conducting exercise in accordance with exercise objectives
- confirming all permissions, authorities, clearances and approvals are obtained
- consulting with entities including implementing a communications plan
- demonstrating decision making techniques
- ensuring all resources are available for the exercise
- finalising required documentation
- following organisational policies and procedures
- gathering and analysing feedback
- identifying exercise hazards
- implementing and completing exercise risk and safety requirements
- managing and evaluating pre and post exercise activities
- managing exercise plan and directing activity and exercise personnel
- monitoring and adjusting pace and intensity of an exercise and adjusting, as required
- planning and delivering briefings and debriefings
- preparing emergency management exercises
- reviewing exercise preparation.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- budget and logistical management principles
- communication, consultation and relationship building techniques
- emergency management concepts and principles
- evaluation methods and techniques
- exercise hazards and risks
- 'Lessons Management' processes

- logistics requirements
- organisational documentation, policies and procedures
- risk and safety management principles.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must include two different exercises styles, with one being a multi-organisational exercise. Assessment must confirm the ability to ensure all permissions, authorities, clearances and approvals are obtained and ensure all resources are available for the exercise.

Resources for assessment must include access to

- a range of exercises and/or case studies
- appropriate materials and equipment currently used in industry
- applicable documentation including organisational procedures, standards, equipment specifications, regulations, codes of practice and operational manuals.

## PUAEMR037 Manage recovery functions and services

### Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to manage a range of recovery functions and services including financial assistance, personal support programs, health services, rebuilding programs and business continuity. It includes obtaining, analysing and sharing information on the impact of the emergency, planning delivery of recovery functions and services, coordinating delivery of recovery functions and services and evaluating the delivery of recovery functions and services.

The unit applies to individuals who are members of a recovery committee or are directly supporting members. This may include state, territory and municipal recovery coordinators and their deputies, liaison officers and managers, centre and assistance program managers and representatives from government and nongovernment service providers, welfare organisations, allied professionals and community and business leaders.

No licencing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

recovery arrangements

- 3.4 Workloads of personnel are monitored and managed
  - 3.5 Delivery of recovery functions and services are adjusted in response to changing circumstances and priorities
  - 3.6 Community, political and media expectations and interests are managed
  - 3.7 Transition to mainstream services is managed within agreed timelines
- 4 **Evaluate delivery of recovery functions and services**
  - 4.1 Lessons management process is applied to recovery activities undertaken and is documented
  - 4.2 Emergency management plans and arrangements are reviewed and modified in accordance with the evaluation of recovery functions and services

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is not equivalent to PUAEMR017 Manage recovery functions and services.

## Links

# Assessment Requirements for PUAEMR037 Manage recovery functions and services

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- analysing information, including historical, about disaster impacts on individuals and communities and their recovery needs
- analysing recovery needs and identifying required recovery functions and services
- communicating information about recovery functions and services
- completing required documentation
- demonstrating decision making about recovery functions and services
- developing plans and strategies for delivery of recovery functions and services
- evaluating delivery of recovery functions and services
- following organisational policies and procedures
- identifying vulnerable groups
- managing community, political and media expectations and interest
- monitoring and managing wellbeing of personnel
- reviewing and modifying emergency plans and arrangements
- transitioning to mainstream services.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- communication methods for managing recovery functions and services
- community development principles and processes including needs and recovery service delivery research methodology
- data and information collection techniques
- disaster recovery funding arrangements
- diversity of community
- entities and networks including community leaders and members, business owners and/or operators, government and utility organisations
- legislative and regulatory frameworks including local, state and territory statutory and emergency management arrangements

- lessons management
- likely impacts on communities and individuals of emergencies and their recovery needs
- models of recovery operations and approaches to service delivery
- organisational documentation, policies and procedures
- protocols and procedures for the release of information
- recovery service budgeting, administrative processes and delegations
- risk mitigation.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of exercises and/or case studies
- appropriate materials and equipment currently used in industry
- applicable documentation including organisational procedures, standards, equipment specifications, regulations, codes of practice, operational manuals and records.

## PUAEMR038 Work within an emergency management context

### Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to work within an emergency management context. It includes confirming jurisdictional emergency management arrangements, contributing to entity awareness of jurisdictional arrangements, supporting organisational and community emergency planning and decisions and applying knowledge of emergency management arrangements.

The unit applies to personnel preparing to work within an emergency management context. This may include individuals who are undertaking or are preparing to work in an emergency management role within their organisation and/or local community and requires broad knowledge of emergency management arrangements within differing jurisdictions.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable

### Competency Field

Emergency Management

### Unit Sector

Not applicable

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### **1 Confirm jurisdictional emergency management**

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1.1** Emergency management arrangements are identified and accessed

## arrangements

# PUAEQU001 Prepare, maintain and test response equipment

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to inspect, maintain and test a range of equipment. It includes inspecting response equipment, testing response equipment and cleaning, maintaining and restowing equipment

The unit applies to personnel who have either a primary role in the maintenance of equipment or are required to test and maintain equipment as part of an operational role.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification

PUAFIR210 Prevent injury

## Competency Field

Equipment

## Unit Sector

Public Safety

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |                                               |                                                                                                                                   |
|-----------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| <b>1 Inspect response equipment</b>           | <b>1.1</b> Equipment is inspected, in accordance with organisational procedures                                                   |
|                                               | <b>1.2</b> Missing parts are identified and reported, in accordance with organisational procedures                                |

# **PUAFER001 Identify, prevent and report potential facility emergency situations**

## **Modification History**

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## **Application**

This unit of competency involves the skills and knowledge required by occupants to identify and prevent the development of facility emergency situations or to minimise their consequences, and to report if emergency protection systems and/or equipment is compromised.

It applies to a broad range of emergencies and covers the work required before an emergency services and/or specialist response team arrives; it does not include the specific use of equipment to prevent facility emergency situations.

The unit has been developed to cover facilities as specified in Australian Standard 3745 and AS 4083. For this unit, as covered by AS 3745 and/or AS4083, occupants are people attending a facility on a permanent or temporary basis such as an employee, contractor, student or resident, but not a visitor or patient and a facility is a building, structure or workplace that is, or may be, occupied by people (occupants).

All aspects of the unit must be undertaken in accordance with legislative requirements, organisational policies and procedures and approved safe practices. It applies to occupants who are required to be 'emergency aware' in their facility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

Facility Emergency Response

## **Unit Sector**

Public Safety

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Identify, monitor and report situations that could lead to facility emergencies**

#### **2 Identify, report and correct situations that could prevent facility emergencies from being safely handled**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |            |                                                                                                                                                                               |
|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>1.1</b> | Situations that could lead to facility emergencies are identified by the occupant and facility emergency response procedures are followed                                     |
| <b>1.2</b> | Immediate work area and/or public area is routinely checked for situations that could lead to emergencies                                                                     |
| <b>1.3</b> | High risk activities are monitored to ensure precautions and facility emergency response procedures are followed                                                              |
| <b>2.1</b> | Relevant emergency protection systems and equipment are identified                                                                                                            |
| <b>2.2</b> | Situations that could lead to emergency protection systems and equipment being impaired are identified                                                                        |
| <b>2.3</b> | Immediate work area is routinely checked for situations that could lead to emergency protection systems and equipment being made inoperable and results of check are reported |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

- |                                                                                           |                                                                                                                                                |
|-------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| high risk activities must include three or more of the following relevant to the facility | <ul style="list-style-type: none"> <li>• handling dangerous goods and hazardous materials including waste</li> <li>• handling gases</li> </ul> |
|-------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------|

emergency protection systems and equipment must include three or more of the following relevant to the facility

- hot work
- manual handling
- manufacturing
- using, mixing and/or moving chemicals
- working around traffic
- working at heights, in confined spaces, in poorly ventilated spaces or around noise - subject to permit
- working with plant and machinery
- working with unstable equipment or equipment that has deteriorated
- access, egress and paths of travel
- alarm initiation devices
- any specific dangerous good and/or hazardous chemical antidotes and treatment e.g. corrosives
- automatic fire, leak, spill or movement detectors
- escape equipment
- exit signs and emergency lighting
- facility emergency response procedures contained within the facility emergency plan
- fire or smoke detection,
- fire or smoke doors, fire walls
- first aid kits
- initial response firefighting equipment
- occupant warning and communications systems
- shower and eyewash
- special hazard identification systems
- spill or leak containment equipment
- suppression systems

situations that could lead to emergency protection systems and equipment being impaired must include three or more of the following relevant to the facility

- emergency equipment not being maintained
- emergency lighting and/or exit lighting being damaged, missing
- impairing exits and/or pathways to exits
- inability to access emergency equipment
- inappropriate or non-compliant storage and/or handling of dangerous goods
- interfering with alarm systems
- not replacing or replenishing used emergency equipment
- not reporting damage to emergency

- equipment or facilities
- propping open fire or smoke doors

# Assessment Requirements for PUAFER001 Identify, prevent and report potential facility emergency situations

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- communicating with team members and stakeholders
- identifying and reporting situations in a facility that reduce the effectiveness of emergency protection systems and equipment
- identifying emergency protection systems and equipment present in a facility
- identifying, monitoring and reporting situations that could lead to emergencies in a facility

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- basic types emergency protection systems and equipment
- principles of operation and limitations of emergency protection systems and equipment installed in a facility
- procedures for identifying, minimising, or preventing, and reporting situations within a facility that may lead to an emergency
- safe work practices applicable to a facility that help to prevent emergencies
- situations at a facility that reduce the effectiveness of emergency protection systems and equipment

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant activities, exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, facility emergency response procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFER002 Ensure facility emergency prevention procedures, systems and processes are implemented

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to implement facility emergency prevention safety procedures are within a facility, or a defined group of facilities. An individual undertaking this work may be supervising occupants of a facility; typically, they will be a general supervisor.

The unit has been developed to cover the facilities as specified in Australian Standard (AS) 3745 and AS4083. For this unit, as covered by AS3745 and/or AS4083, occupants are people attending a facility on a permanent or temporary basis such as an employee, contractor, student or resident, but not a visitor or patient and a facility is a building, structure or workplace that is, or may be, occupied by people (occupants).

All aspects of the unit must be undertaken in accordance with legislative requirements, facility policies and procedures and accepted safe work practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

situations that could lead to facility emergencies must include three or more of the following

- emergency lighting and/or exit lighting being damaged, missing
- emergency equipment not being maintained
- impairing exits and/or pathways to exits
- interfering with alarm systems
- not replacing or replenishing used emergency equipment
- not reporting damage to emergency control

emergency protection systems must include three or more of the following

- equipment or facilities
- propping open fire or smoke doors
- automatic fire, leak and spill movement detectors
- closed circuit television (CCTV)
- communications equipment
- facility emergency plan
- fire and smoke doors
- manual alarms
- security infrastructure
- special hazard identification systems
- spill or leak containment systems (sprinkler and deluge systems)
- warning systems

emergency control equipment must include three or more of the following

- communications equipment
- fire and smoke detection, alarm, mitigation and suppression systems
- first aid kits
- forcible entry tools
- initial response firefighting equipment
- isolation barriers
- personal protection kits
- security systems and equipment
- shower and eyewash
- spill control kits and equipment

evacuation systems must include three or more of the following

- access and egress
- escape equipment
- exits
- procedures

# Assessment Requirements for PUAFER002 Ensure facility emergency prevention procedures, systems and processes are implemented

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) facility requirements
- conducting facility emergency prevention inspections
- delegating tasks according to facility emergency prevention, safe work practices and level of responsibility
- ensuring facility emergency protection systems, emergency control equipment and evacuation systems remain effective
- identifying situations that could lead to facility emergencies
- monitoring and reviewing facility work area regularly to identify new and unsafe work practices
- recording and reporting unsafe conditions in a facility
- reporting on problems or deficiencies with facility emergency protection systems, emergency control equipment and evacuation systems

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- basic types emergency prevention and protection systems and emergency control equipment
- facility emergency plan and response procedures
- facility procedures to identify and rectify problems
- organisational documentation including recording and reporting procedures
- organisational policies and procedures
- principles of operation that limit the functioning of emergency prevention and protection systems and emergency control equipment installed in a facility
- safety inspection processes

- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant activities, exercises, case studies and/or simulations
  - that reflect the types of emergencies that may be expected in a facility
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational policies, facility emergency response procedures, facility emergency plan, emergency prevention inspection results, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFER003 Manage and monitor facility emergency procedures, equipment and other resources

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to manage and monitor facility emergency prevention and control structures for a complex facility or a defined group of facilities. It involves managing problems and resolving issues in relation to the organisation's facility emergency prevention process and emergency control structures.

The unit has been developed to cover the facilities as specified in Australian Standard (AS) 3745 and AS4083. For this unit, as covered by AS3745 and/or AS4083, occupants are people attending a facility on a permanent or temporary basis such as an employee, contractor, student or resident but not a visitor or patient and a facility is a building, structure or workplace that is, or may be, occupied by people (occupants).

All aspects of the unit must be undertaken in accordance with legislative requirements, organisational policies and procedures and accepted safe practices. It applies to members of an Emergency Planning Committee (EPC).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

demonstrate achievement of the element.

**1 Manage emergency measures and practices**

- 1.1** Emergency prevention measures, practices and control equipment are identified, documented and disseminated, in accordance with the facility emergency plan
- 1.2** Situations that could lead to facility emergencies are identified and recorded and options for mitigating or avoiding these situations are formulated, tested and implemented
- 1.3** Suitably qualified and competent emergency planners are consulted

**2 Manage emergency control equipment**

- 2.1** Emergency control equipment maintenance requirements are documented, disseminated and managed
- 2.2** Instruction and training is provided for onsite personnel in the use of emergency control equipment
- 2.3** Equipment maintenance is audited for compliance, in accordance with facility emergency response procedures
- 2.4** Emergency control equipment is assessed for useability and accessibility and is reported on, in accordance with facility emergency response procedures
- 2.5** Facility emergency procedures are followed to correct emergency control equipment defects and deficiencies

**3 Record and report emergency control equipment and faults**

- 3.1** Schedule for verifying and reporting equipment faults is developed and implemented
- 3.2** Details and nature of equipment faults are recorded and, where possible, are rectified in accordance with facility emergency response procedures
- 3.3** Maintenance logs, records and tests are consulted and corrective action on equipment is verified
- 3.4** Reports on verified faults are provided within required timeframes and contain recommendations
- 3.5** Frequency of fault occurrences is monitored and reported on, in accordance with facility emergency response procedures

**4 Monitor emergency**

- 4.1** Currency and compliance of facility emergency plan

## control structures

is monitored

- 4.2 Emergency control organisational activities are monitored to ensure they comply with facility emergency plans, relevant industry standards and are appropriate for the facility
- 4.3 Compliance with industry standards and statutory requirements is checked and appropriate recommendations are made where compliance is an issue
- 4.4 Implementation of emergency prevention safety inspection recommendations is monitored, in accordance with facility emergency response procedures
- 4.5 Representation on the emergency planning committee and emergency control organisation is monitored, in accordance with the facility emergency plan, relevant industry standards and statutory requirements
- 4.6 Recommendations and reports are provided to stakeholders, in accordance with facility emergency response procedures
- 4.7 Training is provided and monitored, in accordance with the facility emergency plan and statutory requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

# Assessment Requirements for PUAFER003 Manage and monitor facility emergency procedures, equipment and other resources

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- analysing operational effectiveness of emergency control equipment
- applying legislation, industry standards, codes of practice and regulations
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- ensuring compliance of facility emergency response procedures, emergency control structures, equipment and other resources with the facility emergency plan
- establishing and maintaining facility emergency plans
- identifying hazards and controlling risks
- implementing compliance regime
- implementing maintenance auditing and fault finding procedures
- managing, recording and reporting emergency control equipment and faults
- monitoring emergency control structures including verifying results
- providing advice and guidance to the emergency management planning committee and emergency control organisation
- providing training in emergency response procedures, emergency control structures and equipment
- reporting emergency prevention problems and suggestions for correction
- utilising emergency prevention principles and solutions

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- approved fire protection and other emergency systems located in a facility
- basic characteristics, use and limitations of facility emergency response procedures and emergency control equipment
- compliance requirements
- dynamic risk assessment
- emergency response procedures, emergency control structures and equipment training

- facility documentation including maintenance logs and records, legislation, industry standards, codes of practice and regulations
- facility emergency plan including role of emergency planning committee and emergency control organisation
- fault finding in equipment
- maintenance requirements of facility emergency control equipment and emergency plan and emergency response procedures
- operational effectiveness of emergency control equipment
- principles and practices of emergency prevention
- situations that could lead to facility emergencies
- verification processes and procedures
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

## PUAFER004 Respond to facility emergencies

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required by occupants to recognise emergencies in a facility, to report emergencies and to take appropriate action during facility emergency situations. It includes preparing for emergency situations, reporting emergencies, responding to emergency warnings and advice, choosing the most appropriate course of action and evacuating from a danger area.

The unit has been developed to cover the facilities as specified in Australian Standard (AS) 3745 and AS4083. For this unit, as covered by AS3745 and AS4083, occupants are people attending a facility on a permanent or temporary basis such as an employee, contractor, student, resident but not a visitor or patient and a facility is a building, structure or workplace that is, or may be, occupied by people (occupants).

All aspects of the unit must be undertaken in accordance with legislative requirements, organisational policies and procedures and accepted safe practices. It applies to occupants who are required to be 'emergency aware' in their facility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

#### PERFORMANCE CRITERIA

Elements describe the essential    Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

**1 Prepare for emergency situations**

- 1.1** Facility emergency procedures to be used by occupants are identified and followed
- 1.2** Emergency resources in a facility are identified and located
- 1.3** Emergency response exercises are participated in, in accordance with facility emergency procedures

**2 Report emergencies**

- 2.1** Emergencies are identified and reported, in accordance with facility emergency procedures
- 2.2** Occupants in any immediate danger from an emergency or potential emergency are alerted, in accordance with facility emergency procedures

**3 Respond to emergency warnings and advice**

- 3.1** Emergency warnings and advice are responded to, in accordance with facility emergency procedures
- 3.2** Instructions from emergency control organisation or attending emergency services are complied with during an emergency

**4 Choose most appropriate course of action**

- 4.1** Emergencies that require evacuation are determined
- 4.2** Emergencies that require occupants to shelter-in-place (no evacuation) are determined
- 4.3** Shelter or refuge is assessed to determine suitability and sustainability when a shelter-in-place response is the preferred option
- 4.4** Emergencies that require lockdown are determined
- 4.5** Appropriate cover is assessed when lockdown is required

**5 Evacuate from danger area**

- 5.1** Need to evacuate from danger area is determined and issued under facility emergency procedures
- 5.2** Work area is prepared for evacuation, in accordance with facility emergency procedures
- 5.3** Area of danger is evacuated, in accordance with facility emergency procedures
- 5.4** Where it is safe to do so, assistance is provided to

occupants who may require it

- 5.5 Evacuation procedures and instructions from emergency control organisation or emergency response personnel are followed
- 5.6 Alternative pathways or methods of evacuation are identified, assessed and chosen, in accordance with facility emergency procedures, if usual means of evacuation are blocked or occupants are endangered
- 5.7 Communication system is used to respond to facility emergencies, in accordance with facility procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

# Assessment Requirements for PUAFER004 Respond to facility emergencies

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- complying with legislation, industry standards, codes of practice and regulations
- evacuating from work area
- following facility emergency procedures and direction of emergency control organisation members and/or attending emergency services
- identifying and evacuating occupants who may require assistance
- identifying and reporting emergencies
- maintaining own safety and the safety of others in emergency situations
- participating in emergency response exercises including briefings, debriefings, simulations, reviews and desk top drills
- preparing for emergency situations
- responding to emergency warnings and advice
- selecting the most appropriate course of action during an emergency

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- circumstances where evacuation may need to be modified
- emergency response exercises including participation in briefings and debriefings
- evacuation alarms and facility emergency procedures including action to take when evacuation to a location external to the building might expose evacuated occupants and/or personnel to a greater level of danger
- facility emergency documentation, policies and procedures
- facility emergency reporting systems and procedures facility emergency warning system, signals and instructions
- legislation, industry standards, codes of practice and regulations
- locations of assembly areas and post evacuation actions

- locations of emergency equipment in a facility
- roles, responsibilities and authority of emergency personnel, emergency control organisations and emergency response teams
- types of emergencies, hazards and evacuation actions associated with each one
- types of occupants who may require assistance
- where Personal Emergency Evacuations Plans (PEEPs) for occupants who have a disability are kept
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

# PUAFER005 Operate as part of an emergency control organisation

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to work within the command, control and coordination structure of an Emergency Control Organisation (ECO). An ECO's priority is the safety of facility occupants and visitors during an emergency which means ECO members are responsible for pre-emergency, emergency and post emergency actions. It includes undertake pre-emergency planning, taking appropriate actions in an emergency and assisting with post emergency activities.

The unit has been developed to cover the facilities as specified in Australian Standard (AS) 3745 and AS4083. For this unit, as covered by AS3745 and/or AS4083, occupants are people attending a facility on a permanent or temporary basis such as an employee, contractor, student or resident, but not a visitor or patient and a facility is a building, structure or workplace that is, or may be, occupied by people (occupants).

All aspects of the unit must be undertaken in accordance with legislative requirements, organisational policies and procedures and accepted safe practices. It applies to members of an ECO who are floor or area wardens and/or wardens or deputy wardens.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

in accordance with facility emergency response procedures

**3.3** Report of actions taken during the emergency is documented and prepared for debriefing

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAWER005B Operate as part of an emergency control organisation.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFER005 Operate as part of an emergency control organisation

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- assisting occupants who may require assistance
- assisting with post emergency response activities
- complying with legislation, industry standards, codes of practice and regulations
- contributing to facility emergency planning
- giving clear directions to occupants and visitors
- implementing safe work practices
- initiating and controlling initial emergency response
- responding to emergency signals and warnings
- taking on a leadership role within emergency control organisation and/or a deputy role for other emergency control organisation positions
- undertaking pre-emergency planning
- using communications systems
- wearing required emergency control organisation identification

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- command, control and coordination function of emergency control organisation
- communications systems
- context of own role within facility emergency response procedures
- dynamic risk assessment
- emergency assessment and emergency stations including assembly or marshalling points; designated telephone or intercom; designated muster points; emergency control point; master emergency control point and warden intercommunication point (WIP) telephones
- emergency signals, alarms and warnings including audible and visual alarms; audible or vibrating pagers; coded or uncoded public address announcements; email; screen alerts;

stench alerts; verbal alerts and emergency devices evacuation priorities and conduct of evacuation including shelter-in-place or lockdown

- facility documentation including facility emergency plan; facility emergency response procedures; evacuation diagrams; personal emergency evacuation plans for occupants who have a disability and visitor profiles
- facility emergency response procedures
- hazard identification
- legislation, industry standards, codes of practice and regulations
- means of identification including arm bands with consistent colours and markings; helmets, caps, hats; tabards, vests or other distinctive clothing and uniforms
- members of emergency control organisation roles and responsibilities
- methods of accounting for occupants during and after emergencies
- methods of summoning first aid to occupants or visitors injured during an emergency evacuation
- precautions to be taken during emergencies
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including safe work practices

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational policies, facility emergency plan, facility emergency response procedures, emergency systems and equipment, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFER006 Lead an emergency control organisation

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to make decisions about the safety of occupants during a facility emergency and to give instructions on the priority order for responding to an emergency incident.

It includes leading the preparation of facility emergency response procedures; commanding, controlling and coordinating facility emergency response procedures and responses and concluding the facility emergency incident. Individuals who undertake this work may also act as the primary liaison with emergency services after their arrival.

The unit has been developed to cover the facilities as specified in Australian Standard (AS) 3745 and AS4083. For this unit, as covered by AS3745 and AS4083, occupants are people attending a facility on a permanent or temporary basis such as an employee, contractor, student or resident, but not a visitor or patient and a facility is a building, structure or workplace that is, or may be, occupied by people (occupants).

All aspects of the unit must be undertaken in line with legislative requirements, organisational policies and procedures and approved safe practices. It applies to members of an Emergency Control Organisation (ECO) who are chief wardens, deputy chief wardens and communications officers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

PUAFER005 Operate as part of an emergency control organisation

## Competency Field

Facility Emergency Response

## Unit Sector

Public Safety

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |                                                   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

# Assessment Requirements for PUAFER006 Lead an emergency control organisation

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- briefing emergency services personnel
- commanding, controlling and coordinating of facility emergency response procedures
- complying with legislation, industry standards, codes of practice and regulations concluding facility emergency
- giving clear directions and keeping others informed throughout the emergency in accordance with facility emergency plan
- identifying evacuation assembly areas
- implementing facility emergency response procedures
- interpreting information displayed on emergency control indicator equipment including fire indicator panel, building management system and security management system
- preparing for emergencies in a facility
- responding to emergency signals and warnings appropriately
- undertaking pre-emergency planning

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- actions in response to developing situations
- collation of information and reporting on the status of the emergency and/or evacuation
- command, control and coordination framework
- dynamic risk assessment
- emergency response structure including external organisations and/or agencies
- emergency signals, warnings and procedures including audible and visual alarms or vibrating pagers; coded or uncoded public address announcements; email; screen alerts; stench alarms; verbal alerts and emergency devices
- emergency stations including assembly or marshalling points; designated telephone or

intercom; designated muster points; emergency control points; master emergency control point and Wardens' Intercommunication Telephones (WIP)

- facility documentation, policies and procedures
- facility emergency plan and response procedures
- how and when emergency signals and warnings may occur in a facility
- leadership responsibilities during an emergency in a facility
- legislation, industry standards, codes of practice and regulations
- liaison requirements of emergency services
- own role in facility emergency plan including role and authority of attending emergency services
- processes and procedures for briefings
- typical behaviour of people in an emergency
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

## PUAFER007 Manage an emergency control organisation

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required by a member of an Emergency Planning Committee to document and maintain a facility emergency plan, to establish and maintain an emergency control organisation and to operate in accordance with the facility's emergency plan. It includes initiating emergency response planning, ensuring an emergency control organisation is in place, providing for initiation and control of an initial emergency response, providing for post initial response activities, planning and implementing emergency control training and providing support in the post response and/or recovery phase.

The unit has been developed to cover facilities as specified in Australian Standard (AS) 3745 and AS4083. For this unit, as outlined in covered by AS3745 and/or AS4083, occupants are people attending a facility on a permanent or temporary basis such as an employee, contractor, student or resident, but not a visitor or patient and a facility is a building, structure or workplace that is, or may be, occupied by people (occupants).

All aspects of the unit must be undertaken in accordance with legislative requirements, organisational policies and procedures and accepted safe work practices. It applies to members of an Emergency Planning Committee.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

Facility Emergency Response

### Unit Sector

Public Safety

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| <b>3 Provide for initiation and control of initial emergency response</b> | <p><b>3.1</b> Facility procedures for initiating and controlling initial emergency response are developed, implemented and communicated, in accordance with facility emergency response procedures</p> <p><b>3.2</b> Arrangements are established, in accordance with personal emergency evacuation plans, for the evacuation of occupants who need assistance</p> <p><b>3.3</b> Facility emergency plan provides for assets to be secured, where safe to do so</p>                                                                                                                                                                                                                                                                                                                                                               |

- 3.4 Facility emergency plan provides for restricted access to evacuated areas
    - 3.5 Evacuation exercises are conducted, as required, to validate and amend facility emergency response procedures
    - 3.6 A system to account for all occupants during emergencies is developed and implemented, in accordance with facility emergency response procedures
- 4 **Provide for post initial response activities**
  - 4.1 Priorities for evacuation and post initial response activities are put in place, in accordance with the facility emergency plan
  - 4.2 Emergency services personnel are briefed on post initial response activities
  - 4.3 Post initial response activities are documented, in accordance with facility requirements
  - 4.4 Facility emergency response procedures provide for recovery activities to be identified and implemented
- 5 **Plan and implement emergency control organisation training**
  - 5.1 Training needs of emergency control organisation members are identified and documented, in accordance with facility emergency response procedures
  - 5.2 Training is developed, implemented and reviewed, in accordance with facility emergency plan
  - 5.3 Training is identified from hazard needs analysis
  - 5.4 Refresher training, drills and exercises are conducted, in accordance with facility emergency plan
  - 5.5 Resources for training are identified and provided, as required
  - 5.6 Feedback on training is sought and is used to improve training programs
- 6 **Provide support in post response recovery phase**
  - 6.1 Provision is made in the facility emergency plan for minimising adverse consequences to occupants, the environment and facility
  - 6.2 Debriefing activities are undertaken, in accordance with the facility emergency plan

- 6.3 External support services are accessed, as required, in accordance with the facility emergency plan
- 6.4 Liaising with media is undertaken, in accordance with the facility emergency plan
- 6.5 Reports are completed and referred to the emergency planning committee, in accordance with the facility emergency plan

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAWER007B Manage an emergency control organisation.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUA FER007 Manage an emergency control organisation

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- accessing external support services
- analysing training needs and planning and implementing emergency control organisation training
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- assisting occupants
- communicating with occupants and stakeholders
- delivering post initial response activities
- ensuring an emergency control organisation is in place
- identifying assets
- identifying hazards
- initiating a system of emergency response planning
- offering advice and support to occupants in post response and recovery phase
- performing emergency response and evacuations
- planning and preparing for range of possible emergencies providing for initiation and control of initial emergency response

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- characteristics and limitations of emergency alert systems and procedures
- external support services
- facility assets
- facility emergency plan
- hazard identification and precautions
- identification of occupants who may need assistance including use of personal emergency evacuation plans
- initial emergency response including

- advice or requests for emergency services
- alternative evacuation
- designated assembly area
- evacuation routes and destinations
- guidance from emergency response team
- lateral evacuation
- methods or priorities in managing media responses needs analysis evaluation
- not re-entering an evacuated area until directed by emergency personnel
- not to evacuate or to partially evacuate
- relocation or provision of welfare services for evacuated occupants
- restrictions or entry to danger areas
- search of floors or areas
- shelter in place and lockdown,
- supply of emergency equipment and use of response equipment
- whether to evacuate
- occupants who need assistance including babies, children, pregnant women and the elderly, those with an impairment either temporary or permanent, any who are injured, those from cultural or linguistic backgrounds and any others who are not able to comprehend instructions
- organisational/facility documentation, policies and procedures
- post initial response activities
- procedures for pre-planning and post initial response activities
- programs for training
- resources to support an emergency control organisation
- systems for controlling the entry of visitors, contractors and staff during an emergency
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) facility requirements

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational policies, facility emergency plan and procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

## PUAFER008 Confine small emergencies in a facility

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to confine small emergencies in a facility and it applies to occupants who are required to have first attack firefighting skills. It includes preparing for emergency situations, identifying and assessing an emergency, safely confining emergencies, using initial response equipment and reporting on the facility's emergency response.

Small emergencies in a facility include incidents such as small fires that can be controlled using a fire extinguisher; chemical spills that can be controlled using facility personal protective clothing and equipment and a spill kit; or a vehicle accident where there is no significant injury or damage.

The unit has been developed to cover the facilities as specified in Australian Standard (AS) 3745 and AS4083. For this unit, as covered by AS3745 and/or AS4083, occupants are people attending a facility on a permanent or temporary basis such as an employee, contractor, student or resident, but not a visitor or patient and a facility is a building, structure or workplace that is, or may be, occupied by people (occupants).

All aspects of the unit must be undertaken in line with legislative requirements, organisational policies and procedures, and accepted safe work practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable

### Competency Field

Facility Emergency Response

### Unit Sector

Public Safety

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

|                                             |            |                                                                                                                                                      |
|---------------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>1 Prepare for emergency situations</b>   | <b>1.1</b> | Possible facility emergency situations and responses are identified by the occupant                                                                  |
|                                             | <b>1.2</b> | Emergency resources are identified and their location is ascertained                                                                                 |
|                                             | <b>1.3</b> | Problems with emergency resources are identified and reported to relevant personnel, in accordance with the facility emergency plan                  |
| <b>2 Identify and assess emergency</b>      | <b>2.1</b> | Hazards are identified and effectiveness of initial response actions are assessed                                                                    |
|                                             | <b>2.2</b> | Advice in relation to the emergency is sought, in accordance with the facility emergency plan                                                        |
|                                             | <b>2.3</b> | Where initial response actions are considered unsafe or inappropriate action is taken to discontinue, in accordance with the facility emergency plan |
| <b>3 Safely confine emergencies</b>         | <b>3.1</b> | Facility emergency is confined to the immediate area, in accordance with facility emergency response procedures                                      |
|                                             | <b>3.2</b> | Emergency resources are used, in accordance with facility emergency response procedures and safe work practices                                      |
|                                             | <b>3.3</b> | Emergency resources are used, in accordance with facility emergency response procedures                                                              |
| <b>4 Use initial response equipment</b>     | <b>4.1</b> | Initial response equipment is checked to ensure its serviceability prior to use                                                                      |
|                                             | <b>4.2</b> | Equipment is selected and used in response to the facility emergency                                                                                 |
|                                             | <b>4.3</b> | Use of equipment is coordinated with other emergency actions, in accordance with the facility emergency plan                                         |
| <b>5 Report facility emergency response</b> | <b>5.1</b> | Emergency and response is documented and reported, in accordance with the facility emergency plan                                                    |
|                                             | <b>5.2</b> | Use of initial response equipment is documented and                                                                                                  |

reported, in accordance with the facility emergency plan

- 5.3** Initial response equipment is marked or positioned after use, in accordance with the facility emergency plan and a report to relevant personnel is completed to indicate if any equipment requires servicing and/or replacing

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAWER008B Confine small facility emergencies.

# Assessment Requirements for PUAFER008 Confine small emergencies in a facility

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- communicating with occupants, emergency personnel and stakeholders
- complying with facility policies and procedures
- confining emergencies safely
- giving and following instructions
- identifying and acting to avoid or control any associated hazards
- identifying and assessing an emergency
- implementing facility emergency response procedures
- preparing for emergency situations
- reporting facility emergency response
- restowing initial response equipment
- using initial response equipment
- utilising risk management processes

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- actions to be followed when initial response action is not safe
- facilities and equipment that may be used safely to confine emergencies
- facility emergency plan and emergency response procedures
- initial response actions including activation of response team, activation of suppression systems, use of alerts, containment of emergency, evacuation of area, removal of occupants from danger, removal of emergency, basic aid, shut down procedures, use of containment systems and use of portable fire extinguishers, fire blankets and/or hose reels
- kinds of emergency resources
- legislation, industry standards, codes of practice and regulations
- limitations of initial response equipment, emergency control equipment or facilities

- methods of extinguishment
- organisational/facility documentation, policies and procedures
- possible hazards types of emergencies
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant activities, exercises, case studies and/or simulations
  - reflective of a range of emergency situations that may be expected in a facility
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational policies, facility emergency plan and emergency response procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# **PUAFER009 Participate as a member of a facility emergency response team**

## **Modification History**

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## **Application**

This unit of competency involves the skills and knowledge required to participate as a member of a facility emergency response team. An emergency response team works in conjunction with the emergency control organisation in the management of an emergency in a facility in the early stages prior to the arrival of emergency services and/or specialist response teams. It does not cover the competency required for crisis management, recovery or restoration.

The unit has been developed to cover the facilities as specified in Australian Standard (AS) 3745 and AS4083. For this unit, as covered by AS3745 and/or AS4083, occupants are people attending a facility on a permanent or temporary basis such as an employee, contractor, student or resident, but not a visitor or patient and a facility is a building, structure or workplace that is, or may be, occupied by people (occupants).

All aspects of the unit must be undertaken in line with legislative requirements, organisational policies and procedures, and accepted safe practices. It is applicable to personnel who are responsible, as part of a response team, for participating in the preparation of facility emergency response procedures and responding to emergencies.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## **Pre-requisite Unit**

Not applicable

## **Competency Field**

Facility Emergency Response

## **Unit Sector**

Public Safety

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Prepare for emergencies in a facility**

- 1.1** Emergency equipment, assigned for use by the response team, is stored and maintained in a safe, accessible and serviced state
- 1.2** Facility emergency response procedures to be used by personnel are identified and accessed
- 1.3** Risk assessment of response team's activities is undertaken, in accordance with facility emergency response procedures
- 1.4** Response team's training activities are performed, in accordance with facility emergency response procedures and legislation

#### **2 Respond to emergencies in a facility**

- 2.1** Emergency is responded to, in accordance with facility emergency response procedures
- 2.2** Emergency is assessed for hazards and precautions are implemented
- 2.3** Identified hazards are reported to occupants in danger and to response team leader, in accordance with facility emergency response procedures
- 2.4** An appropriate response level is determined, in accordance with the status of the facility emergency
- 2.5** Instructions from response team leader are confirmed and implemented safely and promptly, in accordance with facility emergency response procedures
- 2.6** Equipment is selected and safely operated, in accordance with facility emergency response procedures
- 2.7** Emergency is contained to prevent an escalation and to enable emergency services and specialist response team activity to be completed safely

#### **3 Communicate with and complement other personnel**

- 3.1** Communication with response team members and leader is maintained throughout facility emergency

- |                                                               |            |                                                                                                                                                                             |
|---------------------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                               | <b>3.2</b> | Emergency response procedures and activities are consistent with the response team leader's plan of action and supports the work and actions of other response team members |
|                                                               | <b>3.3</b> | Any injuries, accidents or near misses involving team members are reported to the response team leader                                                                      |
| <b>4 Assist with recovery from an emergency in a facility</b> | <b>4.1</b> | Evidence relating to the cause, origin and progress of the facility emergency is preserved and recorded                                                                     |
|                                                               | <b>4.2</b> | Assistance is provided to occupants, in accordance with facility emergency response procedures                                                                              |
|                                                               | <b>4.3</b> | Emergency equipment is returned to a state of readiness, in accordance with facility emergency response procedures                                                          |
|                                                               | <b>4.4</b> | Debriefings are attended and contributed to, in accordance with facility emergency response procedures                                                                      |

- restowing response equipment
- using emergency equipment safely
- working as a team member under the direction of a facility emergency response team leader and with other initial response teams

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- alarm systems and associated equipment
- dynamic risk assessments
- equipment operating characteristics, limitations and general care
- general emergency priorities and strategies
- hazard identification and analysis of precautions required during control activities
- hierarchy of control
- organisational/facility documentation, policies and procedures including procedures for responding to alarms and for survival, rescue and recovery
- other response teams including damage control, emergency control organisation, fire team,

- first aid, maintenance and security
- personal protective clothing and equipment
- tactics for safely handling specific emergencies
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational policies, facility emergency plan and emergency response procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFER010 Lead a facility emergency response team

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to lead a facility emergency response team in the control of an emergency in its' early stages prior to the arrival of emergency services and/or specialist response teams. It includes leading an emergency response team by preparing the team for a facility emergency, coordinating the response to control a facility emergency, communicating with and coordinating personnel and leading a team's recovery from a facility emergency.

This unit has been developed to cover the facilities as considered in Australian Standard (AS) 3745 and AS4083. For this unit, as covered by AS3745 and/or AS4083, occupants are people attending a facility on a permanent or temporary basis such as an employee, contractor, student or resident, but not a visitor or patient and a facility is a building, structure or workplace that is, or may be, occupied by people (occupants).

All aspects of the unit must be undertaken in accordance with legislative requirements, organisational policies and procedures, and accepted safe practices. It applies to team leaders of a facility emergency team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

PUAFER009 Participate as a member of a facility emergency initial response team

## Competency Field

Facility Emergency Response

## Unit Sector

Public Safety

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Establish and maintain emergency response teams**

- 1.1** Role, authority, structure and scope of emergency response team is negotiated with management of the facility and is documented in facility emergency response procedures
- 1.2** A system for alerting emergency response team members to an emergency is developed, demonstrated and regularly tested
- 1.3** A business plan and budget are developed and maintained for the emergency response team
- 1.4** Facility emergency systems and procedures are audited for compliance with industry standards, codes and/or regulations

**2 Provide information and develop procedures**

- 2.1** A risk assessment of emergency response team's expected activities is conducted, in accordance with industry standards, codes and/or regulations
- 2.2** Hazards are identified and controls are developed and implemented, in accordance with industry standards, codes and/or regulations
- 2.3** Information is provided to the emergency response team about its role, authority, structure, scope, equipment and training requirements
- 2.4** Facility emergency response procedures are developed and provided to emergency response teams and other appropriate personnel and are regularly reviewed
- 2.5** Pre-incident planning information about layout of the facility and key features relevant to potential emergencies is provided to the emergency response team
- 2.6** Suitably qualified and competent emergency planners are consulted
- 2.7** Members of the emergency response team and emergency control organisation are consulted about and encouraged to participate in the development and review of facility emergency procedures

**3 Make recommendations**

- 3.1** Recommendations are made for the acquisition of

|                                                                        |            |                                                                                                                                                                                 |
|------------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>for provision of emergency equipment and manage its maintenance</b> |            | emergency equipment appropriate to the role and scope of the emergency response team                                                                                            |
|                                                                        | <b>3.2</b> | Safe operating procedures, based on risk assessments and manufacturers' instructions, are developed and communicated to the emergency response team                             |
|                                                                        | <b>3.3</b> | Arrangements are made for the storage of emergency equipment in a location that is safe, convenient and readily accessible to the emergency response team                       |
|                                                                        | <b>3.4</b> | Arrangements are made to ensure emergency equipment is maintained, in accordance with industry standards and/or manufacturers' instructions                                     |
|                                                                        | <b>3.5</b> | Personal protective clothing and equipment and information about its characteristics, limitations, safe use and care are provided to each member of the emergency response team |
| <b>4 Arrange training for emergency response teams</b>                 | <b>4.1</b> | Training and assessment is arranged before personnel are assigned to emergency response duties                                                                                  |
|                                                                        | <b>4.2</b> | Training is arranged, based on needs analysis, to ensure currency of competence                                                                                                 |
|                                                                        | <b>4.3</b> | Arrangements are made for scheduling, promoting, reporting and recording of training, in accordance with facility emergency response procedures                                 |
|                                                                        | <b>4.4</b> | Feedback on performance, during training, is used to validate and improve training delivery, processes and procedures                                                           |
| <b>5 Monitor and report on emergency response team</b>                 | <b>5.1</b> | Emergency response team is audited and reviewed for relevance and ability to implement emergency response systems                                                               |
|                                                                        | <b>5.2</b> | Status of the emergency response team and emergency control system is reported to the emergency planning committee, in accordance with facility emergency response procedures   |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAWER010B Lead a facility emergency initial response team.

## Links

# Assessment Requirements for PUAFER010 Lead a facility emergency response team

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- communicating with and coordinating personnel
- completing reports
- complying with legislation, industry standards, codes of practice and regulations
- coordinating response to control an emergency in a facility
- coordinating use of emergency equipment safely under emergency conditions
- leading a safe and prompt response to a facility emergency
- leading team's recovery from a facility emergency
- preparing team for an emergency in a facility
- selecting, implementing and coordinating safe actions by the team
- supporting responding emergency services and/or specialist response teams
- taking on a leadership role including giving clear directions under emergency conditions, making decisions appropriate to the situation and keeping others informed
- undertaking pre-incident planning
- using communication skills during emergencies
- working with other response teams

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- alarm systems and associated equipment
- dynamic risk assessment
- equipment operating characteristics, limitations, precautions and general care
- facility emergency management plans and emergency response procedures
- fire safety features in buildings
- hazards and precautions
- how people react in emergency situations

- legislation, industry standards, codes of practice and regulations
- management of contingencies
- organisational documentation, policies and procedures
- other response teams
- personal protective clothing and equipment
- pre-incident planning including contingency plans, sketches, notes about facility layout, features, hazards and emergency control facilities, discussions and/or use of operational procedures involving emergency plans, sketches, notes, procedures or Safety Data Sheets (SDSs)
- priorities and strategies for a general emergency
- procedures for responding to alarms
- roles, responsibilities and authority of attending emergency services personnel
- situational awareness
- survival, rescue and recovery procedures
- tactics for safely handling specific emergencies
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - emergency initial response equipment
- applicable documentation including organisational policies, facility emergency plan, facility emergency response procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFER011 Manage facility emergency response teams

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to manage a facility emergency response team assigned to control workplace emergencies in their early stages prior to the arrival of the emergency services and/or specialist response team. It includes establishing and maintaining emergency response teams, providing information and developing procedures, making recommendations for the provision of emergency equipment and managing its maintenance, arranging training for emergency response teams and monitoring and reporting on emergency response teams.

Depending on the size and structure of the facility management of the emergency may involve more than one facility emergency response team over more than one physical location, as specified in the emergency management plan.

The unit has been developed to cover the facilities as considered in Australian Standard (AS) 3745 or AS4083. For this unit, as covered by AS3745 and/or AS4083, occupants are people attending a facility on a permanent or temporary basis such as an employee, contractor, student or resident, but not a visitor or patient and a facility is a building, structure or workplace that is, or may be, occupied by people (occupants).

All aspects of the unit must be undertaken in accordance with legislative requirements, organisational policies and procedures, and accepted safe practices. It applies to members of an Emergency Planning Committee (EPC).

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Facility Emergency Response

## Unit Sector

Public Safety

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Establish and maintain emergency response teams**

- 1.1** Role, authority, structure and scope of emergency response team is negotiated with management of the facility and is documented in facility emergency response procedures
- 1.2** A system for alerting emergency response team members to an emergency is developed, demonstrated and regularly tested
- 1.3** A business plan and budget are developed and maintained for the emergency response team
- 1.4** Facility emergency systems and procedures are audited for compliance with industry standards, codes and/or regulations

#### **2 Provide information and develop procedures**

- 2.1** A risk assessment of emergency response team's expected activities is conducted, in accordance with industry standards, codes and/or regulations
- 2.2** Hazards are identified and controls are developed and implemented, in accordance with industry standards, codes and/or regulations
- 2.3** Information is provided to the emergency response team about its role, authority, structure, scope, equipment and training requirements
- 2.4** Facility emergency response procedures are developed and provided to emergency response teams and other appropriate personnel and are regularly reviewed
- 2.5** Pre-incident planning information about layout of the facility and key features relevant to potential emergencies is provided to the emergency response team
- 2.6** Suitably qualified and competent emergency planners are consulted
- 2.7** Members of the emergency response team and emergency control organisation are consulted about and encouraged to participate in the development and review

of facility emergency procedures

- |                                                                                               |                                                                                                                                                                                            |
|-----------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>3 Make recommendations for provision of emergency equipment and manage its maintenance</b> | <b>3.1</b> Recommendations are made for the acquisition of emergency equipment appropriate to the role and scope of the emergency response team                                            |
|                                                                                               | <b>3.2</b> Safe operating procedures, based on risk assessments and manufacturers' instructions, are developed and communicated to the emergency response team                             |
|                                                                                               | <b>3.3</b> Arrangements are made for the storage of emergency equipment in a location that is safe, convenient and readily accessible to the emergency response team                       |
|                                                                                               | <b>3.4</b> Arrangements are made to ensure emergency equipment is maintained, in accordance with industry standards and/or manufacturers' instructions                                     |
|                                                                                               | <b>3.5</b> Personal protective clothing and equipment and information about its characteristics, limitations, safe use and care are provided to each member of the emergency response team |
| <b>4 Arrange training for emergency response teams</b>                                        | <b>4.1</b> Training and assessment is arranged before personnel are assigned to emergency response duties                                                                                  |
|                                                                                               | <b>4.2</b> Training is arranged, based on needs analysis, to ensure currency of competence                                                                                                 |
|                                                                                               | <b>4.3</b> Arrangements are made for scheduling, promoting, reporting and recording of training, in accordance with facility emergency response procedures                                 |
|                                                                                               | <b>4.4</b> Feedback on performance, during training, is used to validate and improve training delivery, processes and procedures                                                           |
| <b>5 Monitor and report on Emergency response team</b>                                        | <b>5.1</b> Emergency response team is audited and reviewed for relevance and ability to implement emergency response systems                                                               |
|                                                                                               | <b>5.2</b> Status of the emergency response team and emergency control system is reported to the emergency planning committee, in accordance with facility emergency response procedures   |

# Assessment Requirements for PUA FER011 Manage facility emergency response teams

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- arranging training for emergency response teams
- assessing resources needed by facility emergency response team
- communicating and consulting with all stakeholders from a range of organisations, agencies and professions including advisers
- complying with legislation, industry standards, codes and regulations
- developing facility emergency response procedures
- establishing and maintaining emergency response teams
- making recommendations for the provision of emergency equipment and managing its maintenance
- managing and conducting risk assessments and/or analysis
- managing, monitoring and reporting on facility emergency response teams
- planning, coordinating, promoting training and collecting feedback
- providing information
- undertaking pre-incident planning
- using business plans and budgets
- working with other emergency response teams
- writing reports

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- business plans and budgets
- emergency warning systems
- equipment operating characteristics, limitations, procedures and general care
- facility emergency plan and emergency response procedures
- hazards and precautions

- how people react in emergency situations
- legislation, industry standards, codes and regulations
- maintenance management systems
- organisational/facility documentation, policies and procedures
- other emergency response teams
- personal protective clothing and equipment
- pre-incident planning including contingency plans, sketches or notes about facility, layout, features, hazards, emergency control facilities and discussions and/or use of operational procedures involving emergency plans, sketches, notes, procedures and/or Safety Data Sheets (SDSs)
- priorities and strategies for a general emergency
- situational awareness
- statutory and legislative requirements
- tactics for safely handling specific emergencies
- training cycles and management systems
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

# PUAFIR001 Coordinate state aerial operations

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge to coordinate the allocation and strategic placement of aircraft and specialist aviation personnel and equipment within the state or territory for the purposes of emergency management. It includes establishing aviation resource coordination for state or territory, monitoring need for state or territory aviation resources, engaging state or territory aviation resources, prioritising and allocating aviation resources, supervising deployment of aviation resources, monitoring management of aviation resources at incidents, responding to reports of aircraft occurrences and reviewing coordination arrangements.

The unit is applicable to personnel responsible within their state or territory for coordinating aircraft and specialist personnel and equipment. Authorisation to perform this role is subject to state or territory policies and procedures.

The fire sector is those sections of government departments, statutory authorities or agencies that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

| ELEMENTS                                                                 | PERFORMANCE CRITERIA                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

- 4.2 Requests for aviation resources are received and processed with consideration given to appropriate aircraft for the task, logistics support required and cost effectiveness
  - 4.3 State or territory emergency coordinators are consulted on priorities where there are competing requests
  - 4.4 Discussions are held with incident and/or regional controllers on availability, capability and limitations of aircraft resources and state or territory priorities
  - 4.5 Permission to dispatch aviation resources is granted within established authority and procedures
- 5 **Supervise deployment of aviation resources**
  - 5.1 Aircraft, pilots and air crew are dispatched in accordance with their contracts and state or territory administrative arrangements
  - 5.2 Monitoring is undertaken to ensure appropriate aviation dispatch system records are maintained
  - 5.3 Monitoring is undertaken to ensure pilots of dispatched aircraft are advised of known aircraft allocated to incident and Fire Common Traffic Advisory Frequency (FCTAF)
  - 5.4 Monitoring is undertaken to ensure flight following is established and maintained, as required
  - 5.5 Requests to retain aircraft are reviewed using cost effective analysis and in consultation with state or territory operations coordinator, as required
- 6 **Monitor management of aviation resources at incidents**
  - 6.1 Management arrangements and support for aviation resources at incidents are monitored for safety, effectiveness and efficiency
  - 6.2 Action is taken within scope of authority to suspend operations where a breach of legislation, regulations or state or territory procedures is identified
- 7 **Respond to reports of aircraft occurrences**
  - 7.1 Aircraft search and rescue procedures are established and implemented, as required
  - 7.2 Accidents and incidents are reported and investigated in accordance with aviation regulations

**8 Review coordination arrangements**

- 8.1** Debriefings are conducted to evaluate effectiveness of aviation resources coordination
- 8.2** Reports are produced and disseminated in accordance with regulatory requirements and organisational procedures

**Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

**Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the PUA Public Safety Training Package Companion Volume Implementation Guide.

**Unit Mapping Information**

This is a newly created unit, there is no equivalent unit.

**Links**

# Assessment Requirements for PUAFIR001 Coordinate state aerial operations

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- adhering to aircraft contracts, legislation, regulations and state or territory policies and procedures for aviation operations
- advising regional and/or incident controllers about aircraft resources and priorities
- conducting debriefings to evaluate effectiveness of aviation resource coordination
- confirming authority to coordinate state or territory aviation resources
- confirming availability, capability and limitations of aircraft resources
- consulting state or territory emergency coordinators on priorities
- coordinating allocation and deployment of aviation resources across multiple incidents
- coordinating engagement of aviation resources for incident response within state or territory
- dispatching aircraft, pilots and air crew
- ensuring flight following procedures are established and maintained
- establishing aircraft search and rescue procedures and implementing as required
- establishing aviation coordination within state or territory control or coordination facility
- following legislation, regulations and national, state or territory policies and procedures relating to acquisition of aviation resources
- identifying and communicating contractual constraints on aviation resources to personnel responsible for dispatch
- investigating alternative sources for resources
- invoking coordination arrangements for aviation resources in state or territory
- liaising with state or territory organisational personnel to determine current and potential need for aviation resources
- maintaining an overview on availability and capability of individual aviation resources
- monitoring
  - management arrangements and support for aviation resources at incidents for safety, effectiveness and efficiency
  - provision of information to pilots regarding known aircraft allocated to incident and Fire Common Traffic Advisory Frequency (FCTAF) records in the aviation dispatch system
- negotiating air space requirements, issues and scarce aviation resources
- processing requests for aviation resources and reviewing requests to retain aircraft

- producing and disseminating reports
- quantifying aviation resources and support resource arrangements
- reporting and investigating accidents and incidents in accordance with aviation regulations
- suspending operations where a breach of legislation, regulations or state or territory procedures is identified, if required
- undertaking and maintaining a strategic overview of current and potential emergency.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- accident and incident notification and response procedures
- air base and helibase requirements
- aircraft in national fleet including their capability, contract arrangements and management requirements
- aircraft use including
  - aerial incendiary operations
  - air observation
  - cargo and equipment transport for resupply operations
  - fire bombing
  - heavy air tanker operations
  - helicopter insertion and extraction
  - passenger transportation
  - Remote Piloted Aircraft System (RPAS) operations
  - specialist equipment utilisation
  - specialist intelligence gathering
- air operations unit structure and roles
- air space restriction requirements
- aviation resources including
  - aerial attack platforms including light or large helicopter and light or medium fixed wing aircraft
  - aerial products including water, foam, retardant and gel, their characteristics, application and effectiveness
  - factors affecting performance of aviation resources including fuel, vegetation, weather and topographic factors
  - firebombing aircraft including fixed and rotary wing firebombers, single engine air tankers (seats) and multi engine aircraft
  - firebombing systems including buckets, belly tank and scoopers
- flight safety including
  - aviation briefings
  - aviation communications

- duty time limitations
- Notice to Airmen (NOTAM)
- restricted airspace
- flight planning and flight following requirements
- general fire behaviour and strategies and tactics used by firefighting organisations
- hazards that may adversely affect aircraft operations
- organisational aircraft activation protocols
- organisational policies and procedures for aerial operation missions conducted in state or territory
- procedures for conducting aircraft support operations including aircraft marshalling, refuelling, aerial suppressant mixing and loading and incendiary operations
- radio communication protocols including requirements for ground to air communications
- record keeping requirements
- relevant legislation, regulations and civil aviation regulations
- risk management principles
- roles and responsibilities in aerial operations missions
- search and rescue arrangements
- state and territory aviation deployment systems
- Team Resource Management (TRM) principles
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of exercises, case studies and/or simulations
- appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - operational environment involving coordination of aircraft across a state or territory
- applicable documentation including organisational procedures, standards, equipment specifications, regulations, codes of practice and operational manuals.

## PUAFIR002 Manage aviation resources for an incident

### Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge to manage aviation resources, and coordinate flight and ground based services to support aerial operations missions conducted as part of an incident response. It includes delivering services within an organisational regulatory framework, assisting with planning for air operations as part of the incident action plan, activating and managing aircraft, overseeing management of support personnel and contractors, establishing and managing facilities and consumables to support aerial operations, planning and managing flight schedules and pilot services, managing air base accident response, ensuring the air base has safety and security systems in place and ensuring record keeping systems are in place.

The unit is applicable to aircraft officers managing aviation resources within complex incident response operational environments. Authorisation to perform this role is subject to agency policies and procedures.

The fire sector is those sections of government departments, statutory authorities or agencies that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals with the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR003 Manage aviation support operations at an air base

### Competency Field

Fire

### Unit Sector

Fire

## Elements and Performance Criteria

- 3.3 Aircraft identification is recorded on arrival and an air communications plan is developed in consultation with aircrews and the communications planner and is included in the IAP
    - 3.4 Aircraft and welfare arrangements for flight and air crews are managed in accordance with contractual arrangements
- 4 **Oversee management of support personnel and contractors**
  - 4.1 Support personnel and contractors assigned to assist with delivery of air support facilities and services are activated in accordance with organisational procedures
  - 4.2 Air base manager is appointed, as required, in accordance with organisational procedures
  - 4.3 Oversight is provided for engaging support personnel to deliver specialist services
  - 4.4 Supervisory structure for support personnel is established, monitored and adjusted, as required
  - 4.5 Oversight is provided for management of support personnel including tasking, briefing, performance management, welfare management and debriefing
  - 4.6 Oversight is provided to ensure personnel who are impaired or working unsafely are stood down from the operation
  - 4.7 System to identify job hazards and to eliminate, minimise or control them is established and maintained
- 5 **Establish and manage facilities and consumables to support aerial operations**
  - 5.1 Air base and facilities to support air operations are established, as required, and are fit for purpose
  - 5.2 Consumables and supplies for air operations and welfare are identified, ordered, stored and their use recorded
  - 5.3 Welfare services are provided in accordance with aircraft contractual arrangements and in consultation with the logistics officer
  - 5.4 Safe work practices for storage and handling of dangerous goods and hazardous substances are

- implemented and monitored
- 6 Plan and manage flight schedules and pilot services**
- 6.1** Proposed aerial operations missions are confirmed with task supervisor and priorities are confirmed
  - 6.2** Requests for non-tactical use of aircraft are considered
  - 6.3** Flights are coordinated and tasked for operations, as required
  - 6.4** Procedures to take and retain passenger manifests are implemented
  - 6.5** Flight dispatch is coordinated and authorised
  - 6.6** Flight notification and flight following procedures are implemented
  - 6.7** Ground-to-air radio communications are monitored to ensure only authorised personnel undertake communications
  - 6.8** Recording of aircraft and pilot flight times is managed
  - 6.9** Pilots are debriefed at the end of task flights
- 7 Manage air base accident response**
- 7.1** Accident response plan is prepared and included in the IAP
  - 7.2** Aircraft accident response procedures are implemented
  - 7.3** Aircraft are tasked in response to an accident
  - 7.4** Accident response equipment is located and checked in accordance with organisational procedures and statutory regulations, where air base is located at a permanent airport
- 8 Ensure air base has safety and security systems in place**
- 8.1** Designated unsafe areas are demarcated and clearly signposted
  - 8.2** Security is provided for aircraft and equipment and access to the air base is controlled
- 9 Ensure record keeping systems are in place**
- 9.1** Systems for recording storage and use of consumables and aerial products are established and maintained in accordance with organisational

procedures

- 9.2** Record of activities is maintained and a handover is conducted with incoming aircraft officer

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the PUA Public Safety Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This is a newly created unit, there is no equivalent unit.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFIR002 Manage aviation resources for an incident

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- activating and managing aircraft resources including both fixed wing and rotary wing aircraft to support aerial operations missions for incident response
- appointing air base manager and assigning support personnel and contractors to assist with delivery of air support facilities and services
- confirming Team Resources Management (TRM) principles and priorities for aerial operations mission are applied
- considering requests for non-tactical use of aircraft
- consulting with state air desk, air operation manager and air attack supervisor on availability, capability and management of aviation resources
- coordinating and authorising flight dispatch and tasking for flight operations
- debriefing pilots on return from flights
- demarcating and signposting designated unsafe areas
- developing air communications plan
- documenting aircraft and support requirements for aerial operations missions in air operations plan
- establishing facilities to support air operations including
  - aircraft refuelling facilities
  - airstrips and helipads
  - car parking areas
  - firefighting product preparation and loading facilities
  - storage areas for dangerous goods that may include fuel, incendiaries and fire suppressant chemicals
  - welfare facilities and services
- establishing security for aircraft and equipment and monitoring access to air base
- establishing, monitoring and adjusting supervisory structure for support personnel
- identifying job hazards and eliminating, minimising or controlling them
- identifying, ordering, storing and recording consumables and aerial products
- implementing relevant legislation, regulations and organisational policies and procedures for aerial operations missions

- locating and checking accident response equipment where an air base is located at a permanent airport
- maintaining records of activities and hand overs to incoming aircraft officers and the number, type and activities of aircraft allocated to an incident
- managing aircraft and welfare arrangements for flight and air crews, delivery of in-flight and ground support services and briefings
- managing engagement of contractors and support personnel to deliver specialist services
- managing personnel who are impaired or working in an unsafe way
- monitoring aviation support services to ensure they are undertaken by trained and authorised personnel including
  - aerial fire suppressant mixing and loading
  - aircraft marshalling
  - aircraft refuelling
  - external load lifting
  - ground-to-air radio communications
- monitoring safe work practices for storage and handling of dangerous goods and hazardous substances
- obtaining and activating aircraft
- preparing accident response plans
- providing advice on the administrative and logistical requirements of a range of aerial operations missions
- providing advice on the availability, capability and support requirements of aviation resources
- recording aircraft identification on arrival and aircraft and pilot flight times
- taking and retaining passenger manifests where an air base manager has not been appointed
- tasking aircraft in response to an accident.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- accident, incident and near miss response procedures and reporting system
- air operations plan content including accident response plan and air communications plan
- air operations unit structure and roles
- air space requirements and processes
- aircraft operator, flight and air crew roles and responsibilities
- aviation radio communications
- flight planning, flight notification and flight following requirements
- management of briefings and debriefings
- Notices to Airmen (NOTAM), temporary flight restrictions and danger areas
- organisational aircraft activation protocols
- organisational policies and procedures for conducting aerial operations missions and ground

support services

- radio communication protocols including requirements for ground-to-air communications
- record keeping requirements
- relevant legislation and regulations
- risk management principles
- roles and responsibilities in aerial operations missions
- safety and security requirements at air bases
- search and rescue arrangements
- Team Resource Management system (TRM) principles
- types of aircraft used within jurisdictions, their capability, use and management requirements including contract arrangements
- types of consumables, supplies, aerial suppressants and incendiaries
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of exercises, case studies and/or simulations
- appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - incident control centre or command post
  - an air base
  - aircraft refuelling facilities
  - firefighting product preparation and loading facilities
  - fixed wing and rotary wing aircraft and pilots
  - ground to air communication facilities
- applicable documentation including organisational procedures, standards, equipment specifications, regulations, codes of practice and operational manuals.

## PUAFIR003 Manage aviation support operations at air base

### Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to establish and manage an air base as part of an incident response and to provide support services for the resources in aerial operations missions. It includes working safely as a member of air operations team, planning for aerial operations support, establishing and managing a support unit to assist with service delivery, maintaining a safe and secure air base, supervising the layout of air base facilities, supervising the delivery of in-flight pilot services, supervising the storage and handling of dangerous goods, implementing air base accident response and maintaining records.

The unit is applicable to individuals managing an air base supporting fixed wing aircraft, rotary wing aircraft and/or remotely piloted aircraft. The air base may be established at an existing airport or helipad or may be in a remote location. Authorisation to perform this role is subject to agency policies and procedures.

The fire sector is those sections of government departments, statutory authorities or agencies that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals with the fire sector or the units contributing to the attainment of a fire qualification.

PUAOPE020 Lead a crew

PUAOPE013 Operate communications systems and equipment

PUAFIR017 Work safely around aircraft

### Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

| ELEMENTS                                                                     | PERFORMANCE CRITERIA                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Elements describe the essential outcomes                                     | Performance criteria describe the performance needed to demonstrate achievement of the element.                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>1 Work safely as air operations team member</b>                           | <b>1.1</b> Team Resource Management (TRM) principles are applied and roles and responsibilities are confirmed in the air operations unit<br><b>1.2</b> Communication is established and maintained with air attack supervisors, support personnel and contractors<br><b>1.3</b> Work, Health and Safety (WHS)/Occupational Health and Safety requirements are implemented<br><b>1.4</b> Job hazards are identified and action is taken to eliminate, minimise or control them                 |
| <b>2 Plan for aerial operations support</b>                                  | <b>2.1</b> Briefing is obtained on need for aerial operations support and points requiring clarifications are confirmed<br><b>2.2</b> Facility and service requirements to support aerial operations missions are identified in consultation with the supervisor and are documented in the air operations plan within the Incident Action Plan (IAP), if developed<br><b>2.3</b> Need for personnel and contractors to assist with delivery of air base facilities and services is determined |

- |          |                                                          |                                                                                                                             |
|----------|----------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------|
|          | <b>3.4</b>                                               | Personnel are monitored for application of safe work practices and personnel working in an unsafe way are stood down        |
| <b>4</b> | <b>Maintain safe and secure air base</b>                 |                                                                                                                             |
|          | <b>4.1</b>                                               | Arrangements are made to demarcate and clearly signpost designated unsafe areas                                             |
|          | <b>4.2</b>                                               | Arrangements are made to escort personnel in designated unsafe areas who are not aircrew or part of the air operations unit |
|          | <b>4.3</b>                                               | Security is provided for aircraft and equipment, if required                                                                |
|          | <b>4.4</b>                                               | Arrangements for controlling access to the air base are established                                                         |
| <b>5</b> | <b>Supervise layout of air base facilities</b>           |                                                                                                                             |
|          | <b>5.1</b>                                               | Air base facilities are planned and established in accordance with organisational procedures                                |
|          | <b>5.2</b>                                               | Parking and facility areas are identified and established                                                                   |
|          | <b>5.3</b>                                               | Storage areas for dangerous goods are established                                                                           |
|          | <b>5.4</b>                                               | Fire product mixing and loading facilities are established                                                                  |
|          | <b>5.5</b>                                               | Refuelling facilities and services are established                                                                          |
|          | <b>5.6</b>                                               | Welfare facilities and services are established to meet the needs of air base personnel and pilots                          |
|          | <b>5.7</b>                                               | Dust abatement measures are implemented, as required                                                                        |
| <b>6</b> | <b>Supervise delivery of in-flight pilot services</b>    |                                                                                                                             |
|          | <b>6.1</b>                                               | Delivery of inflight pilot services is monitored                                                                            |
|          | <b>6.2</b>                                               | Pilots are briefed prior to their flights and debriefed on return                                                           |
| <b>7</b> | <b>Supervise storage and handling of dangerous goods</b> |                                                                                                                             |
|          | <b>7.1</b>                                               | Dangerous goods and hazardous substances are identified from documentation or through confirmation with relevant personnel  |
|          | <b>7.2</b>                                               | Storage requirements for dangerous goods and hazardous substances are identified and established                            |

- 7.3 Handling procedures for different classes and characteristics of goods are implemented
- 8 **Implement air base accident response**
  - 8.1 IAP accident response plan for aerial operations is obtained and followed
  - 8.2 Accident response equipment is located and checked in accordance with organisational procedures and statutory regulations
  - 8.3 Air base accident response procedures are communicated to support personnel and their implementation is monitored
- 9 **Maintain records**
  - 9.1 Records of storage and use of consumables are maintained in accordance with organisational procedures
  - 9.2 Record of activities is maintained and a handover is prepared for the incoming air base manager

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the PUA Public Safety Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is not equivalent to PUAFIR313 Operate aviation support equipment.

## Links

# Assessment Requirements for PUAFIR003 Manage aviation support operations at air base

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Team Resource Management (TRM) principles
- communicating air base accident response procedures to support personnel and monitoring adherence
- confirming team roles and responsibilities within air operations unit
- demarcating and signposting designated unsafe areas and arranging escort of personnel who are not aircrew or part of the air operations unit
- determining and engaging personnel, contractors and specialists for delivery of air base facilities and services
- establishing and managing delivery of support services including
  - access to air base
  - air base facilities
  - parking and facility areas
  - product preparation and loading services, as required
  - records for storage and use of consumables
  - refuelling facilities and services
  - storage areas for dangerous goods
  - supervisory structure for support personnel and contractors
  - welfare facilities and services
- following organisational policies and procedures
- identifying
  - dangerous goods and hazardous substances from documentation or relevant personnel
  - job hazards
  - storage requirements for dangerous goods and hazardous substances
- implementing
  - accident response plan for aerial operations
  - action to eliminate, minimise or control hazards
  - dust abatement measures, as required
  - Work, Health and Safety (WHS)/Occupational Health and Safety requirements including

- handling procedures for different classes of goods
- locating and verifying accident response equipment
- managing delivery of flight services including
  - aircraft marshalling and parking services
  - aircraft timekeeping
  - briefing pilot
  - flight coordination
  - flight following
  - ground-to-air radio communications
  - recording passenger manifests
  - security service for aircraft and equipment, if required
  - weather information
- maintaining communication records of activities and handing over to incoming air base manager
- supervising support personnel and contractors including
  - application of safe work practices
  - appropriate tasking
  - briefing and debriefing
  - monitoring performance
  - task completions.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- aircraft marshalling and refuelling requirements
- air base establishment including
  - air base support personnel
  - communications
  - layout
  - logistics planning
  - selecting a site
- aerial fire suppression products, systems and equipment including
  - aircraft product loading procedures
  - managing stores
  - product mixing
- air operations planning
- airspace classifications
- consumables planning
- coordination of aircraft

- crew marshalling
- dangerous goods and hazardous substances including fuel, incendiaries and fire retardants
- flight following
- flight notification
- flight planning
- management of briefings and debriefings
- night operations, if undertaken
- organisational communications systems
- organisational policies and procedures including
  - accident, incident and emergency responses and procedures
  - conducting hazardous aircraft support operations including aircraft marshalling, refuelling, aerial product preparation and loading and incendiary operations
  - management of aircraft and air operations missions
- passenger safety briefing protocols to be conducted prior to flights
- personnel who provide specialist services for dangerous goods handling, aircraft marshalling, aircraft refuelling, fire suppressant mixing and loading, external load lifting and ground-to-air radio communications
- requirements for reporting and record keeping
- risk management principles
- search and rescue processes
- Team Resource Management (TRM) principles
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of exercises, case studies and/or simulations
- appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - an air base which may be an aerodrome or a remote air base
  - aircraft
  - appropriately skilled support personnel

- refuelling facilities
- applicable documentation including organisational procedures, standards, equipment specifications, regulations, codes of practice and operational manuals.

# PUAFIR004 Manage complex aerial operations for an incident

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge to manage complex aerial operations during the response to an incident. It includes working within organisational and regulatory frameworks, establishing and managing an air operations unit for an incident, confirming safety and effectiveness of aerial operations, developing aerial operations strategies, developing and maintaining an air operations plan within an incident action plan, managing the implementation of an air operations plan, responding to changed circumstances and establishing systems for the safety and security of aerial operations.

The unit is applicable to personnel that may fill the role of the air operations manager at an incident. The air operations manager is the most senior aviation related official, during an incident response, responsible for coordinating a range of tactical aerial operations missions within a complex operational environment. They are also responsible for managing personnel undertaking missions and for providing aviation related support services. Authorisation to perform this role is subject to organisational policies and procedures.

The fire sector is those sections of government departments, statutory authorities or agencies that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes

#### **1 Work within an organisational and regulatory framework**

#### **2 Establish and manage air operations unit**

### PERFORMANCE

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Briefing on the incident is obtained from the operations officer
- 1.2** Responsibility for coordinating aerial operations for the incident and managing work of the air operations unit is accepted
- 1.3** Legislation, regulations and organisational policies and procedures for incident aerial operations are identified and implemented
- 1.4** Communication is established and maintained with state or territory aircraft coordinator
- 1.5** Air space requirements and issues are referred to state or territory aircraft coordinator
- 1.6** Incident reporting requirements for air operations are met
- 1.7** Advice is provided on aircraft availability and capability, support requirements and operational priorities in accordance with organisational regulatory framework
- 2.1** Air operations unit, appropriate to incident scale and needs, is established
- 2.2** Personnel are allocated responsibilities and are briefed and debriefed at the conclusion of their deployment
- 2.3** Communication is maintained with operations officer, aircraft officer and air attack supervisor and their specialist expertise is sought, as required
- 2.4** Communication is maintained with aircraft contractors including pilots, engineers and refuellers and their specialist advice is sought, as required

- 2.5 Team Resource Management (TRM) principles are applied to incident air operations and roles and responsibilities for air operations missions are confirmed
  - 2.6 Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements are implemented
  - 2.7 Job hazards are identified and action is taken to eliminate, minimise or control them
  - 2.8 Personnel are managed and monitored for safe and effective work practices and those who are impaired or working in an unsafe way are stood down from duty
- 3 **Confirm safety and effectiveness of current aerial operations**
  - 3.1 Air operations plan and details of specific aviation support aspects are confirmed
  - 3.2 Aircraft at incident, en route or in the vicinity are identified
  - 3.3 Aerial operations missions are identified
  - 3.4 Temporary restricted air space need is determined with incident controller and operations officer, with requests then forwarded through to the state air desk
  - 3.5 Air communications plan is established and maintained
  - 3.6 Flight following procedures are established and maintained
  - 3.7 Support services and related personnel are confirmed
  - 3.8 Accident response plan is established and maintained
- 4 **Develop aerial operations strategies**
  - 4.1 Incident controller's intent and incident management objectives are identified

- 4.2 Current and projected incident situation is obtained
  - 4.3 Capabilities and constraints of available aircraft are reviewed
  - 4.4 Options for use of aircraft resources to support operational needs are developed and analysed
  - 4.5 Aerial strategies and tactics that contribute towards achievement of incident management objectives are developed
  - 4.6 Availability of resources to implement strategies are confirmed with aircraft officer
  - 4.7 Priorities and strategies for use of aircraft resources are proposed and confirmed with operations officer
- 5 **Develop and maintain air operations plan within the IAP**
  - 5.1 Air operations plan is developed in accordance with organisational procedures and in collaboration with operations officer and planning officer
  - 5.2 Aerial operations mission resources, support facilities and services are identified in the air operations plan
  - 5.3 Accident response and air communication plans are developed and are included in the air operations plan
  - 5.4 Air operations plan is developed in consultation with operations officer and submitted to incident controller for approval
  - 5.5 Air operations plan is regularly reviewed in response to changed situations or at predetermined timeframes
- 6 **Manage implementation of air operations plan**
  - 6.1 Roles and responsibilities for implementing air operations plan are confirmed
  - 6.2 Arrangements are made for aerial operations mission personnel to be briefed

- |                                                                                 |            |                                                                                                                                          |
|---------------------------------------------------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                 | <b>6.3</b> | Tasking of flights is authorised in accordance with organisational procedures                                                            |
| <b>7 Respond to changed circumstances</b>                                       | <b>7.1</b> | Effectiveness of aerial operations missions is monitored and priorities for aircraft use are regularly confirmed with operations officer |
|                                                                                 | <b>7.2</b> | Procedures are established for reassignment of aircraft                                                                                  |
|                                                                                 | <b>7.3</b> | Operations officer is notified of changes to aircraft capability or status and situations that are or may be hazardous                   |
| <b>8 Provide oversight of systems for safety and security of air operations</b> | <b>8.1</b> | Flight following procedures are established and implemented in accordance with organisational regulations and requirements               |
|                                                                                 | <b>8.2</b> | Search and rescue procedures are established and implemented in accordance with organisational regulations and requirements              |
|                                                                                 | <b>8.3</b> | Incident and near miss reporting system is established and monitored                                                                     |
|                                                                                 | <b>8.4</b> | Notifiable incidents are reported in accordance with organisational procedures and regulatory requirements                               |
|                                                                                 | <b>8.5</b> | Secure areas are designated for aircraft and are monitored to ensure only authorised personnel can access them                           |
|                                                                                 | <b>8.6</b> | Security for aircraft and equipment and arrangements for controlling access to the air base are established                              |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the PUA Public Safety Training Package Companion Volume Implementation Guide.

## **Unit Mapping Information**

This is a newly created unit, there is no equivalent unit.

## **Links**

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUA FIR004 Manage complex aerial operations for an incident

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- allocating roles and responsibilities and managing personnel performance and welfare
- applying Team Resource Management (TRM) principles
- authorising tasking of flights
- briefing and debriefing personnel and pilots
- complying with relevant legislation and regulations
- coordinating complex aerial operations during an incident response
- designating secure areas for aircraft and monitoring access
- determining restricted air space and forwarding requests to state air desk
- developing air operation plan for complex aerial operation
- confirming
  - accident response plan and air communications plan
  - aerial strategies and tactics
  - availability and options for use of aircraft resources to support operational needs
  - priorities and strategies for aircraft resources
  - support services and personnel
- establishing and maintaining flight following procedures and incident and near miss reporting system
- following organisational policies and procedures including reassignment of aircraft and search and rescue procedures
- identifying
  - aerial operations mission, resources, support facilities and services in air operations plan
  - aircraft at incident, en route or in the vicinity
  - incident controller's intent and incident management objectives
  - job hazards and action to eliminate, minimise or control them
- implementing Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements and safe work practices
- managing work of air operations unit for complex aerial operations
- maintaining communication with state or territory aircraft coordinators, operations officer, aircraft officer, air attack supervisor and aircraft contractors including pilots, engineers and

refuellers

- monitoring aerial operations missions and confirming priorities for aircraft
- controlling aircraft and equipment security and access to the air base
- notifying authorised personnel of changes to aircraft capability or status and of hazardous situations
- obtaining briefings from relevant personnel to coordinate aerial operations
- planning air attack strategies for complex aerial operations
- providing aviation and general information advice to personnel
- referring air space requirements and issues to state or territory aircraft coordinators
- reporting notifiable incidents
- reviewing air operations plan and capabilities and constraints of available aircraft.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- air accident, incident and near miss response procedures and reporting systems
- air attack strategies including offensive, defensive and firebombing
- air attack tactics including direct, indirect, head, flank, parallel, line building and asset and crew protection and aerial ignition
- air base establishment requirements
- air operations unit structure including roles and responsibilities
- aircraft capability relative to fire and incident management activities
- aircraft operator, flight crew and air crew roles and responsibilities
- aircraft refuelling and marshalling requirements
- aircraft operating environment including
  - airspace classifications and process
  - aviation communications systems
  - flight rules
  - temporary restricted airspace
  - visual meteorological conditions
- air radio communication requirements
- aviation resources including
  - aerial attack platforms including light helicopter, light or medium fixed wing aircraft
  - aerial products including water, foam, retardant and gel and their characteristics, application and effectiveness
  - factors affecting performance of aviation resources including fuel, weather and topographic factors
  - firebombing aircraft including fixed and rotary wing firebombers, single engine air tankers (seats) and multi engine aircraft
  - firebombing systems including buckets, belly tank and scoopers
- consumables planning

- coordination of aircraft
- crew marshalling
- fire behaviour
- firebombing systems
- flight following
- flight notification
- flight planning
- flight safety including
  - aviation briefings
  - aviation communications
  - duty time limitations
  - Notice to Airmen (NOTAM)
  - restricted airspace
- hazards that may adversely affect aircraft operations
- incident action plan content including
  - accident response plan
  - air operations plan
  - aircraft communications plan
- logistics planning
- management of briefings and debriefings including passenger safety briefings
- night operations, if required
- operational support requirements for aerial operations missions
- organisational policies and procedures for conducting hazardous aircraft support operations including aircraft marshalling, refuelling, firebombing product mixing and loading, passenger transport and incendiary operations
- relevant legislation and regulations including civil aviation regulations
- report and record keeping requirements
- risk management principles
- safety and security requirements at an airbase
- search and rescue requirements
- strategies and tactics relating to fire activity, behaviour and suppression
- tactical aircraft
- Team Resource Management (TRM) principles
- Work Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the

time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of exercises, case studies and/or simulations
- an incident or exercise involving complex aerial operations that requires coordination
- appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - an air operations unit with personnel performing both tactical and support functions for complex aerial operations
- applicable documentation including organisational procedures, standards, equipment specifications, regulations, codes of practice and operational manuals.

## PUAFIR005 Observe fire from an aircraft

### Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to observe a fire or prescribed burn from an aircraft and to collect intelligence relating to fire location and behaviour including fuel loads, terrain, rate of spread, threats and progress of strategies and tactics. It includes working safely as an air observation team member, preparing for air observation mission, planning flight route, preparing for flight, validating flight path en route to mission area, collecting and recording incident intelligence, reacting to changed conditions and emergencies and concluding air observation mission.

The unit is applicable to personnel responsible for collecting incident intelligence from either a fixed wing or rotary wing aircraft or from the ground using remotely piloted aircraft. Authorisation to perform this role is subject to organisational policies and procedures.

The fire sector is those sections of government departments, statutory authorities or agencies that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR017 Work safely around aircraft

PUAFIR303 Suppress wildfire

PUAOPE013 Operate communications systems and equipment

PUAOPE014 Navigate to an incident

### Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Work safely as air observation team member**

- 1.1** Team Resource Management (TRM) principles are applied during air observation mission
- 1.2** Compliance is maintained with relevant legislation, regulations and organisational policies and procedures
- 1.3** Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements for air operations are implemented
- 1.4** Job hazards are identified and action is taken to eliminate, minimise or control them

#### **2 Prepare for air observation mission**

- 2.1** Briefing on air observation mission is obtained from task supervisor
- 2.2** Mission information is collated
- 2.3** Maps, navigation equipment and personal protective clothing and equipment for mission are prepared

#### **3 Plan flight route**

- 3.1** Mission aircraft, its performance capability and fuel range are confirmed with task supervisor
- 3.2** Pre-flight plan is prepared using available information including known terrain, hazards, mission requirements, weather forecast and expected time duration
- 3.3** Alternative landing areas in flight area are identified in consultation with pilot
- 3.4** Flight plan and communication arrangements for mission are confirmed with pilot
- 3.5** Flight following and search and rescue arrangements are confirmed

#### **4 Prepare for flight**

- 4.1** Pilot is briefed on mission

- 4.2 Briefing from pilot is received on aircraft safety and emergency procedures
  - 4.3 Communication equipment is tested for correct frequencies and functionality
  - 4.4 Satellite navigation equipment, where required, for the mission is checked for correct programming and operability
- 5 **Validate flight path en route to mission area**
  - 5.1 Communication is maintained with pilot to ensure planned route is followed and mission objectives are achieved
  - 5.2 Flight following protocols are established and maintained
  - 5.3 Flight route is followed on map and/or using satellite navigation technology and location is confirmed through identification of ground features
  - 5.4 En route, diversion and arrival reporting information is transmitted in accordance with organisational procedures
- 6 **Collect and record fire intelligence information**
  - 6.1 Spatial data on fire location and progress of suppression efforts is recorded and communicated in accordance with organisational procedures
  - 6.2 Observations of current and projected fire behaviour, including factors that may affect it, are collected and recorded
  - 6.3 Fire intelligence information is communicated to task supervisor within agreed timeframes using approved communication arrangements
- 7 **React to changed conditions and emergencies**
  - 7.1 Contact is made with task supervisor and/or fire ground commander, if present, to confirm communication arrangements
  - 7.2 Observed hazards that pose a risk to people, property, assets or the environment are reported to task supervisor and/or fire ground commander, if present
  - 7.3 Observed changes in operational conditions are communicated to task supervisor and/or fire ground commander, if present

- |                                           |                                                                                                                                                    |
|-------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>8 Conclude air observation mission</b> | <b>8.1</b> After action review is conducted with air observation personnel                                                                         |
|                                           | <b>8.2</b> Navigation equipment is stored in accordance with organisational procedures and faults are referred to approved personnel for attention |
|                                           | <b>8.3</b> Details of air operations mission are recorded in accordance with organisational procedures                                             |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the PUA Public Safety Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is not equivalent to PUAFIR408 Plan aircraft operations and PUAFIR315 Navigate from an aircraft.

## Links

Companion Volume Implementation Guides are found in VETNet -

# Assessment Requirements for PUAFIR005 Observe fire from an aircraft

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Team Resource Management (TRM) principles
- briefing pilot on mission requirements and receiving pilot briefing on aircraft safety and emergency procedures
- checking satellite navigation equipment, where required, for correct programming and operability
- collecting and recording observations of current and projected fire behaviour
- communicating fire intelligence and changed conditions to task supervisor and/or fireground commanders
- complying with organisational policies and procedures
- conducting after action reviews with air observation personnel
- confirming
  - flight following and search and rescue arrangements
  - flight plan and communication arrangements with pilot
  - mission aircraft, its performance capability and fuel range
- contacting task supervisor to confirm communication arrangements
- determining job hazards and taking action to eliminate, minimise or control them
- establishing and maintaining flight protocols, as required
- following flight routes using satellite navigation technology and/or map and ground features
- identifying alternative landing areas in flight zone
- implementing relevant legislation and regulations
- maintaining communication with pilot
- observing and communicating hazards that pose a risk
- observing fire from aircraft
- obtaining mission briefings
- preparing maps, navigational equipment, personal protective clothing and equipment and preliminary flight plans
- receiving briefing on mission, aircraft safety and emergency procedures from pilot
- recognising location through identification of ground features
- recording and communicating spatial data and progress of incident response strategies

- recording details of air operation mission
- reporting en route, diversion and arrival information
- storing navigation equipment and reporting faults
- testing communication equipment for correct frequencies and functionality
- wearing personal protective clothing and equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and include knowledge of

- aircraft performance capability
- alternate routes due to weather and aircraft tactical issues
- burning techniques including prescribed burning techniques
- cartographic symbols, legends and other information relating to fire mapping
- communication methods and processes with ground and air team members
- correct use of organisational satellite navigation equipment, if used
- factors that impact aircraft navigation including prevailing weather and environmental conditions and margin of error allowable per task or incident terrain
- fire behaviour, firefighting strategies and tactics
- hazards and risks associated with fire and flight
- legislation and regulations including relevant civil aviation regulations
- methods for determining current location
- mission information including weather forecast, incident action plan, if developed, and communications plan
- organisational policies and procedures including fire mapping protocols and procedures, intelligence collection protocols and procedures, air observations procedures and reporting requirements
- other flight planning considerations that may impact mission
- personal protective clothing and equipment requirements
- pilot briefings and debriefings
- processes for organising an aerial fire observation mission
- radio communication protocols including requirements for ground-to-air communications
- risk management principles and risks associated with incidents
- roles and responsibilities in aerial operations units
- route planning techniques
- spatial data collection
- Team Resource Management (TRM) principles
- use of satellite navigation equipment and/or maps, where required
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including safe working procedures around aircraft.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of exercises, case studies and/or simulations
- appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - an aircraft suitable for air observation with a pilot
- applicable documentation including organisational procedures, standards, equipment specifications, regulations, codes of practice and operational manuals.

## PUAFIR006 Observe non-fire incident from an aircraft

### Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to observe a non-fire incident from an aircraft and to collect intelligence information relating to an incident. It includes working safely as air observation team member, preparing for air observation mission, planning flight route, preparing for flight, validating flight path en route to mission area, collecting and recording incident intelligence, reacting to changed conditions and emergencies and concluding air observation mission.

The unit is applicable to personnel responsible for collecting intelligence relating to incidents such as flood, storm, cyclone, earthquake or tsunami from either a fixed wing or rotary wing aircraft or from the ground using remotely piloted aircraft. Authorisation to perform this role is subject to organisational policies and procedures.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR017 Work safely around aircraft

PUAOPE013 Operate communications systems and equipment

PUAOPE014 Navigate to an incident

### Competency Field

Fire

### Unit Sector

Fire

## Elements and Performance Criteria

| ELEMENTS                                            | PERFORMANCE CRITERIA                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Elements describe the essential outcomes            | Performance criteria describe the performance needed to demonstrate achievement of the element.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>1 Work safely as air observation team member</b> | <b>1.1</b> Team Resource Management (TRM) principles are applied during air observation mission<br><br><b>1.2</b> Compliance is maintained with relevant legislation, regulations and organisational policies and procedures<br><br><b>1.3</b> Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements for air operations are implemented<br><br><b>1.4</b> Job hazards are identified and action is taken to eliminate, minimise or control them                                                                                                                  |

- |          |                                                             |                                                                                                                                                               |
|----------|-------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
|          | <b>4.2</b>                                                  | Briefing from pilot is received on aircraft safety and emergency procedures                                                                                   |
|          | <b>4.3</b>                                                  | Communication equipment is tested for correct frequencies and functionality                                                                                   |
|          | <b>4.4</b>                                                  | Satellite navigation equipment, where required, for the mission is checked for correct programming and operability                                            |
| <b>5</b> | <b>Validate flight path en route to mission area</b>        |                                                                                                                                                               |
|          | <b>5.1</b>                                                  | Communication is maintained with pilot to ensure planned route is followed and mission objectives are achieved                                                |
|          | <b>5.2</b>                                                  | Flight following protocols are established and maintained                                                                                                     |
|          | <b>5.3</b>                                                  | Flight route is followed on map and/or using satellite navigation technology and location is confirmed through identification of ground features              |
|          | <b>5.4</b>                                                  | En route, diversion and arrival reporting information is transmitted in accordance with organisational procedures                                             |
| <b>6</b> | <b>Collect and record incident intelligence information</b> |                                                                                                                                                               |
|          | <b>6.1</b>                                                  | Spatial data on incident location and progress of incident response strategies is recorded and communicated in accordance with organisational procedures      |
|          | <b>6.2</b>                                                  | Observations of current and projected incident behaviour including factors that may affect incident behaviour are collected and recorded                      |
|          | <b>6.3</b>                                                  | Intelligence information is communicated to task supervisor within agreed timeframes using approved communication arrangements                                |
| <b>7</b> | <b>React to changed conditions and emergencies</b>          |                                                                                                                                                               |
|          | <b>7.1</b>                                                  | Contact is made with task supervisors and ground based supervisor, where appointed, to confirm communication arrangements                                     |
|          | <b>7.2</b>                                                  | Observed hazards that pose a risk to people, property, assets or the environment are reported to task supervisor and ground based supervisor, where appointed |

- |                                           |            |                                                                                                                              |
|-------------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------|
|                                           | <b>7.3</b> | Observed changes in operational conditions are communicated to task supervisor and ground based supervisor, where appointed  |
| <b>8 Conclude air observation mission</b> | <b>8.1</b> | After action review is conducted with air observation personnel                                                              |
|                                           | <b>8.2</b> | Equipment is stored in accordance with organisational procedures and faults are referred to approved personnel for attention |
|                                           | <b>8.3</b> | Details of air operations mission are recorded in accordance with organisational procedures                                  |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the PUA Public Safety Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is not equivalent to PUAFIR408 Plan aircraft operations and PUAFIR315 Navigate from an aircraft.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUA FIR006 Observe non-fire incident from an aircraft

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Team Resource Management (TRM) principles
- briefing pilot on mission requirements and receiving pilot briefing on aircraft safety and emergency procedures
- checking satellite navigation equipment for correct programming and operability
- collating information on non-fire incidents
- collecting, communicating and recording intelligence including observed changes in operational conditions
- complying with organisational policies and procedures
- conducting after action reviews with air observation personnel
- confirming
  - flight following and search and rescue arrangements
  - flight plan and communication arrangements
  - mission aircraft, its performance capability and fuel range
- contacting task supervisors and ground based supervisor, where appointed, to confirm communication arrangements
- determining job hazards and taking action to eliminate, minimise or control them
- establishing and maintaining flight following protocols, as required
- following flight route using satellite navigation technology and/or map and ground features
- identifying alternative landing areas in flight zone
- implementing relevant legislation and regulations
- maintaining communication with pilot
- observing and communicating hazards that pose a risk
- observing non-fire incidents from aircraft
- obtaining mission briefings
- preparing maps, navigation equipment, personal protective clothing and equipment and preliminary flight plans
- receiving briefing on mission, aircraft safety and emergency procedures from pilot
- recognising location through identification of ground features
- recording and communicating spatial data and progress of incident response strategies

- recording and reporting details of air operation mission
- reporting en route, diversion and arrival information
- storing navigation equipment and reporting faults
- testing communication equipment for correct frequencies and functionality
- wearing personal protective clothing and equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- aircraft performance capability
- alternate routes due to weather, aircraft tactical issues or lost procedures
- characteristics of non-fire incidents
- communication methods and processes
- correct use of organisational satellite navigation equipment, if used
- factors that may impact on navigation including prevailing weather and environmental conditions and margin of error allowable per task or incident terrain
- hazards and risks associated with flight
- intelligence collection protocols and procedures
- methods for determining current location
- mission information requirements including weather forecast, incident action plan if it is developed, communications plan and contacts for task supervisors and ground based supervisors, where appointed
- organisational policies and procedures
- other flight planning considerations
- personal protective clothing and equipment requirements
- pilot briefings and debriefings
- potential flight and job hazards
- preparation of flight plans and route planning techniques
- processes for organising aerial observation mission
- radio communication protocols including requirements for ground to air communications
- relevant legislation and regulations including civil aviation regulations
- risk management principles and risks associated with incidents
- roles and responsibilities in air operations unit
- route planning techniques
- spatial data collection
- Team Resource Management (TRM) principles
- use of satellite navigation equipment and/or maps, when required
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of exercises, case studies and/or simulations
- appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - an aircraft suitable for air observation and a pilot
- applicable documentation including organisational procedures, standards, equipment specifications, regulations, codes of practice and operational manuals.

# PUAFIR007 Operate aerial drip torch

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to prepare, operate and maintain an aerial drip torch, also called an aerial helitorch, as part of an aerial ignition operation. It includes preparing for aerial ignition operation, preparing drip torch, conducting aerial ignition operation and maintaining aerial drip torch within scope of authority.

The unit is applicable to an aerial drip torch operator responsible for dropping ignited gelled petroleum from a helicopter as part of aerial ignition operations, which introduces fire into the landscape in order to ignite either a prescribed burn or burning as part of a fire suppression strategy. Because of the risks involved aerial ignition must be conducted in accordance with an approved burn plan or incident action plan with the ignition sequence and intervals planned and monitored.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite unit listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR013 Supervise incendiary operations during aerial ignition

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

| ELEMENTS                                    | PERFORMANCE CRITERIA                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

- 3.4 Aerial drip torch is attached via sling to the aircraft in accordance with organisational procedures and aircraft operator requirements
  - 3.5 Communication with the pilot is maintained to ensure aerial ignition achieves its objectives
  - 3.6 Aerial drip torch is operated in accordance with organisational procedures and manufacturers' specifications
  - 3.7 Adjustments to the aerial drip torch are made, as required, in response to changed conditions or alterations to burn plan
  - 3.8 Response to emergencies involving aircraft or aerial drip torch is undertaken in accordance with aircraft and organisational procedure
- 4 Maintain aerial drip torch within scope of authority**
- 4.1 Aerial drip torch is shut down in accordance with organisational procedures and manufacturers' guidelines prior to departure of aircraft from ignition site
  - 4.2 Excess gelled petroleum is stored or disposed of in accordance with organisational procedures and regulatory requirements
  - 4.3 Aerial drip torch is maintained within scope of authority
  - 4.4 Aerial drip torch faults are documented and forwarded to appropriate personnel for repair, if required
  - 4.5 Aerial drip torch is stored in accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the PUA Public Safety Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This is a newly created unit, there is no equivalent unit.

# Assessment Requirements for PUAFIR007 Operate aerial drip torch

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- adhering to safe working practices if aerial drip torch malfunctions
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including aircraft or other emergency procedures and requirements for personal protective clothing and equipment
- checking and wearing of personal protective clothing and equipment
- conducting aerial drip torch operations
- demonstrating pre-flight testing and installation, where required, of an aerial drip torch
- ensuring gelled petroleum is mixed and loaded into aerial drip torch in accordance with organisational procedures
- implementing regulatory requirements for storage and handling of dangerous goods
- maintaining and storing the aerial drip torch within scope of authority and in accordance with regulatory requirements
- operating aerial drip torch from an airborne aircraft
- operating for extended periods in an aircraft
- preparing aerial drip torch
- reporting aerial drip torch malfunctions, accidents and incidents
- using communications equipment
- working as a member of a team.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- aircraft operator's policy and procedures for aerial drip torch operations
- aircraft safety and emergency procedures
- characteristics and limitations of aerial drip torch and gelled petroleum
- emergency procedures for aerial drip torch malfunction
- guidelines relating to safe use of aerial drip torch
- methods for disposal of excess gelled petroleum

- organisational policies and procedures including for working in aerial ignition operations and for use of an aerial drip torch
- personal protection clothing and equipment for operating an aerial drip torch
- regulatory and organisational requirements for storage and transport of dangerous goods
- risk mitigation and hazard identification
- roles and responsibilities of team involved in aerial drip torch operations
- Team Resources Management (TRM) principles
- Work Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of exercises, case studies and/or simulations
- appropriate materials, equipment and tools currently used in industry including
  - aerial drip torch and gelled petroleum
  - an area to conduct operations
  - appropriate tools for maintaining an aerial drip torch where within scope of authority
  - helicopter authorised to fly with an aerial drip torch
  - personal protective clothing and equipment for operating an aerial drip torch
  - safe disposal facilities for unused gelled petroleum
  - safe transport of aerial drip torch equipment and consumables in accordance with relevant dangerous goods codes
- applicable documentation including organisational procedures, standards, equipment specifications, regulations, codes of practice and operational manuals.

# PUAFIR008 Operate aerial ignition equipment in an aircraft

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to prepare, operate and maintain aerial ignition equipment in an aircraft. It includes preparing aerial ignition equipment, conducting aerial ignition operations and servicing, maintaining and storing ignition equipment.

Equipment may comprise automated incendiary machines and handheld manual incendiary injection. The ignition equipment is used to drop consumables such as incendiaries from a fixed wing aircraft, helicopter or a remotely piloted aircraft as part of aerial ignition operations.

Aerial ignition equipment introduces fire into the landscape in order to ignite either prescribed burn or burning as part of a fire suppression strategy. Because of the risks involved aerial ignition must be conducted in accordance with an approved burn plan or incident action plan with the ignition sequence and intervals planned and monitored.

The unit is applicable to a person required to operate ignition equipment in a helicopter in order to ignite either a prescribed burn or burning as part of a fire suppression strategy. An incendiary operations supervisor is responsible for supervising the aerial ignition.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR017 Work safely around aircraft

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare aerial ignition equipment**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Personal protection clothing and equipment and other safety equipment is checked and worn in accordance with organisational procedures
- 1.2** Requirements for aerial ignition operations are identified and confirmed with relevant personnel
- 1.3** Activities are undertaken in accordance with standards, legislation, organisational procedures and Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- 1.4** Ignition equipment and consumables to be used are confirmed
- 1.5** Ignition equipment and consumables are stored and transported in accordance with organisational procedures and regulatory requirements
- 1.6** Ignition equipment is installed in aircraft in accordance with organisational procedures and aircraft operator requirements
- 1.7** Ignition equipment is inspected and tested to ensure correct operation, where required
- 1.8** Consumables are loaded into ignition equipment in accordance with organisational procedures

#### **2 Conduct aerial ignition operations**

- 2.1** Principles of team resources management are established and maintained for aerial ignition operations
- 2.2** Briefing is received from pilot on aircraft safety including aircraft emergency procedures
- 2.3** Response procedures for emergency situations involving ignition equipment or aircraft are confirmed with pilot

and incendiary operations supervisor

- |                                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|----------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                | <p><b>2.4</b> Communication with pilot and incendiary operations supervisor is maintained to ensure aerial ignition operations achieves burn prescription</p> <p><b>2.5</b> Ignition equipment is operated in accordance with organisational procedures and manufacturers' specifications</p> <p><b>2.6</b> Adjustments to ignition equipment are undertaken, as required or requested</p> <p><b>2.7</b> Ignition operations are conducted in accordance with burn plan</p>                                                                                                                                                          |
| <p><b>3 Service, maintain and store ignition equipment</b></p> | <p><b>3.1</b> Ignition equipment is isolated or shut down in accordance with organisational procedures and manufacturers' guidelines prior to departure of aircraft from ignition site</p> <p><b>3.2</b> Excess incendiary devices are stored or disposed of in accordance with organisational procedures</p> <p><b>3.3</b> Ignition equipment is serviced, maintained and repaired within scope of authority</p> <p><b>3.4</b> Ignition equipment faults are documented and forwarded to appropriate personnel for action</p> <p><b>3.5</b> Ignition equipment is stored and forwarded to appropriate personnel for maintenance</p> |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR312 Operate aerial ignition equipment in an aircraft.

## Links

Companion Volume Implementation Guides are found in VETNet -

# Assessment Requirements for PUAFIR008 Operate aerial ignition equipment in an aircraft

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- adhering to safe working practices if machine or ignition equipment malfunctions
- applying organisation procedures for aerial ignition
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including aircraft or other emergency procedures
- checking and wearing of personal protective clothing and equipment
- conducting aerial ignition operations using approved ignition equipment and consumables
- demonstrating pre-flight testing and installation, where required, of aerial ignition equipment
- operating for extended periods in an aircraft
- operating ignition equipment from an airborne aircraft
- preparing and maintaining ignition equipment
- receiving briefing from pilot on aircraft safety
- reporting equipment malfunctions, accidents and incidents
- servicing, maintaining, repairing and storing equipment and consumables
- shutting down or isolating ignition equipment
- using communications equipment
- using ignition equipment
- working as a member of a team.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- aircraft operator's policy and procedures for aerial ignition
- aircraft safety and emergency procedures
- characteristics and limitations of ignition equipment and consumables
- consumables such as capsules containing potassium permanganate and ethylene glycol (antifreeze)
- emergency procedures for equipment malfunction
- guidelines relating to safe use of ignition equipment used by organisation

- mechanical knowledge sufficient to service, maintain and repair aerial ignition equipment
- methods for disposal of excess consumables
- organisational policies and procedures for aerial ignition
- personal protection clothing and equipment for operating the aerial ignition equipment
- requirements for packing and transporting aerial ignition equipment and consumables
- risk mitigation and hazard identification
- roles and responsibilities of team involved in aerial ignition operations
- Team Resources Management (TRM) principles
- types and applications of aerial ignition equipment
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions. Assessment will take place in a simulated environment followed by an assessment by an accredited operator on the job.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of exercises, case studies and/or simulations
- appropriate materials, equipment and tools currently used in industry including
  - aerial ignition equipment and consumables
  - an aircraft
  - an area to conduct operations
  - personal protective clothing and equipment and relevant safety equipment
  - safe disposal facilities
  - suitable tools for testing, maintenance and inspection of equipment
  - transport of consumables and ignition equipment
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR009 Operate airborne intelligence system

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge to operate an airborne intelligence system such as advanced aerial mapping systems, camera and/or infrared equipment in order to collect spatial data in relation to fires, floods or other incidents. It includes preparing airborne intelligence system for data collection mission, operating airborne intelligence system and servicing, maintaining and storing the airborne intelligence system.

Airborne intelligence systems may be mounted on fixed wing aircraft, rotary wing aircraft or remotely piloted aircraft. The equipment can be operated from within an aircraft or from the ground.

The unit is applicable to personnel operating an airborne intelligence system in order to collect spatial data about a fire, flood or other incident. Authorisation to perform this role is subject to organisational policies and procedures.

The fire sector is those sections of government departments, statutory authorities or agencies that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite unit listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR005 Observe fire from an aircraft

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

| ELEMENTS                                                                  | PERFORMANCE CRITERIA                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the PUA Public Safety Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This is a newly created unit, there is no equivalent unit.

## Links

Companion Volume Implementation Guides are found in VETNet -

# Assessment Requirements for PUAFIR009 Operate airborne intelligence system

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying digital image techniques and data formats
- briefing pilot on mission requirements
- communicating mission spatial data
- confirming airborne data collection mission with task supervisor
- determining and implementing data collection and analysis techniques for mission
- documenting and forwarding airborne intelligence system faults to approved personnel for action
- following organisational policies and procedures
- inspecting, testing and adjusting airborne intelligence system to ensure correct operation
- installing and operating airborne intelligence system in aircraft
- maintaining airborne intelligence system within scope of authority
- maintaining communication with pilot to ensure aircraft flies over areas specified
- operating airborne intelligence system
- receiving pilot briefing on aircraft safety and emergency procedures
- recording spatial data for an incident
- removing and storing airborne intelligence system from aircraft including packing and transporting safely, where required.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- airborne intelligence data including formats and communication
- airborne intelligence systems operation
- data collection and digital image and analysis techniques
- operation of airborne intelligence system
- organisational airborne intelligence systems including advanced aerial mapping system and camera or infrared equipment used to collect spatial data relating to fire, flood or other incidents, if used by the organisation

- organisational policies and procedures including emergency procedures for system malfunctions and use of airborne intelligence systems
- personal protective clothing and equipment for travelling in an aircraft
- requirements for packing and transporting airborne intelligence systems safely
- roles and responsibilities in airborne intelligence missions
- maintenance procedures for airborne intelligence systems
- spatial data communication and requirements
- Team Resources Management (TRM) principles
- types of airborne intelligence system faults
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of exercises, case studies and/or simulations
- appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - an aircraft suitable for airborne intelligence system use
  - an organisational airborne intelligence system
- applicable documentation including organisational procedures, standards, equipment specifications, regulations, codes of practice and operational manuals.

# PUAFIR010 Operate small equipment to prepare and load product into aircraft

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge to operate small equipment and to prepare and load product into aircraft tanks as part of an incident response strategy. It includes working safely with product, protecting water supplies and the environment, operating and maintaining small equipment to prepare and load product, loading product into aircraft and responding to product spillage.

Product may include fire retardant, a fire suppressant such as foam, gel, or water (without additive). It may also be an oil spill dispersant or other product. Some products, such as water, will require minimum preparation and work may be undertaken under limited supervision. The preparation of other products such as fire retardant will be more technical and therefore, preparation may need to be undertaken under supervision within a team environment.

A wide range of small equipment is used to prepare and load product. A trained person will need to receive an induction where the preparation and loading involves product and/or equipment with which they are unfamiliar.

This unit is applicable to personnel working at an airbase and operating small equipment to prepare and load product into aircraft for dispersal as part of an incident management strategy. Authorisation to perform this function is subject to organisational policies and procedures.

The fire sector is those sections of government departments, statutory authorities or agencies that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals with the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR017 Work safely around aircraft

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

| ELEMENTS                                                                  | PERFORMANCE CRITERIA                                                                                                                                                                                                                                                                                                                                                                                                                              |

# Assessment Requirements for PUAFIR010 Operate small equipment to prepare and load product into aircraft

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- assessing risks and implementing control measures
- attaching equipment required to load product to aircraft under pilot supervision
- cleaning equipment at the conclusion of an operation, as required
- following emergency and first aid procedures on Safety Data Sheets
- following organisational procedures for preparing and loading product
- identifying and reporting hazards
- implementing Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- locating site for preparing and loading product
- operating small equipment for preparing and loading product into aircraft according to manufacturers' instructions
- resolving operation of small equipment issues
- setting up small equipment
- transferring product to aircraft under pilot supervision
- undertaking preventative actions to protect water supplies and the environment
- wearing and correctly using personal protective clothing and equipment
- working safely with product and responding to spillage, as required.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- environmental risks of product spillage including spills near water sources
- hazard identification
- how to load product onto aircraft
- maintenance and cleaning of equipment
- operation of small equipment
- organisational policies and procedures
- personal protective clothing and equipment suitable for specific products

- preventative actions to protect water supplies and the environment
- product characteristics and/or limitations
- risk management principles
- storage and handling requirements for specific products
- types of aircraft used in aerial fire suppression
- use and content of Safety Data Sheets for products
- uses and risks of water, foam, gel and fire retardant
- Work, Health and Safety (WHS) / Occupational Health and Safety (OHS) requirements.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of exercises, case studies and/or simulations
- appropriate materials, equipment and tools currently used in industry including
  - an aircraft for loading
  - equipment for preparing and loading product
  - operating procedures
  - product for preparing and loading
  - personal protective clothing and equipment for product being used
  - safe working conditions
- applicable documentation including organisational procedures, standards, equipment specifications, regulations, codes of practice, Safety Data Sheets and manufacturers' operating instructions for product and equipment.

## PUAFIR011 Operate state air desk

### Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to deploy aircraft and specialist aviation personnel and equipment to incidents within the state or territory. It includes working in accordance with state and territory operating procedures, processing requests for aviation resources, dispatching aviation resources, processing requests to retain or release aircraft, processing information affecting aviation resource management and reporting aircraft accidents, incidents and occurrences.

The unit is applicable to personnel that deploy national firefighting fleet aircraft and/or aircraft and services directly contracted by the state or territory as part of incident management. Authorisation to perform this role is subject to state or territory policies and procedures.

The fire sector is those sections of government departments, statutory authorities or agencies that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals with the fire sector or the units contributing to the attainment of a fire qualification.

PUAOPE013 Operate communications systems and equipment

### Competency Field

Fire

### Unit Sector

Fire

## Elements and Performance Criteria

|---------------------------------------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                     | <b>4.2</b> | Requests to retain aircraft are referred to state or territory aviation operations coordinator                                                                 |
| <b>5 Process information affecting aviation resource management</b> | <b>5.1</b> | Information on arrangements for managing and supporting aviation resources at incidents is collected and reported in accordance with organisational procedures |
|                                                                     | <b>5.2</b> | State or territory aviation operations coordinator is notified of concerns with the safety or effectiveness of the management of aviation resources            |
|                                                                     | <b>5.3</b> | Information on airspace restrictions or Notice to Airmen (NOTAM) is processed in accordance with state or territory procedures                                 |
| <b>6 Report aircraft accidents, incidents and occurrences</b>       | <b>6.1</b> | Notifications of accidents, incidents or other occurrences are reported to state or territory aviation coordinator                                             |
|                                                                     | <b>6.2</b> | Search and rescue procedures are actioned in accordance with organisational procedures                                                                         |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the PUA Public Safety Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This is a newly created unit, there is no equivalent unit.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFIR011 Operate state air desk

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- actioning search and rescue procedures
- advising organisations of details on aircraft and/or aviation resources dispatched
- advising pilots of known aircraft allocated to incident and Fire Common Traffic Advisory Frequency (FCTAF)
- arranging flight following for specific aircraft
- collecting and reporting on arrangements for managing and supporting aviation resources at incidents
- consulting with state or territory aviation operation coordinator
- coordinating deployment of aviation resources to incidents
- deploying aircraft and aviation resources according to contracts
- implementing state or territory policies and procedures for deploying aviation resources
- maintaining records
- monitoring availability of aircraft and recording dispatched resources on deployment system
- notifying state or territory aviation operation coordinator on safety and/or effectiveness of aviation resources
- obtaining authorisation for dispatch of an aircraft, where required
- performing as state or territory air desk operator
- processing information on airspace restrictions or Notice to Airmen (NOTAM) and requests for aviation resources according to state or territory procedures
- referring and processing requests to release and retain aircraft
- reporting on accidents, incidents or other occurrences
- using state or territory aviation deployment system.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all requirements of the elements and performance criteria and includes knowledge of

- Fire Common Traffic Advisory Frequency (FCTAF)
- flight safety including
  - aviation briefings

- aviation communications
- duty time limitations
- flight following requirements
- Notice to Airmen (NOTAM)
- restricted airspace
- search and rescue arrangements
- management requirements for aviation resources including support services at incidents
- national aviation resource sharing arrangements
- organisational policies and procedures for deploying aviation resources
- record keeping requirements
- role and responsibilities of state or territory aviation operation coordinator
- state or territory aviation deployment systems
- state or territory aviation resources
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of exercises, case studies and/or simulations
- appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - state or territory aviation deployment systems
  - operational environment involving deployment of aircraft to incidents
- applicable documentation including organisational procedures, standards, equipment specifications, regulations, codes of practice and operational manuals.

# PUAFIR012 Supervise aerial firefighting operations

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to supervise aerial fire operations missions during an incident response. It includes applying principles of team resource management to aerial operations missions, assisting with the development of air operations plans, planning aerial operations missions, deploying to mission site, assessing proposed mission site, prioritising and coordinating aircraft assignments, reviewing, monitoring and adjusting aircraft strategy and tactics and concluding mission.

The unit is applicable to airborne air attack supervisors, operating in a separate aircraft to the tactical aircraft, who observe the incident ground and activities of tactical aircraft. However, it should be noted that air attack supervisors may operate from the ground. Authorisation to perform this role is subject to organisational policies and procedures.

The fire sector is those sections of government departments, statutory authorities or agencies that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals with the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR005 Observe fire from an aircraft

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

| ELEMENTS                                                                            | PERFORMANCE CRITERIA                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Elements describe the essential outcomes                                            | Performance criteria describe the performance needed to demonstrate achievement of the element.                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>1 Apply principles of team resource management to aerial operations missions</b> | <b>1.1</b> Team Resource Management (TRM) principles are applied and roles and responsibilities for missions are confirmed<br><b>1.2</b> Communication is maintained with appropriate ground and air team members, where appointed<br><b>1.3</b> Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements are implemented<br><b>1.4</b> Job hazards are identified and action is taken to eliminate, minimise or control them<br><b>1.5</b> Legislation, regulations, contracts and organisational procedures for the mission are implemented |
| <b>2 Assist with development of air operations plan</b>                             | <b>2.1</b> Incident controller's intent and incident management objectives are confirmed<br><b>2.2</b> Strategies for aerial fire suppression to achieve incident management objectives are developed<br><b>2.3</b> Most appropriate product is selected based on level of fire risk, types of fuels and any restrictions on use of specific products<br><b>2.4</b> Resources to implement strategies are confirmed<br><b>2.5</b> Assistance is provided for development of the air operations plan within the incident action plan, as required                     |
| <b>3 Plan aerial operations mission</b>                                             | <b>3.1</b> Briefing is obtained from task supervisor on mission location and objectives<br><b>3.2</b> Assessment of forecast weather conditions on aerial operations is undertaken in discussion with the pilot<br><b>3.3</b> Operational and support resources for mission are confirmed                                                                                                                                                                                                                                                                            |

- 3.4 Hazards are identified and assessed for effect on aerial strategies and tactics
  - 3.5 Information for the mission is collated
  - 3.6 Air communication and operational communication plans are obtained and contact arrangements for team members are confirmed
- 4 **Deploy to mission site**
  - 4.1 Briefing on situation, aerial mission, roles, command and communication arrangements, safety and identified hazards is delivered to pilots
  - 4.2 Communication equipment is tested for correct frequencies and functionality
  - 4.3 Where an air attack supervisor is airborne, pilot is requested to fly to mission site and flight following protocols are established and maintained
- 5 **Assess proposed mission site**
  - 5.1 Mission site is located and key topographic features and hazards are identified
  - 5.2 Communication is established and maintained with ground based commander and pilots of tactical aircraft assigned to mission
  - 5.3 Flight hazards within mission area are noted including topography, tall infrastructure, other aircraft, smoke and extreme fire behaviour
  - 5.4 Weather, fuels, fire behaviour and smoke in the mission area are monitored
  - 5.5 All aircraft flying in the vicinity of the mission area are identified
  - 5.6 Location of ground based resources and members of the public are identified
  - 5.7 Progress of incident and incident control activities are observed, noted and communicated
- 6 **Prioritise and coordinate aircraft assignments**
  - 6.1 Liaison is maintained with ground based commander to identify appropriate targets for tactical aircraft assignments

- 6.2 Proposed assignments are prioritised on basis of incident management priorities and safety and effectiveness and are, where appropriate, allocated to individual aircraft
  - 6.3 Safety of ground based resources and members of the public in the mission area is assured prior to commencement and during assignments
  - 6.4 Pilots are briefed on their assignments including area hazards, targets, drop pattern and location of any people
  - 6.5 Activities of multiple tactical aircraft are coordinated
  - 6.6 Separation and stacking of tactical, observation, media and itinerate aircrafts are coordinated and maintained in consultation with pilots
- 7 **Review, monitor and adjust aircraft strategy and tactics**
  - 7.1 Aircraft and pilot performance are monitored and requests to modify tactics are made, as required
  - 7.2 Ground based commander, where appointed, is contacted to determine effectiveness of assignments
  - 7.3 Pilots are directed to cease assignments where mission is unsafe, ineffective or conditions are unsuitable
  - 7.4 Aircraft not achieving performance are stood down and replacements are requested, as required
  - 7.5 Changes to types of fire product being used is requested, as required
  - 7.6 Observed hazards or changes in operational conditions that pose a risk to people, property, assets or the environment are reported to ground based commander or operations officer
- 8 **Conclude mission**
  - 8.1 Aircraft pilots are advised when to cease operations and return to air base
  - 8.2 Ground based commander and members of mission team are provided with situation reports prior to departure of aircraft from fire site

- 8.3 Notifiable incidents are reported in accordance with organisational procedures
- 8.4 After action review is conducted with team members
- 8.5 Details of aerial fire suppression mission are recorded in accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the PUA Public Safety Training Package Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is not equivalent to PUAFIR409 Develop air attack strategies.

## Links

Companion Volume Implementation Guides are found in VETNet -

# Assessment Requirements for PUAFIR012 Supervise aerial firefighting operations

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Team Resource Management (TRM) principles
- assessing weather forecast conditions with pilots
- collating information
- complying with relevant legislation and regulations
- confirming
  - incident controller's intent and incident management objectives
  - operational and support resources
  - team roles and responsibilities including contact arrangements for team members
- delivering briefings to pilots on situation, aerial mission, roles, safety, hazards and command and communication arrangements
- developing strategies for aerial fire suppression
- ensuring, where the air attack supervisor is airborne, pilot flies to mission site and implements flight following protocols
- following organisational policies and procedures
- identifying job hazards and actions required to eliminate, minimise or control them
- maintaining communication with team members and task supervisors
- obtaining air communications and operations communications plans
- planning and supervising aerial fire suppression mission
- providing assistance to develop air operations plan
- receiving briefing from task supervisor on mission location and objectives
- reviewing hazards for their impact on aerial strategies and tactics
- selecting appropriate product for firefighting operations
- testing communication equipment for correct frequencies and functionality.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- aerial products and equipment including
  - performance characteristics and comparative features of fire suppressants and retardants
  - types of retardants and suppressants
- aircraft capability
- air attack strategies
- air operations plans
- communication equipment
- effective firebombing including
  - delivery systems and equipment
  - different applications of small medium and large air tankers
  - effect of distance, elevation and atmospheric conditions
  - environmental considerations
  - factors that influence drop patterns
  - fixed wing and helicopter firebombing
  - helicopter belly tanks and buckets
- firebombing procedures including
  - air attack, ongoing, en route and general procedures including TRM
  - joint helicopter and fixed wing firebombing operations
  - maintaining aircraft separation
  - on site tactics and techniques
  - pilot briefings and debriefings
  - pre-flight preparation
- firebombing tactics including
  - containment of a remote fire
  - drop assessment
  - line building techniques
  - operating in urban interface areas
  - support of ground forces and assets
  - techniques for grassfires
- hazards affecting aircraft performance
- organisational policies and procedures
- relevant legislation and regulations including Civil Aviation Regulations
- selection of appropriate products
- Team Resource Management (TRM) principles
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of exercises, case studies and/or simulations
- appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - aircraft platform for transporting air attack supervisor
  - an airbase with facilities
  - firebombing aircraft
  - ground operations commander
  - personnel for loading firebombing aircraft with product
  - water source for use as an aerial fire suppressant
- applicable documentation including organisational procedures, standards, equipment specifications, regulations, codes of practice and operational manuals.

# PUAFIR013 Supervise incendiary operations during aerial ignition

## Modification History

**Release 1.0** This is the first release of this unit of competency in the Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to supervise incendiary operations during aerial ignition of a prescribed burn or fire suppression operations. It includes planning aerial ignition operation, supervising preparation of personnel, equipment and consumables, preparing for flight, conducting aerial ignition operation, collecting information relating to operation, reacting to changed conditions and emergencies and concluding aerial ignition operation.

The unit is applicable to a supervisor responsible for conducting aerial ignition from a fixed wing or rotary wing aircraft or using remotely piloted aircraft who is undertaking the ignition to an approved burn or incident action plan. Authorisation to perform this role is subject to organisational policies and procedures.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAOPE020 Lead a crew

PUAFIR303 Suppress wildfire

PUAFIR005 Observe fire from an aircraft

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Plan aerial ignition operation**

- 1.1** Approved burn plan or incident action plan is used to identify burn location, objectives, control lines and burn prescription or defined burn conditions
- 1.2** Hazards and risks are identified during planning to ensure safety of flight, firefighting resources, neighbours and environmental values
- 1.3** Factors affecting burn prescription or defined burn are determined including terrain, fuel loads, types and distribution in the burn area and forecast weather conditions
- 1.4** Factors affecting aerial ignition are determined including operating height and incendiary drift
- 1.5** Ignition pattern, lighting sequence and aerial ignition lines for planned burn are confirmed with burn manager or incident operations officer
- 1.6** Time of day and weather conditions for aerial ignition are determined in conjunction with burn manager or incident operations officer
- 1.7** Time required to complete aerial ignition is estimated and departure time and flight duration is calculated
- 1.8** Alternative aircraft landing locations are identified
- 1.9** Aerial ignition operation arrangements are reviewed against burn plan or incident action plan and variations are checked with burn manager or incident operations officer

#### **2 Supervise preparation of personnel, equipment and consumables**

- 2.1** Safe work practices are implemented around aircraft

- 2.2 Organisational procedures for aerial ignition operations are identified and implemented
  - 2.3 Resource requirements for personnel, equipment, aircraft and fuel for aerial ignition are identified and organised
  - 2.4 Consumable requirements are calculated and obtained
  - 2.5 Confirmation is obtained that ignition equipment has been checked and tested prior to flight in accordance with the manufacturers' and organisational operating manual
  - 2.6 Satellite navigation equipment used to locate burn area and implement lighting pattern is checked for correct programming and operability prior to flight
  - 2.7 Personal protection clothing and safety equipment is checked and worn prior to flight
- 3 **Prepare for flight**
  - 3.1 Principles of Team Resource Management (TRM) are established and maintained
  - 3.2 Briefings on aircraft safety including aircraft emergency procedures is received from pilot
  - 3.3 Briefings on burn or incident operations management including chain of command, communication arrangements, burn objectives, planned ignition sequence and forecast weather is received from burn manager or incident operations officer
  - 3.4 Briefings on aerial ignition operations including response procedures for emergency situations involving ignition equipment is delivered to pilot and air crew
  - 3.5 Aircraft communications equipment is tested pre-flight for correct frequencies and functionality
  - 3.6 Flight following protocols are established and maintained
- 4 **Conduct aerial ignition operation**
  - 4.1 Pilot is directed to burn site, flight route is followed on map, burn site is identified and reconnaissance is carried out to establish key ground features and hazards
  - 4.2 Contact is made with fire ground supervisor to confirm communication arrangements and intended strategy and tactics

- 4.3 Preliminary fly over is conducted to identify hazards and confirm area is clear of personnel and equipment
  - 4.4 Weather conditions, smoke and fire behaviour are monitored
  - 4.5 Approval to commence operations is obtained from burn manager or incident operations officer
  - 4.6 Communication with pilot and ignition equipment operator is maintained to ensure ignition commences and concludes in accordance with lighting plan
- 5 **Collect information relating to operation**
  - 5.1 Observations of fire behaviour resulting from aerial ignition are recorded
  - 5.2 Data on aerial ignition mission is collected, recorded and communicated to appropriate personnel
- 6 **React to changed conditions and emergencies**
  - 6.1 Observed changes in operational conditions are communicated to fire ground supervisor and burn manager or incident operations officer
  - 6.2 Adjustments to ignition rate and sequence including altering aerial ignition lines, airspeed, rate of ignition and ceasing ignition are made to achieve burn objectives
  - 6.3 Observed hazards that pose a risk to people, property, assets or the environment are reported to fire ground supervisor and burn manager or incident operations officer
  - 6.4 Response to emergencies involving aircraft or ignition operations is undertaken in accordance with aircraft and organisational procedures
- 7 **Conclude aerial ignition operation**
  - 7.1 Isolation or shutdown of ignition equipment is confirmed in accordance with manufacturers' guidelines prior to departure of aircraft from burn site
  - 7.2 Fire ground supervisor and burn manager or incident operations officer are provided with situation reports prior to departure of aircraft from burn site
  - 7.3 After action review is conducted with aerial ignition operation personnel
  - 7.4 Details of aerial ignition operation are recorded

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is not equivalent to PUAFIR519 Supervise incendiary operations during aerial ignition

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUA FIR013 Supervise incendiary operations during aerial ignition

## Modification History

**Release 1.0** This is the first release of this unit of competency in the Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- adhering to burn plan or incident action plan
- communicating clearly with pilot, aerial ignition equipment operator and ground operational personnel
- confirming correct pre-flight testing and operating procedures have been completed
- ensuring safety of firefighting resources, public, neighbours and environmental values
- establishing, implementing and monitoring flight following procedures
- estimating time required to complete aerial ignition operations including departure times and flight duration
- following flight route on map and/or using satellite navigation technology and confirming location through identification of ground features
- following organisational operating procedures
- identifying ignition patterns, lighting sequences and flight lines to achieve burn objectives
- interpreting fire behaviour observed from the air
- maintaining an appropriate airspeed and commencing and ceasing ignition to ensure rate of ignition (drop rate) will achieve burn objectives
- modifying ignition rates and sequence, and making operational adjustments including
  - altering aerial ignition lines
  - altering rate of ignition i.e. drop rate
  - altering the airspeed
  - ceasing ignition
- observing changes in operational conditions
- providing clear directions to pilot and aerial ignition equipment operator
- receiving briefing on aerial ignition operations including response procedures recording activities in a written log of activities
- undertaking actions in response to an aircraft emergency or equipment malfunction
- using organisationally approved safe work practices around aircraft and incendiary equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- aircraft and fire ground communications
- communication requirements within the aircraft and with ground supervisor relating to ignition lines, maintenance of an appropriate airspeed, when to commence and cease ignition and appropriate rates of ignition
- consumables including aerial incendiaries, ethylene glycol, gelling agent or unleaded petrol
- content of burn plan or incident action plan and of burn prescriptions or conditions
- fire behaviour for burns including fire intensity, flame height and rate of spread and spotting
- ground features including flight hazards, control lines, helipads or landing strips, escape routes and refuges for ground crews, staging areas and designated locations for managing burn or fire
- hazards and risks to flight and firefighting operations
- how to brief pilots and other personnel involved in aerial ignition operations including burn prescription and Team Resource Management (TRM) principles
- ignition equipment such as manually operated ignition equipment or automated ignition equipment
- ignition patterns including contour lighting, grid, line, ridge and spot lighting
- lighting sequence taking into account fuel structure, slope, time of day, wind speed and direction, temperature, humidity and sun angle
- observed changes in operational conditions including changes in weather and smoke direction, increase in flame height and fire intensity and the effects of smoke and shading on fire ground
- organisational and aircraft operator procedures, where appropriate, for handling storage and transport of ignition equipment and operating ignition equipment including
  - stop and/or start procedures
  - response procedures for emergency situations involving the operation of ignition equipment including actions to take for ignited ignition equipment on aircraft electrical system fault and ignition placement outside of the control line
- potential contingency arrangements for changes in weather and smoke direction, increase in flame height and fire intensity and changes in fire behaviour from effects of smoke and shading on fire ground
- property and assets in or near burn area including urban interface areas, commercial land, cultural sites or historical buildings, utilities, camps or recreational areas, plantations, research plots or reference areas identified in a burn plan and/or on an operational map
- protocols for briefings and debriefings
- risks to firefighters, public, neighbours and environmental values
- role and responsibility of incendiary operations supervisor including organisational requirements for the role in evolving fire situations
- safety of personnel and public including those involved with burn implementation in the burn area or in adjacent areas and vulnerable communities that may be impacted by smoke
- selection of aircraft for aerial ignition taking into account aircraft performance

- weather and contingency planning for changes in the weather
- when and how to make adjustments to planned ignition patterns including consideration of line and spot spacing, line orientation and burning time remaining.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or other simulations
- appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - an aircraft operator and pilot endorsed by CASA and approved by state or territory organisation to conduct aerial ignition
  - an aircraft with capacity to hold ignition equipment
  - authorisation to light burn
  - authorised personnel and/or aerial ignition equipment operator
  - fire suppression crew
  - ignition equipment and consumables
  - plan for aerial ignition of prescribed burn or burning out operations including a map
  - weather forecast
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR014 Supervise preparation and loading of product into aircraft

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to supervise the preparation and loading of product into aircraft for dispersal as part of an incident response strategy. It includes ensuring safety of support personnel, supervising storage and handling of product, reviewing environmental considerations, supervising preparation and loading of product, supervising storage of prepared product, overseeing transfer of product into an aircraft and supervising the response to a spillage.

The unit is applicable to personnel at an airbase who are responsible for preparing products such as fire retardant or fire suppressant such as foam, gel, water (without additives) or an oil spill dispersant and loading it into fixed wing or rotary wing aircraft. Work is performed independently or under limited supervision as a single operator or within a team environment. Authorisation to perform this role is subject to organisational policies and procedures.

The fire sector is those sections of government departments, statutory authorities or agencies that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals with the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR010 Operate small equipment to prepare and load product into aircraft

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

| ELEMENTS                                              | PERFORMANCE CRITERIA                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| <b>4 Supervise preparation and loading of product</b> | <p><b>4.1</b> Equipment for preparing product is set up and operated in accordance with manufacturers' instructions</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

|                                                    |            |                                                                                                                                                  |
|----------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                    | <b>4.2</b> | Equipment issues are resolved through systematic checking of operation                                                                           |
|                                                    | <b>4.3</b> | Quality of prepared product is tested using approved equipment and adjustments are made, as required                                             |
| <b>5 Supervise storage of prepared product</b>     | <b>5.1</b> | Product is stored in accordance with manufacturers' instructions and organisational requirements                                                 |
|                                                    | <b>5.2</b> | Quality of stored product is monitored in accordance with manufacturers' requirements, as required                                               |
|                                                    | <b>5.3</b> | Storage tank is flushed and waste material is collected for disposal when a contaminant is detected                                              |
| <b>6 Oversee transfer of product into aircraft</b> | <b>6.1</b> | Attaching transfer equipment and transferring product to the aircraft is conducted under pilot supervision                                       |
|                                                    | <b>6.2</b> | Equipment is cleaned at the conclusion of the transfer operation, as required                                                                    |
| <b>7 Supervise response to spillage</b>            | <b>7.1</b> | Organisational procedures are implemented for product spillage                                                                                   |
|                                                    | <b>7.2</b> | Emergency and first aid procedures on Safety Data Sheet for product are followed                                                                 |
|                                                    | <b>7.3</b> | Personnel affected by spillage of fire control chemicals are washed using eye, hand and shower facilities, as appropriate, and a report is filed |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the PUA Public Safety Training Package Companion

Volume Implementation Guide.

## **Unit Mapping Information**

This is a newly created unit, there is no equivalent unit.

## **Links**

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUA FIR014 Supervise preparation and loading of product into aircraft

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- ascertaining which trained personnel are unfamiliar with product and/or equipment and providing information, instruction and supervision on safe handling techniques
- assessing risks and implementing control measures
- attaching transfer equipment and transferring product to the aircraft under pilot supervision
- briefing and tasking support personnel
- cleaning equipment
- ensuring personnel affected by spillage are washed appropriately and a report is filed
- flushing storage tank and collecting waste material for disposal when contamination is detected
- following emergency and first aid procedures on Safety Data Sheet
- identifying and establishing product storage requirements
- identifying hazards
- implementing organisational procedures for site confirmation and product spillage
- maintaining communication with air base manager and liaising with pilots on product quality and loading requirements
- monitoring the performance of support personnel
- obtaining briefings from the air base manager
- resolving issues with the operation of small equipment
- setting up equipment for preparing product
- storing product and monitoring quality
- supervising teams preparing and loading product into aircraft
- testing quality of prepared product and making adjustments.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- associated risks of contact with products
- how to clean and flush equipment, where required

- measurement of product quality
- organisational equipment used
- organisational procedures for product spillage
- personal protective clothing and equipment suitable for specific products
- potential issues with product - cause and solution
- product contamination
- range of other types of equipment including
  - foam injection unit
  - gel injection unit
  - retardant mixers
- risk management principles and control measures
- risks of product near water sources and preventative actions
- roles and responsibilities in an air operations unit
- safe working procedures around aircraft
- storage and handling requirements for different products
- types of aircraft used for applying products
- use and content of Safety Data Sheets for products
- use, composition and risks of water, foam, gel, fire retardants and other products
- Work Health and Safety (WHS)/ Occupational Health and Safety (OHS) requirements.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of exercises and case studies and/or simulations
- appropriate personnel, materials, equipment and tools currently used in industry including
  - an aircraft for loading
  - product
  - equipment for preparing product
  - team to supervise
  - personal protective clothing and equipment suitable for product
  - operating procedures
- applicable documentation including organisational procedures, standards, equipment

specifications, regulations, codes of practice, Safety Data Sheets for products and manufacturers' operating instructions for product and equipment.

## **Links**

# PUAFIR015 Undertake helicopter winch operations

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge for personnel and their equipment, where required, to be winched in and out of a hovering helicopter during an incident in accordance with civil aviation orders. It includes preparing for winch-exit operations, loading personnel and equipment into helicopter, preparing to winch-exit from helicopter, winching-exiting from a helicopter, winching on board helicopter and documenting maintenance of equipment.

The unit is applicable to personnel who undertake helicopter winch exit-entry as a part of their duties. Operations are typically conducted within a team environment.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR017 Work safely around aircraft

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

### **1 Prepare for winch-exit operations**

- 1.1** Equipment, where required, is appropriate to helicopter winch-exit operations and is selected and prepared
- 1.2** Personal protective clothing and safety equipment is selected and worn during winch-exit operations
- 1.3** Checks on personal protective clothing and equipment are undertaken
- 1.4** Instructions of pilot and/or air crew are followed during helicopter activities including emergencies

### **2 Load personnel and equipment into helicopter**

- 2.1** Personnel and equipment, where required, are assembled, weighed and recorded
- 2.2** Pilot or air crew is informed of equipment, where required, and personnel weights
- 2.3** Equipment, where required, is loaded into helicopter and secured under supervision of pilot or air crew
- 2.4** Personnel boarding helicopter are secured with seatbelt in accordance with instructions from pilot or air crew
- 2.5** Pre-flight safety briefing is obtained from pilot or air crew

### **3 Prepare to winch-exit from helicopter**

- 3.1** Following clearance from pilot or air crew, instructions are received to prepare for exit
- 3.2** Winch cable is attached and checked
- 3.3** Pre-descent checks are conducted
- 3.4** Seat belt is released in accordance with instructions received from air crew
- 3.5** Movement towards helicopter door and assumption of winching position is undertaken
- 3.6** Clearance is obtained from pilot or air crew to commence helicopter winch-exit
- 3.7** Emergency procedures are conducted, as required
- 3.8** Emergency commands are responded to, in accordance with organisational procedures

- |                                            |                                                                                                                                                                                                       |
|--------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>4 Winch-exit from helicopter</b>        | <b>4.1</b> Winch operations are conducted in accordance with legislation, regulations, organisational procedures and Work, Health and Safety (WHS)/ Occupational Health and Safety (OHS) requirements |
|                                            | <b>4.2</b> Actions are undertaken to minimise uncommanded movement, spinning or swaying during descent to ground                                                                                      |
|                                            | <b>4.3</b> Appropriate landing technique is selected and used in accordance with ground and safety conditions                                                                                         |
|                                            | <b>4.4</b> Winch equipment is detached and the all clear signal is communicated to pilot or air crew when landing activities are complete                                                             |
|                                            | <b>4.5</b> Assembly point is identified and reached                                                                                                                                                   |
|                                            | <b>4.6</b> Emergency procedures and commands are followed                                                                                                                                             |
|                                            | <b>4.7</b> Emergency commands are responded to in accordance with organisational procedures                                                                                                           |
| <b>5 Winch on board helicopter</b>         | <b>5.1</b> Individuals and equipment, where required, are located at assembly point in preparation for winching on board                                                                              |
|                                            | <b>5.2</b> Winching equipment is donned and attached to winch cable and the all clear signal is communicated to air crew                                                                              |
|                                            | <b>5.3</b> Actions to minimise uncommanded movement, spinning or swaying during ascent are undertaken                                                                                                 |
|                                            | <b>5.4</b> Movement on board helicopter and towards allocated seat is undertaken                                                                                                                      |
|                                            | <b>5.5</b> Seat belt is secured until clearance is obtained to commence movement within helicopter                                                                                                    |
|                                            | <b>5.6</b> Winch cable is detached under instruction and handed to air crew                                                                                                                           |
|                                            | <b>5.7</b> Seat belt remains secured during landing until helicopter has landed and clearance is obtained to commence movement                                                                        |
| <b>6 Document maintenance of equipment</b> | <b>6.1</b> Damage to equipment is reported for maintenance, where required                                                                                                                            |

## 6.2 Damage to equipment is documented, where required

### Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

### Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

### Unit Mapping Information

This unit replaces and is equivalent to PUAFIR219 Undertake helicopter winch operations.

### Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFIR015 Undertake helicopter winch operations

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- assembling, weighing and recording personnel and equipment, where required, and informing pilot or air crew
- documenting equipment maintenance
- ensuring seatbelt is secured
- following instructions and procedures within a helicopter
- identifying an assembly point
- implementing legislative, regulatory, organisational and operational guidelines
- loading personnel and equipment, where required, into a helicopter
- minimising movement during ascent and descent of a helicopter
- participating in pre-flight safety briefings
- preparing and conducting helicopter winch exit-entry operations including being winched to the ground from a helicopter and being winched into the helicopter from the ground
- responding to emergency procedures and commands
- selecting and wearing personal protective clothing and safety equipment.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- aircraft operator policies and procedures
- areas and slope suitable to conducting operations
- authorised personnel including airbase or helibase manager, air crew and pilot
- briefing reports and formats
- characteristics, limitations and operating principles of winch-exit equipment including winch and related equipment and materials
- formats for briefings
- organisational documentation requirements

- organisational policies and procedures including emergency procedures and emergency command procedures
- personal protective clothing and safety equipment
- regulatory reporting arrangements
- risk mitigation
- safe work practices when working in and around aircraft
- safe work procedures for winch operations including roles and responsibilities of individuals and helicopter crews
- types of equipment appropriate to winch operations
- types of equipment, where required, that must be weighed and assembled
- types of helicopters used by emergency service organisations for conducting winch-exit operations
- types of landing techniques
- winch-exit and winch-entry operations
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of exercises, case studies and/or simulations
- appropriate materials, equipment and tools currently used in industry including
  - an area to conduct winching
  - a helicopter with pilot and authorised winch operator
  - personal protective clothing and safety equipment
- applicable documentation including organisational procedures, standards, equipment specifications, regulations, codes of practice and operational manuals.

# PUAFIR016 Undertake hover-exit operations from helicopter

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required by personnel to enter and exit a hovering helicopter, along with equipment where required, during an incident. It includes preparing for hover-exit operations, loading helicopter, preparing to exit from hovering helicopter, exiting from hovering helicopter, entering a hovering helicopter and documenting maintenance of equipment.

Hover exit and entry are performed independently or under limited supervision as a single operator or within a team environment. The unit is applicable to personnel involved in the response to an incident such as a fire or flood and who is required to enter and exit a hovering helicopter as part of their duties.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR017 Work safely around aircraft

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Prepare for hover-exit operations

- 1.1 Equipment, if required during hover-exit, is prepared for loading
- 1.2 Appropriate personal protective clothing and equipment is selected and worn during hover-exit operations
- 1.3 Checks on personal protective clothing and equipment are undertaken, where required
- 1.4 Instructions of pilot and/or air crew are followed during helicopter activities including emergencies

#### 2 Load helicopter

- 2.1 Personnel and equipment, where required, are assembled and weighed with names and weights recorded as instructed by air and/or ground crew
- 2.2 Pilot and/or air crew is informed of personnel and equipment weight
- 2.3 Equipment, where required, is loaded into helicopter and secured under pilot and/or air crew supervision
- 2.4 Personnel board helicopter and are secured with seatbelts or other approved means in accordance with pilot and/or air crew instructions
- 2.5 Pre-flight safety briefing is obtained from pilot or aircrew

#### 3 Prepare to exit from hovering helicopter

- 3.1 Following clearance from pilot and/or air crew, instructions are received to prepare for exit
- 3.2 Seat belt is released prior to moving towards the helicopter doorway in accordance with instructions received from air crew
- 3.3 Pre-descent checks are conducted
- 3.4 Clearance is obtained from pilot and/or air crew to disembark
- 3.5 Emergency procedures are followed, as required

- |                                        |            |                                                                                                                                                                          |
|----------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                        | <b>3.6</b> | Emergency commands are responded to in accordance with organisational procedures                                                                                         |
| <b>4 Exit from hovering helicopter</b> | <b>4.1</b> | Operations are undertaken and conducted in accordance with organisational procedures and Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements |
|                                        | <b>4.2</b> | Slow and controlled movements are taken to minimise uncommanded aircraft reactions to changing and shifting weight                                                       |
|                                        | <b>4.3</b> | Individuals and equipment are transferred between helicopter and the ground under instruction from pilot and/or air crew                                                 |
|                                        | <b>4.4</b> | Assembly point for individuals and equipment, where required, is identified and reached                                                                                  |
|                                        | <b>4.5</b> | Emergency procedures are followed, as required                                                                                                                           |
|                                        | <b>4.6</b> | Emergency commands are responded to in accordance with organisational procedures                                                                                         |
|                                        | <b>4.7</b> | All clear signal is communicated to pilot or air crew when landing activity is complete                                                                                  |
| <b>5 Enter a hovering helicopter</b>   | <b>5.1</b> | Individuals and equipment, where required, are located at nominated assembly point in preparation for hover-entry                                                        |
|                                        | <b>5.2</b> | Following clearance from pilot and air crew, movement towards helicopter is undertaken in accordance with instructions received                                          |
|                                        | <b>5.3</b> | Under instruction from air crew, individuals and equipment, where required, are transferred between the ground and helicopter                                            |
|                                        | <b>5.4</b> | Slow and controlled movements are taken to minimise uncommanded aircraft reactions to changing and shifting weight                                                       |
|                                        | <b>5.5</b> | Seat belt, or other approved means, is secured or connected                                                                                                              |
|                                        | <b>5.6</b> | Seat belt remains secured until clearance for release is issued by the pilot and/or aircrew                                                                              |

- |                                            |            |                                                                 |
|--------------------------------------------|------------|-----------------------------------------------------------------|
| <b>6 Document maintenance of equipment</b> | <b>6.1</b> | Damage to equipment is reported for maintenance, where required |
|                                            | <b>6.2</b> | Damage to equipment is documented, where required               |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR211 Undertake hover-exit operations from helicopter.

# Assessment Requirements for PUAFIR016 Undertake hover-exit operations from helicopter

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- demonstrating hover-exit procedures for exiting from a helicopter at different heights
- documenting equipment maintenance
- following instructions and procedures within a helicopter
- implementing emergency procedures
- implementing legislative, regulatory, organisational and operational procedures
- loading hover-exit personnel and equipment, where required, into a helicopter
- minimising movement during ascent and descent from a helicopter
- participating in briefings and debriefings
- preparing for hover-exit operations from a helicopter
- preparing to enter and exit from a hovering helicopter
- preparing, inspecting, carrying and stowing equipment, where required, prior to, during and following exiting from a helicopter
- reporting accidents and incidents
- responding to emergency commands
- working as a team member in transferring personnel and equipment, where required, between the helicopter and ground.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- categories of helicopters used by emergency service organisations for conducting hover-exit operations
- characteristics, limitations and operating principles of hover-exit operations and equipment
- correct methods for carrying various types of equipment, where required, on a helicopter

- format and content for briefings
- general safety, pre-mission and pre-flight safety
- methods for carrying various types of equipment, where required, on a helicopter
- organisational documentation and regulatory reporting arrangements
- organisational policies and procedures including emergency procedures, emergency commands and safety
- personal protective clothing and equipment
- preparations of equipment, where required, for hover-exit loading and unloading
- risk mitigation
- safe work practices when working in and around helicopters
- signals and commands used in hover-exit operations
- site selection for hover-exits
- techniques to minimise uncommanded movement of the helicopter during hover-exit transfers
- types of landing techniques
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of exercises, case studies and/or simulations
- appropriate materials, equipment and tools currently used in industry including
  - area to conduct hover entry-exit operations
  - helicopter with pilot and air crew
  - personal protective clothing and equipment and safety equipment
- applicable documentation including organisational procedures, standards, equipment specifications, regulations, codes of practice and operational manuals.

# PUAFIR017 Work safely around aircraft

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to apply safe work practices when working around aircraft for organisational operations. It includes working safely in or around aircraft and facilitating safe ground support.

The unit is applicable to the provision of introductory training for personnel providing support services for aerial operations, noting that personnel undertaking specialist functions such as aircraft marshalling, aircraft refuelling, fire suppressant mixing and loading and ground-to-air radio communications will require further training. It also applies to the provision of safety training for operational personnel who may be required to utilise aircraft or work in the vicinity of aircraft in the performance of their work tasks and/or the provision of foundation training for all aviation related roles for fire, land management and emergency management.

Work is performed independently or under limited supervision as a single operator or within a team environment.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Work safely in and around aircraft

- 1.1 Site and job hazards are identified, risks are assessed and control measures are implemented
- 1.2 Personal protective clothing and equipment is worn and used correctly in accordance with organisational procedures
- 1.3 Appropriate clearances and permissions, where required, are obtained and procedures are adhered to whilst operating in aircraft movement areas
- 1.4 Any approach to an operating aircraft is made from an angle visible to the pilot or air crew and with approval of the pilot or air crew
- 1.5 Adequate clearance is maintained from propellers, rotors, engines, exhaust gases and engine intakes
- 1.6 Typical manoeuvring patterns of aircraft are anticipated and a safe distance is maintained
- 1.7 Instructions or signals from pilots or staff controlling aircraft are complied with in accordance with organisational procedures

#### 2 Facilitate safe ground support

- 2.1 Briefing on safety and tasks are received and acknowledged from task supervisor
- 2.2 Appropriate approvals and precautions are observed when positioning vehicles or equipment close to aircraft
- 2.3 Instructions from pilots and/or authorised air crew coordinating aircraft operations are followed
- 2.4 Aircraft loading and other activities relating to the aircraft, where required, are conducted under pilot or authorised air crew supervision
- 2.5 Aircraft hazards and equipment defects are reported to pilot or approved task supervisor
- 2.6 Compliance is maintained around aircraft in accordance with air base regulations

- 2.7 Accidents are identified and reported to pilot and/or task supervisor
- 2.8 Directions from pilot or air crew are followed during an emergency

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR209 Work safely around aircraft.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFIR017 Work safely around aircraft

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- complying with regulatory requirements and organisational procedures
- ensuring safety and quality procedures are applied
- following directions from pilot or air crew during an emergency
- identifying hazards and risks and acting to minimise, mitigate, control or eliminate
- implementing precautions and aviation emergency procedures, as required
- participating in briefings
- reporting accidents
- using personal protective clothing and equipment
- working safely around aircraft.

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- actions to be taken in the event of an emergency
- air base site hazards
- airbase access and security requirements
- airbase layout, facilities and services including working zones and lighting facilities
- aircraft design features including 'no step' places
- aircraft features and movement characteristics
- aircraft operations including loading and refuelling precautions
- content of briefings
- correct selection, fitting and wearing of personal protective clothing and equipment for tasks to be performed
- hazards of working around aircraft
- organisational policies and procedures including safe work practices around aircraft
- risk identification and mitigation processes

- roles and responsibilities of personnel supervising, managing and supporting aircraft operations
- safety equipment including fire extinguisher and first aid kit
- types of aircraft which may include but is not limited to aeroplanes, helicopters, remotely piloted aircraft and their movement characteristics
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements.

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of exercises, case studies and/or simulations
- appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, standards, equipment specifications, regulations, codes of practice and operational manuals.

# PUAFIR018 Navigate from an aircraft

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to navigate from an aircraft using visual techniques. It includes preparing for flight, determining and planning a safe flight route, navigating to a destination and completing post navigational activities.

The unit applies to personnel such as air observers, air attack supervisors and incendiary operations supervisors who are required to obtain accurate intelligence information of fire activity and control progress from an aircraft to support planning and operations.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR017 Work safely around aircraft

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential    Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

## **1 Prepare for flight**

- 1.1** Incident and/or task information is obtained
- 1.2** Relevant maps and navigation equipment are gathered and checked
- 1.3** Information and navigation techniques are applied to plot position on map or navigation chart and to determine current location and destination, within accepted tolerances
- 1.4** Aircraft performance capabilities are considered

## **2 Determine and plan a safe flight route**

- 2.1** Preliminary flight route is determined using available information
- 2.2** Assessment of hazards, topographical features and other considerations along proposed flight route and at destination is undertaken
- 2.3** Preliminary flight route is modified, in accordance with outcomes of hazard assessment
- 2.4** Records are prepared, in accordance with organisational requirements
- 2.5** Pilot is briefed on task requirements, planned flight route and relevant information, in accordance with organisational requirements

## **3 Navigate to destination**

- 3.1** Pilot is directed to follow planned route, as required
- 3.2** Route plan and navigation aids are used to maintain compliance with planned route
- 3.3** Location is determined by identification with ground features
- 3.4** Current location is regularly verified within accepted tolerances
- 3.5** Amendments to flight route are undertaken, in accordance with changes in environmental factors, fire behaviour and operational requirements
- 3.6** Lost en route procedures are implemented, as required
- 3.7** Unanticipated difficulties are reported, in accordance with organisational procedures

|                                                |            |                                                                                                         |
|------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------|
|                                                | <b>3.8</b> | En route and arrival reporting information is transmitted, in accordance with organisational procedures |
| <b>4 Complete post navigational activities</b> | <b>4.1</b> | Report is completed, in accordance with organisational procedures                                       |
|                                                | <b>4.2</b> | Navigational equipment is maintained, in accordance with organisational procedures                      |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

environmental factors must include one or more of the following

- fire behaviour
- need to match transportation mode to terrain
- time of day

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR315 Navigate from an aircraft.

# Assessment Requirements for PUAFIR018 Navigate from an aircraft

## Modification History

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- briefing a pilot and conducting pilot briefings
- communicating through verbal and written instructions, intercom, radio system and hand signals
- completing post navigational activities including reporting requirements
- conducting grid and/or magnetic north and latitude and longitude conversions
- determining location and planning safe flight route by plotting a navigational route
- identifying hazards
- maintaining accuracy within accepted tolerances when following a route and retaining positional awareness
- navigating for extended periods in an aircraft
- preparing for aircraft flight including collecting incident information
- plotting positions on a map
- reacting to changes in the operating environment necessitating replanning of a course
- using maps and charts
- using navigational aids and equipment

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- accepted tolerances
- aircraft performance capability
- alternate routes strategies due to weather, aircraft tactical issues or lost procedures
- cartographic symbols and legends
- characteristics and limitations of Global Positioning System (GPS) and aircraft navigational

equipment

- communication methods and processes
- determination of locations
- environmental factors
- factors that may impact on navigation including prevailing weather and environmental conditions and margin of error allowable per task or incident terrain
- grid and magnetic conversions
- information on a map
- map and chart types
- methods for determining current location
- navigational equipment
- organisational documentation, policies and procedures
- other flight planning considerations
- pilot briefing
- potential hazards and flight hazards
- report requirements
- route planning techniques
- topographical features
- types of incident or task information
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - navigation equipment, weather forecast information and maps and charts for aerial navigation
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR201 Assist with prescribed burning

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to assist with prescribed burning for agricultural, natural resource purposes or hazard mitigation.

Prescribed burning is the process of planning and applying fire to a predetermined area under specific environmental conditions to achieve a desired outcome. It requires the ability to assist with preparations for the burn, support the conduct of the burn and participate in clean up activities.

The unit applies to personnel participating in lighting and conducting prescribed burns under direct supervision.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR210 Prevent injury

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Assist with preparations for burn**

- 1.1** Ignition devices and fire equipment to be used in the burn are prepared for use, as directed
- 1.2** Safety equipment including personal protective equipment, is checked and prepared for use
- 1.3** Location and extent of the burn is discussed and clarified with supervisor
- 1.4** Strategies and tactics for conducting the burn, including contingency plans are obtained in a briefing and clarification is sought, if required
- 1.5** Assets requiring protection during the burn are recognised and noted
- 1.6** Personal role, crew activities and extent of the burn are checked with supervisor

**2 Participate in conducting burn**

- 2.1** Assistance with pre-burn checks is provided, as directed by supervisor
- 2.2** Burn ignition activities are undertaken using ignition devices, as directed
- 2.3** Ignition patterns suitable for burn objectives are implemented, as directed
- 2.4** Fire suppression activities are undertaken using suppression equipment, in accordance with organisational procedures
- 2.5** Problems or concerns during the burn are raised with supervisor
- 2.6** Communication is maintained with team members and supervisor at all times, in accordance with organisational procedures
- 2.7** Conditions at the burn are observed and their effect on fire behaviour and development are reported to supervisor
- 2.8** Safe escape route or refuge is discussed and maintained, in accordance with organisational procedures

- |                                                    |             |                                                                                                                          |
|----------------------------------------------------|-------------|--------------------------------------------------------------------------------------------------------------------------|
|                                                    | <b>2.9</b>  | Personal protective clothing and equipment is utilised throughout the burn, in accordance with organisational procedures |
|                                                    | <b>2.10</b> | Burn perimeter is made safe, in accordance with burn plan                                                                |
|                                                    | <b>2.11</b> | Hazards remaining in the burn area are reported to supervisor                                                            |
|                                                    | <b>2.12</b> | Burn debriefing is participated in                                                                                       |
| <b>3 Participate in clean up and burn security</b> | <b>3.1</b>  | Clean up and burn security activities are carried out as directed                                                        |
|                                                    | <b>3.2</b>  | Personal protective clothing and equipment is cleaned and returned to storage                                            |
|                                                    | <b>3.3</b>  | Equipment used in the burn is cleaned, maintained and returned to storage                                                |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

- |                                                                                 |                                                                                                                                                                                                |
|---------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| fire suppression equipment must include one or more of the following            | <ul style="list-style-type: none"> <li>• hand tools</li> <li>• hose</li> <li>• knapsack</li> <li>• other burn preparation equipment</li> <li>• small gear pump</li> <li>• tanker</li> </ul>    |
| clean up and burn security activities must include one or more of the following | <ul style="list-style-type: none"> <li>• burn security activities</li> <li>• maintenance of ignition equipment</li> <li>• maintenance of personal protective clothing and equipment</li> </ul> |

- maintenance of suppression equipment
- use of vehicles to patrol until the burn is declared safe

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR213 Assist with prescribed burning.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFIR201 Assist with prescribed burning

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- aiding clean up activities
- assisting with preparations for prescribed burn including undertaking pre-burn checks
- assisting in lighting a burn using the relevant equipment
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- communicating with supervisor and team members
- discussing safe escape routes and refuges
- following directions and responding to instructions given during a prescribed burn
- participating in conducting prescribed burn including recognition of assets requiring protection
- participating as a team member using safe work practices
- participating in briefings and debriefings
- using equipment in burn preparation and suppression activities
- undertaking clean up and burn security activities
- working with personal protective clothing and equipment

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- assets requiring protection
- clean up activities and burn security activities
- fire hazards
- impact of conditions at prescribed burns on potential fire behaviour including weather, terrain and fuel characteristics
- organisational documentation, policies and procedures
- personal protective clothing and equipment

- types of burn ignition devices and techniques
- types of preparation and burn suppression equipment and techniques
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation and working safely around fires

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - burn preparation suppression equipment
  - ignition equipment
  - range of controlled fires or prescribed burns
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# PUAFIR202 Use Class A foam in wildfire operations and non-structural applications

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to use Class A foam to extinguish Class A carbonaceous solid fires in wildfire operations, secure against ignition or extinguish Class B shallow hydrocarbon fuel spills and to operate and maintain foam equipment required for its production.

Class A foam is a liquid foam solution used mostly to extinguish fires in ordinary combustible solids such as wood, fabric, paper or organic material. The foam blanket adheres to fuels and gradually releases the water in the foam to wet fuels for a longer period than water alone.

Class B shallow hydrocarbon fuel spills includes incidents such as at road crashes where fuel tanks may have been ruptured or begun leaking, service station fuel pump area spills or machinery refuelling trailers have occurred.

The unit applies to personnel on the fire ground responsible for preparing, handling and applying Class A foam during wildfire and non-structural firefighting operations.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR204 Respond to wildfire

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Prepare Class A foam for use

- 1.1 Type of foam for application in a wildfire or on non-structural object is selected depending on the required effect of foam on components of the fire triangle and fuel
- 1.2 Decision to apply Class A foam to Class A fuels at wildfire or non-structural incident is received from Incident Controller
- 1.3 Foam proportioning or induction rate is selected, in accordance with manufacturers' recommendations, organisational procedures and guidelines, to produce the solution strength required to achieve operational objectives with the decision communicated to the crew preparing the foam
- 1.4 Foam expansion or aspiration ratio is confirmed, based on fuel type, operational requirements and need to achieve maximum operational benefit
- 1.5 Class A foam concentrate and equipment is prepared for use, in accordance with organisational procedures and safe work practices with consideration of potential environmental impact and required precautions to be complied with
- 1.6 Correct personal protective clothing and equipment required for working with Class A foam is donned for handling concentrate and solution

#### 2 Operate Class A foam system and equipment

- 2.1 Type of Class A foam system is confirmed through chain of command
- 2.2 Predetermined amount of foam concentrate is added to water flow using appropriate equipment, as directed
- 2.3 Foam system available is operated using predetermined

proportioning or induction method

- 2.4** Where system is manually regulated, proportioning percentage rate and flow is monitored and achievement of operational objectives is confirmed

### **3 Apply Class A foam**

- 3.1** Foam system and equipment is operated to produce required solution strength suitable for its intended application as non-aspirated or aspirated foam and for the type of fuel to which it is to be applied
- 3.2** Class A foam is applied as a direct attack to extinguish the edge of the fire using non-aspirated or low expansion foam nozzles
- 3.3** Class A foam is used to wet fuels to construct a control line adjacent to the fire edge, using required foam proportion rate to contribute to fuel reduction burning, burning out and back burning
- 3.4** Foam is applied to conduct mop up/blacking out operations by regulating flow to suit application type and rate
- 3.5** Class A foam is applied to non-structural objects, in accordance with organisational operating procedures for these types of fires
- 3.6** Direct and indirect application of Class A foam is demonstrated, in accordance with organisational operating procedures
- 3.7** Environmental contamination from application of Class A foam is considered and preventative measures are implemented

### **4 Store and handle Class A foam and prevent damage to equipment and the environment**

- 4.1** Class A foam is stored on tankers and appliances in designated storage drums, racks or tanks, in accordance with Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- 4.2** Storage arrangements in workplace and other locations for Class A drum stocks of foam concentrate are implemented and adhered to, in accordance with Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- 4.3** Measures to control foam leaks or spills are followed, in accordance with organisational procedures

- 4.4 Class A foam tanks are refilled using personal protective clothing and equipment and approved foam concentrate transfer equipment, in accordance with organisational procedures and environmental requirements
- 4.5 Cleaning and safe disposal of any foam spills is undertaken, in accordance with relevant Safety Data Sheets (SDS)
- 4.6 Foam compatibility is considered when using Class A foam solutions from different vehicles on the same fire particularly when mixing one manufacturer's brand of Class A foam with another's
- 4.7 Environmental regulations, as specified in organisational procedures, are adhered to when using foam and cleaning spills or foam equipment
- 4.8 Procedures for foam storage, mixing and filling sites are implemented, in accordance with organisational procedures and industry guidelines
- 4.9 Practices that do not contaminate water bodies, storm water drains or agricultural areas are implemented and adhered to when cleaning equipment at an incident or other location where Class A foam is used

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

non-structural objects must include two or more of the following

- coal fires
- hydrocarbon fuels
- machinery fire dozers and graders
- motor vehicles
- small and shallow hydrocarbon fuel spills
- tyre dumps

measures to control leaks or spills must include

- exercising care to avoid spills at mixing and

loading areas

## **Unit Mapping Information**

This unit replaces and is equivalent to PUAFIR214 Use Class A foam in wildfire operations and non-structural applications.

## **Links**

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUA FIR202 Use Class A foam in wildfire operations and non-structural applications

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- applying Class A foam including direct and indirect application
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- constructing control lines, mopping up and completing blacking out operations
  - constructing a control line including using a natural or constructed barrier or treated fire edge to limit spread of fire
- containing and disposing of, where practicable, fire water runoff containing Class A foam or wetting agent prior to its use
- directing attacks must include constructing a control line immediately adjacent to fire edge
  - extinguishing fire's edge using water, foam and earth or by beating out flames
- handling concentrate using nitrile or neoprene handling gloves, P2 nuisance level organic vapour respirator (non-cartridge type) and in addition when handling solution using barrier cream for hands and leather gloves
- implementing asset protection
- implementing safe work practices when using Class A foam including avoiding the use of foam 50 metres from waterways
- implementing safe work practices when preparing, selecting, operating, cleaning up, storing and handling Class A foam
- implementing environmental precautions when working with Class A foams
- instigating environmental precautions when working with Class A foam
  - minimising the use of foam and wetting agents
- mopping up and blacking out operations including making a fire safe after it has been controlled by extinguishing or removing burning material along or near the control line including felling stags and trenching logs to prevent rolling and the like, coal conveyor belts, power station cable ducts, ship holds, underground mining and vehicles
  - notifying and seeking advice from environmental protection authorities
    - if there is substantial or significantly polluted fire water runoff or where Class A foam or wetting agent enters a waterway
    - where Class A foam or wetting agent enters a domestic water storage, flushing the water

storage before reuse

- where possible, using alternatives to foam and wetting agents to suppress fires where there is a risk of contaminating waterways
- operating Class A foam system and equipment
- preparing Class A foam for use and applying on a range of fuels using nominated proportioning or induction rates to maximise operational benefits
- refilling Class A foam containers
- selecting foam proportioning rate and foam expansion or aspiration ratio for fuel to be treated
- selecting and operating branch nozzle to apply foam
- storing and handling Class A foam including implementing procedures for operating and flushing Class A foam system and minimising risk of equipment and/or environmental contamination
- using personal protective clothing and equipment required for working with Class A foam in all situations as per manufacturers' specifications including rubber or leather boots, safety goggles, wildfire or structural helmet, wildfire overalls or structural firefighter clothing for specialist use applications

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- application of Class A foam
- aspirated and non-aspirated foam
- characteristics and limitations of equipment including cleaning and maintenance
- Class A foam system types and their operating components
- classes of fires
- Class A foams including concentrate storage and handling, expansion or aspiration of, expansion ratio, proportioning or induction rates, storage, mixing and filling sites and types and their use for wildfire application
- Class A foam including combinations of synthetic detergent surfactants that reduce the surface tension of water and foaming agents and corrosion inhibitors that reduce corrosion of metals and preservative to prolong shelf life
- Class A fuels such as flammable solids including forest flammable and grassland fuels, wood, paper, plastics and rubber
- Class A foam systems including low and high energy
- direct and indirect application of low expansion foam
- effects of Class A foam on fire triangle
- environmental impacts of Class A foams and precautions
- foam proportioning or induction rates including production of foam with properties within effective range and use of foam chemicals at safe concentrations
- foam expansion or aspiration ratio including low and high expansion foam, medium expansion foam and non-aspirated foam

- intended application of non-aspirated foam including cools, isolates and penetrates
- intended application of aspirated foam including insulates and smothers
- maximum operational benefits including application visible from ground and air, easily proportioned, effective use of Class A fuel, extension of useful life of water, increase in effectiveness of water, reduction in suppression and mop up time, short term fire barriers and simple application
- measures for the control of leaks or spills and exercising care to avoid spills at mixing and loading areas
- non-structural applications
- organisational documentation, policies and procedures
- personal protective clothing and equipment
- properties and benefits of Class A foam
- safe work practices including
  - avoiding contamination from exposure
  - being alert to concentrate and solution as it contributes to creating slippery conditions on vehicle decks and on the ground
  - being alert to the presence of trip hazards
  - holes and hot ash beds that can be concealed beneath the foam blanket and
  - potential environmental impact of using Class A foam
- storage arrangements in workplaces including storage of foam to minimise risk of foam entering drains and location of foam mixing and loading areas away from waterways
- types for non-structural applications and reason for restricting use of Class A foam on structures
- use of Class A foam on Class B hydrocarbon fuels including flammable liquids such as petrol, diesel and fuel oils and their impact
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including safe work practices, risk mitigation and use of Safety Data Sheets (SDSs)

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - conducting foam training at a location away from waterways, storm water drains or agricultural areas
  - pumper or tanker fitted with a Class A foam system and associated equipment
  - training site where activity can be undertaken with minimum impact to the environment
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# PUAFIR203 Respond to urban fire

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to respond to an urban fire where offensive and defensive strategies are used. It includes proceeding to a fire, preparing extinguishing media and/or equipment for use, entering a structure, conducting search and rescues and combatting fires.

The unit applies to firefighting personnel who work as a member of a team, under direct supervision. Work at this level is undertaken under direct supervision, and with instruction.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR207 Operate breathing apparatus open circuit

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential    Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

**1 Proceed to fire**

- 1.1** Information received about the location and type of fire is confirmed
- 1.2** Appropriate personal protective clothing and equipment is donned, in accordance with organisational procedures
- 1.3** Most effective route to the fire is identified and navigated safely

**2 Prepare extinguishing media and/or equipment for use**

- 2.1** Water supplies at the incident to support firefighting are located
- 2.2** Equipment to access and supply water to firefighting operations are identified and assembled, in accordance with organisational procedures
- 2.3** Nominated extinguishing media and/or equipment is identified, obtained and accessed
- 2.4** Extinguishing media and equipment are used, in accordance with manufacturers' specifications and organisational procedures

**3 Enter the structure**

- 3.1** Hazards are identified, monitored and controlled, in accordance with organisational procedures
- 3.2** Personal protective clothing and equipment selected is appropriate to the hazards
- 3.3** Organisational breathing apparatus procedures and safe work practices are followed
- 3.4** Structure is entered, in accordance with organisational procedures and safety practices
- 3.5** Safe paths of access and egress are identified and maintained throughout the incident
- 3.6** Life is protected and damage to property and the environment is minimised, in accordance with organisational procedures

**4 Conduct search and rescue**

- 4.1** Systematic primary and secondary searches are conducted
- 4.2** Rooms are searched and marked, in accordance with organisational procedures

- 4.3 Casualties are located, assisted and rescued, in accordance with organisational procedures
  - 4.4 Fatalities are located and protected, in accordance with organisational procedures and relevant legislation
  - 4.5 All persons are accounted for and information is reported utilising the organisations chain of command.
- 5 Combat fires**
  - 5.1 Personal safety is maintained, in accordance with organisational procedures and workplace health and safety guidelines
  - 5.2 Organisational firefighting objectives, strategies and tactics are received, confirmed and implemented as directed
  - 5.3 Firefighting considerations are taken into account when implementing firefighting tactics
  - 5.4 Equipment and extinguishing media used to combat the fire are appropriate to the class of fire and support firefighting requirements
  - 5.5 Firefighting equipment is positioned to achieve maximum effect in suppressing the fire, protecting exposures and preserving evidence of fire cause
  - 5.6 Extinguishing media is applied using appropriate application techniques
  - 5.7 Fire suppression techniques are applied to minimise hazards to occupants trapped or lost within the structure
  - 5.8 Communication with team members and the supervisor are maintained throughout the incident
- 6 Observe and react to changes in conditions and fire behaviour**
  - 6.1 Changing conditions at the fire are observed and their effects on fire behaviour are noted and reported
  - 6.2 Evidence of changing conditions at the fire are reported
  - 6.3 Firefighting tactics are adapted to meet changing conditions and fire behaviour
- 7 Participate in ancillary operations**
  - 7.1 Ancillary activities to complement firefighting operations and prevent further damage to the structure and its contents are undertaken

|                                           |            |                                                                                                                  |
|-------------------------------------------|------------|------------------------------------------------------------------------------------------------------------------|
|                                           | <b>7.2</b> | Water runoff from the fire is monitored and conditions are reported                                              |
|                                           | <b>7.3</b> | Damage to the environment at the incident is minimised through appropriate firefighting and ancillary activities |
| <b>8 Conclude firefighting operations</b> | <b>8.1</b> | Firefighting equipment is collected and stowed at the incident                                                   |
|                                           | <b>8.2</b> | Incident scene is made safe for the public                                                                       |
|                                           | <b>8.3</b> | Defective or missing equipment is identified and reported                                                        |
|                                           | <b>8.4</b> | Incident information is record and completed, in accordance with organisational procedures                       |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

|                                                         |                                                                                                                                                                                    |

recording appropriate incident information must include

- overhaul
- salvage
- securing the area
- attendance records
- completing personal notebooks logs and/or report forms
- equipment used
- objectives set
- obtain relevant details
- owner or occupant details
- problems encountered

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR203B Respond to urban fire.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFIR203 Respond to urban fire

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including maintaining the health and safety of self and others
- combating fires through implementing firefighting objectives, strategies and tactics
- concluding firefighting operations
- conducting search and rescue
- controlling fire environment by cooling fire gases
- entering structures affected by fire
- identifying hazardous materials
- instigating actions to avoid risk of injury
- moving in smoke and darkness
- observing and reacting to changes in conditions and fire behaviour
- obtaining water from reticulated or static water supplies
- operating a firefighting branch
- operating fire extinguishers
- participating in ancillary operations
- preparing extinguishing media and equipment for use
- proceeding to a fire
- recording incident information
- selecting and using firefighting equipment
- using extinguishing media on a fire
- using personal protective clothing and equipment
- using structural entry techniques
- utilising breathing apparatus, associated equipment and operational procedures

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- ancillary activities
- basic signs of fire cause and activities for protecting evidence
- behaviour of a building or structure in a fire
- chain of command
- change in conditions at a fire caused by increase or decrease in
  - fuel available to fire
  - increase or decrease of oxygen available to fire
- different construction types and their behaviour in a fire
- equipment and tools used in fire suppression activities extinguishing media
- fire behaviour
- fire ground signals including audible and visual
- fire tetrahedron
- firefighting foams
- firefighting tasks, tactics and techniques
- hazardous materials identification
- hazards and actions to minimise, mitigate, control or eliminate
- identification of various building types including structural elements and materials, causes and signs of structural failure
- methods of heat transfer
- natural ventilation procedures
- navigation and map reading
- organisational documentation, policies and procedures including procedures for working with ladders, ropes, lines and tying knots
- portable fire extinguishers
- principles and methods of extinguishment
- salvage and overhaul
- signs of structural collapse
- water supplies
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including safety assessments and/or risk mitigation processes, safe work practices and personal protective clothing and equipment

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situation that reflects workplace conditions.

Competency should be assessed on the job and/or in a range of simulated fire environments.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- a relevant appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - range of controlled or simulated fires, firefighting equipment, extinguishing media and breathing apparatus and associated equipment
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR204 Respond to wildfire

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to respond to a wildfire, work as a safe and situationally aware member of a crew to attack and extinguish a fire, participate in mop ups and patrol operations and prepare equipment for the next crew.

The unit applies to firefighting personnel who work as a member of a team. It includes preparing to respond to fire; proceeding to fire; obtaining and using firefighting equipment and extinguishing media; combating wildfire; observing and reacting to wildfire and weather conditions; participating in mop up and patrol activities; supporting operations and recovering and storing equipment. Work at this level is undertaken under direct supervision, and with instruction.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR210 Prevent injury

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

|                                                                        |            |                                                                                                                                                  |
|------------------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>1 Prepare to respond to fire</b>                                    | <b>1.1</b> | Information received about the location and type of wildfire is confirmed                                                                        |
|                                                                        | <b>1.2</b> | Most effective route to the fire is identified and navigated safely                                                                              |
|                                                                        | <b>1.3</b> | Appropriate personal protective clothing and equipment is donned, in accordance with organisational procedures                                   |
| <b>2 Proceed to fire</b>                                               | <b>2.1</b> | Location of the fire and type of fuel is confirmed on approach                                                                                   |
|                                                                        | <b>2.2</b> | Life is protected and damage to property and the environment is minimised, in accordance with organisational procedures                          |
|                                                                        | <b>2.3</b> | Evidence relevant to fire cause is noted and reported utilising the organisations chain of command, in accordance with organisational procedures |
|                                                                        | <b>2.4</b> | Indicators of fire behaviour are observed and reported                                                                                           |
| <b>3 Obtain and use firefighting equipment and extinguishing media</b> | <b>3.1</b> | Nominated extinguishing media and/or firefighting equipment are located and obtained                                                             |
|                                                                        | <b>3.2</b> | Extinguishing media and equipment are used, in accordance with manufacturers' specifications and organisational procedures                       |
| <b>4 Combat wildfire</b>                                               | <b>4.1</b> | Instructions are received, firefighting strategies and tactics are confirmed and implemented                                                     |
|                                                                        | <b>4.2</b> | Suppression techniques, equipment and extinguishing media appropriate to wildfire conditions are used                                            |
|                                                                        | <b>4.3</b> | Control lines are prepared as directed                                                                                                           |
|                                                                        | <b>4.4</b> | Equipment is positioned, made ready for use and protected from damage                                                                            |
|                                                                        | <b>4.5</b> | Fire is attacked taking into account wildfire hazards as directed                                                                                |

- |                                                                             |            |                                                                                                         |
|-----------------------------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------|
|                                                                             | <b>4.6</b> | Evidence of fire cause and area of fire origin are protected                                            |
|                                                                             | <b>4.7</b> | Communication is maintained at all times with all personnel                                             |
| <b>5 Observe and react to wildfire and weather conditions</b>               | <b>5.1</b> | Changing conditions at the fire are observed and their effects on fire behaviour are noted and reported |
|                                                                             | <b>5.2</b> | Weather conditions and changes to fire behaviour are observed and reported                              |
|                                                                             | <b>5.3</b> | Variations in topography, fuel features and fuel arrangements are observed and reported                 |
|                                                                             | <b>5.4</b> | Escape routes and safety zones are confirmed and maintained throughout the incident                     |
|                                                                             | <b>5.5</b> | Communication is maintained with other firefighting personnel throughout operational activities         |
| <b>6 Participate in mop up and patrol activities and support operations</b> | <b>6.1</b> | Mopping up activities are carried out, as directed                                                      |
|                                                                             | <b>6.2</b> | Patrol of the perimeter or sector of the fire is maintained, as directed                                |
|                                                                             | <b>6.3</b> | Activities to support firefighting operations are carried out, as directed                              |
| <b>7 Recover and store equipment</b>                                        | <b>7.1</b> | Equipment and consumables are recovered, as directed                                                    |
|                                                                             | <b>7.2</b> | Firefighting equipment is collected and stored at the incident                                          |
|                                                                             | <b>7.3</b> | Cleaning and maintenance are carried out in accordance with organisational procedures                   |
|                                                                             | <b>7.4</b> | Damaged or lost equipment is identified and reported                                                    |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

|                                                         |                                                                                                                                                        |
|---------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
| extinguishing media must include two of the following   | <ul style="list-style-type: none"><li>• class A foam</li><li>• retardants</li><li>• soil</li><li>• water</li><li>• wetting agents</li></ul>            |
| personal protective clothing and equipment must include | <ul style="list-style-type: none"><li>• eye and head protection</li><li>• turnout uniform and gloves</li></ul>                                         |
| types of wildfire must include                          | <ul style="list-style-type: none"><li>• surface</li></ul>                                                                                              |
| types of fuel must include one of the following         | <ul style="list-style-type: none"><li>• forest</li><li>• grass</li><li>• scrub</li></ul>                                                               |
| firefighting equipment must include                     | <ul style="list-style-type: none"><li>• hand tools</li><li>• hose and small gear</li><li>• pump</li><li>• tanker</li></ul>                             |

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFIR204 Respond to wildfire

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- combating wildfires
- communicating on the fire ground using a range of tools
- detecting hot spots, hazardous trees, unsecured wildfire perimeter
- maintaining situational awareness
- maintaining health and safety of self and others in work area
- observing and reacting to wildfire and weather conditions
- obtaining and using firefighting equipment and extinguishing media
- participating in mop ups, patrol activities and support operations
- participating in entrapment safety procedures
- preparing to respond to a fire
- proceeding to a fire
- reacting to changing wildfire behaviour due to changes in weather, topography and fuel conditions
- recovering, reinstating and storing equipment
- undertaking dry and wet wildfire attack
- undertaking operational activities safely, in accordance with organisational procedures
- using extinguishing media in wildfire control
- using wildfire control tools and equipment
- working with firefighting equipment
- working as a member of a team

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- communication on the fire ground using radio and telephone

- consumables including flagging tape, fuel, rubbish and signs
- extinguishing media, water, foam and suppressants
- escape routes including prepared tracks, roads, trails and waterways
- earth moving equipment such as bulldozers, graders and tractors with blades
- equipment for firefighting including chainsaw, ropes and lines, drip torch and knap sack
- evidence related to fire cause including fresh vehicle tracks, items or objects at scene, nature and behaviour of fire at the scene upon arrival, nature and colour of smoke and number of columns, people and vehicles leaving the scene and whether gates on access routes to the fire were closed, opened or locked
- fire behaviour
- fuel features including arrangement and distribution, moisture content, quantity, size and type
- indicators of fire behaviour including flame height and length, noise, rate of spread, smoke colour and density, spotting and extreme fire behaviour
- organisational documentation, policies and operating procedures
- safety zones including bare ground, burnt areas, clearings, rivers and site of recent wildfire or prescribed burn, static water bodies and defensible space
- support operations including providing and transporting food, water and equipment
- tactics for firefighting including backburning, burning out and patrol
- types of wildfire including crown and ground
- types of fuel including crop, heath, peat, coal, combustible soils and plantation
- strategies for firefighting including defensive, direct and indirect attack, offensive and parallel attack
- variations in topography including aspect, elevation, landscape features and slope
- weather conditions including atmospheric stability, relative humidity, temperature and variations to wind speed and direction
- wildfire control tactics and techniques
- wildfire hazards
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including health and fitness requirements, hygiene and wellbeing, safe work practices, safety assessments and risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that

reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR205 Respond to aviation incident (specialist)

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to work under supervision as a member of a specialist aviation incident response team while responding to an aviation event. It applies to personnel who are members of specialist aviation incident response teams.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR203 Respond to urban fire

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Respond to aircraft incident**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1.1** Approach to aircraft incident is based on type of accident or collision, location, terrain, weather, wind

- speed, direction and response time requirements
- 1.2** Hazards and personal injury risks associated with aircraft incidents and/or accidents are identified
  - 1.3** Access to incident is gained through use of airport maps and aircraft diagrams or plans
  - 1.4** Changing incident conditions are anticipated, reported and managed, in accordance with organisational procedures
  - 1.5** Operations are carried out, in accordance with organisational procedures and regulatory requirements
- 2 Use appropriate equipment**
- 2.1** Equipment is selected, in accordance with incident objectives and strategies
  - 2.2** Appropriate rescue and/or firefighting equipment is selected and used, in accordance with organisational procedures
  - 2.3** Appropriate equipment is selected and used to isolate aircraft fuselage from hazards and escape paths are maintained, in accordance with organisational procedures
- 3 Evacuate persons and attend to casualties**
- 3.1** Hazards and injury risks associated with aircraft incidents are identified and reported
  - 3.2** Equipment is selected and located to facilitate evacuation and rescue
  - 3.3** Evacuees are directed to a safe area and casualties are attended to
- 4 Conduct operations**
- 4.1** Operational tactics are implemented based on incident conditions, in accordance with organisational procedures
  - 4.2** Changing incident conditions are evaluated and any alterations to tactics are communicated, in accordance with organisational procedures
  - 4.3** Operations are carried out, in accordance with industry regulatory requirements
  - 4.4** Fuselage protection and escape paths are established and maintained, in accordance with organisational procedures

- 4.5 Assistance to passengers and crew is provided during aircraft evacuation
  - 4.6 Evacuees and or casualties are moved or directed to a safe area, in accordance with organisational procedures and Aerodrome Emergency Plan
  - 4.7 Appropriate rescue techniques are used to release trapped persons from aircraft
- 5 **Conclude operations**
  - 5.1 Evidence at aircraft incident is preserved and secured, in accordance with organisational procedures
  - 5.2 Any damage to the aircraft caused by forcible entry is recorded and reported, in accordance with organisational procedures and legislative requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR205B Respond to aviation incident (specialist).

# Assessment Requirements for PUAFIR205 Respond to aviation incident (specialist)

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- adhering to airport operating procedures
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including identifying toxic environments
- conducting and concluding operations
- evacuating persons and attending to casualties
- identifying hazards and undertaking risk assessment
- implementing aviation firefighting objectives and tactics and strategies
- meeting legislative and regulatory requirements
- responding to an aviation incident
- selecting and using aviation firefighting equipment, extinguishing media and personal protective clothing and equipment
- using appropriate equipment
- using strategies including controlling and extinguishing fire, isolation of aircraft fuselage from hazard and maintenance of safe paths of egress
- working with aviation firefighting equipment including
  - aircraft rescue and firefighting vehicle
  - ancillary firefighting equipment
  - apparatus to deliver extinguishing medium
  - breathing apparatus
  - equipment for lighting
  - escape safety devices
  - extrication devices
  - fire hose
  - fixative or sealant for composite fibres
  - ladders
  - rescue equipment
  - specialised tools for cabin entry
  - ventilation equipment

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- aircraft construction
- aircraft and airport emergency procedures
- characteristics and limitations of equipment
- incident objectives, strategies and tactics
- organisational documentation, policies and procedures
- potential hazards and risk mitigation
- types of aviation incidents
- types of aviation accidents and incidents including aircraft incidents, equipment, strategies and operational tactics
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - firefighting equipment, aircraft or simulator and fire extinguishing media
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR206 Check installed fire safety systems

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to locate, identify and check the status of installed fire safety systems.

The unit applies to personnel required to locate, identify and check the status of installed fire safety systems. Work at this level is performed under direct supervision and instruction.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Locate and identify installed fire safety systems**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1.1 Installed fire safety systems are identified and located in buildings**

|                                                              |            |                                                                                                                                                                                                        |
|--------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                              | <b>1.2</b> | Onsite visual identification of installed fire safety systems and mode of operation is confirmed and reported through direct chain of command                                                          |
| <b>2 Check and monitor the status of fire safety systems</b> | <b>2.1</b> | Installed fire safety systems are checked, in accordance with organisational procedures                                                                                                                |
|                                                              | <b>2.2</b> | Status of installed fire safety systems is monitored and irregularities such as faults and isolation of individual functions are identified and reported, in accordance with organisational procedures |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

- fire safety systems must include three or more of the following
- alternative fire suppression system
  - fire detection systems
  - fire hydrant and hydrant booster system
  - fire indicator panels, occupant warning and communications systems
  - fire sprinklers and sprinkler booster system
  - smoke hazards management and ancillary systems

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR206B Check installed fire safety systems.

# Assessment Requirements for PUAFIR206 Check installed fire safety systems

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- checking and monitoring the status of installed fire safety systems
- checking status of various fire safety systems
- completing organisational documentation
- identifying components of various fire safety systems
- identifying faults in installed fire safety systems
- implementing organisational procedures
- locating and identifying installed fire safety systems
- working under supervision

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- advantages and disadvantages of various forms of heat and smoke detection devices
- basic components of a fire hydrant system, their operation and function, sources of water supply to and within a fire hydrant system and its use and operation
- basic components of a sprinkler system, their operation and function, sources of water supply to and within a sprinkler system and its use and operation
- basic components of heat and smoke detection systems, their operation and function
- emergency evacuation procedures
- operating principles and applications of heat and smoke alarms and detectors
- operating principles and applications of smoke hazard management and ancillary systems
- operation and use of fire control room
- organisational documentation, policies and procedures
- safe work practices when working with alternative fire suppression systems
- use and operation of occupant warning systems equipment
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational

requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - a wide range of fire safety systems and their components
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR207 Operate breathing apparatus open circuit

## Modification History

**Release 2.0** This is the second release of this unit of competency in the PUA Public Safety Training Package.

Editorial update.

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to select, don, operate and maintain breathing apparatus equipment in a hazardous atmosphere. It includes conducting pre-donning checks and tests of breathing apparatus; donning and checking of breathing apparatus; operating breathing apparatus and concluding breathing apparatus operations.

The unit applies to personnel who work as a member of a team. Work at this level is undertaken under direct supervision and instruction.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR210 Prevent injury

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Conduct pre-donning checks and tests on breathing apparatus**

- 1.1** Breathing apparatus is inspected for immediate use, in accordance with the organisational procedures
- 1.2** Faulty or damaged equipment is reported and recorded, in accordance with the organisational procedures

#### **2 Don and check breathing apparatus**

- 2.1** Breathing apparatus is donned, in accordance with the organisational procedures
- 2.2** Breathing apparatus is started and checked, in accordance with organisational procedures
- 2.3** Ancillary equipment required for tasks is selected for use

#### **3 Operate breathing apparatus**

- 3.1** Hazards are identified, monitored and controlled, in accordance with the organisational procedures
- 3.2** Communication is established and maintained with team members and other appropriate personnel throughout activity
- 3.3** Response activities are undertaken as a member of a team, demonstrating effective application of breathing apparatus, in accordance with the organisational procedures
- 3.4** Breathing apparatus control procedures are followed, in accordance with the organisational procedures
- 3.5** Entrapment procedures are implemented, in accordance with the organisational procedures
- 3.6** Personal safety is maintained, in accordance with organisational procedures

#### **4 Conclude operations**

- 4.1** Breathing apparatus set is shut down, in accordance with organisational procedures
- 4.2** Breathing apparatus set is removed, in accordance with organisational procedures
- 4.3** Cleaning and maintenance of breathing apparatus is

undertaken, in accordance with organisational procedures

**4.4** Equipment is made ready for operational use, in accordance with organisational procedures

**4.5** Participating in debriefing sessions

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

# Assessment Requirements for PUAFIR207 Operate breathing apparatus open circuit

## Modification History

**Release 2.0** This is the second release of this unit of competency in the PUA Public Safety Training Package.

Editorial update.

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- conducting pre-donning checks and tests on breathing apparatus
- donning and checking breathing apparatus
- following organisational policies and procedures including implementing entrapment and breathing apparatus emergency procedures
- inspecting breathing apparatus after its use
- inspecting breathing apparatus and concluding breathing apparatus operations
- moving in conditions of reduced visibility
- operating breathing apparatus
- participating in debriefing sessions
- returning breathing apparatus to operational status
- complying with organisational procedures for breathing apparatus use and maintenance

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- characteristics, component parts, operation of compressed air breathing apparatus
- how breathing apparatus supports personal protection
- industry standards for breathing apparatus
- operation of breathing apparatus
- operational testing, operating procedures and safe work practices when wearing breathing apparatus

- organisational documentation, policies and procedures including entrapment procedures
- performance of breathing apparatus control equipment
- personal protective clothing and equipment
- respiratory system and effects of hazardous atmospheres on the body
- types of hazardous atmospheres including heated, smoke or other suspended particles
- use of personal lines and tallies
- utilisation of distress signal unit
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including safety assessments and risk mitigation

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - range of controlled or simulated scenarios, breathing apparatus and associated equipment
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR208 Participate in community safety activities

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to participate as a member of a team in community safety activities including working with the community on matters, presenting organisational approved community safety information and contributing to hazard mitigation activities. Community safety activities provide an important opportunity to build community capacity in relation to prevention, preparedness and response to fires.

The unit applies to personnel required to participate as a member of a team in a variety of activities to build community capacity in relation to prevention, preparedness and response to fire events. Work at this level is performed under direct supervision and instruction.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |                                                                 |                                                                                                                                                                                            |

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFIR208 Participate in community safety activities

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- accompanying inspections
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- collecting, reporting and responding to feedback
- identifying specified hazards
- participating in identifying specific hazards, presenting community safety information and risk mitigation activities and procedures
- presenting information
- undertaking mitigation activities
- using communication methods and techniques

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- community organisations and members
- environments and the potential impact of fire and hazards
- hazard identification
- organisational documentation, policies and procedures including on those on confidentiality and privacy
- risk mitigation processes and activities
- techniques for collecting, recording and reporting feedback
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of

assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- appropriate literature and equipment applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

## PUAFIR210 Prevent injury

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit involves the skills and knowledge required to identify and avoid workplace hazards and risks, to maintain personal safety and to report identified issues to supervisors and team members.

It is designed as an introduction to safe work practices and is specifically relevant to a workplace requiring personnel to be involved in incidents, prescribed burns and/or operational aspects of emergency management. It includes identifying, implementing and monitoring effectiveness of workplace hazards and risk control procedures.

The unit applies to personnel who work as a member of a team. Work at this level is undertaken under direct supervision and instruction.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

Fire

### Unit Sector

Fire

### Elements and Performance Criteria

#### ELEMENTS

#### PERFORMANCE CRITERIA

Elements describe the essential    Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

**1 Identify workplace hazards and risks, and advise others**

- 1.1** Procedures and practices are followed to identify hazards and risks in the workplace
- 1.2** Identified hazards and risks in the work area are communicated to team members and supervisors
- 1.3** Identified risk factors which may create or escalate the immediate risk to life, property or the environment are reported, in accordance with organisational procedures

**2 Implement hazard and risk control procedures**

- 2.1** Personal protective clothing and equipment is selected and donned, in accordance with organisational procedures
- 2.2** Hazard identification and risks controls are implemented, in accordance with Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) guidelines and organisational procedures
- 2.3** Equipment appropriate for dealing with a hazard is selected for use and checked, in accordance with organisational procedures
- 2.4** Personal health and welfare is managed, in accordance with organisational policy

**3 Monitor effectiveness of hazard and risk control procedures**

- 3.1** Situation awareness is maintained to ensure the continued effectiveness of hazard and risk control procedures
- 3.2** Changes in incident behaviour and conditions are reported immediately through the chain of command, in accordance with organisational procedures
- 3.3** Activities and debriefings regarding hazard and risk control procedures are participated in, as appropriate

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work

environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

personal protective clothing and equipment  
must include

- eye and head protection
- turn out uniform and gloves

controlling risks must include

- dynamic risk assessment
- safe person approach

# Assessment Requirements for PUAFIR210 Prevent injury

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- applying safe work practices in accordance with organisational Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) policies and procedures
- identifying hazards and using risk control measures
- identifying workplace hazards and risks and advising others
- implementing hazard and risk control procedures
- monitoring effectiveness of hazard and risk control procedures
- selecting equipment pertinent to incidents, prescribed burning and/or operational aspects of emergency management
- working with organisational procedures including the selection and use of personal protective equipment

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- basic principles of a dynamic risk assessment and safe person approach
- hazards, including heat illness, fire, structural, aerial operations, hazardous materials and vehicles
- methods of hazard identification, risk control reporting and debriefing
- organisational documentation, policies and procedures for hazard and risk management
- personal protective clothing and equipment requirements
- risks to life, community, property and the environment
- situational awareness actions that support safety in the work place
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including occupational hazards and risks encountered in the workplace, safety assessments, risk mitigation processes and risk control measures such as eliminate, isolate and substitute

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

# PUAFIR212 Rappel from helicopter

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to safely and effectively rappel from a hovering helicopter using a personal rappel line. The unit applies to personnel required to rappel from a helicopter.

Aviation operations occur in a heavily regulated environment. This work is undertaken in accordance with rappelling policies, regulations, protocols and procedures required to safely rappel from a helicopter.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR209 Work safely around aircraft

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

outcomes.

demonstrate achievement of the element.

**1 Prepare operational rappel equipment**

- 1.1** Rappel equipment is selected and prepared, in accordance with organisational procedures and requirements
- 1.2** Appropriate rappel and safety equipment is donned, in accordance with organisational procedures and requirements
- 1.3** Pre-flight checks on clothing and equipment are undertaken, in accordance with organisational procedures and requirements
- 1.4** Damage to rappel or safety equipment is reported to relevant supervisor for repair, replacement or disposal

**2 Load rappel personnel and equipment into helicopter**

- 2.1** Rappel personnel, rappel and operational equipment are weighed and recorded
- 2.2** Pilot is informed of equipment and personnel weights
- 2.3** Equipment is secured into helicopter under pilot or flight crew supervision
- 2.4** Seat position is assumed and seatbelt is secured
- 2.5** Pre-mission briefing instructions are obtained from operations officer or rappel crew leader and clarification of objectives and procedures is sought, where required
- 2.6** Pre-flight safety briefing is obtained from pilot or air crew

**3 Prepare to rappel from hovering helicopter**

- 3.1** Rappel rope is attached and checked, in accordance with organisational procedures
- 3.2** Movement to helicopter skids is undertaken, as directed, in accordance with organisational procedures
- 3.3** Pre-descent checks are conducted, in accordance with organisational procedures and requirements
- 3.4** Emergency procedures are conducted, as required
- 3.5** Communications and emergency commands are responded to, in accordance with organisational procedures and requirements

- |                                                     |                                                                                                                                                             |
|-----------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>4 Rappel from hovering helicopter</b>            | <b>4.1</b> Departure from skids is performed, in accordance with commands and organisational procedures                                                     |
|                                                     | <b>4.2</b> Rappel rope descent is undertaken, in accordance with organisational procedures and requirements                                                 |
|                                                     | <b>4.3</b> Landing is conducted, in accordance with organisational procedures and requirements                                                              |
|                                                     | <b>4.4</b> Rappel rope is disconnected and landing area is cleared, in accordance with organisational procedures and requirements                           |
|                                                     | <b>4.5</b> Emergency procedures are conducted, as required                                                                                                  |
|                                                     | <b>4.6</b> Emergency commands are responded to, in accordance with organisational procedures and requirements                                               |
| <b>5 Retrieve rappel and firefighting equipment</b> | <b>5.1</b> Area is cleared in preparation for retrieval of rappel and firefighting equipment, in accordance with organisational procedures and requirements |
|                                                     | <b>5.2</b> Equipment is connected and retrieval is conducted, in accordance with organisational procedures and requirements                                 |
| <b>6 Perform maintenance on rappel equipment</b>    | <b>6.1</b> Equipment is inspected and maintenance is performed, in accordance with organisational procedures and manufacturers' guidelines                  |
|                                                     | <b>6.2</b> Damage to fire and rappel equipment is reported to supervisor for repair, replacement or disposal                                                |
|                                                     | <b>6.3</b> Documentation related to maintenance or damage to equipment is completed and reported, in accordance with organisational procedures              |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

rappel equipment must include

- agency or organisational coveralls, protective helmet, earmuffs, chin strap and goggles
- full body harness
- hook knife
- karabiner
- organisational specific descender and safety devices
- rappel gloves
- static kernmantle rappel ropes

air crew must include one or more of the following

- co-pilot
- other member of air crew
- rappel dispatcher

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR212B Rappel from helicopter.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFIR212 Rappel from helicopter

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- adhering to briefing instructions
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- communicating with crew and rappel dispatcher including using emergency hand signals
- completing work to minimise risk to personnel and/or damage to equipment
- implementing legislative, regulatory, organisational and operational guidelines
- loading rappel personnel and equipment into helicopter
- operating safely around a helicopter
- performing maintenance and inspection techniques on rappel equipment
- preparing operational rappel equipment including following pre-rappel checks and equipment donning procedures
- preparing to rappel from a hovering helicopter
- rappelling from a hovering helicopter
- reporting accidents and incidents
- retrieving rappel and firefighting equipment
- undertaking emergency procedures and responding to emergency commands
- utilising procedures and techniques for sequencing and controlling rappelling, braking, landing and disconnecting

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- aviation legislation and regulations related to rappelling
- characteristics and limitations of rappel operations and equipment
- emergency hand signals
- factors that can affect rappel descents including canopy height, slope, vegetation type and

winds

- helicopter rappelling for remote area fire suppression and training
- key roles and responsibilities of helicopter crew including rappel dispatcher
- organisational documentation requirements and regulatory reporting arrangements
- organisational policies and procedures including emergency procedures
- types of helicopters used for conducting rappelling operations
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation and safe work practices when rappelling and/or working in or around helicopters

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

All rappel operations are conducted under pilot and rappel dispatcher supervision. Each rappel descent once commenced is conducted without supervision.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
  - competency is to be assessed verbally and through multiple practical demonstrations in a number of scenarios
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - rappelling equipment and materials, area to conduct operations, helicopter, briefing reports, organisational procedural documentation, appropriate personnel and emergency information
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR220 Respond to isolated structure fire

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to respond to an isolated structure fire when working as a member of a team under direct supervision. It includes defensive external structural firefighting i.e. how to attack a fire from outside a structure and protect exposures. It does not cover offensive firefighting i.e. internal attack within a structure or how to deal with fires involving dangerous goods and/or hazardous chemicals.

An isolated structure refers to a free standing building or manmade construction, such as a homestead or farm machinery shed. With an isolated structure, the possibility of fire spread between the structure itself and other structures or property not directly involved in the fire is generally low.

The unit applies to personnel working in rural and/or urban interface areas and rural communities who are often required to respond to structure fires and to support asset protection. An individual operating in this context will perform this role under the direct supervision of a crew leader or an officer in charge.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR210 Prevent injury

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1 Proceed to fire

- 1.1 Information received about location and type of fire is recorded, in accordance with organisational procedures
- 1.2 Appropriate personal protective clothing and equipment is donned, in accordance with organisational procedures
- 1.3 Most effective route to the fire is identified

#### 2 Prepare extinguishing media and/or equipment for use

- 2.1 Water supplies at the incident to support firefighting are located
- 2.2 Equipment to access and supply water to firefighting operations is identified and assembled, in accordance with organisational procedures
- 2.3 Nominated extinguishing media and/or equipment is identified, obtained and or accessed

#### 3 Combat fires

- 3.1 Personal safety is maintained, in accordance with organisational procedures and Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) guidelines, for responding to isolated structure fires
- 3.2 Hazards are identified and reported to supervisors, in accordance with organisational procedures
- 3.3 Firefighting strategies are implemented through the chain of command, in accordance with organisational procedures
- 3.4 Safe escape routes are identified confirmed and maintained in accordance with organisational procedures
- 3.5 Access to location of fire is gained and protecting life and minimising damage to the environment and property is undertaken, in accordance with organisational

|                                                               |            |                                                                                                                                    |
|---------------------------------------------------------------|------------|------------------------------------------------------------------------------------------------------------------------------------|
|                                                               |            | procedures                                                                                                                         |
|                                                               | <b>3.6</b> | Extinguishing media and equipment are used, in accordance with manufacturers' specifications and organisational procedures         |
|                                                               | <b>3.7</b> | Communication with team members and supervisor is maintained throughout the incident, in accordance with organisational procedures |
| <b>4 Observe and report changes in conditions at the fire</b> | <b>4.1</b> | Changing conditions at the fire are observed and effects on fire behaviour are noted and reported through the chain of command     |
|                                                               | <b>4.2</b> | Firefighting tactics are adapted to meet changing conditions and fire behaviour                                                    |
| <b>5 Participate in ancillary operations</b>                  | <b>5.1</b> | Ancillary activities to complement firefighting operations and to prevent further damage to structure is undertaken                |
|                                                               | <b>5.2</b> | Assistance is given, if required, to complete and record incident information                                                      |
| <b>6 Conclude firefighting operations</b>                     | <b>6.1</b> | Firefighting equipment is collected, reinstated and stowed, in accordance with organisational procedures                           |
|                                                               | <b>6.2</b> | Incident scene is made safe for the public                                                                                         |
|                                                               | <b>6.3</b> | Defective or missing equipment is identified and reported, in accordance with organisational procedures                            |
|                                                               | <b>6.4</b> | Participate in debriefing sessions                                                                                                 |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

equipment must include

- turnout uniform and gloves
- fire attack equipment
- small gear and ancillary equipment

extinguishing media must include

- foam
- water

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR218 Respond to isolated structure fire.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFIR220 Respond to isolated structure fire

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- accessing location of fire
- applying defensive firefighting strategies and techniques
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- concluding firefighting operations
- identifying hazards
- identifying signs of structural collapse
- observing and reporting changes in conditions at fire
- obtaining water from reticulated and/or static water supplies
- participating in ancillary operations
- participating in debriefing sessions
- proceeding to isolated structure fire
- selecting and using firefighting equipment
- undertaking ancillary activities including assisting with damming water runoff, making up equipment and securing area
- using personal protective clothing and equipment
- utilising extinguishing media at fires

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- ancillary activities including damming water runoff, making up equipment and securing area
- behaviour of buildings and/or structures in a fire
- causes and signs of structural collapse
- change in conditions including weather

- changes in conditions at the fire
- damage to environment
- extinguishing media
- fire behaviour
- fire ground signals including audible and/or visual
- fire tetrahedron
- firefighting techniques including defensive strategies and tactics
- hazards including electricity, gas, hazardous materials, machinery, equipment, products, smoke, darkness, heat and structural collapse
- organisational documentation, policies and procedures including those for working with ladders, ropes and lines
- personal protective clothing and equipment
- portable fire extinguishers
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including safe work practices and risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - range of controlled or simulated fires, firefighting equipment and extinguishing media
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR301 Undertake community safety activities

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to identify and evaluate risks, to select and implement strategies to reduce risks and to improve community safety.

The unit applies to personnel who conduct inspections of sites to identify hazards and determine risk mitigation strategies. At this level the risk mitigation strategies identified by the individual will be selected from a list predetermined by the organisation. Work is typically carried out under supervision and actions implemented will generally require approval.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Identify specific hazards through inspection**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1.1 Inspections are conducted to provide information for pre-incident planning**

- |                                                                 |            |                                                                                                                                                                                                             |
|-----------------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                 | <b>1.2</b> | Hazards are identified using organisational risk management procedures and processes                                                                                                                        |
|                                                                 | <b>1.3</b> | Specific hazards in area of responsibility that may impact on life, property, process or the environment are accurately identified and reported to supervisor, in accordance with organisational procedures |
|                                                                 | <b>1.4</b> | Community members and organisations are consulted, where appropriate, during the identification and/or inspection process                                                                                   |
| <b>2 Consider hazard information to determine level of risk</b> | <b>2.1</b> | Hazard information collected is documented and reviewed, in accordance with organisational procedures                                                                                                       |
|                                                                 | <b>2.2</b> | Level of risk for each hazard is determined using organisational risk management procedures and processes                                                                                                   |
| <b>3 Implement risk mitigation strategies</b>                   | <b>3.1</b> | Risk mitigation strategy is selected from a predetermined list and is implemented                                                                                                                           |
|                                                                 | <b>3.2</b> | Risk reduction activities are conducted, in accordance with organisational procedures                                                                                                                       |
|                                                                 | <b>3.3</b> | Risk mitigation strategies are implemented with minimum damage to the environment, in accordance with organisational procedures and applicable legislation                                                  |
| <b>4 Evaluate mitigation strategies</b>                         | <b>4.1</b> | Feedback is provided to appropriate parties and/or community members on risk mitigation procedures and processes                                                                                            |
|                                                                 | <b>4.2</b> | Risk mitigation strategies are evaluated for effectiveness and community acceptance                                                                                                                         |
|                                                                 | <b>4.3</b> | Issues are reported, in accordance with organisational procedures                                                                                                                                           |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR301B Undertake community safety activities.

# Assessment Requirements for PUAFIR301 Undertake community safety activities

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- ascertaining relationship between hazards and risks posed to the community and environment
- assessing risks in consultation with community groups
- collecting and analysing feedback
- completing organisational forms and documentation
- considering hazard information to determine levels of risk
- cooperating and working with community groups
- evaluating risk mitigation strategies
- identifying specific hazards through inspection
- implementing risk mitigation strategies

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- community organisations
- community member and organisational feedback requirements and how to collect it
- environmental factors to be considered
- evacuation procedures in an emergency
- hazardous chemicals
- inspection processes
- organisational documentation, policies and procedures
- property and building construction hazards
- risk mitigation strategies relating to hazard reduction, isolation, removal and management
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - organisational forms and appropriate equipment
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR302 Suppress urban fire

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit involves the skills and knowledge required to work as a member of a team under limited supervision when suppressing an urban fire. It includes responding to fires and determining extinguishing media, equipment and structural fire behaviour. It also includes protecting people; how to attack fires, ventilate structures, observe and react to fire conditions; undertake ancillary firefighting operations and complete operations.

The unit applies to personnel required to suppress a range of different types of structure and non-structure fires where there is the potential for multiple hazards to be present.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

HLTAID003 Provide first aid

PUAFIR203 Respond to urban fire

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Initiate response to fire**

- 1.1** Fire details are received and initial response is determined, in accordance with organisational procedures
- 1.2** Firefighting personal protective clothing and equipment requirements are determined and used, based on available information
- 1.3** Changes to fire conditions are reported and acted on to determine firefighting tactics
- 1.4** Firefighting considerations are taken into account when determining tactics

**2 Determine extinguishing media and equipment**

- 2.1** Available static or reticulated water supplies to support firefighting operations are identified and capacity is determined
- 2.2** Selection of hose and equipment is sufficient to support firefighting operations
- 2.3** Extinguishing media are selected, in accordance with the type of fire within the area of operation
- 2.4** Breathing apparatus is used within its' safe work limitations, in accordance with manufacturers' specifications and organisational procedures

**3 Determine structural fire behaviour**

- 3.1** Combustion processes taking place in the structure are determined
- 3.2** Tactics for terminating combustion processes are determined
- 3.3** Presence of hazardous materials located in the fire area are identified and an appropriate plan of action is determined

**4 Protect people**

- 4.1** Primary and secondary searches are planned, conducted and supported, in accordance with organisational procedures
- 4.2** Appropriate priority and support is allocated to fire rescue and evacuation activities
- 4.3** Casualties are treated and/or handed into the care of

medical personnel once clear of threat of fire

## **5 Attack fire**

- 5.1** Firefighting strategies and tactics are prioritised, implemented and monitored, in accordance with organisational procedures
- 5.2** Firefighting extinguishing media are selected, in accordance with the type of fire and the actual or potential hazards identified within the area of operations
- 5.3** Fire is located and access is gained in the safest and most effective manner to minimise damage to property or the risk of injury to others or self, in accordance with organisational procedures
- 5.4** Potential fire behaviour is anticipated and action is taken to protect the safety of self and others and to achieve determined strategies
- 5.5** Breathing apparatus procedures are complied with, in accordance with organisational requirements
- 5.6** Fire is attacked using a range of extinguishing media and application techniques appropriate to type and size of fire, in accordance with manufacturers' specifications and organisational procedures
- 5.7** Evidence of fire cause is protected and action is taken, in accordance with organisational procedures
- 5.8** Firefighting suppression activities, including extinguishing media, are used to contain spread of fire and damage to the environment and property
- 5.9** Burning and smouldering materials are identified and extinguished, in accordance with organisational requirements
- 5.10** Communication is maintained and monitored throughout firefighting operations, in accordance with organisational procedures
- 5.11** Firefighting ancillary activities are undertaken to avoid or minimise risk of environmental damage

## **6 Ventilate structure**

- 6.1** Structures are ventilated, as required, using the most appropriate natural and mechanical ventilation techniques, in accordance with organisational procedures

|                                                      |            |                                                                                                                                                                                                         |
|------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                      | <b>6.2</b> | Structures are ventilated without endangering personnel or increasing the spread of fire, in accordance with organisational procedures                                                                  |
| <b>7 Observe and react to fire conditions</b>        | <b>7.1</b> | Fire is continually monitored and significant changes affecting the status of the fire and effectiveness of selected firefighting strategies are reported, in accordance with organisational procedures |
|                                                      | <b>7.2</b> | Firefighting strategies and tactics are modified and adjusted, in accordance with organisational procedures, the changing conditions at the fire or as directed                                         |
| <b>8 Undertake ancillary firefighting operations</b> | <b>8.1</b> | Firefighting and ancillary activities undertaken at the incident ensure that the risk of injury to the public, other personnel and self is avoid or minimised                                           |
|                                                      | <b>8.2</b> | Salvage and overhaul activities are undertaken to support the conclusion of firefighting operations, in accordance with organisational procedures                                                       |
| <b>9 Complete operations</b>                         | <b>9.1</b> | Equipment is made ready for operational use, in accordance with organisational procedures                                                                                                               |
|                                                      | <b>9.2</b> | Damaged or missing equipment is replaced, recorded and/or reported, in accordance with organisational procedures                                                                                        |
|                                                      | <b>9.3</b> | Participate in debriefing sessions                                                                                                                                                                      |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

fire must include

- fires involving electricity
- industrial complex
- mobile property fires
- multi-storey structures
- structure and non-structure fires which may

|                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|---------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                         | also include                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

application techniques must include

- defensive mode
- direct attack
- direction of attack
- indirect attack
- offensive mode

ancillary activities must include three or more of the following

- damming and/or draining water runoff
- guarding against hazards
- making up equipment
- overhaul
- protecting the ignition site
- salvage
- securing the area
- supply of materials

structures to be ventilated must include

- commercial
- high rise buildings
- mobile structures i.e. road, rail, aviation and marine vehicles
- multi-storey
- residential

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR302B Suppress urban fire.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFIR302 Suppress urban fire

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- attacking fires
- completing operations
- controlling fire environment by cooling fire gases
- determining extinguishing media and equipment
- firefighting tactics including cooling the fuels, interrupting the chemical chain reaction, removing fuels, excluding oxygen and ventilation
- firefighting suppression activities including locating and accessing the fire, search and rescue, anticipation of fire behaviour, ensuring safety, applying extinguishing media, applying techniques to maximise the effect and minimise the damage and identifying and protecting area of fire origin and evidence of cause
- initiating response to fire
- observing and reacting to fire conditions whilst maintaining situational awareness
- operating breathing apparatus
- operating firefighting equipment
- participating as a firefighting team member
- performing ancillary firefighting operations
- protecting people
- recognising fire behaviour indicators
- undertaking salvage and overhaul
- using natural and mechanical ventilation techniques
- utilising firefighting strategies and tactics for rescue, exposures, confinement, extinguishment, overhaul, ventilation and salvage
- working with a range of extinguishing media

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes

knowledge of

- combustion processes including spontaneous heating combustion and ignition
- damage to the environment from fire suppression activities including air pollution, hazards to flora and fauna, soil and water pollution
- structural fire behaviour and factors which impact on spread
- fire behaviour indicators
- firefighting tactics including cooling fuels, interrupting chemical chain reaction, removing fuels, excluding oxygen and ventilation
- firefighting considerations including available firefighting resources, extinguishing media, fire exposures, signs of structural collapse, size of fire, topography, type of fire and weather
- hazardous materials including those defined by the Australian Dangerous Goods Code and other fire extinguishing substances
- organisational documentation, policies and procedures including reporting and recording incident details and breathing apparatus control procedures
- personal protective clothing and equipment requirements including breathing apparatus
- purpose of ventilation techniques including assisting in fire suppression activities, facilitating evacuation of occupants, maximising visibility within a structure, minimising damage, preventing build up of toxic or explosive atmospheres and providing clean air
- strategies and methods of attack for extinguishing fires in a range of structures
- types of media for firefighting and their suitability for different classes of fire
- use of firefighting equipment and application of techniques
- ventilation techniques including horizontal, hydraulic, mechanical, natural and vertical
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Competency should be assessed on the job or in a simulated environment.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and

equipment currently used in industry including

- firefighting equipment, breathing apparatus, control equipment and extinguishing media
- firefighting, ventilation and salvage equipment
- range of controlled or simulated fires
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR303 Suppress wildfire

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to work as a member of a crew to apply appropriate fire control strategies and safe work practices to extinguish a wildfire, participate in mop ups and patrol operations and prepare equipment for the next crew.

The unit applies to personnel who work as a member of a crew or team. Work at this level is often undertaken without direct supervision and instruction. There may be some level of supervision of other members of the crew at this level.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR204 Respond to wildfire

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential    Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

- |                                                 |                                                                                                                                                              |
|-------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>1 Receive and report details of wildfire</b> | <b>1.1</b> Details of the wildfire including location, type, behaviour and developments are received and recorded                                            |
|                                                 | <b>1.2</b> Fire details are reported, in accordance with organisational requirements                                                                         |
| <b>2 Prepare to respond to fire</b>             | <b>2.1</b> Location of wildfire is confirmed and safest access route is determined                                                                           |
|                                                 | <b>2.2</b> Personal protective clothing and equipment, apparel, food and water are obtained before departure, in accordance with organisational requirements |
|                                                 | <b>2.3</b> Most appropriate appliance or vehicle is selected and used                                                                                        |
| <b>3 Proceed to fire</b>                        | <b>3.1</b> Location of wildfire is confirmed by observation or from instructions while on approach                                                           |
|                                                 | <b>3.2</b> Access to area is determined and achieved without injury to personnel or damage to vehicles, equipment or environmentally sensitive areas         |
|                                                 | <b>3.3</b> Evidence observed on approach relevant to wildfire cause is noted and brought to the attention of appropriate authorities                         |
|                                                 | <b>3.4</b> Navigational aids are used for planning and operational purposes                                                                                  |
|                                                 | <b>3.5</b> Notification of arrival and appropriate report is provided                                                                                        |
| <b>4 Protect people and assets</b>              | <b>4.1</b> As far as conditions allow the number, location and safety of people and assets in the threatened area is determined and assessed                 |
|                                                 | <b>4.2</b> Appropriate protective procedures are implemented, under direction, to protect persons in the path of a wildfire                                  |
|                                                 | <b>4.3</b> Access by the public and personnel to hazardous locations is controlled, as directed, in accordance with organisational procedures                |
|                                                 | <b>4.4</b> Defensibility of property and assets is considered and, if appropriate, assistance is provided to help occupiers                                  |
|                                                 | <b>4.5</b> Safety of people and assets in the threatened area is                                                                                             |

- monitored
- 4.6** Safety of people and security of assets in the area is checked and reported after the fire
- 5 Combat wildfire**
- 5.1** Briefing is received including area of operations, strategies and tactics to be employed
- 5.2** Escape routes and safety zones are confirmed and communicated to personnel
- 5.3** Firefighting media and equipment are selected and used in accordance with organisational procedures
- 5.4** Fire hazards are identified and action is taken to minimise the risks of injury to the public, personnel and self
- 5.5** Firefighting strategies and tactics are implemented to achieve objectives and to minimise overall damage and impact on assets and the environment
- 5.6** Fuel, weather and topographical factors are observed and potential fire behaviour is anticipated and acted upon to ensure safety
- 5.7** Communication is maintained with supervisor through the chain of command and with other firefighters in the work area
- 5.8** Fire control activities are undertaken to minimise overall damage and impact on assets and the environment
- 5.9** Potential fire behaviour is considered and acted upon to ensure safety and achievement of objectives
- 5.10** Fire reports are provided to supervisor, as required
- 5.11** Area of origin and evidence of fire cause are protected and brought to the attention of supervisor or relevant authority, in accordance with organisational procedures
- 6 Conduct mop up and patrol activities**
- 6.1** Mop up activities are carried out, in accordance with organisational procedures
- 6.2** Patrol of the fire is maintained
- 7 Recover and maintain equipment**
- 7.1** Equipment is made ready for operational use, in accordance with organisational procedures

- 7.2 Damaged or missing equipment is replaced, recorded and/or reported, in accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Unit Mapping Information

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

# Assessment Requirements for PUA FIR303 Suppress wildfire

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- anticipating and reacting to changing wildfire behaviour
- applying Work Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- assessing risk to life, property and the environment
- contributing to the implementation of firefighting strategies
- combating wildfires, performing firefighting tactics, and using firefighting equipment and extinguishing media
- communicating and working with team members
- conducting mop ups and patrol activities
- detecting hot spots and hazardous trees
- implementing and monitoring firefighting strategies and tactics
- interpreting fire weather, fuels and terrain and predicting likely impact on fire behaviour
- maintaining safety and health of self, other workers and people in a wildfire area
- participating in briefings and confirming instructions
- preparing to respond to wildfires, using navigation equipment
- proceeding to wildfires
- receiving, recording and reporting information

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- crew protective procedures
- access to wildfires
- recognition of environmentally sensitive areas and actions to minimise damage
- escape routes including prepared tracks, roads, trails and waterways
- fire behaviour and its response to different fuels, topography and weather conditions
- fire cause

- fireground hazards
- fire report requirements
- fuel types and factors that impact fire development
- media and equipment for firefighting
- means of transport to fire ground
- navigational aids including aerial photographs, compass, global positioning systems and maps
- organisational documentation, policies and procedures
- potential fire behaviour including fire development, flame height and intensity, fuel load and arrangement, rate of speed, spotting, change due to terrain, topography, changes due to weather conditions, winds and fire winds.
- protective procedures including alerts and warnings, insitu protection and relocation
- safety zones including bare ground, burnt areas, clearings, rivers, site of recent wildfire or prescribed burns and static water bodies
- strategies for firefighting including offensive strategies including direct attack, indirect attack, parallel attack and combined attack and defensive strategies including community and asset protection
- tactics for firefighting including back burning and burning out, control line construction - hand and machine and direct suppression and extinguishment
- tasks for firefighting including application of firefighting media, control line construction, mopping up and patrol
- topographical factors that affect fire development
- types of fires including crown, ground and surface
- types of assets that require protection
- weather factors that influence fire development
- Work Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation and safety near vehicles and machines

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - access to wildfire or prescribed burns and/or approved field based environment
  - firefighting equipment and extinguishing media
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR304 Respond to marine emergencies

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to work as a member of a team under supervision when responding to marine emergencies. It applies to personnel required to respond to an incident involving a marine structure or vessel. The incident may involve fire and hazardous materials.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR207 Operate breathing apparatus open circuit

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Proceed to marine

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1.1 Information about vessel, location and type of marine

|                                                               |                                                                                                                                                                             |
|---------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>emergency</b>                                              | emergency is received, in accordance with organisational procedures and requirements, with relevant stakeholders and support agencies or organisations immediately notified |
|                                                               | <b>1.2</b> Personal protective clothing and equipment is donned in response to type of marine emergency                                                                     |
|                                                               | <b>1.3</b> Most effective route to marine emergency is identified                                                                                                           |
|                                                               | <b>1.4</b> Access to marine emergency is gained whilst protecting life and minimising damage to property and environment, in accordance with organisational procedures      |
| <b>2 Prepare extinguishing media and/or equipment for use</b> | <b>2.1</b> Water supplies at incident to support firefighting are located                                                                                                   |
|                                                               | <b>2.2</b> Resources and equipment to access and assist in marine emergency operations are identified and assembled                                                         |
|                                                               | <b>2.3</b> Nominated extinguishing media or equipment is identified, obtained and accessed                                                                                  |
|                                                               | <b>2.4</b> Equipment is used, in accordance with organisational procedures and manufacturers' specifications                                                                |
| <b>3 Access marine structure or vessel</b>                    | <b>3.1</b> Hazards and special risks are identified, monitored and controlled, in accordance with organisational procedures                                                 |
|                                                               | <b>3.2</b> Personal protective clothing and equipment selected is appropriate to hazards and special risks                                                                  |
|                                                               | <b>3.3</b> Breathing apparatus is checked and donned, in accordance with organisational procedures                                                                          |
|                                                               | <b>3.4</b> Breathing apparatus procedures are followed, in accordance with organisational procedures                                                                        |
|                                                               | <b>3.5</b> Access to marine emergency site is gained, in accordance with organisational procedures                                                                          |
|                                                               | <b>3.6</b> Nature and location of marine emergency is determined                                                                                                            |
| <b>4 Conduct search and rescue</b>                            | <b>4.1</b> Systematic primary and secondary searches are conducted                                                                                                          |
|                                                               | <b>4.2</b> All areas are searched and marked, in accordance with organisational procedures                                                                                  |

- 4.3 Casualties are located, assisted and rescued, in accordance with organisational procedures
  - 4.4 Fatalities are located and protected, in accordance with organisational procedures and relevant legislation
  - 4.5 All persons are accounted for and information is communicated through the chain of command
- 5 Combat the emergency**
  - 5.1 Organisational firefighting objectives and strategies are received, confirmed and implemented under direction
  - 5.2 Firefighting tactics are selected, in accordance with the type of marine emergency and with actual or potential hazards identified
  - 5.3 Firefighting considerations are taken into account when implementing tactics
  - 5.4 Marine emergency is located and access is gained in the safest manner to minimise damage to property or risk of injury
  - 5.5 Incident potential is anticipated and action is taken to protect the safety of self and others
  - 5.6 Strategies and tactics are selected to minimise injury to persons, damage to property and impact on the environment
  - 5.7 Ongoing communication is maintained throughout the operation between firefighters and marine crew members using the chain of command
- 6 Observe and react to changing conditions**
  - 6.1 Changing conditions at the marine emergency site are observed and their effects on vessel behaviour are noted and reported, as required
  - 6.2 Tactics are adapted to meet changing conditions and vessel behaviour
  - 6.3 Safe paths of egress are identified and maintained at all times
- 7 Participate in ancillary operations**
  - 7.1 Ancillary operations are undertaken to complement marine emergency operations and to prevent further damage to the vessel and its contents
  - 7.2 Water runoff is monitored and conditions reported

- |                              |            |                                                                                                               |
|------------------------------|------------|---------------------------------------------------------------------------------------------------------------|
|                              | <b>7.3</b> | Risk and/or damage to the environment is avoided or minimised during ancillary operations                     |
|                              | <b>7.4</b> | Marine emergency incident information is completed and recorded, in accordance with organisational procedures |
| <b>8 Conclude operations</b> | <b>8.1</b> | All equipment is removed from the marine emergency incident site, after completion of activities              |
|                              | <b>8.2</b> | Equipment is cleaned, reinstated and stowed, in accordance with organisational procedures                     |
|                              | <b>8.3</b> | Participate in debriefing sessions                                                                            |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

support agencies must include

- organisations covered by existing emergency management arrangements such as
  - environmental agencies
  - police
  - volunteer coast guard

personal protective clothing and equipment must include

- breathing apparatus
- chemical protective clothing
- life jacket, including whistle and strobe light
- safety harness and lines
- turnout uniforms and gloves

resources must include six or more of the following

- access craft
- aircraft or helicopter
- bulk extinguishing agent
- communication equipment
- deep lift and volume
- extrication equipment
- hi-x foam equipment

|                                                                                   |                                                                                                                                                                                                                                                                  |
|-----------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                   | <ul style="list-style-type: none"><li>• international shore connection</li><li>• positive pressure ventilation fan</li><li>• pumps</li><li>• ship fire control plans</li><li>• ship manifest</li><li>• thermal imaging equipment</li><li>• water drill</li></ul> |
| firefighting strategies must include                                              | <ul style="list-style-type: none"><li>• combination attack</li><li>• defensive and offensive mode</li><li>• direct and indirect attack</li><li>• direction of attack</li><li>• overhead</li></ul>                                                                |
| firefighting tactics must include                                                 | <ul style="list-style-type: none"><li>• boundary cooling</li><li>• cooling fuels</li><li>• diluting fuel</li><li>• excluding oxygen</li><li>• interrupting chemical chain reaction</li><li>• removing fuels</li></ul>                                            |
| ancillary operations must include participating in three or more of the following | <ul style="list-style-type: none"><li>• damming and/or draining water runoff</li><li>• guarding against hazards</li><li>• making up equipment</li><li>• overhaul</li><li>• salvage</li><li>• securing area</li></ul>                                             |

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR304B Respond to marine emergencies.

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFIR304 Respond to marine emergencies

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- accessing resources
- accessing vessel
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- combating marine emergency
- concluding operations including recording required information
- conducting marine emergency operations using safe work practices
- conducting search and rescue
- identifying hazards and special risks
- implementing firefighting objectives, strategies and tactics for marine events
- monitoring vessel stability
- observing and reacting to changing conditions on vessel
- operating firefighting equipment on vessels
- participating in ancillary operations
- preparing and applying extinguishing media and/or equipment for use
- proceeding to marine emergency
- wearing personal protective clothing and equipment
- working with vessel stability control techniques

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- hazards and special risks
- impact of changing conditions
- industry stakeholders and support organisations and agencies
- industry stakeholders including marine authorities and port operators and owners

- marine emergency pre-incident plans
- maritime emergencies and firefighting on a vessel
- objectives, strategies and tactics for firefighting marine events
- organisational documentation, policies and procedures
- personal protective clothing and equipment
- safety considerations including safe work practices
- vessels including firefighting systems, types and construction and stability
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - range of controlled or simulated marine emergencies
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

## PUAFIR305 Respond to aviation incidents (general)

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to work as a member of a non-specialist team, under supervision, when responding to an aviation incident. It applies to personnel required to respond to an aircraft incident, primarily outside of major domestic and international airports, it is not intended for specialised aviation firefighters.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

One of the following:

PUAFIR220 Respond to isolated structure fire

PUAFIR203 Respond to urban fire

### Competency Field

Fire

### Unit Sector

Fire

### Elements and Performance Criteria

#### ELEMENTS

#### PERFORMANCE CRITERIA

Elements describe the essential    Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

**1 Respond to aviation emergency**

- 1.1** Approach to aviation incident is determined by onsite and environmental conditions
- 1.2** Access to aviation incident is based on airport and aircraft knowledge and use of maps, plans and diagrams
- 1.3** Equipment is selected and used to achieve aviation incident objectives, strategies and tactics

**2 Evacuate persons and attend to casualties**

- 2.1** Hazards and injury risks associated with aircraft fires and crashes are identified and reported
- 2.2** Equipment is selected and located to facilitate evacuation and rescue
- 2.3** Appropriate rescue techniques are used to release trapped persons
- 2.4** Evacuees are moved and/or directed to a safe area, in accordance with organisational procedures

**3 Conduct aviation emergency operations**

- 3.1** Operational tactics are determined, communicated and implemented based on aviation incident conditions and available resources and equipment
- 3.2** Changing conditions are evaluated and any changes to tactics is communicated through the chain of command, in accordance with organisational procedures
- 3.3** Operations are carried out, in accordance with organisational procedures
- 3.4** Ongoing liaison is conducted with emergency services and relevant authorities, in accordance with organisational procedures

**4 Conclude aviation emergency operations**

- 4.1** Evidence at the aviation incident is preserved and secured
- 4.2** Any damage to the aircraft, caused by forcible entry is recorded and reported, in accordance with organisational procedures
- 4.3** At conclusion of aviation incident responsibility for the site is transferred to relevant authority

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR305B Respond to aviation incidents (general).

# Assessment Requirements for PUAFIR305 Respond to aviation incidents (general)

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- concluding aviation operations
- conducting operations using available resources and equipment
- evacuating persons and attending to casualties
- identifying hazards and risks
- implementing aviation objectives, strategies and tactics
- participating in aircraft incident response planning
- preserving and securing evidence at scene
- responding to aviation emergency including identifying type of incident
- selecting and using firefighting equipment and extinguishing media
- selecting and using firefighting personal protective clothing and equipment

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- aircraft construction
- aircraft hazards
- aircraft emergency procedures
- airport operating procedures
- available resources and equipment
- characteristics and limitations of equipment and resources
- emergency procedures for aviation accidents and incidents
- fire ground strategies and tactics for aviation incidents
- objectives, strategies and tactics including control and extinguish fire, isolate aircraft fuselage from hazard and maintain safe escape routes
- organisational documentation, policies and procedures
- onsite and environmental conditions including potential conditions

- types of aviation accidents and incidents
- types of aircraft fires
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

# PUAFIR306 Identify, detect and monitor hazardous materials at an incident

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to use specific equipment to detect airborne contaminants, liquids and solids at a hazardous materials incident.

The unit applies to personnel required to detect and identify contaminants at a hazardous materials incident using specialist equipment to identify the materials, assess risks posed by the materials identified and to formulate a plan for their safe isolation and mitigation.

Hazardous materials incident is a generic term used to refer to an incident involving any hazardous material based on physico-chemical, chemical, biological or radiological properties that poses an unreasonable risk to life, property or the environment. This includes dangerous goods, goods too dangerous to be transported and hazardous chemicals.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR207 Operate breathing apparatus open circuit

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Assess hazardous materials incident**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Hazardous materials incident is approached using care and caution and a safe distance is maintained, in accordance with organisational procedures and advice from appropriate authorities

**1.2** Hazardous materials are identified from a safe distance and information is conveyed through the chain of command, in accordance with organisational procedures

**1.3** Information sources are accessed to determine potential behaviour of hazardous materials, in accordance with organisational procedures

#### **2 Identify and assess hazards at incident**

**2.1** Site hazards are identified, in accordance with organisational procedures

**2.2** Specific hazards relating to materials and containers are identified, in accordance with organisational procedures

**2.3** Relevant hazard information is incorporated into detection strategy

**2.4** Hazards are assessed, in accordance with organisational procedures, and information is conveyed through the chain of command

#### **3 Develop an entry plan**

**3.1** Entry plan objectives are identified and conveyed through the chain of command

**3.2** Entry plan is developed, in accordance with organisational procedures

**3.3** Appropriate detection equipment is assessed and selected, in accordance with organisational procedures

**3.4** Personal protective clothing and equipment is identified, selected and checked, in accordance with organisational policies, procedures and response situation

**3.5** Hazard control zones are established, in accordance with organisational procedures

**3.6** Decontamination procedures are identified

- |                               |            |                                                                                                                                                  |
|-------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
|                               | <b>3.7</b> | Organisations required to assist with the operation are determined and documented                                                                |
|                               | <b>3.8</b> | Detection strategy is documented, in accordance with organisational procedures                                                                   |
| <b>4 Implement entry plan</b> | <b>4.1</b> | Entry plan is implemented in accordance with organisational procedures                                                                           |
|                               | <b>4.2</b> | Detection equipment is prepared for use, in accordance with organisational procedures                                                            |
|                               | <b>4.3</b> | Detection equipment is used and maintained, in accordance with organisational procedures                                                         |
|                               | <b>4.4</b> | Personal protective clothing and personal protective equipment is donned and operated, in accordance with organisational policies and procedures |

|                               | <b>4.6</b> | Upon leaving area of operations, decontamination procedures are undertaken, in accordance with organisational procedures                         |
| <b>5 Review entry plan</b>    | <b>5.1</b> | Entry plan is reviewed and safety of entry team is monitored, in accordance with organisational procedures                                       |
|                               | <b>5.2</b> | Contamination incidents are recorded and reported to appropriate personnel, in accordance with organisational procedures                         |
|                               | <b>5.3</b> | Entry plan is reviewed and documentation is completed, in accordance with organisational procedures                                              |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

identification of hazardous materials must include

- HAZMAT (hazardous materials) information
- initial information
- placarding
- product or trade names
- site manager
- visual signs and material indicators
- CHEMDATA
- Safety Data Sheets (SDS)
- technical specialist

information sources must include

and must include one of the following

- electronic databases
- environment
- reference texts

entry plan must include

- action levels
- decontamination
- detection strategy
- personal protective clothing and equipment
- safe approach entry and exit

detection equipment must include

- carbon monoxide and hydrogen sulphide detectors
- flammable gas detector
- oxygen detector

and must include three or more of the following

- air sampling apparatus
- biological agent detectors
- chemical agent monitors
- colourimetric detection tubes
- field sampling kit
- flame ionisation detectors and flame photometric detectors
- Fourier Transform Infrared (FTIR) spectrometers
- Hazard Categorisation (HAZCAT) kits
- indicator paper
- ionisation mobility spectrometers
- photoionisation detectors
- radiation detectors and dosimeters
- radioisotope identifiers and neutron detectors
- Raman spectrometers

- remote air sampling equipment
  - sampling tubes
  - specific electrochemical detectors such as formaldehyde, chlorine, mass spectrometers and explosive detection kits and/or detectors
- personal protective clothing must include
- chemical protective clothing including splash suits
  - gas tight suits
  - turnout uniform and gloves
- personal protective equipment must include
- breathing apparatus
  - control boards
  - Distress Signal Units (DSU)
- response situations must include three or more of the following
- confined spaces
  - hazardous materials storage sites
  - hazardous waste sites
  - motor vehicle accidents
  - post fire situations
  - ships
  - storage tanks and silos
  - transport vehicles
  - unknown substance incidents

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR316 Identify, detect and monitor hazardous materials at an incident.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFIR306 Identify, detect and monitor hazardous materials at an incident

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- analysing and communicating detection results
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- assessing hazardous materials at an incident
- collecting and interpreting safety and hazard information
- complying with legislation
- demonstrating safe working practices
- developing, implementing and reviewing an entry plan
- donning and operating in, decontaminating and removing in personal protective clothing and equipment
- establishing control zones
- identifying and assessing hazards at an incident including implementing hazardous control zones
- identifying hazardous materials
- identifying, selecting, checking, testing and maintaining personal protective clothing and equipment for a range of hazardous materials
- implementing decontamination procedures
- implementing organisational procedures and operating guidelines
- interpreting hazardous conditions using detection equipment
- maintaining monitoring equipment
- operating breathing apparatus
- recommending appropriate actions when identifying, detecting and monitoring materials
- recording and interpreting data
- reviewing entry plan
- selecting, operating and interpreting detection equipment

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- apparatus (breathing) maintenance and procedures
- asphyxiates including simple, chemical, flammable gases and liquids
- basic chemistry concepts
- conditions under which atmospheres become hazardous
- decontamination procedures and types of decontamination including
  - decontamination areas including holding, wash, disrobing and rest
  - decontamination plan and corridor
  - decontamination techniques including emergency, emergency mass and technical decontamination
- detection strategies applied for decontamination
- dynamic risk assessments
- dynamics of toxicity, corrosivity and flammability
- effects on humans exposed to commonly encountered atmospheric contaminants such as reaction products, combustion products and variable oxygen concentrations
- entry plans
- flammable range
- identification of hazardous materials
- information sources
- legislation relevant to organisation
- local and systemic effects of industrial toxins
- main routes for entry of toxins into the human body
- odour threshold including exposure standards including time weighted average, short term exposure limits and peak limitation values and Immediate Danger to Life and Health (IDLH) which may include Acute Exposure Guideline Levels (AEGL)
- organisational documentation, policies and procedures including those of government
- personal protective clothing and equipment use and limitations for a range of hazardous materials
- physical and chemical properties
- potential behaviour of hazardous materials including corrosivity, entry routes of toxins, flammability, toxicity, vapour density and pressure
- procedures for establishment, maintenance and review of control zones including entry plans and decontamination
- response situations
- roles and responsibilities of other agencies
- support organisations required to assist
- types of hazards including chemical, biological and radiological, physical, electrical, mechanical, thermal, visual, environment and dangerous situations and pressure vessels and lines

- types of hazard control zones including
  - area of likely contamination (hot zone)
  - area of operations (warm zone)
  - controlled exits, entrances, refuges and emergency exits
  - criteria applied to determine the extent of hazardous areas
  - support zone (cold zone)
- units of measurement used to express concentration of atmospheric contaminants (mg/cubic m, ppm, % and v/v)
- upper and lower flammable limits
- use and limitations of workplace exposure standards
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Competency should be demonstrated over a range of situations in environments with detectable but safe levels of contaminants using different types of detection equipment.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - a range of detection equipment
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR307 Operate aerial appliance

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to operate aerial appliances designed for high level rescues or firefighting at an incident. It includes siting aerial appliance, operating appliance and concluding operations.

The unit applies to personnel required to safely and competently site and operate aerial appliances.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAEQU001 Prepare, maintain and test response equipment

PUAFIR210 Prevent injury

PUAVEH001 Drive vehicles under operational conditions

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

## **1 Site aerial appliance**

- 1.1** Onsite physical hazards which impact on safe working operations of appliance and ancillary equipment are identified and appliance is sited to minimise impact, in accordance with organisational procedures
- 1.2** Aerial appliance is positioned in a location that supports operational requirements, in accordance with organisational procedures, to prevent injury to personnel or damage to equipment and facilities
- 1.3** Personal protective clothing and equipment is selected and worn, in accordance with organisational procedures and Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- 1.4** Personnel working with the aerial appliance are deployed, in accordance with organisational operating procedures and WHS/OHS guidelines

## **2 Operate appliance**

- 2.1** Aerial appliance is operated within safe working limits, in accordance with organisational procedures and manufacturers' specifications
- 2.2** Performance of aerial appliance is monitored and adjusted in response to changed conditions to achieve determined strategies and objectives
- 2.3** Action is taken to rectify any deficiencies in the operation of the aerial appliance, where possible
- 2.4** Aerial appliance is operated in a manner to prevent injury to personnel or damage to equipment and facilities
- 2.5** Fire spread, onsite hazards and atmospheric conditions and their potential impact on aerial appliance operations are monitored and relevant information is referred to appropriate personnel
- 2.6** Communication is established and maintained with appropriate personnel through the chain of command

## **3 Conclude operations**

- 3.1** Ancillary equipment is cleaned, reinstated and stowed, in accordance with organisational procedures and WHS/OHS guidelines

- 3.2 Aerial appliance is checked and equipment is maintained and any faults or deficiencies are reported, in accordance with organisational procedures
- 3.3 Participate in debriefing sessions

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

aerial appliance must include

- hydraulic articulated platform
- hydraulic platform
- ladder platform
- teleboom
- turntable ladder

ancillary equipment must include two or more of the following

- breathing apparatus
- communications
- firefighting
- lighting
- rescue

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR317 Operate aerial appliance.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFIR307 Operate aerial appliance

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- avoiding hazards and obstacles
- checking and maintaining equipment
- concluding operations
- identifying and avoiding hazards and obstacles including overhead, structural and surface
- implementing safe work practices
- operating ancillary equipment
- operating communication equipment
- operating crew basket, monitor and rescue stretcher
- siting and operating aerial appliances safely
- wearing personal protective clothing and equipment

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- ancillary equipment
- checks of ancillary equipment
- communication methods
- impact of weather
- organisational documentation, policies and procedures including operation of standby procedures, aerial appliance siting and stabilisation and elevating, extending, depressing and housing an aerial appliance
- personal protective clothing and equipment including breathing apparatus including self-contained or airline, eye and ear protection, helmet and gloves, safety harness and structural firefighter turnout clothing

- potential fields of operation
- potential hazards including atmospheric conditions such as wind direction and strength, overhead electrical wires, structural collapse and surface (ground) collapse
- principal features and components of aerial appliances
- roles and responsibilities of organisational and/or aerial appliance personnel
- safe working limits and safety features of aerial appliance
- safe working operations
- use of communication equipment
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including emergency procedures and risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - organisational aerial appliances and site suitable for assessment
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR308 Employ personal protection at a hazardous materials incident

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to select, don, test and safely operate appropriate personal protective clothing and equipment at an incident involving dangerous goods and hazardous chemicals as well as safely combatting incidents involving hazardous materials.

A hazardous material incident is a generic term used to refer to any incident involving any hazardous materials based on physio-chemical, chemical, biological or radiological properties that pose an unreasonable risk to life, property or the environment. This includes dangerous goods, goods too dangerous to be transported and hazardous chemicals.

Incident Controllers will determine the appropriate level of personal protection clothing and equipment required at a hazardous materials incident, based on information collected at the site and advice received from electronic databases and specialist sources.

The unit applies to personnel who through their work are required to don, test and operate designated personal protective clothing and equipment at a hazardous materials incident.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR207 Operate breathing apparatus open circuit

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Select, don and test personal protective clothing and equipment**

- 1.1** Appropriate personal protective clothing and equipment are identified using relevant sources and is selected and checked based on the hazard, in accordance with organisational procedures
- 1.2** Personal protective clothing and equipment is donned and tested, in accordance with organisational procedures and safe work practices
- 1.3** Personal protective clothing and equipment is checked, donned and tested prior to entry into fire or hazardous atmospheres to ensure it is operational and meets organisational Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) procedures

#### **2 Work in area of operation**

- 2.1** Personal protective clothing and equipment is worn and/or operated to minimise risk of injury to wearer and others from environmental health hazards, in accordance with organisational procedures
- 2.2** Activities undertaken in the area of operations are in accordance with organisational procedures

#### **3 Complete operations**

- 3.1** Decontamination procedures are implemented on leaving the area, in accordance with organisational procedures
- 3.2** Personal protective clothing and equipment are removed without damage, in accordance with organisational procedures
- 3.3** Personal protective clothing and equipment are cleaned, maintained or serviced and stowed, in accordance with organisational procedures
- 3.4** Documentation is completed, in accordance with

organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

- |                                                                                               |                                                                                                                                                                                                                                                              |

# Assessment Requirements for PUA FIR308 Employ personal protection at a hazardous materials incident

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes

- applying Work, Health and Safe (WHS)/Occupational Health and Safety (OHS) organisational requirements
- checking, testing and maintaining personal protective clothing and equipment
- completing hazardous materials operations
- completing organisational documentation
- following organisational testing procedures
- identifying and accessing sources of information for recognition of chemical hazards and dangerous goods
- identifying appropriate protective clothing and equipment for a range of hazardous materials
- implementing decontamination procedures
- operating personal protective equipment including Breathing Apparatus (BA), control boards and Distress Signal Units (DSU)
- selecting, donning, operating and maintaining personal protective clothing and equipment
- working in area of operations
- working in personal protective clothing and equipment at hazardous materials incidents

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- characteristics and limitations of personal protective clothing and equipment
- check, test and maintenance procedures for personal protective clothing and equipment
- decontamination area including holding area, wash area and disrobing and rest area
- decontamination of personal protective clothing and equipment
- decontamination procedures and types of decontamination including decontamination plan and corridor
- decontamination techniques including wet, dry, combination of wet and dry and emergency, emergency mass and technical decontamination

- environmental hazards
- equipment including breathing apparatus
- local and systemic effects of industrial toxins
- main routes for entry of toxins into the human body
- organisational documentation, policies and procedures
- sources of information to identify chemical hazards and dangerous goods
- use and limitations of industry exposure standards
- Work, Health and Safe (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation processes

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

# PUAFIR309 Operate pumps

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to operate a portable pump and/or appliance mounted pump at an incident.

The unit is applicable to personnel who are responsible for operating centrifugal appliance mounted pumps, portable pumps and foam systems at an incident. Typically, this work requires the application of basic principles hydraulics and involves working as a member of a team under limited supervision.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAEQU001 Prepare, maintain and test response equipment

One of the following:

PUAFIR203 Respond to urban fire

PUAFIR220 Respond to isolated structure fire

PUAFIR204 Respond to wildfire

PUAFIR205 Respond to aviation incident

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare pump to deliver water**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Type of pump and hose selected is appropriate to the operation and/or incident
- 1.2** Suitability of water supply for operational purposes is determined
- 1.3** Pump is sited and positioned to receive and deliver water supply, in accordance with organisational procedures and requirements
- 1.4** Pump and primer are engaged, in accordance with organisational procedures and manufacturers' guidelines
- 1.5** Appropriate agents and equipment are prepared for production of foam at an incident, as required

#### **2 Operate pump**

- 2.1** Pump components and ancillary equipment are utilised to draught water, to boost water from a reticulated supply or to deliver and relay water from an appliance tank, in accordance with organisational procedures and requirements of incident
- 2.2** Pump operation is in accordance with organisational procedures, manufacturers' specifications, and Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) guidelines
- 2.3** Pump settings are determined, in accordance with organisational procedures and requirements of the incident
- 2.4** Pumps are operated and observed to ensure that pressure and flow of water meets operational requirements and that safety to personnel is maintained
- 2.5** Pump performance is monitored and maintained to ensure maximum efficiency of operation, to detect and correct pumping and safety problems and to take appropriate action, in accordance with organisational procedures
- 2.6** Pump operations are carried out avoiding injury to

|                                   |            |                                                                                                                                                        |

- monitoring of gauges and warning lights
- pump operators working on other units when relay pumping
- use of pressure relief valves and transfer valves
- use of pump performance charts or tables illustrating information such as optimum nozzle pressure and friction loss

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR309B Operate pumps.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFIR309 Operate pumps

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- accessing static and reticulated water supplies
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- concluding pump operations
- implementing organisational procedures
- maintaining appropriate levels of pressure
- monitoring levels of water in appliance tank to ensure minimum levels for crew protection
- monitoring supply of foam concentrate
- observing personnel and pumping throughout incident
- operating a pump including using gauges and controls, positioning and priming
- preparing pump to deliver water
- providing and maintaining water supply to branch operators
- pumping without injury to personnel or damage to equipment
- responding to changing circumstances
- supplying or delivering correct proportion of foam and water
- supplying water to a location by use of a relay pump
- using ancillary equipment to support pump operations

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- ancillary equipment used to support delivery of foam and/or water
- determination of water supply capacity and suitability
- discharge and flow rates
- jet reaction
- organisational documentation, policies and procedures
- power train for pump

- principles of hydraulics
- principles of hydraulic flow and pressure, priming and operating pumps, pump components and their operation and pump gauges and/or controls
- pump positioning
- relay pumping including when to use and how it is done
- static and reticulated water supply and their use in pumping operations
- types of primer and their use in pumping operations
- types of foam concentrate, pumps and primers and foam agents and equipment
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - a range of pumps
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR310 Operate specialist appliance

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to operate a specialist appliance at an incident.

A specialist appliance is a vehicle designed for a specific purpose which may include hazardous materials response, mobile communication, heavy rescue, salvage or specialist mechanical support.

The unit applies to personnel who are required to safely operate specialist appliances in emergency response and firefighting situations. It should be noted that individuals may be required to demonstrate competence to organisational standards to be deemed an operator of a specific specialist vehicle.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Site specialist appliance**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Specialist appliance and ancillary equipment is sited, in accordance with organisational procedures, to minimise

- hazards which may impact on safe working operations
- 1.2** Specialist appliance is positioned, in accordance with organisational procedures, to support operational requirements and to prevent injury to personnel or damage to equipment and facilities
  - 1.3** Personal protective clothing and equipment is selected and worn, in accordance with organisational procedures and Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) guidelines
  - 1.4** Specialist appliance equipment is deployed, in accordance with organisational procedures and WHS/OHS guidelines
- 2 Operate specialist appliance**
- 2.1** Specialist appliance is operated, in accordance with organisational procedures and manufacturers' specifications
  - 2.2** Safe clearances are maintained to ensure that personnel are not injured by the operation of specialist appliance
  - 2.3** Performance of specialist appliance is monitored and adjusted, as required, in response to changed conditions and to achieve determined strategies and objectives
  - 2.4** Action is taken to rectify any deficiencies in the operation of specialist appliance, as required
  - 2.5** Specialist appliance is operated in a manner that prevents injury to personnel or damage to equipment and facilities
  - 2.6** Fire spread, onsite hazards and atmospheric conditions including potential impact on specialist appliance operations are monitored and relevant information is referred to appropriate personnel
  - 2.7** Communication is established and maintained through the chain of command
- 3 Conclude specialist appliance operations**
- 3.1** Ancillary equipment is collected and stowed, in accordance with organisational procedures and WHS/OHS guidelines
  - 3.2** Specialist appliance is checked and maintained, and any faults or deficiencies are reported, in accordance with organisational procedures

### 3.3 Participate in debriefing sessions

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR318 Operate specialist appliance.

## Links

# Assessment Requirements for PUAFIR310 Operate specialist appliance

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- checking and maintaining equipment and reporting faults
- concluding specialist appliance operations
- identifying and avoiding hazards
- implementing safe work practices
- operating specialist appliance
- operating equipment located on specific appliances
- siting specialist appliance
- using approved communication methods
- working with ancillary equipment
- wearing personal protective clothing and equipment

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- ancillary equipment
- communication methods on fire ground
- hazards including atmospheric conditions such as wind direction and strength, fire explosion, fire spread, hazardous atmospheres such as smoke and toxic gases and structural collapse
- impact of weather on operation of specialist appliance
- organisational documentation, policies and procedures for use in specialist appliances
- personal protective clothing and equipment
- potential hazards
- principal features and components of specialist appliance
- safe working operations including compliance with manufacturers' specifications, organisational operational procedures and WHS/OHS guidelines
- specialist appliance including breathing apparatus unit, command unit, firefighting appliance

either non-water or foam, foam or water tender, HAZMAT (hazardous materials) response unit, hose layer, lighting and salvage units and rescue tender

- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

# PUAFIR311 Dispatch rappel personnel and equipment from a helicopter

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to dispatch operational rappel personnel and equipment from a hovering helicopter for fire suppression purposes. It applies to personnel who supervise others rappelling from a hovering helicopter. This work involves adherence to rappelling policies, regulations, protocols and procedures required for these activities.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR212 Rappel from helicopter

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential    Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

**1 Prepare operational dispatch equipment**

- 1.1** Specialist rappel and dispatch equipment is selected and prepared, in accordance with organisational procedures and safe work practices
- 1.2** Appropriate rappel and dispatch equipment is donned, in accordance with organisational requirements
- 1.3** Personal equipment pre-flight check is conducted, in accordance with organisational procedures and requirements
- 1.4** Rappel and cargo ropes are loaded into the helicopter and secured
- 1.5** Equipment faults are reported to supervisor, for rectification or replacement

**2 Conduct helicopter pre-flight check and preparation**

- 2.1** Helicopter cabin area is prepared, in accordance with organisational procedures and requirements
- 2.2** Helicopter emergency equipment is located and checked, in accordance with organisational procedures
- 2.3** Rappel rope attachment points are inspected and operational status is confirmed
- 2.4** Rappel ropes are attached to rope attachment points
- 2.5** Helicopter communications system is tested and operational status confirmed
- 2.6** Helicopter equipment faults are reported to pilot
- 2.7** Pre-mission brief details are confirmed with appropriate personnel

**3 Load rappellers and equipment into helicopter**

- 3.1** Weight of rappel personnel, rappel and firefighting equipment is obtained
- 3.2** Equipment is secured in helicopter, in accordance with organisational procedures and weight and balance requirements
- 3.3** Rappellers are appropriately secured in seats
- 3.4** Personal attachment to helicopter is confirmed

- |                                                   |            |                                                                                                                                                          |
|---------------------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                   | <b>3.5</b> | Pre-flight operational checks and briefs are undertaken, in accordance with organisational procedures and requirements                                   |
| <b>4 Conduct rappel site inspection</b>           | <b>4.1</b> | Overfly of prospective rappel site is undertaken, in accordance with organisational procedures and requirements                                          |
|                                                   | <b>4.2</b> | Hazard assessment of proposed dispatch site is undertaken                                                                                                |
|                                                   | <b>4.3</b> | Pilot and rappel crew leader are informed as to site suitability                                                                                         |
|                                                   | <b>4.4</b> | Possible escape routes from fire are identified and conveyed to rappel crew                                                                              |
| <b>5 Dispatch rappel crew and their equipment</b> | <b>5.1</b> | Pre-dispatch checks of rappellers, attachment to rappel ropes and equipment are conducted, in accordance with organisational procedures and requirements |
|                                                   | <b>5.2</b> | Pilot is directed to maintain helicopter over rappel site, in accordance with organisational procedures and requirements                                 |
|                                                   | <b>5.3</b> | Pilot's approval to conduct a rappel is obtained                                                                                                         |
|                                                   | <b>5.4</b> | Rappel rope is attached and checked, in accordance with organisational procedures, prior to commencing the dispatch                                      |
|                                                   | <b>5.5</b> | Rappellers are directed to helicopter skids using relevant hand signals, in accordance with organisational procedures and requirements                   |
|                                                   | <b>5.6</b> | Rappeller and equipment descent and landing are monitored                                                                                                |
|                                                   | <b>5.7</b> | Communication is maintained with rappellers, pilot and control organisation                                                                              |
|                                                   | <b>5.8</b> | Emergency procedures are invoked, as required, in accordance with organisational procedures and requirements                                             |
| <b>6 Retrieve personnel and equipment</b>         | <b>6.1</b> | Appropriate ropes and equipment for the retrieval of rappellers are prepared                                                                             |
|                                                   | <b>6.2</b> | Pre-retrieval checks of rappellers, attachment to rappel ropes and equipment are conducted, in accordance with                                           |

- organisational procedures and requirements
- 6.3** Pilot is briefed on proposed retrieval operation
- 6.4** Equipment and personnel extraction is conducted, in accordance with organisational procedures and requirements
- 6.5** Personnel extraction is conducted, in accordance with organisational procedures and requirements
- 7 Complete rappel operations**
  - 7.1** Debriefing of rappellers and pilot is conducted, in accordance with organisational procedures and requirements
  - 7.2** Helicopter equipment is inspected and stowed and all identified faults are reported to the pilot
  - 7.3** Rappel equipment and rope attachment points are inspected, in accordance with organisational procedures and requirements
  - 7.4** Damage to rappel equipment is reported to appropriate personnel for repair, replacement or disposal, in accordance with organisational procedures and practices
  - 7.5** Report on operation is completed, in accordance with organisational procedures and requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR311B Dispatch rappel personnel and equipment from a helicopter.

# Assessment Requirements for PUA FIR311 Dispatch rappel personnel and equipment from a helicopter

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- conducting helicopter pre-flight check and preparation
- communicating with crew and rappellers through communication system
- completing rappel operations including finishing reports
- completing extractions of personnel and equipment
- following legislative and operational guidelines
- dispatching rappel crew and specialist equipment
- operating helicopter emergency equipment
- performing rappel site inspection
- preparing and stowing equipment
- reporting accidents and incidents including transmitting reports required during rappel operations
- retrieving personnel and equipment through implementation of lowering and retrieving including use of static extraction and rappelling techniques
- seating rappellers prior, during and following rappelling from helicopter
- sequencing and controlling rappelling techniques and operations
- selecting a suitable site
- transmitting reports required during rappel operations
- using hand signals
- weighing equipment and personnel
- working with organisational procedures including codes of practice, hazard policy, emergency procedures, flight instructions, safe use of equipment, housekeeping processes, utilising safe operating procedures, implementing equipment inspection and maintenance process and planning and implementing briefing and debriefing processes

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the

requirements of the elements and performance criteria and includes knowledge of

- communication systems and techniques
- extraction and retrieval methods
- factors to consider when assessing site suitability
- helicopter conning
- helicopter environment awareness
- helicopter safety including emergency equipment
- industry standards, organisational requirements and Civil Aviation Safety Authority (CASA) regulations
- key roles and responsibilities of helicopter crew
- organisational documentation, policies and procedures
- pre-flight checks
- reports required during rappel operations
- specialist rappel despatch equipment
- weight distribution principles and effects on a helicopter
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation and emergency procedures

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Competency should be assessed in a simulated environment followed by an assessment by a certified operator on the job that encompasses a number of scenarios.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective clothing and equipment currently used in industry including
  - rappelling equipment and materials, personal protective and safety equipment, area to conduct operations, helicopters, briefing reports and organisational procedural, documentation, appropriate personnel and emergency information
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR314 Utilise installed fire safety systems

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to operate and reinstate installed fire safety systems, to operate occupant warning systems and to apply emergency procedures.

The unit applies to personnel required to locate fire safety systems in a building and to operate these systems to support fire suppression activities. These personnel will also be required to utilise these systems to support the evacuation of occupants and other emergency services personnel from the building. Work at this level may be performed without direct supervision but may require some limited supervision of other members of the team.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR206 Check installed fire safety systems

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

|                                                                                                                            |            |                                                                                                                                                                                                                                       |

| <b>3 Apply emergency plans and/or procedures</b>                                                                           | <b>3.1</b> | Building emergency procedures and response structures are identified and implemented, in accordance with organisational procedures                                                                                                    |
|                                                                                                                            | <b>3.2</b> | Fire warden and/or facility manager is consulted, in accordance with organisational procedures                                                                                                                                        |
|                                                                                                                            | <b>3.3</b> | Occupant warning system is operated, in consultation with building facility personnel                                                                                                                                                 |
| <b>4 Utilise occupant warning systems</b>                                                                                  | <b>4.1</b> | Building occupant warning systems are effectively operated, in accordance with organisational procedures                                                                                                                              |
|                                                                                                                            | <b>4.2</b> | Any faults with the system are reported, in accordance with organisational procedures                                                                                                                                                 |
| <b>5 Reinstate installed fire safety system to service</b>                                                                 | <b>5.1</b> | System is reinstated or isolated, in accordance with organisational procedures                                                                                                                                                        |
|                                                                                                                            | <b>5.2</b> | Any faults with the system are reported, in accordance with organisational procedures                                                                                                                                                 |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

fire safety system must include three or more of the following

- alternative fire suppression system
- fire detection system
- fire hydrant and hydrant booster system
- fire indicator panels, occupant warning and communication systems
- fire sprinklers and sprinkler booster system
- smoke hazard management and ancillary system
- systems for evacuation

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR314B Utilise installed fire safety systems.

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFIR314 Utilise installed fire safety systems

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- communicating with stakeholders
- implementing organisational operating procedures using information sources
- locating fire safety systems in a facility's plan and associated documentation, including log books and specifications
- locating, identifying, checking, operating and reinstating fire safety systems
- reporting fire safety system equipment faults

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- function, components and operation of fire safety systems including control and indicating panels
- industry standards
- operation of fire detection and/or suppression systems
- operational principles for installed fire safety systems
- operational principles of smoke hazard management systems
- organisational documentation, policies and procedures including procedures for reinstating fire safety systems
- pre-fire planning processes and plans
- warden's role and responsibilities
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation and safety relating to alternative fire suppression systems

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - access to fire safety systems in a building
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR323 Take local weather observations

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to take, assess, record and report simple weather observations for a specified area. It includes obtaining weather observations to provide basic interpretations to assist with predictions of future weather conditions and the impact of these conditions on planned field activities or an organisation's ability to respond to a natural disaster.

The unit applies to personnel responsible for taking and recording field weather observations in a specified area.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Gather field based

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### 1.1 Weather instruments that can be used for taking weather

|                                                                |            |                                                                                                       |
|----------------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------|

# Assessment Requirements for PUAFIR323 Take local weather observations

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- gathering reliable field based weather observations
- identifying weather trends
- making basic interpretations of current weather effects in localised areas for an emergency management incident
- observing and assessing influence of topography on local weather conditions
- observing and assessing local weather signs to identify likely changes
- observing topographical influences including altitude, slope and vegetation
- recording and reporting weather observations to relevant personnel
- recognising types of topographical influences including altitude, vegetation, slope and aspect
- taking representative weather observations in two different locations, weather observations using hand held weather instruments and basic visual weather observations
- taking weather observations including air temperature, cloud amount and type, relative humidity, wind direction, speed and gusts and time and location at which observations were made
- undertaking observations of weather signs

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- Bureau of Meteorology information related to weather forecasts
- maritime influence on weather and climate
- meteorological terms
- organisational documentation, policies and procedures
- roles and responsibilities of personnel in the field
- safe work procedures
- types of topographical influences on weather

- types of weather signs types of weather observations including air temperature, atmospheric stability, cloud amount and type, dew point, inversions, precipitation, relative humidity, wind direction - speed and gusts, wind changes - cold fronts, sea and land breezes, and thunderstorms and time and location at which observations were made
- variety of weather instruments including hand held weather meter and sling or whirling psychrometer
- weather trends including anticipated changes, deteriorating conditions, improving conditions and no significant change
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation and safe work procedures

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

# PUAFIR324 Render hazardous materials incidents safe

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to safely combat incidents involving hazardous materials.

The unit applies to personnel who respond to incidents involving hazardous materials and who have the skills and knowledge to identify and assess hazards and risks and contribute to the development, implementation and review of the plan constructed to mitigate the risks they pose to the public and the environment.

Hazardous materials incident is a generic term used to refer to an incident involving any hazardous materials based on physico-chemical, chemical, biological or radiological properties that pose an unreasonable risk to risk to life, property or the environment. This includes dangerous goods, goods too dangerous to be transported and hazardous chemicals.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR207 Operate breathing apparatus open circuit

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

|                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

- accordance with organisational policies
- 3.7** Requirement for detection and confinement and/or containment strategies are identified, in accordance with organisational procedures
- 3.8** Organisations required to assist with operations are identified and notified
- 4 Assist with implementation of plan for mitigation of a HAZMAT incident**
- 4.1** Individual roles and responsibilities within the organisation's Incident Action Plan (IAP) are identified and followed
- 4.2** Hazardous materials incident scene is isolated and secured and hazard control zones and decontamination corridor are established, in accordance with organisational procedures
- 4.3** Entry plan is implemented, in accordance with organisational procedures
- 4.4** Hazardous materials response equipment is applied, in accordance with organisational procedures
- 4.5** Personal protective clothing and equipment is donned and operated, in accordance with organisational procedures
- 4.6** Decontamination procedures are applied, as required, in accordance with organisational procedures
- 4.7** Detection and confinement or containment strategies are applied, in accordance with organisational procedures
- 4.8** Results are recorded and reported, in accordance with organisational procedures
- 5 Assist with review of plan**
- 5.1** Plan is reviewed and safety of entry team is monitored, in accordance with organisational procedures
- 5.2** Contamination incidents are recorded and reported to appropriate personnel and/or authorities, in accordance with organisational procedures
- 5.3** Entry, decontamination, detection and mitigation effectiveness is reviewed, in accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

- |                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

information sources must include

- control boards
- Distress Signal Units (DSU)
- CHEMDATA (HAZMAT action guides)
- emergency response guide books
- HAZCHEM Emergency Action Codes
- Safety Data Sheets (SDSs)
- technical specialists

and must include one or more of the following

- dangerous goods - initial emergency response guide
- electronic chemical database
- external organisational assistance
- International Maritime Dangerous Goods (IMDG) code
- reference texts
- safe storage and handling information cards
- site and community emergency response plans
- defensive and offensive strategies

detection and confinement or containment strategies must include

and must include three or more of the following

- damming – using booms, pads, overflow and underflow dams
- field product transfer including gases or liquids using both closed and open loop methods
- flaring
- freeze (ice) patching
- grounding and bonding
- neutralisation of other materials including adsorption, gelation, emulsification and other chemical methods
- over packing including recovery drums or original containers
- plugging and patching
- rescue
- retention, absorbent materials and neutralisation of acids or bases
- vapour suppression or blanketing and diking or diversion
- ventilation and dispersion

- venting or vent and burn

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR320 Render hazardous materials incidents safe.

# Assessment Requirements for PUAFIR324 Render hazardous materials incidents safe

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- assisting in the establishment, implementation and review of an incident action plan
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements and demonstrating safe work practices
- collecting and interpreting safety and hazard information
- complying with legislation
- demonstrating safe working practices
- donning, operating in, decontaminating and removing personal protective clothing and equipment
- ensuring mitigation techniques are used
- establishing hazard control zones and decontamination corridors
- following instructions and procedures
- identifying and assessing hazardous materials at an incident
- identifying, selecting, checking, testing and maintaining personal protective clothing and equipment for a range of hazardous materials
- identifying and assessing hazards at an incident
- implementing organisational policies procedures
- interpreting safety and hazard information
- operating breathing apparatus
- undertaking decontamination procedures
- using mitigation techniques
- using response equipment
- working as a team member
- working with a range of information sources to assist in the identification of hazardous materials

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the

requirements of the elements, performance criteria and range of conditions and includes knowledge of

- containment plans
- decontamination principles and procedures
- detection methods and strategies for identifying hazardous materials
- effects on humans exposed to commonly encountered hazardous materials including local and systemic effects of industrial toxins
- hazard mitigation (confinement or containment) techniques including control zones
- information sources used to identify product and provide information for safe handling
- legislation relevant to the organisation and hazardous materials incidents
- main routes of entry of toxins into the human body
- maintenance and testing procedures for breathing apparatus
- methods of identifying hazardous materials
- nature and properties of hazardous materials
- organisational documentation, policies and procedures
- personal protective clothing and equipment procedures - use and limitations for a range of hazardous materials
- principles of incident control
- scene control and site isolation processes and procedures
- support organisations assisting with operations
- types of hazard control zones including
  - area of likely contamination - hot zone
  - area of operations - warm zone
  - controlled exits, entrances, refuges and emergency exits
  - criteria applied to determine the extent of hazardous areas
  - support zone - cold zone
- types of decontamination and decontamination procedures including
  - alternative water decontamination techniques
  - alternative wet decontamination techniques
  - decontamination area including holding area, wash area, disrobing area and rest area
  - decontamination plan and corridor
  - decontamination techniques including emergency, emergency mass and technical decontamination
  - detection strategies applied for decontamination
  - dry decontamination techniques
  - use of breathing apparatus, control boards and Distress Signal Units (DSU)
- use and limitations of workplace exposure standards
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation and safe work practices

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR325 Operate heavy plant in fire control operations

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to operate heavy plant in fire control operations.

Heavy plant refers to heavy duty equipment and vehicles, specially designed for executing construction tasks, most frequently ones involving earthwork operations. This may include fire control line construction; clearing vehicle turnarounds, passing bays and safety zones; constructing helipads in forest and/or scrub environments and road construction.

The unit applies to personnel who operate heavy plant machinery, who will be directed to undertake a range of tasks to support fire operations and roadwork construction, it does not include tree pushing.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential    Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

**1 Use and service heavy plant machinery**

- 1.1** Heavy plant machinery is set up and pre-operational checks are undertaken to ensure safe operation in forest environments that are free of soil, water borne disease and weeds prior to and after use
- 1.2** Effective communication is established with supervisor, team members and support vehicle operators
- 1.3** Safe work procedures are employed when using heavy plant machinery for construction
- 1.4** Heavy plant machinery is parked safely and securely when not in operation
- 1.5** Personal protective clothing and equipment is worn and used, in accordance with organisational procedures

**2 Construct fire control line**

- 2.1** Obtain briefing and confirm work to be undertaken
- 2.2** Topographical and vegetation factors are considered when selecting a route for construction of a fire control line
- 2.3** Environmental, agricultural, cultural and heritage factors are considered when selecting a route for construction of fire control line using heavy plant machinery
- 2.4** Fire control line is constructed directly on fire edge or away from fire edge, taking into account weather conditions and/or changes in fire behaviour, to meet fire suppression requirements
- 2.5** Hazards are identified and considered when selecting route and constructing fire control line
- 2.6** Debris from fire control line construction is appropriately placed to facilitate fire suppression works and to reduce environmental impact
- 2.7** Fire control line is constructed to suit purposes, including vehicle access, in accordance with organisational procedures
- 2.8** Helipads, turning areas, passing bays and safety zones are constructed, as directed

**3 Mop up and rehabilitate area**

- 3.1** Mop up work is conducted, in accordance with organisational procedures and in coordination with crew

members

### 3.2 Rehabilitation work is conducted, in accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

machines must include one or more of the following

- bulldozer
- excavator
- faller buncher
- front end loader
- grader
- harvester
- skidder

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR321 Operate heavy plant in fire control operations.

# Assessment Requirements for PUAFIR325 Operate heavy plant in fire control operations

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- communicating through the chain of command
- communicating with personnel in support vehicles
- constructing a fire control line in forest or scrub environments
- constructing a fire control line adjacent to and at a distance from live fire edge
- identifying hazards and risks including exposures
- implementing industry and organisational standards when operating heavy plant machinery
- implementing safe work procedures
- mopping up and rehabilitating an area
- operating machines in a fire and non-fire environment
- participating in briefing sessions
- performing pre-start checks of heavy plant machinery
- performing basic maintenance and ensuring servicing of heavy plant machines in a fire or non-fire environment
- recognising and considering topographical, vegetation, agricultural, environmental, cultural and heritage factors
- selecting routes for fire control line construction
- working with different types of mop up activities

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- assessment of hazards and risks including characteristics of trees, topographical factors, vegetation, environmental factors, cultural and heritage factors and agricultural factors
- capabilities of support vehicles

- hazards and risks including exposures
- heavy plant machine capabilities, limitations, design and safety features
- industry and organisational standards for control line, helipad and roadwork construction and rehabilitation activities
- machine maintenance requirements in a fire ground environment
- organisational documentation, policies and procedures
- pre-start and post work check procedures
- safe work procedures including
  - assistance to vehicles and personnel working with machines
  - communication with fire control line supervisors and support vehicles
  - contact and communication with support vehicles
  - Falling Object Protection (FOPs) and Roll Over Protection (ROPs) are correctly fitted and used
  - fire ground emergencies
  - limits of machine capability
  - personal protective clothing and equipment
  - position in relation to live fire edge and fire intensity
  - safe work practices
  - seatbelts being worn in the cabin
  - survival techniques in burn over situations
- topographical, vegetation, environmental, cultural, heritage and agricultural factors
- types of mop up activities
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Competency should be assessed in an organisation or agency approved operational environment or in a field based simulated environment.

Constructing a fire line should be assessed in a forest and/or scrub environment.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - machinery and communications equipment
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR326 Push trees with machines in forest fire control operations

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to apply machine operation skills to the specific circumstances of fire operations. It includes fire control line construction, pushing trees, clearing vehicle turnarounds and passing bays, constructing helipads at a wildfire on forested land and completing rehabilitation activities. Work at this level will be carried out under direction with limited supervision.

The unit applies to personnel who will be directed to push trees using machinery to support fire operations.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1 Use and service machine**
  - 1.1** Machinery is set up and preparation checks are undertaken to ensure safe operation in forest environments that are free of soil and water borne disease and weeds prior to and after use
  - 1.2** Effective communication is established with supervisor, team members and support vehicles
  - 1.3** Safe work procedures are employed when using machinery to push tree
  - 1.4** Machinery is parked safely and securely when not in operation
  - 1.5** Personal protective clothing and equipment is worn and used, in accordance with organisational procedures
- 2 Plan to push tree**
  - 2.1** Obtain briefing and confirm work to be undertaken
  - 2.2** Hazardous tree marking system is interpreted and actioned for each tree
  - 2.3** Tree is assessed for suitability for pushing with machinery
  - 2.4** Topographical factors and vegetation are considered when planning to push tree using machinery
  - 2.4** Environmental, cultural and heritage factors are considered in relation to area where trees will be pushed
  - 2.5** Approval is sought and gained for tree to be pushed with machinery
  - 2.6** Hazards and safe clearances are established around trees selected for pushing with machinery
  - 2.7** Escape routes are identified, in accordance with organisational procedures
  - 2.8** Support personnel are warned of tree to be pushed with machinery
- 3 Push tree**
  - 3.1** Communication is maintained with ground crew during tree pushing operations
  - 3.2** Ground is prepared for tree pushing with machinery
  - 3.3** Direction of tree fall is determined

- |                                                         |            |                                                                                                        |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

machine must include one or more of the following

- bulldozer
- excavator
- faller buncher
- front end loader
- harvester

and must be fitted with

- Falling Object Protection Systems (FOPS)
- Roll Over Protection Systems (ROPS)

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR322 Push trees with machines in forest fire control operations.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFIR326 Push trees with machines in forest fire control operations

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- assessing and planning to push trees using machinery
- considering topography, vegetation, environmental, cultural and heritage factors
- communicating within the chain of command
- implementing safe work procedures including
  - communicating with fire control line supervisors and support vehicles
  - ensuring FOPS and ROPS are correctly fitted and used
  - maintenance of contact and communication with support vehicles
  - positioning in relation to live fire edge and fire intensity
  - providing assistance to vehicles and personnel working with machines
  - survival techniques in burn over situations
  - wearing personal protective clothing and equipment
  - wearing seatbelts in cabin
  - working within limits of machine capability
- identifying hazards and risks including exposures
- maintaining communication with support personnel and vehicles
- operating machines in a fire and non-fire environment
- participating in briefing sessions
- performing basic maintenance and ensuring servicing of machinery in fire and non-fire environments
- performing pre-start checks
- preparing ground for tree pushing
- pushing trees in support of fire operations safely
- seeking and gaining permission to complete actions
- undertaking mop up and rehabilitation activities
- using safe tree pushing practices including not rocking trees, avoiding obstacles such as tree roots, stumps and rocks, determining direction of approach relative to proposed direction of

fall, recognising minimum and gradual power application to effect tree fall, being aware of point of contact with machine and using blade and/or tree arm for optimal leverage

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- assessment of hazards and risks including characteristics of trees, cultural and heritage factors, environmental factors, hazards and risks including exposures, topographical factors and vegetation, burn over survival techniques and capabilities of support vehicles
- ground preparation including clearing escape route, clearing vegetation and obstacles such as logs and rocks around trees, creating ramp for pushing and ripping or severing roots of tree to be pushed
- hazards and risks including exposures
- machine capabilities, limitations, design and safety features
- machine maintenance requirements in a fire ground environment
- organisational documentation, policies and procedures including operating machines
- personal protective clothing and equipment
- rehabilitation works
- re-start and post work check procedures
- safe work procedures including
  - assistance to vehicles and personnel working with machines
  - communication with fire control line supervisors and support vehicles
  - ensuring FOPS and ROPS are correctly fitted and used
  - fire ground emergencies
  - maintenance of contact and communication with support vehicles
  - position in relation to live fire edge and fire intensity
  - survival techniques in burn over situations
  - wearing personal protective clothing and equipment
  - wearing seatbelts in cabin
  - working within limits of machine capability
- safe tree pushing practices including
  - avoiding obstacles such as tree roots, stumps and rocks
  - awareness of point of contact with machine
  - considering characteristics of hazardous tree
  - considering rehabilitation activities
  - direction of approach relative to proposed direction of fall
  - minimum and gradual power application to effect tree fall
  - not rocking tree
  - use of blade and/or tree arm for optimal leverage

- wildfire control tactics and techniques
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Competency should be assessed in an organisational/agency approved operational environment or in a field based simulated wildfire environment; pushing trees by machinery should be assessed in a forest environment.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - trees requiring pushing, machinery and communications equipment
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR401 Obtain incident intelligence

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to acquire, record and communicate incident intelligence from an airborne, water or ground based platform.

The unit applies to personnel required to work in the field to collect, record and communicate incident intelligence relevant to the management of an incident by the incident management team.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare and plan for collection of intelligence**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1.1 Briefing is obtained about mission, in accordance with organisational procedures**

- 1.2 Data applicable to the proposed mission is collected from relevant personnel and organisations
  - 1.3 Intelligence resource kit is prepared based on mission requirements
  - 1.4 Aircraft or vehicle is obtained and pilot or driver is briefed about the mission, in accordance with organisational procedures
  - 1.5 Information about the mission including potential or actual hazards is identified
  - 1.6 Mission planning is undertaken, in accordance with organisational procedures utilising relevant data
  - 1.7 Safety briefing is obtained, in accordance with organisational procedures
- 2 Collect and record information**
  - 2.1 Target locations are confirmed with applicable personnel and organisations
  - 2.2 Site and en route hazards are identified, in accordance with organisational procedures
  - 2.3 Incident intelligence information is identified and collected, as tasked
  - 2.4 Information concerning the impact and status of selected incident strategies and tactics is collected
  - 2.5 Data collected is recorded and documented, in accordance with organisational procedures
- 3 Review information collected**
  - 3.1 Data collected is reviewed for currency and relevance to ongoing operational activities
  - 3.2 Data gaps are identified for further intelligence gathering
  - 3.3 Data is organised to meet the needs of its audience
- 4 Send and receive incident information**
  - 4.1 Information about target area is accurately communicated within required timeframes to mission personnel, in accordance with organisational procedures
  - 4.2 Received information and instructions are acted upon, in accordance with organisational procedures and regulatory authority requirements

- 5 Conclude mission**
  - 5.1** Mission data is recorded and documented, in accordance with organisational procedures
  - 5.2** Mission debriefing is conducted and documentation is provided, in accordance with organisational procedures
  - 5.3** Effectiveness of mission is evaluated, in accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR401B Obtain incident intelligence.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFIR401 Obtain incident intelligence

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- accessing information for planning intelligence
- collecting and recording incident information
- identifying hazards
- locating and working in target areas
- obtaining, recording and providing intelligence for incident control and response
- participating and conducting briefings and debriefings
- preparing and planning for collection of intelligence
- reading maps and plans
- reporting accidents and incidents
- reporting incident intelligence including radio reports
- reviewing information collected
- selecting, prioritising, reviewing and reporting information for incident management team to support response
- sending and receiving incident information
- undertaking mission planning
- using communications equipment
- using intelligence resource kit and equipment
- utilising techniques for incident intelligence gathering

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- communication processes including methods and tools
- incident type and behaviour
- intelligence resource kits components
- map and chart types

- mission planning techniques and navigation processes
- organisational documentation, policies and procedures
- other relevant organisations and agencies intelligence resource kits
- potential hazards
- processes for briefings and debriefings
- weather conditions
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - actual or simulated aircraft or ground fire detection and reconnaissance situations
  - equipment, personnel and facilities etc. appropriate to incident intelligence gathering
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR402 Conduct simple prescribed burns

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to prepare, conduct and evaluate simple prescribed burns in accordance with approved burn plans.

A prescribed burn is the controlled application of fire under specified environmental conditions to a predetermined area and at the time, intensity and rate of spread required to attain planned resource management objectives. A simple prescribed burn is characterised by low risk, low intensity, small area, low potential impact on assets, completion in one shift and minimal variation of fuel and terrain.

A prescribed burn plan is an approved plan for the conduct of prescribed burning, it includes a map identifying the area to be burned and incorporates the specifications and conditions under which the operation is to be conducted.

The unit is applicable to personnel responsible for preparing, conducting and evaluating a simple prescribed burn on public and private land.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR303 Suppress wildfire

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Prepare to burn

#### 2 Conduct burn

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Burn operations for a simple prescribed burn are identified and undertaken, in accordance with approved prescribed burn plan, burn plan objectives, organisational procedures and legislative and regulatory requirements
- 1.2** Permits are obtained, in accordance with organisational procedures and legislative and regulatory requirements
- 1.3** Burn notifications and plans are issued to persons or organisations, in accordance with prescribed burn plan, organisational procedures and legislative requirements
- 1.4** Control lines, including secondary control lines, are specified and prepared, in accordance with organisational procedures
- 1.5** Prescribed burn plan operational hazards and risks to safety of people, property, assets, ecology and environment are identified and risk mitigation works are completed
- 1.6** Forecast weather conditions are monitored, recorded and assessed, in accordance with organisational procedures
- 1.7** Fuel conditions are monitored, in accordance with organisational procedures and prescribed burn plan
- 1.8** Resource requirements are confirmed with reference to burn plan
- 2.1** Prescribed burn notifications are issued, in accordance with organisational procedures
- 2.2** Pre-burn checks are conducted, in accordance with organisational procedures
- 2.3** Local weather conditions for day of burn are monitored and contingency arrangements actioned and communicated accordingly
- 2.4** Resources are gathered and personnel are briefed, in accordance with prescribed burn plan and contingency

arrangements

- 2.5 Burn ignition strategies, including lighting techniques patterns and sequences are implemented, in accordance with organisational procedures and prescribed burn plan
- 2.6 Burning is monitored, patrol activities are conducted and operational changes made, as required
- 2.7 Contingencies are implemented, in accordance with prescribed burn plan, as required
- 2.8 Burn documentation is kept, in accordance with organisational procedures
- 2.9 Burn operations are concluded and burn security is implemented, in accordance with organisational procedures
- 2.10 Crews are debriefed and resources released from the burn
- 2.11 Incidents are reported and investigated, in accordance with organisational procedures

### 3 Conduct post burn activities

- 3.1 Outcomes of the burn are assessed against burn objectives, in accordance with organisational procedures
- 3.2 Variations from the burn plan are reported, in accordance with organisational procedures
- 3.3 Restoration and rehabilitation works are identified and carried out, in accordance with organisational procedures
- 3.4 Prescribed burn records are submitted, in accordance with the organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

|                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                       |

- lighting sequence must include one or more of the following
  - multi-line
  - spot
  - lighting sequences that considers
    - fuel arrangement
    - fuel moisture
    - slope
    - time of day
    - wind direction
- monitoring burn must include one or more of the following
  - fire shape and spread
  - flame height
  - fuel moisture content
  - predictions
  - rate of spread
  - recording
  - safety considerations
  - smoke development
  - weather observation
  - wind speed and direction
- concluding operations and burn security must include one or more of the following
  - mitigating hazards for public safety
  - mopping up and black out
  - patrolling burn area
  - reopening roads
  - transfer of responsibility, as per organisational procedures
- outcomes of the burn must include one or more of the following
  - achievement of burn objectives
  - escapes
  - external impacts
  - levels of scorch
  - percentage of area burnt
  - reporting and storage of burn documentation

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR412 Conduct simple prescribed burns.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFIR402 Conduct simple prescribed burns

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including hazards, risk mitigation and safety of personnel
- checking burn and crew activities
- completing burn notifications
- concluding burn operations and implementing burn security
- conducting operational briefings and debriefings, safe burns utilising resources and post burn activities including operations and security
- confirming resources, location, construction and suitability of control lines for prescribed burns
- identifying and implementing restoration and rehabilitation activities
- implementing contingency arrangements
- interpreting and implementing simple prescribed burn plans
- interpreting simple prescribed burn plans and objectives, fire behaviour conditions and existing and forecast weather conditions
- monitoring equipment
- planning for contingencies
- preparing for a simple prescribed burn
- recording actions taken
- using fire prediction tools and resources

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- briefing and debriefing content and processes
- burn notification including verbal and written notification
- characteristics of a simple prescribed burn including completed in one shift, involves

minimal variation of fuels and terrain, low intensity, low potential impact on assets, low risk and small area

- conclusion of simple prescribed burns including operations and security
- contingency arrangements including command structure, safety considerations such as escape routes and safety zones, actions to take in the event of unexpected fire behaviour changes, resolution of escapes, special resources and secondary control lines, resource requirements, resolution of resource breakdowns, injury on fire line and burn targets not met
- contingency plans
- fire prediction tools
- ground ignition patterns and techniques
- impact of conditions at simple prescribed burns on potential fire behaviour
- legislation, industry standards, codes of practice and regulations
- legislative and organisational authorisations required
- organisational documentation, policies and procedures
- outcomes of simple prescribed burn
- personnel and organisations involved in simple prescribed burn activities
- required permits
- resource requirements
- restoration and rehabilitation
- seasonal restrictions on simple prescribed burns
- simple prescribed burn and securing burn monitoring
- techniques, patterns and sequencing for lighting
- types of property and assets
- types of simple prescribed burns, prescribed burn plans and objectives
- weather conditions including: temperature, relative humidity, weather changes, atmospheric stability, drought index, fire danger index, weather forecasts, actual or anticipated changes in conditions and progress targets not met
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation and safe work practices

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Competency should be demonstrated in a range of actual and/or field based workplace environments with evidence collected from undertaking a simple prescribed burn being required.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - fire management and contingency plans
  - lighting and suppression crews
  - lighting and suppression equipment
  - simple prescribed burn plans
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

## PUAFIR403 Assess building plans

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to interpret building plans and associated documentation for fire safety systems and to produce a report that meets organisational requirements.

The unit applies to personnel who are authorised by their organisation to assess building plans, and their application at various sites and to ensure they comply with regulatory requirements.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR314 Utilise installed fire safety systems

### Competency Field

Fire

### Unit Sector

Fire

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

|                                                                              |            |                                                                                                                                                |

|                                                                              | <b>3.2</b> | Recommendations arising from the assessment are documented and reported, in accordance with organisational procedures                          |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

documentation to undertake the assessment must include two or more of the following

- building certifiers and/or building surveyors documentation
- building plans
- fire safety engineer reports

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR403B Assess building plans.

# Assessment Requirements for PUAFIR403 Assess building plans

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- determining and interpreting building plans in relation to installed fire safety systems
- identifying plans and associated documentation required to undertake an assessment of a building plan
- reporting on assessment of building plans
- reviewing building's fire safety systems against appropriate requirements
- using knowledge of firefighting and organisational requirements for assessing building plans
- utilising knowledge of standards including Australian Standards and building codes for assessing building plans

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- building and drafting terms and practices
- building classes and types of construction
- building or facility's operational documentation
- design documentation and reporting
- equipment manufacturers' specifications
- fire safety systems including
  - alternative fire suppression systems
  - building control systems
  - building design requirements
  - emergency vehicle access
  - fire and emergency control centres or rooms
  - fire detection systems
  - fire hydrant and hydrant booster system

- fire indicator panels, occupant warning and communication systems
- fire resisting structures and compartmentations
- fire sprinkler and sprinkler booster systems
- smoke hazard management and ancillary system
- organisational documentation, policies and procedures including maintenance procedures
- regulations, codes and standards for buildings
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - site and building plans and associated documentation
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR404 Inspect dangerous goods facilities

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to inspect dangerous goods facilities and identify areas of non-compliance.

The unit applies to personnel authorised by their organisation to prepare for and conduct inspection of sites that store and handle dangerous goods and to identify areas of non-compliance with national and state and territory regulations that apply to the storage and handling of dangerous goods. Personnel are also required to notify relevant authorities of breaches in compliance or health and safety issues, that pose a risk to occupants and/or the community.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR403 Assess building plans

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential    Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

**1 Identify presence of dangerous goods and/or hazardous chemicals**

- 1.1** Dangerous goods and/or hazardous chemicals are identified, in accordance with organisational procedures
- 1.2** Dangerous goods and/or hazardous chemical labelling and documentation is located
- 1.3** Information about hazardous chemicals is confirmed through available sources of information and interpreted, as required
- 1.4** HAZMAT (Hazardous Materials) identification information about dangerous goods and/or hazardous chemicals is sought from authorised personnel and relevant authorities

**2 Establish location and quantity of dangerous goods and/or hazardous chemicals**

- 2.1** Location of dangerous goods and/or hazardous chemicals is identified
- 2.2** Licensed quantity of dangerous goods and/or hazardous chemicals stored or handled in different locations are determined
- 2.3** Type of bulk or package storage is identified
- 2.4** Storage, handling and/or transport of dangerous goods and/or hazardous chemicals is identified
- 2.5** Number of different classes of dangerous goods located in one area is identified
- 2.6** Site manifests are located and examined

**3 Identify product information**

- 3.1** Safety Data Sheets (SDSs) are located and information is accessed and interpreted
- 3.2** Product safety information is located and interpreted
- 3.3** Additional information such as manifests, HAZCHEM signage and safety signs are located and interpreted, where applicable

**4 Identify and locate fire safety systems in facility's plan and associated documentation**

- 4.1** Type of facility is identified

- |          |                                                                                            |                                                                                                                                                                                                                                                                  |

- 7.2 Issues identified are documented, in accordance with organisational procedures
- 7.3 Variations in facility plans and associated documentation are outlined, as required
- 7.4 Information about facility's fire safety system's operation and maintenance is provided, as required
- 7.5 Collated information and issues identified are reported to supervisor or relevant authorities, in accordance with organisational procedures

**Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

**Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

information about facility's fire safety system's operation must include two or more of the following

- Australian Standards (AS)
- British/European Union Standards
- company or owner requirements
- factory mutual systems – loss prevention data
- industry association specification
- manufacturers' specifications
- other standards such as overseas or international standards e.g. ISO and National Fire Protection Association
- Safe Work Australia standards and codes of practice
- WHS/OHS legislation

**Unit Mapping Information**

This unit replaces and is equivalent to PUAFIR404B Inspect dangerous goods facilities.

# Assessment Requirements for PUAFIR404 Inspect dangerous goods facilities

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- conducting inspections whilst using relevant regulations, codes and standards as a reference
- determining product information
- establishing location and quantity of dangerous goods and/or hazardous chemicals
- identifying dangerous goods and hazardous chemicals using information sources
- interpreting regulations, codes of practice and industry standards
- locating fire safety systems in a facility's plan and associated documentation including log books and specifications
- producing reports
- reading facility plans and associated documentation such as log books and specifications
- reporting on inspection highlighting any variations
- reviewing documentation and confirming fire safety systems and equipment are being maintained
- verifying actual fire safety systems with a facility plan and associated documentation including comparing documented fire safety system with actual fire safety system
- working with Safety Data Sheets (SDSs)

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- containment and removal of hazardous materials
- dangerous goods and hazardous chemicals
- difference between packaging and storage of dangerous goods
- fire safety systems including
  - alternative fire suppression systems

- bunding
- cooling water system
- explosion relief devices
- fire and flame detection and alarm systems
- fire emergency control centre or room
- fire hydrant and hydrant booster system
- fire indicator panels, occupant warning and communications systems
- fire resisting elements and compartmentation
- fire sprinkler and sprinkler booster system
- gas and vapour detection and alarm systems
- passive fire protection
- smoke hazard management and ancillary systems
- static water and pump sets
- forms of identification
- information sources including HAZCHEM emergency action code, Chemdata/HAZMAT action guide, safety data sheets, technical specialists, dangerous goods - initial emergency response guide, electronic chemical databases, safe storage and handling information cards, reference texts and international maritime dangerous goods code
- information systems used to identify dangerous goods and/or hazardous chemicals
- means by which products that constitute hazardous chemicals or dangerous goods are classified including United Nations (U.N.) numbers, proper shipping names, product names or trade names, chemical names, chemical abstract service numbers, dangerous goods class labels, packing groups, emergency information panels, , storage manifests, transportation documents,
- organisational documentation including reporting formats
- organisational policies and procedures including procedures for responding to a hazardous materials incident
- Safety Data Sheets (SDSs) including chemical and physical properties, health hazard information, precautions for use, product identity and safe handling information
- special hazards
- systems for hazards associated with chemicals and dangerous goods are identified including class labels, NFPA 704 HAZMAT marking system, ADR hazard identification system, packing groups, HAZCHEM emergency code and Global Harmonised System (GHS).
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of

assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - regulations, codes of practice, industry standards and access to a suitable facility
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR405 Collect, analyse and provide regulatory information

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to collect, analyse and provide information to support the achievement of an organisation's objectives.

The unit applies to personnel authorised to collect and analyse information related to other organisations, industries and businesses and includes building Acts, regulations, codes of practice, guidelines and planning requirements.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Identify regulatory and other information sources**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1.1** Regulatory information needs of individuals, managers, persons conducting a business or undertaking and/or officers are determined and potential sources are

|                                                                        |                                                                                                                                                  |
|------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                        | identified                                                                                                                                       |
|                                                                        | 1.2 Other information held by the organisation is reviewed to determine suitability and accessibility                                            |
|                                                                        | 1.3 Plans are prepared to obtain information which is not available or accessible within the organisation                                        |
| <b>2 Collect and analyse regulatory and other relevant information</b> | 2.1 Collect and analyse regulatory and other pertinent information                                                                               |
|                                                                        | 2.2 Information is collected in a format suitable for analysis, interpretation and dissemination                                                 |
|                                                                        | 2.3 Information is analysed to identify relevant trends and developments in terms of the needs for which it was acquired                         |
| <b>3 Use management information systems</b>                            | 3.1 Management information system is used to store and retrieve data for decision making                                                         |
|                                                                        | 3.2 Technology available in the local work area and/or organisation is used to manage information                                                |
| <b>4 Record and report relevant information</b>                        | 4.1 Results of information gathering, analysis and synthesis is reported, in accordance with organisational procedures                           |
|                                                                        | 4.2 Results of information gathering, analysis and synthesis are reported and used to inform policy development and organisation decision making |
|                                                                        | 4.3 Information is disseminated to appropriate personnel within specified timeframes                                                             |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

regulatory information must include one or more of the following

- acts, regulations, codes of practice and guidelines
  - dangerous goods codes
  - industry standards
  - ministerial or cabinet policy and guidelines documents
  - National Construction Code (Building Code of Australia)
  - planning requirements
- potential sources must include
- databases
  - interviews
  - literature search
  - observation
  - research
  - surveys

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR405B Collect, analyse and provide regulatory information.

# Assessment Requirements for PUAFIR405 Collect, analyse and provide regulatory information

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- analysing, recording and disseminating information
- authoring and presenting reports and submissions
- collecting, analysing and synthesising regulatory information
- disseminating information
- identifying information sources
- using appropriate methods to collect, collate and analyse information
- using management information systems to store and retrieve data

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- appropriate methods
- information collection, collation, analysis and display techniques
- information evaluation issues related to accuracy, credibility, pertinence, relevance, reliability and validity
- information storage requirements and methods
- management of information systems
- organisational documentation, policies and procedures
- project management techniques
- regulatory and other sources of information
- research techniques
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

# PUAFIR406 Develop simple prescribed burn plans

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to develop simple prescribed burn plans for specified burn areas and to prepare the plans to achieve identified objectives.

A prescribed burn is the controlled application of fire under specified environmental conditions to a predetermined area and at the time, intensity and rate of spread required to attain planned resource management objectives. A simple prescribed burn is characterised by low risk, low intensity, small area, low potential impact on assets, completion in one shift and minimal variation of fuel and terrain.

A prescribed burn plan is an approved plan for the conduct of prescribed burning, it includes a map identifying the area to be burned and incorporates the specifications and conditions under which the operation is to be conducted.

The unit is applicable to personnel responsible for the development of simple prescribed burn plans.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR303 Suppress wildfire

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Identify burn areas and burn objectives**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Areas requiring simple prescribed burning are identified, in accordance with organisational procedures

**1.2** Burn objectives are identified, in accordance with organisational procedures

**1.3** Target groups are identified and consultation process is undertaken, in accordance with organisational procedures

**1.4** Legislative and regulatory requirements are identified and complied with throughout planning process

#### **2 Prepare prescribed burn plan for simple burn**

**2.1** Key features of the burn area are identified including variations in terrain, fuel types and quantities control lines and weather

**2.2** Risks from proposed burn, both on and off site, are assessed and considered in planning process including operational hazards, safety of people, protection of property, assets, environment and ecological risks

**2.3** Results of consultation are factored into the planning process, in accordance with organisational procedures

**2.4** Fire behaviour to meet burn objectives and to account for variations in fuel, terrain and weather is determined

**2.5** Burn ignition strategies and tactics required for fire behaviour, intensity and that are suitable for location are determined, in accordance with organisational procedures

**2.6** Lighting techniques and lighting patterns are identified

**2.7** Hazard and risk mitigation are determined and asset protection works are identified

**2.8** Strategies for mitigating hazards and risks are identified and required preparatory works are identified

**2.9** Strategies and tactics for controlling prescribed burn are identified

- |                                                |             |                                                                                                                                   |
|------------------------------------------------|-------------|-----------------------------------------------------------------------------------------------------------------------------------|
|                                                | <b>2.10</b> | Type and quantity of resources required are identified                                                                            |
|                                                | <b>2.11</b> | Prescriptions for implementation of burn plan strategies and tactics are documented, in accordance with organisational procedures |
|                                                | <b>2.12</b> | Contingencies are outlined in the prescribed burn plan                                                                            |
|                                                | <b>2.13</b> | Prescribed burn plan is prepared, in accordance with organisational procedures                                                    |
| <b>3 Gain approval of prescribed burn plan</b> | <b>3.1</b>  | Prescribed burn plan is submitted for approval, in accordance with organisational procedures and legislative requirements         |
|                                                | <b>3.2</b>  | Modifications and amendments to prescribed burn plan are made based on feedback received                                          |
|                                                | <b>3.3</b>  | Prescribed burn plan approval is gained                                                                                           |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

simple prescribed burn plan must include

- an approved plan for conduct of simple prescribed burn
- map identifying area to be burned
- specifications and conditions under which operation is to be conducted

simple prescribed burn objectives must include one or more of the following

- asset protection
- biodiversity protection
- community protection
- habitat management
- hazard reduction
- management of cultural sites and activities
- management of cultural sites and activities
- protection of fire sensitive ecological communities

|                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|-------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| target consultation groups must include one or more of the following                      | <ul style="list-style-type: none"><li>• vegetation management</li><li>• adjacent land owners or managers</li><li>• commercial operations within impact zone</li><li>• community groups with specific interests</li><li>• government organisations including local, state and federal</li><li>• groups or individuals that may be adversely affected</li><li>• other groups and people within prescribing organisation</li></ul> |
| lighting techniques must include                                                          | <ul style="list-style-type: none"><li>• hand held</li><li>• wind and/or waterproof matches</li></ul>                                                                                                                                                                                                                                                                                                                            |
| lighting patterns include one or more of the following                                    | <ul style="list-style-type: none"><li>• contour lighting</li><li>• echelon</li><li>• grid</li><li>• line</li><li>• multi-line</li><li>• spot</li></ul>                                                                                                                                                                                                                                                                          |
| operational hazards must include two or more of the following                             | <ul style="list-style-type: none"><li>• adverse terrain or weather conditions</li><li>• crew size</li><li>• falling trees and limbs</li><li>• hazardous material</li><li>• high fuel loads</li><li>• ignition methods</li><li>• plant</li><li>• powerlines</li><li>• road traffic</li><li>• vegetation type</li></ul>                                                                                                           |

| property and assets must include two or more of the following that are near the burn area | <ul style="list-style-type: none"><li>• camps or recreational areas</li><li>• commercial land use such as crops or industry</li><li>• cultural sites or historical buildings</li><li>• other property and assets</li><li>• plantations</li></ul>                                                                                                                                                                                |

environmental and ecological risks must include

- research plots and reference areas
- stock
- urban areas
- utilities - power and telephone lines, water supply structures and communications towers
- impact on
  - native flora and fauna including rare and endangered species
  - smoke
  - soil
  - use of chemical fire suppressants
  - water quality or supply

resources must include one or more of the following

- crews for ground ignition and suppression
- equipment backup
- ignition and suppression equipment and supplies
- logistical support
- other vehicles
- tankers

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR413 Develop simple prescribed burn plans.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFIR406 Develop simple prescribed burn plans

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- applying legislative, regulatory, organisational and permit requirements
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation and safe work practices
- assessing fuel types and quantities in burn area
- determining actions to minimise impacts of simple prescribed burn
- developing contingency arrangements
- developing pre-burn work schedule
- gaining simple prescribed burn approval
- identifying and working with resources
- identifying burn areas including developing timelines for planning and conduct of simple prescribed burn, simple prescribed burn objectives, strategies and tactics to meet simple prescribed burn objectives, ignition strategies and lighting techniques and patterns for ignition
- identifying resources
- identifying, assessing and mitigating operational hazards and risks
- identifying, assessing and mitigating risks to people, property and assets, ecological and environmental risks
- implementing legislation and regulations
- interpreting map of area and identifying key features
- predicting anticipated fire behaviour and intensity in burn area
- preparing plans and map for simple prescribed burning
- targeting consultation groups are identified, liaised with and consulted

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- accumulated fuels
- characteristics of simple prescribed burns including completed in one shift, involves minimal variation of fuels and terrain, low intensity, low potential impact on assets, low risk and small area
- contingencies
- effects of fire on vegetation, fauna, people, property, assets, ecology and the environment
- fire behaviour for fuel type being prescribed
- fire prediction tools
- ignition strategies and tactics
- legislative, regulatory, organisational and permit requirements for simple prescribed fires
  - notification requirements
  - organisational documentation, policies and procedures
  - planned burn hazards and risks
  - resource requirements and capabilities
- simple prescribed burn plans
- simple prescribed burning ignition and suppression strategies
- smoke management
- target groups and community
- traffic management plan requirements
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation and safe work practices

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Competency should be demonstrated in a range of actual and/or field based workplace environments.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - area requiring application of fire under prescribed conditions

- existing management plans and data relevant to area being prescribed
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR407 Interpret and analyse fire weather information

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to assess and interpret weather information in relation to its impact on fire behaviour. It includes collecting, interpreting, analysing and recording weather information.

The unit applies to personnel who are required to provide weather predictions as part of the planning undertaken for a fire.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Collect weather information**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1.1 Sources of weather information are identified and accessed**

- |                                                                   |            |                                                                                                                                   |
|-------------------------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------|
|                                                                   | <b>1.2</b> | Fire site information is sought from databases or experts                                                                         |
|                                                                   | <b>1.3</b> | General data is obtained                                                                                                          |
|                                                                   | <b>1.4</b> | Field observations are obtained and monitored                                                                                     |
| <b>2 Interpret weather information</b>                            | <b>2.1</b> | Weather data is interpreted for current weather conditions in an area                                                             |
|                                                                   | <b>2.2</b> | Bureau of Meteorology weather forecasts and warnings are interpreted for future weather conditions in an area                     |
|                                                                   | <b>2.3</b> | Field weather observations are assessed                                                                                           |
|                                                                   | <b>2.4</b> | Local weather influences likely to affect fire weather conditions are identified                                                  |
|                                                                   | <b>2.5</b> | Weather forecasts are validated against field weather observations, as they become available                                      |
|                                                                   | <b>2.6</b> | Weather forecasts are evaluated for their effect on fire behaviour                                                                |
| <b>3 Analyse, record and communicate fire weather information</b> | <b>3.1</b> | Analysis is conducted using weather data and forecast weather signs, local weather influences and likely impact on fire behaviour |
|                                                                   | <b>3.2</b> | Quality information is provided within required timeframes for fire control planning                                              |
|                                                                   | <b>3.3</b> | Weather conditions are monitored and potential changes to fire predictions are assessed and reported                              |
|                                                                   | <b>3.4</b> | Analysis and advice are provided to relevant personnel                                                                            |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR414 Interpret and analyse fire weather information.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFIR407 Interpret and analyse fire weather information

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- analysing, recording and communicating fire weather information and source data
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- collecting weather information by accessing recorded data, maps and web based products
- composing field observations
- interpreting topographic maps to assess effects on weather
- interpreting weather maps
- managing data and maintaining accurate records
- providing organisational personnel accurate analysis and projection of weather affecting an area and likely impact on fire behaviour

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- effect of topography on weather and fire behaviour
- field observations including cloud type and cover, dew point, fire behaviour including rate of spread, flame height and spotting, fuel moisture content, temperature and relative humidity, wind speed, direction and gust and location and time of observation
- fire behaviour factors
- impact of weather on fire behaviour including size, growth and shape
- influences on weather
- observation, analysis and interpretation of weather signs
- organisational documentation, policies and procedures
- sources of data relating to weather and fire behaviour
- sources of weather information
- types of weather influence most likely to affect fire weather conditions including altitude and elevation, bodies of water, distance from coast, dry air subsidence inversion, Foehn winds, katabatic and anabatic winds, sea and land breezes, slope and aspect and wind channelling

- weather analysis including atmospheric stability, Bureau of Meteorology products and tools, Haines index, smoke dispersion, temperature inversions, wind changes
- weather data including air temperature, dewpoint, relative humidity, synoptic charts, wind direction, speed and gusts, drought factor and drought index
- weather forecasts
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - a range of sources for information related to weather conditions and fire behaviour and organisational templates for weather recording
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# PUAFIR410 Provide safety advice at a rural/land management incident

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to provide safety advice at a rural and/or land management incident.

The unit applies to wildfire and land management field based Safety Officers, who are responsible for providing advice to commanders and/or supervisors about safety issues and the implementation of safety procedures at a rural and/or land management incident. This unit also involves observing potential or existing hazards and providing advice on available and viable risk management options. Authorisation to perform this role is subject to organisational policies and procedures.

The Incident Controller has the ultimate responsibility for the safety and welfare of operational crews, supporting personnel and members of the public who may be involved in an incident. Providing a safe working environment for people at an incident is the shared responsibility of the Incident Controller, each member of the Incident Management Team and at their respective levels all persons involved at the incident.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Contribute to safety, health and welfare of personnel involved in an incident**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Initial briefing is obtained and Incident Controller's intent is confirmed and any questions are asked
- 1.2** Identity of safety officers providing strategic safety advice at the incident is established and all communication methods are confirmed
- 1.3** Requirements for safety, health and welfare of crews/teams at the incident are identified
- 1.4** Assessment of information relating to safety, health and welfare is collected, collated and analysed
- 1.5** Safety, health and welfare priorities are obtained and confirmed through the chain of command throughout the incident
- 1.6** Safety, health and welfare of operational and other associated personnel is monitored and reviewed throughout the incident
- 1.7** Mitigation strategies for risks that may not have been controlled elsewhere in the Incident Action Plan (IAP) are identified and developed
- 1.8** Adequacy of procedures is assessed and issues identified are reported through the chain of command

#### **2 Support incident action planning**

- 2.1** Distribution of IAP is monitored to ensure it reaches all personnel and issues identified are reported to relevant personnel
- 2.2** Provision of maps and sector assignment orders to ground staff is monitored and issues identified are reported to relevant personnel
- 2.3** Briefings are participated in and assessed to ensure appropriate safety messages are conveyed and issues identified are reported to relevant personnel

- |                                            |            |                                                                                                                                                          |
|--------------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                            | <b>2.4</b> | Issues addressing health, safety and welfare of personnel are identified and communicated to assist in the preparation of the IAP for the next shift     |
| <b>3 Support operations at an incident</b> | <b>3.1</b> | Supervisors are assisted to identify any outlying operations where they are responsible for health, safety and welfare                                   |
|                                            | <b>3.2</b> | Information about developments at the incident is regularly obtained                                                                                     |
|                                            | <b>3.3</b> | Potential or developing risks to health, safety or welfare of personnel are identified and revised risk analysis is undertaken from information obtained |
|                                            | <b>3.4</b> | Supervisors are assisted to monitor the application of safe working practices and wearing of personal protective clothing and equipment                  |
|                                            | <b>3.5</b> | Implementation of the communications plan is monitored for effectiveness and adequacy                                                                    |
|                                            | <b>3.6</b> | Monitoring and reporting of safety events is undertaken                                                                                                  |
|                                            | <b>3.7</b> | Safety issues are reported to incident personnel through the chain of command, in accordance with organisational procedures                              |
|                                            | <b>3.8</b> | Safety events and investigations are participated in and recommendations are made, as required                                                           |
|                                            | <b>3.9</b> | Incoming field safety advisor is briefed                                                                                                                 |
| <b>4 Complete documentation</b>            | <b>4.1</b> | Arrangements are made for a log and/or record of activities and decisions to be kept                                                                     |
|                                            | <b>4.2</b> | Information is compiled to facilitate preparation of an end of shift summary report                                                                      |
|                                            | <b>4.3</b> | Information is compiled for participation in incident debriefing or other performance improvement forums                                                 |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUA FIR410A Provide safety advice at a rural/land management incident.

# Assessment Requirements for PUA FIR410 Provide safety advice at a rural/land management incident

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- assessing adequacy of briefings and debriefings
- completing documentation including reports and logs
- maintaining awareness of active and developing rural and/or land management situations
- managing and communicating information
- monitoring risk management procedures and processes
- participating in and contributing to briefings contributing to the safety, health and welfare of personnel involved in a rural and/or land management incident
- participating in initial safety event investigation
- providing WHS/OHS advice to develop the Incident Action Plan
- recognising issues, activities and events that require safety advisor action
- working within the chain of command

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- hazard identification encountered at rural and/or land management incidents
- incident or accident investigation and reporting processes and procedures
- initial briefings formats including Situation, Mission, Execution, Administration, Commands (SMEAC)
- operational procedures, practices and implementation including Lookout, Awareness, Communications, Escape routes, Safety zones (LACES)
- organisational documentation, policies and procedures
- planning processes
- risk assessment and management principles
- roles and responsibilities of Incident Controllers, incident management teams and personnel at a rural/land management incident

- safety events including accidents, breach of safety requirements or procedures, near miss or hit and WHS/OHS incidents
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - actual or simulated workplace environments
- applicable documentation including organisational procedures, policies, industry standards, guidelines, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR411 Provide safety advice at an urban incident

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to provide safety advice at an urban incident.

The unit is applicable to urban field based Safety Officers who are responsible for providing safety advice to the Incident Controller including any action or condition where a person's life and/or safety is at risk. It also involves observing potential or existing hazards and providing advice on available and viable risk management options. The authorisation to perform this role is subject to organisational policies and procedures.

Incident Controllers' have the ultimate responsibility for the safety and welfare of operational crews, supporting personnel and members of the public who may be involved in an incident. Providing a safe working environment for personnel at an incident is the shared responsibility of the Incident Controller, each member of the Incident Management Team and at their respective levels all persons working at the incident.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Contribute to safety of all personnel involved in an incident**

- 1.1** Initial briefing is obtained and the Incident Controller's intent is confirmed and questions are asked
- 1.2** Requirements for safety, health and welfare of crews/teams are identified
- 1.3** Assessment of information relating to safety is reported to Incident Controller
- 1.4** Safety, health and welfare priorities are identified and confirmed with Incident Controller throughout incident
- 1.5** Safety, health and welfare of operational and other associated personnel is monitored and reviewed throughout incident
- 1.6** Mitigation strategies are identified and developed for risks that may not have been controlled elsewhere in the Incident Action Plan
- 1.7** Adequacy of procedures is assessed and issues identified are reported to relevant personnel

#### **2 Assess risks at incident**

- 2.1** Initial and ongoing risk assessments of hazards are undertaken and precautions to be observed are proposed
- 2.2** Electrical and other utilities are assessed to ensure they are rendered safe or hazards identified are mitigated
- 2.3** Building risks are assessed to ensure they are identified and communicated to relevant personnel and are mitigated, where possible
- 2.4** Environmental risks are identified and mitigated, where possible

#### **3 Provide advice to relevant personnel on mitigating safety risks**

- 3.1** Relevant personnel are immediately informed of any action or condition that has the potential to place any person's life or safety at risk
- 3.2** Mitigation actions are recommended where operational actions or conditions have the potential to place any

|                                                                              |            |                                                                                                                                                                                                                                   |
|------------------------------------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                              |            | person's life or safety at risk                                                                                                                                                                                                   |
|                                                                              | <b>3.3</b> | Work is undertaken with relevant personnel to ensure safety issues are considered and addressed                                                                                                                                   |
|                                                                              | <b>3.4</b> | Incident Controller is alerted to unsafe work practices and alternative strategies and/or mitigations are suggested                                                                                                               |
|                                                                              | <b>3.5</b> | Advice is provided and the outcomes of that advice is documented                                                                                                                                                                  |
| <b>4 Monitor application of resources identified in Incident Action Plan</b> | <b>4.1</b> | Resources to safely control an incident are identified in the Incident Action Plan (IAP) and inappropriate or inadequate availability of resources is determined and conveyed to Incident Controller and other relevant personnel |
|                                                                              | <b>4.2</b> | Resources to provide for contingencies are identified in the IAP and inappropriate or inadequate availability of these resources is determined and conveyed to Incident Controller and other relevant personnel                   |
| <b>5 Monitor personnel at an incident</b>                                    | <b>5.1</b> | Freelance operations not part of the coordinated response are identified and reported to relevant personnel                                                                                                                       |
|                                                                              | <b>5.2</b> | Supervision of personnel is assessed and issues identified are reported to the Incident Controller and other relevant personnel                                                                                                   |
|                                                                              | <b>5.3</b> | Wearing of appropriate personal protective clothing and equipment is observed and issues identified are reported to relevant personnel                                                                                            |
|                                                                              | <b>5.4</b> | Adherence to safe work procedures when using personal protective clothing and equipment is observed and issues identified are reported to relevant personnel                                                                      |
|                                                                              | <b>5.5</b> | Presence and movement of external agencies/organisations, technical experts or advisors at the incident are observed and issues identified are reported to relevant personnel                                                     |
| <b>6 Monitor operations at an incident</b>                                   | <b>6.1</b> | Adequacy of briefings is assessed and issues identified are reported to relevant personnel                                                                                                                                        |
|                                                                              | <b>6.2</b> | Adherence to decontamination procedures is observed and issues identified are reported to relevant personnel                                                                                                                      |

- 6.3 Lighting during night operations is assessed and recommendations are provided to improve site or personnel visibility
  - 6.4 Correct siting of appliances and/or vehicles is assessed and recommendations are made
  - 6.5 Use of equipment at an incident is observed and issues identified are reported to relevant personnel
  - 6.6 Provision of escape routes and refuges is assessed and issues identified are reported to relevant personnel
- 7 **Monitor operational safety at an incident**
  - 7.1 Any action that has imminent risk of injury or harm is ceased, suspended or modified
  - 7.2 Intervention is immediately reported to the appropriate officer within the chain of command
  - 7.3 Application of the organisation's safe working systems and practices is assessed and issues identified are reported to relevant personnel
  - 7.4 Operational and/or safety information flow between the Incident Management Team (IMT) and personnel on the ground is assessed and issues identified are reported to relevant personnel
  - 7.5 Fatigue status of all personnel at the incident is observed and actions are recommended to mitigate fatigue related safety issues
- 8 **Complete documentation**
  - 8.1 Arrangements are made for a log and/or record of all activities and decisions to be kept
  - 8.2 Assessment of future risks likely to emerge is undertaken and actions are proposed to prevent and/or mitigate these risks
  - 8.3 Suggestions for safety messages to be included in future IAP's are made
  - 8.4 Investigation of any accident, near miss or hit, significant injuries and/or fatalities is overseen and resulting documentation is handed over to relevant personnel or appropriate authority
  - 8.5 Advice on the need for additional support is documented and given to relevant personnel

## **8.6** Reports are prepared and given to relevant personnel

### **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

### **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

### **Unit Mapping Information**

This unit replaces and is equivalent to PUAFIR411A Provide safety advice at an urban incident.

### **Links**

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUA FIR411 Provide safety advice at an urban incident

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including applying safe work procedures
- assessing adequacy of briefings and procedures
- completing documentation including providing an incident report
- conducting initial briefings
- contributing to safety of personnel by providing advice during an incident
- disseminating operational information
- implementing risk management procedures and processes including negotiating mitigation strategies with Incident Controller
- monitoring application of resources identified in the incident action plan, personnel at an incident, operations at an incident and operational safety at an incident
- observing and assessing active and developing incident situations
- promoting a safety culture within an organisation including following zero harm or safe person principles
- using equipment safely
- wearing personal protective clothing and equipment
- working as a team member within a chain of command

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- additional support options
- chain of command
- characteristics and liabilities of equipment
- correct siting of appliances including equipment access, overhead electrical hazards, staging, traffic and end off positioning and uphill and upwind
- decontamination procedures including Breathing Apparatus (BA) monitoring, emergency decontamination plan and medication and health monitoring

- incident action plans
- operational and/or safety information including the provision of maps and warnings
- operational procedures, practices and implementation
- organisational documentation, policies and procedures including reporting procedures
- presence and movement of external organisations or technical experts and advisors including personal protective clothing and equipment requirements, escort requirements, briefing requirements and recording presence and movement
- risk assessments and risk management principles
- roles and responsibilities at an incident of Incident Controllers, incident management teams and personnel
- safe work procedures when using personal protective clothing and equipment including Breathing Apparatus (BA) entry points and procedures, BA staging (shelter, fluid replacement, cleaning and hygiene) and rapid entry teams (firefighter down)
- Situation, Mission, Execution, Administration and logistics, Command and Communications and Safety (SMEACS) briefings
- types of hazards at an urban incident including building and environmental risks
- types of incident report
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - actual or simulated workplace environments
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR417 Supervise machinery use in wildfire operations

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to task and supervise the use of machinery to undertake a range of activities to support fire ground operations. It includes control line construction and rehabilitation, reduction and removal of hazards, improvement of existing tracks and roads, creating access and egress to control lines, constructing helipads and assisting in blacking out.

The unit applies to personnel who supervise machine operators and who provide an essential interface between machine operators and the command structures at fire incidents.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR303 Suppress wildfire

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential    Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

## **1 Assess work area**

- 1.1** Risk assessment of fire site is undertaken and hazards and assets at risk are identified and inspected
- 1.2** Trees to be pushed are identified, marked for attention, options to avoid pushing trees are examined and permission to remove trees is obtained
- 1.3** Terrain through which tasks must be undertaken to achieve incident objectives is assessed
- 1.4** Route is selected, assessed and marked for construction of control line and removal or avoidance of hazards and to determine the most appropriate path and type of machinery suitable for wildfire operations activity
- 1.5** Consultation and communication with land owners and managers is undertaken prior to machinery entering the property

## **2 Brief and task machine operators**

- 2.1** Personnel are briefed on strategies and tactics to be implemented by machine operators, in accordance with organisational procedures and the incident action plan
- 2.2** Machine operators are tasked and briefed on work standards and safe work practices to be adhered to
- 2.3** Reporting arrangements between machine operators, fire crew and supervisor are outlined
- 2.4** Machine operators are checked to confirm that they are wearing appropriate personal protective clothing and equipment
- 2.5** Appropriate communications equipment is provided and instructions for use is given to machine operators
- 2.6** Machinery is inspected to ensure compliance with safety requirements
- 2.7** Machinery is selected to ensure compliance with work and/or contract requirements
- 2.8** Machinery is checked for compliance with hygiene guidelines in respect to spread of disease and weeds and remedial action is taken, as required
- 2.9** Anchor points, escape routes and safety zones are established and communicated to personnel in the area

- |                                                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <b>5 Recover and maintain equipment</b>        | <ul style="list-style-type: none"><li><b>5.1</b> Requests for repairs or maintenance of machinery are communicated through the chain of command</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

- 5.2 Damaged or missing equipment is recorded and/or reported, in accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

risk assessment of the site must include

- fire behaviour
- fuel type
- terrain
- weather conditions

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR415 Supervise machinery use in wildfire operations.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFIR417 Supervise machinery use in wildfire operations

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- applying and monitoring safe work practices during fire suppression activities including control line construction and pushing trees
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- assessing work area including hazards and risks
- briefing and tasking machine operators
- communicating with machine operators
- conducting mop up and support activities
- constructing anchor points and safety zones including burnt areas, clearings, rivers, site of a recent wildfire or prescribed burn, static water bodies and area of safety zone suitable for fire size
- cooperating with support vehicle personnel
- ensuring hazardous trees have been marked for attention
- establishing and maintaining work standards of machine operators
- implementing strategies
- maintaining communication
- maintaining health and safety of people in wildfire area
- monitoring and reporting on machinery operations in fire suppression activities
- recovering and maintaining equipment
- reviewing options
- selecting and marking routes for fire control line construction
- supervising personnel and the use of machinery
- wearing personal protective clothing and equipment

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes

knowledge of

- asset categories
- Australasian Inter-service Incident Management System (AIIMS)
- communications equipment
- fire control line construction including anchor points and safety zones, asset protection, capabilities of support vehicles, fire control line construction rates and construction standards, using machines to construct control lines, construction guidelines and tandem operations
- isolation of hazards
- mop up and support activities
- options available with control lines
- organisational documentation, policies and procedures
- personal protective clothing and equipment
- potential hazards
- processes for planning for the availability of machines and operators
- protection of environmental, structural, infrastructure, cultural and agricultural assets
- records for time keeping and reporting requirements
- role and responsibilities of machine supervisor
- role of machines in mopping up
- safety including communication, machine requirements, mutual support, operator safety, operating procedures, safe work practices including those for working around trees, survival techniques when threatened by wildfire and personnel welfare
- strategies and tactics for firefighting
- tree marking including hazardous tree and track marking system
- types of control line construction
- types of hazards including burns, disorientation, environmental, fatigue, heat related illness, falling objects, branches and trees, lack of visibility, machines, manual handling, overhead hazards, beehives, powerlines, trees weakened by fire, rot or cracks, rolling objects, smoke inhalation, snake or insect bites, sprains or fractures, terrain and soil types, trips and falls and water bombing operations
- types of machinery, their capabilities and limitations including bobcat - skid steer loader, brompton rat, bulldozer, excavator, front end loader, grader, scrub rollers, tractor with blade or plough and wheeled dozer and log skidder with blade
- use of machines in wildfire operations including
  - arrangements regarding organisational, private and contracted equipment
  - capabilities of supporting fire units
  - general servicing and maintenance requirements of machines
  - machine design and safety features
  - machine set up and capabilities
  - organisational requirements for engagement of machines
  - transport of machines
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) legislated requirements including risk mitigation and safe work procedures

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Competency should be demonstrated and assessed over time in a range of field based environments.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - wildfire or prescribed burn and machinery
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR418 Supervise specialist response to aviation accidents and incidents

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to supervise the initial response to an aviation accident or incident by a specialised aviation firefighting team. It applies to personnel who supervise specialist aviation incident response teams at an airport.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR205 Respond to aviation incident (specialist)

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |                                                                       |                                                                                                                                                                                                          |
|-----------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>1 Respond to aviation accidents and incidents</b>                  | <b>1.1</b> International Civil Aviation Organisation (ICAO) and/or Civil Aviation Safety Authority (CASA) requirements or recommendations are determined when attending aviation accidents and incidents |
|                                                                       | <b>1.2</b> Aviation accident and incident response conditions are analysed, in accordance with organisational procedures                                                                                 |
|                                                                       | <b>1.3</b> Appropriate resources are identified, accessed and used, in accordance with organisational procedures                                                                                         |
|                                                                       | <b>1.4</b> Hazards and risks are identified and continually monitored and communicated to relevant personnel, in accordance with organisational procedures                                               |

# Assessment Requirements for PUA FIR418 Supervise specialist response to aviation accidents and incidents

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- conducting size up operations of an aviation accident or incident
- controlling an aircraft accident or incident including response conditions
- identifying hazards and risks
- implementing aerodrome emergency operating procedures
- implementing emergency services liaison including aerodrome emergency plans incident control system, management systems and memorandums of understanding
- implementing incident action plans and incident management procedures
- implementing objectives, tactics and strategies for aircraft incidents
- liaising with emergency services
- meeting organisational requirements
- preserving aircraft response scene
- responding to aviation accidents and incidents
- selecting and using aviation firefighting equipment, agents and protective clothing and equipment under response conditions
- supervising the rescue and evacuation of persons on board aircraft
- utilising personal protective clothing and equipment

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- aerodrome emergency plans and operating procedures
- air navigation and Civil Aviation Safety Authority (CASA) regulatory arrangements and standards
- aircraft details including construction, control surfaces and engines

- aviation accident and incident response conditions including
  - airport operations such as area of response, aerodrome emergency plans, aircraft movements and category
  - response time criteria
  - types of fires such as armaments, hydrocarbon fuel, metal, type of aircraft, aircraft knowledge and familiarisation and airport topography
- emergency services liaison procedures
- fire ground objectives, strategies and tactics for aircraft incidents
- firefighting extinguishing mediums used on aircraft including dry sand, extinguishing gas or powder, foam, vaporising liquid, water and personal protective clothing and equipment
- hazards and aviation risks
- identification of aviation hazards and risks
- International Civil Aviation Organisation (ICAO) standards and recommended practices
- objectives, strategies, tactics and other factors for consideration
- operation of emergency exits in aircraft
- organisational documentation, policies and procedures
- security and preservation of scene
- size up strategies
- types of aviation accidents and incidents
- types of aviation accidents and/or incidents
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Competency should be demonstrated in a range of actual or simulated aviation incidents and should be assessed in a range of simulated aviation fires and incidents.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including

- aircraft or simulator
- appropriate fuels for burning
- environmentally sound training ground, incorporating aircraft simulations for practical training
- extinguishing mediums
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR501 Conduct fire investigation and analysis activities

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to respond to an incident and to undertake a preliminary fire investigation prior to the arrival of a specialist fire investigator.

The unit is applicable to personnel required to conduct a fire investigation at a fire or related incident. It is not intended for personnel operating in the role of specialist fire investigator.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUALAW001 Protect and preserve incident scene

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |                                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|          | <b>4.1</b>                                                | Information relating to incident is gathered, in accordance with organisational procedures                                        |
|          | <b>4.2</b>                                                | Information relating to incident is evaluated, in accordance with organisational procedures                                       |
| <b>5</b> | <b>Record and report information collected</b>            |                                                                                                                                   |
|          | <b>5.1</b>                                                | Information for a fire incident investigation is recorded, in accordance with organisational procedures and the rules of evidence |
|          | <b>5.2</b>                                                | Information collected for a fire incident investigation is prepared and documented, in accordance with organisational procedures  |
|          | <b>5.3</b>                                                | Report is submitted through the chain of command, in accordance with organisational procedures                                    |
| <b>6</b> | <b>Prepare for proceedings</b>                            |                                                                                                                                   |
|          | <b>6.1</b>                                                | Briefings are participated in with counsel, as required                                                                           |
|          | <b>6.2</b>                                                | Additional information or clarification of fire incident investigation procedures or findings are investigated, if required       |
|          | <b>6.3</b>                                                | Protocols for giving evidence at coronial, civil or criminal proceedings are implemented                                          |
| <b>7</b> | <b>Review and evaluate fire or incident investigation</b> |                                                                                                                                   |
|          | <b>7.1</b>                                                | Outcomes of legal proceedings are identified and distributed to ensure knowledge of investigations and                            |

trends is maintained and is current

- 7.2 Changes to organisational policies and procedures arising from legal proceedings and decisions are formulated and reported
- 7.3 Fire or incident cause determination, documentation or recommendations are forwarded to relevant personnel, in accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR501B Conduct fire investigation and analysis activities.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUA FIR501 Conduct fire investigation and analysis activities

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- communicating using approved methods and tools
- conducting analysis of the incident
- determining origin and cause of fire at incident
- displaying evidence gathering and packaging techniques
- participating in briefings
- planning fire or incident investigation and analysis activities
- recording and reporting information collected
- securing, collecting, collating and preserving evidence
- utilising methods and techniques for evidence and information collection

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- causes of fire including accidental, chemical, deliberate, electrical origin, environmental or natural occurrences, flammable liquids, gas and gas explosions, lightning, matches and lighters, mechanical defects, motor vehicles, smoking and spontaneous combustion
- determination of point of origin through use of evidence
- differences between accidentally, negligently, deliberately or naturally lit fires
- examination of fire scenes
- factors affecting fire behaviour
- fire dynamics such as flash over and back draught
- fire scene and risk investigation hazards
- legal implications of evidence collection
- legal protocols for giving evidence including court practices and procedures, pre-court briefings and rules of evidence
- legislative requirements in relation to fire incident investigation

- organisational documentation including reporting requirements
- organisational policies and procedures including fatality and criminal involvement procedures
- personal protective clothing and equipment
- preservation of evidence including maintaining chain of evidence and log of events
- processes for packaging
- security, contamination and preservation of fire scenes
- techniques for collecting evidence and sources of information
- types of specialist and forensic personnel
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - evidence management, handling and packaging resources
  - fire investigation equipment and resources real or simulated, test fire sites and fire crews and pumpers, as required
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

## PUAFIR502 Develop incident control strategies

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to determine a range of strategies that can be used to control incidents. Incident control strategies will normally be documented and relate to Level 2 and/or Level 3 incidents.

The unit applies to personnel responsible for the development of incident control strategies.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

Fire

### Unit Sector

Fire

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### **1 Identify objectives and strategies**

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Risk characteristics of incident are identified

**1.2** Sources of risk are determined

- 1.3 Objectives are identified
  - 1.4 Strategic options are identified
  - 1.5 Tactics appropriate to strategies are evaluated
- 2 Evaluate strategies
  - 2.1 Predictions of incident development are made under alternative strategy scenarios
  - 2.2 Resource requirements for each strategy are determined, in accordance with organisational procedures
  - 2.3 Consequences and likelihood of success and/or failure of strategic options are considered and assessed
  - 2.4 Feedback on strategies is obtained from stakeholders and incident managers and is collated and recorded, in accordance with organisational procedures
  - 2.5 Strategies are reviewed taking feedback into account
- 3 Select strategies
  - 3.1 Strategic options are documented using a range of information sources, in accordance with organisational procedures
  - 3.2 Preferred strategies and recommendations are submitted for consideration, in accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR502B Develop incident control strategies.

# Assessment Requirements for PUAFIR502 Develop incident control strategies

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least two occasions and includes

- analysing incident needs and meeting resource requirements
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- assessing strategic options
- conducting risk assessments including identifying sources of risk
- determining consequences
- developing incident predictions
- ensuring incident control strategies meet identified objectives
- evaluating incident control tactics
- evaluating strategies
- gathering data from approved information sources
- identifying incident objectives and strategies
- identifying risk characteristics and sources of risk
- implementing and evaluating tactics
- liaising with stakeholders
- providing justification for the selection of recommended strategies
- recognising and communicating with stakeholders
- selecting and applying incident models including consideration of consequences
- selecting control strategies and tactics
- undertaking predictions
- utilising information sources
- working with resource requirements

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- application of available prediction models

- development and implementation of incident objectives, strategies and tactics
- emergency management concepts and principles
- evaluation and consequences of strategies and tactics
- incident control tactics including evaluation of outcomes
- information sources
- legislative and regulatory requirements for emergency management
- organisational documentation, policies and procedures including field notes, log books and post incident reports
- resource required for tactical implementation
- risk characteristics and sources of risk
- stakeholder needs
- strategic options
- types of incidents
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk management concepts and principles and risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Competency should be assessed in two or more incident situations or scenarios where there is the capacity to demonstrate the required evidence.

Resources for assessment must include access to

- a range of relevant activities, exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - resources that may involve complex scenarios sufficient to allow evidence to be gathered from a variety of sources and stakeholders on more than one occasion and over an extended period
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR503 Coordinate human resource management activities

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to coordinate and implement a range of human resource management activities.

The unit applies to personnel responsible for managing human resources for a designated area of responsibility and applying organisational policies including equal employment opportunity, industrial awards and Work, Health and Safety (WHS)/Occupational Health and Safety (OHS). A designated area of responsibility may include a region, brigade or a business unit or department.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Identify and interpret industrial agreements and**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1.1 Industry awards and workplace agreements are interpreted and applied**

## awards

- |                                                                   |            |                                                                                                                                                                                 |

|                                                                   | <b>1.2</b> | Organisational policies that relate to industrial relations are communicated to all personnel, in accordance with organisational procedures and employee consultative processes |
|                                                                   | <b>1.3</b> | Unions are consulted, in accordance with organisational procedures                                                                                                              |
| <b>2 Settle employee grievances and complaints</b>                | <b>2.1</b> | Grievances and complaints are received, recorded and treated confidentially, in accordance with organisational procedures                                                       |
|                                                                   | <b>2.2</b> | Investigation of grievances and complaints is undertaken, in accordance with organisational procedures                                                                          |
|                                                                   | <b>2.3</b> | Findings of the investigation are concluded and appropriate action is taken                                                                                                     |
|                                                                   | <b>2.4</b> | Settlement of grievances and complaints is undertaken, in accordance with organisational policies, procedures and legislation                                                   |
| <b>3 Applying human resource legislation</b>                      | <b>3.1</b> | Human resource legislation requirements are identified and implemented within the organisation                                                                                  |
|                                                                   | <b>3.2</b> | Organisational policies and procedures are implemented to ensure the working environment is equitable, safe and conforms to legislation, government policy                      |
|                                                                   | <b>3.3</b> | Management is advised of unsafe or discriminatory situations within the organisation that requires intervention                                                                 |
| <b>4 Administer disciplinary procedures</b>                       | <b>4.1</b> | Disciplinary matters are investigated to examine possible actions and designated personnel are sent a comprehensive briefing                                                    |
|                                                                   | <b>4.2</b> | Disciplinary matters are dealt with, in accordance with organisational procedures                                                                                               |
| <b>5 Appraise personnel and coordinate progression activities</b> | <b>5.1</b> | Personnel are informed of progression and promotional opportunities                                                                                                             |

|                                                      |            |                                                                                                                                           |
|------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------|
|                                                      | <b>5.2</b> | Activities related to providing promotional opportunities are coordinated, in accordance with organisational procedures                   |
|                                                      | <b>5.3</b> | Confidentiality of performance appraisal is maintained, in accordance with organisational procedures                                      |
| <b>6 Evaluate and utilise expertise of personnel</b> | <b>6.1</b> | Specific strengths and weaknesses of personnel are identified and utilised for the attainment of work group outcomes and job satisfaction |
|                                                      | <b>6.2</b> | Individual and work group development is supported by facilitation of team building activities                                            |
| <b>7 Produce succession plans</b>                    | <b>7.1</b> | Succession plans are produced and implemented to assist with the smooth transition of personnel from one job to another                   |
|                                                      | <b>7.2</b> | Information on competencies and other organisational requirements for each job role is communicated to all personnel                      |
| <b>8 Establish performance indicators</b>            | <b>8.1</b> | Organisational performance indicators are established                                                                                     |
|                                                      | <b>8.2</b> | Individuals and work groups in the organisation are informed of performance standards and indicators                                      |
|                                                      | <b>8.3</b> | Performance indicators are reviewed with individuals and work groups to ensure they match organisational requirements                     |
| <b>9 Identify development needs of personnel</b>     | <b>9.1</b> | Human resource planning advice is sought from appropriate sources, if required, when scoping personnel development needs                  |
|                                                      | <b>9.2</b> | Training and development needs of personnel are identified                                                                                |
|                                                      | <b>9.3</b> | Plans for personnel development are implemented, in accordance with organisational procedures and practices                               |
|                                                      | <b>9.4</b> | Personnel are encouraged to acquire new skills and to develop existing knowledge and skills                                               |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to PUAFIR503B Coordinate human resource management activities.

# Assessment Requirements for PUA FIR503 Coordinate human resource management activities

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- administering disciplinary procedures
- applying human resource legislation
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- appraising personnel and coordinating job progression activities
- conducting investigations into grievances and complaints
- establishing organisational/workplace performance indicators
- evaluating expertise of personnel
- facilitating work group building activities
- identifying and interpreting industrial policies, agreements and awards
- identifying development needs of personnel
- implementing human resource management policies
- producing workplace succession plans
- providing informal feedback
- resolving employee grievances and complaints by applying grievance procedures

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and include knowledge of

- conflict resolution techniques
- employee performance appraisals
- grievance and complaint procedures
- industrial relations system – internal and external
- industry agreements and award conditions
- job and/or career progression and succession planning
- legislation related to Human Resources (HR)
- organisational documentation, policies and procedures including equal employment opportunity policies, procedures, guidelines and responsibilities and disciplinary procedures

- role of HR manager
- sources and reasons for grievances
- sources for HR information
- team building facilitation
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Competency should be demonstrated over time and in a wide range of contexts.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# Assessment Requirements for PUAFIR504 Assist with formulation and implementation of plans and policies

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- assisting in the development, implementation and evaluation of policies, procedures or plans
- assisting in the preparation and implementation of organisational business plans
- contributing to strategic and operational planning processes
- developing and proposing submissions
- facilitating policy and plan change within the organisation
- following consultative processes
- identifying and considering stakeholder concerns
- implementing change management strategies to deal with resistance to policy development
- monitoring the administration of organisational policies, procedures and plans

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- concepts involved in the policy cycle
- consultative procedures and processes in the policy cycle
- methods for implementing and evaluating policies, procedures and plans
- organisational documentation, policies and procedures including submissions
- reasons for resistance to policy development and strategies for dealing with issues that arise
- role of management, employees and stakeholders in policy and plan development
- stakeholders and external organisations
- submission types
- types of operational plans
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Competency should be demonstrated over time and in a range of contexts; the evaluation of the development and implementation of organisational plans and policies may require a few months.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

## PUAFIR505 Administer cost centre's financial resources

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to prepare budget estimates and to administer and report on budget performance. It includes preparing capital and recurrent budget estimates, administering financial budgets and managing forward planning activities.

The unit is applicable to personnel required to manage the financial resources for a designated area of responsibility. A designated area of responsibility may include a region, brigade, business unit, department or a project involving the use and management of financial resources.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

Fire

### Unit Sector

Fire

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### **1 Prepare capital and recurrent budget**

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1.1 Capital and recurrent budget estimate is prepared to ensure that the necessary funds to operate a cost centre**

|                                             |            |                                                                                                                                                                                         |
|---------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>estimates</b>                            |            | for a budgetary period are accurately determined                                                                                                                                        |
|                                             | <b>1.2</b> | Budget details and supporting evidence are prepared and submitted, in accordance with organisational procedures and requirements                                                        |
|                                             | <b>1.3</b> | Budget review process is used to identify organisational priorities                                                                                                                     |
| <b>2 Administer financial budget</b>        | <b>2.1</b> | Budget is administered, in accordance with organisational procedures and financial policies to ensure effective resource usage                                                          |
|                                             | <b>2.2</b> | Financial information is analysed and reported on, in accordance with organisational procedures, and actions are taken to achieve planned outcomes                                      |
|                                             | <b>2.3</b> | Expenditure is monitored and evaluated on a regular basis, in accordance with organisational procedures                                                                                 |
| <b>3 Manage forward planning activities</b> | <b>3.1</b> | Resource availability in relation to forward planning for staffing, plant, equipment and appliances is continuously monitored and managed, in accordance with organisational procedures |

## Assessment Requirements for PUA FIR505 Administer cost centre's financial resources

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes:

- administering a financial budget
- managing forward planning activities
- preparing capital and recurrent budget estimates including expenditure and capital requirements for a work group, department or business unit
- preparing a performance report for a budget

### Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- content and format of a performance report
- elements of a budget
- financial and budget development processes
- function and purpose of budgets
- limitations of budgets
- organisational documentation, policies and procedures
- purpose of a performance report
- types and formats of budgets

### Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy

requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations relevant
- appropriate materials, tools, equipment and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR506 Conduct complex prescribed burns

## Modification History

**Release 2.0** This is the second release of this unit of competency in the PUA Public Safety Training Package.

Editorial update.

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to prepare and conduct complex prescribed burns, in accordance with approved burn plans.

A prescribed burn is the controlled application of fire under specified environmental conditions to a predetermined area and at the time, intensity and rate of spread required to attain planned resource management objectives. An approved prescribed burn plan includes a map identifying the area to be burned and incorporates the specifications and conditions under which the operation is to be conducted.

Complex prescribed burns are characterised by moderate to high risk, a range of fire intensity, being in medium to large areas, having significant potential impact on assets and involving a variety of fuels and terrain. A burn operation may involve a large number of resources requiring the establishment of a formal management and support structure. A prescribed burn may require several separate ignitions (ground and/or aerial) possibly over several days. It may have several high value assets requiring complex protection actions.

The unit applies to personnel responsible for preparing, conducting and evaluating complex prescribed burns on public and private land.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR303 Suppress wildfire

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Prepare to burn

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Complex prescribed burn operations are identified and undertaken, in accordance with approved prescribed burn plan, burn objectives, organisational procedures, and legislative and regulatory requirements
- 1.2** Permits are obtained, in accordance with organisational procedures and legislative and regulatory requirements
- 1.3** Burn notifications and plans are issued to personnel or organisations, in accordance with prescribed burn plan, organisational procedures and legislative requirements
- 1.4** Control lines, including secondary control lines are specified and prepared, in accordance with organisational procedures
- 1.5** Prescribed burn plan, operational hazards and risks to safety of people, property, assets, ecology and environment are identified and risk mitigation works completed
- 1.6** Forecast weather conditions are monitored, recorded and assessed, in accordance with organisational procedures
- 1.7** Fuel conditions are monitored, in accordance with organisational procedures
- 1.8** Resource requirements are confirmed with reference to burn plan and anticipated conditions
- 1.9** Forecast weather conditions are monitored throughout prescribed complex burn

## **2 Conduct burn**

- 2.1** Burn notifications are issued, in accordance with organisational procedures
- 2.2** Pre-burn checks are conducted, in accordance with organisational procedures
- 2.3** Local weather conditions for day of burn are monitored and contingency arrangements actioned and communicated accordingly
- 2.4** Resources are gathered and personnel briefed, in accordance with prescribed burn plan and contingency arrangements
- 2.5** Burn ignition strategies and tactics are implemented, in accordance with prescribed burn plan and organisational procedures including lighting techniques for ground and/or aerial ignition, as relevant to the specific burn, lighting patterns and lighting sequence
- 2.6** Burning is monitored, patrol activities are conducted and operational changes made, as required
- 2.7** Contingencies are implemented, as required, in accordance with prescribed burn plan
- 2.8** Burn documentation is kept, in accordance with organisational procedures
- 2.9** Burn operations are concluded and burn security is implemented in accordance with organisational requirements
- 2.10** Crews are debriefed and resources released from the burn
- 2.11** Incidents are reported and investigated in accordance with organisational procedures

## **3 Conduct post burn activities**

- 3.1** Outcomes of burn are assessed and reported against burn objectives, in accordance with organisational procedures
- 3.2** Variations from burn plan are reported, in accordance with organisational procedures
- 3.3** Restoration and rehabilitation works are identified and carried out, in accordance with organisational procedures
- 3.4** Complex prescribed burn records are submitted, in

accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

|                                                                                |                                                                                                                                                                                                                                                                                                                                                 |
|--------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| prescribed burn plan must include                                              | <ul style="list-style-type: none"><li>• an approved plan for conduct of prescribed burning</li><li>• map identifying the area to be burned</li><li>• specifications and conditions under which operation is to be conducted</li></ul>                                                                                                           |
| burn objectives must include one or more of the following                      | <ul style="list-style-type: none"><li>• asset protection</li><li>• biodiversity protection</li><li>• community protection</li><li>• habitat management</li><li>• hazard reduction</li><li>• management of cultural sites and activities</li><li>• protection of fire sensitive ecological communities</li><li>• vegetation management</li></ul> |
| operational hazards must include one or more of the following                  | <ul style="list-style-type: none"><li>• adverse terrain or weather conditions</li><li>• crew size</li><li>• falling trees and limbs</li><li>• hazardous materials</li><li>• ignition methods</li><li>• plant</li><li>• road traffic</li><li>• vegetation</li></ul>                                                                              |
| environmental and ecological risks must include three or more of the following | <ul style="list-style-type: none"><li>• impact of smoke</li><li>• impact of use of any chemical fire suppressants</li><li>• impact on native flora and fauna, including rare and endangered species</li><li>• impact on soil</li><li>• impact on water quality or supply</li></ul>                                                              |

contingency arrangements must include

- actions to take in the event of unexpected weather
- command structure
- dealing with escapes
- resource breakdowns
- resource requirements
- safety considerations including escape routes and safety zones
- special resources and/or secondary control lines
- wind changes

personnel or organisations must include one or more of the following

- personnel or organisations who
  - have an interest in managing the consequences of a burn
  - have an interest in preventing health impacts from smoke e.g. nursing homes, health departments
  - have an interest in specific assets
  - have an interest in the area to be burned
  - may be adversely affected by the burn
  - may be concerned by evidence of a burn
  - may have adjacent land to which a burn could spread

resource requirements must include one or more of the following

- contingency resources
- crews for
  - aircraft ground support
  - control and suppression
  - ground ignition
- equipment and supplies
- logistical support
- tankers and other vehicles

burn ignition strategies and tactics must include:

- contingency arrangements
- fire behaviour to be achieved
- ignition methods, lighting patterns, sequencing and timing of ignition

lighting techniques for ground and aerial ignition must include three or more of the following

- hand held drip torch
- aerial drip torch
- aerial incendiaries
- hand held propelled incendiaries
- vehicle mounted propelled incendiaries
- vehicle mounted incendiaries
- wind and/or waterproof matches

|                                                                                   |                                                                                                                                                                                                                                                                                       |
|-----------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| lighting patterns must include two or more of the following                       | <ul style="list-style-type: none"><li>• backing fire ignition</li><li>• spot or grid ignition</li><li>• strip ignition</li><li>• flank fire ignition</li></ul>                                                                                                                        |
| lighting sequence must include                                                    | <ul style="list-style-type: none"><li>• fuel arrangement</li><li>• fuel moisture</li><li>• slope</li><li>• time of day</li><li>• wind direction</li></ul>                                                                                                                             |

# Assessment Requirements for PUAFIR506 Conduct complex prescribed burns

## Modification History

**Release 2.0** This is the second release of this unit of competency in the PUA Public Safety Training Package.

Editorial update.

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation and safe work practices
- concluding burn operations and implementing burn security
- conducting operational briefings and debriefings
- conducting post burn activities
- conducting safe complex prescribed burn operations by utilising appropriate resources (ground and air)
- confirming location, construction and suitability of control lines for prescribed burns
- confirming resources required
- evaluating outcomes against objectives
- identifying and protecting assets
- implementing contingency arrangements
- interpreting and implementing complex prescribed burn plans
- interpreting existing and forecast weather conditions and fire behaviour conditions
- issuing verbal and written burn notifications
- monitoring burn and patrol activities
- preparing to burn
- recording actions taken
- responding to changing conditions
- restoring and rehabilitating sites
- using fire prediction tools
- using monitoring equipment
- utilising lighting techniques and sequencing
- working with ignition patterns and techniques

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- characteristics of complex prescribed burns including involvement of a variety of fuels and terrain, medium to large areas, moderate to high risk, range of fire intensity and significant potential impact on assets
- contingency plans
- evaluation of burn outcomes against objectives
- fire prediction tools and their use
- fuel sampling techniques
- ground and aerial ignition patterns and techniques
- impact of conditions of a complex prescribed burn on potential fire behaviour
- legislation, industry standards, codes of practice and regulations
- legislative, regulatory and organisational authorisations
- organisational documentation, policies and procedures
- permit requirements
- procedures for monitoring, concluding and securing burn
- resource requirements and capabilities
- restoration and rehabilitation activities including site stabilisation and recording and reporting future restoration and rehabilitation requirement
- seasonal restrictions on prescribed complex burns
- smoke modelling and smoke impacts
- techniques, patterns and sequencing for lighting
- traffic management plans
- types of prescribed complex burns
- types of property and assets within or near burn area including urban areas, commercial land use such as crops or industry, any cultural sites or historical buildings, other property and assets, stock, utilities such as power and telephone lines, water supply, structures and communications towers, camps or recreational areas, plantations and research plots and reference areas
- verbal and written burn notifications
- weather conditions including temperature, relative humidity, wind, atmospheric stability, drought index, fire danger index, weather forecasts and actual or anticipated changes in conditions
- weather monitoring techniques
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation and safe work practices

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training

Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions. Competency should be demonstrated in an operational environment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - an area for proposed complex prescribed burn
  - authorisation to light burn
  - fire management plans
  - lighting and suppression crews
  - lighting equipment
  - prescribed burn plans including plan for proposed assessment burn
  - suppression equipment
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR507 Inspect building fire safety systems

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to inspect building fire safety systems. It includes interpreting building plans and associated documentation for fire safety systems; locating and noting variations to systems; assessing the operation and maintenance of the systems and to report on the findings of the inspection in accordance with organisational requirements.

The unit is applicable to personnel who are authorised by their organisation to enter buildings to conduct inspections of installed fire safety systems and to report on any matters arising in relation to their location, operation, maintenance and compliance.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR302 Suppress urban fire

PUAFIR314 Utilise installed fire safety systems

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Determine scope of inspection**

#### **2 Identify fire safety systems on documentation and locate in building**

#### **3 Verify fire safety systems on building plan and associated documentation**

#### **4 Review compliance of building's fire safety systems**

#### **5 Inspect operation and maintenance of fire safety systems**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Class of building is identified, in accordance with National Construction Code (Building Code of Australia)

**1.2** Methodology for conducting inspection is determined

**2.1** Fire safety systems and components are identified on building plans and associated documentation

**2.2** Fire safety systems are located in building and any variations between plans and actual locations are recorded

**3.1** Building plans and associated documentation are compared with the actual location of the building's fire safety systems

**3.2** Variations between the building plans and associated documentation and actual locations are recorded

**4.1** Building fire safety systems are checked against design requirements and relevant industry standards

**4.2** Building's emergency organisational structure is checked against design requirements and relevant industry standards

**4.3** Variations to design requirements and relevant standards are noted and reported

**5.1** Maintenance requirements are identified and examined

**5.2** Maintenance records are located and examined

**5.3** Maintenance procedures and log books are checked against design requirements and relevant standards

|                                                                     |            |                                                                                                                                                                                                     |
|---------------------------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                     | <b>5.4</b> | Fire safety systems are tested in conjunction with a building representative and results are recorded and reported, in accordance with organisational procedures and owner or occupier requirements |
| <b>6 Report on operation and maintenance of fire safety systems</b> | <b>6.1</b> | Variations to building plans and associated documentation are identified and outlined in report                                                                                                     |
|                                                                     | <b>6.2</b> | Information on review of the building's fire safety systems' compliance is provided to relevant personnel                                                                                           |
|                                                                     | <b>6.3</b> | Reports are distributed, in accordance with organisational procedures, legislation and/or owner or occupier requirements                                                                            |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

fire safety systems must include two or more of the following

- alternative fire suppression system
- building control system
- building design requirements
- emergency egress system
- emergency vehicle access system
- fire and emergency control centres and rooms
- fire detection systems
- fire hydrant and hydrant booster system
- fire indicator panels, occupant warning and communications systems
- fire resisting structures and compartmentations
- fire sprinkler and sprinkler booster system
- smoke hazard management and ancillary system

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR507B Inspect building fire safety systems.

# Assessment Requirements for PUAFIR507 Inspect building fire safety systems

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- determining scope of inspection including interpreting building plans in relation to fire safety systems
- identifying and comparing building's installed fire safety system on building plans and associated documentation
- inspecting and determining building's fire safety system against design requirements, industry standards and organisational requirements
- interpreting building plans in relation to fire safety systems
- locating and identifying components of building's fire safety system
- reporting on inspection, operation and maintenance of fire safety systems including any variations
- reviewing compliance of fire safety systems through applying knowledge of National Construction Code (Building Code of Australia) and inspecting and determining building's fire safety systems against design requirements and/or industry standards
- verifying maintenance requirements in relation to fire safety systems

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- building evacuation procedures
- class of building including buildings and structures as per the Building Code of Australia
- egress routes and housekeeping practices
- manufacturers' specifications
- methods of operation of fire safety systems
- organisational documentation, policies and procedures including maintenance procedures

- role of emergency management organisations
- specific building design requirements
- types of fire safety systems
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Competency should be assessed through actual inspections.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - site and building plans and associated documentation for an actual inspection
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR508 Develop and analyse the behaviour and suppression options for a wildfire

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to provide an analysis of the behaviour and spread of a wildfire and to prepare suppression options that are appropriate for expected fire behaviour.

The unit applies to personnel required to provide fire behaviour and spread predictions for consideration by the incident management team and state control centre.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Analyse factors that can impact a wildfire and**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1.1 Information on current and future fire behaviour and spread is collected from a range of sources and is**

|                                                                 |            |                                                                                                                            |
|-----------------------------------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------|
| <b>develop predictions</b>                                      |            | recorded, in accordance with organisational procedures                                                                     |
|                                                                 | <b>1.2</b> | Analysis is undertaken of fuels, fuel assessment, weather analysis and the effects of topography on fire behaviour         |
|                                                                 | <b>1.3</b> | Relevant site information is sought from data bases or experts, in accordance with organisational procedures               |
|                                                                 | <b>1.4</b> | Appropriate fire prediction tools and references are utilised in the analysis of fire behaviour and spread                 |
|                                                                 | <b>1.5</b> | Fire behaviour and spread predictions are developed, in accordance with organisational procedures                          |
|                                                                 | <b>1.6</b> | Predicted fire behaviour is validated against actual observations and intelligence as it becomes available                 |
| <b>2 Develop and maintain maps and data</b>                     | <b>2.1</b> | Required map information and data regarding predicted fire spread and behaviour is prepared                                |
|                                                                 | <b>2.2</b> | Quality information is provided within required timeframes for fire control planning                                       |
|                                                                 | <b>2.3</b> | Key assumptions and limitations affecting the predictions are identified and reported                                      |
|                                                                 | <b>2.4</b> | Fire behaviour and spread predictions are updated as new weather and fire information becomes available                    |
| <b>3 Analyse and communicate risks</b>                          | <b>3.1</b> | Location and timing of potential future impact of the fire is predicted                                                    |
|                                                                 | <b>3.2</b> | Key risks of fire to human, economic and environmental assets are considered, in accordance with organisational procedures |
|                                                                 | <b>3.3</b> | Fire and weather are monitored to assess if and or when fire behaviour is likely to change                                 |
|                                                                 | <b>3.4</b> | Identified risks and impacts are communicated to relevant personnel                                                        |
| <b>4 Contribute to the analysis of fire suppression options</b> | <b>4.1</b> | Participate in preparation of options analysis for consideration by the Incident Management Team (IMT)                     |
|                                                                 | <b>4.2</b> | Relevant time frames and fire behaviour thresholds for fire suppression strategies and tactics are considered              |
|                                                                 | <b>4.3</b> | Predicted changes to or variations in fire behaviour                                                                       |

conditions due to fuel, weather, topography and fire size are reviewed and considered

- 4.4** Advice and analysis are provided to the IMT, in accordance with organisational procedures, to assist in developing strategies including fall back strategies

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

firefighting strategies must include

- defensive strategies - community and asset protection
- offensive strategies - direct, indirect and parallel attack

firefighting tactics must include

- aerial suppression
- back burning and burning out
- control line construction - hand and machine
- direct application of firefighting media

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR512 Develop and analyse the behaviour and suppression options for a Level 2 wildfire.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUA508 Develop and analyse the behaviour and suppression options for a wildfire

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- accessing and interpreting weather products including conducting weather analysis, consideration of fuels, using topographical information to predict fire behaviour and the selection fire prediction tools
- analysing and communicating key risks
- analysing factors impacting on wildfire and developing incident predictions
- applying topographical information to predict fire behaviour
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- conducting weather analysis
- considering fuels
- developing and maintaining maps and data information for fire predictions
- preparing and analysing fire suppression options including strategies and tactics consistent with incident objectives
- providing for use to an Incident Management Team (IMT) an accurate analysis and projection of fire spread and fire behaviour indicating probable and possible scenarios and an analysis of a range of appropriate fire suppression options
- selecting and applying fire prediction tools and references

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- conditions suitable for and limitations of fire suppression strategies and tactics
- effects of topography on fire behaviour
- fire behaviour including fire perimeter, fire size, growth and shape, fire whirls, flame characteristics such as height and depth, heat output and intensity, junction zones, rate of spread, smoke and spotting
- fire considerations and risks

- fire suppression strategies and tactics
- fire weather
- fuel and fuel assessment
- fuel types and fuel assessment techniques
- human, economic and environmental assets
- impact of weather on fire behaviour
- map information and data including
  - fire behaviour estimates
  - maps of fire spread estimated at time intervals as required by the incident management team with separate mapping for probable and possible scenarios
  - narrative regarding limitations, assumptions, prediction uncertainties and other comments to assist in the interpretation of data
- organisational documentation, policies and procedures
- sources of information relating to weather and fire behaviour
- types of fire prediction tools and references
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation and categories of risk

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Competency should be demonstrated over time in actual or simulated wildfire incidents

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - a range of actual or simulated fires
  - a range of sources of information related to fire spread and behaviour
  - organisational templates for fire behaviour prediction
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR509 Implement prevention strategies

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to implement public safety risk prevention strategies which can be used to reduce risks to the community. It includes providing advice on prevention strategies, implementing and monitoring prevention strategies and reviewing the implementation of prevention strategies.

The unit is applicable to personnel required to work with individuals and community groups to implement public safety risk prevention strategies within their area of responsibility.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

|                                                         | <b>2.3</b> | Progress reports are provided to stakeholders, in accordance with organisational policies and procedures                                                            |
| <b>3 Review implementation of prevention strategies</b> | <b>3.1</b> | Stakeholders are advised of outcome of implementation of prevention strategies, in accordance with organisational policies and procedures                           |
|                                                         | <b>3.2</b> | Recommendations are documented and provided to appropriate personnel, in accordance with organisational procedures, as proposed amendments to prevention strategies |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR509B Implement prevention strategies.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFIR509 Implement prevention strategies

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- analysing needs through advice from stakeholders
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- briefing local forums
- communicating with stakeholders including providing reports
- completing documentation requirements
- ensuring risk prevention strategies are consistent with organisational community safety policies, procedures and criteria
- implementing and monitoring prevention strategies
- implementing organisational policies and procedures
- providing advice on prevention strategies
- reviewing and assessing implementation of prevention strategies
- reviewing strategies and providing feedback

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- assessment of public safety risk prevention strategies
- authorities and other responsible organisations
- communication methods and techniques
- emergency management concepts and principles
- legislation, regulations and codes of practice
- organisational criteria for implementing prevention strategies
- organisational documentation, policies and procedures
- participation and/or briefing in local forums
- risk prevention strategies
- source of risk
- stakeholders including authorities

- techniques for prioritisation and evaluation of public safety risk management systems
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# PUAFIR510 Inspect for legislative compliance

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to detect legislative and/or regulatory non-compliance and breaches and/or risks to the public or the environment through routine and/or non-routine inspections. It includes determining the requirements for inspections, conducting inspections, determining appropriate actions to achieve legislative compliance and preparing reports to fire services and other appropriate authorities.

The unit is applicable to personnel authorised by their organisation to inspect sites and/or areas for legislative non-compliance breaches within the organisation's legislative provision. This may include assisting owners and/or occupiers to detect legislative non-compliance, responding to complaints from the public and acting to minimise risks to the public and/or the environment.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |                                                                         |            |                                                                                                                                                           |
|-------------------------------------------------------------------------|------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>1 Determine requirements for inspection</b>                          | <b>1.1</b> | Need for inspection is identified                                                                                                                         |
|                                                                         | <b>1.2</b> | Scope of inspection is determined, based on legislative provisions and organisational requirements                                                        |
|                                                                         | <b>1.3</b> | Power of entry is determined, in accordance with legislative provisions and organisational procedures                                                     |
| <b>2 Conduct inspection</b>                                             | <b>2.1</b> | Designated areas to be inspected are identified and defined within scope of inspection                                                                    |
|                                                                         | <b>2.2</b> | Inspection is conducted, in accordance with organisational policies and procedures and regulatory requirements                                            |
|                                                                         | <b>2.3</b> | Non-compliance and possible breaches are detected and recorded, in accordance with organisational procedures, requirements and legislation                |
| <b>3 Determine appropriate action to achieve legislative compliance</b> | <b>3.1</b> | Consultation is sought with relevant persons, in accordance with organisational procedures, to facilitate resolution of non-compliance                    |
|                                                                         | <b>3.2</b> | Options for action are identified that will enable compliance to be achieved                                                                              |
|                                                                         | <b>3.3</b> | Corrective action plan to achieve compliance is developed as a result of consultation                                                                     |
|                                                                         | <b>3.4</b> | Action is undertaken to achieve compliance                                                                                                                |
| <b>4 Prepare report</b>                                                 | <b>4.1</b> | Inspection report is compiled and submitted                                                                                                               |
|                                                                         | <b>4.2</b> | Details of offences or breaches are recorded and recommended actions are submitted to appropriate personnel, in accordance with organisational procedures |
|                                                                         | <b>4.3</b> | Infringement notices are initiated and processed, and offences are reported, in accordance with organisational procedures                                 |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

non-compliance and possible breaches must include two or more of the following

- chemical spills and pollution
- maintenance of fire safety systems
- non-compliance with legislative requirements

options for action must include one or more of the following

- cease using premises
- contacting other emergency services
- contacting relevant authorities
- contacting supervisor
- isolating site
- processing infringement notices in accordance with organisational requirements
- recommendations

reports must include one or more of the following

- diary
- standard forms and/or written reports

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR510B Inspect for legislative compliance.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUA FIR510 Inspect for legislative compliance

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- adhering to legislative and organisational requirements
- analysing and providing options for action
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- communicating findings of inspections
- conducting inspections
- determining requirements for inspection
- identifying actions or options to achieve legislative compliance
- identifying and assessing situation found
- recognising and assessing situation including noting non-compliances
- recording and preparing reports
- using inspection techniques

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- building codes and standards
- fire safety systems
- legislation for which the organisation has responsibility
- legislation relevant to the organisation such as compliance
- legislative requirements relating to issuing notices and reporting risks to public and the environment
- organisational documentation and guidelines
- organisational policies and procedures including conducting routine and non-routine inspections, reporting risks and breaches, collecting information, resolution of complainants, completion of reports for incidents and complaints, issuance of notices and non-compliance

and options for action

- potential risks to public and environment
- powers of entry
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) legislated requirements including risk management procedures and risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# PUAFIR515 Develop complex prescribed burn plans

## Modification History

**Release 2.0** This is the second release of this unit of competency in the PUA Public Safety Training Package.

Editorial update.

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to develop complex prescribed burn plans for specified burn areas to achieve identified objectives.

A prescribed burn is the controlled application of fire under specified environmental conditions to a predetermined area at a time, intensity and rate of spread required to attain planned resource management objectives. An approved prescribed burn plan includes a map identifying the area to be burned and incorporates the specifications and conditions under which the operation is to be conducted.

Complex prescribed burns are characterised by moderate to high risk, a range of fire intensity, being in medium to large areas, having significant potential impact on assets and involving a variety of fuels and terrain. The burn operation may involve a large number of resources requiring the establishment of a formal management and support structure. It may require several separate ignitions, ground and/or aerial, possibly over several days and it may include a number of high value assets requiring complex protection actions.

The unit is applicable to personnel responsible for developing complex prescribed burn prescriptions.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR303 Suppress wildfire

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Identify burn area and burn objectives**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Areas requiring complex prescribed burn plans are identified, in accordance with organisational and permit procedures and legislative and regulatory requirements

**1.2** Burn objectives are identified and consultation process is undertaken, in accordance with organisational procedures

**1.3** Target consultation groups are identified, and consultation process is initiated, in accordance with organisational procedures

**1.4** Legislative and regulatory requirements are identified and complied with throughout planning process

#### **2 Prepare prescribed burn plan for a complex burn**

**2.1** Key features of burn area are identified including variations in terrain, fuel types and quantities, control lines and weather

**2.2** Risks from the proposed burn, both on and off site, are assessed and considered in planning process including operational hazards, safety of people, protection of property, assets, environmental and ecological risks

**2.3** Results of consultation are factored into the planning process, in accordance with organisational procedures

**2.4** Fire behaviour to meet burn objectives and to account for variations in fuel, terrain and weather is determined

**2.5** Burn ignition strategies and tactics suited to location that provide required fire behaviour and intensity are determined, in accordance with organisational

procedures

- 2.6** Lighting techniques and patterns for both ground based and/or aerial ignition for specific burn are identified
- 2.7** Strategies for mitigating hazards and risks are identified and preparatory works are planned
- 2.8** Strategies and tactics for controlling prescribed burn are identified
- 2.9** Type and quantity of resources required are identified
- 2.10** Conditions for implementation of burn ignition strategies and tactics are specified, in accordance with organisational procedures
- 2.11** Prescribed burn plan is prepared, in accordance with organisational procedures
- 2.12** Contingencies are outlined in prescribed burn plan

### **3 Gain prescribed burn plan approval**

- 3.1** Prescribed burn plan is submitted for approval, in accordance with legislative and organisational requirements
- 3.2** Modifications and amendments to prescribed burn plan are made, based on feedback received
- 3.3** Prescribed burn plan approval is gained

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

- complex prescribed burn plans must include
- approved plan for conduct of prescribed burning
  - map identifying area to be burned
  - specifications and conditions under which operation is to be conducted

burn objectives must include one or more of the following

- asset, biodiversity and community protection
- habitat management
- hazard reduction
- management of cultural sites and activities
- protection of fire sensitive ecological communities
- vegetation management

target consultation groups must include one or more of the following

- adjacent land owners or managers
- commercial operations within impact zone
- community groups with specific interests
- government organisations including local, state and federal
- other groups and people within the prescribing organisation
- people that may be affected by burn

burn ignition strategies and tactics must include

- contingency planning
- fire behaviour to be achieved
- ignition methods, sequencing and timing of ignition

lighting techniques for ground and aerial ignition must include three or more of the following

- hand held drip torch
- aerial drip torch
- aerial incendiaries
- hand held propelled incendiaries
- vehicle mounted propelled incendiaries
- vehicle mounted incendiaries
- wind and/or water proof matches

lighting patterns must include two or more of the following

- backing fire ignition
- spot or grid ignition
- strip ignition
- flank fire ignition

operational hazards must include two or more of the following

- adjoining land use and proximity to urban areas
- adverse terrain or weather conditions
- crew size
- falling trees and limbs
- hazardous materials
- high fuel loads
- ignition method
- plant
- powerlines
- road traffic
- vegetation type

safety of people must include two or more of the following

- impact of smoke on vulnerable communities near the burn area
- safety of any people permanently or temporarily in burn area
- safety of people involved with burn implementation
- safety of people on areas adjacent to burn area

property and assets must include two or more of the following

- any of the following that are in or near the burn area
  - camps or recreational areas
  - commercial land use such as crops or industry
  - cultural sites or historical buildings
  - other property and assets
  - plantations
  - research plots and reference areas
  - stock
  - urban areas
  - utilities - power and telephone lines, water supply structures and communications towers

environmental and ecological risks must include

- impact of native flora and fauna including rare and endangered species
- impact of smoke
- impact of soil
- impact of use of chemical fire suppressants
- impact on water quality or supply

resources required must include one or more of the following

- aircraft and crews including incendiary operations supervisors and machine operators for aerial ignition
- aircraft ground support
- control line standards
- crews and supervisors for ground ignition, control and patrol work
- equipment and supplies including fuel and incendiaries
- planning and logistical support
- pre-burn work schedule
- tankers, other ignition and suppression vehicles, equipment and fuel

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR513 Develop complex prescribed burn plans.

## Links

Companion Volume Implementation Guides are found in VETNet -  
<https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUA FIR515 Develop complex prescribed burn plans

## Modification History

**Release 2.0** This is the second release of this unit of competency in the PUA Public Safety Training Package.

Editorial update.

**Release 1.0** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- applying legislative, regulatory, organisational and permit requirements
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risks mitigation and safe work practices
- assessing characteristics of multiple fuel types, terrain and weather
- developing a pre-burn work schedule
- developing contingency arrangements
- documenting complex prescribed burn plans including objectives
- gaining complex prescribed burn approval
- identifying actions to minimise impacts of complex prescribed burn preparation
- identifying resources
- identifying, assessing and mitigating operational hazards and risks including to people, property, assets, ecology and environment
- identifying, liaising and consulting with target consultation groups
- interpreting maps of area and identifying key features
- predicting fire behaviour and intensity in burn area
- preparing maps for complex burn operational use
- preparing plans for complex prescribed burns including developing lighting techniques and patterns for ground and/or aerial ignition, tactics involving multiple fuel types, ignition strategies, burn objectives, strategies and tactics to meet objectives and timelines for planning and conduct of burn
- recommending actions and communicating them
- responding to feedback and adjusting plans for approval

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- accumulated fuels
- burn feasibility
- characteristics of complex prescribed burn including medium to large areas, moderate to high risk, range of fire intensity, significant potential impact on assets and variety of fuels and terrain
- complex prescribed burning ignition and suppression strategies including ignition patterns and sequences for ground and aerial
- contingency arrangements
- control line suitability
- effects of fire on people, property, assets, ecology and environment
- fire prediction tools
- fuel sampling techniques
- legislative, regulatory, organisational and permit requirements
- organisational documentation, policies and procedures including pre-burn procedures
- planned burn hazards and risks
- resource capabilities
- smoke modelling
- traffic management
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation and safe work practices
- written and verbal notification requirements

## Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in operational situations or in simulated operational training situations that reflect workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including

- area requiring application of fire under prescribed conditions
- existing management plans and data relevant to area being prescribed
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR516 Assess and evaluate a facility's fire and incident safety management systems

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to assess and evaluate a facility's fire and incident safety management systems for dangerous goods and/or hazardous chemicals. It is applicable to personnel authorised by their organisation to undertake an assessment of a facility where dangerous goods and hazardous substances are stored.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR404 Inspect dangerous goods facilities

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |                                                                                                                                |                                                                                                                                                                    |
|--------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>1 Assess hazards of materials on site</b>                                                                                   | <b>1.1</b> Emergency response plans, tactical fire plans and other documentation are accessed and reviewed                                                         |
|                                                                                                                                | <b>1.2</b> Identification of hazards of onsite materials is carried out                                                                                            |
|                                                                                                                                | <b>1.3</b> Facility risk factors are determined                                                                                                                    |
|                                                                                                                                | <b>1.4</b> Potential incidents are determined                                                                                                                      |
|                                                                                                                                | <b>1.5</b> Factors which may contribute to loss of containment, control of, or fire involving hazardous materials are assessed                                     |
|                                                                                                                                | <b>1.6</b> Information about hazardous materials is accessed using a range of sources                                                                              |
| <b>2 Identify, determine and assess consequences of release of onsite materials (non-fire scenario)</b>                        | <b>2.1</b> Range of dangerous goods onsite are identified and assessed, in accordance with organisational procedures                                               |
|                                                                                                                                | <b>2.2</b> Consequences of dangerous goods releases are identified and assessed, in accordance with organisational procedures                                      |
|                                                                                                                                | <b>2.3</b> Impact on immediate area, personnel, property and the environment is identified, in accordance with organisational procedures                           |
|                                                                                                                                | <b>2.4</b> Resources available to combat the release of onsite materials are identified and assessed                                                               |
| <b>3 Determine and assess consequences of the fire scenario (fire, chemical and gas release) involving hazardous materials</b> | <b>3.1</b> Range of fire scenarios involving hazardous materials, including gas and chemical is identified, in accordance with organisational procedures           |
|                                                                                                                                | <b>3.2</b> Consequences of each fire scenario involving hazardous materials are identified and assessed, in accordance with organisational procedures              |
|                                                                                                                                | <b>3.3</b> Impact on immediate area, personnel, property and environment of a hazardous materials fire is identified, in accordance with organisational procedures |
|                                                                                                                                | <b>3.4</b> Resources available to combat the release of onsite materials are identified and assessed                                                               |

- |                                                                                       |            |                                                                                                                                                                            |
|---------------------------------------------------------------------------------------|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>4 Assess fire and incident and safety management systems and their performance</b> | <b>4.1</b> | Fire, incident and safety management systems including prevention, preparedness, response and recovery are identified                                                      |
|                                                                                       | <b>4.2</b> | Operation and performance of fire, incident and safety management systems is assessed, in accordance with performance based criteria                                       |
|                                                                                       | <b>4.3</b> | Fire, incident and safety management system design assumptions and fire organisational operations are assessed                                                             |
|                                                                                       | <b>4.4</b> | Recovery strategies are identified and assessed, in accordance with organisational procedures                                                                              |
| <b>5 Report and recommend action</b>                                                  | <b>5.1</b> | Proposed or existing fire, incident and safety management systems are documented                                                                                           |
|                                                                                       | <b>5.2</b> | Evaluation of fire, incident and safety management systems is recorded                                                                                                     |
|                                                                                       | <b>5.3</b> | Recommendations and proposed upgrades to fire, incident and safety management systems are reported, documented and forwarded, in accordance with organisational procedures |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

- information about hazardous materials must be sourced from one or more of the following
- ADR hazardous identification system
  - electronic databases
  - emergency procedures guides
  - Global Harmonised System (GHS)
  - HAZCHEM emergency action code
  - HAZMAT action guides
  - safety data sheets

scenarios must include at least two or more of the following

- boiling liquid expanding vapour explosion
- bund, flash and jet fires
- leak into banded or unbanded areas
- pool fires
- structural failure of storage vessels on part of manufacturing plant
- structure fire
- toxic vapour clouds
- vapour cloud explosion
- vehicle fires

fire and incident and safety management systems must include

- alternative fire suppression system
- bunding
- explosion relief devices
- fire and flame detection and alarm system
- fire hydrant and hydrant booster system
- fire indicator panels, occupant warning and communications systems
- fire main system
- fire sprinkler and sprinkler booster system
- gas and vapour detection and alarm system
- passive fire protection
- smoke and ventilation control system
- static water and pump sets
- systems for evacuation

and must include one or more of the following

- Australian and New Zealand Standards and codes of practice
- facility emergency procedures
- facility fire and incident response teams' material handling system
- facility's mutual aid agreements
- facility's work practices

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR514 Assess and evaluate a facility's fire and incident safety management systems and PUAFIR508B Assess and evaluate a facility's fire/incident safety management systems in hazardous materials.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet -

# Assessment Requirements for PUA FIR516 Assess and evaluate a facility's fire and incident safety management systems

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- assessing fire, incident and safety management systems and their performance
- assessing hazards of onsite materials
- determining and assessing consequences of a release (fire and non-fire) using scenarios
- evaluating whether fire safety management system within a structure meets regulatory performance requirements in the event of a fire or other emergency
- identifying and assessing hazardous onsite materials
- identifying hazardous materials using a range of information sources
- implementing legislation, industry standards, codes of practice and regulations
- inspecting premises using a risk based approach
- interpreting risk related documentation
- preparing reports and providing recommendations
- using information sources including chemdata HAZMAT action guides, emergency response guides, HAZCHEM emergency action code, Safety Data Sheets (SDSs), technical specialists, dangerous goods - initial emergency response guide, electronic chemical databases, safe storage and handling information cards, reference texts and Identification Maritime Dangerous Good Code (IMDC)
- using scenarios to evaluate possible outcomes
- utilising legislation, industry standards, codes of practice and regulations
- working with recovery strategies

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- consequences of dangerous good release and/or fire inclusive of impact on environment,

people and property

- emergency response plans
- emergency shutdown systems
- fire safety and hazard and operability studies (HAZOP)
- fire scenarios and consequences
- information sources including chemdata/HAZMAT action guides, emergency response guides, HAZCHEM emergency action code, Safety Data Sheets (SDSs), technical specialists, dangerous goods - initial emergency response guides, electronic chemical database, safe storage and handling information cards, reference texts and Identification Maritime Dangerous Good Code (IMDC)
- legislation, industry standards, codes of practice and regulations organisational documentation, policies and procedures
- recovery strategies
- types of onsite fire safety systems
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation, risk analysis and identification of hazards

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - facility plans, documentation, fire safety study and suitable facility for inspection
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR517 Conduct an inspection of a performance based design building

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to inspect fire safety systems in buildings containing performance based design solutions.

The unit applies to personnel authorised by their organisation to undertake inspections of buildings to determine whether their fire safety systems comply with the requirements of performance based design. Personnel may be required to provide reports to various stakeholders including building surveyors or certifiers, business owners and/or fire services.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR403 Assess building plans

PUAFIR507 Inspect building fire safety systems

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### 1 Undertake an inspection of fire safety systems and check for compliance

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** All components of a building's fire safety systems are identified, in accordance with approved performance based design reports, building plans, fire safety systems drawings and associated documentation

**1.2** All components of the fire safety systems and their elements are compared with design requirements, industry standards, building regulations and codes of practice, in accordance with organisational procedures

**1.3** Fire safety system performance and maintenance requirements are compared with design requirements industry standards, building regulations and codes of practice, in accordance with organisational procedures

#### 2 Report on inspection of fire safety systems to appropriate authorities

**2.1** Results of the inspection of fire safety systems' performance are reported, in accordance with organisational procedures

**2.2** Fire safety problems and issues relating to fire safety systems are identified and reported, in accordance with organisational procedures

**2.3** The report is distributed, in accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

fire safety systems must include

- alternative fire suppression systems
- building control systems
- building design requirements

performance based design must include

- emergency egress systems
- emergency vehicle access systems
- fire and emergency control centres and rooms
- fire detection and alarm systems
- fire hydrant and hydrant booster systems
- fire resisting elements and compartmentation
- fire sprinkler and sprinkler booster systems
- smoke hazard management and ancillary systems
- compartmentation
- fire engineering report requirements
- fire service capabilities
- fire service intervention
- fire suppression systems
- industry standards including international fire engineering guidelines and the National Construction Code (Building Code of Australia)
- occupant egress
- smoke hazard management arrangements
- type of construction and reduction in fire resistant levels

## Unit Mapping Information

This unit replaces and is not equivalent to PUAFIR506B Conduct an assessment of a building's performance based design.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUA FIR517 Conduct an inspection of a performance based design building

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- compiling and preparing reports
- determining performance based design impacts
- identifying fire engineering reports and performance specifications for fire safety systems
- interpreting building plans
- locating and identifying components of a building's fire safety system
- reporting on inspection of fire safety systems to appropriate authorities
- undertaking an inspection of fire safety systems and checking for compliance
- using fire intervention models
- working with organisational policies, procedures and documentation

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- building regulations and codes
- design documentation and reporting requirements
- design fires
- fire brigade intervention model and its application
- fire engineering and certifiers reports
- fire safety system performance and maintenance requirements
- hazards and risks in different building occupancy types
- industry standards including international fire engineering guidelines related to
  - fire detection, warning and suppression
  - fire initiation, development and control
  - fire services intervention
  - fire spread, impact and control

- occupant evacuation and control
- smoke development, spread and control
- manufacturers' equipment specifications
- organisational documentation, policies and procedures including maintenance procedures
- performance based building and fire codes
- performance based design
- principles of fire modelling including fire modelling and computational fluid dynamics and evacuation modelling
- types of fire safety systems

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

# **PUAFIR518 Conduct and record a Bushfire Attack Level (BAL) assessment**

## **Modification History**

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## **Application**

This unit of competency covers the skills and knowledge to perform Bushfire Attack Level (BAL) assessments.

Individuals undertaking Bushfire Attack Level assessments require a theoretical knowledge of fire, an understanding of regulatory frameworks, an ability to assess a location and consult with clients on the benefits of achieving fire resistance. It includes analysing the cause and effect of bushfire attack and correlating information about site conditions and determining the Bushfire Attack Level for a site.

The unit is applicable to personnel who are responsible for conducting a Bushfire Attack Level assessment as described in industry standards related to the construction of buildings in bushfire prone areas.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

Licensing, legislative, regulatory or certification requirements may apply to this unit in some jurisdictions.

## **Pre-requisite Unit**

Not applicable.

## **Competency Field**

Fire

## **Unit Sector**

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Analyse cause and effect of bushfire attack on buildings**

- 1.1** Objectives of planning and building legislation and standards covering development in areas exposed to bushfire are reviewed to identify measures to improve performance of buildings when subject to bush fire attack
- 1.2** Requirements for Bushfire Attack Level (BAL) assessment are identified and complied with including Work, Health and Safety (WHS)/Occupational Health and Safety (OHS), legislative, organisational and certification requirements
- 1.3** Interaction between fuel, topography and weather is assessed for the site and potential bushfire behaviour and its impact on people and property is determined
- 1.4** Potential fire impact on buildings including construction durability and immediate environment is determined
- 1.5** Sources of combustion are identified to determine how they influence the BAL

#### **2 Correlate information about site conditions**

- 2.1** The location of the site being assessed is identified
- 2.2** Fire Danger Index (FDI) and/or wind speed is determined for the site
- 2.3** Vegetation classification, type and height is determined for the site
- 2.4** Distance from vegetation to building sites is measured, in accordance with organisational procedures
- 2.5** Slope of land under vegetation is measured, in accordance with organisational procedures

#### **3 Determine BAL for site**

- 3.1** Relevant FDI, vegetation classification and type, distance to vegetation and slope are used to determine BALs applicable to the site

- 3.2 BALs appropriate to the site are verified, in accordance with organisational procedures
- 3.3 Details of BAL assessment is documented and reported, in accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

legislation and standards must include all the following

- AS 3959 Construction of Buildings in Bushfire Prone Areas (or successor)
- NASH Standard - Steel Frame Construction in Bushfire Areas (National Association of Steel Framed Housing)
- National Construction Code (Building Code of Australia)
- planning requirements and relevant state and territory legislation

buildings must include the following

- alterations and additions to existing buildings
- new buildings

Fire Danger Index (FDI) must include one or more of the following

- forest fire and grassland fire danger indexes
- organisational and jurisdiction specific requirements for their use

vegetation type must include one or more of the following

- as defined in AS3959 Construction of Buildings in Bushfire Prone Areas (or successor)
- as specified in organisational and jurisdictional guides

## Unit Mapping Information

New unit, no equivalent unit.

# Assessment Requirements for PUA FIR518 Conduct and record a Bushfire Attack Level (BAL) assessment

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulations and guidelines including safe work practices and procedures
- complying with legislation, regulations, industry standards and codes of practice for undertaking a Bushfire Attack Level (BAL) assessment
- collecting information and determining BAL assessment
- explaining purpose and processes associated with undertaking a BAL assessment to site owners including identifying problems and demonstrating potential responses
- identifying bushfire behaviour and conditions
- maintaining organisational documentation including recording, reporting and maintaining organisational information accurately
- using organisational policies and procedures relevant to undertaking a BAL assessment

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- bushfire behaviour concepts relevant to bushfire attack level assessments including
  - bushfire attack mechanisms including embers, radiant heat and flame contact
  - ember production and transport
  - heat transfer - convection, radiation and conduction
- bushfire behaviour concepts relevant to how bushfires move across different landscapes and vegetation including
  - fire development, growth and scale
  - flame height, fire intensity and rate of spread
  - junction zones and spotting
- Commonwealth, state or territory statutory requirements including licensing, and certification requirements

- communication methods and techniques
- fire weather conditions and impacts on fire behaviour including atmospheric stability, humidity, temperature, wind speed and direction and fire danger indices
- fuel and its impact on fire behaviour including amount, arrangement and moisture status
- organisational policies and procedures for undertaking a BAL assessment including procedures for recording, reporting and maintaining organisational records and information
- process for slope assessment and determination of effective slope
- site constraints and limitations
- sources of combustion including
  - flammable elements and vulnerable features in and around site
  - structures and other sources adjacent to or at proposed site
- vegetation type and classification including forest, woodland, shrubland, scrub, Mallee and/or Mulga, rainforest, grassland, tussock moorland and exclusions
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including guidelines and practices for undertaking BAL assessments

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Students must determine the level of bush fire attack by undertaking a minimum of four calculated Bushfire Attack Level (BAL) assessments in a variety of vegetation types and locations.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - AS3959 Construction of buildings in bushfire prone areas (or successor)
  - range of appropriate sites
  - specifications and work instructions
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR601 Develop and administer organisational policies, procedures and practices

## Modification History

**Release 1.** This is the first release of this unit of competency in the Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to administer policies, procedures and practices to support the achievement of organisational and operational objectives.

The unit applies to personnel required to lead a team to develop policies and supporting procedures to meet identified organisational needs. Policies developed will require integration into the organisation's strategic and business planning.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR504 Assist with the formulation and implementation of plans and policies

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential    Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

**1 Identify and develop policies, procedures and practices**

- 1.1** Need for new or review of policies, procedures and practices is identified in consultation with stakeholders
- 1.2** Consultative processes are used to exchange information with stakeholders about policies, procedures and practices to assist in problem solving and decision making, in accordance with organisational procedures
- 1.3** Cooperation and input is obtained from stakeholders
- 1.4** Policies, procedures and practices are reviewed or developed with stakeholders, in accordance with organisational procedures
- 1.5** Reviewed or new policies, procedures and plans are submitted, in accordance with organisational procedures

**2 Manage the implementation of policies, procedures and practices**

- 2.1** Reviewed or new policies, procedures and practices are integrated into organisational strategic and business plans
- 2.2** Reviewed or new organisational policies, practices and procedures are implemented and monitored for adherence and compliance
- 2.3** Administration procedures are updated to reflect reviewed or new policies, procedures and processes
- 2.4** Communication about reviewed or new policies, procedures and processes to stakeholders is facilitated, in accordance with organisational procedures
- 2.5** Policies and procedures information is gathered, stored and safely secured with confidentiality maintained, in accordance with organisational procedures
- 2.6** Copyright provisions are observed, in accordance with organisational procedures

**3 Review policies, procedures and practices**

- 3.1** Policies, procedures and practices are reviewed to ensure they are current and meet organisational business and strategic plans
- 3.2** Decisions and actions about policies, procedures and practices are recorded, in accordance with organisational

procedures

## **Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## **Range of Conditions**

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to PUAFIR601B Develop and administer agency policy, procedures and practices.

## **Links**

# Assessment Requirements for PUAFIR601 Develop and administer organisational policies, procedures and practices

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- disseminating information about reviewed or new policies, procedures and processes to stakeholders
- documenting reviewed or new policies, procedures and processes
- identifying and developing policies, procedures and practices
- integrating reviewed or new policies, procedures and processes in business and strategic plans
- managing the implementation of policies, procedures and practices
- reviewing policies, procedures and practices
- undertaking consultation during the preparation, development and review of policies, procedures and practices
- utilising liaising skills
- working with a variety of communication methods and techniques to make presentations and submissions to stakeholders

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- business and strategic plans
- communication methods and techniques
- internal and external stakeholders
- organisational documentation, policies, procedures and practices
- policy cycle
- strategies for implementing organisational policies, procedures and practices
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

# PUAFIR602 Manage the implementation of community safety strategies

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to establish and manage the implementation of a range of community safety intervention strategies that can be used to reduce risks.

The unit applies to personnel required to develop and implement community safety strategies for their area of responsibility, consistent with the organisation's policy for community safety.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR509 Implement prevention strategies

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential    Performance criteria describe the performance needed to

outcomes.

demonstrate achievement of the element.

**1 Identify prevention, preparedness, response and recovery strategies**

**1.1** Characteristics of potential community risks are identified

**1.2** Existing and potential prevention, preparedness, response and recovery strategies are identified through research, expert opinion and stakeholder consultation

**2 Evaluate draft strategies**

**2.1** Evaluation of draft strategies is undertaken, with any limitations and impacts identified and communicated to stakeholders

**2.2** Feedback on draft strategies are obtained from stakeholders and collated, in accordance with organisational procedures

**2.3** Stakeholder concerns and issues are addressed through negotiation and are taken into account in a revised draft of community safety strategies

**3 Select strategies**

**3.1** Revised strategies are presented to stakeholders for agreement

**3.2** Community safety strategies are documented and submitted for approval to relevant personnel, in accordance with organisational procedures

**4 Communicate approved strategies**

**4.1** Approved community safety strategies are publicised to stakeholders

**4.2** Technologies and processes are selected, in accordance with organisational procedures, to most effectively communicate information to stakeholders

**5 Organise implementation of documented strategies**

**5.1** Implementation processes and procedures for community safety strategies relevant to risks are identified

**5.2** Community safety action plans are developed to facilitate implementation processes and procedures

**6 Review effectiveness of implemented strategies**

**6.1** Community safety strategies and implementation is evaluated and reviewed, in accordance with organisational procedures

**6.2** Community safety action plans are adjusted following review, if required

- 6.3** Adjustments, if required, to community safety action plans are implemented, in accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR602B Manage the implementation of community safety strategies.

# Assessment Requirements for PUAFIR602 Manage the implementation of community safety strategies

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- conducting needs analysis
- documenting and communicating approved community safety strategies
- establishing communication methods and networks
- establishing an implementation process for community safety strategies
- evaluating draft community safety strategies
- identifying stakeholders
- identifying prevention, preparedness, response and recovery strategies
- implementing action plans
- monitoring and reviewing planning processes
- negotiating with client groups and stakeholders including resolving conflicts
- organising the implementation of documented community safety strategies
- reviewing effectiveness of implemented community safety strategies including procedures, action plans and strategies
- selecting community safety strategies
- using information technologies to communicate information
- using publicising strategies
- working with prevention, preparedness, response and recovery strategies

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- communication methods and techniques
- community safety action plans
- emergency management concepts and principles
- evaluation of draft strategies
- implementation of strategies

- information technologies
- legislative and regulatory requirements relevant to community safety strategies
- organisational documentation, policies and procedures
- prevention, preparedness, response and recovery strategies
- potential stakeholders
- strategies to use for publicising community safety implementation
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation, risk management models and potential hazards and their consequences

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - controlled access to organisational records and personnel information about incidents and/or simulations based on actual events - these resources may involve complex scenarios sufficient to allow evidence to be gathered from a variety of sources and stakeholders on more than one occasion and over an extended period
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR603 Determine origin and cause of wildfire

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to undertake wildfire scene examination and assessment to determine the path, origin and cause of a wildfire based on fire behaviour, weather conditions, topography and fuel load. It focuses on developing and applying a systematic approach to fire investigation in a wildfire context and is applicable to wildfire fire investigators who are required to determine the origin and cause of a wildfire.

It includes coordinating wildfire investigations, securing fire scenes and preserving evidence, identifying and recovering evidence relevant to a wildfire investigation, packaging items of evidence for examination and conducting an analysis of evidence to identify the cause and origin of a wildfire.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR303 Suppress wildfire

PUALAW001 Protect and preserve incident scene

PUALAW002 Conduct initial investigation at incident scene

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Coordinate wildfire investigation**

#### **2 Secure fire scene and preserve evidence**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Roles and responsibilities of agencies or organisations and support personnel involved in the wildfire investigation are confirmed
- 1.2** Cooperation of personnel from a range of agencies/organisations consistent with their designated roles and responsibilities for a wildfire investigation is achieved
- 1.3** Information required by fire investigator from personnel from other agencies or organisations is identified, sought and received
- 1.4** Activities of personnel involved in the wildfire investigation are coordinated, in accordance with organisational procedures, to enable an efficient and effective investigation
- 1.5** Personal protective clothing and equipment is used, in accordance with organisational procedures
- 1.6** Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) procedures appropriate to the wildfire incident are followed
- 2.1** Legal obligations of fire investigators are adhered to throughout the investigation
- 2.2** Methods of scene security prior to examination are implemented, in accordance with organisational procedures
- 2.3** Procedures to monitor and log access to a wildfire scene are identified and applied
- 2.4** Strategies for locating, collecting and evidence are implemented, in accordance with organisational procedures
- 2.5** Methods of preservation of evidence at a wildfire scene are implemented

- 2.6 Scene is protected from unnecessary damage, destruction or contamination
- 3 Conduct scene investigation**
  - 3.1 Investigation activities are coordinated with Incident Controller, in accordance with organisational procedures, when active fire management operations are still occurring in relation to the incident
  - 3.2 Fire incident information, data and records are collected and assessed, in accordance with organisational procedures
  - 3.3 Witness information is obtained
  - 3.4 Survey of scene is conducted to identify hazards and to preserve areas or items of evidential value
  - 3.5 Effect of fuels, weather and topography on wildfire development and spread are identified
  - 3.6 Effects of firefighting actions on fire scene and investigation are assessed
  - 3.7 Fire scene is reviewed, in accordance with organisational procedures, to determine areas of interest and to record observation of factors which may have a bearing on the determination of the origin and cause or development of wildfire
  - 3.8 Physical indicators related to path of fire or development of wildfire are identified, assessed and recorded
  - 3.9 Indicators of damage or destruction of assets caused by wildfire are identified, in accordance with organisational procedures
  - 3.10 Cause of fire, based on recognised cause categories, is determined by wildfire investigation
- 4 Identify and collect evidence to investigate a wildfire**
  - 4.1 Control, comparison and residual samples are identified and extracted, in accordance with organisational procedures requirements
  - 4.2 Samples are protected to avoid contamination and to ensure continuity of evidence
  - 4.3 Samples are recorded, collected, packaged and secured, in accordance with organisational continuity of evidence protocols and procedures

- |                                                                    |            |                                                                                                                                                                          |
|--------------------------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                    | <b>4.4</b> | Procedures for capturing fire scene records are implemented                                                                                                              |
|                                                                    | <b>4.5</b> | Forensic and physical evidence is interpreted                                                                                                                            |
|                                                                    | <b>4.6</b> | Organisational and legal reports are completed, in accordance with organisational procedures                                                                             |
| <b>5 Analyse information to determine origin and cause of fire</b> | <b>5.1</b> | Collected information and evidence is analysed and interpreted                                                                                                           |
|                                                                    | <b>5.2</b> | Fire origin and cause determination theories are developed and assessed using organisationally approved scientific methods, in accordance with organisational procedures |
|                                                                    | <b>5.3</b> | Findings are reported and documented, in accordance with organisational procedures and policies                                                                          |
|                                                                    | <b>5.4</b> | Evidence is secured for subsequent action, in accordance with organisational procedures                                                                                  |
|                                                                    | <b>5.5</b> | Wildfire investigation report is completed and forwarded to relevant authorities and stakeholders                                                                        |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

- origin and cause determination must include
- burn indicators
    - advancing or head fire
    - backing or heel fire
    - lateral or flanking fire
  - angle and depth of char indicators
  - ash, cupping and curling indicators
  - damage differential indicators
  - die out pattern indicators

- foliage or leaf freeze indicators
- grass stem indicators
- identification of ignition sources
- protection indicators
- scene observation, interpretation and processing
- sooting and staining indicators
- transition zone
- v-pattern indicators
- wildfire behaviour including weather, fuel load and topography
- wildfire spread

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR603A Determine origin and cause of wildfire.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFIR603 Determine origin and cause of wildfire

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- analysing information to determine origin and cause of fire
- applying Work, Health and Safety (WHS)/Occupational Health and safety (OHS) organisational requirements
- conducting a scene assessment and investigation
- coordinating wildfire investigations
- determining area and/or point of origin and suspected cause of fire
- identifying and collecting evidence to investigate a wildfire
- identifying potential ignition sources and following processes for elimination of cause
- implementing organisational procedures
- implementing organisationally approved scientific methods to wildfire investigations
- interpreting and analysing forensic data and physical evidence
- packaging, labelling and storing evidence for transport
- performing witness interviews and accurately recording information
- preserving evidence to avoid damage, spoliation or contamination
- recognising, documenting and preserving physical evidence
- recording information accurately
- securing fire scene and preserving evidence
- taking notes to support recording of information
- using organisationally approved methods and techniques to collect, handle and store evidence
- using organisationally approved systematic approach to examination of wildfire scenes
- utilising equipment to collect, handle and store evidence
- writing wildfire investigation reports

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- collection of physical evidence including handling, packaging and recording of physical evidence as well as photographs, drawings and samples
- common causes of wildfires including camp fire, debris burning, electrical, equipment, incendiary, juvenile, lightning, machinery, miscellaneous, power lines, rail, smoking and vehicles
- deliberate fire lighting motives and methodology
- determinants of fire cause
- evidence preservation
- fatal fire and crime scene management
- fire behaviour
- fire scene examination
- how to distinguish between accidental, negligent, deliberate and natural cause of fire
- indicators of fire cause and fire spread
- legal definitions of interviews and statements
- legislation relevant to each state and territory including Fire Service Act, Coroners Act, Criminal Code and Evidence Act
- match of evidence to point of proof and offence provisions
- methods for recording documentary and witness evidence, and their application including note taking processes and procedures
- organisational documentation, policies and procedures
- organisational requirements for producing investigation reports
- origin and cause determination
- other organisations, agencies and support personnel
- principles of investigation based on organisationally approved scientific methods and use of operational procedures for conducting investigations
- principles of wildfire spread
- product recall and Safety Data Sheets (SDSs)
- roles, responsibilities and limits of authority of personnel and agencies/organisations at a wildfire investigation including the Incident Controller
- rules of evidence including identification, collection and preservation, continuity and admissibility
- scene preservation and security
- state and territory court requirements for investigations
- types of evidence collection including admissibility, collection and preservation, continuity and identification
- use and storage of fire scene records
- use of deductive evidence to determine point of origin
- Work, Health and Safety (WHS)/Occupational Health and safety (OHS) organisational requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include

requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - case studies and organisational/workplace scenarios to capture the range of wildfire scenes likely to be encountered and for which evidence needs to be gathered and managed
  - legislation, policy, procedures and protocols related to the gathering and managing of evidence
- applicable documentation including organisational procedures, industry standards, regulations, codes of practice and operation manuals.

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# PUAFIR604 Determine origin and cause of structure fire

## Modification History

**Release 1.** This is the first release of this unit of competency in the Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to manage the inspection and assessment of a structure fire to determine origin and cause. The unit focuses developing and applying a systematic approach to fire investigation in a structured environment.

It includes originating structure fire investigations, securing fire scenes and preserving evidence. It also includes the evaluation and examination of fire debris, identifying and recovering evidence relevant to a fire investigation, packaging items of evidence for examination and conducting a thorough analysis of fire behaviour, development and travel as well as gathering evidence to establish fire cause.

Application of this unit is relevant to fire investigators who are required to determine the origin and cause of a structure fires.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR302 Suppress urban fire

PUALAW001 Protect and preserve incident scene

PUALAW002 Conduct initial investigation at incident scene

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Coordinate structure fire investigation**

#### **2 Secure fire scene and preserve evidence**

#### **3 Conduct scene investigation**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- 1.1** Cooperation with a range of agencies/organisations personnel in the conduct of the investigation is consistent with organisational procedures and designated roles and responsibilities for a structure fire investigation
- 1.2** Information required by fire investigator from a range of agencies/organisations personnel is identified, sought and recorded
- 1.3** Personal protective clothing and equipment is used, in accordance with organisational procedures
- 2.1** Legal obligations of fire scene investigators are adhered to throughout the investigation
- 2.2** Methods of scene security prior to examination are implemented, in accordance with organisational procedures
- 2.3** Procedures to monitor and log access to a fire scene are identified and applied, as required
- 2.4** Strategies for locating, collecting and processing evidence are implemented, in accordance with organisational procedures
- 2.5** Methods of preservation of evidence at a fire scene are implemented
- 2.6** Scene is protected from unnecessary damage, spoliation, destruction or contamination
- 3.1** Investigation activities are coordinated with Incident Controller, in accordance with organisational procedures, when active fire management activities are still occurring
- 3.2** External and internal survey of scene is conducted to identify hazards and action is taken to mitigate risks

- 3.3 Scene is examined, externally and internally, to determine areas of interest and to record observations which may have a bearing on the origin, cause or development of a structure fire
  - 3.4 Areas or items of evidence that have a potential bearing on the origin, cause or development of a structure fire are identified
  - 3.5 Effects of building construction and other factors relevant to fire development and spread are identified
  - 3.6 Nature and reactivity of materials involved in fire cause are identified
  - 3.7 Site indicators of fire spread with other sources of evidence are examined
  - 3.8 Witness information is obtained and recorded, in accordance with organisational procedures and rules of evidence
  - 3.9 Burn patterns and effects of fire suppression are identified and assessed
  - 3.10 Area or likely point of origin and possible cause of structure fire are determined, in accordance with organisational procedures
  - 3.11 Origin and cause determination theories are assessed and tested, in accordance with organisational procedures
- 4 Collect and analyse evidence from a fire scene**
- 4.1 Appropriate sampling areas and items are identified using required sampling equipment and resources
  - 4.2 Appropriate collection and packaging techniques are adopted, in accordance with organisational procedures
  - 4.3 Potential for destruction, spoliation and contamination of evidence is eliminated, in accordance with organisational procedures
  - 4.4 Integrity and continuity of collected exhibits is maintained, in accordance with organisational procedures
  - 4.5 Evidence from fire scene is analysed and processed using a range of recording and digital multimedia

- 4.6 Fire origin and cause determination theories are developed and assessed
- 4.7 Witness accounts are reviewed against theories, in accordance with organisational procedures
- 4.8 Fire origin and cause are determined
- 4.9 Findings are reported and documented, in accordance with organisational procedures
- 4.10 Evidence is secured for subsequent action, in accordance with organisational procedures
- 4.11 Investigation report is completed and forwarded to relevant authorities and stakeholders, in accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

- origin and cause determination must include
- burn patterns - v/patterns, inverted v/patterns, hour glass and circular shaped patterns
  - identification of ignition sources
  - scene interpretation and processing

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR604A Determine origin and cause of structure fire.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFIR604 Determine origin and cause of structure fire

## Modification History

**Release 1.** This is the first release of this unit of competency in the Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- applying collection techniques including the preservation of evidence, search techniques and security of environment
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- assessing and investigating fire scenes externally and internally
- collecting and analysing evidence from fire scenes
- coordinating and conducting fire scene investigations
- identifying area and point of origin and possible cause of fire utilising evidence and forensic scientific principles
- identifying burn patterns and burn pattern formation
- implementing collection techniques
- interpreting fire indicators scene
- interpreting scene
- managing fire scene investigation cases
- securing fire scene and preserving evidence
- taking fire scene notes, using digital multimedia accompanied with written explanations and narratives
- using sampling equipment
- utilising equipment to collect, handle and store exhibits and items of interest
- writing reports related to origin and cause of structure fire

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- agencies and organisations involved in a structure fire investigation
- burn patterns and how burn patterns are formed, including plume, ventilation, hot gas layer,

- full room involvement and suppression general patterns
- causal factors of burn patterns
- class of buildings
- classes of fire
- collection techniques including preservation of evidence, search techniques and security of environment
- common types of human behaviour associated with an incident
- equipment and resources used for sampling
- fatal fire and crime scene management
- internal survey of scene procedures
- organisational documentation, policies and procedures
- organisational requirements for producing reports
- origin and cause determination
- product recall and Safety Data Sheets (SDSs)
- roles and responsibilities of personnel
- rules of evidence including identification, collection, continuity and admissibility
- scene security including legal obligations and scene preservation
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - organisational policies, procedures and protocols related to the gathering and management of evidence in structural fire scene investigations
- applicable documentation including organisational procedures, industry standards, regulations, codes of practice and operation manuals.

# PUAFIR605 Determine origin and cause of mobile property fire

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to manage, inspect and assess a mobile property fire to determine origin and cause. For the purposes of this unit mobile property includes aircraft, farm machinery, caravans, campervans, marine craft, motor vehicles, trains, trams, trucks and buses.

The unit focuses on developing and applying a systematic approach to fire investigations in a mobile property context. It includes coordinating mobile fire investigations, securing fire scenes, preserving evidence, conducting analysis of evidence and making informed fire cause determinations and is applicable to fire investigators who are required to determine the origin and cause of a mobile property fires.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUALAW001 Protect and preserve incident scene

PUALAW002 Conduct initial investigation at incident scene

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1 Coordinate mobile property fire investigation**

**1.1** Cooperation with multi-organisational/agency personnel is consistent with designated roles and responsibilities and is in accordance with organisational procedures

**1.2** Information required by fire investigators from multi-organisation/agency personnel is identified

**1.3** Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) procedures are followed, in accordance with organisational procedures

#### **2 Secure fire scene and preserve evidence**

**2.1** Legal obligations of fire scene investigators are determined and adhered to throughout the investigation

**2.2** Methods of scene security prior to examination are implemented, in accordance with organisational procedures

**2.3** Procedures to monitor and log access to a fire scene are identified and applied, in accordance with organisational procedures

**2.4** Strategies for locating, collecting, preserving and processing evidence are implemented, in accordance with organisational procedures

#### **3 Conduct scene investigation**

**3.1** Investigation activities are coordinated with Incident Controller, in accordance with organisational procedures, when active fire management operations are still occurring in relation to the incident

**3.2** External and internal survey of scene is conducted to identify hazards and action is taken to mitigate risk

**3.3** Scene is investigated to determine areas of interest and to record observations on origin, cause or development of the fire

**3.4** Burn patterns and effects of fire suppression are identified and assessed

**3.5** Areas or items of evidence that have a potential bearing

- on origin, cause or development of fire are identified
- 3.6** Effects of construction and other factors that impact fire development and spread are identified
  - 3.7** Nature, combustibility and reactivity of materials involved in fire cause are identified
  - 3.8** Indicators of fire spread are identified in conjunction with other sources of evidence
  - 3.9** Effects of environmental conditions are recorded
  - 3.10** Evidence is assessed and prioritised for further review
  - 3.11** Fire origin and cause is determined and reported, in accordance with organisational procedures
- 4 Collect and analyse evidence from a fire scene**
- 4.1** Appropriate sampling areas and items are identified using sampling equipment and resources
  - 4.2** Appropriate collection techniques are applied including eliminating contamination and loss of evidence
  - 4.3** Integrity and continuity of collected exhibits is maintained, in accordance with organisational procedures
  - 4.4** Evidence from fire scene is analysed and processed using a range of recording and digital multimedia
  - 4.5** Product recall and safety data sheet databases are researched, as required
  - 4.6** Fire origin and cause determination theories are developed and assessed
  - 4.7** Findings are reported and documented, in accordance with organisational procedures
  - 4.8** Evidence is secured for subsequent action, in accordance with organisational procedures
  - 4.9** Investigation report is completed and forwarded to relevant authorities and stakeholders, in accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

- origin and cause determination must include
- analysing
  - identification of origin
  - interpretation
  - processing

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR605A Determine origin and cause of mobile property fire.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFIR605 Determine origin and cause of mobile property fire

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including safe work practices at a fire scene
- articulating and justifying investigation findings
- assessing and investigating fire scenes externally and internally
- conducting witness interviews
- coordinating mobile fire investigation and managing fire scene examination
- identifying area, point of origin and possible cause of fire
- identifying potential ignition sources and follow processes for elimination of cause
- implementing approved collection techniques
- implementing organisationally approved systematic approach to mobile property investigations
- packaging and preserving evidence to avoid damage, spoliation or contamination
- recognising potential hazards including assessing and mitigating risks
- securing fire scene and preserving evidence
- taking fire notes using digital multi-media accompanied with written explanation and narratives
- using methods and techniques to identify, document, collect, handle, transport and store evidence
- using sampling equipment and resources
- writing fire reports related to origin and cause of mobile structure fire

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of

- approved collection techniques
- causes of fire including chemical reaction; electrical wiring; engine fire; fuel line and

systems; fuel types and mixtures; incendiary devices including commercial, manufactured devices for other purposes, homemade, industrial and military; mechanical failure or damage and transmission fires

- common causes of fires including accidental, chemical, electrical, incendiary, natural, negligence and mechanical
- methods, techniques and equipment for handling and storing evidence to preserve and avoid damage or contamination
- organisational documentation, policies and procedures
- organisational requirements for producing investigation reports
- origin and cause determination
- other organisations/agencies and support personnel
- package, label and storage of evidence for transportation requirements
- potential ignition sources, their identification and processes of elimination
- principles of investigation based on based on organisationally approved systematic approaches
- product recall and Safety Data Sheets (SDSs)
- technological media for recording
- types of evidence including burn patterns, electronic data and witness statements
- types of sampling equipment and resources
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) legislated requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
  - that capture the range of causes for which evidence needs to be gathered and managed including using organisational procedures and protocols relating to the gathering and managing of evidence
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, equipment

specifications, regulations, codes of practice and operation manuals.

# PUAFIR606 Apply principles of combustion and fire dynamics to fire scene investigation

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to apply the principles of fire science and fire dynamics to a fire scene investigation. It includes applying principles of fire chemistry, chemistry of combustion and fire behaviour.

The unit is applicable to the work of a specialist fire investigator.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Apply principles of fire chemistry in fire**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

#### **1.1 States of matter, changes and impact on combustion are explained in relationship to fire scene investigation**

|                                                                       |             |                                                                                                                                                          |
|-----------------------------------------------------------------------|-------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>behaviour</b>                                                      |             | when reporting on fire behaviour                                                                                                                         |
|                                                                       | <b>1.2</b>  | Chemical reactions, basic chemical structures, bonds and energy are defined in relationship to fire scene investigation when reporting on fire behaviour |
|                                                                       | <b>1.3</b>  | Process of chemical reaction and oxidisation is explained in relationship to fire scene investigation when reporting on fire behaviour                   |
|                                                                       | <b>1.4</b>  | Organic and inorganic compounds are distinguished in relationship to fire scene investigation when reporting on fire behaviour                           |
|                                                                       | <b>1.5</b>  | Hydrocarbons and how they are constructed are explained in relationship to fire scene investigation when reporting on fire behaviour                     |
|                                                                       | <b>1.6</b>  | Pyrolysis is defined in relationship to fire scene investigation when reporting on fire behaviour                                                        |
|                                                                       | <b>1.7</b>  | Chemistry of combustion in solids, liquids and gases is explained in relationship to fire scene investigation when reporting on fire behaviour           |
|                                                                       | <b>1.8</b>  | Vapour density and its impact on fire spread is assessed in relationship to fire scene investigation when reporting on fire behaviour                    |
|                                                                       | <b>1.9</b>  | Different fuel types are identified, and fuel loads are assessed in relationship to fire scene investigation when reporting on fire behaviour            |
|                                                                       | <b>1.10</b> | Difference between exothermic and endothermic reactions is explained in relationship to fire scene investigation when reporting on fire behaviour        |
| <b>2 Apply knowledge of fire physics and impact on fire behaviour</b> | <b>2.1</b>  | Evidence of presence of heat is identified and explained by applying theory of heat release and methods of heat transfer                                 |
|                                                                       | <b>2.2</b>  | Stages of fire development in structures are identified and outlined in relationship to fire scene investigation when reporting on fire behaviour        |
|                                                                       | <b>2.3</b>  | Stages of fire development in a compartment are identified and detailed in relationship to fire scene investigation when reporting on fire behaviour     |

- 2.4 Concepts of flashover and backdraught, and their signs and symptoms are outlined in relationship to fire scene investigation when reporting on fire behaviour
- 2.5 Effect of fuel load on fire behaviour is explained in relationship to fire scene investigation when reporting on fire behaviour
- 2.6 Deflagration and detonation are outlined in relationship to fire scene investigation when reporting on fire behaviour
- 2.7 Types of ignition are outlined in relationship to fire scene investigation when reporting on fire behaviour

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR606A Apply principles of combustion and fire dynamics to fire scene investigation.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFIR606 Apply principles of combustion and fire dynamics to fire scene investigation

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation
- assessing fuel type and load at investigation scene
- demonstrating knowledge of fire physics and impact on fire behaviour
- evaluating impact of vapour density on fire spread
- identifying and assessing ignition sources
- identifying unrelated fire science evidence including finger prints, forced entry, signs of burglary and tool marks
- implementing legislation, codes of practice and industry standards to fire investigation
- undertaking risk analysis of fire scenes including consideration of electrical hazards, hazardous materials, physical hazards and environmental hazards
- using physical principles to fire investigation including compartment fire behaviour and wildfire behaviour and fire spread at an investigation scene
- validating fire investigation conclusions using scientific principles
- working with principles of fire chemistry when investigating fire behaviour including methodology to determine fire cause and theory related to principles of fire chemistry and physics to develop hypothesis based on fire scene evidence

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- chemistry and properties of flammable and combustible liquids, solids and gases
- chemistry of combustion including combustion products of common fuels
- chemistry of pyrolysis
- Classes of fire and fuel types including Class A solid carbonaceous materials, Class B flammable liquids, Class C flammable gases, Class D combustible metals such as sodium, potassium, calcium, magnesium, aluminium dust, zinc dust, titanium dust, Class E fires involving energised electrical equipment and Class F fires involving cooking oil and fat

- combustion and fire dynamics at fire scene investigations including deflagration and detonation including dust and vapour explosion, mechanical explosion and solid explosion, effect of oxygen concentration, combustion products of different fuels and fire extinguishment theory and methods
- compartment fire development and spread including ignition, growth, flashover, fully developed, backdraught and decay
- fire extinguishment theory
- flammable vapours
- ignition temperatures including flashpoint, fire point, auto-ignition temperature or flame point and explosive limits
- interrelationship between fuel size, quantity, arrangements, moisture content, weather and topography on wildfire development and behaviour
- mathematical formulae to assist with the determination of cause and origin
- methods of heat transfer including radiant, convection, conduction and direct flame contact
- non-piloted autoignition
- products of different fuels
- spontaneous combustion including drying oils, chemicals, vegetable matter and friction
- states of matter including solids, liquids and gases
- theory of heat release including heat flux, heat release rate and temperature
- toxicity of combustion gases
- types of combustion including incipient, smouldering and flaming
- types of ignition including chemical or reaction, friction or mechanical, flame or heat, self-ignition and spark, arc or electrical
- vapour density
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including safe work practices

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations including:
  - workplace scenarios to capture the range of causes likely to occur for which evidence

needs to be gathered and managed

- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR607 Apply electrical/electronic knowledge to fire investigations

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to inspect and assess a fire scene to determine whether the origin and possible cause of fire is related to the presence of electrical installations and appliances. It includes identifying sources of evidence, collecting and documenting evidence in preparation for analysis, findings and conclusions.

The unit applies to fire investigators who are required to assess a fire scene to identify the presence of electrical circuits, equipment or appliances that may have contributed to the cause of fire.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR605 Determine origin and cause of mobile property fire

PUAFIR609 Collect, record and coordinate the analysis of physical evidence

One of the following:

PUAFIR603 Determine origin and cause of wildfire

PUAFIR604A Determine origin and cause of structure fire

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Coordinate fire investigation**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Cooperation with multi-organisational personnel during the investigation is consistent with roles and responsibilities and is in accordance with organisational procedures

**1.2** Information for the fire investigation from multi-organisational personnel is identified and obtained, in accordance with organisational procedures

**1.3** Personal protective clothing and equipment is used, in accordance with organisational procedures

**1.4** Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) procedures incident are followed

#### **2 Identify, assess and collect circuitry components and appliances**

**2.1** External and internal survey of fire scene is conducted to identify and assess electrical circuitry, electrical equipment and appliances

**2.2** Relevance of electrical circuitry, equipment and appliances to fire cause is assessed and established

**2.3** Arrangements are made for the attendance of electrical specialist where it is believed that electrical systems, components or appliances may have contributed to the fire

**2.4** Expertise in electrical infrastructure is sourced, where required

**2.5** Interviews with witnesses are conducted, in accordance with organisational procedures

**2.6** Circuitry plans and/or layouts are obtained

**2.7** Areas or items of evidential value at the fire scene are identified and preserved

- |                                                             |            |                                                                                                                                           |
|-------------------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------|
|                                                             | <b>2.8</b> | Evidence is recorded and collected at the fire scene and observations are documented, in accordance with organisational procedures        |
|                                                             | <b>2.9</b> | Electrical circuitry components, equipment and appliances of evidential value are protected, in accordance with organisational procedures |
| <b>3 Arrange for tests on electrical evidence collected</b> | <b>3.1</b> | Advice is received from electrical specialist as to electrical or appliance systems                                                       |
|                                                             | <b>3.2</b> | Arrangements are made for laboratory and specialist testing and assessment of electrical items                                            |
| <b>4 Interpret and record findings</b>                      | <b>4.1</b> | Circuitry components on site plans are documented to support evidence and conclusions                                                     |
|                                                             | <b>4.2</b> | Circuit diagrams and electrical plans relating to building, components and equipment are determined and interpreted                       |
|                                                             | <b>4.3</b> | Specialist report on electrical circuitry or equipment failure as contributing to the cause of fire is obtained, where required           |
|                                                             | <b>4.4</b> | Specialist findings about ignition are considered in conjunction with other observations and evidence from the fire                       |
|                                                             | <b>4.5</b> | Product recall and material safety data sheet databases are researched, as required                                                       |
|                                                             | <b>4.6</b> | Recommendations are forwarded to authorities and/or stakeholders, as required                                                             |
|                                                             | <b>4.7</b> | Findings are interpreted and recorded, in accordance with organisational procedures                                                       |

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work

environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## **Unit Mapping Information**

This unit replaces and is equivalent to PUAFIR607A Apply electrical/electronic knowledge to fire investigations.

## **Links**

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFIR607 Apply electrical/electronic knowledge to fire investigations

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- arranging for tests on electrical evidence collected
- checking and assessing scene safety including isolating power
- coordinating fire investigations including other organisations and support personnel
- demonstrating knowledge of basic electrical circuitry
- documenting findings and identifying components of electrical equipment and relationships to electrical causes of ignition
- identifying potential ignition sources and processes of elimination
- identifying, assessing and collecting circuitry components and appliances
- implementing legislation, codes of practice and industry standards
- interpreting and recording findings
- operating visual and electric recording equipment
- protecting electrical circuitry components, equipment and appliances of evidential value
- undertaking an external and internal assessment of scene
- using information technology and databases
- utilising organisationally approved scientific methods
- working with methods, techniques and equipment for handling, collecting, preserving, packaging, labelling, storing and transporting evidence

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- basic circuit diagrams and electrical plans relating to electric components and equipment
- electrical circuitry components, equipment and appliances of evidential value
- electrical circuitry including design, installations, overload protection, power supply, resistance, short circuit or fault currents and voltage, current or kilowatts in different appliances

- fire scene observations including cable insulation, circuit and component failure, circuit mapping, components, evidence electrical tracking, flame propagation in hazardous, locations, operation of protective devices, wire overheating, starting, arcing and burn patterns
- laboratory or specialist testing sequence of electrical items
- organisational documentation, policies and procedures
- organisational protocols and procedures including legal and regulatory requirements for the investigation of fire incidents
- other organisations and agencies including support personnel
- product recall processes
- protection of evidential value
- requirements for reporting and recording
- safety data sheet databases
- sources of industry standards relating to electrical installations and appliances
- types of operation and potential faults in electrical and electronic equipment and appliances
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - examples of electrical circuitry, electrical equipment and appliances damaged by electrical faults which resulted in fire
  - various electrical circuitry, electrical equipment and appliances
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

## PUAFIR608 Investigate fatal fires

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to undertake an investigation of a fire involving fatalities. It is applicable to specialist fire investigators who are required to apply a systematic approach to the investigation of fatalities at a fire scene.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR605 Determine origin and cause of mobile property fire

PUAFIR609 Collect, record and coordinate the analysis of physical evidence

One of the following:

PUAFIR603 Determine origin and cause of wildfire

PUAFIR604 Determine origin and cause of structure fire

### Competency Field

Fire

### Unit Sector

Fire

### Elements and Performance Criteria

#### ELEMENTS

#### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Assess impact of fire on human remains**

- 1.1** Presence of human remains is identified and confirmed at the scene and is processed, in accordance with coronial and organisational requirements
- 1.2** Appropriate notifications to coronial services and police are made, in accordance with statutory and organisational procedures
- 1.3** Effect of fire heat range on human remains is assessed
- 1.4** Visible burn patterns and injuries on human remains are identified, assessed and documented
- 1.5** Proximity of human remains to fire is assessed
- 1.6** Origin and cause determination theories for fire are assessed

**2 Examine factors impacting on origin and cause of death**

- 2.1** Human factors that may have prevented occupants escaping the fire and products of combustion are examined and recorded
- 2.2** Effectiveness and operation of early warning detection and suppression systems are assessed
- 2.3** Observations regarding deceased's clothing are made and recorded
- 2.4** Observations of human behaviour before, during and after the fire are recorded
- 2.5** Effects of environmental conditions are assessed and recorded

**3 Implement procedures for recovery of human remains and report findings**

- 3.1** Disaster victim identification procedures are implemented, in accordance with organisational procedures
- 3.2** Methods of protecting human remains prior to removal from a fire scene are implemented
- 3.3** Consequential damage to human remains are recorded and reported to the appropriate authorities
- 3.4** Human remains collected from a fire scene are recorded,

in accordance with organisational procedures

- 3.5 Techniques to minimise evidence deterioration are followed, in accordance with organisational procedures
- 3.6 Techniques and equipment are used for scene analysis, reconstruction and testing of hypothesis, in accordance with organisational procedures
- 3.7 Investigation report is completed and forwarded to appropriate authorities and stakeholders

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR608A Investigate fatal fires.

## Links

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFIR608 Investigate fatal fires

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- assessing impact of fire on human remains
- complying with legislation, codes of practice and standards in fire investigation and court procedures
- conducting interviews and accurately recording information
- determining and implementing procedures for recovery of human remains and reporting findings
- examining factors impacting on origin and cause of death
- implementing organisationally approved approach to the systematic investigation of fatal fires
- implementing procedures for recovery of human remains
- interpreting findings of forensic data and physical evidence analyses
- preserving evidence to avoid damage, spoliation and contamination
- taking notes to support research and court preparation
- writing reports related to origin and cause of fatal fire

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- common causes of fire including accidental, chemical, deliberate, electrical, incendiary, natural and negligence
- compilation of written reports related to origin and cause of fatal fires
- disaster victim identification procedures
- effect of heat range fire on human remains including carboxyhemoglobin, common injuries before and post fire, extent of burns and effects of products of combustion
- effects of fire and fire gases on the human body and fire consumption of human remains
- evidence collection including admissibility, body bags, collection, continuity, identification, packaging and sampling techniques
- fire scene notes using digital multi-media accompanied with written explanations and

narratives

- industry standards that relate to clothing design, fabric and flammability
- legislation relevant to state and/or territory Fire Service Act, Coroners' Act, Criminal Code and Evidence Act
- operational procedures for conducting investigations
- organisational and legal requirements for writing and presenting reports
- organisational documentation, policies and procedures
- origin and cause determination including required reports
- processes and outcomes of post mortems and coronial inquests
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) legislated requirements including risk mitigation processes and safe work practices involving biological hazards

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations, that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR609 Collect, record and coordinate the analysis of physical evidence

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to record and document physical evidence collected at a fire scene and to coordinate the analysis of physical evidence to meet organisational requirements.

The unit focuses on developing and applying a systematic approach to the recording and documenting of physical evidence collected at a fire scene and the coordination of the analysis. It is relevant to specialist fire investigators, it does not address the technical and forensic analysis of evidence.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUALAW001 Protect and preserve incident scene

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1 Inspect scene and determine investigation plan**

- 1.1** Authority to access and inspect fire scene is obtained or verified, through approved channels
- 1.2** Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements are implemented, in accordance with organisational procedures
- 1.3** Incident scene security is confirmed, in accordance with organisational requirements
- 1.4** Fire scene is inspected
- 1.5** Evidence is identified using appropriate observation techniques and technological methods
- 1.6** Evidence collection plan and recording processes are established, in accordance with organisational procedures and legislative requirements

**2 Collect and record physical evidence**

- 2.1** Items of physical evidence are recorded, in accordance with organisational procedures, prior to collection
- 2.2** Liaison with technical specialists and other organisations is initiated, in accordance with organisational procedures, regarding the appropriateness, collection, preservation, handling and transportation of evidential samples to be collected
- 2.3** Evidence is collected and/or preserved in situ, in accordance with organisational procedures
- 2.4** Quality and quantity of samples are collected to ensure accuracy and sufficiency of evidence
- 2.5** Evidence is labelled and documented, in accordance with organisational requirements to ensure continuity of evidence

**3 Store, process and transport evidence**

- 3.1** Physical evidence is packaged and stored, in accordance with organisational procedures, to maintain continuity and to prevent degradation, contamination and spoliation
- 3.2** Documentation is completed for handling or possession of evidence, in accordance with evidentiary

- requirements and organisational procedures
- 3.3 Details of evidence collected is entered in case notes, evidence and/or data management systems and, where appropriate, in the exhibits register
  - 3.4 Movement of exhibits for examination is undertaken, in accordance with organisational procedures to ensure continuity, security and integrity of evidence
  - 3.5 Verbal and written summaries or reports are made, in accordance with organisational procedures
- 4 Coordinate the analysis process**
- 4.1 An examination is undertaken of evidence prior to any damage or deterioration occurring and includes relevant stakeholders
  - 4.2 Sequencing of evidence for examination is followed, in accordance with organisational procedures
  - 4.3 Technical specialists are briefed regarding range of tests or examination of evidence to be undertaken
  - 4.4 Feedback and advice is obtained from technical specialists regarding range of tests or examination outcomes of evidence
  - 4.5 Results are interpreted in consultation with technical specialists, where required
  - 4.6 Data is documented, and a report is finalised, in accordance with organisational procedures
  - 4.7 Retention and/or disposal of evidence is completed, in accordance with organisational procedures and legal requirements

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR609A Collect, record and coordinate the analysis of physical evidence.

# Assessment Requirements for PUAFIR609 Collect, record and coordinate the analysis of physical evidence

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- collaborating with technical specialists
- collecting, recording and labelling physical evidence sufficient for analysis
- collecting, packaging and preserving physical evidence to ensure continuity of evidence
- collating quantity and quality of samples
- coordinating and conducting analysis processes
- disposing of evidence correctly
- evaluating scene and determining investigation plan
- maximising evidentiary value of physical evidence
- recording physical evidence
- storing, processing and transporting evidence
- utilising interviewing skills

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- application and potential limitations of forensic investigative techniques field detection systems and resources including operation of photo ionisation detector and canines
- collection, records and continuity of physical evidence
- context in which forensic examinations are conducted
- documentation for recording and collecting physical evidence
- factors for consideration when packaging and storing physical evidence
- interpretation of test results
- quality and quantity of samples
- range of techniques for recording, collecting, packaging, labelling and preserving physical evidence
- roles and functions of forensic specialists in recording, collecting, preserving and ensuring

- continuity of physical evidence
- organisational documentation, policies and procedures
- security, protection and preservation of physical evidence
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

# PUAFIR610 Manage imaging and electronic data

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to electronically record evidence at a fire investigation scene. It includes the use, collection and selection of media and the analysis and management of associated data.

The unit focuses on developing and applying a systematic approach to electronically recording physical evidence at a fire investigation, using a range of media. Application of this unit is relevant to specialist fire investigators who are required to determine the origin and cause of fires.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

Not applicable.

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

|                                                     | <b>3.3</b> | Electronic record of physical evidence is documented and labelled, in accordance with organisational procedures and legal requirements to ensure continuity, authenticity and integrity of evidence |
|                                                     | <b>3.4</b> | Evidence captured is protected from data corruption, in accordance with organisational procedures                                                                                                   |
|                                                     | <b>3.5</b> | Data evidence log is completed and maintained, in accordance with organisational procedures                                                                                                         |
| <b>4 Analyse data to support conclusions</b>        | <b>4.1</b> | Data is assessed and analysed to support conclusions                                                                                                                                                |
|                                                     | <b>4.2</b> | Data is collated and selected, in accordance with organisational procedures                                                                                                                         |
|                                                     | <b>4.3</b> | Selected evidence is prepared for use in reports and/or presentations                                                                                                                               |
| <b>5 Manage electronic evidence</b>                 | <b>5.1</b> | Processes for capturing evidence are maintained and audited, in accordance with organisational procedures                                                                                           |
|                                                     | <b>5.2</b> | Primary and working copies of data collected are created, stored and used, as required                                                                                                              |
|                                                     | <b>5.3</b> | Data is disseminated, in accordance with organisational                                                                                                                                             |

procedures and legislative requirements

- 5.4 Data identified for disposal is eliminated, in accordance with organisational procedures and legal requirements
- 5.5 Data to be retained is documented and stored or archived to ensure continuity and non-contamination or degradation of evidence, in accordance with organisational procedures and legal requirements
- 5.6 Imaging and electronic data and equipment is stored securely, in accordance with organisational procedures

## Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

## Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

## Unit Mapping Information

This unit replaces and is equivalent to PUAFIR610A Manage imaging and electronic data.

PUA Training Package Companion Volume Implementation Guide is found in VETNet - <https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=3eca5672-6d5a-410b-8942-810d0ba05bbf>

# Assessment Requirements for PUAFIR610 Manage imaging and electronic data

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- analysing data to support conclusions
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements
- creating, storing and using primary and working copies of data including
  - copying data for ongoing data review and interpretation
  - database recording or linking digital data to physical evidence and specific incidents
  - enhancing, reformatting and recycling data
  - labelling and storing primary image data to secured electronic storage devices for archiving
  - statutory requirements for retention of evidence
- capturing evidence electronically
- evaluating scenes to determine data to be captured electronically
- labelling evidence
- maintaining data evidence log
- managing electronic data including data corruption processes
- presenting electronic data evidence
- selecting and preparing equipment and accessories
- using and maintaining digital cameras, videos, audio and data recording devices

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- data corruption and protection processes
- data evidence log requirements
- data or imaging techniques
- integrity of data in networked environments
- local, state and territory court requirements for investigation and recording of findings

- methods, techniques and equipment for handling and storing evidence to preserve and avoid damage or contamination
- organisational protocols for recording, storing, archiving and releasing data files
- processes for the labelling of evidence including date, details of persons living evidence, digital evidence and location
- range of electronic equipment
- roles and functions for the recording, collecting, preserving and continuity of data
- types of accessories
- use and maintenance of equipment and accessories
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) organisational requirements including risk mitigation and personal protective clothing and equipment

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry including
  - range of electronic media
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

# PUAFIR611 Process and analyse fire scene data and laboratory results

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to receive data from scientific practitioners, to process and analyse findings and to determine the origin and cause of a fire. It includes understanding scientific processes, analysis and laboratory results.

The unit focuses on developing and applying a systematic approach to fire investigation and working across fire and emergency incidents including structure, mobile and wildfire. It is applicable to specialist fire investigators.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

PUAFIR609 Collect, record and coordinate the analysis of physical evidence

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

### PERFORMANCE CRITERIA

Elements describe the essential outcomes.

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |                                                    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|----------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

# Assessment Requirements for PUAFIR611 Process and analyse fire scene data and laboratory results

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- analysing documentary and physical evidence
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- evaluating results of fire scene data
- handling exhibits and preserving continuity of evidence
- identifying, analysing and using data
- implementing organisational procedures
- interpreting laboratory results and findings
- maximising potential evidentiary value of physical evidence collected
- packaging and storing physical evidence
- solving problems and making decisions in relation to forensic investigation contexts
- working with a range of specialist practitioners and stakeholders
- writing reports

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- application of approved scientific methods to analyse fire scene evidence
- legislative, policy, procedural and quality system requirements for the collection, preservation, security, continuity, receipt and disposal of evidence
- organisational documentation, policies and procedures including guidelines
- physical evidence packaging and storing including drying of wet exhibits, exhibit labels, packaging medium, physical nature of exhibit, storage temperature and tamper evident seals
- processes for packaging and storing of evidence
- range of services available to assist laboratory examination and interpretation of physical evidence
- role and functions of forensic discipline specialists in laboratory examination of physical evidence

- specialist practitioners including emergency services personnel, forensic and industry scientists and police
- types of data to be collected and analysed
- types of physical evidence
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including risk mitigation and practices to be followed when handling physical evidence

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

# PUAFIR612 Undertake post incident analysis

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Application

This unit of competency involves the skills and knowledge required to manage or participate in the analysis of an incident after the event. The analysis should review all prior, actual and post aspects of an incident (structure, mobile and wildfire).

The unit focuses on developing and applying a systematic approach to a post incident analysis across incidents. It is not intended to address post incident analysis of operational activities. Application of this unit is relevant to fire investigators who conduct post incident analysis of fire investigations.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

## Pre-requisite Unit

It is essential that the prerequisite units listed below are obtained prior to the issuance of this unit to individuals within the fire sector or the units contributing to the attainment of a fire qualification.

CPPSEC3028A Compile investigative report

PUAFIR605 Determine origin and cause of mobile property fire

One of the following:

PUAFIR603 Determine origin and cause of wildfire

PUAFIR604 Determine origin and cause of structure fire

## Competency Field

Fire

## Unit Sector

Fire

## Elements and Performance Criteria

### ELEMENTS

Elements describe the essential outcomes.

#### **1 Participate in post incident analysis**

#### **2 Facilitate initial assessment of incident**

#### **3 Participate in investigation processes**

### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

**1.1** Roles and responsibilities of multi-organisational or agency and support personnel involved in post incident analysis are determined and confirmed

**1.2** Cooperation with multi-organisational or agency personnel in the conduct of post incident analysis is in accordance with organisational procedures and is consistent with designated roles and responsibilities

**1.3** Information for post incident analysis from multi-organisational or agency personnel is identified and sought

**1.4** Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) procedures are followed

**2.1** Integrity of incident site is established and maintained, in accordance with organisational procedures and legal requirements, to ensure objectivity of information collected

**2.2** Statutory and legal obligations are identified and followed

**2.3** Factors affecting the complexity of the investigation are determined and assessed

**2.4** Stakeholders are notified, in accordance with organisational procedures

**3.1** Organisational policies and procedures for scene investigation are implemented

**3.2** Scope of investigation is determined, in accordance with organisational procedures

**3.3** Stakeholder involvement is facilitated throughout investigation processes

**3.4** Barriers impacting on post incident analysis are identified and addressed, in accordance with organisational procedures

- |                                                |            |                                                                                                       |
|------------------------------------------------|------------|-------------------------------------------------------------------------------------------------------|
|                                                | <b>3.5</b> | Action plans and timelines are developed and implemented                                              |
|                                                | <b>3.6</b> | Liaison with members of analysis team is undertaken, in accordance with organisational procedures     |
| <b>4 Collect data for analysis</b>             | <b>4.1</b> | Information and data, including historical, is identified and accessed                                |
|                                                | <b>4.2</b> | Physical, visual and electronic data is collected for use in post incident analysis                   |
|                                                | <b>4.3</b> | Interviews are conducted, in accordance with organisational procedures                                |
|                                                | <b>4.4</b> | Information and data gathered by others is analysed                                                   |
|                                                | <b>4.5</b> | Documented evidence is recorded, in accordance with organisational procedures                         |
| <b>5 Analyse collected data</b>                | <b>5.1</b> | Method for analysis is identified and confirmed, in accordance with organisational procedures         |
|                                                | <b>5.2</b> | Data is analysed in accordance with organisational procedures                                         |
|                                                | <b>5.3</b> | Timeline of events is constructed from analysis, where possible                                       |
|                                                | <b>5.4</b> | Conditions and circumstances contributing to the incident and resulting escalation are identified     |
|                                                | <b>5.5</b> | Relationship between human behaviour and incident is assessed                                         |
|                                                | <b>5.6</b> | Impact of the application of building codes is evaluated                                              |
|                                                | <b>5.7</b> | Likelihood of reoccurrence with high consequence is assessed and actioned for follow up               |
| <b>6 Compile post incident analysis report</b> | <b>6.1</b> | Results of analysis and recommendations are reported, in accordance with organisational procedures    |
|                                                | <b>6.2</b> | Information and data is disseminated to key personnel and stakeholders, as appropriate                |
|                                                | <b>6.3</b> | Data dissemination processes are reviewed and evaluated, in accordance with organisational procedures |

# Assessment Requirements for PUAFIR612 Undertake post incident analysis

## Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

## Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- analysing collected data
- applying Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements
- collecting data for analysis including historical
- compiling post incident analysis reports and recommendations
- completing organisational documentation
- conducting investigations using organisationally approved scientific methods
- developing recommendations
- operating with and in an analysis team
- participating in post incident analysis with key stakeholders and organisations
- using communication media and information technology

## Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- factors, barriers and complexities that can impact a post incident analysis
- guidance materials
- hazard and risk mitigation measures
- internal and external sources of information and data including historical
- key personnel including stakeholders
- legislation, regulations, codes of practice and industry standards
- organisational documentation, policies and procedures
- resources and support personnel
- structure of analysis teams including roles and responsibilities
- types of organisations and agencies involved in post incident analysis
- Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) requirements including risk mitigation

## Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in industry approved simulated workplace operational situations that reflect workplace conditions.

Resources for assessment must include access to

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, equipment, tools and personal protective clothing and equipment currently used in industry
- applicable documentation including organisational procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

## PUALAW001 Protect and preserve incident scene

### Modification History

**Release 1.** This is the first release of this unit of competency in the PUA Public Safety Training Package.

### Application

This unit of competency involves the skills and knowledge required to conduct an initial assessment on receipt of a call, when enroute and/or at the incident and to then take action to maintain public safety, preserve scene and record details and information on arrival at the scene of an accident or incident.

The unit is applicable personnel who are the first to arrive at the scene of an accident or incident. It applies to public safety personnel at an incident who need to understand the importance of maintaining the legal integrity of a scene.

The fire sector is those sections of government departments, statutory authorities or organisations that have responsibility under jurisdictional arrangements for the delivery of firefighting and fire management services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

### Pre-requisite Unit

Not applicable.

### Competency Field

Fire

### Unit Sector

Fire

### Elements and Performance Criteria

#### ELEMENTS

Elements describe the essential outcomes.

#### PERFORMANCE CRITERIA

Performance criteria describe the performance needed to demonstrate achievement of the element.

- |                                    |                                                                    |
|------------------------------------|--------------------------------------------------------------------|
| <b>1 Secure and preserve scene</b> | <b>1.1</b> Participation in initial assessment when enroute and at |
|------------------------------------|--------------------------------------------------------------------|

the incident is undertaken to identify factors which will impact on public safety and scene preservation

- |                                                      |            |                                                                                                                                                                                 |
|------------------------------------------------------|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                      | <b>1.2</b> | Incident and/or accident site is secured to preserve the scene, identify evidence and area of origin and to maintain public safety, in accordance with legislative requirements |
| <b>2 Record and report details of incident scene</b> | <b>2.1</b> | Details of the scene are noted, recorded and reported, in accordance with organisational policies and procedures                                                                |
|                                                      | <b>2.2</b> | Witness details and information volunteered is recorded, in accordance with organisational and legislative requirements                                                         |
|                                                      | <b>2.3</b> | Information is communicated to relevant personnel, in line with organisation's procedures                                                                                       |

## Foundation Skills
