**Assessment Requirements for RINHB317D
Install underground in-seam directional
drilling standpipes**

Release: 2

Assessment Requirements for RIINHB317D Install underground in-seam directional drilling standpipes

Modification History

Release	Comment
1	This unit replaces RIINHB317A Install underground in-seam directional drilling standpipes
2	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- implements the requirements, procedures and techniques for the safe, effective and efficient completion of the installation of underground in-seam directional drilling standpipe including:
 - applying safe manual handling practices
 - identifying, selecting and applying rig operational controls
 - operating hand borers
 - operating grouting equipment
 - conducting inspection and monitoring
 - conducting equipment maintenance
 - reading, interpreting and applying drill plans
- works effectively with others to undertake and complete the installation of underground in-seam directional drilling standpipe that meets all of the required outcomes including:
 - complying with written and verbal reporting requirements and procedures
 - communicating clearly and concisely with others to receive and clarify work instructions
 - communicating clearly and concisely with others to resolve coordination requirements prior to commencing and during work activities

- demonstrates completion of installation of underground in-seam directional drilling standpipes that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
 - carrying out rib consolidation drilling
 - inserting and sealing grouting tubes into rib consolidation holes
 - choosing drill bit and reamer appropriate to the geology
 - carrying out pilot hole drilling and ream standpipe hole
 - monitoring and adjusting drilling technique according to conditions
 - grouting in standpipe

Knowledge Evidence

The candidate must demonstrate knowledge in installing underground in-seam directional drilling standpipes through:

- accessing, interpreting and applying the organisation and site requirements and procedures for:
 - work, health and safety
 - environmental issues
 - operating drill rig
 - housekeeping
- potential underground directional drilling hazards
- the manufacturer's requirements and procedures
- the specific handling requirements for underground drilling equipment
- basic geology types and their impact on underground in-seam directional drilling operations
- drill bits for different geology types
- reamers for different geology types
- importance and functions of the standpipe
- being prepared for fire/accident/emergency

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit must be assessed in the context of this sector's work environment; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,

- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

Industry sector	AQF** Level	Required assessor or Industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.	

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level
