Assessment Requirements for RIIMSM305D Conduct materials extraction operations underground

Release: 2

Assessment Requirements for RIIMSM305D Conduct materials extraction operations underground

Modification History

Release	Comment
1	This unit replaces RIIMSM305A Conduct materials extraction operations underground
2	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies applicable legislation, documentation, policies and procedures
- implements the requirements, procedures and techniques for the safe, effective and efficient completion of underground materials extraction operations including:
 - selecting and using relevant tools & equipment
 - accessing, interpreting and applying manufacturer's/supplier's manuals
 - applying diagnostic and fault finding techniques
 - maintaining equipment records
- works effectively with others to undertake and complete the conduct of underground materials extraction operations that meets all of the required outcomes including:
 - communicating clearly and concisely with others to confirm instructions
 - organising and prioritising work activities
- demonstrates completion of conducting materials extraction operations underground that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
 - driving and manoeuvring machinery to extraction location
 - operating machinery and equipment to extract and load materials
 - cutting drives and faces to planned sequence and the mine work plan
 - carrying out basic operator maintenance

Knowledge Evidence

The candidate must demonstrate knowledge in conducting materials extraction operations underground through:

- accessing, interpreting and applying the organization and site requirements and procedures for:
 - working underground and equipment operation
 - emergency response
 - pillar extraction methods and safety requirements
 - hazardous materials handling
 - environmental issues
 - operating hoisting systems
 - assessment of mine ground conditions
 - machinery and equipment operation and maintenance
- accessing, interpreting and applying machinery and equipment characteristics, technical capabilities and limitations
- accessing, interpreting and applying mine geology and survey data associated with ore-bearing ground
- identifying ventilation systems
- accessing, interpreting and applying site environmental requirements and constraints relevant to machinery and equipment operations
- identifying pillar configuration, design and layout
- identifying characteristics and properties of roofs and walls
- being prepared for fire/accident/emergency

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit must be assessed in the context of this sector's work environment; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,

- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

Industry sector	AQF** Level	Required assessor or Industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.	

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level
