**Assessment Requirements for
RIMCU303E Conduct continuous miner
operations**

Release: 1

Assessment Requirements for RIIMCU303E Conduct continuous miner operations

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 5.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- conduct continuous miner operations on at least two occasions, including:
 - carrying out pre-start, start-up, shutdown and isolation procedures
 - trimming roof, floor and ribs
 - brushing roof and floor
 - breakaway
 - wide drivage
 - confirming cutting sequence information, including locations and measurements of areas to be mined.

During the above, the candidate must:

- locate and apply relevant documentation, policies and procedures and confirm work activity is compliant
- implement the requirements, procedures and techniques for continuous miner operations, including:
 - interpreting, applying and communicating technical information
 - identifying and minimising environmental issues, potential hazards and risks
 - selecting and using relevant tools and equipment
 - complying with environmental requirements and constraints
 - identifying work requirements
 - applying diagnostic and fault finding techniques
 - interpreting mine survey and geological data
 - maintaining line and horizon
 - maintaining equipment records
 - maintaining sufficient services
 - applying cable care and safety

- work effectively with others to conduct continuous miner operations in a way that meets required outcomes, including:
 - organising work activities to meet task requirements
 - communicating clearly and concisely with others to receive and clarify work instructions
 - complying with reporting requirements and procedures
 - determining coordination requirements throughout work activities.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key legislation required to conduct continuous miner operations
- key policies, procedures and documentation required to conduct continuous miner operations, including development plans
- continuous miner characteristics, technical capabilities and limitations, including:
 - continuous miner design types, including:
 - radio remote controlled
 - manually operated
 - single pass
 - dual pass
 - principles, processes and techniques for:
 - prestart checks, start-up, park, shutdown and isolation procedures
 - confirming and clarifying cutting sequence information, including locations and markings of areas to be mined
 - fitting continuous miners
 - high drivage, including risks associated with cutting in different strata types
 - cutting roadways/headings and maintaining line and level
 - preparing continuous miners for maintenance and conducting inspection, fault finding and scheduled maintenance
- mine and face ventilation systems, and relevant mine environmental, geological and survey data types, including:
 - permit to mine
 - bore hole intersection notices
 - ventilation/gas data
 - deputy reports
 - geological hazard plans
 - survey data
 - longitudinal and cross sectional survey plans
- principles and techniques for identifying and responding to relevant hazards and emergencies, including those related to:

- roof and rib falls
- cable flashes
- injury to personnel
- outbursts
- inrushes
- frictional ignitions
- loss of ventilation
- gas trips
- gas accumulation
- breaking into old workings
- water
- floor conditions
- site requirements for housekeeping and completing maintenance records
- techniques for coordinating and communicating job activities with others.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
 - continuous miner
 - personal protective equipment
 - equipment required to conduct continuous miner operations
- be conducted in a safe environment; and,
- be assessed in the context of this sector's work environment; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided

- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must have current industry skills directly relevant to the training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	AQF indicator level***	Required assessor or industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 year
	2	2 years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.
