

Assessment Requirements for RIISTD401 Monitor quarry laboratory operations and the quality of results

Release: 1

Assessment Requirements for RIISTD401 Monitor quarry laboratory operations and the quality of results

Modification History

Release	Comments	
	This version first released with RII Resources and Infrastructure Industry Training Package Version 5.0.	

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- supervise laboratory operations and monitor quality of results on at least two occasions, including:
 - analysing at least two sets of test reports and data to detect potential or actual non-conformances, asses their significance, identify potential causes and recommend preventative or corrective actions
 - reviewing the accuracy and completeness of at least one set of technical records for sampling or testing activities, including:
 - instrument calibration/performance records
 - client requests or work orders however named
 - worksheets
 - competency records
 - reports
 - records of proficiency testing or quality assurance activities.

During the above, the candidate must:

- locate and apply required legislation, accreditation, documentation, policies and procedures
- interpret and implement required procedures and techniques, including:
 - using computers/data management devices and programs
 - reading and interpreting databases and spreadsheets
 - maintaining written and verbal reporting requirements and procedures
- work with others to supervise laboratory operations and monitor quality of test results to meet required outcomes, including:
 - communicating instructions to those involved
 - establishing and maintaining communication with all personnel and clients

Approved Page 2 of 5

 using a range of communication techniques and equipment to convey information to others.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key legislation required to supervise laboratory operations and monitor quality of test results, including:
 - National Association of Testing Authorities (NATA) accreditation program requirements
 - Australian and international standards and codes relevant to the laboratory's operations and scope of testing
- key policies, procedures and established requirement for supervising laboratory operations and monitoring the quality of test results, including those for:
 - budgeting, operational planning and efficient resource use
 - · scheduling and completing internal audit
 - contingency planning
 - · work health and safety
 - emergencies
 - environmental sustainability issues as they relate to the work task
 - workplace data quality and legal traceability
 - records and reports
 - housekeeping
- problem-solving techniques, including:
 - · troubleshooting and fault-finding
 - risk analysis, cause analysis and/or aspect/impact analysis commensurate with the problem
 - non-routine operational, technical, administrative and/or personnel-related problems
- specifications for samples, tests or calibration activities under investigation
- procedures, equipment, materials and instrumentation used to generate test results and data
- apply basic mathematical skills to determine data acceptability
- typical sample collection and preparation problems and associated preventative and corrective actions
- human and environmental factors that may affect data
- sources of interference that may affect data
- workplace documents and/or plans covering management of laboratory services, quality, environment, personnel, budgets and maintenance
- laboratory services and/or products and customers in work or functional area
- business operational plans and key performance indicators (KPIs) for work or functional area

Approved Page 3 of 5

- team leadership, mentoring, coaching and training opportunities and techniques
- human resource management
- characteristic properties of the materials under investigation
- workplace industrial agreements and regulations dealing with hygiene, dress and behaviour of employees.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
 - personal protective equipment
 - equipment required to supervise laboratory operations and monitor quality of test results
- be conducted in a safe environment; and,
- be assessed in the context of this sector's work environment; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- · current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

Approved Page 4 of 5

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must have current industry skills directly relevant to the training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	AQF indicator level***	Required assessor or industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 year
	2	2 years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

^{*}Guidance on simulated environments has been stipulated in the RII implementation guide located on VETNet.

Approved Page 5 of 5

^{**}Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

^{***} While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.
