**Assessment Requirements for  
RIMCU404E Apply and monitor the gas  
drainage management plan**

**Release: 1**

# Assessment Requirements for RIIMCU404E Apply and monitor the gas drainage management plan

## Modification History

Release	Comment
1	This unit replaces RIIMCU404D Apply and monitor the gas drainage management plan. Editorial corrections to performance criteria 2.1 and knowledge evidence. Added mapping table.

## Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant legislation, documentation, policies and procedures
- implements the requirements, procedures and techniques for the safe, effective and efficient completion of gas drainage management plan application and monitoring including:
  - operating hand held monitoring equipment
  - accessing, interpreting and applying relevant gas drainage data
  - interpreting geological reports
  - conducting audit and review processes and techniques
  - accessing, interpreting and applying technical information related to gas drainage
  - interpreting geological reports
- briefings and handover details
  - identifying training needs, and preparing and implementing training plans
  - assessing the risks and consequences of gas drainage
- works effectively with others to plan, prepare and conduct the application and monitoring of the gas drainage management plan that meets all of the required outcomes including:
  - organising work activities to meet all task requirements
  - communicating clearly and concisely with others to receive and clarify work instructions
  - complying with written and verbal reporting requirements and procedures
  - resolving coordination requirements throughout work activities
- demonstrates completion of applying and monitoring the gas drainage management plan that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:

- application of gas drainage procedures such as:
  - gas drainage drilling program
  - gas or geological anomaly detection
  - mine atmosphere monitoring
  - stimulation techniques
  - goaf walls
  - reporting requirements
  - auditing
  - ventilation systems and usage
  - mine plan
  - action plans
  - systems of mining
  - response plans
  - emergency procedures
  - individual and group responsibilities
  - training and education procedures
- application of gas drainage monitoring such as:
  - continuous monitoring
  - leakage monitoring (laser beam technology)
  - portable (hand held)
  - monitoring
  - collection of bag samples
  - pipeflow and pressure measurements
  - gas chromatography
  - ventilation measurements from relevant areas
- applying gas drainage management training to:
  - mine workers
  - trades persons
  - permanent employees
  - contractors
  - mine officials
- other special requirements

## Knowledge Evidence

The candidate must demonstrate knowledge of the following when applying and monitoring the gas drainage management plan:

- legislative, organisation and site requirements and procedures for:
  - gas drainage drilling
  - gas drainage installation

- ventilation requirements
- return airways gas levels
- intake airway gas accumulated levels
- gas control and distribution
- environmental monitoring and management
- local government and mine site inspection and reporting
- the methods of gas drainage and their applications/limitations against the mine design, mine and panel ventilation systems, systems of mining current and future mine development
- the impact of gas drainage on mining techniques, mine and panel design and production output
- the impact of the strata geology, strata control systems and coal seam characteristics on the gas drainage management plan, including:
  - coal seam gradient
  - moisture content
  - friability
  - the porous features of the coal seam
  - stresses and intrusions
- mining monitoring procedures
- identifying drilling options and related equipment and techniques, including:
  - impacts of intersecting holes and hole design
- components/factors to be considered in the gas drainage management plan including:
  - the effects of the type and quantity of gas in the coal seam
  - the impacts of accumulation of coal dust after gas drainage has been completed
  - pressure changes: causes, the impacts on the ventilation system, and the effects on gas drainage
  - heat/humidity: the sources and factors which may impact on gas drainage and personnel
  - underground water management principles and systems
- equipment, monitoring systems and techniques including:
  - mine fans: fan laws, fan types, performance characteristics, configurations, applications and limitations in association with the gas drainage management plan
  - mine and goaf ventilation systems, and ventilation control devices: the types, purposes, design criteria and specifications, distribution/placement criteria and limitations
  - de-gassing: methods of control – including brattice, auxiliary fans, compressed air venturis, sails, hurdles and bleeders
  - fixed gas drainage monitoring systems: types, characteristics, uses and limitations
  - portable monitoring equipment for gas drainage purposes: types, characteristics, uses and limitations
  - gas drainage surveys: the types, frequency and method for conducting including pressure/quantity/temperature and gas

- gas drainage computer modelling and simulation techniques: functions, capabilities, advantages, and limitations for mine environment analysis
- ventilation theory, including:
  - gas laws including Charles and Boyle
  - natural ventilation pressures
  - gas make
  - leakage
  - Kirchhoff's Law
- hazard management processes and techniques
- processes and techniques for determining alarms and trigger points/levels
- emergency response and evacuation/disaster planning processes and techniques

## Assessment Conditions

- Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors; and industry regulations for certification and licensing; and,
- this unit must be assessed in the context of this sector's work environment; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other units of
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this unit of competency, and through the minimum years of current\* work experience specified below in an industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an industry subject matter expert. The industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or industry Sector as follows:

Industry sector	AQF** Level	Required assessor or industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years

Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this unit is being assessed outside of the Resources and Infrastructure Sectors, assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and, where no industry standard is specified, should comply with any relevant regulation.	

\*Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting frequent site assessments across various locations.

\*\*Where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered to indicate the AQF level.
