| 1. Ensure appropriate planning and preparation of tasks is carried out | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Access, interpret and clarify the *specific task information and requirements* relevant to undertaking the *manufacture of slurry surfacing*  
1.3. Ensure a *job plan* is available which makes best use of the available resources and meets task requirements |
| 2. Ensure appropriate initiation of tasks is carried out | 2.1. Confirm that the necessary *resources* are available for the safe, effective and efficient conduct of the tasks  
2.2. Ensure clear and timely *instructions* are communicated to *team members* and others involved, for the safe, effective and efficient conduct of tasks, to meet the specific task requirements |
| 3. Oversee the execution of tasks | 3.1. *Monitor* slurry surfacing manufacturing performance to ensure it achieves the *required outcomes*  
3.2. *Initiate* adjustments to work practice or job plan to ensure safe execution of work and achievement of required outcomes  
3.3. Ensure plant equipment and tools maintenance requirements are carried out and recorded |
| 4. Report on the execution of tasks | 4.1. Complete and submit reports as required  
4.2. Recommend changes to improve the safety, efficiency and effectiveness of the execution of tasks |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to supervise the manufacture of slurry surfacing:

- apply legislative, organisation and site requirements and procedures
- interpret project contract and specification requirements and procedures
- interpret project geological data
- identify rock types
- interpret meteorological data
- identify drainage issues
- interpret material properties and test results, including compaction test results
- interpret project site geotechnical data
- interpret project site hydrological data
- interpret project engineering survey information
- interpret project plans and drawings
- interpret project specifications
- prepare for and conduct briefings, toolbox and site meeting
- prepare short messages
- prepare and present job reports
- prepare and maintain log books and diaries
- provide leadership
- apply performance monitoring skills
- apply supervisory skills
- develop workplace relationships
- develop individuals and the team
- apply inspection requirements and procedures
- calculate quantities for the execution of tasks, including:
  - volumes
  - tonnage required
  - percentages
  - areas
  - resource consumption figures, including required supply rates
- interpret the manufacture of slurry surfacing properties and test results
- provide recommendations for the improvement of the safe, effective and efficient execution of the manufacture of slurry surfacing

Required knowledge
Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to supervise the manufacture of slurry surfacing:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- work zone traffic management requirements and procedures
- contract management requirements and procedures
- communication requirements and procedures
- administrative requirements and procedures
- slurry surfacing manufacturing plant and equipment capabilities and application
- plant, equipment and tools maintenance requirements and procedures
- operational techniques for the execution of the manufacture of slurry surfacing
- slurry surfacing manufacturing resource requirements and procedures
- activities scheduling requirements and procedures
- slurry surfacing raw materials and product delivery requirements and procedures
- job plan drafting of and administration requirements and procedures
- reporting requirements and procedures
- workplace relationship requirements and procedures
- organisational, client and site operational requirements
- relationship between various areas of civil works
- team leadership techniques
- works planning techniques
- slurry surfacing manufacturing monitoring methods
- engineering survey principles
- materials quality and delivery requirements and procedures
- mentoring techniques
- estimating principles
- civil works construction sequencing
- slurry surfacing manufacture and related activities' terminology
- pavement drainage requirements
- works planning techniques
- monitoring methods
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the supervision of the manufacture of slurry surfacing</td>
</tr>
<tr>
<td></td>
<td>• implementation of procedures and techniques for the safe, effective and efficient supervision of the manufacture of slurry surfacing</td>
</tr>
<tr>
<td></td>
<td>• working with others to plan, prepare and conduct the manufacture of slurry surfacing</td>
</tr>
<tr>
<td></td>
<td>• provision of clear and timely instruction and supervision by the individual of those involved in the manufacture of slurry surfacing</td>
</tr>
<tr>
<td></td>
<td>• evidence of the consistent successful supervision of the manufacture of slurry surfacing</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Evidence for assessment is best gathered using the outcomes of products and processes in the workplace.</td>
</tr>
<tr>
<td></td>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
</tr>
</tbody>
</table>
### Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.

### Aboriginal people and other people from a non English speaking background may have second language issues.

### Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.

### Where applicable, physical resources should include equipment modified for people with disabilities.

### Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
- consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to plan, prepare and conduct the manufacture of slurry surfacing
  - provision of clear and timely instruction and supervision by the individual of those involved in the conduct of the manufacture of slurry surfacing

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Specific task information and requirements** may include:

- site geological and geotechnical data, including:
  - rock types and characteristics
  - soil types and characteristics
- site hydrological data, including:
  - surface water
  - ground water
- site meteorological data, including:
  - rainfall
  - humidity
  - temperature
  - wind
- known and potential site hazards, constraints and conditions
- site cultural and heritage information
- task specifications
- sources of materials
- other organisations and contractors involved in the task or related tasks
- coordination, timing and budgeting requirements

**Manufacture of slurry surfacing** may include:

- site preparation methods
- traffic management methods
- load and haulage methods
- manufacture methods
- pollution control methods
- product dispatch methods
- sediment control methods

**Job plan** is to include:

- human resource requirements
- plant and machinery requirements
- construction materials requirements
- sub-contractor support requirements
- waste disposal requirements
- coordination requirements
- activity scheduling
- materials delivery scheduling
- risk assessment and management requirements
- occupational health and safety requirements
- quality management requirements, including testing scheduling requirements
- traffic management requirements
- environmental requirements
- task monitoring requirements
- task performance monitoring requirements
- communication requirements
- reporting requirements

**Resources** are to include:

- labour
- plant, equipment and tools
- material supply vehicles
- construction materials
- sub-contractor services

**Instructions** are to include:

- briefings
- handovers
- work orders
- toolbox meetings
- site meetings

**Team members** may include:

- other members of the organisation's management team
- members of the team directly involved in the task
- suppliers representatives
- sub-contractors representatives
- supervisors or managers of other organisations who are involved in related tasks

**Monitor** is to include:

- ongoing risk assessment
- engineering survey
- sampling and testing
### Required outcomes

- task specifications requirements
- task drawings requirements
- coordination requirements
- activity scheduling requirements
- unit cost requirements
- overall task cost requirements
- waste management requirements

### Initiate

- written communication
- oral communication

<tr>
<td></td>
<td>1.2. Confirm and apply work instructions</td>
</tr>
<tr>
<td></td>
<td>1.3. Select measuring and calculating equipment to carry out tasks that are consistent with the requirements of the job, and check them for serviceability and any faults and rectify or report faults</td>
</tr>
<tr>
<td>2. Perform measurements</td>
<td>2.1. Select and apply method of obtaining the measurement</td>
</tr>
<tr>
<td></td>
<td>2.2. Obtain measurements using a rule or tape, accurate to 1mm</td>
</tr>
<tr>
<td></td>
<td>2.3. Confirm and record measurements</td>
</tr>
<tr>
<td>3. Perform calculations</td>
<td>3.1. Select appropriate calculation method for achieving the required result</td>
</tr>
<tr>
<td></td>
<td>3.2. Correctly calculate material quantities for the project using the appropriate factors</td>
</tr>
<tr>
<td></td>
<td>3.3. Confirm and record results</td>
</tr>
<tr>
<td>4. Estimate approximate quantities</td>
<td>4.1. Take calculations for determining material requirements</td>
</tr>
<tr>
<td></td>
<td>4.2. Select appropriate formulas for calculating quantities</td>
</tr>
<tr>
<td></td>
<td>4.3. Estimate quantities from the calculations taken</td>
</tr>
<tr>
<td></td>
<td>4.4. Calculate, confirm and record material quantities for the project within enterprise tolerances</td>
</tr>
</tbody>
</table>
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to carry out measurements and calculations:

- locate, interpret and apply relevant information
- comply with site safety plan, OHS regulations and State/Territory legislation applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- complete measurements, calculations and determination of quantities for at least three different projects of varying complexity
- calculate each of the following using a realistic civil construction task for example:
  - length
  - perimeter
  - circumference
  - area
  - volume
  - number
  - ratio
  - percentage
  - conversion of metres to millimetres and millimetres to metres
  - measure using a rule or tape measure five separate tasks within 1mm accuracy
- use operational tools and equipment safely and effectively
- communicate and work effectively and safely with others

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to carry out measurements and calculations:

- site and equipment safety requirements
- measuring, calculating, geometry and determination of quantities
- tolerances
- calculators
- company procedures
- project quality requirements
- communication devices
- processes for care of measuring equipment
- civil construction terminology
- JSA’s/Safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to identify, locate and protect underground services:

- apply legislative, organisation and site requirements and procedures for identifying, locating and protecting underground services
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to identify, locate and protect underground services:

- site and equipment safety requirements
- service and utility providers
- types of services and utilities
- construction principles
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheet and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statement
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
|---|---|
| | • knowledge of the requirements, procedures and instructions for identifying, locating and protecting underground services
| | • implementation of requirements, procedures and techniques for the safe, effective and efficient completion of the identification, location and protection of underground services
| | • working with others to undertake and complete the identification, location and protection of underground services in a way that meets all of the required outcomes
| | • consistent timely completion of the identification, location and protection of underground services that safely, effectively and efficiently meets the required outcomes

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
| | • Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
| | • The assessment environment should not disadvantage the participant. For example,
language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the identification, location and protection of underground services

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- project safety plan
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Safety requirements may include:

- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan including: protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe operating procedures including recognising and preventing hazards associated with high voltage power lines, uneven/unstable terrain, trees, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working at heights, working in proximity to others, worksite visitors and the public
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement
- recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
<table>
<thead>

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify types of drawings and their functions | 1.1. Identify the main types of plans and *drawings* used in the industry  
1.2. Identify the key functions of each type of drawing  
1.3. Recognise and adhere to quality requirements of company operations  
1.4. Identify environmental controls from the job plans, specifications and environmental plan |
| 2. Recognise amendments | 2.1. Check title panel to verify latest amendments to drawing  
2.2. Check amendments to *specifications* to ensure currency of information |
| 3. Recognise commonly used symbols and abbreviations | 3.1. Recognise civil construction symbols and abbreviations  
3.2. Locate and correctly interpret legend on project drawings, symbols and abbreviations |
| 4. Locate and identify key features on a site plan | 4.1. Achieve orientation of the plan with the site  
4.2. Identify and locate *key features* of the site  
4.3. Gain access to site and identify services, main features, contours and datum |
| 5. Read and interpret job specifications | 5.1. Job specifications are identified from drawings, notes and descriptions  
5.2. Standards of work, finishes and tolerances are identified from the project specifications  
5.3. Material attributes are identified from specifications |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to read and interpret plans and specifications:

- apply legislative, organisation and site requirements and procedures
- speaking clearly and directly, listening carefully to instructions and information
- applying teamwork to a range of situations, particularly in a safety context
- solving problems such as recognising clear discrepancies between the documents (map, plan, specifications) and the actual site and taking action to correct these
- showing initiative in adapting to changing work conditions or contexts particularly when working across a variety of work areas
- managing time, particularly in organising priorities and planning work
- taking responsibility for self organisation of work priorities
- applying mathematical skills, including basic calculations of heights, areas, volumes and grades
- showing a willingness to learn and to use a range of mediums to learn
- using workplace technology including the use of communication systems and the reporting/recording of results

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to read and interpret plans and specifications:

- features of plans and elevations including direction, scale, key, contours, symbols and abbreviations
- commonly used civil construction symbols and abbreviations
- the processes for application of scales in plan preparation/interpretation
- techniques for orienting/confirming the orientation of a plan
- key features of formal job specifications
- site and equipment safety requirements
- project quality requirements
- basic calculations of heights, areas, volumes and grades
- civil construction terminology
- drawing conventions
- JSA's/Safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</thead>
<tbody>
<tr>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
<td></td>
</tr>
<tr>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
<td></td>
</tr>
<tr>
<td>• Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.</td>
<td></td>
</tr>
</tbody>
</table>
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the reading and interpreting of plans and specifications

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Drawings** may include:
- site plans
- locality plans
- cross sectional plans
- longitudinal plans
- structural detail and specification providing illustrations and dimensions and project plans
- drawings
- specifications
- illustrations
- dimensions and notes

**Specifications** may include:
- materials and quality of work
- quality assurance
- nominated sub-contractors
- provision of site access/facilities
- details relating to performance including:
  - standards of work
  - tolerances
  - material types
  - characteristics
  - treatments and finishes

**Key features** may include:
- type of product/service
- quantities
- characteristics
- sizes
- pattern dimension
- location
- surfaces and compatibility

**Unit Sector(s)**
Civil Works (Common Units)
Competency field

Refer to Unit Sector(s).

Co-requisite units

RIICCM204A Place and fix reinforcement materials

Modification History
Not applicable.

Unit Descriptor
This unit covers the placement and fixing of reinforcement materials in the civil construction industry. It includes planning and preparing, preparing for reinforcement placement, placing and fixing reinforcement, checking reinforcement prior to concrete pour, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain and confirm *safety requirements* from the *site* safety plan and organisational policies and procedures, and apply to the allotted task  
1.3. Identify, obtain and implement *signage/barricade requirements* from the project traffic management plan  
1.4. Select plant, *tools and equipment* to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.5. Check stock of *reinforcement materials* for correct type and quantity against reinforcement schedule and details in plans/specifications  
1.6. Identify *environmental protection requirements* from the project environmental management plan, and confirm and apply to the allotted |
| 2. Prepare for reinforcement placement | 2.1. Check formwork for completion and conformity to receive reinforcement  
2.2. Cut and bend reinforcement bars to required set out and plans/specifications  
2.3. Tie bars to designed configuration  
2.4. Cut reinforcement sheets to required sizes  
2.5. Attach stiffening rods to panels as required to facilitate handling processes  
2.6. Locate bar chairs/spacers to requirements of reinforcement schedule and plans/specifications |
| 3. Place and fix reinforcement | 3.1. Place fabric reinforcement sheets into position in accordance with engineer's drawings and specifications  
3.2. Locate and position reinforcement bars  
3.3. Locate and place reinforcement using bar chairs, ligatures and spacers  
3.4. Support and secure reinforcement material is supported and secured into position |
| 3.5. Secure cast-in items to reinforcement  
3.6. Cover and protect ends of protruding reinforcement material |
|---|---|
| 4. Check reinforcement prior to concrete pour  
4.1. Check location and position of reinforcement and fixing ties to reinforcement for accuracy  
4.2. Check depth of coverage, clearance, spacing and overlap of reinforcement material in accordance with engineer's drawings/job specifications |
| 5. Clean up  
5.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan  
5.2. Clean, check, maintain and store plant, tools and equipment |
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to place and fix reinforcement materials:

- apply legislative, organisation and site requirements and procedures for placing and fixing reinforcement materials
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions
- read engineering drawings

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to place and fix reinforcement materials:

- steel reinforcement characteristics
- concrete characteristics and properties
- concreting principles
- structural technology
- formwork
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site and equipment safety requirements
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Context of and specific resources for assessment

• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.

• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites
may differ due to the site circumstances.

- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the placing and fixing of reinforcement materials

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to carry out manual excavation:

- apply legislative, organisation and site requirements and procedures for carrying out manual excavation
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to carry out manual excavation:

- types, uses, limitations and maintenance requirements of manual excavation tools
- basic principles of soil technology for civil works
- basic trench collapse prevention techniques including benching and battering
- site safety requirements
- site isolation and traffic control responsibilities and authorities
- project quality requirements
- civil construction terminology
- concreting tools, plant and equipment
- JSAs/safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to support plant operations:

- plant types, characteristics, technical capabilities and limitations
- basic soil types and characteristics
- site and equipment safety requirements
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statement

---

3.8. Report damage to access roads to supervisor

| 4. Clean up | 4.1. Clean work area and dispose of or recycle materials in accordance with project environmental management plan |
| 4.2. Clean, check, maintain and store tools and equipment |
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

assessments should not be greater than those required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the plant operations support

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Safety requirements** may include:

- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan including: protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe operating procedures including recognising and preventing hazards associated with high voltage power lines, uneven/unstable terrain, trees, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working at heights, working in proximity to others, worksite visitors and the public
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement
- recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to equipment
<table>

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to spread and compact materials manually:

- apply legislative, organisation and site requirements and procedures for manually spreading and compacting materials
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to spread and compact materials manually:

- basic principles of soil technology for civil works
- basic soil compaction theory including the effects of moisture and mechanical interlock
- hand operated mechanical compaction machine types, characteristics, technical capabilities and limitations
- site and equipment safety requirements
- site isolation and traffic control responsibilities and authorities
- project quality requirements
- civil construction terminology
- practical field tests for moisture content, shrinkage and compaction
- JSAs/safe work method statement

---

| 4. Clean up | 4.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan  
4.2. Clean, check, *maintain* and store tools and equipment |
| --- | --- |
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
|                                                                                           | • knowledge of the requirements, procedures and instructions for manually spreading and compacting materials
|                                                                                           | • implementation of requirements, procedures and techniques for the safe, effective and efficient completion of the manual spreading and compacting of materials
|                                                                                           | • working with others to undertake and complete the manual spreading and compacting of materials that meets all of the required outcomes
|                                                                                           | • consistent timely completion of manual spreading and compacting of materials that safely, effectively and efficiently meets the required outcomes
|                                                                                           | • a minimum of three separate operations requiring the hand spreading and the mechanical (hand operated) compaction of two different material types to site specification

Context of and specific resources for assessment

| • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to carry out basic leveling:

- apply legislative, organisation and site requirements and procedures for carrying out basic levelling
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions
- apply basic mathematical techniques associated with levelling

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to carry out basic leveling:

- basic civil construction processes
- civil construction plan, symbols and construction terminology
- levelling device types, characteristics, technical capabilities and limitations
- levelling techniques related to essential tasks
- basic mathematical techniques associated with levelling
- site and equipment safety requirements
- site isolation and traffic control responsibilities and authorities
- project quality requirements
- civil construction terminology
- JSAs/safe work method statement
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
<table>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to carry out concrete work:

- apply legislative, organisation and site requirements and procedures for carrying out concrete work
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to carry out concrete work:

- site and equipment safety requirements
- steel reinforcement characteristics
- concrete characteristics and properties
- concreting principles
- structural technology
- formwork
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheet and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th></th>
</tr>
</thead>
</table>
| **Critical aspects for assessment and evidence required to demonstrate competency in this unit** | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
- knowledge of the requirements, procedures and instructions for carrying out concrete work
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of concrete work
- working with others to undertake and complete concrete work that meets all of the required outcomes
- consistent timely completion of concrete work that safely, effectively and efficiently meets the required outcomes |

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>
| **Context of and specific resources for assessment** | This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate |
cultural diversity.

- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
|                      | - written and/or oral assessment of the candidate's required knowledge
|                      | - observed, documented and/or first hand testimonial evidence of the candidate's:
|                      |   - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
|                      |   - consistent achievement of required outcomes
|                      |   - first hand testimonial evidence of the candidate's:
|                      |     - working with others to undertake and complete concrete work

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards

Safety requirements may include:
- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan including: protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe operating procedures including recognising and preventing hazards associated with high voltage power lines, uneven/unstable terrain, trees, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working at heights, working in proximity to others, worksite visitors and the public
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement
- recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to equipment operation including emergency shutdown and stopping, extinguishing equipment fires, organisational First Aid requirements and evacuation

RIICCM210A Install trench support

Modification History
Not applicable.

Unit Descriptor
This unit covers the installation of trench support in the civil construction industry. It includes planning and preparing, installing trench shoring, removing trench shoring, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:

- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

</thead>
</table>
| **1. Plan and prepare** | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain and confirm *safety requirements* from the site safety plan and organisational policies and procedures, and apply to the allotted task  
1.3. Identify, obtain and implement *traffic control signage* requirements from the project traffic management plan  
1.4. Select plant, *tools and equipment* to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.5. Identify *environmental protection requirements* from the project environmental management plan, and confirm and apply to the allotted task |
| **2. Install trench shoring** | 2.1. Communicate with plant operator to ensure the *excavation of trenches* complies with site plan, line and depth  
2.2. Determine and prepare *shoring method*  
2.3. Set out positioning of shoring  
2.4. Position or *erect shoring* within the trench  
2.5. Secure shoring in position and check to ensure structural conformity with regulations  
2.6. Clean out excavation out by hand to job requirements  
2.7. Provide ladders for access and egress to site safety plan requirements |
| **3. Remove trench shoring** | 3.1. Release jacking mechanisms and remove ladders  
3.2. Check shoring and prepare it for lifting from the trench  
3.3. Remove shoring from trench and store it on site |
| **4. Clean up** | 4.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan  
4.2. Clean, check, maintain and store tools and |
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to install trench shoring:

- apply legislative, organisation and site requirements and procedures for installing trench shoring
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to install trench support:

- site and equipment safety requirements
- excavation techniques
- shoring methods and systems
- working in confined spaces
- construction techniques
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Civil Works (Common Units)

### Competency field
Refer to Unit Sector(s).
Co-requisite units

Not applicable.
RIICCM301A Construct and dismantle fences and gates

Modification History
Not applicable.

Unit Descriptor
This unit covers the construction and dismantling of fences and gates in the civil construction industry. It includes planning and preparing, erecting fences, erecting gates and signage, removing and making good, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

SkillsDMC
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to construct and dismantle fences and gates:

- apply legislative, organisation and site requirements and procedures for constructing and dismantling fences and gates
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to construct and dismantle fences and gates:

- site and equipment safety requirements
- fencing systems
- fence construction techniques
- site safety and security isolation
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheet and materials handling methods
- quality requirements
- civil construction terminology
- JSAs/safe work method statement
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for constructing and dismantling fences and gates</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of the construction and dismantling of fences and gates</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the construction and dismantling of fences and gates in a way that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>

<th><strong>Guidance information for assessment</strong></th>
<th>Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.</th>
</tr>
</thead>
</table>

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the construction and dismantling of fences and gates
# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Safety requirements may include:

- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan including: protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe operating procedures including recognising and preventing hazards associated with high voltage power lines, uneven/unstable terrain, trees, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working at heights, working in proximity to others, worksite visitors and the public
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement
- recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to equipment
| **Site locations may include:** | • new construction sites  
• on site locations  
• off site in an external paddock environment  
• existing fencing situations |
| **Traffic control signage may include:** | • unit signage  
• escort vehicle  
• highway traffic signs  
• site safety signage  
• temporary signage for the benefit of motorists and pedestrians  
• traffic conditions signage |
| **Traffic conditions may include:** | • congested urban environments  
• low traffic rural areas  
• off-road un-trafficked areas  
• buildings  
• parking sites  
• pedestrian areas |
| **Tools and equipment may include:** | • measuring tapes  
• rulers  
• hammers  
• rammers  
• socket wrenches  
• fencing strainers  
• pliers and wire cutters  
• pop riveters  
• levelling equipment  
• docking saws  
• drop saws  
• jigs  
• stops  
• power drills  
• screwdrivers  
• bits and drills  
• clamps  
• squares  
• nail guns |
| **Environmental protection** | • organisational/project environmental management plan |
**requirements** may include:
- waste management
- water quality protection
- noise
- vibration
- dust
- clean-up management

**Erection of fences** may include:
- re-fence existing land owner properties where new civil works may have claimed land
- prevention of potential accidents which may occur by unauthorised access on worksites
- protection of valuable machinery
- prevention of materials from being contaminated

**Posts** may be secured by:
- cement footings
- rammed
- earth packed

**Fencing and gates** may include:
- post, wire and droppers or metal mesh fences and gates
- timber cladding fences and gates

**Signage at entry gates** may include:
- site safety information
- security access information

**Materials** may include:
- fencing mesh
- fencing wire
- droppers
- metal posts
- metal rails
- concrete fencing materials
- anchor bolts
- timber posts
- rails
- pickets
- palings
- cladding

<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify local market opportunities | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Confirm local market information as regards construction materials  
1.3. Identify sales area boundaries in accordance with economic efficiency/effectiveness  
1.4. Identify and describe competitor organisations and basic profiles  
1.5. Apply company products and pricing systems within organisational requirements  
1.6. Implement company sales strategy |
| 2. Conduct and follow through sales | 2.1. Identify and apply successful sales processes to sales situations  
2.2. Plan, undertake and records customer prospects  
2.3. Plan, prepare and undertake the sales approach  
2.4. Apply effective sales communication techniques in face to face, telephone and written situations  
2.5. Prepare quotations/tenders  
2.6. Plan, prepare and conduct sale presentations/demonstration  
2.7. Handle objections effectively throughout the sales process  
2.8. Apply a variety of closure techniques to secure sales  
2.9. Follow up sales according to organisation follow up procedures and customer feedback mechanisms  
2.10. Undertake a personal analysis in relation to achievement of success as a salesperson, and formulate a plan for personal development |
| 3. Establish potential customer database and site sales systems | 3.1. Establish site processes and systems to monitor and review customer base and local market  
3.2. Identify current and potential customers  
3.3. Develop and record customer profiles in a |
| 4. Develop and maintain site sales operations | 4.1. Agree and identify sales roles and responsibilities |
| 4.2. Manage the activities of sales personnel where applicable |
| 4.3. Develop and agree on weekly/monthly sales call plan |
| 4.4. Prioritise and agree on sales activities |
| 4.5. Identify, record and activate liaison procedures between customers and company personnel |
| 4.6. Analyse result of sales to institute techniques for improvement of sales skills and organisational procedures |
| 4.7. Observe and apply sales protocols |
| 4.8. Document and communicate sales results within the organisation's reporting and continuous improvement process |
| 4.9. Confirm and update records of customer profile/needs |
| 4.10. Monitor sales stages according to agreed project milestones and negotiate adjustments as deemed necessary by both customer and supplier |

| 5. Prepare sales reports | 5.1. Maintain sales records and prepare reports |
| 5.2. Identify sales/performance variances and take corrective action to adjust performance |
| 5.3. Use local market information to update and develop sales strategies |
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to conduct sales in construction materials operations:

- apply legislative, organisation and site requirements and procedures for conducting sales in construction materials operations
- access, interpret and apply company sales systems and processes
- conduct cold calls
- initiate and close sales negotiations
- apply company pricing structure
- plan sales
- cost products
- conduct market information collection
- make decisions
- maintain records
- effective communication to coordinate teams, negotiate, resolve conflict, run meetings
- writing skills to prepare correspondence and reports

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to conduct sales in construction materials operations:

- site products and services
- competitor market information
- site pricing structure - transport, products, profit margins
- company systems - costing, invoicing credit, delivery
- sales techniques and strategies
- company delivery capabilities - loading equipment and transport capability
- customers profiles and processes
- contract law relevant to sales operations
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

may differ due to the site circumstances.

- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment should sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge in undertaking the conduct of sales in construction materials operations
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of methods of conducting sales in construction materials operations that best meet the required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the conduct of sales in

- provision of clear and timely required support and advice on the conduct of sales in construction materials operations
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Compliance documentation may include: | legislative, organisational and site requirements and procedures  
| | manufacturer's guidelines and specifications  
| | Australian standards  
| | Employment and workplace relations legislation  
| | Equal Employment Opportunity and Disability Discrimination legislation |
| Construction materials may include: | quarry products  
| | other extractive industries operations products  
| | pre-mixed concrete  
| | road and pavement surfacing products and services |
| Market information may include: | local/state/federal government conditions  
| | market trends - volumetric, changing product profile, substitutes, pricing  
| | competitors:  
| | products  
| | people  
| | locations(s)  
| | capabilities  
| | profile  
| | delivery - distance and time/means  
| | company and/or site production capacity  
| | customers' perceptions/objections  
| | customers' purchasing profile  
| | roles and responsibilities of customer's personnel  
| | environmental implications  
| | occupational health and safety implications  
| | specifications and standards |
| Sales area boundaries may be set by: | geographic boundaries  
| | transportation systems  
| | operating limits |
### Personal development

RIICCR601A Manage customer relationships

Modification History
Not applicable.

Unit Descriptor
This unit covers management of client relationships in the resources and infrastructure industries. It includes planning to meet client requirements, identifying opportunities for product and service enhancement, exploring opportunities to improve client satisfaction, and monitoring marketing performance. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a management or supervisory role at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

<table>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to manage customer relationships:

- manage legal rights and responsibilities
- research techniques for collection of data
- analyse problems
- apply problem solving
- use numerical calculations, including basic arithmetical calculations (addition, subtraction, multiplication, division)
- interpret statistical diagrams, including tables, charts and graphs
- manage contractual rights and responsibilities
- plan and manage customer relationships (including sales, advertising and promotion, logistics)
- apply key marketing concepts and methods
- monitor client satisfaction
- use record keeping systems
- apply communication systems, processes and procedures

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to manage customer relationships:

- legal rights and responsibilities
- contractual rights and responsibilities
- planning and control systems (sales, advertising and promotion, logistics)
- key marketing concepts and methods
- methods of monitoring client satisfaction
- numerical concepts such as percentages, place value for whole numbers and decimals, estimation (for example, quantities, resources, time)
- record keeping systems
- communication systems, processes and procedures
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for managing customer relationships</td>
</tr>
<tr>
<td></td>
<td>• implementation of procedures and techniques for the safe, effective and efficient management of customer relationships</td>
</tr>
<tr>
<td></td>
<td>• the identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• the identification of viable options and the selection of customer relationship management strategies that best meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• working with other to undertake and complete the management of customer relationships</td>
</tr>
<tr>
<td></td>
<td>• consistent successful management of customer relationships</td>
</tr>
</tbody>
</table>

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not
disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.

- Customisation of assessment and delivery environment should sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>- knowledge of the requirements, procedures and instructions for installing temporary and permanent rock anchors</td>
</tr>
<tr>
<td></td>
<td>- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of temporary and permanent rock anchor installation</td>
</tr>
<tr>
<td></td>
<td>- working with others to undertake and complete the installation of temporary and permanent rock anchors that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>- consistent timely completion of temporary and permanent rock anchor installation that safely, effectively and efficiently meets the required outcomes</td>
</tr>
<tr>
<td></td>
<td>- installation of a minimum of ten permanent anchor bolts, finished with mesh and shotcrete</td>
</tr>
<tr>
<td></td>
<td>- installation of a minimum of ten temporary anchor bolts</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
<td></td>
</tr>
<tr>
<td>- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites</td>
<td></td>
</tr>
</tbody>
</table>
may differ due to the site circumstances.

- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the installation of temporary and permanent rock anchors

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
|---|---|
| Safety requirements may include: | • OHS requirements are to be in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan. This may include protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances  
• safe operating procedures are to include but not be limited to recognising and preventing hazards associated with overhead and underground services, other machines, personnel, traffic control, working in proximity to others, worksite visitors and the public  
• hazards and risks may include but not be limited to uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials  
• emergency procedures related to equipment operation are to include but may not be limited to emergency shutdown and stopping, extinguishing fires, organisational First Aid requirements and evacuation |
| Site may include: | • cuttings  
• tunnels  
• embankments |
| **Signage** may include:                                                                 | • escort vehicle                              |
|                                                                                       | • highway traffic signs                        |
|                                                                                       | • site safety signage                          |
|                                                                                       | • temporary signage for the benefit of motorists|
|                                                                                       | and pedestrians                                |
|                                                                                       | • barricades                                   |
|                                                                                       | • traffic conditions signage                   |

| **Traffic** may include:                                                              | • congested urban environments                |
|                                                                                       | • low traffic rural areas                      |
|                                                                                       | • off-road un-trafficked areas                 |
|                                                                                       | • buildings                                    |
|                                                                                       | • parking sites                                |
|                                                                                       | • pedestrian areas                             |

| **Plant, tools and equipment** may include:                                            | • compressors                                  |
|                                                                                       | • pneumatic tools                              |
|                                                                                       | • spanners                                     |
|                                                                                       | • drilling rigs                                |
|                                                                                       | • attachments                                  |
|                                                                                       | • grouting rigs                                |

| **Environmental requirements** may include:                                            | • organisational/project environmental        |
|                                                                                       | management plan                                |
|                                                                                       | • waste management                             |
|                                                                                       | • water quality protection                      |
|                                                                                       | • noise                                        |
|                                                                                       | • vibration                                    |
|                                                                                       | • dust and clean-up management                 |

| **Requirements** may include:                                                          | • ground stabilisation                         |
|                                                                                       | • roof and wall support                         |
|                                                                                       | • stressing                                    |

| **Anchors** may include:                                                               | • anchor bolts                                 |
|                                                                                       | • cable anchoring                              |
|                                                                                       | • spiling bars                                 |
|                                                                                       | • grouted anchors and bolts                    |
|                                                                                       | • mechanically anchored bolts                  |
|                                                                                       | • dowels                                       |

| **Temporary anchors** be required for:                                                 | • construction processes                       |
|                                                                                       | • stability for temporary structures           |
|                                                                                       | • stability to operating plant                 |

| **Materials** may include:                                                             | • anchor bolts                                 |
|                                                                                       | • spiling bars                                 |
|                                                                                       | • steel cables                                 |
Unit Sector(s)
Foundation Works

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.

• ribbed steel bards
RIICFW303A Install primary ground support

Modification History
Not applicable.

Unit Descriptor
This unit covers the installation of primary ground support in the civil construction industry. It includes planning and preparing, setting out and preparing for primary ground support, installing primary ground support, maintaining primary ground support, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>
</thead>
</table>

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, confirm and apply work instructions, including plans, specifications, quality requirements and operational details to the allotted task  
1.3. Obtain and confirm *safety requirements* from the *site* safety plan and organisational policies and procedures, and apply to the allotted task  
1.4. Identify, obtain and implement *signage* requirements from the project *traffic* management plan  
1.5. Select *tools and equipment* to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.6. Identify *environmental protection requirements* from the project environmental management plan, and confirm and apply to the allotted task |
| 2. Set out and prepare for primary ground support | 2.1. Determine the requirements for ground support construction from ground conditions and engineer's directions  
2.2. Identify and implement method of ground support installation in accordance with the excavation process  
2.3. Obtain material requirements for *primary ground support*  
2.4. *Install* primary ground support in accordance with the progressive development of the excavation process  
2.5. Set out position of sets/rings and points of support to engineer's specifications  
2.6. Prepare component parts of ground support to designed requirements |
| 3. Install primary ground support | 3.1. Select relevant primary ground support system  
3.2. Install primary ground support system in accordance with job specifications |
<p>| 4. Maintain primary ground | 4.1. Carry out daily inspection of primary |</p>
<table>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to install primary ground support:

- apply legislative, organisation and site requirements and procedures for installing primary ground support
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to install primary ground support:

- site and equipment safety requirements
- foundation work
- primary ground support systems and their installation techniques
- scaffolding and work platform installation
- construction principles
- processes for interpreting engineering drawings
- soil, sand, rock, clay, shale, gravel and silt types and characteristics
- water erosion
- equipment types, characteristics, technical capabilities and limitations

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Safety requirements** may include:
- OHS requirements are to be in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan. This may include protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe operating procedures are to include but not be limited to recognising and preventing hazards associated with overhead and underground services, other machines, personnel, traffic control, working in proximity to others, worksite visitors and the public
- hazards and risks may include but not be limited to uneven/unstable terrain, fires, overhead and underground services, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures are to include but may not be limited to extinguishing fires, organisational First Aid requirements and evacuation

**Site** may include:
- cuttings
- tunnels
- embankments
| **Signage** may include: | - escort vehicle  
- highway traffic signs  
- site safety signage  
- temporary signage for the benefit of motorists and pedestrians  
- barricades  
- traffic conditions signage |
| **Traffic** may include: | - congested urban environments  
- low traffic rural areas  
- off-road un-trafficked areas  
- buildings  
- parking sites  
- pedestrian areas |
| **Tools and equipment** may include: | - shovels  
- crow bars  
- spanners  
- measuring tapes  
- picks  
- mattocks  
- sledge hammers  
- spirit levels  
- angle grinders  
- kanga hammers  
- tampers  
- oxy-acetylene equipment |
| **Environmental requirements** may include: | - organisational/project environmental management plan  
- waste management  
- water quality protection  
- noise  
- vibration  
- dust and clean-up management |
| **Primary ground support** may include: | - steel sets/rings  
- timber sets  
- pre-cast concrete segmental sections  
- timber lagging sections  
- steel spilings  
- steel sheeting  
- dry mix concrete pads  
- reinforced concrete beams |
<p>| <strong>Install</strong> may include: | - ground stabilisation to access shafts and |</p>

RIICFW304A Conduct pile driving operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the driving of piles in the civil construction industry. It includes planning and preparing, locating pile positions and establishing piling rig plants, driving piles, removing piling rigs, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply *compliance documentation* relevant to the driving of piles  
1.2. Obtain, confirm and apply work instructions, including plans, specifications, quality requirements and operational details to the allotted task  
1.3. Obtain and confirm *safety requirements* from the *site* safety plan and organisational policies and procedures, and apply to the allotted task  
1.4. Identify, obtain and implement *signage* requirements from the project *traffic* management plan  
1.5. Select *plant, tools and equipment* to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.6. Identify *environmental protection requirements* from the project environmental management plan, and confirm and apply to the allotted task |
| 2. Locate pile positions and establish piling rig plant | 2.1. Establish location for piles from reference points and set out to requirements  
2.2. Establish plant and related equipment in position and check for operation in accordance with standard operating procedures  
2.3. Prepare and check pile for conformity  
2.4. Identify and protect area for pile driving and surrounding working space in accordance with safety requirements |
| 3. Drive pile | 3.1. Lift pile and manoeuvre into position using the piling rig in accordance with standard operating procedures  
3.2. Set up piling rig and *drive pile* into place in accordance with standards  
3.3. Carry out splicing or jointing in accordance with engineers' specifications |
| 4. Remove piling rig | 4.1. Dismantle plant and related equipment in accordance with manufacturer's manual and |
| 5. Clean up | 5.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan  
5.2. Clean, check, maintain and store plant, tools and equipment |

| standard operating procedures  
4.2. Relocate piling rig in preparation for next piling installation procedure |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to drive piles:

- apply legislative, organisation and site requirements and procedures for driving piles
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to drive piles:

- site and equipment safety requirements
- foundation work
- piles and their installation techniques
- scaffolding and work platform installation
- construction principles
- processes for interpreting engineering drawings
- soil, sand, rock, clay, shale, gravel and silt types and characteristics
- water erosion
- processes for installing piles in water
- equipment types, characteristics, technical capabilities and limitations
- procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statements
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for assisting with operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the directing of pile driving operations  
1.2. Obtain, confirm and apply *work instructions* for the allocated task  
1.3. Obtain platform certification  
1.4. Identify, manage and report all *potential hazards*  
1.5. Obtain, confirm and apply *safety requirements* and *environmental requirements* for the allotted task  
1.6. Select and use appropriate *personal protective equipment* and protective clothing at all times  
1.7. Identify, obtain and implement signage requirements from the project traffic management plan and/or *safety requirements*  
1.8. Resolve *coordination requirements* with others at the site prior to commencing and during work activities  
1.9. Select plant, *tools and equipment* to carry out tasks that are suitable and consistent with the requirements of the task, and check them for serviceability and rectify or report any faults |
| 2. Assisting with the locating pile position and establishing the piling rig | 2.1. Establishing the location for piles from reference points and set out to requirements  
2.2. Establishing recovery pegs and conducting on-going measurements to ensure the correct location  
2.3. Directing the establishment of the plant and related equipment in position and assist with checking for operation  
2.4. Preparing and checking pile for conformity with *work instructions*  
2.5. Identify and protect area for pile driving and surrounding working space |
| 3. Support the piling process | 3.1. Provide guidance for lifting and maneuvering of piles into position  
3.2. Provide guidance for setting up piling rig |
3.3. Direct the splicing or jointing in accordance with *work instructions*

| 4. Carryout post-operational requirements | 4.1. Assist with dismantle plant and related equipment  
4.2. Provide direction for relocation of piling rig  
4.3. Clear work area and dispose of or recycle materials in accordance with project environmental management plan  
4.4. Clean, check, maintain and store plant, tools and equipment |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to assist with pile driving operations:

- apply legislative, organisation and site requirements and procedures for
- apply off-set pegging techniques
- apply pile locating techniques
- apply plumbing and pile driving techniques
- apply pile splicing and joining procedures
- apply maintenance requirements and procedures
- interpret engineering drawings
- apply operational safety requirements
- apply environmental requirements
- apply environmentally sensitive fluids and materials disposal requirements and procedures
- apply chemical and fuel safety measures
- apply hazardous goods handling techniques
- apply manual lifting techniques
- work wearing personal protective equipment
- apply work tasks organising techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to assist with pile driving operations:

- hazard identification and risk management procedures
- site personal protective equipment requirements
- site and equipment health and safety procedures
- site environmental and heritage requirements and constraints
- emergency procedures
- isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- safe work method statement and/or Job safety analysis requirements and procedures
- environmental requirements and procedures
- water erosion issues
- types and characteristics of soil, sand, rock, clay, shale, gravel and silt and water table
- civil construction terminology
- civil construction procedures
- foundation work procedures
- machine characteristics, technical capability and limitations
- driven piles and their installation techniques
- techniques for installing piles in water
- project quality requirements
- work platform installation requirements and procedures
- operational, maintenance and basic diagnostic procedures
- machine operational procedures
- isolation procedures
- maintenance systems and procedures
- site record keeping requirements
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Critical aspects for assessment and evidence required to demonstrate competency in this unit</strong></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for directing pile driving operations</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient directing of pile driving operations, which are to include:</td>
</tr>
<tr>
<td></td>
<td>• a minimum of two timber piles or two pre-cast concrete piles, and</td>
</tr>
<tr>
<td></td>
<td>• driven using at least one of the three pile hammering methods</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete pile driving operations that meet all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely direction of pile driving operations that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
| | • Evidence for assessment is best gathered using the outcomes of products and processes of the workplace context. The assessment environment should not disadvantage the participant. For example, language, literacy and |
numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes, including:
  - a minimum of two timber piles or two pre-cast concrete piles, and
  - driven using at least one of the three pile hammering methods
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete pile driving operations

**Guidance information for**

Consult the SkillsDMC User Guide for further
| assessment | information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

<table>
<thead>
<tr>
<th>May include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>legislative, organisational and site requirements and procedures</td>
</tr>
<tr>
<td>manufacturer's guidelines and specifications</td>
</tr>
<tr>
<td>Australian standards</td>
</tr>
<tr>
<td>code of practice</td>
</tr>
<tr>
<td>Employment and workplace relations legislation</td>
</tr>
<tr>
<td>Equal Employment Opportunity and Disability Discrimination legislation</td>
</tr>
</tbody>
</table>

### Work instructions

<table>
<thead>
<tr>
<th>May come from briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>nature and scope of tasks,</td>
</tr>
<tr>
<td>specifications</td>
</tr>
<tr>
<td>quality of finished works</td>
</tr>
<tr>
<td>achievement targets</td>
</tr>
<tr>
<td>operational conditions</td>
</tr>
<tr>
<td>obtaining of permits required</td>
</tr>
<tr>
<td>site layout</td>
</tr>
<tr>
<td>out of bounds areas</td>
</tr>
<tr>
<td>worksite inspection requirements</td>
</tr>
<tr>
<td>lighting conditions</td>
</tr>
<tr>
<td>plant or equipment defects</td>
</tr>
<tr>
<td>hazards and potential hazards</td>
</tr>
<tr>
<td>coordination requirements or issues</td>
</tr>
<tr>
<td>contamination control requirements</td>
</tr>
<tr>

</tr>
<tr>
<td>barricade and signage requirements</td>
</tr>
</tbody>
</table>

### Hazards

<table>
<thead>
<tr>
<th>May include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>uneven terrain</td>
</tr>
<tr>
<td>unstable terrain</td>
</tr>
<tr>
<td>trees</td>
</tr>
<tr>
<td>fires</td>
</tr>
<tr>
<td>overhead and underground services</td>
</tr>
<tr>
<td>excavations</td>
</tr>
<tr>
<td>traffic</td>
</tr>
<tr>
<td>embankments</td>
</tr>
<tr>
<td>cuttings</td>
</tr>
</tbody>
</table>
- structures
- hazardous materials
- equipment failure
- confined operations
- uncontrolled interaction with other plant

### Inspect and prepare work area

may include:

- identification of hazards
- selection and implementation of control measures for the hazards identified
- safeguarding site and non-site personnel by:
  - erection of barricades and posting of signs
  - selection of appropriate equipment to ensure personnel safety and protection
  - determination of appropriate path of movement for loads and equipment/vehicles
- selection and implementation of environmental control measures

### Safety requirements

may include:

- protective clothing and equipment
- use of tools and equipment
- workplace environment and safety
- handling of materials
- use of fire fighting equipment
- use of First Aid equipment
- control of hazardous materials and substances
- safe operating procedures, including recognising and preventing hazards associated with:
  - overhead and underground services
  - other machines
  - personnel
  - traffic control
  - working in proximity to others
  - worksite visitors and the public
- emergency procedures, including:
  - emergency shutdown and stopping
  - extinguishing equipment fires
  - organisational First Aid requirements
  - evacuation
- safe parking practices, including:
  - clear access ways
  - equipment/machinery is away from overhangs and refuelling sites
### Environmental Requirements

- waste management
- water quality protection
- noise
- vibration
- dust
- clean-up management

### Coordination requirements

- piling team
- other equipment operators
- maintenance personnel
- supervisors
- other worksite personnel
- external consultants
- visitors

### Personal protective equipment

- steel-capped boots and hardhat
- gloves
- dust mask
- eye and hearing protection
- general protective and reflective clothing

### Tools and equipment

- pile hammers
- shovels
- crow bars
- measuring tapes
- spirit levels
- plumb bob
- and may include scaffolding

### Hazardous and emergency situations

- powerlines and other overhead services
- underground services
- dust and noise
- lighting strikes
- high wind
- unstable ground conditions
- confined operations
- uncontrolled interaction with other plant

### Records and reports

- fuel usage
- computer readings
- end of shift documentation
- quality information
Unit Sector(s)
Foundation Works

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIICFW307A Direct cast in-situ piling operations

Modification History
Not applicable.

Unit Descriptor
This unit covers directing of cast in-situ piling operations in the civil construction industry. It includes planning and preparing for the operations; directing the rig, locating and preparing pile positions; placing concrete; and carrying out post-operational requirements.

Application of the Unit
The boring process for casting in-situ piles may include auger bored and they may be CFA piles. This unit is appropriate for those working in supporting roles in piling, at worksites within:

- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for assisting with operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the directing of cast in-situ piling operations  
1.2. Obtain, confirm and apply *work instructions* for the allocated task  
1.3. Identify, manage and report all *potential hazards*  
1.4. Obtain, confirm and apply *safety requirements* and *environmental requirements* for the allotted task  
1.5. Select and use appropriate *personal protective equipment* and protective clothing at all times  
1.6. Identify, obtain and implement signage requirements from the project traffic management plan and/or *safety requirements*  
1.7. Resolve *coordination requirements* with others at the site prior to commencing and during work activities  
1.8. Select plant, *tools and equipment* to carry out tasks that are consistent with the requirements of the task, and check them for serviceability and rectify or report any faults |
| 2. Directing the rig, locating and preparing pile positions | 2.1. Establishing the location of piles from reference points and set out to requirements  
2.2. Establishing recovery pegs and conducting on-going measurements to ensure correct location  
2.3. Positioning and checking plant and related equipment for operation  
2.4. Provide guidance for boring of holes to *work instructions*  
2.5. Installing the casing in the bored hole if applicable  
2.6. Preparing pile to receive concrete in accordance with *work instructions* |
| 3. Assist with placing concrete | 3.1. Placing concrete into pile  
3.2. Have knowledge of placing concrete in |
<table>
<thead>
<tr>
<th>4. Carry out post-operational requirements</th>

</tr>
</thead>
<tbody>
<tr>
<td>4.1. Provide direction for the relocation of boring rig to next point of installation operation</td>
<td></td>
</tr>
<tr>
<td>4.2. Provide direction with removal of boring rig from site on completion of work</td>
<td></td>
</tr>
<tr>
<td>4.3. Clear work area and dispose of or recycle materials in accordance with requirements</td>
<td></td>
</tr>
<tr>
<td>4.4. Clean, check, maintain and store plant, tools and equipment as recommended and required</td>
<td></td>
</tr>
</tbody>
</table>
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to direct with cast in-situ piling operations:

- apply legislative, organisation and site requirements and procedures for
- apply off-set pegging techniques
- apply pile locating techniques
- apply maintenance requirements and procedures
- interpret engineering drawings
- apply operational safety requirements
- apply environmental requirements
- apply environmentally sensitive fluids and materials disposal requirements and procedures
- apply chemical and fuel safety measures
- apply hazardous goods handling techniques
- apply manual lifting techniques
- work wearing personal protective equipment
- apply cast in-situ piling operation techniques
- apply maintenance requirements and procedures
- apply work tasks organising techniques

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to assist with cast in-situ piling operations:

- hazard identification and risk management procedures
- site personal protective equipment requirements
- site and equipment health and safety procedures
- site environmental and heritage requirements and constraints
- emergency procedures
- isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- safe work method statement and/or Job safety analysis requirements and procedures
- environmental requirements and procedures
- water erosion issues
- types and characteristics of soil, sand, rock, clay, shale, gravel and silt and water table
- civil construction terminology
- civil construction procedures
- foundation work procedures
- machine characteristics, technical capability and limitations
- the boring process for cast in-situ piles and their installation techniques
- techniques for installing piles in water
- project quality requirements
- work platform installation requirements and procedures
- operational, maintenance and basic diagnostic procedures
- machine operational procedures
- isolation procedures
- maintenance systems and procedures
- site record keeping requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required for the safe, effective and efficient conduct of workplace communication:

- apply legislative, organisation and site requirements and procedures
- communicate clearly and promptly, listening carefully to instructions and information
- communicate concisely both written and verbally
- operate communications systems and equipment
- interpret other communications such as flags, lights, signs, bells and whistles
- apply operational safety requirements
- identify and report communication faults and deficiencies according to site procedures

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required for the safe, effective and efficient conduct of workplace communication:

- current relevant legislative requirements, standards and site procedures
- worksite communication system components
- types of communications equipment and systems and their applications and limitations
- operational procedures and safety requirements of communication equipment and systems
- common faults in communication equipment/systems
- emergency communication procedures
- record maintenance
- site requirements and constraints related to communication equipment/systems
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

RIICOM301B Communicate information

Modification History

Not applicable.

Unit Descriptor

This unit covers the communication of information in resources and infrastructure industries. It includes: communicating information orally and in writing; achieving meeting outcomes; making presentations, and participating in negotiations.

Application of the Unit

This unit is appropriate for those working in operational roles or as members of committees, at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.
**Elements and Performance Criteria Pre-Content**

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Communicate information orally | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Analyse and clarify the purpose of the oral communication with the other parties  
1.3. Adopt a suitable oral communication style to match the communication purpose and audience  
1.4. Deliver oral information to others that is clear, succinct and unambiguous  
1.5. Check the received information with the listener(s) to ensure it has been received accurately and understood  
1.6. Listen carefully and intently to oral information that is received from others  
1.7. Check the meaning with the speaker to ensure that the information has been received accurately and understood |
| 2. Communicate information in writing | 2.1. Analyse and confirm the purpose or objective of the written communication  
2.2. Format and present the document according to current industry and enterprise practice  
2.3. Organise the document logically so it is structured and balanced according to the purpose, audience and context  
2.4. Ensure the written language is applicable to the communication purpose and audience  
2.5. Ensure the written information is clear, succinct and unambiguous  
2.6. Ensure conclusions reached are logically justified and reflect the purpose of the written communication  
2.7. Complete preparation and the communication process within any specified time frame and to industry and workplace requirements |
| 3. Achieve meeting outcomes | 3.1. Prepare for the meeting to cover all requirements in a timely and effective manner  
3.2. Clarify the purpose of a meeting with all of
| 3. **Conduct the meeting** effectively in accordance with standard procedures |
|---|---|
| 3.4. Record accurately the outcomes of an official meeting and promptly provide minutes of the meeting to all participants |
| 3.5. Document accurately all required action flowing from decisions reached at a meeting |
| 3.6. Notify promptly persons responsible for implementing action from decisions at a meeting and confirm in writing details of the required action |
| 3.7. Take appropriate follow-up action to ensure that all decisions of a meeting are acted upon as required |

| 4. **Make a presentation** |
|---|---|
| 4.1. Identify and clarify the purpose of a presentation and, where appropriate, confirm with the intended audience |
| 4.2. Organise the information to be communicated in a presentation and structure it in accordance with contemporary presentation techniques and practice |
| 4.3. Identify, evaluate and select the *media resources* available to use for the presentation |
| 4.4. Organise and prepare *presentation aids* in advance, in accordance with recognised standards of good practice |
| 4.5. Check resources and presentation aids where possible prior to the presentation to ensure that they are functioning properly |
| 4.6. Make the presentation as planned with appropriate response to the reactions and feedback provided by the audience |
| 4.7. Evaluate the outcomes of the presentation and act upon the findings |

<p>| 5. <strong>Participate in negotiations</strong> |
|---|---|
| 5.1. Make adequate <em>preparation for the negotiation</em> |
| 5.2. Select a suitable negotiation strategy in accordance with the relevant requirements, including the location, time and approach to be taken |</p>
<table>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to communicate information in the workplace:

- apply legislative, organisation and site requirements and procedures
- apply research and interpretative skills to locate, interpret and apply relevant operational information
- apply technical literacy and communication skills sufficient to interpret and apply common industry terminology, and interpret work procedures and processes
- apply plain English speaking and communication skills in relation to oral communications with supervisors and other employees both informally and in making formal presentations
- apply questioning and active listening skills, for example when obtaining information on technical working practices
- apply writing skills to allow effective written communications in the workplace
- apply effective listening and interpersonal skills to enable effective communication in meetings and negotiations
- apply planning and organising skills sufficient to prepare and manage communication processes covered in this unit
- apply teamwork skills sufficient to involve and engage the employers/supervisors in the communication processes
- apply problem solving skills to assess technical industry issues

### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to communicate information in the workplace:

- legislation and regulations
- the theory of industry based communication requirements and systems
- the topic or subject area which is the target for the communication
- the factors for effective oral communication
- the site conventions and requirements for written communications including report writing
- meeting procedures and follow-up requirements
- preparing for and conducting a presentation
- basic negotiating techniques and their application
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td>- knowledge of the requirements, procedures and instructions to communicate information</td>
<td></td>
</tr>
<tr>
<td>- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of the communication of information</td>
<td></td>
</tr>
<tr>
<td>- working with others to undertake and complete the communication of information that meets all of the required outcomes</td>
<td></td>
</tr>
<tr>
<td>- consistent timely completion of the communication of information that safely, effectively and efficiently meets the required outcomes</td>
<td></td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Evidence for assessment is best gathered using the outcomes of products and processes of the workplace context.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate
<table>

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisation and site requirements and procedures |
| | manufacturer's guidelines and specifications |
| | Australian standards |
| | code of practice |
| | Employment and Workplace Relations legislation |
| | Equal Employment Opportunity and Disability Discrimination legislation |

| Communication may be: | face to face |
| | in writing |
| | by telephone |
| | by electronic means |
| | formal |
| | informal |

| Written communication may be prepared and stored in hard copy or electronic form and may include: | memos |
| | letters |
| | reports |

| Meeting preparation may include: | arrangements for the venue |
| | issue of the notice of meeting to attendees and other interested parties |
| | circulation of agenda and other papers |
| | arrangements for visiting speakers |
| | venue set up on the day |

| Meeting conduct may include: | the handling of apologies |
| | minutes |
| | motions |
| | discussion |
| | voting |
| | recording of outcomes according to industry |
| | mine site conventions and rules of procedure |

| Media resources may include: | the hardware aspects of projectors |
| | computers |
Presentation aids may include:
- overhead transparencies
- slides
- computer software materials
- presentation notes
- hand-outs
- computer disks
- videos

Negotiation preparation may include:
- full consideration of the subject matter
- the significance of the outcomes for the parties involved
- the facts
- the issues and options
- the perceived/anticipated positions of the parties involved

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to install water mains pipelines:

- apply legislative, organisation and site requirements and procedures for installation of water mains pipelines
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to install water mains pipelines:

- civil construction terminology
- site and equipment safety requirements
- mains pipe systems and installation procedures
- confined space entry requirements
- dewatering
- concrete and concrete fabrication
- processes for interpreting engineering drawings
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures including testing procedures
- mains water pressure
- valves and flow control devices
- water reticulation
- processes for the calculation of pipeline grades and percentages
- sedimentation and erosion controls
- excavation/trench safety
- site isolation and traffic control responsibilities and authorities
  - materials safety data sheets and materials handling methods
  - project quality requirements
  - JSAs/safe work method statement
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation
- work instructions, including plans, specifications, quality requirements and operational details

**Safety requirements** include:

- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan including: protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control, and hazardous materials and substances
- safe operating procedures including recognising and preventing hazards associated with underground services, other machines, personnel, restricted access barriers, traffic control, working in proximity to others, worksite visitors and the public
- recognising hazards and risks including uneven/unstable terrain, trees, underground services, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement
- emergency procedures including emergency
| Signage for traffic control may include: | • escort vehicles  
• highway traffic signs  
• site safety signage  
• temporary signage for the benefit of motorists and pedestrians  
• barricades  
• traffic conditions signage |
| Traffic conditions may include: | • congested urban environments  
• low traffic rural areas  
• off-road un-trafficked areas  
• buildings  
• parking sites  
• pedestrian areas |
| Tools and equipment may include: | • levelling equipment  
• shovels  
• lifting equipment  
• crow bars  
• hammers  
• grinders  
• jointing equipment  
• oxy-acetylene equipment,  
• scaffolding  
• saws |
| Environmental protection requirements may include: | • organisational/project environmental management plan  
• waste management  
• water quality protection  
• noise  
• vibration  
• dust and clean-up management |
| Materials may include: | • pic  
• backfill  
• bedding materials |
| Installation procedures may include: | • selecting size, type and materials of pipe  
• bedding down pipes  
• positioning pipes  
• checking alignment, level and grade  
• repair work |
**Mains pipe system** may include:
- pressurised mains water pipelines
- in-ground and above ground systems
- pipes constructed from PVC, UPVC, poly, DICL, steel and copper

**Support mechanism** may include:
- bedding for in-ground trenches which may include:
  - aggregate
  - sand
  - concrete shoulders for above ground pipes

**Valves** may include:
- stop valves
- flow control valves
- non return valves
- pressure control valves
- energy dissipaters and air release valves

**Test** may include:
- pressure
- visual straightness
- quality
- tolerance
- air
- water

**Unit Sector(s)**
Underground Services

**Competency field**
Refer to Unit Sector(s).

**Co-requisite units**
Not applicable.
RIICPL302A Install stormwater systems

Modification History
Not applicable.

Unit Descriptor
This unit covers the installation of stormwater systems in the civil construction industry. It includes planning and preparing, setting out and excavating, installing the stormwater system, testing the stormwater system, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:

- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain *safety requirements* from the site safety plan  
1.3. Identify, obtain and implement *signage* requirements from the project *traffic management plan*  
1.4. Select plant, *tools and equipment* to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.5. Identify, confirm and apply *environmental protection requirements* from the project environmental management plan |
| 2. Set out and excavate | 2.1. Prepare work area and *materials* to support the efficient *installation* of the *pipe* work  
2.2. Determine and apply dewatering requirements  
2.3. Determine location, alignment direction, level and grade of *stormwater system* from job drawings/specifications  
2.4. Set out works to specification  
2.5. Advise plant operator of excavation requirements and monitor levels  
2.6. Install stormwater system *bedding* in accordance with plans, specifications and standards |
| 3. Install stormwater system | 3.1. Lower pipes and place in position to design specifications  
3.2. *Join* pipes in accordance with manufacturer's specifications  
3.3. Check alignment level and grade continuously for conformance with design plans and specifications  
3.4. Position side support and/or overlay beside the pipes  
3.5. Fit inspection openings in accordance with job specifications  
3.6. Monitor backfill procedure to ensure work is completed to specification, where |
<p>| | |</p>
<table>

</thead>
</table>
| 4. Test stormwater system | 4.1. Perform test to relevant authority requirements as determined by the specifications  
4.2. Perform stormwater system *test procedures* establishing functionality and serviceability  
4.3. Record and report test results |
| 5. Clean up | 5.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan  
5.2. Clean, check, maintain and store plant, tools and equipment |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to install stormwater systems:

- apply legislative, organisation and site requirements and procedures for installation of stormwater systems
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to install stormwater systems:

- civil construction terminology
- site and equipment safety requirements
- mains pipe systems and installation procedures
- confined space entry requirements
- dewatering
- concrete and concrete fabrication
- processes for interpreting engineering drawings
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures including testing procedures
- mains water pressure
- valves and flow control devices
- water reticulation
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</tbody>
</table>

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the installation of stormwater systems

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Safety requirements** include:

- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan including: protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control, and hazardous materials and substances
- safe operating procedures including recognising and preventing hazards associated with underground services, other machines, personnel, restricted access barriers, traffic control, working in proximity to others, worksite visitors and the public
- recognising hazards and risks including uneven/unstable terrain, trees, underground services, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement
- emergency procedures including emergency shutdown and stopping, extinguishing equipment fires, organisational First Aid requirements and evacuation
**Signage** for traffic control may include:
- escort vehicles
- highway traffic signs
- site safety signage
- temporary signage for the benefit of motorists and pedestrians
- barricades
- traffic conditions signage

**Traffic conditions may include:**
- congested urban environments
- low traffic rural areas
- off-road un-trafficked areas
- buildings
- parking sites
- pedestrian areas

**Tools and equipment may include:**
- levelling equipment
- shovels
- lifting equipment
- crow bars
- hammers
- grinders
- jointing equipment
- oxy-acetylene equipment
- scaffolding
- saws

**Environmental protection requirements may include:**
- organisational/project environmental management plan
- waste management
- water quality protection
- noise
- vibration
- dust and clean-up management

**Materials may include:**
- pipes
- concrete
- backfill
- bedding materials

**Installation procedures may include:**
- selecting size, type and material of pipe
- bedding down pipes
- positioning pipes
- checking alignment, level and grade
- fitting inspection holes
- repair work where required
| **Pipe** may include:                      | • stormwater pipes constructed from  |
|                                           |   • reinforced concrete (RCP)       |
|                                           |   • PVC                              |
|                                           |   • Steel                            |
|                                           |   • fibre reinforced concrete (FRC)  |
|                                           |   • DICL                             |

| **Stormwater systems** are to include:    | • only in-ground                    |

| **Bedding** may include:                  | • aggregate                          |
|                                          | • sand                               |

| **Join** may include:                     | • rubber ring                         |
|                                          | • solvent welded                      |
|                                          | • arc welded                          |
|                                          | • mechanical jointed                  |

| **Test procedures** may include:          | • visual straightness                 |
|                                          | • ovality                             |
|                                          | • tolerance                           |
|                                          | • air                                 |
|                                          | • water                               |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to install sewer pipelines:

- apply legislative, organisation and site requirements and procedures for installation of sewer pipelines
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to install sewer pipelines:

- site and equipment safety requirements
- sewer pipelines and installation procedures
- civil construction terminology
- processes for the calculation of pipeline grades and percentages
- sedimentation and erosion control
- excavation/trench safety
- confined space entry requirements
- dewatering
- concrete and concrete fabrication
- processes for interpreting engineering drawings
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures including testing procedures
- valves and flow control devices
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- JSAs/safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Safety requirements include:

- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan including: protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control, and hazardous materials and substances
- safe operating procedures including recognising and preventing hazards associated with underground services, other machines, personnel, restricted access barriers, traffic control, working in proximity to others, worksite visitors and the public
- recognising hazards and risks including uneven/unstable terrain, trees, underground services, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement
- emergency procedures including emergency shutdown and stopping, extinguishing equipment fires, organisational First Aid requirements and evacuation
**Signage** for traffic control may include:
- escort vehicles
- highway traffic signs
- site safety signage
- temporary signage for the benefit of motorists and pedestrians
- barricades

2.4. Control ingress of water by *dewatering*  
2.5. Position, fabricate or *install* main components of the pre-cast unit to design specifications  
2.6. Seal finished surface by rendering where specified  
2.7. Position and attach *auxiliary components* or modifications to pre-cast unit according to design specifications where specified  
2.8. Inspect new and existing gully pits for damage or wear and repair in accordance with specifications |
| 3. Clean up | 3.1. Clear work area and dispose of or recycle *materials* in accordance with project environmental management plan  
3.2. Clean, check, maintain and store plant, tools and equipment |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to install pre-cast gully pits:

- apply legislative, organisation and site requirements and procedures for installation of pre-cast gully pits
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to install pre-cast gully pits:

- site and equipment safety requirements
- gully pits
- civil construction terminology
- sedimentation and erosion control
- excavation/trench safety
- stormwater systems
- confined space entry requirements
- dewatering
- concrete and concrete fabrication
- processes for interpreting engineering drawings
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- JSAs/safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
|                                                | • Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances. |
|                                                | • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of |
assessment should not be greater than those required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the installation of pre-cast gully pits

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Safety requirements** include:

- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan including: protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control, and hazardous materials and substances
- safe operating procedures including recognising and preventing hazards associated with underground services, other machines, personnel, restricted access barriers, traffic control, working in proximity to others, worksite visitors and the public
- recognising hazards and risks including uneven/unstable terrain, trees, underground services, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement
- emergency procedures including emergency shutdown and stopping, extinguishing equipment fires, organisational First Aid requirements and evacuation
| **Signage** for traffic control may include: | • escort vehicles  
• highway traffic signs  
• site safety signage  
• temporary signage for the benefit of motorists and pedestrians  
• barricades  
• traffic conditions signage |
| **Traffic** conditions may include: | • congested urban environments  
• low traffic rural areas  
• off-road un-trafficked areas  
• buildings  
• parking sites  
• pedestrian areas |
| **Tools and equipment** may include: | • levelling equipment  
• shovels  
• lifting equipment  
• hammers  
• grinders  
• oxy-acetylene equipment  
• scaffolding  
• trowels |
| **Environmental protection requirements** may include: | • organisational/project environmental management plan  
• waste management  
• water quality protection  
• noise  
• vibration  
• dust and clean-up management |
| **Location** of gully pits may include: | • roads  
• verges  
• private properties |
| **Gully pit** may include: | • pre-cast unit sections  
• use only as stormwater systems |
| **Dewatering** may include: | • wells  
• trenches  
• sumps  
• pits  
• submersible pumps  
• vacuum pumps  
• surface pumps  
• sludge pumps |
Install procedures may include:
- selecting size, type and material of pit
- positioning gully pits
- rendering
- attaching auxiliary components
- making or attaching modifications
- repair work

Auxiliary components may include:
- covers
- steps
- conversion slabs
- benching

Materials may include:
- concrete
- bedding materials
- pre-cast components
- jointing materials (silicon, mastic or epoxy)
- cement render

Unit Sector(s)
Underground Services

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIICPL305A Install pre-cast access chambers

Modification History
Not applicable.

Unit Descriptor
This unit covers the installation of pre-cast access chambers in the civil construction industry. It includes planning and preparing, installing access chambers, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. |
| Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

RIICPL401A Apply the principles for the installation of underground service using open excavation

Modification History
Not applicable.

Unit Descriptor
This unit covers the supervision for the installation of underground service using open excavation tasks in Civil Construction. It includes the requirements for ensuring that the planning, preparing, initiating, monitoring, adjusting and reporting for the installation of underground service using open excavation tasks are carried out in accordance with the accepted industry principles.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, for the installation of underground service using open excavation tasks within:

- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

| 1. Ensure appropriate planning and preparation of tasks is carried out | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Access, interpret and clarify the *specific task information and requirements* relevant to undertaking the *installation of underground service using open excavation tasks*  
1.3. Ensure a *job plan* is available which makes best use of the available resources and meets task requirements |
| 2. Ensure appropriate initiation of tasks is carried out | 2.1. Confirm that the necessary *resources* are available for the safe, effective and efficient conduct of the tasks  
2.2. Ensure clear and timely *instructions* are communicated to *team members* and others involved, for the safe, effective and efficient conduct of tasks, to meet the specific task requirements  
2.3. *Set out* tasks as required for the effective completion of the task |
| 3. Oversee the execution of tasks | 3.1. *Monitor* the installation of underground service using open excavation task performance to ensure it achieves the *required outcomes*  
3.2. *Initiate* adjustments to work practice or job plan to ensure safe execution of work and achievement of required outcomes  
3.3. Ensure plant equipment and tools maintenance requirements are carried out and recorded |
| 4. Report on the execution of tasks | 4.1. Complete and submit reports as required  
4.2. Recommend changes to improve the safety, efficiency and effectiveness of the execution of tasks |
**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to supervise the installation of underground service using open excavation tasks:

- apply legislative, organisation and site requirements and procedures
- interpret project contract and specification requirements and procedures
- interpret project site soil and geological data
- identify soil and rock types
- interpret meteorological data
- identify drainage issues
- interpret material properties and test results, including compaction test results
- interpret project site geotechnical data
- interpret project site hydrological data
- interpret project engineering survey information
- interpret project plans and drawings
- interpret project specifications
- prepare for and conduct briefings, toolbox and site meeting
- prepare of short messages
- prepare and presenting of job reports
- prepare and maintaining of log books and diaries
- provide leadership
- apply performance monitoring skills
- apply set out requirements and procedures
- set up and use levelling devices
- establish construction offsets
- apply supervisory skills
- develop workplace relationships
- develop individuals and the team
- apply inspection requirements and procedures
- calculate quantities for the execution of tasks, including:
  - volumes
  - tonnage required
  - grades
  - percentages
  - areas
  - resource consumption figures, including required supply rates
- interpret underground service materials properties and test results
• provide recommendations for the improvement of the safe, effective and efficient execution for the installation of underground service using open excavation tasks

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to supervise the installation of underground service using open excavation tasks:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational Health and Safety requirements and procedures
- shoring requirements and procedures
- slope management requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- work zone traffic management requirements and procedures
- contract management requirements and procedures
- communication requirements and procedures
- administrative requirements and procedures
- open excavation underground service installation plant and equipment capabilities and application
- plant, equipment and tools maintenance requirements and procedures
- operational techniques for the execution for the installation of underground service using open excavation tasks
- open excavation underground service installation resource requirements and procedures
- activities scheduling requirements and procedures
- open excavation underground service installation materials delivery requirements and procedures
- job plan drafting of and administration requirements and procedures
- reporting requirements and procedures
- workplace relationship requirements and procedures
- organisational, client and site operational requirements
- relationship between various areas of civil works
- team leadership techniques
- works planning techniques
- open excavation underground service installation monitoring methods
- engineering survey principles
- materials quality and delivery requirements and procedures
- mentoring techniques
- estimating principles
- civil works construction sequencing
- installation of underground services and related activities' terminology
- set out requirements and procedures
- drainage requirements
- works planning techniques
- monitoring methods
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for the supervision of installation of underground service using open excavation tasks
- implementation of appropriate procedures and techniques for the safe, effective and efficient supervision of installation of underground service using open excavation tasks
- working with others to plan, prepare and conduct for the installation of underground service using open excavation tasks
- provision of clear and timely instruction and supervision by the individual of those involved in the installation of underground service using open excavation tasks
- evidence of the consistent successful supervision for the installation of underground service using open excavation tasks |

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Evidence for assessment is best gathered using the outcomes of products and processes in the workplace.
- The assessment environment should not disadvantage the participant. For example,

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Specific task information and requirements may include:
- site geological and geotechnical data, including:
  - rock types and characteristics
  - soil types and characteristics
- site hydrological data, including:
  - surface water
  - ground water
- site meteorological data, including:
  - rainfall
  - humidity
  - temperature
  - wind
- site engineering survey data
- known and potential site hazards, constraints and conditions
- site cultural and heritage information
- task specifications
- task drawings
- sources of materials
- other organisations and contractors involved in the task or related tasks
- coordination, timing and budgeting requirements

Installation of underground service using open excavation
- water mains pipelines
- stormwater systems, including:

- work orders
- toolbox meetings
- site meetings

**Team members** may include:
- other members of the organisation's management team
- members of the team directly involved in the task
- suppliers representatives
- sub-contractors representatives
- supervisors or managers of other organisations who are involved in related tasks

**Set out** is to include:
- control lines
- cleared width
- batters
- off-sets

**Monitor** is to include:
- ongoing risk assessment
- engineering survey
- sampling and testing
- observation and recording
- general supervision

**Required outcomes** may include:
- task specifications requirements
- task drawings requirements
- coordination requirements
- activity scheduling requirements
- unit cost requirements
- overall task cost requirements
- waste management requirements

**Initiate** is to include:
- written communication
- oral communication

**Unit Sector(s)**
Underground Services

Co-requisite units

Not applicable.
RIICRC201A Repair potholes

Modification History
Not applicable.

Unit Descriptor
This unit covers the repairing of potholes in the civil construction industry. It includes planning and preparing for work, repairing potholes, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for work | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Identify and apply relevant drawings and job specifications to all work activities  
1.3. Obtain and confirm *safety requirements* from the *site* safety plan and organisational policies and procedures, and apply to the allotted task  
1.4. Identify, obtain and implement signage requirements from the project traffic management plan  
1.5. Select *tools and equipment* to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.6. Identify *environmental protection requirements* from the project environmental management plan, and confirm and apply to the allotted task |
| 2. Repair potholes | 2.1. Remove water and loose *material* from *pothole* or defective area  
2.2. Trim pothole/defect to ensure mechanical interlock of repair material  
2.3. Apply binder to provide adequate adhesion of repair material and waterproofing of repaired area  
2.4. Place and compact materials to specification  
2.5. Clean repaired area, remove excess loose materials, and apply sand or blinding material where specified |
| 3. Clean up | 3.1. Clear work area and recycle or dispose of materials in accordance with project environmental management plan  
3.2. Clean, check, maintain and store tools and equipment |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to repair potholes:

- apply legislative, organisation and site requirements and procedures for repair potholes
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to repair potholes:

- the types and causes of potholes
- type, uses, limitations and safety requirement of pothole repair equipment and materials
- pothole repair techniques
- site and equipment safety requirements
- site isolation and traffic control responsibilities and authorities
- work recording techniques including specifications, check-lists and drawings
- materials handling methods
- project quality requirements
- civil construction terminology
- road maps and map reading techniques
- JSAs/safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Critical aspects for assessment and evidence required to demonstrate competency in this unit</td>
<td></td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for repairing potholes</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of pothole repairs</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the repair of potholes in a way that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of pothole repairs that safely, effectively and efficiently meets the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• preparation, repair and clean up of a minimum of three potholes including at least two to sub-grade level, using specified materials: the repairs are to be in accordance with the prescribed job specification</td>
</tr>
</tbody>
</table>

Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances
- The assessment environment should not disadvantage the participant. For example,

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Safety requirements** may include:
- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe operating procedures including recognising and preventing hazards associated with high voltage power lines, uneven/unstable terrain, trees, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working at heights, working in proximity to others, worksite visitors and the public
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distances are kept from excavations, and areas secured from unauthorised access or movement
- recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to equipment

**Tools and equipment may include:**

- spades
- shovels
- rakes
- quick-cut saws
- jack hammers
- vibrating plates
- pedestrian rollers
- crow bars
- hand tampers
- picks
- emulsion/binder applicators
- rammers

**Environmental requirements may include:**

- organisational/project environmental management plan
- waste management
- water quality protection
- noise
- vibration
- dust
- clean-up management

**Materials may include:**

- granular pavement materials
- water
- pre-mix preparations
- hot mix bituminous preparations
- cold mix bituminous preparations
- sand
- binding materials

operation including emergency shutdown and stopping, extinguishing equipment fires, organisational First Aid requirements and evacuation

3. working with others to undertake and complete the installation of sub-soil drainage in a way that meets all of the required outcomes  
4. consistent timely completion of sub-soil drainage installation that safely, effectively and efficiently meets the required outcomes  
5. installation of a minimum of 100 metres of sub-soil drain in two separate locations, including end structures or outlets to design specifications |  |

### Context of and specific resources for assessment

1. This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
2. Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
3. The assessment environment should not disadvantage the participant. For example,
<table>
<thead>
<tr>
<th>Language, literacy and numeracy demands of assessment should not be greater than those required on the job.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.</td>
</tr>
<tr>
<td>Aboriginal people and other people from a non English speaking background may have second language issues.</td>
</tr>
<tr>
<td>Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.</td>
</tr>
</tbody>
</table>

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the installation of sub-soil drainage

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Safety requirements may include:

- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe operating procedures including recognising and preventing hazards associated with high voltage power lines, uneven/unstable terrain, trees, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working at heights, working in proximity to others, worksite visitors and the public
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distances are kept from excavations, and areas secured from unauthorised access or movement
- recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to equipment
| **Tools and equipment** may include: | • levelling equipment  
| | • tape measures  
| | • shovels  
| | • hand saws  
| | • cutting knives  
| | • crow bars  
| | • hammers  
| | • trowels  
| | • formwork |
| **Environmental requirements** may include: | • organisational/project environmental management plan  
| | • waste management  
| | • water quality protection  
| | • noise  
| | • vibration  
| | • dust  
| | • clean-up management |
| **Bedding materials** may include: | • aggregate  
| | • sand |
| **Subsoil drainage systems** may include: | • strip filter drains and perforated pipes with or without geo-textile fabric  
| | • granular materials enclosed in geo-textile fabric |
| **Materials** may include: | • marking materials  
| | • strip filter drains  
| | • perforated pipes  
| | • geo-textile fabric  
| | • pipe jointing materials  
| | • backfill and bedding materials  
| | • marker post  
| | • concrete  
| | • stones |

**Unit Sector(s)**
Road and Pavements Construction and Maintenance (General)
Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIICRC204A Install and maintain roadside fixtures

Modification History
Not applicable.

Unit Descriptor
This unit covers the installation and maintenance of roadside fixtures in the civil construction industry. It includes planning and preparing, installing guide posts and delineators, erecting guardrails, erecting road fencing, repairing roadside fixtures, maintaining signs, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Plan and prepare</td>
<td>1.1. Access, interpret and apply <em>compliance documentation</em> relevant to the work activity</td>
</tr>
<tr>
<td></td>
<td>1.2. Identify and apply relevant drawings and job specifications to all work activities</td>
</tr>
<tr>
<td></td>
<td>1.3. Obtain and confirm <em>safety requirements</em> from the site safety plan and organisational policies and procedures, and apply to the allotted task</td>
</tr>
<tr>
<td></td>
<td>1.4. Identify, obtain and implement <em>signage</em> requirements from the project traffic management plan</td>

6.3. Replace reflective patches in accordance with cyclic maintenance program |
| 7. Clean up | 7.1. Clear work area and recycle or dispose of *materials* in accordance with project environmental management plan  
7.2. Store or stack unused materials  
7.3. Clean, check, maintain and store plant, tools and equipment |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to install and maintain roadside fixtures:

- apply legislative, organisation and site requirements and procedures for installing and maintaining roadside fixtures
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to install and maintain roadside fixtures:

- roadside signage systems
- civil construction terminology
- types, characteristics and installation/maintenance techniques of roadside and kerb fixtures
- types, characteristics and installation/maintenance techniques of roadside fencing
- types, characteristics and installation/maintenance techniques of roadside fixtures
- site and equipment safety requirements
- site isolation and traffic control responsibilities and authorities
- project quality requirements
- JSAs/safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

RIICRC206A Install pre-cast concrete crash barriers

Modification History
Not applicable.

Unit Descriptor
This unit covers the installation of pre-cast concrete crash barriers in the civil construction industry. It includes planning and preparing, erecting concrete crash barriers, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Identify and apply relevant drawings and job specifications to all work activities  
1.3. Obtain and confirm *safety requirements* from the site safety plan and organisational policies and procedures, and apply to the allotted task  
1.4. Identify, obtain and implement *signage* requirements from the project *traffic* management plan  
1.5. Select plant, *tools and equipment* to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.6. Identify *environmental protection requirements* from the project environmental management plan, and confirm and apply to the allotted task |
| 2. Erect concrete crash barriers | 2.1. Set out position of *concrete crash barriers* according to job drawings and specifications  
2.2. Erect and/or install barriers in the correct location  
2.3. Join barriers according to manufacturer's specifications  
2.4. Seal and finish barriers against weather |
| 3. Clean up | 3.1. Clear work area and dispose of or recycle *materials* in accordance with project environmental management plan  
3.2. Store or stack unused materials  
3.3. Clean, check, maintain and store plant, tools and equipment |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to install pre-cast concrete crash barriers:

- apply legislative, organisation and site requirements and procedures for installing pre-cast concrete crash barriers
- interpret engineering drawings
- select and use plant, tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- organise work tasks

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to install pre-cast concrete crash barriers:

- types, characteristics and installation/maintenance techniques of roadside and kerb fixtures
- civil construction terminology
- types, characteristics and installation techniques of concrete crash barriers
- site and equipment safety requirements
- site isolation and traffic control responsibilities and authorities
- plant/crane capabilities and limitations
- safe lifting techniques
- project quality requirements
- JSAs/safe work method statement
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites
may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment
This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the installation of pre-cast concrete crash barriers

### Guidance information for assessment
Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

#### Safety requirements may include:
- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe operating procedures including recognising and preventing hazards associated with high voltage power lines, uneven/unstable terrain, trees, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working at heights, working in proximity to others, worksite visitors and the public
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distances are kept from excavations, and areas secured from unauthorised access or movement
- recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to equipment

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to lay pipes:

- apply legislative, organisation and site requirements and procedures for laying pipes
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to lay pipes:

- site and equipment safety requirements
- pipes and installation procedures
- confined space entry requirements
- dewatering
- concrete and concrete fabrication
- steel and PVC pipes
- processes for interpreting engineering drawings
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- pipe types and characteristics
- basic soil types and characteristics
- excavation/trench backfilling techniques
- processes for calculation of pipe grades and percentages
- sedimentation and erosion control
- excavation/trench safety
- JSAs/safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
|                                                                                           | • knowledge of the requirements, procedures and instructions for laying pipes
|                                                                                           | • implementation of requirements, procedures and techniques for the safe, effective and efficient completion of pipe laying
|                                                                                           | • working with others to undertake and complete the laying of pipes that meets all of the required outcomes
|                                                                                           | • consistent timely completion of pipe laying that safely, effectively and efficiently meets the required outcomes
|                                                                                           | • installation of pipe on two different projects to a minimum of ten pipe joints listed in the Unit Scope: the pipes are to have a minimum diameter of DN225 mm

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.

</tr>
</thead>
<tbody>
<tr>
<td>• written and/or oral assessment of the candidate's required knowledge</td>
</tr>
<tr>
<td>• observed, documented and/or first hand testimonial evidence of the candidate's:</td>
</tr>
<tr>
<td>• implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes</td>
</tr>
<tr>
<td>• consistent achievement of required outcomes</td>
</tr>
<tr>
<td>• first hand testimonial evidence of the candidate's:</td>
</tr>
<tr>
<td>• working with others to undertake and complete the laying of pipes</td>
</tr>
</tbody>
</table>

### Guidance information for assessment

| Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.
**Relevant compliance documentation** may include:
- legislative, organisational and site requirements and procedures
- plans, specifications and drawings
- manufacturer's guidelines and specifications
- Australian Standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Safety requirements** may include:
- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe operating procedures including recognising and preventing hazards associated with underground and overhead services, other machines, personnel, restricted access barriers, traffic control, working at heights, working in proximity to others, worksite visitors and the public
- recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures including emergency shutdown and stopping, organisational First Aid requirements and evacuation
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distances from excavations are kept, and areas secured from unauthorised access or movement

**Site** may include:
- any ground conditions in urban and rural areas

**Signage** may include:
- escort vehicle
- highway traffic signs
- site safety signage
- temporary signage for the benefit of motorists and pedestrians
<table>
<thead>
<tr>

**Co-requisite units**

Not applicable.
RIICRC209A Lay reinforced concrete box culverts

Modification History
Not applicable.

Unit Descriptor
This unit covers the laying of reinforced concrete box culverts in the civil construction industry. It includes planning and preparing, setting out and excavating, constructing concrete bases, laying culvert units, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Obtain and confirm safety requirements from the site safety plan and organisational policies and procedures, and apply to the allotted task  
1.3. Identify, obtain and implement signage requirements from the project traffic management plan  
1.4. Select tools and equipment to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.5. Identify environmental protection requirements from the project environmental management plan, and confirm and apply to the allotted task  
1.6. Check RCBC units to ensure conformity |
| 2. Set out and excavation | 2.1. Determine location and depths of excavation from job drawings  
2.2. Set out and clearly mark excavation location  
2.3. Advise plant operator of excavation requirements  
2.4. Check excavation depths and grades to conform with plans and specifications  
2.5. Compact and prepare foundations base for testing |
| 3. Construct concrete base | 3.1. Set out and construct formwork to required dimensions  
3.2. Place steel reinforcement to specifications  
3.3. Form recesses in slab as specified  
3.4. Connect and tighten hold down anchors to specified requirements  
3.5. Place, compact, finish and cure concrete to specified requirements |
| 4. Lay culvert units | 4.1. Place continuous mortar bed to support legs  
4.2. Lower and position RCBC units to line and level on supporting slab |
<p>| | |</p>
<table>
<thead>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to lay reinforced concrete box culverts:

- apply legislative, organisation and site requirements and procedures for laying reinforced concrete box culverts
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to lay reinforced concrete box culverts:

- site and equipment safety requirements
- RCBC culverts and installation procedures
- confined space entry requirements
- dewatering
- concrete and concrete fabrication
- processes for interpreting engineering drawings
- equipment types, characteristics, technical capabilities and limitations
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Critical aspects for assessment and evidence required to demonstrate competency in this unit</td>

3.8. Conduct inspection and testing of repaired drainage system to determine effectiveness of repairs |
| 4. | Maintain open drains |
|   | 4.1. Maintain open drains to correct line and fall specifications  
4.2. Finish surfaces adjoining open drains allowing ease of run off  
4.3. Undertake adequate erosion control methods |
| 5. | Inspect, clear and repair culverts |
|   | 5.1. Identify faults in *culverts* and determine appropriate repair requirements and specifications  
5.2. Repair/replace sections and joint to levels and design specifications  
5.3. Repair/maintain inlets and outlets in accordance with culvert design and specifications  
5.4. Compact backfill |
| 6. | Clean up |
|   | 6.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan  
6.2. Seal and store/pack in unused materials in accordance with standard material handling practices and techniques  
6.3. Clean, check, maintain and store plant, tools and equipment |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to maintain drainage systems:

- apply legislative, organisation and site requirements and procedures for maintaining drainage systems
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to maintain drainage systems:

- drainage types, characteristics, advantages and limitations
- basic flow theory
- basic principles of soil technology for civil works
- techniques for locating faults in drainage systems
- methods of joining pipes
- excavation techniques
- site and equipment safety requirements
- processes for interpreting engineering drawings and sketches
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- sedimentation and erosion control
- JSAs/safe work method statement
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

1.2. Obtain and confirm *safety requirements* from the *site* safety plan and organisational policies and procedures, and apply to the allotted task  
1.3. Identify, obtain and implement signage requirements from the project traffic management plan  
1.4. Select *tools* and equipment to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.5. Identify *environmental protection requirements* from the project environmental management plan, and confirm and apply to the allotted task |
| 2. Set out and prepare for construction/installation | 2.1. Identify and protect existing services to prevent damage  
2.2. Set out location of *kerb, channel and/or fixtures* to dimensions from *drawings* and specifications or to pre-set pegs  
2.3. Set out driveways and other inverts  
2.4. Check grades to ensure correct fall  
2.5. Construct formwork and check to ensure compliance with specifications  
2.6. Complete *services and conduit* preparation in accordance with relevant procedures |
| 3. Form kerb and barrier strips | 3.1. Maintain vertical and horizontal alignment during concrete placement  
3.2. Place concrete accurately to string line  
3.3. Maintain concrete to specified standard  
3.4. Mix and apply mortar at quality and quantity to achieve specified finish |
| 4. Pour concrete to installed formwork | 4.1. Place and compact concrete into formwork  
4.2. Finish surface to alignment specifications  
4.3. Remove face formwork without damage to concrete following concrete set |
| 5. Finish kerbs, channels and fixtures | 5.1. Finish job to shape in accordance with |
| fixtures | specifications or to the relevant Australian standard  
| 5.2. Finish concrete to specified quality and texture  
| 5.3. Position expansion, construction and dowel joints to specification  
| 5.4. Cure and protect finished work during process |
| 6. Install pre-cast concrete units | 6.1. Prepare base section and finish to specification for pre-cast unit installation  
| 6.2. Install and join pre-cast concrete units |
| 7. Repair kerb, gutters and median, barrier strips | 7.1. Identify damaged areas, assess repair requirements and carefully remove or repair damaged section  
| 7.2. Set up formwork or slip form machine and use to replace removed section  
| 7.3. Place concrete accurately to correct alignment using concrete to the specified mix  
| 7.4. Finish concrete to specification matching the shape of the kerb or gutter in place  
| 7.5. Clear, backfill and finish area |
| 8. Clean up | 8.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan  
| 8.2. Clean, maintain, check and store tools and equipment |
**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to replace and form concrete kerb, channels and fixtures:

- apply legislative, organisation and site requirements and procedures for replacing and forming concrete kerb, channels and fixtures
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to replace and form concrete kerb, channels and fixtures:

- curbing profiles
- channelling and fixtures profiles and structural features
- concrete properties including the effects of weathering
- concreting and related formwork techniques
- concrete curing techniques
- types, characteristics, uses and limitations of forming machines
- the types of services and related conduit requirements
- site and equipment safety requirements
- processes for interpreting engineering drawings and sketches
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- set out techniques
- JSAs/safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
</tr>
</thead>
</table>
| **Critical aspects for assessment and evidence required to demonstrate competency in this unit** | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for placing and forming concrete kerbs, channels and fixtures
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of placing and forming concrete kerbs, channels and fixtures
- working with others to undertake and complete the placing and forming of concrete kerbs, channels and fixtures that meets all of the required outcomes
- consistent timely completion of concrete kerb, channel and fixture placement and forming that safely, effectively and efficiently meets the required outcomes |

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
</tr>
<tr>
<td>• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>

</tr>
</tbody>
</table>
| **Method of assessment** | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:  
- written and/or oral assessment of the candidate's required knowledge  
- observed, documented and/or first hand testimonial evidence of the candidate's:  
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes  
  - consistent achievement of required outcomes  
  - first hand testimonial evidence of the candidate's:  
    - working with others to undertake and complete the placing and forming of concrete kerbs, channels and fixtures |
| **Guidance information for assessment** | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:

- legislative, organisational and site requirements and procedures
- drawings and specifications
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Safety requirements** may include:

- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe operating procedures including recognising and preventing hazards associated with high voltage power lines, uneven/unstable terrain, trees, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working at heights, working in proximity to others, worksite visitors and the public
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distances are kept from excavations, and areas secured from unauthorised access or movement
- recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials

RIICRC303A Lay pavers

Modification History
Not applicable.

Unit Descriptor
This unit covers the laying of pavers in the civil construction industry. It includes planning and preparing for work, preparing to lay paving, laying pavers, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>

<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for work | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain and confirm *safety requirements* from the site safety plan and organisational policies and procedures, and apply to the allotted task  
1.3. Identify, obtain and implement signage requirements from the project traffic management plan  
1.4. Select *tools and equipment* to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.5. Identify *environmental protection requirements* from the project environmental management plan, and confirm and apply to the allotted task  
1.6. Identify area and location of paving from job *drawings*  
1.7. Calculate paving requirements and select *material* to meet required finish of surface and pattern |
| 2. Prepare to lay paving | 2.1. Set out location and shape of paving area to dimensions from job drawings  
2.2. Carry out excavation to specified depth, allowing for base and thickness of unit  
2.3. Position drainage pipes in sub-soil to local regulations  
2.4. Prepare sub-soil and footing in accordance with specifications  
2.5. Select base material in accordance with manufacturer's specifications for identified substrate  
2.6. Clean surface free of loose material and dust where paving is to be bonded to substrate |
| 3. Lay pavers | 3.1. Position edge boards to set out and specifications  
3.2. Spread sand and aggregate, and compact to specifications  
3.3. Grade paving surface, where drainage is |
<table>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to lay pavers:

- apply legislative, organisation and site requirements and procedures for laying pavers
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to lay pavers:

- basic principles of soil technology for civil works
- types, characteristics, uses and limitations of pavers
- techniques for preparing foundations and beddings for pavers
- foundation formwork techniques
- techniques for cutting and forming pavers
- techniques and patterns for laying pavers
- paver compaction techniques, equipment and tools
- finishing and edging techniques and processes
- site and equipment safety requirements
- processes for interpreting engineering drawings and sketches
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the laying of pavers

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Safety requirements** may include:
- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe operating procedures including recognising and preventing hazards associated with high voltage power lines, uneven/unstable terrain, trees, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working at heights, working in proximity to others, worksite visitors and the public
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distances are kept from excavations, and areas secured from unauthorised access or movement
- recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to equipment
| Tools and equipment may include: | • hand tools  
• spreader bars  
• spirit/string levels  
• laser levels  
• trowels  
• rubber mallets  
• hammers  
• balustrades  
• brick saws  
• grinders  
• plate compactors  
• concrete mixers |

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to maintain sealed roads:

- apply legislative, organisation and site requirements and procedures for maintaining sealed roads
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to maintain sealed roads:

- site isolation and traffic control responsibilities and authorities
- type, uses, limitations and safety requirement of road maintenance repair equipment
- road maintenance and repair materials
- road maintenance repair techniques
- work recording techniques including specifications and check-lists
- setting out procedures
- processes for the calculation of material requirements
- materials handling methods
- project quality requirements
- site and equipment safety requirements including appropriate state or territory legislation, regulations and codes
- civil construction terminology
- road maintenance programs
- JSAs/safe work method statement
## Evidence Guide

Road and Pavements Construction and Maintenance (General)

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIICRC305A Conduct road construction paver screeding operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of road construction paver screeding operations in the civil construction industry. It includes planning and preparing, setting up paver screeds, operating paver screeds, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct road construction paver screeding operations:

- apply legislative, organisation and site requirements and procedures for conducting road construction paver screeding operations
- apply legislative, organisation and site requirements and procedures for laying pavers
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct road construction paver screeding operations:

- site and equipment safety requirements
- paver screed operations
- aggregate and gravel types and sizes
- longitudinal and transverse joints
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- processes for the calculation of material uniformity and travel speed
- materials safety data sheets and materials handling methods
- quality requirements
- civil construction terminology
- safe operating techniques in all terrain
- JSAs/safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
</table>

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for conducting road construction paver screeding operations
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of road construction paver screeding operations
- working with others to undertake and complete the conduct of road construction paver screeding operations that meets all of the required outcomes
- consistent timely completion of road construction paver screeding operations that safely, effectively and efficiently meets the required outcomes
- conduct road construction screed paving operations on a minimum of two different material types/surface types and include the mandatory tasks of:
  - three longitudinal joints (of at least 100m) constructed to required thickness, uniformity, line and level, on both matching and unsupported edge in accordance with project specifications and/or work instructions
  - six transverse joints constructed to required thickness, uniformity, line and level, on both matching and unsupported edge in accordance with project specifications and/or work instructions
  - five sections of straight paving (one of at least 100 linear metres) to required thickness, uniformity, line and level, on
| **Context of and specific resources for assessment** |  both matching and unsupported edge in accordance with project specifications and/or work instructions, and  
|  |  three intersections to required thickness, uniformity, line and level, on both the matching and unsupported edge in accordance with project specifications and/or work instructions  
|  |  one of the above tasks to include at least one mode of automatic screed levelling devices  

| **Method of assessment** |  This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:  
|  |  Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.  
|  |  The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.  
|  |  Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.  
|  |  Aboriginal people and other people from a non-English speaking background may have second language issues.  
|  |  Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.
methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the conduct of road construction paver screeding operations

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
| --- | --- |
| Safety requirements may include: | • OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances  
• safe operating procedures including recognising and preventing hazards associated with high voltage power lines, uneven/unstable terrain, trees, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working at heights, working in proximity to others, worksite visitors and the public  
• safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distances are kept from excavations, and areas secured from unauthorised access or movement  
• recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials  
• emergency procedures related to equipment |
operation including emergency shutdown and stopping, extinguishing equipment fires, organisational First Aid requirements and evacuation

| Site may include: | • formed/prepared roads  
• pads  
• highways  
• freeways  
• car parks  
• airport runways  
• container yards  
• hard stands  
• footpaths and bikeways |
| Task may include: | • mixing and spreading granular materials  
• spreading concrete materials  
• mixing and spreading stabilised materials  
• spreading bituminous materials |
| Traffic may include: | • congested urban environments  
• low traffic rural areas  
• off-road un-trafficked areas  
• buildings  
• parking sites  
• pedestrian areas |
| Plant, tools and equipment may include: | • shovels  
• measuring tapes  
• depth gauges  
• standard tool kits  
• string lines  
• thermometers  
• straight edges  
**automatic screed levelling devices may include:**  
• grade sensors/averaging sensors  
• matching shoes  
• levelling beams  
• sonic and laser |
| Environmental protection requirements may include: | • organisational/project environmental management plan  
• waste management  
• water quality protection  
• noise  
• vibration |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct earthworks:

- apply legislative, organisation and site requirements and procedures for conducting earthworks
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct earthworks:

- type, uses and limitations of plant used for earthworks construction
- earthworks construction and sub grade preparation techniques
- work recording techniques including specifications, check-lists and drawings
- setting out procedures
- processes for the calculation of material requirements
- compaction and stabilisation techniques/methods
- plan reading and interpretation
- site and equipment safety requirements
- site isolation and traffic control responsibilities and authorities
- responsibilities under the environmental management plan
- materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</tbody>
</table>

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the conduct of road pavement construction

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Safety requirements may include:

- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe operating procedures including recognising and preventing hazards associated with high voltage power lines, uneven/unstable terrain, trees, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working at heights, working in proximity to others, worksite visitors and the public
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distances are kept from excavations, and areas secured from unauthorised access or movement
- recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to equipment
<table>
<thead>
<tr>
<th><strong>Site may include:</strong></th>
<th>operation including emergency shutdown and stopping, extinguishing equipment fires, organisational First Aid requirements and evacuation</th>
</tr>
</thead>
</table>
| **Plant may include:** | - rollers  
- graders  
- skid-steers  
- backhoes  
- paver  
- excavators  
- front-end loaders  
- tip-trucks  
- water carts |
| **Tools and equipment may include:** | - shovels  
- levelling equipment  
- string lines  
- crowbars  
- tape measures  
- handsaws  
- cutting knives  
- hammers  
- trowels  
- formwork |
| **Environmental protection requirements may include:** | - organisational/project environmental management plan  
- waste management  
- water quality protection  
- noise  
- vibration  
- dust and clean-up management |
| **Line and level may include:** | - the use of a string line |
| **Materials may include:** | - gravel  
- rock  
- sand  
- blended materials  
- stabilised materials |
### Road pavement may include:
- quarried products
- all the materials above the sub-grade and below the wearing surface
- may also be known as sub-base and/or base structure

Construction of road pavement may include:
- surface finish
- the repair of surface defects

### Unit Sector(s)
Road and Pavements Construction and Maintenance (General)

### Competency field
Refer to Unit Sector(s).

### Co-requisite units
Not applicable.
RIICRC308A Conduct paver operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of paver operations in the civil construction industry. It includes planning and preparing conducting paver pre-operational checks, operating pavers, relocating pavers, carrying out operator maintenance, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil Construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct paver operations:

- apply legislative, organisation and site requirements and procedures for conducting paver operations
- apply calculations of material requirements, mix, application rates, uniformity and travel speed
- change machine attachments
- select and use tools and equipment safely
- apply basic earthworks calculations
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct paver operations:

- paver types, characteristics, technical capabilities and limitations
- basic principles of soil technology for civil works
- paving operations and techniques
- site and equipment safety requirements
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- safe operating techniques in all terrain
- civil construction activity sequences of road construction, earthworks and drainage
- JSAs/safe work method statement
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
|---|---|
| | • knowledge of the requirements, procedures and instructions for conducting paver operations
| | • implementation of requirements, procedures and techniques for the safe, effective and efficient completion of paver operations
| | • working with others to undertake and complete the paver operations in a way that meets all of the required outcomes
| | • consistent timely completion of paver operations that safely, effectively and efficiently meets the required outcomes
| | • a minimum of five sections of straight paving (at least one of 100 metres) plus three intersections are to be placed

### Context of and specific resources for assessment

| | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
| | • Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
| | • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those

|                                                          | • noise                                            |
|                                                          | • vibration                                        |
|                                                          | • dust                                             |
|                                                          | • clean-up management                              |
| **Hazards** may include:                                  | • uneven/unstable terrain                          |
|                                                          | • trees                                            |
|                                                          | • fires                                            |
|                                                          | • overhead and underground services                |
|                                                          | • bridges                                          |
|                                                          | • buildings                                        |
|                                                          | • excavations                                      |
|                                                          | • traffic                                          |
|                                                          | • embankments                                      |
|                                                          | • cuttings                                         |
|                                                          | • structures                                       |
|                                                          | • hazardous materials                              |
| **Operate stabiliser** may include:                       | • churning up (excavating and remixing) existing fill |
|                                                          | • refilling in layers using the stabilised material |
|                                                          | • mixing materials                                 |
|                                                          | • applying additives                               |
- achieving specified line and depth
- enhancing the properties of the existing pavement
- decreasing permeability
- volume change

| Additives may include: | cement  
|                       | lime  
|                       | bitumen  
|                       | other chemicals where the existing material is not conducive to cement treatment |

Not applicable.
RIICRC310A Construct and maintain roads

Modification History
Not applicable.

Unit Descriptor
This unit covers the construction and maintenance of roads in the civil construction industry. It includes preparing for road construction and maintenance, constructing roads, and maintaining roads. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
**Elements and Performance Criteria**

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for road construction and maintenance | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Identify and apply relevant drawings and job specifications to all work activities  
1.3. Receive, interpret and clarify shift changeover details  
1.4. Locate ancillary services and mark services out before work commences  
1.5. Select tools and equipment to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.6. Obtain and confirm *safety requirements* from the site safety plan and organisational policies and procedures, and apply to the allotted task  
1.7. Conduct equipment pre-start checks to ensure equipment is ready for operation  
1.8. Identify *environmental protection requirements* from the project environmental management plan, and confirm and apply to the allotted task  
1.9. Communicate with other personnel using approved communication methods |
| 2. Construct roads | 2.1. Conform to specified road construction characteristics and location  
2.2. Peg road detailing direction and shape  
2.3. Prepare road sub-base so that road material can be applied to meet planned *road characteristics*  
2.4. Construct road surface to achieve required traction, manoeuvrability and stable haul surface for all vehicles and personnel  
2.5. Erect and construct *road signage* and safety barriers to avoid damage to equipment, avoid injury to personnel, protect surrounding vegetated areas and delineated roadways  
2.6. Construct *drains* and water crossing points to aid the removal of run-off, avoid accumulation of excessive water, and |

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to construct and maintain roads:

- apply dumping techniques
- apply diagnostic techniques
- apply driving techniques
- apply hazardous goods handling techniques
- interpret plans, reports, maps, specifications
- apply lifting techniques (manual, cranes and loads)
- report defects
- apply safe work practices
- work in a team
- use communications equipment
- use hand and power tools
- organise work activities

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to construct and maintain roads:

- construction pegging
- drainage construction methods
- dumping procedures
- emergency procedures
- environmental and heritage procedures
- equipment processes, technical capability and limitations
- equipment safety requirements
- geological and technical data
- hauling procedures
- hazardous goods procedures and consequences of spills
- isolation procedures
- material placement procedures
- mine operational system
- night and day working procedures
- OHS procedures
• open cut procedures
• operational procedures and checks
• road construction methods/road rules
• shutdown procedures
• site procedures
• site safety requirements
• start-up procedures
• towing procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for constructing and maintaining roads</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of road construction and maintenance</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the construction and maintenance of roads in a way that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of road construction and maintenance that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
</tr>
<tr>
<td></td>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those...</td>
</tr>
<tr>
<td><strong>required on the job.</strong></td>
<td></td>
</tr>
<tr>
<td>---</td>
<td></td>
</tr>
<tr>
<td>• Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.</td>
<td></td>
</tr>
<tr>
<td>• Aboriginal people and other people from a non English speaking background may have second language issues.</td>
<td></td>
</tr>
<tr>
<td>• Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.</td>
<td></td>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
|--------------------------------------------------|------------------------------------------------------------------------------------------------|
| Safety requirements may include: | • OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances  
• safe operating procedures including recognising and preventing hazards associated with high voltage power lines, uneven/unstable terrain, trees, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working at heights, working in proximity to others, worksite visitors and the public  
• safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distances are kept from excavations, and areas secured from unauthorised access or movement  
• recognising hazards and risks including abandoned equipment, adjoining pit walls, adverse weather conditions (electrical storms, floods, fires), chemicals, contaminants, |

Unit Sector(s)
Road and Pavements Construction and Maintenance (General)

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIICRC311 Conduct concrete road paver operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of concrete road paver operations in the civil construction industry. It includes planning and preparing, setting up concrete road paver, operating concrete road paver, carrying out operator maintenance, relocating paver, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
Civil construction

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Not applicable.
Elements and Performance Criteria

| 1. Plan and prepare for operations | 1.1 Access, interpret and apply compliance documentation relevant to the work activity |
| | 1.2 Obtain and confirm safety requirements from the site safety plan and organisational policies and procedures, and apply to the allotted task |
| | 1.3 Identify, obtain and implement signage requirements from the project traffic management plan |
| | 1.4 Select plant, tools and equipment to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults |
| | 1.5 Identify environmental protection requirements from the project environmental management plan, and confirm and apply to the allotted task |
| | 1.6 Identify type of pavement required |
| 2. Set up concrete road paver | 2.1 Set up paver width and settings in accordance with job specification and plans |
| | 2.2 Use paving drawings and survey markings to establish work area |
| | 2.3 Conduct pre-start and maintenance checks within worksite and manufacturer’s specifications |
| 3. Operate concrete road paver | 3.1 Make adjustments to sensors and controls while paving |
| | 3.2 Use communication systems and hand signals within workplace specifications |
| | 3.2 Operate paver within machinery guidelines and job specifications |
| | 3.3 Complete shut-down and park-up procedures as per machine and site instructions |
| | 3.4 Complete required documentation and report concerns to appropriate personnel |
| 4. Clean up | 4.1 Conduct wash down procedures within worksite and manufacturer’s specifications |
| | 4.2 Clean up work area and dispose of or recycle materials in accordance with the project environment management plan |
| | 4.3 Clean, check, maintain and store plant and tools |

Required Skills and Knowledge
Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct concrete road paver operations:

- apply legislative, organisation and site requirements and procedures for conducting road construction paver screeding operations
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity and report defects in machinery and tools
- communicate effectively to receive and clarify work instructions
- numeracy skills for planning and operations

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct concrete road paver operations:

- site and equipment safety requirements
- site communication and hand signals
- paver screed operations
- approaches to basic concreting
- longitudinal and transverse joints
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- processes for the calculation of material uniformity and travel speed
- materials safety data sheets and materials handling methods
- quality requirements
- civil construction terminology
- safe operating techniques in all terrain
- JSAs/safe work method statements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.
## Overview of assessment

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- Knowledge of the requirements, procedures and instructions for conducting concrete road paver operations
- Implementation of requirements, procedures and techniques for the safe, effective and efficient completion of concrete road paver operations
- Working with others to undertake and complete concrete road paver operations that meets all of the required outcomes
- Consistent timely completion of concrete road paver operations that safely, effectively and efficiently meets the required outcomes
- The conduct of paver operations are to be performed in a minimum of two different concrete types/surface types and are to include the mandatory tasks from the unit scope and cover as a minimum:
  - Three longitudinal joints (of at least 100m) to be constructed to required thickness, uniformity, line and level, on both matching and unsupported edge in accordance with project specifications and/or work instructions
  - Five occasions of straight paving (one of at least 100 linear metres) to required thickness, uniformity, line and level, on both matching and unsupported edge in accordance with project specifications and/or work instructions
  - One intersection to required thickness, uniformity, line and level, on both matching and unsupported edge in accordance with project specifications and/or work instructions
  - Operations to include residential, commercial and highway projects
  - Material delivery through the paver is to include manual and automatic control
  - Prestart operations on the machine
  - Pave off the stop end and pave on the form stop end
  - Maintain edges both with and without boards
  - Use and changes made to vibrators
<table>

### Range Statement

**Relevant compliance documentation** may include:

- legislative, organisational and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Safety requirements** may include:

- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of first aid equipment, hazard control and hazardous materials and substances
- safe operating procedures including recognising and preventing hazards associated with high voltage power lines, uneven/unstable terrain, trees, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working at heights, working in proximity to others, worksite visitors and the public
- safe parking practices including ensuring access ways are clear, visibility is maintained and blind spots are avoided, equipment/machinery is away from overhangs and refuelling sites, safe distances are kept from excavations, and areas secured from unauthorised access or movement
- safety supports are certified and within manufacturer’s recommendations
- recognising hazards and risks including
| **Site may include:** | uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials  
| | *emergency procedures related to equipment operation including emergency shutdown and stopping, extinguishing equipment fires, organisational first aid requirements and evacuation* |
| **Task may include:** | formed/prepared roads  
| | barriers  
| | parapets  
| | airport runways  
| | factory floors  
| | reinforced foundations  
| | pads  
| | highways  
| | freeways  
| | car parks  
| | container yards  
| | hard stands  
| | footpaths and bikeways |
| **Traffic may include:** | formation within recommended lateral tilt values  
| | mixing and spreading granular materials  
| | spreading concrete materials  
| | mixing and spreading stabilised materials |
| **Plant, tools and equipment may include:** | high speed freeways and highways  
| | rail corridors  
| | commercial estates  
| | egress and ingress locations  
| | congested urban environments  
| | low traffic rural areas  
| | off-road un-trafficked areas  
| | parking sites

RIICRC312 Setup and maintain concrete paver stringlines

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of setting-up and maintaining concrete paver stringlines in the civil construction industry. It includes planning and preparing, inspecting equipment and layout, placing stringlines and pins, installation and removal of access gates and the storage and maintenance of stringlines. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil Construction

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills

Elements and Performance Criteria Pre-Content
Not applicable.
## Elements and Performance Criteria

| 1. Plan and prepare for operations | 1.1 Access, interpret and apply compliance documentation relevant to the work activity  
1.2 Obtain and confirm safety requirements from the site safety plan and organisational policies and procedures, and apply to the allotted task  
1.3 Identify, obtain and implement signage requirements from the project traffic management plan  
1.4 Select plant, tools and equipment to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.5 Identify environmental protection requirements from the project environmental management plan, and confirm and apply to the allotted task |
| 2. Inspect equipment and layout | 2.1 Conduct visual inspection of stringlines to ensure compliance with workplace specifications  
2.2 Conduct inspection of stringline flags and pins and ensure compliance with worksite plans  
2.3 Inspect hand or car winch and other pulling devices for safe and accurate operation  
2.4 Conduct visual inspection of ground conditions for conformance to work requirements  
2.5 Load and unload stringline pins onto vehicle within workplace specifications  
2.6 Set up barricades and exclusion zones around work area/PTE |
| 3. Conduct placement of stringline and pins | 3.1 Drive in stringline pins and placement of pins within workplace specifications  
3.2 Tension stringlines within workplace specifications  
3.3 Use tension measuring devices to establish accurate tensions on stringlines  
3.4 Set up anchor pins within workplace specifications  
3.5 Communicate with work teams using workplace hand or radio communication procedures  
3.6 Tie off stringline to anchor pins  
3.7 Release stringline from anchor pins  
3.8 Set out from survey pins heights/level and undertake visual verification of alignment |
Required Skills and Knowledge

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct concrete road paver operations:

- coordinating with other team members
- following instructions
- reading drawings and specifications
- reporting faults and hazards
- knowing work responsibilities and team member’s responsibilities

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct concrete road paver operations:

- levelling techniques
- characteristics of clear and appropriate hand signals
- services identification
- plans/drawings
- type of stringline and tension capabilities
- techniques on driving in stringline pins/placement of pins within workplace specifications
- techniques on tensioning stringline
- using a tension metre and different types of tension metres
- reporting of faults and hazard identification
- workplace equipment safety
- working around other workgroups
- pre-start SWMS and measurements and calculations
- read survey pins

### Evidence Guide

## Required Skills and Knowledge

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct concrete road curing and texturing operations:

- apply legislative, organisation and site requirements and procedures for conducting road construction paver screening operations
- apply legislative, organisation and site requirements and procedures for laying pavers
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions
- organise work activities
- use and operate equipment safely
- identify and report hazards related to work activity

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct concrete road curing and texturing operations:

- site and equipment safety requirements
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- processes for the calculation of material uniformity and travel speed
- materials safety data sheets and materials handling methods
- quality requirements
- civil construction terminology
- safe operating techniques in all terrain
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for conducting concrete road curing and texturing
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of concrete road curing and texturing
- working with others to undertake and complete the concrete road curing and texturing operations in a way that meets all of the required outcomes
- consistent timely completion of concrete road curing and texturing operations that safely, effectively and efficiently meets the required outcomes
- conduct road curing and texturing operations to ensure:
  - correct calculation and application of road curing compound
  - correct application of texture type according to specifications

Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or

# Required Skills and Knowledge

## Required skills

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct concrete handling including:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
    - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - evaluating own actions and making judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
  - teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to handle concrete including:

- concrete materials handling techniques
- concreting materials
- general construction terminology
- hazardous materials
- job safety analysis (JSA) and safe work method statements
- MSDS
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- types, characteristics, uses and limitations of tools and equipment
- workplace and equipment safety requirements.

## Evidence Guide

Unit Sector(s)
Road and Pavements Construction and Maintenance (General)

Custom Content Section
Not applicable.
RIICRC315 Use concreting materials and equipment

Modification History
Not applicable.

Unit Descriptor
This unit of competency covers planning, preparing, selecting, using and cleaning up concreting tools, plant and equipment. The unit includes hand tools, power tools, small plant and equipment. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in entry level operational roles, at worksites within: Civil Construction

Licensing/Regulatory Information

# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>
</thead>
</table>
| **1. Plan and prepare for operations** | 1.1 Access, interpret and apply compliance documentation relevant to the work activity  
1.2 Obtain and confirm safety requirements from the site safety plan and organisational policies and procedures, and apply to the allotted task  
1.3 Identify, obtain and implement signage requirements from the project traffic management plan  
1.4 Select plant, tools and equipment to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.5 Identify environmental protection requirements from the project environmental management plan, and confirm and apply to the allotted task  
1.6 Identify type of pavement required |
| **2. Identify and select hand and power tools** | 2.1 Identify and select hand and power tools, according to their functions, operations and limitations.  
2.2 Recognise and adhere to OHS requirements for using hand and power tools  
2.3 Check lubricants, hydraulic fluid and water according to manufacturer recommendations  
2.4 Select tools consistent with job requirements  
2.5 Check tools, including leads and hoses, for tags, serviceability and safety, and report any faults  
2.6 Check and maintain power tool guards, retaining bolts, couplings, gauges and controls in accordance with manufacturer recommendations  
2.7 Select equipment to hold or support material during operation |
| **3. Use tools** | 3.1 Use hand tools appropriate to the task and materials, and in accordance with OHS requirements  
3.2 Use power tools safely and effectively and in accordance with manufacturer recommendations and state or territory OHS requirements |
3.3 Sharpen and maintain tools

4. Identify, select and use plant and equipment

4.1 Check plant and equipment for safety and report faults
4.2 Select and use plant and equipment consistent with OHS requirements, manufacturer specifications and the needs of the job
4.3 Check lubricants, hydraulic fluid and water according to manufacturer’s specifications
4.4 Maintain plant and equipment in accordance with manufacturer specifications and standard work practices

5. Clean up

5.1 Clear the work area and dispose of, reuse or recycle material in accordance with legislation, regulations, codes of practice and job specification
5.2 Clean, check, maintain and store plant, tools and equipment in accordance with manufacturer recommendations and standard work practices

- 

- 

**Required Skills and Knowledge**

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
    - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - evaluating own actions and making judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
• teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
• technological skills to:
  • use a range of mobile technology, such as two-way radio and mobile phones
  • voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:
• concreting materials
• concreting tool use techniques
• general construction terminology
• job safety analysis (JSA) and safe work method statements
• material safety data sheets (MSDS)
• materials storage and environmentally friendly waste management
• plans, drawings and specifications
• processes for the calculation of material requirements
• quality requirements
• relevant Acts, regulations and codes of practice
• tools and equipment safety manuals and instructions
• types, characteristics, uses and limitations of plant, tools and equipment
• workplace and equipment safety requirements.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>

<td>correct application of texture type according to specifications</td>
</tr>
<tr>
<td><strong>Context of and specific resources for assessment</strong></td>
<td>This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
</tr>
<tr>
<td></td>
<td>Assessment of this competency requires typical resources normally used in Civil Construction. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
</tr>
<tr>
<td></td>
<td>The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
</tr>
<tr>
<td></td>
<td>Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.</td>
</tr>
<tr>
<td></td>
<td>Aboriginal people and other people from a non English speaking background may have second language issues.</td>
</tr>
<tr>
<td></td>
<td>Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required</td>
</tr>
<tr>
<td><strong>Method of assessment</strong></td>
<td>This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:</td>
</tr>
<tr>
<td></td>
<td>written and/or oral assessment of the candidate’s required knowledge</td>
</tr>
</tbody>
</table>
• observed, documented and/or first hand testimonial evidence of the candidate’s:
  implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  consistent achievement of required outcomes
  first hand testimonial evidence of the candidate’s:
  working with others to undertake and complete the conduct of concrete road curing and texturing operations.

Guidance information for assessment
Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

Range Statement

Information includes:
• diagrams or sketches
• instructions issued by authorised organisational or external personnel
• manufacturer specifications and instructions, where specified
• MSDS
• memos
• regulatory and legislative requirements pertaining to using concreting tools and equipment
• relevant Australian standards
• safe work procedures relating to using concreting tools and equipment
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

Planning and preparation include:
• assessment of conditions and hazards
• determination of work requirements and safety plans and policies
• equipment defect identification
• work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety
• emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation handling activities that may require the assistance of
plan and may include: others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

**Tools and equipment** include:
- bolt cutters
- crow bars
- cutting knives
- edging tools
- floats
- grinders
- hammers
- jointers
- kneel boards
- levelling equipment
- long handled shovels
- measuring tapes
- nail bags
- picks
- pinch bars
- pliers
- rakes
- screeds
- sledge hammers
- steel fixing reels
- string lines
- trowels
- vibrators.

**Quality requirements** include:
- internal company quality policy and standards
- manufacturer specifications where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

**Environmental requirements** include:
- clean-up management
- dust and noise
- stormwater management
- vibration
- waste management.

**Hand and power tools** include:
- digging, transporting, levering, cutting, shaping, fixing, fastening and percussion tools
- electrically operated portable and static power tools and leads
- material shifting, holding tools and finishing tools
- setting out, marking out and levelling tools
- 240 volt electricity (circular saw, mitre saw, drill, grinder, impact hammer)
- pneumatic (wrench, grinder, jackhammer, screwdriver)
- battery driven (drill, grinder, circular saw, sander, impact hammer) and
- hydraulics (portapower and attachments, jacking equipment, shoring systems

**Plant and equipment** include:
- compressors
- generators.

RIICRC316 Place and compact concrete

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of concrete placing and compacting operations in the civil construction industry. It includes planning, preparing, defining the work area, placing, compacting, screeding, levelling and clean up during concreting operations. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
Civil construction

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.
**Employability Skills Information**

This unit contains employability skills

**Elements and Performance Criteria Pre-Content**

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

**Elements and Performance Criteria**

| 1. Plan and prepare for operations | 1.1 Access, interpret and apply *compliance documentation* relevant to the work activity |
| | 1.2 Obtain and confirm *safety requirements* from the site safety plan and organisational policies and procedures, and apply to the allotted *task* |
| | 1.3 Identify, obtain and implement signage requirements from the project *traffic* management plan |
| | 1.4 Select *plant, tools and equipment* to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults |
| | 1.5 Identify *environmental protection requirements* from the project environmental management plan, and confirm and apply to the allotted task |

| 2. Define and prepare work area | 2.1 Check location of concrete placement is determined from plans and specifications and location for placement is free of debris and waste |
| | 2.2 Maintain safe working area around pour location using barriers and signage consistent with OHS regulations |
| | 2.3 Locate plant, tools and equipment to suit planned placement |
| | 2.4 Undertake pre-pour inspections before concrete arrives on site |

<p>| 3. Place concrete and compact | 3.1 Place <em>concrete</em> in horizontal layers into location to levels indicated by markers, level pegs or lines |
| | 3.2 Minimise height of vertical drop of concrete to <em>avoid</em> |</p>
<table>
<thead>
<tr>
<th><strong>3.3</strong> Consolidate poured concrete during process using approved compaction or vibration method</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>3.4</strong> Check finished levels against datum using levelling device</td>
</tr>
<tr>
<td><strong>4.</strong> Screed/level concrete</td>
</tr>
<tr>
<td><strong>4.1</strong> Screed concrete to correct levels and grades using straight edged tool/formwork mounted screed</td>
</tr>
<tr>
<td><strong>5.</strong> Clean up</td>
</tr>
<tr>
<td><strong>5.1</strong> Clear work area and dispose, reuse or recycle materials in accordance with legislation, regulations, codes of practice and job specification</td>
</tr>
<tr>
<td><strong>5.2</strong> Clean, check, maintain and store plant, tools and equipment in accordance with manufacturer recommendations and standard work practices</td>
</tr>
</tbody>
</table>
## Required Skills and Knowledge

### Required skills

Specific skill is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct placement and compaction of concrete including:

- using a vibrator
- co-ordinating with other team members
- following instructions
- reading drawings and specifications
- reporting faults and hazards
- knowing responsibilities and team members’ responsibilities

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct placement and compacting concrete including:

- cold joints
- compaction
- concrete materials
- concrete reinforcement techniques
- concreting techniques
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- levelling techniques
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- mix specifications
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- segregation
- slump testing
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.
- MSDS / SWMS
- testing procedures
- spec
- environmental hazards/constraints
- how to read a delivery docket
- different methods of placing concrete ie kibble, pump agitator tipper
- hazards involved in the placement of concrete ie enviro, plant movements, chemicals
- knowing what type of concrete is to be used and what specification
- the importance of doing pre-pour checks before concrete arrives onsite (formwork, steel etc)
- the effects the weather has on concrete ie cold, hot, rain
- the importance of planning your vehicle movements in and around your concrete pour

- different styles and methods of vibrating concrete
- the difference between harmonious concrete and non-harmonious concrete
- how concrete compaction effects the strength and life span of concrete
- what to look for when vibrating concrete

- knowing the environmental and waste management procedures
- inspection of tools and equipment at the end of the shift, why it is important to clean tools
- different products and ways of cleaning tools
- storage and maintenance of concrete tools and gear

Evidence Guide

working with others to undertake and complete the placing and compacting of concrete |
| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Information includes:       | • diagrams or sketches       |
|                            | • instructions issued by authorised organisational or external personnel |
|                            | • manufacturer specifications and instructions, where specified |
|                            | • MSDS                       |
|                            | • memos                      |
|                            | • regulatory and legislative requirements pertaining to placing concrete |
|                            | • relevant Australian standards |
|                            | • safe work procedures relating to placing concrete |
|                            | • signage                    |
|                            | • verbal, written and graphical instructions |
|                            | • work bulletins             |
|                            | • work schedules, plans and specifications |

| Planning and preparation include: | • assessment of conditions and hazards |
|                                    | • determination of work requirements and safety plans and policies |
|                                    | • equipment defect identification |
|                                    | • work site inspection |

<p>| Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include: | • emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation |
|                                                                                                                     | • handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor |
|                                                                                                                     | • hazard control |
|                                                                                                                     | • hazardous materials and substances |
|                                                                                                                     | • organisational first aid |
|                                                                                                                     | • PPE prescribed under legislation, regulations and |</p>

### Materials include:
- concrete.

### Environmental requirements include:
- clean-up management
- dust and noise
- stormwater management
- vibration
- waste management

### Concrete delivery includes:
- crane and kibble
- pre-mix truck
- wheelbarrow

### Placing of concrete includes:
- kibble
- pumping equipment
- shovelling
- tremmies
- truck placed
- vibrating
- wheelbarrows

Methods to **avoid segregation of concrete** include:
- using a tremmie, through minimising the height of a vertical drop (no greater than 2 metres high for 20MPA at 80 slump)
- using pumps with a flexible hose.

### Compaction or vibration methods include:
- mechanical vibrators

### Finishing techniques include:
- broom finished
- brushed
- mechanical trowelling machine
- steel trowel
- wood float

### Screed:
- includes a hand screed
- may include:
  - a mechanical vibrating screed
  - magic screeds

RIICRC317 Finish concrete pavements

Modification History
Not applicable.

Unit Descriptor
This unit covers finishing concrete pavements that have been placed and screeded in domestic, commercial and civil applications and to provide a finish for designated requirements.
The unit includes the conduct of manual and mechanical finishing. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in entry level operational roles, at worksites within: Civil Construction

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.
Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Elements</th>
<th>Performance Criteria</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for operations | 1.1 Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2 Obtain and confirm *safety requirements* from the *site* safety plan and organisational policies and procedures, and apply to the allotted *task*  
1.3 Identify, obtain and implement *signage* requirements from the project *traffic management plan*, and confirm and apply to the allotted task  
1.4 Select *plant, tools and equipment* to carry out *tasks* consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.5 Identify *environmental protection requirements* from the project environmental management plan, and confirm and apply to the allotted task  
1.6 Identify *type of pavement* required |
| 2. Finish concrete | 2.1 Apply float and trowel after initial screeding to assist in maintaining a *level surface* and to remove screeding inaccuracies  
2.2 Apply mechanical trowelling to consolidate and densify the setting concrete surface  
2.3 Install *control joints*, edges finished and concrete trowelled to specifications  
2.4 Apply texture according to client requirements  
2.5 Apply final trowel/*finish* to concrete surface to specifications |
| 3. Clean up | 3.1 Clear work area and dispose of, reuse or recycle material in accordance with legislation, regulations, codes of practice and job |
### Required Skills and Knowledge

#### Required skills

Specific skill is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct finished concrete pavement operations including:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- follow instructions
- read and interpret:
  - documentation from a variety of sources
  - drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes specification

3.2 Clean, check, maintain and store plant, tools and equipment in accordance with manufacturer recommendations and standard work practices
knowledge of the following, as required to conduct finish concrete pavement operations:

- concrete finishing techniques
- concrete materials
- concrete placement
- curing times
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- levelling techniques
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements

### Evidence Guide

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.</th>
</tr>
</thead>
</table>
| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for the finishing of concrete pavements
- implementation of requirements, procedures and techniques for the safe, effective and efficient finishing of pavements
- working with others to undertake the finishing of concrete that meets all of the required outcomes
- consistent timely finishing of concrete that safely, effectively and efficiently meets the required outcomes
- conduct finishing of concrete on:
  - 4x10 metre slab or equivalent |
<table>
<thead>
<tr>
<th><strong>Context of and specific resources for assessment</strong></th>
<th><strong>This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td><em>Assessment of essential underpinning knowledge will usually be conducted in an off-site context.</em></td>
</tr>
<tr>
<td></td>
<td><em>Assessment is to comply with relevant regulatory or Australian Standards’ requirements.</em></td>
</tr>
<tr>
<td></td>
<td><strong>Resource implications for assessment include:</strong></td>
</tr>
<tr>
<td></td>
<td><em>an induction procedure and requirement</em></td>
</tr>
<tr>
<td></td>
<td><em>realistic tasks or simulated tasks covering the mandatory task requirements</em></td>
</tr>
<tr>
<td></td>
<td><em>relevant specifications and work instructions</em></td>

<tr>
<td></td>
<td><strong>Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.</strong></td>
</tr>
<tr>
<td><strong>Method of assessment</strong></td>
<td><strong>Assessment methods must:</strong></td>
</tr>
<tr>
<td></td>
<td><em>satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Integrated Framework Training Package</em></td>
</tr>
<tr>
<td></td>
<td><em>include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application</em></td>
</tr>
</tbody>
</table>
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

RIICRC318 Cure Concrete

Modification History
Not applicable.

Unit Descriptor
This unit of competency specifies the outcomes required to carry out the initial curing process to a nominated poured concrete section to control the moisture evaporation from finished concrete.
The unit includes using curing agents and curing techniques in accordance with engineering specifications. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
Civil construction

Licensing/Regulatory Information

### Required Skills and Knowledge

#### Required skills

Required skills for this unit are:
- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
    - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - evaluating own actions and making judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - numeracy skills for planning and operations
  - recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
  - teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

#### Required knowledge

Required knowledge for this unit is:
- concrete curing materials and techniques
- curing duration and effect on ultimate strength
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- tools and equipment types, characteristics, uses and limitations
- workplace and equipment safety requirements.
### Evidence Guide

</thead>
</table>
| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for conducting concrete curing
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of concrete curing
- working with others to undertake and complete the concrete curing operations in a way that meets all of the required outcomes
- consistent timely completion of concrete curing operations that safely, effectively and efficiently meets the required outcomes
- conduct concrete curing operations |
| Context of and specific resources for assessment | This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets |

</table>

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate’s required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate’s:
- implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
- consistent achievement of required outcomes
- first hand testimonial evidence of the candidate’s: working with others to undertake and complete concrete road paver operations

Range Statement

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to curing concrete
- relevant Australian standards
- safe work procedures relating to curing concrete
- signage
- verbal, written and graphical instructions
### Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection

### Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety

### Tools and equipment include:

- hoses and sprinklers
- rollers
- spray applicators
- tarpaulins and covers

| competency in this unit | all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:  
- knowledge of the requirements, procedures and instructions for the use of concrete saws on pavements  
- implementation of requirements, procedures and techniques for the safe, effective and efficient use of cutting and sawing concrete pavements  
- consistent timely use of concrete saws to safely, effectively and efficiently meets the required outcomes  
- conduct sawing on concrete pavements to a minimum of 100 linear metres |
| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.  
• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.  
• Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.  
• Aboriginal people and other people from a non English speaking background may have second language issues.  
• Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.  
• Where applicable, physical resources should include equipment modified for people with disabilities.  
• Access must be provided to appropriate learning and/or assessment support when required. |
| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the |
following assessment methods:
- written and/or oral assessment of the candidate’s required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate’s:
- implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
- consistently achieving the required outcomes
- first hand testimonial evidence of the candidate’s:
- working with others to undertake the use of concrete saws to initiate planned cracks

Guidance information for assessment
Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

Range Statement

Relevant compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Work instructions may include:
- verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, charts and hand drawings, memos, materials safety data sheets (MSDS) and diagrams or sketches
- plans and specifications
- quality requirements, including: dimensions and tolerances, standards of work and material standards
- safe work procedures or equivalent related to using hand and power tools

Safety requirements may include:
- protective clothing and equipment
- use of tools and equipment
- workplace environment and safety
- handling of materials
- hazard control
- hazardous materials and substances
RIICRC319 Saw and cut concrete pavements to initiate planned cracks

- emergency procedures related to equipment operation which may include
- emergency shutdown and stopping
- extinguishing equipment fires
- organisational first aid requirements and evacuation

**Environmental protection requirements** may include:
- organisational/project environmental management plan
- waste management
- water quality protection
- noise
- vibration
- dust and
- clean-up management

**Checking tools** is to include:
- checking of electrical safety/inspection tag for currency
- equipment defect identification
- assessment of conditions and hazards and determination of work requirements

**Power tools** may include those powered by but not limited to:
- 240 volt electricity (circular saw, mitre saw, drill, grinder, impact hammer)
- pneumatic (wrench, grinder, jackhammer, screwdriver)
- battery driven (drill, grinder, circular saw, sander, impact hammer) and
- hydraulics (portapower and attachments, jacking equipment, shoring systems)

**Concrete saws** are to include:
- wet cut
- cut off saws
- early dry cut

**Equipment** is to include:
- air hoses
- generator
- electric leads

Elements and Performance Criteria

| 1. Plan and prepare for operations | 1.1 Access, interpret and apply compliance documentation relevant to the use of hand and power tools  
1.2 Obtain, confirm and apply work instructions for the allotted task  
1.3 Obtain, confirm and apply safety requirements from the site safety plan and organisational policies and procedures relevant to the allotted task  
1.4 Identify, confirm and apply environmental protection requirements for the allotted task from the project environmental management plan |
| 2. Select and use hand tools | 2.1 Select hand tools consistent with needs of the job  
2.2 Check tools for serviceability and safety, and report faults  
2.3 Clamp or fix materials in position  
2.4 Use hand tools safely and effectively according to their intended use  
2.5 Locate hand tools safely when not in immediate use |
| 3. Select and use power tools | 3.1 Select power tools and equipment consistent with needs of job and in accordance with standard work practice, and report any faults  
3.2 Check tools for serviceability and safety, and report faults  
3.3 Visually check power leads/hoses for serviceability/safety in accordance with the site safety plan  
3.4 Clear route for safe placement of leads/hoses of identified hazards |
<p>| | |</p>

## Required Skills and Knowledge

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to seal concrete pavements:

- apply legislative, organisation and site requirements and procedures
- speak clearly and directly, listening carefully to instructions and information
- interpret and understand the information required for the preparation and application of hand and power tools, including work instructions, quality assurance procedures, manufacturer’s instructions, materials safety data sheets and equipment
- apply teamwork to a range of situations, particularly in a safety context
- solve problems particularly in teams and in dealing practically with safety issues
- show initiative in adapting to changing work conditions or contexts particularly when working across a variety of work placements
- manage time, particularly in organising priorities and planning work including the scheduling and use of equipment, materials and tools to avoid back tracking and re work
- take responsibility for self organisation of work priorities
- use technology related to determining requirements, the planning and application of hand and power tools, including the use of calculations, mechanical equipment and the reporting/recording of results

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to seal concrete pavements:

- site and equipment safety requirements
- hand tools and their application
- portable power tools and their application
- power sources
- materials commonly used in the industry
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- materials safety data sheets (MSDS) and materials handling methods
- project quality requirements
- industry and worksite terminology
- electrical and compressed air safety
- JSA’s/safe work method statement
## Evidence Guide

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
</table>
| | • knowledge of the requirements, procedures and instructions for the sealing of concrete  
• implementation of requirements, procedures and techniques for the safe, effective and efficient sealing of concrete  
• working with others to undertake the sealing of concrete that meets all of the required outcomes  
• consistent timely sealing of concrete that safely, effectively and efficiently meets the required outcomes  
• conduct sealing of concrete pavements by:  
• application and instillation of sealer material and backer rods |

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.  
• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.  
• Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.  
• Aboriginal people and other people from a non English speaking background may have second language issues.  
• Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.  
• Where applicable, physical resources should include equipment modified for people with disabilities.  
• Access must be provided to appropriate learning |
and/or assessment support when required.

Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- seal 50lm of joint in accordance with specification
- written and/or oral assessment of the candidate’s required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate’s:
- implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
- consistently achieving the required outcomes
- first hand testimonial evidence of the candidate’s:
- working with others to undertake the sealing of concrete pavements

Required Skills and Knowledge

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to APGS operations including:

- apply legislative, organisation and site requirements and procedures for conducting road paving operations
- apply legislative, organisation and site requirements and procedures for laying pavers
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct APGS operations including:

- site and equipment safety requirements
- site communication and hand signals
- paver screed operations
- aggregate and gravel types and sizes
- longitudinal and transverse joints
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- processes for the calculation of material uniformity and travel speed
- materials safety data sheets and materials handling methods
- quality requirements
- civil construction terminology
- safe operating techniques in all terrain
- JSAs/safe work method statements
# Evidence Guide

## Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for conducting concrete road paver operations
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of APGS operations
- working with others to undertake and complete APGS that meets all of the required outcomes
- consistent timely completion of APGS operations that safely, effectively and efficiently meets the required outcomes
- the conduct of APGS operations are to include the mandatory tasks from the unit scope and cover as a minimum:
  - setup, calibrate and pave for 200 meters within required conformance (3 times)
  - demonstrate ability to adjust paver (6 times):
    - 2 times horizontal (1 positive, 1 negative)
    - 2 times vertical (1 positive, 1 negative)
    - 2 times combination of above

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery
environment to sensitively accommodate cultural diversity.

- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate’s required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate’s:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate’s:
  - working with others to undertake and complete concrete road paver operations

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

### Range Statement

**Relevant compliance documentation may include:**

- legislative, organisational and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation
| Safety requirements may include:                      | · OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of first aid equipment, hazard control and hazardous materials and substances  
· safe operating procedures including recognising and preventing hazards associated with high voltage power lines, uneven/unstable terrain, trees, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working at heights, working in proximity to others, worksite visitors and the public  
· safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance are kept from excavations, and areas secured from unauthorised access or movement  
· recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials  
· emergency procedures related to equipment operation including emergency shutdown and stopping, extinguishing equipment fires, organisational first aid requirements and evacuation |
| Site may include:                                     | · formed/prepared roads  
· pads  
· highways  
· freeways  
· car parks  
· container yards  
· hard stands  
· footpaths and bikeways |
| Task may include:                                     | · mixing and spreading granular materials  
· spreading concrete materials  
· mixing and spreading stabilised materials  
· spreading bituminous materials |
**Traffic** may include:
- congested urban environments
- low traffic rural areas
- off-road un-trafficked areas
- parking sites
- pedestrian areas

**Plants, tools and equipment** may include:
- shovels
- measuring tapes
- depth gauges
- standard tool kits
- string lines
- thermometers
- straight edges

**Environmental protection requirements may include:**
- organisational/project environmental management plan
- waste management
- water quality protection
- noise
- vibration
- dust and clean-up management

**Survey equipment**
- theodolite
- automated laser device
- stringlines and markers

**Paver**
- automated screed leveller

**APGS**
- GPS
- automated laser detection systems
- positioning systems

**Unit Sector(s)**
Road and Pavements Construction and Maintenance (General).

**Custom Content Section**

this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for the receipt, checking and recording of concrete deliveries
- implementation of requirements, procedures and techniques for the safe, effective and efficient concrete deliveries
- working with others to check concrete deliveries meet all of the required outcomes
- consistent timely receipt, checking and recording of concrete deliveries that safely, effectively and efficiently meets the required outcomes
- conduct recording of concrete deliveries ensure:
  - an even feed of concrete into the paver
  - accurate recording/mapping of delivery location and additional information as required by site procedures
  - accurate recording and calculation of Rate of Evaporation
  - accurate check of concrete for compliance both from docket information and visual inspection
  - provide safe directions to delivery trucks
  - unloading on uneven surfaces or surfaces with grades is safely carried out
  - provide input and implementation of preparation of a VMP for the worksite

Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a Civil Construction. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural
diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate’s required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate’s:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate’s:
  - working with others to undertake and complete the receipt, checking and delivery of concrete.

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

**Range Statement**

**Relevant compliance documentation may include:**

- legislative, organisational and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Safety requirements may include:**

- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment
and safety, handling of materials, use of fire fighting equipment, use of first aid equipment, hazard control and hazardous materials and substances

- safe operating procedures including recognising and preventing hazards associated with high voltage power lines, uneven/unstable terrain, trees, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working at heights, working in proximity to others, worksite visitors and the public
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance are kept from excavations, and areas secured from unauthorised access or movement
- recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to equipment operation including emergency shutdown and stopping, extinguishing equipment fires, organisational first aid requirements and evacuation

| Site may include: | • formed/prepared roads  
• pads  
• highways  
• freeways  
• car parks  
• container yards  
• hard stands  
• footpaths and bikeways |
|---|---|
| Task may include: | • recording concrete conditions and other relevant information  
• communicating with delivery driver including using hand signals  
• communicating with paver operator  
• identifying unloading operator and maintaining communication with the driver  
• visually assessing concrete for compliance |
| Traffic may include: | • congested urban environments  
• low traffic rural areas  
• off-road un-trafficked areas |
### Plants, tools and equipment may include:
- shovels
- measuring tapes
- standard tool kits
- thermometers
- recording sheets
- weather stations

### Environmental protection requirements may include:
- organisational/project environmental management plan
- waste management
- water quality protection
- noise
- vibration
- dust and clean-up management

### Delivery documents
- batch dockets from batching plant

### Safe working area
- area immediately under the control of the receiver as designated on the worksite VMP

### Uniformity and consistency
- visual assessment of mix homogeneity

### Appropriate details
- slump
- time batched
- time discharged

### Additional information
- periodically record concrete temperature, humidity, wind speed and Rate of Evaporation
- record any disruptions to paving
- record any changes in mix

---

### Unit Sector(s)
Road and Pavements Construction and Maintenance (General)

### Custom Content Section
Not applicable.
RIICRC323 Insert tie bars in fresh concrete

Modification History
Not applicable.

Unit Descriptor
This unit covers the insertion of tie bars in fresh concrete operations in the civil construction industry. It includes planning and preparing, setting up, conducting the insertion of tie bars into fresh concrete and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
Civil construction

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>
</thead>
</table>

## Elements and Performance Criteria

| 1. Plan and prepare for operations | 1.1 Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2 Obtain and confirm *safety requirements* from the site safety plan and organisational policies and procedures, and apply to the allotted task  
1.3 Identify, obtain and implement signage requirements from the project *traffic* management plan  
1.4 Select *plant, tools and equipment* to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.5 Identify *environmental protection requirements* from the project environmental management plan, and confirm and apply to the allotted task |
|---|---|
| 2. Setup operations | 2.1 Verify quantity of bars meet task requirements  
2.2 Confirm bars are *fit for purpose*  
2.3 Confirm saw cut locations are marked out or programmed into paving computer as per site specifications  
2.4 Check automatic program spacing  
2.5 Check tie bar spacing and variations conform to plans  
2.6 Check for safe operations and confirm operation of emergency stops |
| 3. Operate tie bar system | 3.1 Maintain safe working area around tie bar inserter  
3.2 Maintain adequate stock of bars at tie bar inserter  
3.3 Operate and monitor mechanical or manual tie bar insertion for correct location, alignment and depth (if sidebars)  
3.4 Report missed bars or jamming immediately to the relevant personnel |
<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>3.5</strong></td>
<td>Ensure location of any missed or non compliant insertion is recorded by relevant site personnel</td>
</tr>
<tr>
<td><strong>3.6</strong></td>
<td>Ensure concrete is fully compacted around the tie bar</td>
</tr>
<tr>
<td><strong>3.7</strong></td>
<td>Ensure magazine is sufficiently loaded at all times</td>
</tr>
<tr>
<td><strong>3.8</strong></td>
<td>Operate hiab (if fitted) to load magazine safely and accurately</td>
</tr>
<tr>
<td><strong>3.9</strong></td>
<td>Load magazine by hand according to correct procedures</td>
</tr>
</tbody>
</table>

| **4. Clean Up** |   |
| **4.1** | Clean up work area at end of day |
| **4.2** | Return unused stockbars to store |

Evidence Guide
### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for the insertion of tie bars into fresh concrete
- implementation of requirements, procedures and techniques for the safe, effective and efficient insertion of tie bars into fresh concrete
- working with others to undertake the insertion of tie bars into fresh concrete that meets all of the required outcomes
- consistent timely insertion of tie bars into fresh concrete that safely, effectively and efficiently meets the required outcomes
- identify and correctly mark onsite changes in tie bar spacing from the plans
- conduct insertion and compaction of tie bars to correct depth over 75 linear metres on a minimum of three (3) occasions
- load a magazine on at least one occasion in accordance with manufacturer’s procedures
- set out manually inserted tie bars and corresponding saw cuts

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery
environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate’s required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate’s:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate’s:
  - working with others to undertake and complete the insertion of tie bars in fresh concrete

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

**Range Statement**

**Relevant compliance documentation may include:**
- legislative, organisational and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation
**Safety requirements may include:**

- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances

- Safe operating procedures including recognising and preventing hazards associated with high voltage power lines, uneven/unstable terrain, trees, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working at heights, working in proximity to others, worksite visitors and the public

- Safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance are kept from excavations, and areas secured from unauthorised access or movement

- Recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials

- Emergency procedures related to equipment operation including emergency shutdown and stopping, extinguishing equipment fires, organisational first aid requirements and evacuation

**Site may include:**

- formed/prepared roads
- pads
- highways and major arterial roads
- freeways
- car and truck parks
- container yards

**Task may include:**

- loading magazine
- operating manual or automatic tie bar inserter
- spreading concrete materials

**Traffic may include:**

- congested urban environments
- low traffic rural areas
- off-road un-trafficked areas
- parking sites
- pedestrian areas
Plant, tools and equipment may include:

- measuring tapes
- depth gauges
- standard tool kits
- string lines
- straight edges
- screed
- hiab

Environmental protection requirements may include:

- organisational/project environmental management plan
- waste management
- water quality protection
- noise
- vibration
- dust and clean-up management

Unit Sector(s)

Elements and Performance Criteria Pre-Content
| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Ensure appropriate planning and preparation of tasks is carried out | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Access, interpret and clarify the *specific task information and requirements* relevant to undertaking *flexible pavement construction tasks*  
1.3. Ensure a *job plan* is available which makes best use of the available resources and meets task requirements |
| 2. Ensure appropriate initiation of tasks is carried out | 2.1. Confirm that the necessary *resources* are available for the safe, effective and efficient conduct of the tasks  
2.2. Ensure clear and timely *instructions* are communicated to *team members* and others involved, for the safe, effective and efficient conduct of the tasks  
2.3. Set out tasks as required for the effective completion of the task |
| 3. Oversee the execution of tasks | 3.1. *Monitor* flexible pavement construction task performance to ensure it achieves the *required outcomes*  
3.2. *Initiate* adjustments to work practice or job plan to ensure safe execution of work and achievement of required outcomes  
3.3. Ensure plant equipment and tools maintenance requirements are carried out and recorded |
| 4. Report on the execution of tasks | 4.1. Complete and submit reports as required  
4.2. Recommend changes to improve the safety, efficiency and effectiveness of the execution of tasks |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to supervise flexible pavement construction tasks:

- apply legislative, organisation and site requirements and procedures
- interpret project contract and specification requirements and procedures
- interpret project site soil and geological data
- identify soil and rock types
- interpret meteorological data
- identify drainage issues
- interpret material properties and test results, including compaction test results
- interpret project site geotechnical data
- interpret project site hydrological data
- interpret project engineering survey information
- interpret project plans and drawings
- interpret project specifications
- prepare for and conduct briefings, toolbox and site meeting
- prepare of short messages
- prepare and presenting of job reports
- prepare and maintaining of log books and diaries
- provide leadership
- apply performance monitoring skills
- apply set out requirements and procedures
- set up and use levelling devices
- establish construction offsets
- apply supervisory skills
- develop workplace relationships
- develop individuals and the team
- apply inspection requirements and procedures
- calculate quantities for the execution of tasks, including:
  - volumes
  - tonnage required
  - grades
  - percentages
  - areas
  - resource consumption figures, including required supply rates
- interpret flexible pavement construction materials properties and test results,
including:
- soil density/moisture relationship
- plasticity index
- particle size distribution
- providing recommendations for the improvement of the safe, effective and efficient execution of flexible pavement construction tasks

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to supervise flexible pavement construction tasks:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational Health and Safety requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- work zone traffic management requirements and procedures
- contract management requirements and procedures
- communication requirements and procedures
- administrative requirements and procedures
- flexible pavement construction plant and equipment capabilities and application
- plant, equipment and tools maintenance requirements and procedures
- operational techniques for the execution of flexible pavement construction tasks
- flexible pavement construction task resource requirements and procedures
- activities scheduling requirements and procedures
- flexible pavement construction materials delivery requirements and procedures
- job plan drafting of and administration requirements and procedures
- reporting requirements and procedures
- workplace relationship requirements and procedures
- organisational, client and site operational requirements
- relationship between various areas of civil works
- team leadership techniques
- works planning techniques
- flexible pavement construction monitoring methods
- engineering survey principles
- materials quality and delivery requirements and procedures
- mentoring techniques
- estimating principles
- civil works construction sequencing
- flexible pavement and related activities' terminology
- set out requirements and procedures
- road geometry
- ground surface treatment requirements and procedures e.g. proof rolling
- pavement drainage requirements
- works planning techniques
- monitoring methods
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency.

The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to plan, prepare and conduct the supervision of flexible pavement

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**RIICRC401A Apply the principles of flexible pavement construction**
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• code of practice  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
| --- | --- |
| Specific task information and requirements may include: | • site geological and geotechnical data, including:  
  • rock types and characteristics  
  • soil types and characteristics  
  • site hydrological data, including:  
    • surface water  
    • ground water  
  • site meteorological data, including:  
    • rainfall  
    • humidity  
    • temperature  
    • wind  
  • site engineering survey data  
  • known and potential site hazards, constraints and conditions  
  • site cultural and heritage information  
  • task specifications  
  • task drawings  
  • sources of materials  
  • other organisations and contractors involved in the task or related tasks  
  • coordination, timing and budgeting requirements |
| Job plan is to include: | • human resource requirements  
• plant and machinery requirements |
- construction materials requirements
- sub-contractor support requirements
- waste disposal requirements
- coordination requirements
- activity scheduling
- materials delivery scheduling
- risk assessment and management requirements
- occupational Health and Safety requirements
- quality management requirements, including testing scheduling requirements
- traffic management requirements
- environmental requirements
- task monitoring requirements
- task performance monitoring requirements
- communication requirements
- reporting requirements

**Flexible pavement construction**

<tr>
<td>sediment control methods</td>
</tr>
</tbody>
</table>
### Resources
are to include:
- labour
- plant, equipment and tools
- highway haulage vehicles
- construction materials
- sub-contractor services

### Instructs
are to include:
- briefings
- handovers
- work orders
- toolbox meetings
- site meetings

### Teams members may include:
- other members of the organisation's management team
- members of the team directly involved in the task
- suppliers representatives
- sub-contractors representatives
- supervisors or managers of other organisations who are involved in related tasks

### Set out is to include:
- control lines
- cleared width
- batters
- off-sets

### Monitor is to include:
- ongoing risk assessment
- engineering survey
- sampling and testing
- observation and recording
- general supervision

### Required outcomes may include:
- task specifications requirements
- task drawings requirements
- coordination requirements
- activity scheduling requirements
- unit cost requirements
- overall task cost requirements
- waste management requirements

### Initiate is to include:
- written communication
- oral communication

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1. Ensure appropriate planning and preparation of tasks is carried out** | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Access, interpret and clarify the *specific task information and requirements* relevant to undertaking the *rigid pavement construction tasks*  
1.3. Ensure a *job plan* is available which makes best use of the available resources and meets task requirements |
| **2. Ensure appropriate initiation of tasks is carried out** | 2.1. Ensure clear and timely *instructions* are communicated to *team members* and others involved, for the safe, effective and efficient conduct of the tasks  
2.2. Confirm that the necessary *resources* are available for the safe, effective and efficient conduct of the tasks, to meet the specific task requirements  
2.3. *Set out* tasks as required for the effective completion of the task |
| **3. Oversee the execution of tasks** | 3.1. *Monitor* rigid pavement construction task performance to ensure it achieves the *required outcomes*  
3.2. *Initiate* adjustments to work practice or job plan to ensure safe execution of work and achievement of required outcomes  
3.3. Ensure plant equipment and tools maintenance requirements are carried out and recorded |
| **4. Report on the execution of tasks** | 4.1. Complete and submit reports as required  
4.2. Recommend changes to improve the safety, efficiency and effectiveness of the execution of tasks |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to supervise rigid pavement construction tasks:

- apply legislative, organisation and site requirements and procedures
- interpret project contract and specification requirements and procedures
- interpret project site soil and geological data
- identify soil and rock types
- interpret meteorological data
- identify drainage issues
- interpret material properties and test results, including compaction test results
- interpret project site geotechnical data
- interpret project site hydrological data
- interpret project engineering survey information
- interpret project plans and drawings
- interpret project specifications
- prepare for and conduct briefings, toolbox and site meeting
- prepare of short messages
- prepare and presenting of job reports
- prepare and maintaining of log books and diaries
- provide leadership
- apply performance monitoring skills
- apply set out requirements and procedures
- set up and use levelling devices
- establish construction offsets
- apply supervisory skills
- develop workplace relationships
- develop individuals and the team
- apply inspection requirements and procedures
- calculate quantities for the execution of tasks, including:
  - volumes
  - tonnage required
  - grades
  - percentages
  - areas
  - resource consumption figures, including required supply rates
- conduct and interpret rigid pavement construction materials properties and test
results, including:

- slump testing
- test cylinder preparation
- provide recommendations for the improvement of the safe, effective and efficient execution of rigid pavement construction tasks

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to supervise rigid pavement construction tasks:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- work zone traffic management requirements and procedures
- contract management requirements and procedures
- communication requirements and procedures
- administrative requirements and procedures
- rigid pavement construction plant and equipment capabilities and application
- plant, equipment and tools maintenance requirements and procedures
- operational techniques for the execution of flexible pavement construction tasks
- rigid pavement construction tasks resource requirements and procedures
- activities scheduling requirements and procedures
- rigid pavement construction materials delivery requirements and procedures
- job plan drafting of and administration requirements and procedures
- reporting requirements and procedures
- workplace relationship requirements and procedures
- organisational, client and site operational requirements
- relationship between various areas of civil works
- team leadership techniques
- works planning techniques
- flexible pavement construction monitoring methods
- engineering survey principles
- materials quality and delivery requirements and procedures
- mentoring techniques
- estimating principles
- civil works construction sequencing
- rigid pavement construction and related activities' terminology
- set out requirements and procedures
- road geometry
- ground surface treatment requirements and procedures e.g. proof rolling
- pavement drainage requirements
- works planning techniques
- monitoring methods
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Specific task information and requirements may include:
- site geological and geotechnical data, including:
  - rock types and characteristics
  - soil types and characteristics
- site hydrological data, including:
  - surface water
  - ground water
- site meteorological data, including:
  - rainfall
  - humidity
  - temperature
  - wind
- site engineering survey data
- known and potential site hazards, constraints and conditions
- site cultural and heritage information
- task specifications
- task drawings
- sources of materials
- other organisations and contractors involved in the task or related tasks
- coordination, timing and budgeting requirements

### Rigid pavement construction may include:
- roads
- airfields
- industrial hardstands
- open car parks
- including the applying of:
  - concrete
  - bound materials
- line marking

### Rigid pavement construction

**tasks**

may include:

- site preparation methods
- extraction methods
- load and haulage methods
- placement methods
- distribution methods
- compaction methods
- surface finishing methods
- line, grade and level control methods
- curing and hot weather concreting techniques
- sediment control methods
- line marking methods

### Job plan

is to include:

- human resource requirements
- plant and machinery requirements
- construction materials requirements
- sub-contractor support requirements
- waste disposal requirements
- coordination requirements
- activity scheduling
- materials delivery scheduling
- risk assessment and management requirements
- occupational health and safety requirements
- quality management requirements, including testing scheduling requirements
- traffic management requirements
- environmental requirements
- task monitoring requirements
- task performance monitoring requirements
- communication requirements
- reporting requirements

### Instructions

are to include:

- briefings
- handovers
- work orders
- toolbox meetings
- site meetings

### Team members

may include:

- other members of the organisation's
| **Management team** | • members of the team directly involved in the task  
• suppliers representatives  
• sub-contractors representatives  
• supervisors or managers of other organisations who are involved in related tasks |
|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| **Resources**       | • labour  
• plant, equipment and tools  
• highway haulage vehicles  
• construction materials  
• sub-contractor services |
| **Set out**         | • control lines  
• cleared width  
• batters  
• off-sets |
| **Monitor**         | • ongoing risk assessment  
• engineering survey  
• sampling and testing  
• observation and recording  
• general supervision |
| **Required outcomes** | • task specifications requirements  
• task drawings requirements  
• coordination requirements  
• activity scheduling requirements  
• unit cost requirements  
• overall task cost requirements  
• waste management requirements |
| **Initiate**        | • written communication  
• oral communication |

**Unit Sector(s)**
Road and Pavements Construction and Maintenance (General)

**Competency field**
Refer to Unit Sector(s).
Co-requisite units

Not applicable.
RIICRC403A Apply the principles of the stabilisation of materials

Modification History
Not applicable.

Unit Descriptor
This unit covers the supervision of the stabilisation of materials tasks in Civil Construction. It includes the requirements for ensuring that the planning, preparing, initiating, monitoring, adjusting and reporting of the stabilisation of materials tasks are carried out in accordance with the accepted industry principles.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, for the supervision of the stabilisation of materials tasks within:
- Civil Construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Ensure appropriate planning and preparation of tasks is carried out | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity
1.2. Access, interpret and clarify the *specific task information and requirements* relevant to undertaking the *stabilisation of materials tasks*
1.3. Ensure a *job plan* is available which makes best use of the available resources and meets task requirements |
| 2. Ensure appropriate initiation of tasks is carried out | 2.1. Confirm that the necessary *resources* are available for the safe, effective and efficient conduct of tasks
2.2. Ensure clear and timely *instructions* are communicated to *team members* and others involved, for the safe, effective and efficient conduct of tasks, to meet the specific task requirements
2.3. *Set out* tasks as required for the effective completion of the task |
| 3. Oversee the execution of tasks | 3.1. *Monitor* the stabilisation of materials task performance to ensure it achieves the *required outcomes*
3.2. *Initiate* adjustments to work practice or job plan to ensure safe execution of work and achievement of required outcomes
3.3. Ensure plant equipment and tools maintenance requirements are carried out and recorded |
| 4. Report on the execution of tasks | 4.1. Complete and submit reports as required
4.2. Recommend changes to improve the safety, efficiency and effectiveness of the execution of tasks |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to supervise the stabilisation of materials tasks:

- apply legislative, organisation and site requirements and procedures
- interpret project contract and specification requirements and procedures
- interpret project site soil and geological data
- identify soil and rock types
- interpret meteorological data
- identify drainage issues
- interpret material properties and test results, including compaction test results
- interpret project site geotechnical data
- interpret project site hydrological data
- interpret project engineering survey information
- interpret project plans and drawings
- interpret project specifications
- prepare for and conduct briefings, toolbox and site meeting
- prepare of short messages
- prepare and presenting of job reports
- prepare and maintaining of log books and diaries
- provide leadership
- apply performance monitoring skills
- apply set out requirements and procedures
- set up and use levelling devices
- establish construction offsets
- apply supervisory skills
- develop workplace relationships
- develop individuals and the team
- apply inspection requirements and procedures
- calculate quantities for the execution of tasks, including:
  - volumes
  - tonnage required
  - grades
  - percentages
  - areas
  - resource consumption figures, including required supply rates
- interpret stabilisation of materials properties and test results, including:
- soil density/moisture relationship
- plasticity index
- provide recommendations for the improvement of the safe, effective and efficient execution of stabilisation of materials tasks

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to supervise the stabilisation of materials tasks:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
  - binder safety and health requirements and procedures
  - materials safety data sheet (MSDS) requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- work zone traffic management requirements and procedures
- contract management requirements and procedures
- communication requirements and procedures
- administrative requirements and procedures
- stabilisation of materials plant and equipment capabilities and application
- plant, equipment and tools maintenance requirements and procedures
- operational techniques for the execution of flexible pavement construction tasks
- stabilisation of materials task resource requirements and procedures
- activities scheduling requirements and procedures
- stabilisation of materials delivery requirements and procedures
- job plan drafting of and administration requirements and procedures
- reporting requirements and procedures
- workplace relationship requirements and procedures
- organisational, client and site operational requirements
- relationship between various areas of civil works
- team leadership techniques
- works planning techniques
- stabilisation of materials monitoring methods
- engineering survey principles
- materials quality and delivery requirements and procedures
- mentoring techniques
- estimating principles
- civil works construction sequencing
- asphalt placement and compaction and related activities' terminology
- works planning techniques
- monitoring methods
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• code of practice  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
| --- | --- |
| Specific task information and requirements may include: | • site geological and geotechnical data, including:  
  • rock types and characteristics  
  • soil types and characteristics  
• site hydrological data, including:  
  • surface water  
  • ground water  
• site meteorological data, including:  
  • rainfall  
  • humidity  
  • temperature  
  • wind  
• site engineering survey data  
• known and potential site hazards, constraints and conditions  
• site cultural and heritage information  
• task specifications  
• task drawings  
• sources of materials  
• other organisations and contractors involved in the task or related tasks  
• coordination, timing and budgeting requirements |
| Stabilisation of materials may include: | • new pavement construction  
• existing pavement repair and maintenance |
### Stabilisation of materials tasks

**tasks** may include:

- site preparation methods
- extraction methods
- load and haulage methods
- placement methods
- distribution methods
- surface finishing methods
- line, grade and level control methods
- compaction and water application methods
- sediment control methods
- dust suppression methods
- mixing methods
- trimming methods
- curing procedures
- construction joint requirements and procedures

### Job plan

**is to include:**

- human resource requirements
- plant and machinery requirements
- construction materials requirements
- sub-contractor support requirements
- waste disposal requirements
- coordination requirements
- activity scheduling
- materials delivery scheduling
- risk assessment and management requirements
- occupational health and safety requirements
- quality management requirements, including testing scheduling requirements
- traffic management requirements
- environmental requirements
- task monitoring requirements
- task performance monitoring requirements
- communication requirements
- reporting requirements

### Instructions

**are to include:**

- briefings
- handovers
- work orders
- toolbox meetings
- site meetings

### Teams members

**may include:**

- other members of the organisation's management team
- members of the team directly involved in the task
- suppliers representatives
### RICHRC403A Apply the principles of the stabilisation of materials

• identify pavement faults
• provide recommendations for the improvement of the safe, effective and efficient execution of pavement condition inspections

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to inspect of and report on pavement condition:

• risk assessment and management requirement and procedures
• statutory compliance requirements and procedures
• occupational health and safety requirements and procedures
• environmental management requirements and procedures
• quality management requirements and procedures
• work zone traffic management requirements and procedures
• contract management requirements and procedures
• communication requirements and procedures
• administrative requirements and procedures
• pavement condition inspection plant and equipment capabilities and application
• plant, equipment and tools maintenance requirements and procedures
• operational techniques for the execution of flexible pavement construction tasks
• pavement condition inspection resource requirements and procedures
• activities scheduling requirements and procedures
• job plan drafting of and administration requirements and procedures
• reporting requirements and procedures
• workplace relationship requirements and procedures
• organisational, client and site operational requirements
• relationship between various areas of civil works
• team leadership techniques
• works planning techniques
• pavement condition inspection methods
• engineering survey principles
• materials quality and delivery requirements and procedures
• mentoring techniques
• estimating principles
• civil works construction sequencing
• pavement condition and related activities’ terminology
• set out requirements and procedures
• road geometry
- ground surface treatment requirements and procedures e.g. proof rolling
- pavement drainage requirements
- works planning techniques
- types of pavement, including:
  - unbound
  - asphalt
  - spray seal
  - rigid
- potential pavement faults
- possible causes of pavement faults
- methods of rectifying pavement faults
- methods of refurbishing pavements
- methods of rehabilitating pavements

|                                                        | - soil types and characteristics                         |
|                                                        | site hydrological data, including:                      |
|                                                        | - surface water                                          |
|                                                        | - ground water                                           |
|                                                        | site meteorological data, including:                     |
|                                                        | - rainfall                                              |
|                                                        | - humidity                                              |
|                                                        | - temperature                                           |
|                                                        | - wind                                                  |
|                                                        | site engineering survey data                             |
|                                                        | known and potential site hazards, constraints and conditions |
|                                                        | site cultural and heritage information                   |
|                                                        | task specifications                                     |
|                                                        | task drawings                                           |
|                                                        | sources of materials                                    |
|                                                        | other organisations and contractors involved in the task or related tasks |
|                                                        | coordination, timing and budgeting requirements         |

| Pavements may include: | roads |
|                       | open car parks |
### Inspection of and reporting on pavement condition

- industrial hardstands

**Inspection of and reporting on pavement condition** may include:

- site preparation, including:
  - traffic control
  - safety measures
- inspection methods, including:
  - engineering survey
  - sampling and testing
  - visual inspection
- pavement marking procedures
- pavement condition recording methods

### Job plan

- human resource requirements
- plant and machinery requirements
- construction materials requirements
- sub-contractor support requirements
- waste disposal requirements
- coordination requirements
- activity scheduling
- materials delivery scheduling
- risk assessment and management requirements
- occupational health and safety requirements
- quality management requirements, including testing scheduling requirements
- traffic management requirements
- environmental requirements
- task monitoring requirements
- task performance monitoring requirements
- communication requirements
- reporting requirements

### Instructions

- briefings
- handovers
- work orders
- toolbox meetings
- site meetings

### Team members

- other members of the organisation's management team
- members of the team directly involved in the task
- suppliers representatives
- sub-contractors representatives
- supervisors or managers of other organisations who are involved in related tasks
**Resources** are to include:
- labour
- plant, equipment and tools
- highway haulage vehicles
- construction materials
- sub-contractor services

**Set out** is to include:
- control lines
- cleared width
- batters
- off-sets

**Monitor** is to include:
- ongoing risk assessment
- engineering survey
- sampling and testing
- observation and recording
- general supervision

**Required outcomes** may include:
- task specifications requirements
- coordination requirements
- activity scheduling requirements
- unit cost requirements
- overall task cost requirements
- waste management requirements

**Initiate** is to include:
- written communication
- oral communication

**Unit Sector(s)**
Road and Pavements Construction and Maintenance (General)

**Competency field**
Refer to Unit Sector(s).

**Co-requisite units**
Not applicable.
RIICRC405A Carry out pavement condition measurement

Modification History
Not applicable.

Unit Descriptor
This unit covers the carrying out of pavement condition measurement in Civil Construction. It includes the requirements for planning, preparing, initiating, monitoring, adjusting and reporting of pavement condition measurement.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, the carrying out of pavement condition measurement within:

- Civil Construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for pavement condition measurement | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Access and share with team members the *specific task information and requirements* relevant to undertaking *pavement condition measurement*  
1.3. Ensure that the pavement condition measurement equipment is prepared for the task  
1.4. Prepare a *job plan*, in conjunction with *relevant team members*, which makes best use of the available resources |
| 2. Initiate and undertake the measurement of pavement condition | 2.1. Acquire and make available the necessary *resources* for the safe, effective and efficient conduct of the task  
2.2. Issue clear and timely *instructions* to team members and others involved in the task  
2.3. Complete the measurement of pavement condition |
| 3. Complete pavement condition measurement post-operational requirements | 3.1. Validate reading recorded by the pavement condition measurement equipment  
3.2. Ensure plant equipment and tools maintenance requirements are carried out and recorded  
3.3. Complete and submit reports as required  
3.4. Recommend changes to improve the safety, efficiency and effectiveness of pavement condition measurement. |
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to carry out of pavement condition measurement:

- apply legislative, organisation and site requirements and procedures
- interpret client requirements and procedures
- interpret project engineering survey information
- interpret project specifications
- choose appropriate operational techniques for the execution of pavement condition measurement
- choose and assigning appropriate plant and equipment for the execution of pavement condition measurement
- calculate quantities for the execution of pavement condition measurement
- calibration of pavement condition measurement equipment
- validate of pavement condition measuring equipment readings
- determine task resource requirements
- schedule activities and materials delivery
- draft and administering job plans
- implement work zone traffic management plans
- prepare for and conducting of briefings, toolbox and site meeting
- prepare short messages
- prepare and presenting job reports
- prepare and maintaining log books and diaries
- provide team leadership
- assessment of individuals performances
- interpret pavement condition measurement test results
- provide recommendations for the improvement of the safe, effective and efficient execution of pavement condition measurement task

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to carry out of pavement condition measurement:

- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- work zone traffic management requirements and procedures
- contract management requirements and procedures
- communication requirements and procedures
- administrative requirements and procedures
- procurement requirements and procedures
- plant, equipment and tools maintenance requirements and procedures
- reporting requirements and procedures
- employment requirements and procedures
- workplace relationship requirements and procedures
- organisational and site operational requirements
- relationship between various areas of civil works
- operational techniques required for the execution of pavement condition measurement construction tasks
- pavement condition measurement plant and equipment capabilities
- team leadership techniques
- works planning techniques
- pavement condition measurement monitoring methods
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Critical aspects for assessment and evidence required to demonstrate competency in this unit</strong></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the carrying out of pavement condition measurement</td>
</tr>
<tr>
<td></td>
<td>• implementation of appropriate procedures and techniques for the safe, effective and efficient carrying out of pavement condition measurement</td>
</tr>
<tr>
<td></td>
<td>• working with others to plan, prepare and conduct the carrying out of pavement condition measurement</td>
</tr>
<tr>
<td></td>
<td>• provision of clear and timely instruction and supervision by the individual of those involved in the carrying out of pavement condition measurement</td>
</tr>
<tr>
<td></td>
<td>• evidence of the consistent successful carrying out of pavement condition measurement</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
</tr>
<tr>
<td></td>
<td>• Evidence for assessment is best gathered using the outcomes of products and processes in the workplace.</td>
</tr>
<tr>
<td></td>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those</td>

</tbody>
</table>
required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to plan, prepare and conduct pavement condition measurement
    - provision of clear and timely instruction and supervision by the individual of those involved in the conduct of pavement condition measurement

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and
| equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

</thead>
</table>
| 1. Ensure appropriate planning and preparation of tasks is carried out | 1.1. Access, interpret and apply **compliance documentation** relevant to the work activity  
1.2. Access, interpret and clarify the **specific task information and requirements** relevant to **undertaking pavement maintenance tasks**  
1.3. Ensure a **job plan** is available which makes best use of the available resources and meets task requirements |
| 2. Ensure appropriate initiation of tasks is carried out | 2.1. Confirm that the necessary **resources** are available for the safe, effective and efficient conduct of tasks  
2.2. Ensure clear and timely **instructions** are communicated to **team members** and others involved, for the safe, effective and efficient conduct of tasks, to meet the specific task requirements  
2.3. **Set out** tasks as required for the effective completion of the task |
| 3. Oversee the execution of tasks | 3.1. **Monitor** pavement maintenance task performance to ensure it achieves the **required outcomes**  
3.2. **Initiate** adjustments to work practice or job plan to ensure safe execution of work and achievement of required outcomes  
3.3. Ensure plant equipment and tools maintenance requirements are carried out and recorded |
| 4. Report on the execution of tasks | 4.1. Complete and submit reports as required  
4.2. Recommend changes to improve the safety, efficiency and effectiveness of the execution of tasks |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to supervise pavement maintenance tasks:

- apply legislative, organisation and site requirements and procedures
- interpret project contract and specification requirements and procedures
- interpret project site soil and geological data
- identify soil and rock types
- interpret meteorological data
- identify drainage issues
- interpret material properties and test results, including compaction test results
- interpret project plans and drawings
- interpret project specifications
- prepare for and conduct briefings, toolbox and site meeting
- prepare of short messages
- prepare and presenting of job reports
- prepare and maintaining of log books and diaries
- provide leadership
- apply performance monitoring skills
- apply set out requirements and procedures
- set up and use levelling devices
- establish construction offsets
- apply supervisory skills
- develop workplace relationships
- develop individuals and the team
- apply inspection requirements and procedures
- calculate quantities for the execution of tasks, including:
  - volumes
  - tonnage required
  - grades
  - percentages
  - areas
  - resource consumption figures, including required supply rates
- interpret pavement maintenance materials properties and test results, including:
  - soil density/moisture relationship
  - plasticity index
  - particle size distribution
- identify pavement faults
- provide recommendations for the improvement of the safe, effective and efficient execution of pavement maintenance tasks

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to supervise pavement maintenance tasks:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- work zone traffic management requirements and procedures
- contract management requirements and procedures
- communication requirements and procedures
- administrative requirements and procedures
- pavement management systems and maintenance management systems
- pavement maintenance plant and equipment capabilities and application
- plant, equipment and tools maintenance requirements and procedures
- operational techniques for the execution of pavement maintenance tasks, including:
  - granular patching (bound and unbound)
  - asphalt patching (small, large, thick and thin)
  - skin patching (with binder and aggregate)
  - pavement crack sealing
  - cold run patching
  - pavement maintenance task resource requirements and procedures
- activities scheduling requirements and procedures
- pavement maintenance materials delivery requirements and procedures
- job plan drafting of and administration requirements and procedures
- reporting requirements and procedures
- workplace relationship requirements and procedures
- organisational, client and site operational requirements
- relationship between various areas of civil works
- team leadership techniques
- works planning techniques
- pavement maintenance monitoring methods
- potential pavement faults
- possible causes of pavement faults
- pavement drainage requirements
- snow and ice clearing requirements and procedures
- erosion control methods
- weed control methods
- sand drift control methods
- stockpile site requirements and procedures
- borrow pit requirements and procedures
- materials quality and delivery requirements and procedures
- mentoring techniques
- estimating principles
- civil works construction sequencing
- pavement maintenance and related activities’ terminology
- set out requirements and procedures
- road geometry
- ground surface treatment requirements and procedures e.g. proof rolling
- pavement drainage requirements
- works planning techniques
- monitoring methods

### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

- implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
- consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to plan, prepare and conduct the supervision of pavement maintenance tasks
  - provision of clear and timely instruction and supervision by the individual of those involved in the conduct of the supervision of pavement maintenance tasks
### Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:
- legislative, organisational and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian Standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Specific task information and requirements may include:**
- site meteorological data, including:
  - rainfall
  - humidity
  - temperature
  - wind
  - known and potential site hazards, constraints and conditions
  - site cultural and heritage information
  - task specifications
  - task drawings
  - sources of materials
  - other organisations and contractors involved in the task or related tasks
  - coordination, timing and budgeting requirements

**Pavement maintenance may include:**
- flexible pavement maintenance, including
- natural pavement materials
- manufactured pavement materials
- asphalt surfaced
- spray seal surfaced
- slurry surfaced
- rigid pavement maintenance, with and without asphalt surfacing

**Pavement maintenance tasks may include:**
- site preparation methods
- extraction methods
- load and haulage methods
- placement methods
RANGE STATEMENT

- distribution methods
- application of prime seal and pre-seal
- application of bituminous emulsion and aggregates
- placement and compaction of Asphalt
- placement and compaction of cold mix
- placement and compaction of stabilisation
- surface and wear course finishing methods
- line, grade and level control methods
- compaction and water application methods
- sediment control methods
- traffic management requirements and procedures
- rigid pavement repair methods
- median, kerb and gutter repair and maintenance requirements and procedures
- side drain maintenance methods
- shoulder repair methods
- line marking methods

Job plan is to include:

- human resource requirements
- plant and machinery requirements
- construction materials requirements
- sub-contractor support requirements
- waste disposal requirements
- coordination requirements
- activity scheduling
- materials delivery scheduling
- risk assessment and management requirements
- occupational health and safety requirements
- quality management requirements, including testing scheduling requirements
- traffic management requirements
- environmental requirements
- task monitoring requirements
- task performance monitoring requirements
- communication requirements
- reporting requirements

Resources are to include:

- labour
- plant, equipment and tools
- highway haulage vehicles
- construction materials
- sub-contractor services
### RANGE STATEMENT

**Instructions are to include:**
- briefings
- handovers
- work orders
- toolbox meetings
- site meetings

**Team members may include:**
- other members of the organisation’s management team
- members of the team directly involved in the task
- suppliers representatives
- sub-contractors representatives
- supervisors or managers of other organisations who are involved in related tasks

**Set out is to include:**
- control lines
- cleared width
- batters
- off-sets

**Monitor is to include:**
- ongoing risk assessment
- engineering survey
- sampling and testing
- observation and recording
- general supervision

**Required outcomes may include:**
- task specifications requirements
- task drawings requirements
- coordination requirements
- activity scheduling requirements
- unit cost requirements
- overall task cost requirements
- waste management requirements

**Initiate is to include:**
- written communication
- oral communication

### Unit Sector(s)
Road and Pavements Construction and Maintenance (General)
Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIICRM201A Escort mobile road marking operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the escort of mobile road marking operations in the civil construction industry. It includes planning and preparing, establishing traffic control operations, using radio communication, positioning traffic controls, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an assistant role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>
</thead>
</table>
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain and confirm *safety requirements* from the *site* safety plan and organisational policies and procedures, and apply to the allotted task  
1.3. Identify, obtain and implement *signage requirements* from the project *traffic management plan*  
1.4. Select vehicles, *tools and equipment* to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.5. Identify *environmental protection requirements* from the project environmental management plan, and confirm and apply to the allotted task |
| 2. Establish traffic control operations | 2.1. Check arrow boards and/or rotating beacon warning signs for serviceability and suitability  
2.2. Determine traffic control requirements  
2.3. Select traffic control in accordance with site and road traffic requirements  
2.4. Assess and record site and traffic variables  
2.5. Position advance warning signs and traffic control devices as specified  
2.6. Determine correctly and confirm maximum speed limit for traffic control operations |
| 3. Use radio communication | 3.1. Adjust *radio* controls for optimum transmission and reception  
3.2. Test and verify radio contact  
3.3. Transmit radio messages clearly and concisely transmitted  
3.4. Check radio contact periodically |
| 4. Position traffic controls | 4.1. Position traffic control signs and display on vehicles  
4.2. Display and operate vehicle warning lights  
4.3. Position vehicles in the work convoy according to specifications |
| 4.4. Assist work crew to place advanced warning signs as required |
| 4.5. Control traffic effectively to protect work crew |
| 5. Clean up |
| 5.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan |
| 5.2. Clean, check, maintain and store vehicles, tools and equipment |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to escort mobile road marking operations:

- apply legislative, organisation and site requirements and procedures for escort of mobile road marking operations
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to escort mobile road marking operations:

- site and equipment safety requirements
- mobile traffic control and general traffic control
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- processes for the calculation of travel speed
- project quality requirements
- civil construction terminology
- project traffic management plans
- JSAs/safe work method statements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for escorting mobile road marking operations</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient escorting of mobile road marking operations</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the escorting of mobile road marking operations that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely escorting of mobile road marking operations that safely, effectively and efficiently meets the required outcomes</td>
</tr>

<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
<td></td>
</tr>
<tr>
<td>• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
<td></td>
</tr>
<tr>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those</td>
<td></td>
</tr>
</tbody>
</table>
| **Method of assessment** | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:  
- written and/or oral assessment of the candidate's required knowledge  
- observed, documented and/or first hand testimonial evidence of the candidate's:  
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes  
  - consistent achievement of required outcomes  
  - first hand testimonial evidence of the candidate's:  
    - working with others to undertake and complete the escorting of mobile road marking operations |

| **Guidance information for assessment** | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Safety requirements may include:

- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance are kept from excavations, and areas secured from unauthorised access or movement
- safe operating procedures including recognising and preventing hazards associated with uneven/unstable terrain, trees, pits, poles, trip hazards, dirt mounds, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working in proximity to others, worksite visitors and the public
- recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to equipment
| **Site locations may include:** | • roads  
• bridges  
• similar sealed surfaces |
| **Signage requirements may include:** | • escort vehicle  
• vehicle mounted signage  
• highway traffic signs  
• site safety signage  
• temporary signage for the benefit of motorists and pedestrians  
• traffic conditions signage |
| **Traffic conditions may include:** | • congested urban environments  
• low traffic rural areas  
• highways |
| **Tools and equipment may include:** | • traffic control vehicles  
• radios  
• batteries  
• signage  
• warning lights  
• beacons  
• arrow boards |
| **Environmental protection requirements may include:** | • organisational/project environmental management plan  
• waste management  
• water quality protection  
• noise  
• vibration  
• dust and clean-up management |
| **Radio transmissions may include:** | • VHF  
• UHF |

| 2. Select fuel, lubricants, tools and equipment | 2.1. Select fuel and lubricants according to manufacturer’s manual  
2.2. Select tools and equipment in accordance with required machinery checks |
| 3. Carry out operator checks and maintenance | 3.1. Check and adjust fuel, oil, hydraulic fluid filters and water levels according to manufacturer’s manual  
3.2. Tighten and maintain bolts, nuts and attachment couplings  
3.3. Check function of controls and gauges and adjust where necessary  
3.4. Conduct standard start-up and shutdown procedures  
3.5. Carry out periodic maintenance in accordance with the operator’s manual  
3.6. Locate plant and equipment safely when not in immediate use |
| 4. Use pedestrian road marking plant | 4.1. Identify site hazards for use of **pedestrian road marking plant**  
4.2. Configure **lines** to specification based on a computerised program  
4.3. Apply new lines to the new or resurfaced **area** |
| 4.4. Superimpose new lines over old lines on existing surfaces |
| 4.5. Operate line cut on/cut off device according to the job specification |
| 4.6. Apply road marking material to the surface providing an even coverage |

5. **Clean up**

| 5.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan |
| 5.2. Return surplus fuel, lubricants, paints and beads to storage |
| 5.3. Clean, check, maintain and store vehicles, tools and equipment |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct pedestrian road marking operations:

- apply legislative, organisation and site requirements and procedures for conducting pedestrian road marking operations
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct pedestrian road marking operations:

- site and equipment safety requirements
- walk behind pedestrian road marking activities and techniques
- road markings
- road marking materials
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- processes for the calculation of material requirements, application rates and travel speed
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statements
Evidence Guide

| Context of and specific resources for assessment | This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency |
### Guideline:

- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete pedestrian road marking operations

- emergency procedures related to equipment
| **Site** locations may include: | • roads  
• bridges  
• footpaths  
• sports courts and fields  
• car parks  
• cycle paths  
• factories  
• airports  
• walking tracks and similar sealed surfaces |
| **Signage requirements** may include: | • escort vehicle  
• highway traffic signs  
• site safety signage  
• temporary signage for the benefit of motorists and pedestrians  
• traffic conditions signage |
| **Traffic conditions may include:** | • congested urban environments  
• low traffic rural areas  
• off-road un-trafficked areas  
• buildings  
• parking sites  
• pedestrian areas  
• highways |
| **Tools and equipment** may include: | • walk behind pedestrian road marking equipment (self propelled or standard)  
• hand held applicators  
• filters  
• spray tips  
• maintenance tools |
| **Environmental protection requirements** may include: | • organisational/project environmental management plan  
• waste management  
• water quality protection  
• noise  
• vibration  
• dust and clean-up management |
| **Pedestrian road marking plant will be:** | • equal to or less than 40 litre tank capacity and may include the use of a self propelled drive |
## Lines may include:
- transverse and longitudinal markings which may include:
  - edge lines,
  - arrows
  - lane lines (broken and unbroken)
  - separation lines (broken and unbroken)
  - barrier lines (one direction and both directions)
  - continuity lines
  - turn lines
  - outline
  - stop lines
  - holding lines
  - give way lines
  - pedestrian crosswalk lines
  - diagonal and chevron markings
  - numerals
  - parking areas and kerb markings

## Area may include:
- chip seal, asphalt or concrete

## Materials may include:
- paints
- solvents
- long life products (two pack epoxy, thermoplastic)
- glass beads
- skid resistant additives

## Unit Sector(s)
Road Marking

## Competency field
Refer to Unit Sector(s).

RIICRM204A Prepare surface for road marking

Modification History
Not applicable.

Unit Descriptor
This unit covers the preparation of surface for road marking in the civil construction industry. It includes planning and preparing, preparing surface and set out, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an assistant role at worksites within:

- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain and confirm *safety requirements* from the *site* safety plan and organisational policies and procedures, and apply to the allotted task  
1.3. Identify, obtain and implement *signage requirements* from the project *traffic management plan*  
1.4. Select plant, *tools and equipment* to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.5. Identify *environmental protection requirements* from the project environmental management plan, and confirm and apply to the allotted task |
| 2. Prepare surface and set out | 2.1. Remove hazards and fixtures from the area  
2.2. Select equipment and/or product and prepare for *removing* markings  
2.3. Identify location for *line marking*  
2.4. Clear *area* of dirt, debris and other contaminants  
2.5. Identify location for line marking and set out with control points to drawings, job requirements and/or specifications  
2.6. Spot straight lines and curves in preparation for marking  
2.7. Remove pre-existing visible marks/lines to specification |
| 3. Clean up | 3.1. Clear work area and dispose of or recycle *materials* in accordance with project environmental management plan  
3.2. Store unused materials in accordance with job requirements  
3.3. Clean, check, maintain and store plant, tools and equipment |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to prepare surface for road marking:

- apply legislative, organisation and site requirements and procedures for preparation of surface for road marking
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to prepare surface for road marking:

- site and equipment safety requirements
- substrate preparation techniques and processes
- road markings
- redundant marking removal materials and primers
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- processes for the calculation of material requirements, application rates and curing times
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statements
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>- knowledge of the requirements, procedures and instructions for preparation of surface for road marking</td>
</tr>
<tr>
<td></td>
<td>- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of preparation of surface for road marking</td>
</tr>
<tr>
<td></td>
<td>- working with others to undertake and complete the preparation of surface for road marking that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>- consistent timely completion of preparation of surface for road marking that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
</tr>
<tr>
<td></td>
<td>• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
</tr>
<tr>
<td></td>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
</tr>
</tbody>
</table>
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct airless and atomized spraying operations:

- apply legislative, organisation and site requirements and procedures for conducting airless and atomized spraying operations
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct airless and atomized spraying operations:

- site and equipment safety requirements
- airless and atomised spraying road marking activities and techniques
- road markings
- road marking materials
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- processes for the calculation of material requirements, application rates and movement speed
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statements
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</table>
disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

  - written and/or oral assessment of the candidate's required knowledge
  - observed, documented and/or first hand testimonial evidence of the candidate's:
    - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
    - consistent achievement of required outcomes
    - first hand testimonial evidence of the candidate's:
      - working with others to undertake and complete airless and atomized spraying operations |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures |
|                                             | • manufacturer's guidelines and specifications |
|                                             | • Australian standards |
|                                             | • Employment and workplace relations legislation |
|                                             | • Equal Employment Opportunity and Disability Discrimination legislation |

| Safety requirements may include: | • OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances |
|                                 | • safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance are kept from excavations, and areas secured from unauthorised access or movement |
|                                 | • safe operating procedures including recognising and preventing hazards associated with uneven/unstable terrain, trees, pits, poles, trip hazards, dirt mounds, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working in proximity to others, worksite visitors and the public |
|                                 | • recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials |
|                                 | • emergency procedures related to equipment |
| **Site** locations may include: | • roads  
• bridges  
• footpaths  
• sports courts and fields  
• car parks  
• cycle paths  
• factories  
• airports  
• walking tracks and similar sealed surfaces |
| **Signage requirements** may include: | • escort vehicle  
• highway traffic signs  
• site safety signage  
• temporary signage for the benefit of motorists and pedestrians  
• traffic conditions signage |
| **Traffic conditions** may include: | • congested urban environments  
• low traffic rural areas  
• off-road un-trafficked areas  
• buildings  
• parking sites  
• pedestrian areas  
• highways |
| **Tools and equipment** may include: | • airless or atomised spray equipment  
• filters  
• spray tips  
• maintenance tools |
| **Environmental protection requirements** may include: | • organisational/project environmental management plan  
• waste management  
• water quality protection  
• noise  
• vibration  
• dust and clean-up management |
| **Area** may include: | • chip seal  
• asphalt  
• concrete |
| **Line marking** may include: | • transverse and longitudinal markings which |
may include:
- barrier lines (one direction and both directions)
- edge lines
- arrows
- shapes
- symbols
- lane lines (broken and unbroken)
- separation lines (broken and unbroken)
- continuity lines
- turn lines
- outline
- stop lines
- holding lines
- stop and give way lines
- pedestrian crosswalk lines
- diagonal and chevron markings
- numerals
- parking areas
- kerb markings

**Material** may include:
- paints
- solvents
- long life products (two pack epoxy, thermo plastic)

**Unit Sector(s)**
Road Marking

**Competency field**
Refer to Unit Sector(s).

**Co-requisite units**
Not applicable.
RIICRM207A Install raised pavement markers

Modification History
Not applicable.

Unit Descriptor
This unit covers the installation of raised pavement markers in the civil construction industry. It includes planning and preparing, preparing surface and set out, preparing marking materials, applying raised pavement markers, measuring work, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an assistant role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

| 1. Plan and prepare | 1.1. Access, interpret and apply **compliance documentation** relevant to the work activity  
1.2. Obtain and confirm **safety requirements** from the site safety plan and organisational policies and procedures, and apply to the allotted task  
1.3. Identify, obtain and implement **signage requirements** from the project traffic management plan  
1.4. Select plant, **tools and equipment** to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.5. Identify **environmental protection requirements** from the project environmental management plan, and confirm and apply to the allotted task |
| 2. Prepare surface and set out | 2.1. Clear **area** of dirt, debris and other contaminants  
2.2. Identify **location** for **raised pavement markers** and position to control point requirements or specifications  
2.3. Remove defective raised pavement markers where required  
2.4. Prime marked location for raised pavement markers in readiness for road marking application |
| 3. Prepare marking materials | 3.1. Mix or prepare marking material in accordance with manufacturer's and job specifications  
3.2. Adjust additives and consistency of material to allow easy application and appropriate curing time  
3.3. Transfer marking material carefully to applicator container |
| 4. Apply raised pavement markers | 4.1. Select equipment relevant to the task and prepare for operation  
4.2. Use equipment with the correct movement and pressure  
4.3. Apply material to job specification |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to install raised pavement markers:

- apply legislative, organisation and site requirements and procedures for installation of raised pavement markers
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to install raised pavement markers:

- site and equipment safety requirements
- raised pavement marking activities and techniques
- road markings
- raised pavement markers
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- processes for the calculation of marker requirements, placement rates and travel speed
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statements
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for installing raised pavement markers</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of installation of raised pavement markers</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the installation of raised pavement markers that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of the installation of raised pavement markers that safely, effectively and efficiently meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• installation of 200 permanent reflective or non reflective raised pavement markers on the various line configurations</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not
disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the installation of raised pavement markers

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain and confirm *safety requirements* from the *site* safety plan and organisational policies and procedures, and apply to the allotted task  
1.3. Identify, obtain and implement *signage requirements* from the project *traffic management plan*  
1.4. Select *plant, tools and equipment* to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.5. Identify *environmental protection requirements* from the project environmental management plan, and confirm and apply to the allotted task |
| 2. Select fuel, lubricants, tools and equipment | 2.1. Select fuel and lubricants according to manufacturer's manual  
2.2. Select tools and equipment in accordance with required machinery checks |
| 3. Carry out operator checks and maintenance | 3.1. Check and adjust fuel, oil, hydraulic fluid filters and water levels according to manufacturer's manual  
3.2. Tighten and maintain bolts, nuts and attachment couplings  
3.3. Check and adjust function of controls and gauges where necessary  
3.4. Conduct standard start-up and shutdown procedures  
3.5. Carry out periodic maintenance  
3.6. Safely locate plant and equipment when not in immediate use |
| 4. Use ride on road marking plant | 4.1. Identify site hazards for use of road marking plant  
4.2. Configure *lines* to specification  
4.3. Apply new lines to the new or resurfaced *area* providing an even coverage in accordance with job specifications  
4.4. Superimpose new lines over old lines on |
| existing surfaces providing an even coverage |
| 4.5. Operate line cut on/cut off device according to the job specification |

| 5. Clean up |
| 5.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan |
| 5.2. Return surplus fuel, lubricants, paints and beads to storage |
| 5.3. Clean, check, maintain and store plant, tools and equipment |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct ride on road marking operations:

- apply legislative, organisation and site requirements and procedures for conducting ride on road marking operations
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct ride on road marking operations:

- site and equipment safety requirements
- ride on road marking activities and techniques
- road markings
- road marking materials
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- processes for the calculation of material requirements, application rates and travel speed
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statements

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Safety requirements may include:

- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance are kept from excavations, and areas secured from unauthorised access or movement
- safe operating procedures including recognising and preventing hazards associated with uneven/unstable terrain, trees, pits, poles, trip hazards, dirt mounds, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working in proximity to others, worksite visitors and the public
- recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to equipment
| **Site locations may include:** | • roads  
|   | • bridges  
|   | • footpaths  
|   | • sports courts and fields  
|   | • car parks  
|   | • cycle paths  
|   | • factories  
|   | • airports  
|   | • walking tracks and similar sealed surfaces  

| **Signage requirements may include:** | • escort vehicle  
|   | • highway traffic signs  
|   | • site safety signage  
|   | • temporary signage for the benefit of motorists and pedestrians  
|   | • traffic conditions signage  

| **Traffic conditions may include:** | • congested urban environments  
|   | • low traffic rural areas  
|   | • off-road un-trafficked areas  
|   | • buildings  
|   | • parking sites  
|   | • pedestrian areas  

| **Plant refers to:** | • ride on road marking machines greater than 40 litres and less than 300 litres in tank capacity and may include the use of a line gap configuration computer

RIICRM302A Conduct long line road marking operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of long line road marking operations in the civil construction industry. It includes planning and preparing, conducting pre-operational checks, operating long line road marking plant, carrying out driver maintenance, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1. Plan and prepare** | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain and confirm *safety requirements* from the *site* safety plan and organisational policies and procedures, and apply to the allotted task  
1.3. Identify, obtain and implement *signage requirements* from the project *traffic management plan*  
1.4. Select *plant, tools and equipment* to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.5. Identify *environmental protection requirements* from the project environmental management plan, and confirm and apply to the allotted task |
| **2. Conduct pre-operational checks** | 2.1. Check/inflate tyres using safe procedures and in accordance with operator's manual and site conditions  
2.2. Determine risk and hazard for safe operation  
2.3. Carry out start up, shutdown and *communications* procedures  
2.4. Check road marking plant controls and functions, including brakes and manoeuvrability for serviceability, and report faults |
| **3. Operate long line road marking plant** | 3.1. Manage engine power to ensure efficiency of plant movements and to minimise damage to the engine and gears  
3.2. Position vehicle correctly prior to marking run to enable uninterrupted flow of road marking *material*  
3.3. Maintain control and alignment on marking run  
3.4. Apply road marking material to the *surface* providing an even coverage  
3.5. Park and secure vehicle in accordance with manufacturer's specifications, company procedures and legal requirements |
| 4. Carry out driver maintenance | 4.1. Conduct inspection and fault finding in accordance with manufacturer's specifications and site requirements  
4.2. Select appropriate replacement parts and materials  
4.3. Remove worn or defective parts safely according to manufacturer's manual and appropriate OHS regulations  
4.4. Carry out routine operational servicing and lubrication tasks  
4.5. Carry out minor maintenance  
4.6. Record operator maintenance work in line with company policy and industry guidelines |
|---------------------------------|----------------------------------------------------------------------------------------------------------|
| 5. Clean up                     | 5.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan  
5.2. Return surplus fuel and lubricants to storage  
5.3. Clean, check, maintain and store plant, tools and equipment |

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, |
assessments may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.

- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non-English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the
| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. | candidate’s:  
- working with others to undertake and complete long line road marking operations |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
|                                                   | • Evidence for assessment is best gathered using the outcomes of products and processes in the workplace. |
|                                                   | • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those |
required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
- consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to plan, prepare and conduct civil concrete structures construction tasks
  - provision of clear and timely instruction and supervision by the individual of those involved in the conduct of the civil concrete structures construction tasks

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• code of practice  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
|---|---|
| Specific task information and requirements may include: | • site geological and geotechnical data, including:  
  • rock types and characteristics  
  • soil types and characteristics  
  • site hydrological data, including:  
  • surface water  
  • ground water  
  • site meteorological data, including:  
  • rainfall  
  • humidity  
  • temperature  
  • wind  
  • site engineering survey data  
  • known and potential site hazards, constraints and conditions  
  • site cultural and heritage information  
  • task specifications  
  • task drawings  
  • sources of materials  
  • other organisations and contractors involved in the task or related tasks  
  • coordination, timing and budgeting requirements |
| Civil concrete structures may include: | • bridges  
• jetties and wharves |
<table>

</tr>
</tbody>
</table>

**Resources are to include:**

- labour
- plant, equipment and tools
- highway haulage vehicles
- construction materials
### Instructions are to include:
- briefings
- handovers
- work orders
- toolbox meetings
- site meetings

### Team members may include:
- other members of the organisation's management team
- members of the team directly involved in the task
- suppliers representatives
- sub-contractors representatives
- supervisors or managers of other organisations who are involved in related tasks

### Set out is to include:
- control lines
- cleared width
- batters
- off-sets

### Monitor is to include:
- ongoing risk assessment
- engineering survey
- sampling and testing
- observation and recording
- general supervision

### Required outcomes may include:
- task specifications requirements
- task drawings requirements
- coordination requirements
- activity scheduling requirements
- unit cost requirements
- overall task cost requirements
- waste management requirements

### Initiate is to include:
- written communication
- oral communication

**Unit Sector(s)**

Civil Structures (General)
Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIICSG402A Apply the principles of civil steel structures construction

Modification History
Not applicable.

Unit Descriptor
This unit covers the supervision of civil steel structures construction tasks in Civil Construction. It includes the requirements for ensuring that the planning, preparing, initiating, monitoring, adjusting and reporting of civil steel structures construction tasks are carried out in accordance with the accepted industry principles.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, for civil steel structures construction tasks within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Ensure planning and preparation of tasks is carried out | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Access, interpret and clarify the specific task information and requirements relevant to undertaking the civil steel structures construction tasks  
1.3. Ensure a job plan, is available which makes best use of the available resources and meets the civil steel structures construction task requirements |
| 2. Ensure initiation of tasks is carried out | 2.1. Confirm that the necessary resources are available for the safe, effective and efficient conduct of the civil steel structures construction tasks  
2.2. Ensure clear and timely instructions are communicated to team members and others involved, for the safe, effective and efficient conduct of the civil steel structures construction tasks  
2.3. Set out tasks as required for the effective completion of the task |
| 3. Oversee the execution of tasks | 3.1. Monitor civil steel structures construction task performance to ensure it achieves the required outcomes  
3.2. Initiate adjustments to civil steel structures construction practice or job plan to ensure safe execution of work and achievement of required outcomes  
3.3. Ensure plant equipment and tools maintenance requirements are carried out and recorded |
| 4. Report on the execution of tasks | 4.1. Complete and submit reports as required  
4.2. Recommend changes to improve the safety, efficiency and effectiveness of the execution of tasks |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

<table>
<thead>
<tr>
<th>Required skills</th>
</tr>
</thead>
<tbody>
<tr>
<td>Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to supervise civil steel structures construction tasks:</td>
</tr>
<tr>
<td>• apply legislative, organisation and site requirements and procedures</td>
</tr>
<tr>
<td>• interpret project contract and specification requirements and procedures</td>
</tr>
<tr>
<td>• interpret project site soil and geological data</td>
</tr>
<tr>
<td>• identify soil and rock types</td>
</tr>
<tr>
<td>• interpret meteorological data</td>
</tr>
<tr>
<td>• identify drainage issues</td>
</tr>
<tr>
<td>• interpret material properties and test results, including compaction test results</td>
</tr>
<tr>
<td>• interpret project site geotechnical data</td>
</tr>
<tr>
<td>• interpret project site hydrological data</td>
</tr>
<tr>
<td>• interpret project engineering survey information</td>
</tr>
<tr>
<td>• interpret project plans and drawings</td>

</tbody>
</table>
| • provide recommendations for the improvement of the safe, effective and efficient
### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to supervise civil steel structures construction tasks:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- work zone traffic management requirements and procedures
- contract management requirements and procedures
- communication requirements and procedures
- administrative requirements and procedures
- civil steel structures construction plant and equipment capabilities and application
- plant, equipment and tools maintenance requirements and procedures
- operational techniques for the execution of civil steel structures construction tasks
- civil steel structures construction task resource requirements and procedures
- activities scheduling requirements and procedures
- civil steel structures construction materials delivery requirements and procedures
- job plan drafting of and administration requirements and procedures
- reporting requirements and procedures
- workplace relationship requirements and procedures
- organisational, client and site operational requirements
- relationship between various areas of civil works
- team leadership techniques
- works planning techniques
- civil steel structures construction monitoring methods
- engineering survey principles
- materials quality and delivery requirements and procedures
- mentoring techniques
- estimating principles
- civil works construction sequencing
- civil steel structures construction and related activities terminology
- set out requirements and procedures
- ground surface treatment requirements and procedures e.g. proof rolling
- pavement drainage requirements
- works planning techniques
- monitoring methods
## Evidence Guide

</table>
| 1. Ensure planning and preparation of tasks is carried out | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Access, interpret and clarify the *specific task information and requirements* relevant to undertaking the *civil timber structures construction tasks*  
1.3. Ensure a *job plan* is available which makes best use of the available resources and meets task requirements |
| 2. Ensure initiation of tasks is carried out | 2.1. Confirm that the necessary *resources* are available for the safe, effective and efficient conduct of the tasks  
2.2. Ensure clear and timely *instructions* are communicated to *team members* and others involved, for the safe, effective and efficient conduct of tasks, to meet the specific task requirements  
2.3. *Set out* tasks as required for the effective completion of the task |
| 3. Oversee the execution of tasks | 3.1. *Monitor* civil timber structures construction task performance to ensure it achieves the *required outcomes*  
3.2. *Initiate* adjustments to work practice or job plan to ensure safe execution of work and achievement of required outcomes  
3.3. Ensure plant equipment and tools maintenance requirements are carried out and recorded |
| 4. Report on the execution of tasks | 4.1. Complete and submit reports as required  
4.2. Recommend changes to improve the safety, efficiency and effectiveness of the execution of tasks |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to supervise civil timber structures construction tasks:

- apply legislative, organisation and site requirements and procedures
- interpret project contract and specification requirements and procedures
- interpret project site soil and geological data
- identify soil and rock types
- interpret meteorological data
- identify drainage issues
- interpret material properties and test results, including compaction test results
- interpret project site geotechnical data
- interpret project site hydrological data
- interpret project engineering survey information
- interpret project plans and drawings
- interpret project specifications
- prepare for and conduct briefings, toolbox and site meeting
- prepare of short messages
- prepare and presenting of job reports
- prepare and maintaining of log books and diaries
- provide leadership
- apply performance monitoring skills
- apply set out requirements and procedures
- set up and use levelling devices
- establish construction offsets
- apply supervisory skills
- develop workplace relationships
- develop individuals and the team
- apply inspection requirements and procedures
- calculate quantities for the execution of tasks, including:
  - volumes
  - grades
  - percentages
  - areas
  - resource consumption figures, including required supply rates
- interpret civil timber structures construction materials properties and test results
- provide recommendations for the improvement of the safe, effective and efficient
## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to supervise civil timber structures construction tasks:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- work zone traffic management requirements and procedures
- contract management requirements and procedures
- communication requirements and procedures
- administrative requirements and procedures
- civil timber structures construction plant and equipment capabilities and application
- plant, equipment and tools maintenance requirements and procedures
- operational techniques for the execution of civil timber structures construction tasks
- civil timber structures construction task resource requirements and procedures
- activities scheduling requirements and procedures
- civil timber structures construction materials delivery requirements and procedures
- job plan drafting of and administration requirements and procedures
- reporting requirements and procedures
- workplace relationship requirements and procedures
- organisational, client and site operational requirements
- relationship between various areas of civil works
- team leadership techniques
- works planning techniques
- civil timber structures construction monitoring methods
- engineering survey principles
- materials quality and delivery requirements and procedures
- mentoring techniques
- estimating principles
- civil works construction sequencing
- civil timber structures construction and related activities terminology
- set out requirements and procedures
- road geometry
- ground surface treatment requirements and procedures e.g. proof rolling
- pavement drainage requirements
- works planning techniques
- monitoring methods

Civil Structure (General)

**Competency field**
Refer to Unit Sector(s).

**Co-requisite units**
Not applicable.
RIICSG404A Apply the principles of civil masonry, crib and gabion structure construction

Modification History
Not applicable.

Unit Descriptor
This unit covers the supervision of civil masonry, crib and gabion structure construction tasks in Civil Construction. It includes the requirements for ensuring that the planning, preparing, initiating, monitoring, adjusting and reporting of civil masonry, crib and gabion structure construction tasks are carried out in accordance with the accepted industry principles.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, for civil masonry, crib and gabion structure construction tasks within:

- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Ensure planning and preparation of tasks is carried out | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Access, interpret and clarify the *specific task information and requirements* relevant to undertaking the *civil masonry, crib and gabion structure construction* tasks  
1.3. Ensure a *job plan* is available which makes best use of the available resources and meets task requirements |
| 2. Ensure initiation of tasks is carried out | 2.1. Confirm that the necessary *resources* are available for the safe, effective and efficient conduct of the tasks  
2.2. Ensure clear and timely *instructions* are communicated to *team members* and others involved, for the safe, effective and efficient conduct of tasks, to meet the specific task requirements  
2.3. *Set out* tasks as required for the effective completion of the task |
| 3. Oversee the execution of tasks | 3.1. *Monitor* civil masonry, crib and gabion structure construction task performance to ensure it achieves the *required outcomes*  
3.2. *Initiate* adjustments to work practice or job plan to ensure safe execution of work and achievement of required outcomes  
3.3. Ensure plant equipment and tools maintenance requirements are carried out and recorded |
| 4. Report on the execution of tasks | 4.1. Complete and submit reports as required  
4.2. Recommend changes to improve the safety, efficiency and effectiveness of the execution of tasks |
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to supervise civil masonry, crib and gabion structure construction tasks:

- apply legislative, organisation and site requirements and procedures
- interpret project contract and specification requirements and procedures
- interpret project site soil and geological data
- identify soil and rock types
- interpret meteorological data
- identify drainage issues
- interpret material properties and test results, including compaction test results
- interpret project site geotechnical data
- interpret project site hydrological data
- interpret project engineering survey information
- interpret project plans and drawings
- interpret project specifications
- prepare for and conduct briefings, toolbox and site meeting
- prepare of short messages
- prepare and presenting of job reports
- prepare and maintaining of log books and diaries
- provide leadership
- apply performance monitoring skills
- apply set out requirements and procedures
- set up and use levelling devices
- establish construction offsets
- apply supervisory skills
- develop workplace relationships
- develop individuals and the team
- apply inspection requirements and procedures
- calculate quantities for the execution of tasks, including:
  - volumes
  - tonnage required
  - grades
  - percentages
  - areas
  - resource consumption figures, including required supply rates
- interpret civil masonry, crib and gabion structure construction materials properties
and test results

- provide recommendations for the improvement of the safe, effective and efficient execution of civil masonry, crib and gabion structure construction tasks

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to supervise civil masonry, crib and gabion structure construction tasks:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- excavation shoring requirements and procedures
- slope management requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- work zone traffic management requirements and procedures
- contract management requirements and procedures
- communication requirements and procedures
- administrative requirements and procedures
- civil masonry, crib and gabion structure construction plant and equipment capabilities and application
- plant, equipment and tools maintenance requirements and procedures
- operational techniques for the execution of civil masonry, crib and gabion structure construction tasks
- civil masonry, crib and gabion structure construction task resource requirements and procedures
- activities scheduling requirements and procedures
- civil masonry, crib and gabion structure construction materials delivery requirements and procedures
- job plan drafting of and administration requirements and procedures
- reporting requirements and procedures
- workplace relationship requirements and procedures
- organisational, client and site operational requirements
- relationship between various areas of civil works
- team leadership techniques
- works planning techniques
- civil masonry, crib and gabion structure construction monitoring methods
- engineering survey principles
- materials quality and delivery requirements and procedures
- mentoring techniques
- estimating principles
- civil works construction sequencing
- civil masonry, crib and gabion structure construction and related activities' terminology
- set out requirements and procedures
- drainage requirements
- works planning techniques
- monitoring methods
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the supervision of civil masonry, crib and gabion structure construction tasks</td>
</tr>
<tr>
<td></td>
<td>• implementation of appropriate procedures and techniques for the safe, effective and efficient supervision of civil masonry, crib and gabion structure construction tasks</td>
</tr>
<tr>
<td></td>
<td>• working with others to plan, prepare and conduct civil masonry, crib and gabion structure construction tasks</td>
</tr>
<tr>
<td></td>
<td>• provision of clear and timely instruction and supervision by the individual of those involved in civil masonry, crib and gabion structure construction tasks</td>
</tr>
<tr>
<td></td>
<td>• evidence of the consistent successful supervision of civil masonry, crib and gabion structure construction tasks</td>
</tr>
</tbody>
</table>

#### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Evidence for assessment is best gathered using the outcomes of products and processes in the workplace.
- The assessment environment should not disadvantage the participant. For example,
language, literacy and numeracy demands of assessment should not be greater than those required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to plan, prepare and conduct civil masonry, crib and gabion structure construction tasks
  - provision of clear and timely instruction and supervision by the individual of those involved in the conduct of civil masonry, crib and gabion structure construction tasks
| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• code of practice  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
|---|---|
| Specific task information and requirements may include: | • site geological and geotechnical data, including:  
  • rock types and characteristics  
  • soil types and characteristics  
  • site hydrological data, including:  
  • surface water  
  • ground water  
  • site meteorological data, including:  
  • rainfall  
  • humidity  
  • temperature  
  • wind  
  • site engineering survey data  
  • known and potential site hazards, constraints and conditions  
  • site cultural and heritage information  
  • task specifications  
  • task drawings  
  • sources of materials  
  • other organisations and contractors involved in the task or related tasks |
| Civil masonry, crib and gabion structures may include: | • masonry walls and terraces  
• crib walls and terraces  
• gabion walls and terraces  
• causeways and fords |
### Civil masonry, crib and gabion structure construction tasks

- site preparation methods
- site set out methods
- extraction methods
- load and haulage methods
- excavation shoring methods
- slope management methods
- masonry, crib and gabion erection methods
- temporary bracing methods
- backfill methods
- compaction and water application methods
- surface finishing methods
- line, grade and level control methods
- sediment control methods

### Job plan

- human resource requirements
- plant and machinery requirements
- construction materials requirements
- sub-contractor support requirements
- waste disposal requirements
- coordination requirements
- activity scheduling
- materials delivery scheduling
- risk assessment and management requirements
- occupational health and safety (OHS) requirements
- excavation shoring requirements
- slope management requirements
- quality management requirements, including testing scheduling requirements
- traffic management requirements
- environmental requirements
- task monitoring requirements
- task performance monitoring requirements
- communication requirements
- reporting requirements

### Resources

- labour
- plant, equipment and tools
- highway haulage vehicles
- construction materials
- sub-contractor services

### Instructions

- briefings
- handovers
- work orders

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to carry out inspections of civil structures:

- apply legislative, organisation and site requirements and procedures
- interpret project contract and specification requirements and procedures
- interpret project site soil and geological data
- identify soil and rock types
- interpret meteorological data
- identify drainage issues
- interpret material properties and test results, including compaction test results
- interpret project site geotechnical data
- interpret project site hydrological data
- interpret project engineering survey information
- interpret project plans and drawings
- interpret project specifications
- prepare for and conduct briefings, toolbox and site meeting
- prepare of short messages
- prepare and presenting of job reports
- prepare and maintaining of log books and diaries
- provide leadership
- apply performance monitoring skills
- apply set out requirements and procedures
- set up and use levelling devices
- establish construction offsets
- apply supervisory skills
- develop workplace relationships
- develop individuals and the team
- apply inspection requirements and procedures
- calculate quantities for the execution of tasks, including:
  - volumes
  - grades
  - percentages
  - areas
  - resource consumption figures, including required supply rates
- interpret civil structures materials properties and test results
- provide recommendations for the improvement of the safe, effective and efficient
### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to carry out inspections of civil structures:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- work zone traffic management requirements and procedures

| 1. Ensure planning and preparation of tasks is carried out | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Access, interpret and clarify the specific task information and requirements relevant to undertaking the civil structures maintenance tasks  
1.3. Ensure a job plan is available which makes best use of the available resources and meets task requirements |
| 2. Ensure initiation of tasks is carried out | 2.1. Confirm that the necessary resources are available for the safe, effective and efficient conduct of the tasks  
2.2. Ensure clear and timely instructions are communicated to team members and others involved, for the safe, effective and efficient conduct of the tasks, to meet the specific task requirements  
2.3. Set out tasks as required for the effective completion of the task |
| 3. Oversee the execution of tasks | 3.1. Monitor civil structures maintenance task performance to ensure it achieves the required outcomes  
3.2. Initiate adjustments to work practice or job plan to ensure safe execution of work and achievement of required outcomes  
3.3. Ensure plant equipment and tools maintenance requirements are carried out and recorded |
| 4. Report on the execution of tasks | 4.1. Complete and submit reports as required  
4.2. Recommend changes to improve the safety, efficiency and effectiveness of the execution of tasks |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to supervise civil structures maintenance tasks:

- apply legislative, organisation and site requirements and procedures
- interpret project contract and specification requirements and procedures
- interpret project site soil and geological data
- identify soil and rock types
- interpret meteorological data
- identify drainage issues
- interpret material properties and test results, including compaction test results
- interpret project site geotechnical data
- interpret project site hydrological data
- interpret project engineering survey information
- interpret project plans and drawings
- interpret project specifications
- prepare for and conduct briefings, toolbox and site meeting
- prepare of short messages
- prepare and presenting of job reports
- prepare and maintaining of log books and diaries
- provide leadership
- apply performance monitoring skills
- apply set out requirements and procedures
- set up and use levelling devices
- establish construction offsets
- apply supervisory skills
- develop workplace relationships
- develop individuals and the team
- apply inspection requirements and procedures
- calculate quantities for the execution of tasks, including:
  - volumes
  - grades
  - percentages
  - areas
  - resource consumption figures, including required supply rates
- interpret civil structures maintenance materials properties and test results
- provide recommendations for the improvement of the safe, effective and efficient
<table>
<thead>
<tr>
<th>Required knowledge</th>
</tr>
</thead>
</table>

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to supervise civil structures maintenance tasks:

- risk assessment and management requirements and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- excavation shoring requirements and procedures
- slope management requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- work zone traffic management requirements and procedures
- contract management requirements and procedures
- communication requirements and procedures
- administrative requirements and procedures
- civil structures maintenance plant and equipment capabilities and application
- plant, equipment and tools maintenance requirements and procedures
- operational techniques for the execution of civil structures maintenance tasks
- civil structures maintenance task resource requirements and procedures
- activities scheduling requirements and procedures
- civil structures maintenance materials delivery requirements and procedures
- job plan drafting and administration requirements and procedures
- reporting requirements and procedures
- workplace relationship requirements and procedures
- organisational, client and site operational requirements
- relationship between various areas of civil works
- team leadership techniques
- works planning techniques
- civil structures maintenance monitoring methods
- engineering survey principles
- materials quality and delivery requirements and procedures
- mentoring techniques
- estimating principles
- civil works construction sequencing
- civil structures maintenance and related activities terminology
- set out requirements and procedures
- pavement drainage requirements
- works planning techniques
- monitoring methods
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</table>
required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate’s required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate’s:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate’s:
  - working with others to plan, prepare and conduct civil structures maintenance tasks
  - provision of clear and timely instruction and supervision by the individual of those involved in the conduct of civil structures maintenance tasks

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and
equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Specific task information and requirements may include:
- site geological and geotechnical data, including:
  - rock types and characteristics
  - soil types and characteristics
- site hydrological data, including:
  - surface water
  - ground water
- site meteorological data, including:
  - rainfall
  - humidity
  - temperature
  - wind
- site engineering survey data
- known and potential site hazards, constraints and conditions
- site cultural and heritage information
- task specifications
- task drawings
- sources of materials
- other organisations and contractors involved in the task or related tasks
- coordination, timing and budgeting requirements

### Civil structures may include:
- the following concrete structures:
  - bridges
- jetties and wharves
- retaining walls
- water storage tanks and small dams
- noise barriers
- culverts
- safety barriers
- foundations
- the following steel structures:
  - bridges
  - jetties and wharves
  - sign gantries
  - vertical sign supports
  - noise barrier supports
  - guardrails
- the following timber structures:
  - bridges
  - jetties and wharves
  - retaining walls
  - noise barrier
- the following masonry, crib and gabion structures:
  - masonry walls
  - crib walls
  - gabion walls

### Civil structures maintenance tasks may include:
- confirmation of the condition of the structure through inspection and testing
- work should include, where applicable:
  - cleaning
  - refurbishing
  - replacement
  - painting

### Job plan is to include:
- human resource requirements
- plant and machinery requirements
- construction materials requirements
- sub-contractor support requirements
- waste disposal requirements
- coordination requirements
- activity scheduling
- materials delivery scheduling
- risk assessment and management requirements
- occupational health and safety (OHS) requirements
- excavation shoring requirements
- slope management requirements
- quality management requirements, including testing scheduling requirements
- traffic management requirements
- environmental requirements
- task monitoring requirements
- task performance monitoring requirements
- communication requirements
- reporting requirements

**Resources** are to include:
- labour
- plant, equipment and tools
- highway haulage vehicles
- construction materials
- sub-contractor services

**Instructions** are to include:
- briefings
- handovers
- work orders
- toolbox meetings
- site meetings

**Team members** may include:
- other members of the organisation's management team
- members of the team directly involved in the task
- suppliers representatives
- sub-contractors representatives
- supervisors or managers of other organisations who are involved in related tasks

**Set out** is to include:
- control lines
- cleared width
- batters
- off-sets

**Monitor** is to include:
- ongoing risk assessment
- engineering survey
- sampling and testing
- observation and recording
- general supervision

**Required outcomes** may include:
- task specifications requirements
- task drawings requirements
- coordination requirements
- activity scheduling requirements
- unit cost requirements
- overall task cost requirements
- waste management requirements

**Initiate** is to include:

- written communication
- oral communication

**Unit Sector(s)**
Civil Structure (General)

**Competency field**
Refer to Unit Sector(s).

**Co-requisite units**
Not applicable.
RIICTB201A Maintain timber bridges

Modification History
Not applicable.

Unit Descriptor
This unit covers the maintenance of timber bridges in the civil construction industry. It includes planning and preparing, maintaining bridges, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare      | 1.1. Access, interpret and apply **compliance documentation** relevant to the work activity  
1.2. Obtain, confirm and apply work instructions, including plans, specifications, quality requirements and operational details  
1.3. Obtain and confirm **safety requirements** from the site safety plan and organisational policies and procedures, and apply to the allotted task  
1.4. Identify, obtain and implement **signage requirements** from the project traffic management plan  
1.5. Select plant, **tools and equipment** to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.6. Identify **materials** appropriate to the work application, safely handle and locate ready for use  
1.7. Identify **environmental protection requirements** from the project environmental management plan, and confirm and apply to the allotted task |
| 2. Maintain bridge       | 2.1. Obtain and apply schedule of **maintenance repairs/work order or instructions** to organisational requirements  
2.2. Locate access devices in reach of the areas to be maintained/repaired and check for safe operation  
2.3. Locate defect or fault and prepare area for rectification  
2.4. Select resources in accordance with the task  
2.5. Report other defects or faults further identified during maintenance  
2.6. Complete bridge maintenance work to specifications or instructions |
| 3. Clean up              | 3.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan  
3.2. Clean, check, maintain and store plant, |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to maintain timber bridges:

- apply legislative, organisation and site requirements and procedures for maintaining timber bridges
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to maintain timber bridges:

- site and equipment safety requirements
- timber bridge maintenance procedures and techniques
- scaffolding
- preservatives and paints
- timber grading
- bridge foundations
- bridge heritage
- equipment types, characteristics, technical capabilities and limitations
- processes for the calculation of material requirements
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- quality assurance systems and standards
- JSAs/safe work method statements
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to apply bridge durability treatment:

- apply legislative, organisation and site requirements and procedures for the application of bridge durability treatment
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to apply bridge durability treatment:

- site and equipment safety requirements
- timber bridge durability treatment procedures and techniques
- scaffolding
- preservatives and protective coatings
- termite barriers
- waterproofing
- timber deterioration
- bridge foundations
- bridge heritage
- equipment types, characteristics, technical capabilities and limitations
- processes for the calculation of material requirements
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- quality assurance systems and standards
- JSAs/safe work method statements
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>

</tr>
</tbody>
</table>
**Environmental protection requirements** may include:
- waste management
- stormwater protection
- noise
- dust
- vibration
- safe use of preservatives
- waterway protection
- clean-up management

**Access devices** may include:
- scaffolding
- cranes
- elevated work platforms
- backhoes
- underbridge inspection units

**Protective coatings** may include:
- conventional, external acrylic and water based paints
- zinc primers
- galvanising

**Preservatives** may include:
- copper naphthenes
- liquid preservatives
- diffusing rods

**Surface preparation** may include:
- abrasive blasting
- wire brushing
- manual or electric sanding and grinding

**Apply protective coating/preservatives** may include:
- paint brushes
- rollers
- trowelling
- spraying

**Fix flashing/capping** may include:
- measuring
- cutting to length
- air circulation spacing
- shaping
- grinding
- filing
- sealing
- drilling and installation of fixings
- fall to drainage point
Unit Sector(s)
Timber Bridge Construction and Maintenance

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIICTB203A Produce drawings and sketches

Modification History
Not applicable.

Unit Descriptor
This unit covers the production of drawings and sketches in the civil construction industry. It includes collating information for drawings, creating simple sketches, orthographic drawings and sectional views, and developing specifications. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:

- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>
</thead>
</table>
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Collate information for drawings | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain and confirm *safety requirements* from the site safety plan and organisational policies and procedures, and apply to the allotted task  
1.3. Identify and adhere to quality requirements of the organisational operations  
1.4. Select tools and equipment to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.5. Select drawing type from a range of *drawings* to suit job requirements  
1.6. Identify *key features*, site dimensions and *orientation*, structures, *services* and features for inclusion in drawings |
| 2. Create simple sketches, orthographic drawings and sectional views | 2.1. Select *drawing medium* to suit job requirements  
2.2. Prepare simple two dimensional drawings and sketches using standard drawing conventions  
2.3. Prepare simple three dimensional drawings and sketches using standard drawing conventions  
2.4. Prepare sectional details of simple structural elements and elevations using standard drawing conventions  
2.5. Include common symbols and abbreviations using correct format and conventions  
2.6. Prepare title panels to enable verification that drawing used is the latest version |
| 3. Develop specifications | 3.1. Identify purpose of *specifications* as they relate to bridge drawings  
3.2. Identify elements as suitable for use in specifications  
3.3. Draft specification for a bridge project using correct format and conventions |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to produce drawings and sketches:

- apply legislative, organisation and site requirements and procedures for producing drawings and sketches
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to produce drawings and sketches:

- site and equipment safety requirements
- timber bridge durability treatment procedures and techniques
- scaffolding
- preservatives and protective coatings
- termite barriers
- waterproofing
- timber deterioration
- bridge foundations
- bridge heritage
- equipment types, characteristics, technical capabilities and limitations
- processes for the calculation of material requirements
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- quality assurance systems and standards
- JSAs/safe work method statements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
</table>

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for producing drawings and sketches
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of drawings and sketches
- working with others to undertake and complete the production of drawings and sketches that meets all of the required outcomes
- consistent timely completion of drawing and sketches that safely, effectively and efficiently meets the required outcomes
- production of at least two sketches, one orthographic drawing and one sectional view drawing, one elevation, plan and end view for a minimum of three projects in compliance with standard drawing conventions

| Context of and specific resources for assessment | - This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not |

© Commonwealth of Australia, 2014
SkillsDMC
disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the production of drawings and sketches |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

## Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

## Safety requirements may include:
- OHS requirements are to be in accordance with state or territory legislation and regulations and may include protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- personal protective equipment is to include that prescribed under legislation, regulation and workplace policies and practices

## Drawings may include:
- sketches
- orthographic drawings and sectional view drawings
- site plans
- bridge plans
- cross sectional plans/elevations
- plan views
- perspective views
- isometric views
- longitudinal plans
- structural detail and specification providing illustrations and dimensions and project plans
- specifications
- illustrations
- dimensions
- notes
### Key features may include:
- shape of site
- proposed structure(s)
- roads
- easements
- existing structures
- services
- dimensions
- types of structure
- shape of structure
- type of construction
- layout
- service requirements
- location of plant and machinery
- vertical and horizontal measurements

### Orientation may include:
- relationship to the north compass point
- location of roads
- relationship to neighbouring properties

### Services may include:
- drainage
- sewerage
- gas
- telephone and cable
- water
- electricity

### Drawing medium may include:
- pencil
- pen and ink
- computer aided drafting
- graph paper
- cartridge paper
- tracing paper

### Specifications may include:
- details relating to materials and quality of work
- quality assurance
- nominated sub-contractors
- provision of site access/facilities
- details relating to performance including standards of work, tolerances, material types, characteristics, treatments and finishes

<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Obtain, confirm and apply work instructions, including plans, specifications, quality requirements and operational details  
1.3. Obtain and confirm safety requirements from the site safety plan and organisational policies and procedures, and apply to the allotted task  
1.4. Identify, obtain and implement signage requirements from the project traffic management plan  
1.5. Select plant, tools and equipment to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.6. Identify material appropriate to the work application, safely handle and locate ready for use  
1.7. Identify environmental protection requirements from the project environmental management plan, and confirm and apply to the allotted task |
| 2. Inspect bridge | 2.1. Locate access devices in reach of areas for inspection and check for safe operation  
2.2. Assess defects, faults, damage and deterioration by walking over, under and around the bridge  
2.3. Observe bridge under the passage of vehicles to assess faults and deterioration  
2.4. Report condition of bridge stating findings and methods of correction |
| 3. Clean up      | 3.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan  
3.2. Clean, check, maintain and store plant, tools and equipment |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to undertake visual inspection:

- apply legislative, organisation and site requirements and procedures for undertaking visual inspection
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to undertake visual inspection:

- site and equipment safety requirements
- timber bridge visual inspection procedures and techniques
- defects, faults, damage and deterioration types, causes and rectification methods
- structural principles of timber bridges
- bridge foundations
- bridge heritage
- equipment types, characteristics, technical capabilities and limitations
- processes for the calculation of material requirements
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- quality assurance systems and standards
- JSAs/safe work method statements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Co-requisite units**

Not applicable.
RIICTB303A Erect a temporary modular support system (bailey) on an existing bridge

Modification History
Not applicable.

Unit Descriptor
This unit covers the erection of a temporary modular support system (bailey) on an existing bridge in the civil construction industry. It includes planning and preparing, setting out and establishing the support system, assembling a temporary modular bridge, disassembling a temporary modular bridge, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

5. **Clean up**

| 5.1. Clear work area and dispose of or recycle materials in accordance with state or territory legislation |
| 5.2. Clean, check, maintain and store machinery, tools and equipment |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to erect a temporary modular support system (bailey) on an existing bridge:

- apply legislative, organisation and site requirements and procedures for erection of a temporary modular support system (bailey) on an existing bridge
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to erect a temporary modular support system (bailey) on an existing bridge:

- site and equipment safety requirements
- temporary modular bridge support system erection procedures and techniques
- construction efficiencies and sequencing
- defective components and parts
- traffic conditions, control and temporary kerbs
- load bearing capacity of temporary modular bridge support systems
- load transfer from truss to bailey
- bridge foundations
- bridge heritage
- equipment types, characteristics, technical capabilities and limitations
- processes for the calculation of material requirements
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- quality assurance systems and standards
- JSAs/safe work method statements
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for erecting a temporary modular support system (bailey) on an existing bridge</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of the erection of a temporary modular support system (bailey) on an existing bridge</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the erection of a temporary modular support system (bailey) on an existing bridge that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of the erection of a temporary modular support system (bailey) on an existing bridge that safely, effectively and efficiently meets the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• construct one temporary modular support system (Bailey) on an existing bridge to design specifications</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
<td></td>
</tr>
<tr>
<td>• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites</td>
<td></td>
</tr>
</tbody>
</table>
may differ due to the site circumstances.
- The assessment environment should not
disadvantage the participant. For example,
language, literacy and numeracy demands of
assessment should not be greater than those
required on the job.
- Customisation of assessment and delivery
environment to sensitively accommodate
cultural diversity.
- Aboriginal people and other people from a non
English speaking background may have second
language issues.
- Where applicable, physical resources should
include equipment modified for people with
disabilities. Access must be provided to
appropriate learning and/or assessment support
when required.

<table>
<thead>
<tr>
<th>Method of assessment</th>
</tr>
</thead>
</table>
| This unit may be assessed in a holistic way with
other units of competency. The assessment
strategy for this unit must verify required
knowledge and skill and practical application using
more than one of the following assessment
methods:
- written and/or oral assessment of the
candidate's required knowledge
- observed, documented and/or first hand
testimonial evidence of the candidate's:
  - implementation of appropriate requirement,
    procedures and techniques for the safe,
    effective and efficient achievement of
    required outcomes
  - consistent achievement of required
    outcomes
  - first hand testimonial evidence of the
candidate's:
    - working with others to undertake and
      complete the erection of a temporary
      modular support system (bailey) on an
      existing bridge

information on assessment including access and
equity issues. |
### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
| Safety requirements may include: | • OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances  
• safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance are kept from excavations, and areas secured from unauthorised access or movement  
• safe operating procedures including recognising and preventing hazards associated with uneven/unstable terrain, trees, pits, poles, trip hazards, dirt mounds, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working in proximity to others, worksite visitors and the public  
• recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, |

### Assess condition of components may include:
- discarding items due to rust, damage or deterioration

### Sequence is:
- completed efficiently and in a cyclical methodology of the parts

### Interlocking components using connections and fittings may include:
- panels
- end posts
- reinforcing cords
- bracing frames
- yolks
- hanger bars or rods
- distribution beams
- locking pins
- split pins
- bracing nuts
- bolts

### Temporary modular bridge support system erection:
- is a team situation and may include working in conjunction with a dogman
- is also referred to as Bailey bridging

### Re-check refers to:
- a visual inspection to ensure work has occurred in the correct sequence and to specifications

4.2. Clean, check, maintain and store machinery, tools and equipment |
| --- | --- |

and return bridge to its normal settle point
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to install or replace super-structure members:

- apply legislative, organisation and site requirements and procedures for installation or replacement of super-structure members
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to install or replace super-structure members:

- site and equipment safety requirements
- temporary support member installation procedures and techniques
- connection behaviour
- shoring and jacking systems
- timber grading
- test boring
- bridge foundations
- bridge heritage
- equipment types, characteristics, technical capabilities and limitations
- processes for the calculation of material requirements
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- quality assurance systems and standards
- JSAs/safe work method statements
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for installation or replacement of super-structure members</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of installation or replacement of super-structure members</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the installation or replacement of super-structure members that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of the installation or replacement of super-structure members that safely, effectively and efficiently meets the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• selection and preparation of the timber, application of preservatives, marking out and cutting to size of at least one corbel or girder for a super-structure in accordance with specifications</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
<td></td>
</tr>
<tr>
<td>• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment.</td>
<td></td>
</tr>
</tbody>
</table>
Selection and use of resources for particular workplaces may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate’s required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate’s:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate’s:
    - working with others to undertake and complete the installation or replacement of super-structure members

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

#### Safety requirements may include:
- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance are kept from excavations, and areas secured from unauthorised access or movement
- safe operating procedures including recognising and preventing hazards associated with uneven/unstable terrain, trees, pits, poles, trip hazards, dirt mounds, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working in proximity to others, worksite visitors and the public
- recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to equipment
<table>

| **Signage** may include: | - highway traffic signs  
|                      | - site safety signage  
|                      | - temporary signage for the benefit of motorists and pedestrians  
|                      | - barricades  
|                      | - traffic conditions signage |
| **Traffic conditions may include:** | - congested urban environments  
|                      | - low traffic rural areas  
|                      | - off-road un-trafficked areas  
|                      | - pedestrian areas,  
|                      | - load limits  
|                      | - temporary closures |
| **Tools and equipment may include:** | - generators/compressors  
|                      | - power leads  
|                      | - drills  
|                      | - impact wrenches  
|                      | - electric planes  
|                      | - sledge hammers  
|                      | - claw hammers  
|                      | - shifting spanners  
|                      | - jacks  
|                      | - proprietary tools  
|                      | - pinch bars  
|                      | - crow bars  
|                      | - mattocks  
|                      | - shovels  
|                      | - chainsaws  
|                      | - wedges  
|                      | - oxy-acetylene equipment  
|                      | - cranes  
|                      | - back hoes  
|                      | - rollers  
| **Materials** may include: | - bolts  
|                      | - nuts  
|                      | - washers  
|                      | - steel plate |
### Environmental protection requirements may include:
- waste management
- stormwater protection
- noise
- dust
- vibration
- safe use of preservatives
- waterway protection
- clean-up management

### Temporary supports may include:
- bed logs
- headers
- toms and jacks
- bracing
- jacks
- chains

### Installation or replacement is to include:
- the dressing and cutting of timber

### Durability treatments may include:
- conventional, external acrylic and water based paints
- zinc primers
- galvanising
- copper naphthenes
- liquid preservatives
- diffusing rods

### Connectors may include:
- bolts
- brackets
- tang bolts
- splicing plates

### Super-structure members may include:
- corbels
- transverse
- cross-girders
- stringers
- girders
- barriers
- decking/sheeting
- kerbing
- whacking planks
- handrails

### Remove temporary supports includes:
- removing jacks or support systems to transfer weight back to bridge members and assess the bedding in procedure
Unit Sector(s)
Timber Bridge Construction and Maintenance

Competency field

# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain and confirm *safety requirements* from the site safety plan and organisational policies and procedures, and apply to the allotted task  
1.3. Identify, obtain and implement *signage* requirements from the project *traffic* management plan  
1.4. Select plant, *tools and equipment* to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.5. Identify materials appropriate to the work application, and ensure they are safely handled and located ready for use  
1.6. Identify *environmental protection requirements* from the project environmental management plan |
| 2. Assemble temporary bridge components | 2.1. *Assess condition of components* for acceptable use and discard faulty parts  
2.2. Compile components and check inventory  
2.3. Mark location points for *high capacity panelling*  
2.4. Select resources, materials and equipment in accordance with the task  
2.5. *Sequence* assembly process prior to commencement  
2.6. Assemble *interlocking components* using connections and fittings  
2.7. *Re-check completed assembly* |
| 3. Launch temporary bridge | 3.1. Set out starting approach site  
3.2. Set out arrival approach site with the receiving bearing  
3.3. Position *temporary bridge* on the starting approach  
3.4. Fit *launching nose*, inclined upwards, to the first module  
3.5. Set up *launching pad* on the starting approach |
3.6. Roll out temporary bridge by winching or pushing
3.7. *Cantilever* temporary bridge modules, calculated at an angle to achieve reaching the arrival *approach*, and *launch*
3.8. Fit launching nose and end module to the receiving bearings at the arrival approach

<table>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to assemble a temporary modular bridge:

- apply legislative, organisation and site requirements and procedures for assembly of a temporary modular bridge
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to assemble a temporary modular bridge:

- site and equipment safety requirements
- temporary modular bridge assembly procedures and techniques
- launching procedures and techniques
- construction efficiencies and sequencing
- defective components and parts
- bridge foundations
- bridge heritage
- equipment types, characteristics, technical capabilities and limitations
- processes for the calculation of material requirements
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- quality assurance systems and standards
- JSAs/safe work method statements
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for assembly of a temporary modular bridge</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of the assembly of a temporary modular bridge</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the assembly of a temporary modular bridge that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of the assembly of a temporary modular bridge that safely, effectively and efficiently meets the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• completion of the assembly and launching of a full temporary modular bridge including all components, connections and fittings, to specifications</td>
</tr>
</tbody>
</table>

#### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the assembly of a temporary modular bridge

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>
<thead>
<tr>
<th>Relevant compliance documentation may include:</th>
<th>legislative, organisational and site requirements and procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>manufacturer's guidelines and specifications</td>
</tr>
<tr>
<td></td>
<td>Australian standards</td>
</tr>
<tr>
<td></td>
<td>Employment and workplace relations legislation</td>
</tr>
<tr>
<td></td>
<td>Equal Employment Opportunity and Disability Discrimination legislation</td>
</tr>
</tbody>
</table>

Safety requirements may include:

- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- Safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhanges and refuelling sites, safe distance are kept from excavations, and areas secured from unauthorised access or movement
- Safe operating procedures including recognising and preventing hazards associated with uneven/unstable terrain, trees, pits, poles, trip hazards, dirt mounds, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working in proximity to others, worksite visitors and the public
- Recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings,
structures and hazardous materials
- emergency procedures related to equipment operation including emergency shutdown and stopping, extinguishing equipment fires, organisational First Aid requirements and evacuation

### Site
- any ground conditions in urban and rural areas
- preparation, including:
  - foundation levelling
  - set up of bed logs
  - storage and security of components

### Signage
- highway traffic signs
- site safety signage
- temporary signage for the benefit of motorists and pedestrians
- barricades
- traffic conditions signage

### Traffic conditions
- congested urban environments
- low traffic rural areas
- off-road un-trafficked areas
- pedestrian areas,
- load limits
- temporary closures

### Tools and equipment
- sledge hammers
- shifting spanners
- ratchet sockets
- bailey tools
- winches
- jacks
- proprietary tools
- pinch bars
- crow bars
- claw hammers
- cranes
- boats
- trucks

### Environmental protection requirements
- waste management
- stormwater protection
- noise
- dust
- vibration
| **Assess condition of components may include:** | • safe use of preservatives  
• waterway protection  
• clean-up management  

| **Positioning of high capacity panelling correctly:** | • is essential for temporary bridge safety and use  

| **Sequence is completed:** | • efficiently and in a cyclical methodology of the parts  

| **Interlocking components may include:** | • bearings  
• end posts  
• reinforcing cords  
• bracing frames  
• transoms  
• transom clips  
• wind braces  
• rakers  
• stringers  
• cord bolts  
• cheeses  
• approach ramps  
• receiving bearings  
• launching nose  
• rollers  
• jacks  
• distribution beams  

| **Re-check completed assembly refers to:** | • a visual inspection to ensure work has occurred in the correct sequence and to specifications  

| **Temporary bridge construction is:** | • a team situation and may include working in conjunction with a dogman  

| **Launching nose allows for:** | • easy connection on to the receiving bearings  

| **Launching pad may include:** | • rollers and sway braces enabling the temporary modular bridge to be launched  

| **Cantilever includes:** | • launching the temporary modular bridge from one end at an angle which will prevent tip deflection and achieve reaching the arrival approach  

| **Approach may include:** | • the temporary road access leading to and from the temporary modular bridge location  

---
Launch refers to:

- the installation process which places the temporary modular bridge in position

Unit Sector(s)

Timber Bridge Construction and Maintenance

Competency field

### Truss members may include:
- timber truss members including:
  - top cords
  - bottom cords
  - principals
  - compression members
  - butting blocks
- steel truss members including:
  - shoes
  - king bolts/tie rods
  - steel bottom cords

### Old truss members can be used as:
- a template for production of new members where it was the correct size, alternatively they are resized to accomplish the correct tension and camber

### Durability treatments may include:
- conventional, external acrylic and water based paints
- zinc primers
- galvanising
- copper naphthenes
- liquid preservatives
- diffusing rods

### Connectors may be used to:
- connect top and bottom cords of trusses using splicing methods and splicing plates

</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain and confirm *safety requirements* from the *site* safety plan and organisational policies and procedures, and apply to the allotted task  
1.3. Identify, obtain and implement *signage* requirements from the project *traffic* management plan  
1.4. Select plant, *tools and equipment* to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.5. Identify *materials* appropriate to the work application, and ensure they are safely handled and located ready for use  
1.6. Identify *environmental protection requirements* from the project *environmental management plan* |
| 2. Construct and maintain a dam | 2.1. Contact utilities to check placement of marine cables before *coffer dam construction*  
2.2. Drive sheet piles into location in accordance with specifications  
2.3. *Brace* sheet piles  
2.4. *Dewater and caulk* dammed area  
2.5. Install sump and/or pump to remove excess water seepage  
2.6. Remove mud manually from dammed area  
2.7. *Level dammed area* ready for bridge work to commence |
| 3. Remove coffer dam | 3.1. Clear dammed area of any refuse or construction waste  
3.2. Remove temporary concrete slab, where used  
3.3. Flood coffer dam  
3.4. Remove sheet pile  
3.5. Extract and dismantle sheet piling allowing waterway to restore its original flow |
| 4. Clean up | 4.1. Clear work area and dispose of or recycle materials in accordance with state or territory legislation  
4.2. Clean, check, maintain and store machinery, tools and equipment |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to construct, maintain and remove coffer dams:

- apply legislative, organisation and site requirements and procedures for construction, maintenance and removal of coffer dams
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to construct, maintain and remove coffer dams:

- site and equipment safety requirements
- boat and water safety
- sheet piling
- environmental protection act
- dewatering
- caulking
- dial before you dig
- bridge foundations
- bridge heritage
- equipment types, characteristics, technical capabilities and limitations
- processes for the calculation of material requirements
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- quality assurance systems and standards
- JSAs/safe work method statements
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Unit Sector(s)**
Timber Bridge Construction and Maintenance

**Competency field**
Refer to Unit Sector(s).

**Co-requisite units**
Not applicable.
RIICTB310A Construct specialised timber deck systems

Modification History
Not applicable.

Unit Descriptor
This unit covers the construction of specialised timber deck systems in the civil construction industry. It includes planning and preparing, constructing the bridge deck, installing the bridge deck, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to construct specialised timber deck systems:

- apply legislative, organisation and site requirements and procedures for construction of specialised timber deck systems
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to construct specialised timber deck systems:

- site and equipment safety requirements
- boat and water safety
- sheet piling
- Environmental Protection Act
- dewatering
- caulking
- dial before you dig
- bridge foundations
- bridge heritage
- equipment types, characteristics, technical capabilities and limitations
- processes for the calculation of material requirements
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- quality assurance systems and standards
- JSAs/safe work method statements
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td>- knowledge of the requirements, procedures and instructions for constructing specialised timber deck systems</td>
<td></td>
</tr>
<tr>
<td>- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of construction of specialised timber deck systems</td>
<td></td>
</tr>
<tr>
<td>- working with others to undertake and complete the construction of specialised timber deck systems that meets all of the required outcomes</td>
<td></td>
</tr>
<tr>
<td>- consistent timely completion of construction of specialised timber deck systems that safely, effectively and efficiently meets the required outcomes</td>
<td></td>
</tr>
<tr>
<td>- construction and installation of at least one span of a specialised timber deck system, constructed of stressed laminated timber</td>
<td></td>
</tr>
</tbody>
</table>

#### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
<table>
<thead>
<tr>
<th>Method of assessment</th>
<th>Guidance information for assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
<td>Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.</td>
</tr>
<tr>
<td>Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.</td>
<td></td>
</tr>
<tr>
<td>Aboriginal people and other people from a non English speaking background may have second language issues.</td>
<td></td>
</tr>
<tr>
<td>Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.</td>
<td></td>
</tr>
<tr>
<td>This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:</td>
<td></td>
</tr>
<tr>
<td>• written and/or oral assessment of the candidate's required knowledge</td>
<td></td>
</tr>
<tr>
<td>• observed, documented and/or first hand testimonial evidence of the candidate's:</td>
<td></td>
</tr>
<tr>
<td>• implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes</td>
<td></td>
</tr>
<tr>
<td>• consistent achievement of required outcomes</td>
<td></td>
</tr>
<tr>
<td>• first hand testimonial evidence of the candidate's:</td>
<td></td>
</tr>
<tr>
<td>• working with others to undertake and complete the construction of specialised timber deck systems</td>
<td></td>
</tr>
</tbody>
</table>

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Safety requirements may include:

- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance are kept from excavations, and areas secured from unauthorised access or movement
- safe operating procedures including recognising and preventing hazards associated with uneven/unstable terrain, trees, pits, poles, trip hazards, dirt mounds, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working in proximity to others, worksite visitors and the public
- recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to equipment
operation including emergency shutdown and stopping, extinguishing equipment fires, organisational First Aid requirements and evacuation

</tr>
</tbody>
</table>
### Requirements

**requirements** may include:
- stormwater protection
- noise
- dust
- vibration
- safe use of preservatives
- waterway protection
- clean-up management

### Timber Bridge Deck

**Timber bridge deck** may include:
- timber bridge deck systems may be built off-site (may be near to the bridge) or in-situ and may include removal of the old deck
- timber bridge decks are to include stress laminated timber bridge decks and may include timber concrete composite module decks, concrete overlay decks, fibre reinforced polymer decks and proprietary system decks

### Stressing Cables

**Stressing cables** are to include:
- steel strands

### Install

**Install** may include:
- lifting in position with a crane and crane operator or rolling into position
- installation conducted in conjunction with a dogman

### Kerbs

**Kerbs** may include:
- the use of a rubberised sealer, fitted beneath the kerbing

### Waterproofing

**Waterproofing** may include:
- a bitumen membrane
- metal seal
- rubber
- caps on end of stressing points

### Unit Sector(s)

**Timber Bridge Construction and Maintenance**

### Competency Field

Refer to Unit Sector(s).

### Co-requisite Units

Not applicable.
RIICTC301A Install tunnelling constructions services

Modification History
Not applicable.

Unit Descriptor
This unit covers the installation of tunnelling construction services in the civil construction industry. It includes planning and preparing for tunnel construction services, installing ducting for air and ventilation, installing pipelines for construction services, installing road/rail access, maintaining services, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to line tunnels:

- apply legislative, organisation and site requirements and procedures for lining tunnels
- interpret engineering drawings
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions
- report defects

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to line tunnels:

- site and equipment safety requirements
- tunnel construction
- tunnel lining
- construction principles
- materials used in tunnel lining
- scaffolding and work platform installation
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| | • The assessment environment should not disadvantage the participant. For example,
| **Method of assessment** | Language, literacy and numeracy demands of assessment should not be greater than those required on the job.  
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.  
- Aboriginal people and other people from a non English speaking background may have second language issues.  
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required. |

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:  
- written and/or oral assessment of the candidate's required knowledge  
- observed, documented and/or first hand testimonial evidence of the candidate's:  
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes  
  - consistent achievement of required outcomes  
  - first hand testimonial evidence of the candidate's:  
    - working with others to undertake and complete the lining of tunnels  

| **Guidance information for assessment** | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
| Safety requirements may include: | • OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances  
• safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance are kept from excavations, and areas secured from unauthorised access or movement  
• safe operating procedures including recognising and preventing hazards associated with uneven/unstable terrain, trees, pits, poles, trip hazards, dirt mounds, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working in proximity to others, worksite visitors and the public  
• recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials  
• emergency procedures related to equipment |
| **Signage** may include: | • escort vehicle  
• highway traffic signs  
• site safety signage  
• temporary signage for the benefit of motorists and pedestrians  
• traffic conditions signage |
|---|---|
| **Traffic conditions may include:** | • congested urban environments  
• low traffic rural areas  
• off-road un-trafficked areas  
• buildings  
• parking sites  
• pedestrian areas |
| **Tools and equipment** may include: | • shotcreting machines  
• drill rigs  
• spanners and shotcrete pumps  
• concrete pumps  
• slick lines  
• formwork |
| **Environmental protection requirements** may include: | • organisational/project environmental management plan  
• waste management  
• water quality protection  
• noise  
• vibration  
• dust and clean-up management |
| **Lining** may include: | • shotcreting  
• rock bolting  
• reinforced mesh  
• formwork  
• pre-cast concrete lining  
• concrete lining  
• applied shotcrete finishes  
• poured reinforced concrete  
• installation of pre-cast section |
| **Concrete application may include the use of:** | • concrete lining machine  
• slip or telescopic formwork  
• strip and re-assemble formwork  
• fold and re-assemble formwork |
Materials may include:
- dowels
- rock bolts
- drainage materials (strip drains, PVC pipe)
- reinforced mesh

Unit Sector(s)
Tunnel Construction

Competency field

Co-requisite units
Not applicable.
RIICTC303A Excavate tunnel by machine

Modification History
Not applicable.

Unit Descriptor
This unit covers the excavation of tunnels by machine in the civil construction industry. It includes planning and preparing, setting up for machine operations, excavating tunnels and controlling dust and water, controlling mucking, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

| **Control mucking** | 4.1. Set up and align conveyor/mucking system to spoil system  
4.2. Operate mucking attachments safely  
4.3. Maintain dust extraction system in operation along conveyor or mucking system  
4.4. Remove spoil in accordance with planned operating procedures  
4.5. Direct trucks safely to and from mucking area |
| **Clean up** | 5.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan  
5.2. Clean, check, maintain and store plant, tools and equipment |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to excavate tunnels by machine:

- apply legislative, organisation and site requirements and procedures for excavating tunnels by machine
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to excavate tunnels by machine:

- site and equipment safety requirements
- tunnel construction
- tunnel excavation
- construction principles
- soil and rock type characteristics
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to muck out tunnel earthworks:

- apply legislative, organisation and site requirements and procedures for mucking out tunnel earthworks
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to muck out tunnel earthworks:

- site and equipment safety requirements
- tunnel construction
- tunnel mucking out
- construction principles
- soil and rock type characteristics
- scaffolding and work platform installation
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
| --- | --- |
|  | • knowledge of the requirements, procedures and instructions for mucking out tunnel earthworks

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to construct portals:

- apply legislative, organisation and site requirements and procedures for constructing portals
- interpret engineering drawings and sketches
- use plant, tools and equipment
- install portals
- organise work tasks

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to construct portals:

- the types and purposes of portals
- basic principles of soil technology for civil works
- the principles of ground support
- the types, functions, characteristics and limitations of excavation ground support systems
- the types, functions, characteristics and limitations of finishing ground support systems
- ground support systems installation techniques
- types, characteristics, uses and limitations of drilling equipment
- site and equipment safety requirements
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- portal installation methods
- JSAs/safe work method statement
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those
required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the construction of portals |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:

- legislative, organisational and site requirements and procedures
- manufacturer’s guidelines and specifications
- Environmental Protection Agency (EPA) requirements
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Safety requirements** may include:

- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance are kept from excavations, and areas secured from unauthorised access or movement
- safe operating procedures including recognising and preventing hazards associated with uneven/unstable terrain, trees, pits, poles, trip hazards, dirt mounds, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working in proximity to others, worksite visitors and the public
- recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings,
<table>

<tr>
<th>Structures and hazardous materials</th>
<th>• emergency procedures related to equipment operation including emergency shutdown and stopping, extinguishing equipment fires, organisational First Aid requirements and evacuation</th>
</tr>
</thead>
</table>
| **Tools and equipment** may include: | • hand tools  
• excavation tools  
• installation and drilling equipment relevant to the selected ground support system |
| **Environmental protection requirements** may include: | • organisational/project environmental management plan  
• waste management  
• water quality protection  
• noise  
• vibration  
• dust and clean-up management |
| **Ground support** may include: | • ground support prior to excavation, such as:  
  - rock anchors  
  - rock bolts  
  - soil nails  
  - spalling bars  
  - cable anchors  
  - canopy tubes  
  - steel sets  
• ground support to finish portal surrounds, such as:  
  - shotcrete  
  - masonry  
  - stone or concrete blockwork  
  - reinforced concrete  
  - pre-cast concrete panels  
  - ground cover |
| **Maintain** may include: | • cleaning  
• authorised servicing  
• recording and reporting of faults  
• authorised minor replacements  
• provision of assistance to maintenance personnel during maintenance and repair activities |
Unit Sector(s)
Tunnel Construction

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIICTC401A Apply the principles of tunnel construction

Modification History
Not applicable.

Unit Descriptor
This unit covers the supervision of tunnel construction tasks in Civil Construction. It includes the requirements for ensuring that the planning, preparing, initiating, monitoring, adjusting and reporting of tunnel construction tasks are carried out in accordance with the accepted industry principles.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, for tunnel construction tasks within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>

 Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to supervise tunnel construction tasks:

- apply legislative, organisation and site requirements and procedures
- interpret project contract and specification requirements and procedures
- interpret project site soil and geological data
- identify soil and rock types
- interpret meteorological data
- identify drainage issues
- interpret material properties and test results, including compaction test results
- interpret project site geotechnical data
- interpret project site hydrological data
- interpret project engineering survey information
- interpret project plans and drawings
- interpret project specifications
- prepare for and conduct briefings, toolbox and site meeting
- prepare of short messages
- prepare and presenting of job reports
- prepare and maintaining of log books and diaries
- provide leadership
- apply performance monitoring skills
- apply set out requirements and procedures
- set up and use levelling devices
- establish construction offsets
- apply supervisory skills
- develop workplace relationships
- develop individuals and the team
- apply inspection requirements and procedures
- calculate quantities for the execution of tasks, including:
  - volumes
  - tonnage required
  - grades
  - percentages
  - areas
  - resource consumption figures, including required supply rates
- interpret tunnel construction materials properties and test results
Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to supervise tunnel construction tasks:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational Health and Safety requirements and procedures
- shoring requirements and procedures
- slope management requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- work zone traffic management requirements and procedures
- contract management requirements and procedures
- communication requirements and procedures
- administrative requirements and procedures
- tunnel construction plant and equipment capabilities and application
- plant, equipment and tools maintenance requirements and procedures
- operational techniques for the execution of tunnel construction tasks
- tunnel construction task resource requirements and procedures
- activities scheduling requirements and procedures
- tunnel construction materials delivery requirements and procedures
- job plan drafting of and administration requirements and procedures
- reporting requirements and procedures
- workplace relationship requirements and procedures
- organisational, client and site operational requirements
- relationship between various areas of civil works
- team leadership techniques
- works planning techniques
- tunnel construction monitoring methods
- engineering survey principles
- materials quality and delivery requirements and procedures
- mentoring techniques
- estimating principles
- civil works construction sequencing
- tunnel construction and related activities’ terminology
- set out requirements and procedures
- works planning techniques
- monitoring methods

- provide recommendations for the improvement of the safe, effective and efficient execution of tunnel construction tasks
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</table>
environment to sensitively accommodate cultural diversity.

- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to plan, prepare and conduct tunnel construction tasks
  - provision of clear and timely instruction and supervision by the individual of those involved in the conduct of tunnel construction tasks

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

## Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

## Specific task information and requirements may include:
- site geological and geotechnical data, including:
  - rock types and characteristics
  - soil types and characteristics
- site hydrological data, including:
  - surface water
  - ground water
- site meteorological data, including:
  - rainfall
  - humidity
  - temperature
  - wind
- site engineering survey data
- known and potential site hazards, constraints and conditions
- site cultural and heritage information
- task specifications
- task drawings
- sources of materials
- other organisations and contractors involved in the task or related tasks
- coordination, timing and budgeting requirements

## Tunnel construction may include:
- road tunnels
- rail tunnels
- pedestrian tunnels
- underground services tunnels

**Job plan** is to include:
- human resource requirements
- plant and machinery requirements
- construction materials requirements
- sub-contractor support requirements
- waste disposal requirements
- coordination requirements
- activity scheduling
- materials delivery scheduling
- risk assessment and management requirements
- occupational Health and Safety requirements
- shoring requirements
- slope management requirements
- quality management requirements, including testing scheduling requirements
- traffic management requirements
- environmental requirements
- task monitoring requirements
- task performance monitoring requirements
- communication requirements
- reporting requirements

**Resources** are to include:
- labour
- plant, equipment and tools
- highway haulage vehicles
- construction materials
- shoring materials
- sub-contractor services

**Instructions** are to include:
- briefings
- handovers
- work orders
- toolbox meetings
- site meetings

**Team members** may include:
- other members of the organisation's management team
- members of the team directly involved in the task
- suppliers representatives
- sub-contractors representatives
- supervisors or managers of other organisations who are involved in related tasks
| **Set out** is to include: | • control lines  
• cleared width  
• batters  
• off-sets |
| **Monitor** is to include: | • ongoing risk assessment  
• engineering survey  
• sampling and testing  
• observation and recording  
• general supervision |
| **Required outcomes** may include: | • task specifications requirements  
• task drawings requirements  
• coordination requirements  
• activity scheduling requirements  
• unit cost requirements  
• overall task cost requirements  
• waste management requirements |
| **Initiate** is to include: | • written communication  
• oral communication |

RIICTT301A Conduct fluid assisted directional boring

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of fluid assisted directional boring in civil construction. It includes the planning and preparing for operations, checking equipment, driving the bore and cleaning up when undertaking fluid assisted directional boring activities associated with horizontal directional drilling.

Application of the Unit
This unit includes fluid types, drilling equipment, drilling heads, installation products and tracking and guidance systems. Fluid assisted directional boring includes boring under roadways, railways, footpaths, creeks, rivers, freeways other services and may include mini, midi and maxi operations.
The unit is appropriate for those working in operational roles, at worksites within:

- Civil Construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. ### Required Skills and Knowledge

**This section describes the skills and knowledge required for this unit.**

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct fluid assisted directional boring:

- apply legislative, organisation and site requirements and procedures
- interpret engineering drawings, plan and specification
- apply equipment operational requirements and procedures
- use of laser control equipment
- apply electronic devices to locate electronic cable
- apply electronic equipment calibration
- apply thrust and rotation of boring equipment
- apply operational maintenance
- apply basic diagnostic procedures
- apply site isolation and traffic control responsibilities and authorities
- apply materials safety data sheets and materials handling methods
- apply project quality requirements
- apply JSA's/safe work method statement

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct fluid assisted directional boring:

- site and equipment safety requirements
- drilling fluids
- categories of horizontal directional drilling
- laser control equipment
- manual handling
- confined space entry
- electronic cable locating devices
- strike alert systems
- remote units
- electronic equipment calibration
- thrust and rotation of boring equipment
- slinging procedures
- processes for interpreting engineering drawings
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSA's/safe work method statement

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Signage** may include:
- site safety signage
- temporary signage for the benefit of motorists and pedestrians
- barricades
- traffic conditions signage

**Tools and equipment** may include:
- boring equipment
- pumps
- compressors
- hoses
- tape measures
- marking equipment
- crow bars
- spanners
- adjustable
- wrenches
- shovels
- picks
- hammers (sledge/hand)
- string lines
- spirit levels
- dumpy levels
- theodolites
- brooms
- hacksaws
- hand saws
- electronic tracking devices
### Environmental protection requirements

- organisational/project environmental management plan
- waste management
- water quality protection
- noise
- vibration
- dust
- clean-up management

### Drilling fluid

- bentonite and water. Often known as mud it carries the debris in suspension and is then filtered through a recirculation system

### Monitoring of boring

- sounder
- beacon
- hand wired guidance system
- magnetometry

RIICTT302A Conduct impact moling, ramming and augering

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of impact moling, ramming and augering in civil construction. It includes the planning and preparing for operations, driving bore holes and cleaning up when undertaking impact moling, ramming, and augering activities associated with horizontal directional drilling.

Application of the Unit
This unit includes percussive moling (pneumatic / hydraulic) and pipe ramming and horizontal augering which includes boring under roadways, railways, footpaths, other services and for up to a distance of 100m.
The unit is appropriate for those working in operational roles, at worksites within:

• Civil Construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites

</table>

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete impact moling, ramming and augering

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RIICTT303A Control micro tunnelling and pipe-jacking

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of micro-tunnelling and pipe-jacking in civil construction. It includes the planning and preparing for operations, checking equipment, driving the bore and cleaning up when undertaking micro-tunnelling and pipe-jacking activities associated with horizontal directional drilling.

Application of the Unit
This unit includes pipe-jacking systems, micro-tunnelling systems, jacking frames, pipes, lubrication and shafts for boring under roadways, railways, and footpaths. Micro-tunnelling includes laser guidance, remote controlled, steerable, controlled evacuation tunnelling methods for pipelines of one metre diameter or less and up to lengths of two hundred metres. Pipe-jacking is used to aid spoil removal and includes removal by auger, slurry conversion or vacuum extraction. The unit is appropriate for those working in operational roles, at worksites within:

- Civil Construction

</thead>
</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, confirm and apply work instructions, including plans, specifications, quality requirements and operational details to the allotted task  
1.3. Obtain and confirm safety requirements from the site safety plan and organisational policies and procedures, and apply to the allotted task  
1.4. Identify, obtain and implement *signage* requirements from the project traffic management plan  
1.5. Ensure plant, *tools and equipment* selected to carry out tasks are consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.6. Identify and confirm *environmental protection requirements* from the project environmental management plan, and apply to the allotted task |
| 2. Prepare for boring operations | 2.1. Determine location, alignment direction, level and grade of bore from drawings and specifications  
2.2. Use above and below ground survey instruments to determine the bore pathway for underground vertical and horizontal alignment  
2.3. Conduct visual geological investigation of alignment to determine the differing soil types and groundwater conditions  
2.4. Select bore head and drilling fluid for the strata  
2.5. Position, anchor/stake down boring equipment in accordance with manufacturer’s and/or site requirements |
| 3. Conduct equipment checks | 3.1. Identify and apply safety requirements  
3.2. Carry out start-up, shutdown and communication procedures  
3.3. Check equipment controls and functions |
including implements or other attachments, anchors and/or stabilising equipment for serviceability and report faults
3.4. Conduct inspection and fault finding in accordance with manufacturer's specifications and/or site requirements
3.5. Carry out equipment maintenance tasks regularly

| 4. Drive bore hole | 4.1. Construct launch and receiving pits to specifications to accommodate bore rig and tools
| | 4.2. Identify and implement trench collapse prevention for launch and receiving pits
| | 4.3. Establish thrust wall to specific design in accordance with pipe size and soil characteristics
| | 4.4. Determine traverse line of pilot hole to receiving pit in accordance with plans and specifications
| | 4.5. Confirm traverse line of pilot hole to receiving pit at specified distances
| | 4.6. Collect and dispose spoil in accordance with job specifications
| | 4.7. Select and attach augers to drilling machine in accordance with design specifications
| | 4.8. Jack through casings/pipes to receiving pit in compliance with design specifications
| | 4.9. Monitor equipment for continuity of production in varied site conditions

| 5. Clean up | 5.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan
| | 5.2. Clean, check, maintain and store plant, tools and equipment |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct micro-tunnelling and pipe-jacking:

- apply legislative, organisation and site requirements and procedures
- apply equipment operational requirements and procedures
- apply site and equipment safety requirements
- use drilling fluids
- apply categories of horizontal directional drilling
- use laser control equipment
- apply manual handling
- apply electronic cable locating devices
- apply slinging procedures
- interpret engineering drawings, plans and specifications
- identify equipment types, characteristics, technical capabilities and limitations
- apply operational, maintenance and basic diagnostic procedures
- apply site isolation and traffic control responsibilities
- apply materials safety data sheets and materials handling methods
- apply project quality requirements
- apply JSA’s/safe work method statement

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct micro-tunnelling and pipe-jacking:

- site and equipment safety requirements
- drilling fluids
- categories of horizontal directional drilling
- laser control equipment
- manual handling
- confined space entry
- electronic cable locating devices
- slinging procedures
- processes for interpreting engineering drawings
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- micro-tunnelling and pipe-jacking requirements and procedures
- apply JSA's/safe work method statement
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for the conduct of micro-tunnelling and pipe-jacking
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of at least 50 metres micro-tunnelling and pipe-jacking
- working with others to undertake and complete micro-tunnelling and pipe-jacking that meets all of the required outcomes
- consistent timely completion of micro-tunnelling and pipe-jacking that safely, effectively and efficiently meets the required outcomes

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non
English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete micro-tunnelling and pipe-jacking

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

Environmental protection requirements may include:
- organisational/project environmental management plan
- waste management
- water quality protection
- noise
- vibration
- dust
- clean-up management

On-line replacement may include:
- replacing existing pipes with the same size pipe
- upsizing without trenching
- being conducted while the pipeline remains operational

Pipe characteristics may include:
- size
- shape
- material
- joint type
- depth
- grade
- rake condition
- service off takes
- on-line structures

Monitoring of replacement may include:
- sounder
- beacon
- hand wired guidance system
- magnetometry

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to undertake localised repair and sealing of existing pipeline systems:

- apply legislative, organisation and site requirements and procedures
- apply site and equipment safety requirements
- apply laser control equipment
- apply manual handling
- apply confined space entry
- interpret engineering drawings, plans and specifications
- apply equipment types, characteristics, technical capabilities and limitations
- apply operational, maintenance and basic diagnostic procedures
- apply site isolation and traffic control responsibilities
- apply materials safety data sheets and materials handling methods
- apply project quality requirements
- apply localised repair and sealing methods
- identify pipeline systems
- apply JSA's/safe work method statement

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to undertake localised repair and sealing of existing pipeline systems:

- site and equipment safety requirements
- laser control equipment
- manual handling
- confined space entry
- processes for interpreting engineering drawings
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- localised repair and sealing methods
- pipeline systems
• JSA’s/safe work method statement
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• knowledge of the requirements, procedures and instructions for undertaking localised repair and sealing of existing pipeline systems</td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of at least two localised repair and sealing of existing pipeline systems</td>
</tr>
<tr>
<td>• working with others to undertake and complete the localised repair and sealing of existing pipeline systems that meets all of the required outcomes</td>
<td>• consistent timely completion of undertaking localised repair and sealing of existing pipeline systems that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

#### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the localised repair and sealing of existing pipeline systems

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

<table>

</tr>
<tr>
<td>• electronic tracking devices</td>
</tr>
</tbody>
</table>
### Environmental protection requirements may include:
- organisational/project environmental management plan
- waste management
- water quality protection
- noise
- vibration
- dust
- clean-up management

### Drilling fluid may include:
- bentonite and water. Often known as mud it carries the debris in suspension and is then filtered through a recirculation system

### Monitoring of repair and sealing may include:
- sounder
- beacon
- hand wired guidance system
- magnetometry

Not applicable.
RIICTT306A Install cure in-place linings for existing pipeline systems

Modification History
Not applicable.

Unit Descriptor
This unit covers the installing cure in-place linings for existing pipeline systems in civil construction. It includes the planning and preparing for operations, surveying the site, completing the cure in-place lining and cleaning up when undertaking the rehabilitation of existing services pipeline system.

Application of the Unit
This unit includes thermal cure, UV cure and ambient cure liners for repairing or renovating non-man-entry pits, including gas, sewer and water. Cure in-place linings may include but not be limited to a resin impregnated sock inserted in the pipe and subsequently forced against the wall using water or air. Curing occurs by heat or ultra violet light. Cure in-place linings may be used for pipes between 50 mm and 750 mm and may also be used for pipes which are not round. This unit is appropriate for those working in operational roles, at worksites within:

- Civil Construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

RIICTT307A Spray linings for existing pipeline systems

Modification History
Not applicable.

Unit Descriptor
This unit covers the spray linings for existing pipeline systems in civil construction. It includes the planning and preparing for operations, checking equipment, driving the bore and cleaning up when undertaking the spray lining process for the rehabilitation of existing services pipeline system.

Application of the Unit
The unit includes cement mortar lining and epoxy lining to repair or renovate non-man-entry pits, including water. Spray lining is usually applied with a robotic spraying machine. This process is normally applied to small diameter pipelines. This unit is appropriate for those working in operational roles, at worksites within:

- Civil Construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

RIICTT308A Install close-fit linings for existing pipeline systems

Modification History
Not applicable.

Unit Descriptor
This unit covers the installation of close-fit linings for existing pipeline systems in civil construction. It includes the planning and preparing for operations, undertaking site survey, completing close-fit lining and clean up when undertaking the rehabilitation of existing services pipeline system.

Application of the Unit
This unit includes swaged liners, folded liners and expanded spiral liners for repair or renovation of non-man-entry pits, including sewer, gas and water. Close-fit linings are used in circumstances where maintaining bore diameter is essential and annulus grouting can be avoided. It may include heat or pressure to apply the lining to the existing pipe. This unit is appropriate for those working in operational roles, at worksites within:

- Civil Construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements</th>

<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply *compliance documentation* relevant to installation of close-fit linings for existing pipeline systems  
1.2. Obtain, confirm and apply work instructions, including plans, specifications, quality requirements and operational details to the allotted task  
1.3. Obtain and confirm safety requirements from the site safety plan and organisational policies and procedures, and apply to the allotted task  
1.4. Identify, obtain and implement *signage* requirements from the project traffic management plan  
1.5. Ensure plant, *tools and equipment* selected to carry out tasks are consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.6. Identify and confirm *environmental protection requirements* from the project environmental management plan, and apply to the allotted task |
| 2. Perform site survey | 2.1. Notify property owners and occupiers and approval for entry onto their property obtained  
2.2. Determine site conditions by visual inspection, plans, discussion with land owners and information from service utilities  
2.3. Locate underground utilities  
2.4. Maintain system serviceability during rehabilitation works in accordance with asset owners' policies, allowable duration of service interruption, and project specifications  
2.5. Survey and record existing site conditions |
<p>| 3. Initiate rehabilitation works | 3.1. Prepare entry and exit pits where specified in accordance with site and OHS requirements |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>
|   | 3.2. Follow confined space entry procedures  
3.3. Monitor installation process and finished product to ensure conformity to the design requirements in accordance with manufacturer's specifications and project specifications |
| 4. Undertake close-fit lining | 4.1. Determine fault with the aid of plans, drawings, CCTV recording or other mechanisms  
4.2. Select close fit lining method appropriate to the fault  
4.3. Apply pressure cleaning to the designated location  
4.4. Pull lining through the pipe and set in position  
4.5. Install close fit lining material to comply with design requirements and manufacturer's specifications  
4.6. Conduct curing process to comply with manufacturer's specifications  
4.7. Correctly secure and seal termination at ends of process in accordance with manufacturer's specifications  
4.8. Open junctions for inspection and operation  
4.9. **Monitor** installation process and finished product to ensure conformity to the design requirements in accordance with manufacturer's specifications |
| 5. Clean up | 5.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan  
5.2. Clean, check, maintain and store plant, tools and equipment and equipment are cleaned, checked, maintained and stored |
**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to install close-fit linings for existing pipeline systems:

- apply legislative, organisation and site requirements and procedures
- apply site and equipment safety requirements
- apply laser control equipment
- apply manual handling
- apply confined space entry
- conduct application of thrust and rotation
- interpret engineering drawings, plans and specifications
- apply equipment types, characteristics, technical capabilities and limitations
- apply operational, maintenance and basic diagnostic procedures
- apply site isolation and traffic control responsibilities
- apply materials safety data sheets and materials handling methods
- apply project quality requirements
- identify pipeline systems
- apply JSA's/safe work method statement

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to install close-fit linings for existing pipeline systems:

- site and equipment safety requirements
- laser control equipment
- manual handling
- confined space entry
- application of thrust and rotation
- processes for interpreting engineering drawings
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- close fit lining requirements and procedures
- pipeline systems
- JSA's/safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
| | • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. |
| | • Customisation of assessment and delivery environment to sensitively accommodate cultural diversity. |
| | • Aboriginal people and other people from a non |
English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the installation of close-fit linings for existing pipeline systems

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RIICTT309A Install slip lining in existing pipeline systems

Modification History
Not applicable.

Unit Descriptor
This unit covers the installation of slip-lining in existing pipeline systems in civil construction. It includes the planning and preparing for operations, completing site survey, undertaking slip-lining and cleaning up when undertaking the rehabilitation of existing services pipeline system.

Application of the Unit
This unit includes basic slip-lining, spirally wound liners and live insertion for the repair renovation of non-man-entry pits, including water and gas mains. Slip-lining includes the insertion of a new pipeline of smaller diameter into the defective pipe and the annulus being grouted. This unit is appropriate for those working in operational roles, at worksites within:

- Civil Construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to renovate large diameter pipes and chambers:

- apply legislative, organisation and site requirements and procedures
- apply site and equipment safety requirements
- apply laser control equipment
- apply manual handling
- apply confined space entry
- interpret engineering drawings, plans and specifications
- apply equipment types, characteristics, technical capabilities and limitations
- apply operational, maintenance and basic diagnostic procedures
- apply site isolation and traffic control responsibilities
- apply materials safety data sheets and materials handling methods
- apply project quality requirements
- identify pipeline systems
- apply JSA's/safe work method statement

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to renovate large diameter pipes and chambers:

- site and equipment safety requirements
- laser control equipment
- manual handling
- confined space entry
- processes for interpreting engineering drawings
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- large diameter pipes and chambers renovation requirements and procedures
- pipeline systems
- JSA's/safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the renovation of large diameter pipes and chambers</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of the at least two different renovations of large diameter pipes and chambers</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the renovation of large diameter pipes and chambers that meets all of the required outcomes</td>
</tr>
<tr>
<td>Context of and specific resources for assessment</td>
<td>• This unit must be assessed in the context of the work environment. <tr>
<td></td>
<td>• Customisation of assessment and delivery environment to sensitively accommodate</td>
</tr>
</tbody>
</table>
### Cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment
This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the renovation of large diameter pipes and chambers

### Guidance information for assessment
Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>

</thead>
</table>
| 1. Ensure appropriate planning and preparation of tasks is carried out | 1.1. Access, interpret and apply compliance documentation relevant to the supervision of the installation of underground service using trenchless technology  
1.2. Access, interpret and clarify the specific task information and requirements relevant to undertaking the installation of underground service using trenchless technology tasks  
1.3. Ensure a job plan is available which makes best use of the available resources and meets task requirements |
| 2. Ensure appropriate initiation of tasks is carried out | 2.1. Confirm that the necessary resources are available for the safe, effective and efficient conduct of tasks  
2.2. Ensure clear and timely instructions are communicated to team members and others involved, for the safe, effective and efficient conduct of tasks, to meet the specific task requirements  
2.3. Set out tasks as required for the effective completion of the task |
| 3. Oversee the execution of tasks | 3.1. Monitor asphalt paving and compaction task performance to ensure it achieves the required outcomes  
3.2. Initiate adjustments to work practice or job plan to ensure safe execution of work and achievement of required outcomes  
3.3. Ensure plant equipment and tools maintenance requirements are carried out and recorded |
| 4. Report on the execution of tasks | 4.1. Complete and submit reports as required  
4.2. Recommend changes to improve the safety, efficiency and effectiveness of the execution of tasks |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to supervise the installation of underground service using trenchless technology tasks:

- apply legislative, organisation and site requirements and procedures
- interpret project contract and specification requirements and procedures
- interpret manufacturer's requirements and procedures
- interpret project site soil and geological data
- identify soil and rock types
- interpret meteorological data
- identify drainage issues
- interpret material properties and test results, including compaction test results
- interpret project site geotechnical data
- interpret project site hydrological data
- interpret project engineering survey information
- interpret project plans and drawings
- interpret project specifications
- prepare for and conduct briefings, toolbox and site meeting
- prepare of short messages
- prepare and presenting of job reports
- prepare and maintaining of log books and diaries
- provide leadership
- apply performance monitoring skills
- apply set out requirements and procedures
- set up and use levelling devices
- establish construction offsets
- apply supervisory skills
- develop workplace relationships
- develop individuals and the team
- apply inspection requirements and procedures
- calculate quantities for the execution of tasks, including:
  - volumes
  - grades
  - percentages
  - areas
  - resource consumption figures, including required supply rates
- interpret materials properties and test results
### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to supervise the installation of underground service using trenchless technology tasks:

- risk assessment and management requirements and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- work zone traffic management requirements and procedures
- contract management requirements and procedures
- communication requirements and procedures
- administrative requirements and procedures
- trenchless technology underground service installation plant and equipment capabilities and application
- plant, equipment and tools maintenance requirements and procedures
- operational techniques for the execution for the installation of underground service using trenchless technology tasks, including at least one of the following methods:
  - impact moling
  - ramming
  - augering
  - fluid assisted directional boring
  - micro tunnelling
  - pipe jacking
  - the installation of underground service using trenchless technology task resource requirements and procedures
- activities scheduling requirements and procedures
- the installation of underground service using trenchless technology materials delivery requirements and procedures
- job plan drafting of and administration requirements and procedures
- reporting requirements and procedures
- workplace relationship requirements and procedures
- organisational, client and site operational requirements
- relationship between various areas of civil works
- team leadership techniques
- works planning techniques
- trenchless technology underground service installation monitoring methods
- engineering survey principles
- materials quality and delivery requirements and procedures
- mentoring techniques
• estimating principles
• civil works construction sequencing
• set out requirements and procedures
• works planning techniques
• monitoring methods
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to supervise the repair and rehabilitation of underground service using trenchless technology tasks:

- apply legislative, organisation and site requirements and procedures
- interpret project contract and specification requirements and procedures
- interpreting manufacturer's requirements and procedures
- interpret project site soil and geological data
- identify soil and rock types
- interpret meteorological data
- identify drainage issues
- interpret material properties and test results, including compaction test results
- interpret project site geotechnical data
- interpret project site hydrological data
- interpret project engineering survey information
- interpret project plans and drawings
- interpret project specifications
- prepare for and conduct briefings, toolbox and site meeting
- prepare of short messages
- prepare and presenting of job reports
- prepare and maintaining of log books and diaries
- provide leadership
- apply performance monitoring skills
- apply set out requirements and procedures
- set up and use levelling devices
- establish construction offsets
- apply supervisory skills
- develop workplace relationships
- develop individuals and the team
- apply inspection requirements and procedures
- calculate quantities for the execution of tasks, including:
  - volumes
  - grades
  - percentages
  - areas
  - resource consumption figures, including required supply rates
- interpret materials properties and test results
Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to supervise the repair and rehabilitation of underground service using trenchless technology tasks:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- shoring requirements and procedures
- slope management requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- work zone traffic management requirements and procedures
- contract management requirements and procedures
- communication requirements and procedures
- administrative requirements and procedures
- trenchless technology underground service repair and rehabilitation plant and equipment capabilities and application, including at least one of the following methods:
  - on-line replacement
  - localised repair and sealing
  - cure in-place lining
  - spray lining
  - slip lining
  - renovation of large diameter pipes and chambers
- plant, equipment and tools maintenance requirements and procedures
- operational techniques for the execution for the repair and rehabilitation of underground service using trenchless technology tasks
- trenchless technology underground service repair and rehabilitation resource requirements and procedures
- activities scheduling requirements and procedures
- the repair and rehabilitation of underground service using trenchless technology materials delivery requirements and procedures
- job plan drafting of and administration requirements and procedures
- reporting requirements and procedures
- workplace relationship requirements and procedures
- organisational, client and site operational requirements
- works planning techniques
- engineering survey principles
- relationship between various areas of civil works
- team leadership techniques
- trenchless technology underground service repair and rehabilitation monitoring
methods
- materials quality and delivery requirements and procedures
- mentoring techniques
- estimating principles
- civil works construction sequencing

### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the supervision of the repair and rehabilitation of underground service using trenchless technology</td>
</tr>
<tr>
<td></td>
<td>• implementation of appropriate procedures and techniques for the safe, effective and efficient supervision of the repair and rehabilitation of underground service using trenchless technology tasks</td>
</tr>
<tr>
<td></td>
<td>• working with others to plan, prepare and conduct the repair and rehabilitation of underground service using trenchless technology tasks</td>
</tr>
<tr>
<td></td>
<td>• provision of clear and timely instruction and supervision by the individual of those involved in the repair and rehabilitation of underground service using trenchless technology tasks</td>
</tr>
<tr>
<td></td>
<td>• evidence of the consistent successful supervision of the repair and rehabilitation of underground service using trenchless technology tasks</td>
</tr>
</tbody>
</table>

#### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.

- The assessment environment should not disadvantage the participant. For example,
<table>
<thead>
<tr>
<th>Language, literacy and numeracy demands of assessment should not be greater than those required on the job.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.</td>
</tr>
<tr>
<td>Aboriginal people and other people from a non English speaking background may have second language issues.</td>
</tr>
<tr>
<td>Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
</tr>
<tr>
<td>Where applicable, physical resources should include equipment modified for people with disabilities.</td>
</tr>
<tr>
<td>Access must be provided to appropriate learning and/or assessment support when required.</td>
</tr>
</tbody>
</table>

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to plan, prepare and conduct the repair and rehabilitation of underground service using trenchless technology tasks
    - provision of clear and timely instruction and supervision by the individual of those involved in the conduct of the repair and

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Specific task information and requirements may include:
- site geological and geotechnical data, including:
  - rock types and characteristics
  - soil types and characteristics
- site hydrological data, including:
  - surface water
  - ground water
- site meteorological data, including:
  - rainfall
  - humidity
  - temperature
  - wind
- site engineering survey data
- known and potential site hazards, constraints and conditions
- site cultural and heritage information
- task specifications
- task drawings
- sources of materials
- types of asphalt
- other organisations and contractors involved in the task or related tasks
- coordination, timing and budgeting requirements

The repair and rehabilitation of water mains pipelines
underground service using trenchless technology may include:

- stormwater systems, including:
  - pipes
  - box culverts
  - pre-cast gully pits
  - sewage pipelines
  - pre-cast access chambers
  - gas pipelines
  - other conduits for services such as:
    - telecommunication cables
    - data cables
    - power cables

The repair and rehabilitation of underground service using trenchless technology tasks may include:

- on-line replacement
- localised repair and sealing
- cure in-place lining
- spray lining
- close-fit lining
- slip lining
- renovation of large diameter pipes and chambers

Job plan is to include:

- human resource requirements
- plant and machinery requirements
- construction materials requirements
- sub-contractor support requirements
- waste disposal requirements
- coordination requirements
- activity scheduling
- materials delivery scheduling
- risk assessment and management requirements
- occupational health and safety requirements
- shoring requirements
- slope management requirements
- requirements for the location of existing underground services
- quality management requirements, including testing scheduling requirements
- traffic management requirements
- environmental requirements
- task monitoring requirements
- task performance monitoring requirements
- communication requirements
- reporting requirements
| Resources are to include:                                    | • labour                                      |
|                                                           | • plant, equipment and tools                  |
|                                                           | • highway haulage vehicles                    |
|                                                           | • construction materials                      |
|                                                           | • shoring materials                           |
|                                                           | • sub-contractor services                     |
| Instructions are to include:                              | • briefings                                   |
|                                                           | • handovers                                   |
|                                                           | • work orders                                 |
|                                                           | • toolbox meetings                            |
|                                                           | • site meetings                               |
| Team members may include:                                 | • other members of the organisation's management team |
|                                                           | • members of the team directly involved in the task |
|                                                           | • suppliers representatives                  |
|                                                           | • sub-contractors representatives             |
|                                                           | • supervisors or managers of other organisations who are involved in related tasks |
| Set out is to include:                                    | • control lines                               |
|                                                           | • cleared width                               |
|                                                           | • batters                                     |
|                                                           | • off-sets                                    |
| Monitor is to include:                                    | • ongoing risk assessment                     |
|                                                           | • engineering survey                          |
|                                                           | • laser tracking                              |
|                                                           | • CCTV                                        |
|                                                           | • sampling and testing                         |
|                                                           | • observation and recording                   |
|                                                           | • general supervision                         |
| Required outcomes may include:                           | • task specifications requirements            |
|                                                           | • task drawings requirements                  |
|                                                           | • coordination requirements                   |
|                                                           | • activity scheduling requirements            |
|                                                           | • unit cost requirements                      |
|                                                           | • overall task cost requirements              |
|                                                           | • waste management requirements               |
| Initiate is to include:                                   | • written communication                       |
|                                                           | • oral communication                          |
Unit Sector(s)
Trenchless Technology

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIICWD501A Prepare detailed design of foundations

Modification History
Not applicable.

Unit Descriptor
This unit covers the completion of the detailed design and documentation of foundations in Civil Construction. It includes the preparation and planning for the detailed design, undertaking of the detailed design, finalisation of the detailed design processes and supporting the application of the detailed design.

Application of the Unit
This unit requires the identification of design inputs, production of calculations, drawings, design options and solutions and specifications required for the completion of foundations works, it does not include the certification of the design. This unit is appropriate for those working in a management role or as a technical specialist, for the completion of the detailed design and documentation of foundations within:

- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan for the detailed design of foundations | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Identify and confirm the *foundations project requirements and information* for the completion of the detailed design  
1.3. Prepare a *design plan* which makes best use of the available resources and meets the design requirements |
| 2. Undertake the detailed design of foundations | 2.1. Interpret and analyse the relevant data and identify the available viable options for the detailed design of foundations  
2.2. Interpret and analyse relevant data and recommend the *preferred option* that best meets the required project outcomes  
2.3. Complete the *detailed design* of the foundations that safely, effectively and efficiently meets the required project outcomes  
2.4. Prepare a cost estimate of the execution of the designed foundations  
2.5. Participate in the review of the foundations design with peers and stakeholders  
2.6. Complete the documentation of the foundations design  
2.7. Monitor and coordinate the progress of other team members involved in the design process  
2.8. Gain design approval |
| 3. Finalise design processes of foundations | 3.1. Ensure filing of design records is completed  
3.2. Complete and submit design cost and other reporting  
3.3. Participate in performance review of the design process  
3.4. Seek client feedback and contribute to the verification of the design  
3.5. Close out all systems |
| 4. Support and review the application of the design of foundations | 4.1. Provide clarification and advice to those applying the design  
4.2. Review the application of the design and |
| recommend changes for the continuous improvements of foundations detailed designs |
| 4.3. Contribute to the validation of the design |

| 4.3. Contribute to the validation of the design |

| 4.3. Contribute to the validation of the design |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete the detailed design and documentation of foundations:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret design briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret geotechnical information
- interpret meteorological data
- interpret cultural and heritage data
- carry out risk assessments
- interpret foundations options selection data
- select of foundations options
- calculate of loads, sheer forces, bending moments, stresses, areas, volumes and mass
- apply strength of materials and statics to the resolution of structural problems
- analyse foundations and design footings
- size of foundations components
- provide leadership and coordination
- choose appropriate construction techniques
- develop and apply design plans
- apply computer aided drafting design (CADD) and drafting technology
- apply industry or government standard design software
- apply engineering graphical presentation techniques
- maintain design cost records
- maintain design records
- provide clarification and advice
- apply client feedback techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete the detailed design
and documentation of foundations:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- cultural and heritage requirements and procedures
- quality management requirements and procedures
- communication requirements and procedures
- Australian and other relevant standards requirements and procedures
- industry and organisational design procedures and practice
- current industry best practice
- foundations design principles
- foundations options
- foundations geometric requirements
- potential hazards, constraints and conditions that may effect foundations design and construction
- trench and pit shoring requirements
- current industry best practice in foundations design and construction
- techniques for choosing preferred options
- team leadership techniques
- operational techniques required for the execution of foundations construction tasks
- foundations materials characteristics
- foundations construction plant and equipment capabilities
- cost estimation techniques
- design review principles and procedures
- documentation requirements
- reporting requirements and procedures
- design approval requirements and procedures
- design records filing requirements and procedures
- performance review requirements and procedures
- systems close out requirements and procedures
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• knowledge of the requirements, procedures and instructions for the completion of the detailed design and documentation of foundations</td>
<td></td>
</tr>
<tr>
<td>• implementation of procedures and techniques for the safe, effective and efficient completion of the detailed design and documentation of foundations</td>
<td></td>
</tr>
<tr>
<td>• the identification of the relevant information and scope of the work required to meet the required outcomes</td>
<td></td>
</tr>
<tr>
<td>• the identification of viable options and the selection of the detailed design and documentation of foundations that best meet the required outcomes</td>
<td></td>
</tr>
<tr>
<td>• working with others to undertake and complete the detailed design and documentation of foundations</td>
<td></td>
</tr>
<tr>
<td>• consistent successful completion of the detailed design and documentation of foundations</td>
<td></td>
</tr>
</tbody>
</table>

#### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those
required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

<table>
<thead>
<tr>
<th>Method of assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:</td>
</tr>
</tbody>
</table>

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the completion of the detailed design and documentation of foundations
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of the detailed design and documentation of foundations that best meet the required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial and documentary evidence of the candidate's:
- working with others to undertake and complete the detailed design and documentation of foundations
- provision of clear and timely required support and advice on the completion of the detailed design and documentation of foundations

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
| | • manufacturer's guidelines and specifications  
| | • Australian standards  
| | • code of practice  
| | • Employment and workplace relations legislation  
| | • Equal Employment Opportunity and Disability Discrimination legislation |

| Confirm may include: | • consultation with the client  
| | • consultation with others within the organisation  
| | • consultation with relevant authorities  
| | • conducting a risk assessment of the existing and potential hazards  
| | • obtaining further site data, including:  
| | • known and potential hazards, constraints and conditions  
| | • cultural and heritage data  
| | • geological data  
| | • geotechnical data  
| | • hydrological data  
| | • survey data  
| | • meteorological data |

| Foundations may include those used for: | • bridges  
| | • jetties and wharves  
| | • sign gantries  
| | • vertical sign supports  
| | • noise barrier supports  
| | • processing plants  
| | • buildings |

| Project requirements and information may include: | • project specifications  
| | • contractual requirements  
| | • client's requirements |
- project site geological data
- project site hydrological data
- project site engineering survey data
- project site cultural and heritage constraints
- existing project design and drawings
- Australian or other relevant standards

**Design plan**

may include:

| human resource requirements |
| design hardware and software |
| coordination requirements |
| scheduling |
| review requirements |
| design process communication and reporting requirements |

**Preferred option**

factors

may include:

| cost |
| site constraints |
| available resources |
| risk assessment of: |
| the existing conditions |
| the application of the design |
| maintainability of the completed works |

**Detailed design**

may include:

| calculations, including: |
| loads |
| sheer forces |
| bending moments |
| stresses |
| construction materials and services quantities |
| construction cost estimates |
| recommended sizing of components |
| recommended concrete strengths |
| recommended reinforcement sizing and location |
| drawings |
| risk assessment of: |
| the existing conditions |
| the application of the design |
| maintainability of the completed works |
| health, safety and environmental requirements |
| contribution to ancillary documentation, which may include: |
| design notes |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete the detailed design and documentation of lighting:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret design briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret meteorological data
- interpret cultural and heritage data
- carry out risk assessments
- interpret lighting options selection data
- determine lighting capacity requirements
- select lighting options
- size lighting components
- provide leadership and coordination
- choose appropriate construction techniques
- develop and apply design plans
- apply computer aided drafting design (CADD) and drafting technology
- apply industry or government standard design software
- apply engineering graphical presentation techniques
- calculate of lighting requirements and power demand and consumption
- maintain design cost records
- maintain design records
- provide clarification and advice
- apply client feedback techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete the detailed design and documentation of lighting:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- cultural and heritage requirements and procedures
- quality management requirements and procedures
- communication requirements and procedures

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the completion of the detailed design and documentation of lighting</td>
</tr>
<tr>
<td></td>
<td>• implementation of procedures and techniques for the safe, effective and efficient completion of the detailed design and documentation of lighting</td>
</tr>
<tr>
<td></td>
<td>• the identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• the identification of viable options and the selection of the detailed design and documentation of lighting that best meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the detailed design and documentation of lighting</td>
</tr>
<tr>
<td></td>
<td>• consistent successful completion of the detailed design and documentation of lighting</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those
required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the completion of the detailed design and documentation of lighting
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of the detailed design and documentation of lighting that best meet the required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial and documentary evidence of the candidate's:
- working with others to undertake and complete the detailed design and documentation of lighting
- provision of clear and timely required support and advice on the detailed design and documentation of lighting

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation | • legislative, organisational and site requirements and procedures  
| may include: | • manufacturer's guidelines and specifications  
| | • Australian standards  
| | • code of practice  
| | • Employment and workplace relations legislation  
| | • Equal Employment Opportunity and Disability Discrimination legislation  

| Confirm | • consultation with the client  
| may include: | • consultation with others within the organisation  
| | • consultation with relevant authorities  
| | • conducting a risk assessment of the existing and potential hazards  
| | • obtaining further site data, including:  
| | • known and potential hazards, constraints and conditions  
| | • cultural and heritage data  
| | • geological data  
| | • geotechnical data  
| | • hydrological data  
| | • survey data  
| | • meteorological data  

| Lighting | • roads,  
| may include its use for: | • bridges  
| | • jetties and wharves  
| | • car parks  
| | • industrial hardstands  
| | • tunnels  
| | • signage  
| | • intermodal facilities  

| Project requirements and information | • project specifications  
| may include: | • contractual requirements

Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIICWD503A Prepare work zone traffic management plan

Modification History
Not applicable.

Unit Descriptor
This unit covers the preparation, documentation and completion of work zone traffic management plans in Civil Construction. It includes the planning for the preparation, undertaking of the preparation, finalisation of the preparation processes and supporting the application of the preparation.

Application of the Unit
This unit requires the identification of plan inputs, production of calculations, drawings, plan options and solutions and specifications required for the implementation of work zone traffic management plan, it does not include the certification of the plan.
This unit is appropriate for those working in a management role or as a technical specialist, preparing and documenting work zone traffic management plans within:

- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to prepare and document work zone traffic management plans:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret traffic management plan briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret meteorological data
- interpret cultural and heritage data
- carry out risk assessments
- interpret traffic analysis data
- determine traffic management plan capacity requirements
- select traffic management plan options
- size traffic management plan components
- provide leadership and coordination
- choose appropriate implementation techniques
- develop and apply design plans
- apply computer based design technology
- apply industry or government standard design software
- apply engineering graphical presentation techniques
- calculate flow rates, level of service, capacities and percentages
- maintain design cost records
- maintain design records
- provide clarification and advice
- apply client feedback techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to prepare and document work zone traffic management plans:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
• occupational health and safety requirements and procedures
• environmental management requirements and procedures
• cultural and heritage requirements and procedures
• quality management requirements and procedures
• communication requirements and procedures
• Australian and other relevant standards requirements and procedures
• industry and organisational design procedures and practice
• principles of road user behaviour
• current industry best practice
• traffic management plan options
• traffic management plan geometric requirements
• potential hazards, constraints and conditions that may affect traffic management plan design and implementation
• current industry best practice in traffic management plan design and implementation
• techniques for choosing preferred options
• team leadership techniques
• operational techniques required for the execution of traffic management plan implementation tasks
• traffic management plan implementation structures capabilities
• cost estimation techniques
• design review principles and procedures
• documentation requirements
• reporting requirements and procedures
• design approval requirements and procedures
• design records filing requirements and procedures
• performance review requirements and procedures
• systems close out requirements and procedures
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for the preparation and documentation of work zone traffic management plans
- implementation of procedures and techniques for the safe, effective and efficient preparation and documentation of work zone traffic management plans
- the identification of the relevant information and scope of the work required to meet the required outcomes
- the identification of viable options and the selection of work zone traffic management plans that best meet the required outcomes
- working with others to undertake and complete the preparation and documentation of work zone traffic management plans
- consistent successful preparation and documentation of work zone traffic management plans

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete the detailed design and documentation of environmental controls:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret design briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret geotechnical information
- interpret environmental controls test results
- interpret meteorological data
- interpret cultural and heritage data
- carry out risk assessments
- interpret environmental controls selection data
- determine environmental controls loadings or capacity requirements
- select environmental controls options
- size environmental controls components
- provide leadership and coordination
- choose appropriate construction techniques
- develop and apply design plans
- apply computer based design technology
- apply industry or government standard design software
- apply engineering graphical presentation techniques
- calculate areas, volumes, flow rates, capacities, densities, mass, percentages and grades
- maintain design cost records
- maintain design records
- provide clarification and advice
- apply client feedback techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete the detailed design.
and documentation of environmental controls:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- cultural and heritage requirements and procedures
- quality management requirements and procedures
- communication requirements and procedures
- Australian and other relevant standards requirements and procedures
- industry and organisational design procedures and practice
- current industry best practice
- environmental controls options
- environmental controls geometric requirements
- environmental controls surfacing requirements
- potential hazards, constraints and conditions that may affect environmental controls design and construction
- current industry best practice in environmental controls design and construction
- techniques for choosing preferred options
- team leadership techniques
- operational techniques required for the execution of environmental controls construction tasks
- environmental controls construction plant and equipment capabilities
- cost estimation techniques
- design review principles and procedures
- documentation requirements
- reporting requirements and procedures
- design approval requirements and procedures
- design records filing requirements and procedures
- performance review requirements and procedures
- systems close out requirements and procedures

|                     | cultural and heritage data |
|                     | geological data |
|                     | geotechnical data |
|                     | hydrological data |
|                     | survey data |
|                     | meteorological data |

| Environmental controls may include: | the layout of: |
|                                   | sediment controls |
|                                   | noise controls |
|                                   | dust controls |
|                                   | visual controls |
| but does not include detailed design of the associated: | surface drainage |
| | | dams |
| | | geotechnical works |
| | | civil structures |

| Project requirements and information may include: | project specifications |
|                                                 | contractual requirements |
### RIICWD504A Prepare detailed design of environmental controls

- client's requirements
- project site geological data
- project site hydrological data
- project site engineering survey data
- project site cultural and heritage constraints
- existing project design and drawings
- Australian or other relevant standards

### Design plan may include:

- human resource requirements
- design hardware and software
- coordination requirements
- scheduling
- review requirements
- design process communication and reporting requirements

### Detailed design may include:

- calculations, including:
  - earthworks volumes
  - construction and landscaping materials and services quantities
  - construction cost estimates
- drawings
- risk assessment of:
  - the existing conditions
  - the application of the design
  - maintainability of the works
- health, safety and environmental requirements
- contribution to ancillary documentation, which may include:
  - design notes
  - construction notes
  - supplementary drawings
  - input to the specifications

### Unit Sector(s)

Civil Works Design

### Competency field

Refer to Unit Sector(s).
Co-requisite units

Not applicable.
RIICWD505A Prepare detailed design of landscaping

Modification History
Not applicable.

Unit Descriptor
This unit covers the completion of the detailed design and documentation of landscaping in Civil Construction. It includes the preparation and planning for the detailed design, undertaking of the detailed design, finalisation of the detailed design processes and supporting the application of the detailed design.

Application of the Unit
This unit requires the identification of design inputs, production of calculations, drawings, design options and solutions and specifications required for the completion of landscaping works, it does not include the certification of the design. This unit is appropriate for those working in a management role or as a technical specialist, for the completion of the detailed design and documentation of landscaping within:

- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete the detailed design and documentation of landscaping:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret design briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret geotechnical information
- interpret environmental controls test results
- interpret meteorological data
- interpret cultural and heritage data
- carry out risk assessments
- interpret landscaping design selection data
- determine landscaping design loadings or capacity requirements
- select landscaping design options
- size landscaping design components
- provide leadership and coordination
- choose appropriate construction techniques
- develop and apply design plans
- apply computer based design technology
- apply industry or government standard design software
- apply engineering graphical presentation techniques
- calculate areas, volumes, flow rates, capacities, densities, mass, percentages and grades
- maintain design cost records
- maintain design records
- provide clarification and advice
- apply client feedback techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete the detailed design...
and documentation of landscaping:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- cultural and heritage requirements and procedures
- quality management requirements and procedures
- communication requirements and procedures
- Australian and other relevant standards requirements and procedures
- industry and organisational design procedures and practice
- current industry best practice
- landscaping options
- landscaping geometric requirements
- landscaping surfacing requirements
- potential hazards, constraints and conditions that may affect landscaping design and construction
- current industry best practice in landscaping design and construction
- techniques for choosing preferred options
- team leadership techniques
- operational techniques required for the execution of landscaping construction tasks
- landscaping construction plant and equipment capabilities
- cost estimation techniques
- design review principles and procedures
- documentation requirements
- reporting requirements and procedures
- design approval requirements and procedures
- design records filing requirements and procedures
- performance review requirements and procedures
- systems close out requirements and procedures
- principles of road user behaviour
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the completion of the detailed design and documentation of landscaping</td>
</tr>
<tr>
<td></td>
<td>• implementation of procedures and techniques for the safe, effective and efficient completion of the detailed design and documentation of landscaping</td>
</tr>
<tr>
<td></td>
<td>• the identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• the identification of viable options and the selection of the detailed design and documentation of landscaping that best meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the detailed design and documentation of landscaping</td>
</tr>
<tr>
<td></td>
<td>• consistent successful completion of the detailed design and documentation of landscaping</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those
<table>
<thead>
<tr>
<th>Method of assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:</td>
</tr>
<tr>
<td>- written and/or oral assessment of the candidate's required knowledge to apply in undertaking the completion of the detailed design and documentation of landscaping</td>
</tr>
<tr>
<td>- observed, documented and/or first hand testimonial evidence of the candidate's:</td>
</tr>
<tr>
<td>- implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes</td>
</tr>
<tr>
<td>- identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td>- identification of viable options and the selection of the detailed design and documentation of landscaping that best meet the required outcomes</td>
</tr>
<tr>
<td>- consistently achieving the required outcomes</td>
</tr>
<tr>
<td>- first hand testimonial and documentary evidence of the candidate's:</td>
</tr>
</tbody>
</table>

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.
<table>
<thead>
<tr>
<th>Guidance information for assessment</th>
<th>Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.</th>
</tr>
</thead>
<tbody>
<tr>
<td>• working with others to undertake and complete the detailed design and documentation of landscaping</td>
<td></td>
</tr>
<tr>
<td>• provision of clear and timely required support and advice on the detailed design and documentation of landscaping</td>
<td></td>
</tr>
</tbody>
</table>
**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisational and site requirements and procedures |
| | manufacturer's guidelines and specifications |
| | Australian standards |
| | code of practice |
| | Employment and workplace relations legislation |
| | Equal Employment Opportunity and Disability Discrimination legislation |

**Confirm may include:**

- consultation with the client
- consultation with others within the organisation
- consultation with relevant authorities
- conducting a risk assessment of the existing and potential hazards
- obtaining further site data, including:
  - known and potential hazards, constraints and conditions
  - cultural and heritage data
  - geological data
  - geotechnical data
  - hydrological data
  - survey data
  - meteorological data

| Project requirements and information may include: | project specifications |
| | contractual requirements |
| | client's requirements |
| | project site geological data |
| | project site hydrological data |
| | project site engineering survey data |
| | project site cultural and heritage constraints |
| | existing project design and drawings |
| | Australian or other relevant standards |

| Landscaping may include: | the layout of the landscaping but does not |
include detailed design of the following:
- vehicle pavements
- vehicle pavement surface treatment
- surface drainage
- subsurface drainage
- underground services
- civil structures
- lighting
- environmental controls

### Design plan
**may include:**
- human resource requirements
- design hardware and software
- coordination requirements
- scheduling
- review requirements
- design process communication and reporting requirements

### Preferred option factors
**may include:**
- cost
- site constraints
- available resources
- risk assessment of:
  - the existing conditions
  - the application of the design
  - maintainability of the completed works

### Detailed design
**may include:**
- calculations, including:
  - earthworks volumes
  - construction and landscaping materials and services quantities
  - construction cost estimates
- drawings
- risk assessment of:
  - the existing conditions
  - the application of the design
  - maintainability of the works
- health, safety and environmental requirements
- contribution to ancillary documentation, which may include:
  - design notes
  - construction notes
  - supplementary drawings
  - input to the specifications

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete the detailed design and documentation of canals:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret design briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret geotechnical information
- interpret environmental controls test results
- interpret meteorological data
- interpret cultural and heritage data
- carry out risk assessments
- interpret canal design selection data
- determine canal design loadings or capacity requirements
- select canal design options
- size canal design components
- provide leadership and coordination
- choose appropriate construction techniques
- develop and apply design plans
- apply computer based design technology
- apply industry or government standard design software
- apply engineering graphical presentation techniques
- calculate areas, volumes, flow rates, capacities, densities, mass, percentages and grades
- maintain design cost records
- maintain design records
- provide clarification and advice
- apply client feedback techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete the detailed design
and documentation of canals:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- cultural and heritage requirements and procedures
- quality management requirements and procedures
- communication requirements and procedures
- Australian and other relevant standards requirements and procedures
- industry and organisational design procedures and practice
- current industry best practice
- canal design options
- canal bank protection options
- canal geometric requirements
- potential hazards, constraints and conditions that may affect canals design and construction
- current industry best practice in canals design and construction
- techniques for choosing preferred options
- team leadership techniques
- operational techniques required for the execution of canals construction tasks
- canal construction plant and equipment capabilities
- cost estimation techniques
- design review principles and procedures
- documentation requirements
- reporting requirements and procedures
- design approval requirements and procedures
- design records filing requirements and procedures
- performance review requirements and procedures
- systems close out requirements and procedures

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete the detailed geotechnical works design and documentation:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret design briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret geotechnical information
- interpret geotechnical works construction materials test results
- interpret meteorological data
- interpret cultural and heritage data
- carry out risk assessments
- interpret geotechnical works selection data
- determine geotechnical works loadings
- select geotechnical works options
- size geotechnical works components
- provide leadership and coordination
- choose appropriate construction techniques
- develop and apply design plans
- apply computer aided drafting design (CADD) and drafting technology
- apply industry or government standard design software
- apply engineering graphical presentation techniques
- calculate areas, volumes, densities, mass, percentages and grades
- maintain design cost records
- maintain design records
- provide clarification and advice
- apply client feedback techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete the detailed geotechnical works design and documentation:
- risk assessment and management requirement and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- cultural and heritage requirements and procedures
- quality management requirements and procedures
- communication requirements and procedures
- Australian and other relevant standards requirements and procedures
- industry and organisational design procedures and practice
- current industry best practice
- geotechnical works options
- geotechnical works geometric requirements
- geotechnical works surfacing requirements

</tr>
</tbody>
</table>

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the completion of the detailed geotechnical works design and documentation
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of detailed geotechnical works design and documentation that best meet the required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial and documentary evidence of the candidate's:
<table>
<thead>
<tr>
<th><strong>Guidance information for assessment</strong></th>
<th>Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.</th>
</tr>
</thead>
<tbody>
<tr>
<td>- working with others to undertake and complete the completion of the detailed geotechnical works design and documentation</td>
<td></td>
</tr>
<tr>
<td>- provision of clear and timely required support and advice on the detailed geotechnical works design and documentation</td>
<td></td>
</tr>
</tbody>
</table>
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>

**Unit Sector(s)**
Civil Works Design
Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIICWD508A Prepare detailed design of rural roads

Modification History
Not applicable.

Unit Descriptor
This unit covers the in Civil Construction. It includes the preparation and planning for the detailed design, undertaking of the detailed design, finalisation of the detailed design processes and supporting the application of the detailed design.

Application of the Unit
This unit requires the identification of design inputs, production of calculations, drawings, design options and solutions and specifications required for the completion of rural roads works, it does not include the certification of the design. This unit is appropriate for those working in a management role or as a technical specialist, for the completion of the detailed design and documentation of rural road layout within:

- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan for the detailed design of rural roads | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Identify and *confirm* the *rural roads project requirements and information* for the completion of the detailed design  
1.3. Prepare a *design plan* which makes best use of the available resources |
| 2. Undertake the detailed design of rural roads | 2.1. Interpret and analyse the relevant data and identify the available viable options for the detailed design of rural roads  
2.2. Interpret and analyse relevant data and recommend the *preferred option* that best meets the required project outcomes  
2.3. Complete the *detailed design* of the rural roads that safely, effectively and efficiently meets the required project outcomes  
2.4. Prepare a cost estimate of the execution of the designed rural roads  
2.5. Participate in the review of the rural roads design with peers and stakeholders  
2.6. Complete the documentation of the rural roads design  
2.7. Monitor and coordinate the progress of other team members involved in the design process  
2.8. Gain design approval |
| 3. Finalise design processes of rural roads | 3.1. Ensure filing of design records is completed  
3.2. Complete and submit design cost and other reporting  
3.3. Participate in performance review of the design process  
3.4. Seek client feedback and contribute to the verification of the design  
3.5. Close out all systems |
| 4. Support and review the application of the design of rural roads | 4.1. Provide clarification and advice to those applying the design  
4.2. Review the application of the design and recommend changes for the continuous improvements of rural roads detailed |
| designs | 4.3. Contribute to the validation of the design |

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• code of practice  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
|---|---|
| Confirm may include: | • consultation with the client  
• consultation with others within the organisation  
• consultation with relevant authorities  
• conducting a risk assessment of the existing and potential hazards  
• obtaining further site data, including:  
  • known and potential hazards, constraints and conditions  
  • cultural and heritage data  
  • geological data  
  • geotechnical data  
  • hydrological data  
  • survey data  
  • meteorological data |
| Rural roads design may include: | • the layout of the roads but does not include detailed design of the following:  
  • pavement  
  • surface treatment  
  • traffic signals  
  • sub-surface drainage  
  • traffic management system  
  • underground services  
  • lighting  
  • environmental controls |
| **Project requirements and information** | • landscaping  
  may include:  
  • project specifications  
  • contractual requirements  
  • client's requirements  
  • project site geological data  
  • project site hydrological data  
  • project site engineering survey data  
  • project site cultural and heritage constraints  
  • existing project design and drawings  
  • Australian or other relevant standards |
|---|---|
| **Design plan** | • human resource requirements  
  may include:  
  • design hardware and software  
  • coordination requirements  
  • scheduling  
  • review requirements  
  • design process communication and reporting requirements |
| **Preferred option factors** | • cost  
  may include:  
  • site constraints  
  • available resources  
  • risk assessment of:  
  • the existing conditions  
  • the application of the design  
  • maintainability of the completed works |
| **Detailed design** | • calculations, including:  
  may include:  
  • earthworks volumes  
  • construction materials and services quantities  
  • construction cost estimates  
  • drawings  
  • risk assessment of:  
  • the existing conditions  
  • the application of the design  
  • maintainability of the completed works

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete the detailed design and documentation of urban road layout:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret design briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret geotechnical information
- interpret urban roads construction materials test results
- interpret meteorological data
- interpret cultural and heritage data
- carry out risk assessments
- interpret urban roads selection data
- determine urban roads capacity requirements
- select urban roads options
- size urban roads components
- provide leadership and coordination
- choose appropriate construction techniques
- develop and apply design plans
- apply computer aided drafting design (CADD) and drafting technology
- apply industry or government standard design software
- apply engineering graphical presentation techniques
- calculate areas, volumes, densities, mass, percentages and grades
- maintain design cost records
- maintain design records
- provide clarification and advice
- apply client feedback techniques

### Required knowledge

 Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete the detailed design and documentation of urban road layout:
- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- cultural and heritage requirements and procedures
- quality management requirements and procedures
- communication requirements and procedures
- Australian and other relevant standards requirements and procedures
- industry and organisational design procedures and practice
- current industry best practice
- urban roads options
- urban roads geometric requirements
- urban roads surfacing requirements
- potential hazards, constraints and conditions that may effect urban roads design and construction
- current industry best practice in urban roads design and construction
- techniques for choosing preferred options
- team leadership techniques
- operational techniques required for the execution of urban roads construction tasks
- urban roads construction plant and equipment capabilities
- cost estimation techniques
- design review principles and procedures
- documentation requirements
- reporting requirements and procedures
- design approval requirements and procedures
- design records filing requirements and procedures
- performance review requirements and procedures
- systems close out requirements and procedures
- principles of road user behaviour
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

RIICWD510A Prepare detailed design of busways

Modification History
Not applicable.

Unit Descriptor
This unit covers the completion of the detailed design and documentation of busway layout in Civil Construction. It includes the preparation and planning for the detailed design, undertaking of the detailed design, finalisation of the detailed design processes and supporting the application of the detailed design.

Application of the Unit
This unit requires the identification of design inputs, production of calculations, drawings, design options and solutions and specifications required for the completion of busways works, it does not include the certification of the design. This unit is appropriate for those working in a management role or as a technical specialist, for the completion of the detailed design and documentation of busway layout within:

- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete the detailed design and documentation of busway layout:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret design briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret geotechnical information
- interpret busways construction materials test results
- interpret meteorological data
- interpret cultural and heritage data
- carry out risk assessments
- interpret busways selection data
- determine busways capacity requirements
- select busways options
- size busways components
- provide leadership and coordination
- choose appropriate construction techniques
- develop and apply design plans
- apply computer aided drafting design (CADD) and drafting technology
- apply industry or government standard design software
- apply engineering graphical presentation techniques
- calculate areas, volumes, densities, mass, percentages and grades
- maintain design cost records
- maintain design records
- provide clarification and advice
- apply client feedback techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete the detailed design and documentation of busway layout:
- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- cultural and heritage requirements and procedures
- quality management requirements and procedures
- communication requirements and procedures
- Australian and other relevant standards requirements and procedures
- industry and organisational design procedures and practice
- current industry best practice
- busways options
- busways geometric requirements
- busways surfacing requirements
- potential hazards, constraints and conditions that may effect busways design and construction
- current industry best practice in busways design and construction
- techniques for choosing preferred options
- team leadership techniques
- operational techniques required for the execution of busways construction tasks
- busways construction plant and equipment capabilities
- cost estimation techniques
- design review principles and procedures
- documentation requirements
- reporting requirements and procedures
- design approval requirements and procedures
- design records filing requirements and procedures
- performance review requirements and procedures
- systems close out requirements and procedures
- principles of road user behaviour
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the completion of the detailed design and documentation of busway layout</td>
</tr>
<tr>
<td></td>
<td>• implementation of procedures and techniques for the safe, effective and efficient completion of the detailed design and documentation of busway layout</td>
</tr>
<tr>
<td></td>
<td>• the identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• the identification of viable options and the selection of the detailed design and documentation of busway layout that best meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the completion of the detailed design and documentation of busway layout</td>
</tr>
<tr>
<td></td>
<td>• consistent successful completion of the detailed design and documentation of busway layout</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those.
<table>
<thead>
<tr>
<th>required on the job.</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.</td>
</tr>
<tr>
<td>• Aboriginal people and other people from a non English speaking background may have second language issues.</td>
</tr>
<tr>
<td>• Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.</td>
</tr>
<tr>
<td>• Where applicable, physical resources should include equipment modified for people with disabilities.</td>
</tr>
<tr>
<td>• Access must be provided to appropriate learning and/or assessment support when required.</td>
</tr>
</tbody>
</table>

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the completion of the detailed design and documentation of busway layout
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of the detailed design and documentation of busway layout that best meet the required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial and documentary evidence of the candidate's:
<table>
<thead>
<tr>
<th>Guidance information for assessment</th>
<th>Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.</th>
</tr>
</thead>
</table>

- working with others to undertake and complete the detailed design and documentation of busway layout
- provision of clear and timely required support and advice on the detailed design and documentation of busway layout
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Confirm may include:
- consultation with the client
- consultation with others within the organisation
- consultation with relevant authorities
- conducting a risk assessment of the existing and potential hazards
- obtaining further site data, including:
  - known and potential hazards, constraints and conditions
  - cultural and heritage data
  - geological data
  - geotechnical data
  - hydrological data
  - survey data
  - meteorological data

### Busway design may include:
- the layout of the busway but does not include detailed design of the following:
  - pavement
  - surface treatment
  - traffic signals
  - sub-surface drainage
  - traffic management systems
  - underground services
  - civil structures
  - lighting

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete the detailed design and documentation of motorway and interchange layouts:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret design briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret geotechnical information
- interpret motorways and interchanges construction materials test results
- interpret meteorological data
- interpret cultural and heritage data
- carry out risk assessments
- interpret motorways and interchanges selection data
- determine motorways and interchanges loadings and capacity requirements
- select motorways and interchanges options
- size motorways and interchanges components
- provide leadership and coordination
- choose appropriate construction techniques
- develop and apply design plans
- apply computer aided drafting design (CADD) and drafting technology
- apply industry or government standard design software
- apply engineering graphical presentation techniques
- calculate areas, volumes, densities, mass, percentages and grades
- maintain design cost records
- maintain design records
- provide clarification and advice
- apply client feedback techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete the detailed design and documentation of motorway and interchange layouts:
- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- cultural and heritage requirements and procedures
- quality management requirements and procedures
- communication requirements and procedures
- Australian and other relevant standards requirements and procedures
- industry and organisational design procedures and practice
- current industry best practice
- motorways and interchanges options
- motorways and interchanges geometric requirements
- motorways and interchanges surfacing requirements
- potential hazards, constraints and conditions that may affect motorways and interchanges design and construction
- current industry best practice in motorways and interchanges design and construction
- techniques for choosing preferred options
- team leadership techniques
- operational techniques required for the execution of motorways and interchanges construction tasks
- motorways and interchanges construction plant and equipment capabilities
- cost estimation techniques
- design review principles and procedures
- documentation requirements
- reporting requirements and procedures
- design approval requirements and procedures
- design records filing requirements and procedures
- performance review requirements and procedures

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the completion of the detailed design and documentation of motorway and interchange layouts
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of detailed design and documentation of motorway and interchange layouts that best meet the required outcomes
<table>
<thead>
<tr>
<th>Guidance information for assessment</th>
<th>Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.</th>
</tr>
</thead>
</table>

- consistently achieving the required outcomes
- first hand testimonial and documentary evidence of the candidate's:
  - working with others to undertake and complete the detailed design and documentation of motorway and interchange layouts
  - provision of clear and timely required support and advice on the detailed design and documentation of motorway and interchange layouts
**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisational and site requirements and procedures |
|                                             | manufacturer's guidelines and specifications |
|                                             | Australian standards |
|                                             | code of practice |
|                                             | Employment and workplace relations legislation |
|                                             | Equal Employment Opportunity and Disability Discrimination legislation |

| Confirm may include: | consultation with the client |
|                     | consultation with others within the organisation |
|                     | consultation with relevant authorities |
|                     | conducting a risk assessment of the existing and potential hazards |
|                     | obtaining further site data, including: |
|                     | known and potential hazards, constraints and conditions |
|                     | cultural and heritage data |
|                     | geological data |
|                     | geotechnical data |
|                     | hydrological data |
|                     | survey data |
|                     | meteorological data |

| Motorways and interchanges design may include: | the layout of the motorways and interchanges but does not include detailed design of the following: |
|                                               | pavement |
|                                               | surface treatment |
|                                               | traffic signals |
|                                               | sub-surface drainage |
|                                               | traffic management systems |
|                                               | underground services |
|                                               | civil structures |
- lighting
- environmental controls
- landscaping

RIICWD513A Prepare detailed design of rail civil infrastructure

Modification History
Not applicable.

Unit Descriptor
This unit covers the completion of the detailed design and documentation of rail civil infrastructure layout in Civil Construction. It includes the preparation and planning for the detailed design, undertaking of the detailed design, finalisation of the detailed design processes and supporting the application of the detailed design.

Application of the Unit
This unit requires the identification of design inputs, production of calculations, drawings, design options and solutions and specifications required for the completion of rail civil infrastructure works, it does not include the certification of the design. This unit is appropriate for those working in a management role or as a technical specialist, for the completion of the detailed design and documentation of rail civil infrastructure layout within:

- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. ### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete the detailed design and documentation of rail civil infrastructure layout:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret design briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret geotechnical information
- interpret rail civil infrastructure construction materials test results
- interpret meteorological data
- interpret cultural and heritage data
- carry out risk assessments
- interpret rail civil infrastructure selection data
- determine rail civil infrastructure capacity requirements
- select rail civil infrastructure options
- size rail civil infrastructure components
- provide leadership and coordination
- choose appropriate construction techniques
- develop and apply design plans
- apply computer aided drafting design (CADD) and drafting technology
- apply industry or government standard design software
- apply engineering graphical presentation techniques
- calculate areas, volumes, densities, mass, percentages and grades
- maintain design cost records
- maintain design records
- provide clarification and advice
- apply client feedback techniques

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete the detailed design and documentation of rail civil infrastructure layout:
- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- cultural and heritage requirements and procedures
- quality management requirements and procedures
- communication requirements and procedures
- Australian and other relevant standards requirements and procedures
- industry and organisational design procedures and practice
- current industry best practice
- rail civil infrastructure options
- rail civil infrastructure geometric requirements
- rail civil infrastructure surfacing requirements
- potential hazards, constraints and conditions that may affect rail civil infrastructure design and construction
- current industry best practice in rail civil infrastructure design and construction
- techniques for choosing preferred options
- team leadership techniques
- operational techniques required for the execution of rail civil infrastructure construction tasks
- rail civil infrastructure construction plant and equipment capabilities
- cost estimation techniques
- design review principles and procedures
- documentation requirements
- reporting requirements and procedures
- design approval requirements and procedures
- design records filing requirements and procedures
- performance review requirements and procedures
- systems close out requirements and procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete the detailed design and documentation of dam layouts:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret design briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret geotechnical information
- interpret dam construction materials test results
- interpret meteorological data
- interpret cultural and heritage data
- carry out risk assessments
- interpret dam options selection data
- determine dam loadings and capacity requirements
- select dam options
- size dam components
- provide leadership and coordination
- choose appropriate construction techniques
- develop and apply design plans
- apply computer aided drafting design (CADD) and drafting technology
- apply industry or government standard design software
- apply engineering graphical presentation techniques
- calculate areas, volumes, flow rates, capacities, densities, mass, percentages and grades
- maintain design cost records
- maintain design records
- provide clarification and advice
- apply client feedback techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete the detailed design
and documentation of dam layouts:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures

</tbody>
</table>
| **Method of assessment** | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the completion of the detailed design and documentation of dam layouts
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of the detailed design and documentation of dam layouts that best meet the required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial and documentary evidence of the candidate's: |

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

Unit Sector(s)
Civil Works Design

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIICWD515A Prepare detailed design of airfield civil works

Modification History
Not applicable.

Unit Descriptor
This unit covers the completion of the detailed design and documentation of airfield civil works layout in Civil Construction. It includes the preparation and planning for the detailed design, undertaking of the detailed design, finalisation of the detailed design processes and supporting the application of the detailed design.

Application of the Unit
This unit requires the identification of design inputs, production of calculations, drawings, design options and solutions and specifications required for the completion of airfield civil works, it does not include the certification of the design. This unit is appropriate for those working in a management role or as a technical specialist, for the completion of the detailed design and documentation of airfield civil works layout within:

- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan for the detailed design of airfield civil works | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Identify and *confirm* the *airfield civil works project requirements and information* for the completion of the detailed design  
1.3. Prepare a *design plan* which makes best use of the available resources and meets the design requirements |
| 2. Undertake the detailed design of airfield civil works | 2.1. Interpret and analyse the relevant data and identify the available viable options for the detailed design of airfield civil works  
2.2. Interpret and analyse relevant data and recommend the *preferred option* that best meets the required project outcomes  
2.3. Complete the *detailed design* of the airfield civil works that safely, effectively and efficiently meets the required project outcomes  
2.4. Prepare a cost estimate of the execution of the designed airfield civil works  
2.5. Participate in the review of the airfield civil works design with peers and stakeholders  
2.6. Complete the documentation of the airfield civil works design  
2.7. Monitor and coordinate the progress of other team members involved in the design process  
2.8. Gain design approval |
| 3. Finalise design processes of airfield civil works | 3.1. Ensure filing of design records is completed  
3.2. Complete and submit design cost and other reporting  
3.3. Participate in performance review of the design process  
3.4. Seek client feedback and contribute to the verification of the design  
3.5. Close out all systems |
| 4. Support and review the application of the design of | 4.1. Provide clarification and advice to those applying the design |
| airfield civil works | 4.2. Review the application of the design and recommend changes for the continuous improvements of airfield civil works detailed designs  
4.3. Contribute to the validation of the design |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete the detailed design and documentation of airfield civil works layout:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret design briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret geotechnical information
- interpret airfield civil works construction materials test results
- interpret meteorological data
- interpret cultural and heritage data
- carry out risk assessments
- interpret airfield civil works layout selection data
- determine airfield civil works capacity requirements
- select airfield civil works layout options
- size airfield civil works components
- provide leadership and coordination
- choose appropriate construction techniques
- develop and apply design plans
- apply computer aided drafting design (CADD) and drafting technology
- apply industry or government standard design software
- apply engineering graphical presentation techniques
- calculate areas, volumes, densities, mass, percentages and grades
- maintain design cost records
- maintain design records
- provide clarification and advice
- apply client feedback techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete the detailed design and documentation of airfield civil works layout:
- risk assessment and management requirements and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- cultural and heritage requirements and procedures
- quality management requirements and procedures
- communication requirements and procedures
- Australian and other relevant standards requirements and procedures
- industry and organisational design procedures and practice
- current industry best practice
- airfield civil works layout options
- airfield civil works geometric requirements
- airfield civil works surfacing requirements
- potential hazards, constraints and conditions that may affect airfield civil works design and construction
- current industry best practice in airfield civil works design and construction
- techniques for choosing preferred options
- team leadership techniques
- operational techniques required for the execution of airfield civil works construction tasks
- airfield civil works construction plant and equipment capabilities
- cost estimation techniques
- design review principles and procedures
- documentation requirements
- reporting requirements and procedures
- design approval requirements and procedures
- design records filing requirements and procedures
- performance review requirements and procedures
- systems close out requirements and procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation
may include:

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Confirm
may include:

- consultation with the client
- consultation with others within the organisation
- consultation with relevant authorities
- conducting a risk assessment of the existing and potential hazards
- obtaining further site data, including:
  - known and potential hazards, constraints and conditions
  - cultural and heritage data
  - geological data
  - geotechnical data
  - hydrological data
  - survey data
  - meteorological data

### Airfield civil works design
may include:

- the layout of the airfield civil works, including:
  - runways
  - taxiways
  - parking areas
  - vehicle roadways
- but does not include detailed design of the following:
  - pavement
  - surface treatment
  - sub-surface drainage
### Project requirements and information

- project specifications
- contractual requirements
- client's requirements
- project site geological data
- project site hydrological data
- project site engineering survey data
- project site cultural and heritage constraints
- existing project design and drawings
- Australian or other relevant standards

### Design plan

- human resource requirements
- design hardware and software
- coordination requirements
- scheduling
- review requirements
- design process communication and reporting requirements

### Preferred option factors

- cost
- site constraints
- available resources
- risk assessment of:
  - the existing conditions
  - the application of the design
  - maintainability of the completed works

### Detailed design

- calculations, including:
  - earthworks volumes
  - construction materials and services quantities
  - construction cost estimates
- drawings
- risk assessment of:
  - the existing conditions
  - the application of the design
  - maintainability of the completed works
- health, safety and environmental requirements
- contribution to ancillary documentation, which may include:

- underground services
- civil structures
- lighting
- environmental controls
- landscaping

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete the detailed design and documentation of bicycle ways:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret design briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret geotechnical information
- interpret bicycle ways construction materials test results
- interpret meteorological data
- interpret cultural and heritage data
- carry out risk assessments
- interpret bicycle ways selection data
- determine bicycle ways capacity requirements
- select bicycle ways options
- size bicycle ways components
- provide leadership and coordination
- choose appropriate construction techniques
- develop and apply design plans
- apply computer aided drafting design (CADD) and drafting technology
- apply industry or government standard design software
- apply engineering graphical presentation techniques
- calculate areas, volumes, densities, mass, percentages and grades
- maintain design cost records
- maintain design records
- provide clarification and advice
- apply client feedback techniques

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete the detailed design and documentation of bicycle ways:
• risk assessment and management requirement and procedures
• statutory compliance requirements and procedures
• occupational health and safety requirements and procedures
• environmental management requirements and procedures
• cultural and heritage requirements and procedures
• quality management requirements and procedures
• communication requirements and procedures
• Australian and other relevant standards requirements and procedures
• industry and organisational design procedures and practice
• current industry best practice
• bicycle ways options
• bicycle ways geometric requirements
• bicycle ways surfacing requirements
• potential hazards, constraints and conditions that may affect bicycle ways design and construction
• current industry best practice in bicycle ways design and construction
• techniques for choosing preferred options
• team leadership techniques
• operational techniques required for the execution of bicycle ways construction tasks
• bicycle ways construction plant and equipment capabilities
• cost estimation techniques
• design review principles and procedures
• documentation requirements
• reporting requirements and procedures
• design approval requirements and procedures
• design records filing requirements and procedures
• performance review requirements and procedures
• systems close out requirements and procedures
• principles of road user behaviour
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for the completion of the detailed design and documentation of bicycle ways
- implementation of procedures and techniques for the safe, effective and efficient completion of the detailed design and documentation of bicycle ways
- the identification of the relevant information and scope of the work required to meet the required outcomes
- the identification of viable options and the selection of the detailed design and documentation of bicycle ways that best meet the required outcomes
- working with others to undertake and complete the detailed design and documentation of bicycle ways
- consistent successful completion of the detailed design and documentation of bicycle ways

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those
<table>
<thead>
<tr>
<th>Method of assessment</th>
<th>Required on the job.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.</td>
</tr>
<tr>
<td></td>
<td>Aboriginal people and other people from a non English speaking background may have second language issues.</td>
</tr>
<tr>
<td></td>
<td>Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.</td>
</tr>
<tr>
<td></td>
<td>Where applicable, physical resources should include equipment modified for people with disabilities.</td>
</tr>
<tr>
<td></td>
<td>Access must be provided to appropriate learning and/or assessment support when required.</td>
</tr>
</tbody>
</table>

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the completion of the detailed design and documentation of bicycle ways
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of the detailed design and documentation of bicycle ways that best meet the required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial and documentary evidence of the candidate's:
- working with others to undertake and complete the detailed design and documentation of bicycle ways
- provision of clear and timely required support and advice on the completion of the detailed design and documentation of bicycle ways

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Confirm** may include:
- consultation with the client
- consultation with others within the organisation
- consultation with relevant authorities
- conducting a risk assessment of the existing and potential hazards
- obtaining further site data, including:
  - known and potential hazards, constraints and conditions
  - cultural and heritage data
  - geological data
  - geotechnical data
  - hydrological data
  - survey data
  - meteorological data

**Bicycle ways design** may include:
- the layout of the bicycle way, but does not include detailed design of the following:
  - pavement
  - surface treatment
  - sub-surface drainage
  - underground services
  - civil structures
  - lighting
  - environmental controls
  - landscaping
## Project requirements and information

**may include:**

- project specifications
- contractual requirements
- client's requirements
- project site geological data
- project site hydrological data
- project site engineering survey data
- project site cultural and heritage constraints
- existing project design and drawings
- Australian or other relevant standards

## Design plan

**may include:**

- human resource requirements
- design hardware and software
- coordination requirements
- scheduling
- review requirements
- design process communication and reporting requirements

## Preferred option factors

**may include:**

- cost
- site constraints
- available resources
- risk assessment of:
  - the existing conditions
  - the application of the design
  - maintainability of the completed works

## Detailed design

**may include:**

- calculations, including:
  - earthworks volumes
  - construction materials and services quantities
  - construction cost estimates
- drawings
- risk assessment of:
  - the existing conditions
  - the application of the design
  - maintainability of the completed works
- health, safety and environmental requirements
- contribution to ancillary documentation, which may include:
  - design notes
  - construction notes
  - supplementary drawings
  - input to the specifications

SkillsDMC
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete the detailed design and documentation of industrial hardstands:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret design briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret geotechnical information
- interpret industrial hardstands construction materials test results
- interpret meteorological data
- interpret cultural and heritage data
- carry out risk assessments
- interpret industrial hardstands selection data
- determine industrial hardstands capacity requirements
- select industrial hardstands options
- size industrial hardstands components
- provide leadership and coordination
- choose appropriate construction techniques
- develop and apply design plans
- apply computer aided drafting design (CADD) and drafting technology
- apply industry or government standard design software
- apply engineering graphical presentation techniques
- calculate areas, volumes, densities, mass, percentages and grades
- maintain design cost records
- maintain design records
- provide clarification and advice
- apply client feedback techniques

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete the detailed design and documentation of industrial hardstands:
- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- cultural and heritage requirements and procedures
- quality management requirements and procedures
- communication requirements and procedures
- Australian and other relevant standards requirements and procedures
- industry and organisational design procedures and practice
- current industry best practice
- industrial hardstands options
- industrial hardstands geometric requirements
- industrial hardstands surfacing requirements
- potential hazards, constraints and conditions that may affect industrial hardstands design and construction
- current industry best practice in industrial hardstands design and construction
- techniques for choosing preferred options
- team leadership techniques
- operational techniques required for the execution of industrial hardstands construction tasks
- industrial hardstands construction plant and equipment capabilities
- cost estimation techniques
- design review principles and procedures
- documentation requirements
- reporting requirements and procedures
- design approval requirements and procedures
- design records filing requirements and procedures
- performance review requirements and procedures
- systems close out requirements and procedures
- principles of road user behaviour
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the completion of the detailed design and documentation of industrial hardstands</td>
</tr>
<tr>
<td></td>
<td>• implementation of procedures and techniques for the safe, effective and efficient completion of the detailed design and documentation of industrial hardstands</td>
</tr>
<tr>
<td></td>
<td>• the identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• the detailed design and documentation of industrial hardstands that best meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the detailed design and documentation of industrial hardstands</td>
</tr>
<tr>
<td></td>
<td>• consistent successful completion of the detailed design and documentation of industrial hardstands</td>
</tr>
</tbody>
</table>

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of
### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the the detailed design and documentation of industrial hardstands
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of detailed design and documentation of industrial hardstands that best meet the required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial and documentary evidence
<table>
<thead>
<tr>
<th>Guideline Information for Assessment</th>
<th>Evidence of the candidate's:</th>
</tr>
</thead>
</table>
| Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. | • working with others to undertake and complete the detailed design and documentation of industrial hardstands  
• provision of clear and timely required support and advice on the completion of the detailed design and documentation of industrial hardstands |
**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• code of practice  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
| Confirm may include: | • consultation with the client  
• consultation with others within the organisation  
• consultation with relevant authorities  
• conducting a risk assessment of the existing and potential hazards  
• obtaining further site data, including:  
  • known and potential hazards, constraints and conditions  
  • cultural and heritage data  
  • geological data  
  • geotechnical data  
  • hydrological data  
  • survey data  
  • meteorological data |
| Industrial hardstands design may include: | • the layout of the industrial hardstands but does not include detailed design of the following:  
  • pavement  
  • surface treatment  
  • traffic signals  
  • sub-surface drainage  
  • traffic management systems  
  • underground services  
  • civil structures  
  • lighting |
### Project requirements and information
**may include:**
- project specifications
- contractual requirements
- client's requirements
- project site geological data
- project site hydrological data
- project site engineering survey data
- project site cultural and heritage constraints
- existing project design and drawings
- Australian or other relevant standards

### Design plan
**may include:**
- human resource requirements
- design hardware and software
- coordination requirements
- scheduling
- review requirements
- design process communication and reporting requirements

### Preferred option factors
**may include:**
- cost
- site constraints
- available resources
- risk assessment of:
  - the existing conditions
  - the application of the design
  - maintainability of the completed works

### Detailed design
**may include:**
- calculations, including:
  - earthworks volumes
  - construction materials and services quantities
  - construction cost estimates
- drawings
- risk assessment of:
  - the existing conditions
  - the application of the design
  - maintainability of the completed works
- health, safety and environmental requirements
- contribution to ancillary documentation, which may include:
  - design notes
  - construction notes

- environmental controls
- landscaping

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete the detailed design and documentation of intermodal facilities civil works:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret design briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret geotechnical information
- interpret intermodal facilities civil works construction materials test results
- interpret meteorological data
- interpret cultural and heritage data
- carry out risk assessments
- interpret intermodal facilities civil works selection data
- determine intermodal facilities civil works capacity requirements
- select intermodal facilities civil works options
- size intermodal facilities civil works components
- provide leadership and coordination
- choose appropriate construction techniques
- develop and apply design plans
- apply computer aided drafting design (CADD) and drafting technology
- apply industry or government standard design software
- apply engineering graphical presentation techniques
- calculate areas, volumes, densities, mass, percentages and grades
- maintain design cost records
- maintain design records
- provide clarification and advice
- apply client feedback techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete the detailed design and documentation of intermodal facilities civil works:
- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- cultural and heritage requirements and procedures
- quality management requirements and procedures
- communication requirements and procedures
- Australian and other relevant standards requirements and procedures
- industry and organisational design procedures and practice
- current industry best practice
- intermodal facilities civil works options
- intermodal facilities civil works geometric requirements
- intermodal facilities civil works surfacing requirements
- potential hazards, constraints and conditions that may affect intermodal facilities civil works design and construction
- current industry best practice in intermodal facilities civil works design and construction
- techniques for choosing preferred options
- team leadership techniques
- operational techniques required for the execution of intermodal facilities civil works construction tasks
- intermodal facilities civil works construction plant and equipment capabilities
- cost estimation techniques
- design review principles and procedures
- documentation requirements
- reporting requirements and procedures
- design approval requirements and procedures
- design records filing requirements and procedures
- performance review requirements and procedures
- systems close out requirements and procedures
- principles of road user behaviour

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.

- The assessment environment should not disadvantage the participant. For example,
language, literacy and numeracy demands of assessment should not be greater than those required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.

- Aboriginal people and other people from a non English speaking background may have second language issues.

- Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.

- Where applicable, physical resources should include equipment modified for people with disabilities.

- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the completion of the detailed design and documentation of intermodal facilities civil works

- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of the detailed design and documentation of intermodal facilities civil works that best meet the required outcomes
  - consistently achieving the required
<table>

# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

## Relevant compliance documentation

<table>
<thead>
<tr>
<th>May include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• legislative, organisational and site requirements and procedures</td>
</tr>
<tr>
<td>• manufacturer's guidelines and specifications</td>
</tr>
<tr>
<td>• Australian standards</td>
</tr>
<tr>
<td>• code of practice</td>
</tr>
<tr>
<td>• Employment and workplace relations legislation</td>

Refer to Unit Sector(s).

Co-requisite units
Not applicable.

- construction notes
- supplementary drawings
- input to the specifications
RIICWD520A Prepare detailed design of rigid pavements

Modification History
Not applicable.

Unit Descriptor
This unit covers the completion of the detailed design and documentation of rigid pavement in Civil Construction. It includes the preparation and planning for the detailed design, undertaking of the detailed design, finalisation of the detailed design processes and supporting the application of the detailed design.

Application of the Unit
This unit requires the identification of design inputs, production of calculations, drawings, design options and solutions and specifications required for the completion of rigid pavement works, it does not include the certification of the design. This unit is appropriate for those working in a management role or as a technical specialist, for the completion of the detailed design and documentation of rigid pavement within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete the detailed design and documentation of rigid pavement:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret design briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret geotechnical information
- interpret rigid pavement construction materials test results
- interpret meteorological data
- carry out risk assessments
- interpret rigid pavement selection data
- select rigid pavement options
- determine rigid pavement loadings requirements
- apply concrete mix design principles
- size rigid pavement components
- choose appropriate construction techniques
- provide leadership and coordination
- develop and apply design plans
- apply computer based design technology
- apply industry or government standard design software
- apply engineering graphical presentation techniques
- calculate areas, volumes, densities, mass, grades, loads and stresses
- maintain design cost records
- maintain design records
- provide clarification and advice
- apply client feedback techniques

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete the detailed design and documentation of rigid pavement:
- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- cultural and heritage requirements and procedures
- quality management requirements and procedures
- communication requirements and procedures
- Australian and other relevant standards requirements and procedures
- industry and organisational design procedures and practice
- current industry best practice
- rigid pavement options
- rigid pavement geometric requirements
- rigid pavement reinforcement requirements
- rigid pavement surfacing requirements
- potential hazards, constraints and conditions that may affect rigid pavement design and construction
- current industry best practice in rigid pavement design and construction
- techniques for choosing preferred options
- team leadership techniques
- operational techniques required for the execution of rigid pavement construction tasks
- rigid pavement construction plant and equipment capabilities
- cost estimation techniques
- design review principles and procedures
- documentation requirements
- reporting requirements and procedures
- design approval requirements and procedures
- design records filing requirements and procedures
- performance review requirements and procedures
- systems close out requirements and procedures
- principles of road user behaviour
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

This unit covers the completion of the design and documentation of stabilised materials mix in Civil Construction. It includes the preparation and planning for the detailed, undertaking of the design, finalisation of the design processes and supporting the application of the design.

Application of the Unit
This unit requires the identification of design inputs, production of calculations, design options and solutions and specifications required for the completion of stabilised materials mix design, it does not include the certification of the design. This unit is appropriate for those working in a management role or as a technical specialist, for the completion of the design and documentation of stabilised materials mix within:

- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>

</table>
| 1. Plan for stabilised materials mix design | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Identify and *confirm* the stabilised materials mix design *project requirements and information* for the completion of the design  
1.3. Prepare a *design plan* which makes best use of the available resources and meets the design requirements |
| 2. Undertake the stabilised materials mix design | 2.1. Interpret and analyse the relevant data and identify the available viable options for the stabilised materials mix design  
2.2. Interpret and analyse relevant data and recommend the *preferred option* that best meets the required project outcomes  
2.3. Complete the stabilised materials mix *design* that safely, effectively and efficiently meets the required project outcomes  
2.4. Prepare a cost estimate of the execution of the designed stabilised materials mix  
2.5. Participate in the review of the stabilised materials mix design with peers and stakeholders  
2.6. Complete the documentation of the stabilised materials mix design  
2.7. Monitor and coordinate the progress of other team members involved in the design process  
2.8. Gain design approval |
| 3. Finalise stabilised materials mix design | 3.1. Ensure filing of design records is completed  
3.2. Complete and submit design cost and other reporting  
3.3. Participate in performance review of the design process  
3.4. Seek client feedback and contribute to the verification of the design  
3.5. Close out all systems |
| 4. Support and review the | 4.1. Provide clarification and advice to those |
application of the stabilised materials mix design

applying the design

4.2. Review the application of the design and recommend changes for the continuous improvements of stabilised materials mix designs

4.3. Contribute to the validation of the design
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
</tr>
<tr>
<td></td>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those</td>
</tr>
</tbody>
</table>
required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the completion of the design and documentation of stabilised materials mix
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of the design and documentation of stabilised materials mix that best meet the required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial and documentary evidence of the candidate's:

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete the design and documentation of asphalt mixes:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret design briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret geotechnical information
- interpret asphalt materials and product test results
- interpret meteorological data
- carry out risk assessments
- interpret asphalt mix selection data
- interpret traffic data
- determine asphalt mix traffic category and loadings requirements
- select of asphalt mix design options
- proportion asphalt mix design components
- provide leadership and coordination
- choosing appropriate operational techniques
- develop and apply design plans
- apply computer based design technology
- apply industry or government standard design software
- apply engineering graphical presentation techniques
- calculate of areas, volumes, density, mass, grades, loads and stresses
- apply mix design procedures, such as marshall and hubbard-field
- maintain design cost records
- maintain design records
- provide clarification and advice
- apply client feedback techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete the design and
documentation of asphalt mixes:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- cultural and heritage requirements and procedures
- quality management requirements and procedures, including materials and product sampling and testing requirements
- asphalt laboratory procedures
- communication requirements and procedures
- Australian and other relevant standards requirements and procedures
- industry and organisational design procedures and practice
- asphalt mix design options
- potential hazards, constraints and conditions that may affect asphalt mix design and construction
- current industry best practice in asphalt mix design and construction
- traffic category application in asphalt mix design
- techniques for choosing preferred options
- team leadership techniques
- operational techniques required for the execution of asphalt construction tasks
- asphalt mix manufacture and construction plant and equipment capabilities
- cost estimation techniques
- design review principles and procedures
- documentation requirements
- reporting requirements and procedures
- design approval requirements and procedures
- design records filing requirements and procedures
- performance review requirements and procedures
- systems close out requirements and procedures
Evidence Guide

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete and documentation of sprayed seal surfacing design:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret design briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret geotechnical information
- interpret sprayed seal surfacing materials test results
- interpret meteorological data
- interpret traffic data
- carry out risk assessments
- interpret sprayed seal surfacing selection data
- determine traffic category to be used in sprayed seal surfacing design
- select sprayed seal surfacing options
- apply binder selection criteria, (including bitumen, bituminous emulsion and polymer modified binders)
- determine binder application rates and aggregate spread rates
- apply requirements for the preparation of pavements for surfacing
- provide leadership and coordination
- develop and apply design plans
- calculate of design traffic volumes, density, mass, grades, loads and stresses
- maintain design cost records
- maintain design records
- provide clarification and advice
- apply client feedback techniques

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete and documentation of sprayed seal surfacing design:
- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- cultural and heritage requirements and procedures
- quality management requirements and procedures
- communication requirements and procedures
- Australian and other relevant standards requirements and procedures
- industry and organisational design procedures and practice
- traffic category application in sprayed seal surfacing designs
- sprayed seal surfacing options
- potential hazards, constraints and conditions that may affect sprayed seal surfacing design and construction
- current industry best practice in sprayed seal surfacing design and construction
- techniques for choosing preferred options
- team leadership techniques
- operational techniques required for the execution of sprayed seal surfacing construction tasks
- sprayed seal surfacing plant and equipment capabilities
- cost estimation techniques
- design review principles and procedures
- documentation requirements
- reporting requirements and procedures
- design approval requirements and procedures
- design records filing requirements and procedures
- performance review requirements and procedures
- systems close out requirements and procedures
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the completion of and documentation of sprayed seal surfacing design</td>
</tr>
<tr>
<td></td>
<td>• implementation of procedures and techniques for the safe, effective and efficient completion of and documentation of sprayed seal surfacing design</td>
</tr>
<tr>
<td></td>
<td>• the identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• the identification of viable options and the selection of sprayed seal surfacing design that best meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the documentation of sprayed seal surfacing design</td>
</tr>
<tr>
<td></td>
<td>• consistent successful completion of and documentation of sprayed seal surfacing design</td>
</tr>
</tbody>
</table>

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those
<table>
<thead>
<tr>
<th>Required on the job.</th>
<th>Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Aboriginal people and other people from a non English speaking background may have second language issues.</td>
</tr>
<tr>
<td></td>
<td>Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.</td>
</tr>
<tr>
<td></td>
<td>Where applicable, physical resources should include equipment modified for people with disabilities.</td>
</tr>
<tr>
<td></td>
<td>Access must be provided to appropriate learning and/or assessment support when required.</td>
</tr>
</tbody>
</table>

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the completion of and documentation of sprayed seal surfacing design
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of sprayed seal surfacing design that best meet the required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial and documentary evidence of the candidate's:
    - working with others to undertake and
<table>

<th>Guidance information for assessment</th>
<th>Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.</th>
</tr>
</thead>
<tbody>
<tr>
<td>complete the documentation of sprayed seal surfacing design</td>
<td>provision of clear and timely required support and advice on the completion of and documentation of sprayed seal surfacing design</td>
</tr>
</tbody>
</table>
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Confirm

- consultation with the client
- consultation with others within the organisation
- consultation with relevant authorities
- conducting a risk assessment of the existing and potential hazards
- obtaining further site data, including:
  - known and potential hazards, constraints and conditions
  - cultural and heritage data
  - traffic data
  - surface texture and condition of existing pavements
  - pavement geometry
  - geological data
  - geotechnical data
  - hydrological data
  - survey data
  - meteorological data

### Sprayed seal surfacing

- bitumen, including multigrade bitumen
- polymer modified binders
- bituminous emulsions
- various aggregate sizes

### Sprayed seal surfacing application

- new installations and maintenance of existing pavements

- recreational facilities
- urban and rural pathways
• maintainability of the completed works
• health, safety and environmental requirements
• contribution to ancillary documentation, which may include:
  • design notes
  • construction notes
  • supplementary drawings
  • input to the specifications

Unit Sector(s)
Civil Works Design

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIICWD525B Select pavement surfacing

Modification History
Not applicable.

Unit Descriptor
This unit covers the completion of the selection and documentation of pavement surfacing in Civil Construction. It includes the preparation and planning for the selection, undertaking of the selection, finalisation of the selection processes and supporting the application of the selection.

Application of the Unit
This unit requires the identification of selection inputs, production of calculations, drawings, selection options and solutions and specifications required for the completion of pavement surfacing works, it does not include the certification of the selection. This unit is appropriate for those working in a management role or as a technical specialist, for the completion of the selection and documentation of pavement surfacing within:

- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>

# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan for the selection of pavement surfacing | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Identify and *confirm* the *pavement surfacing project requirements and information* for the completion of the selection  
1.3. Prepare a *selection plan* which makes best use of the available resources and meets the selection requirements |
| 2. Undertake the selection of pavement surfacing | 2.1. Interpret and analyse the relevant data and identify the available viable options for the selection of pavement surfacing  
2.2. Interpret and analyse relevant data and recommend the *preferred option* that best meets the required project outcomes  
2.3. Complete the *selection* of the pavement surfacing that safely, effectively and efficiently meets the required project outcomes  
2.4. Prepare a cost estimate of the execution of the selected pavement surfacing  
2.5. Participate in the review of the pavement surfacing selection with peers and stakeholders  
2.6. Complete the documentation of the pavement surfacing selection  
2.7. Monitor and coordinate the progress of other team members involved in the selection process  
2.8. Gain selection approval |
| 3. Finalise selection processes of pavement surfacing | 3.1. Ensure filing of selection records is completed  
3.2. Complete and submit selection cost and other reporting  
3.3. Participate in performance review of the selection process  
3.4. Seek client feedback and contribute to the verification of the selection  
3.5. Close out all systems |
| 4. Support and review the | 4.1. Provide clarification and advice to those |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete the selection and documentation of pavement surfacing:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret selection briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret geotechnical information
- interpret pavement surfacing materials and product test results
- interpret meteorological data
- interpret cultural and heritage data
- carry out risk assessments
- interpret pavement surfacing selection data
- determine pavement surfacing loadings and capacity requirements
- select pavement surfacing options
- determine traffic category to be used in pavement surfacing selection and design
- provide leadership and coordination
- choose appropriate construction techniques
- develop and apply selection plans
- calculate of areas, volumes, density, mass, grades, loads and stresses
- maintain selection cost records
- maintain selection records
- provide clarification and advice
- apply client feedback techniques

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete the selection and documentation of pavement surfacing:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- road safety issues, requirements and procedures
- environmental management requirements and procedures
- cultural and heritage requirements and procedures
- community expectations
- quality management requirements and procedures
- communication requirements and procedures
- Australian and other relevant standards requirements and procedures
- industry and organisational selection procedures and practice
- pavement surfacing options and their characteristics
- potential hazards, constraints and conditions that may affect pavement surfacing selection and construction
- current industry best practice in pavement surfacing selection and construction
- techniques for choosing preferred options
- team leadership techniques
- operational techniques required for the execution of pavement surfacing construction tasks
- pavement surfacing construction plant and equipment capabilities
- cost estimation techniques
- selection review principles and procedures
- documentation requirements
- reporting requirements and procedures
- selection approval requirements and procedures
- selection records filing requirements and procedures
- performance review requirements and procedures
- systems close out requirements and procedures
- existing pavement assessment requirements and procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete and document the detailed traffic analysis:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret analysis briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret meteorological data
- carry out risk assessments
- interpret traffic analysis data
- determine traffic capacity requirements
- provide leadership and coordination
- choose appropriate analysis techniques
- develop and apply analysis plans
- apply computer based analysis technology
- apply industry or government standard analysis software
- apply engineering graphical presentation techniques
- calculate of flow rates, level of service, capacities and percentages
- maintain analysis cost records
- maintain analysis records
- provide clarification and advice
- apply client feedback techniques

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete and document the detailed traffic analysis:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- cultural and heritage requirements and procedures
- communication requirements and procedures
- Australian and other relevant standards requirements and procedures
- industry and organisational analysis procedures and practice
- current industry best practice
- traffic analysis options
- potential hazards, constraints and conditions that may affect traffic analysis
- current industry best practice in traffic analysis
- techniques for choosing preferred options
- team leadership techniques
- operational techniques required for the execution of traffic construction tasks
- traffic analysis review principles and procedures
- documentation requirements
- reporting requirements and procedures
- traffic analysis approval requirements and procedures
- traffic analysis records filing requirements and procedures
- performance review requirements and procedures
- systems close out requirements and procedures
- principles of road user behaviour
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Critical aspects for assessment and evidence required to demonstrate competency in this unit</td>
</tr>
</tbody>
</table>

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for the completion and documentation of the detailed traffic analysis
- implementation of procedures and techniques for the safe, effective and efficient completion and documentation of the detailed traffic analysis
- the identification of the relevant information and scope of the work required to meet the required outcomes
- the identification of viable options and the selection of the detailed traffic analysis that best meet the required outcomes
- working with others to undertake and complete the and document the detailed traffic analysis
- consistent successful completion and documentation of the detailed traffic analysis

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
</tr>
</thead>
</table>

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the completion and documentation of the detailed traffic analysis
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of the detailed traffic analysis that best meet the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial and documentary evidence of the candidate's:
  - working with others to undertake and complete the documentation of the detailed traffic analysis
| traffic analysis                                                                 | • provision of clear and timely required support and advice on the completion and documentation of the detailed traffic analysis |
| Guidance information for assessment                                              | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>
<thead>
<tr>
<th>Relevant compliance documentation may include:</th>
</tr>
</thead>

</tr>
</tbody>
</table>
### Analysis plan

- project site cultural and heritage constraints
- existing project design and drawings
- Australian or other relevant standards

### Preferred option factors

- cost
- site constraints
- available resources
- risk assessment of:
  - the existing conditions
  - the application of the analysis
  - maintainability of the completed works

### Detailed traffic analysis

- calculations, including:
  - level of service
  - capacity
- drawings(or sketches)
- risk assessment of:
  - the existing conditions
  - the conduct of the analysis
- health, safety and environmental requirements
- contribution to ancillary documentation, which may include:
  - analysis notes
  - supplementary drawings
  - outcomes and recommendations

---

**Unit Sector(s)**

Civil Works Design

**Competency field**

Refer to Unit Sector(s).
Co-requisite units

Not applicable.
RIICWD527A Prepare detailed design of traffic signals

Modification History
Not applicable.

Unit Descriptor
This unit covers the completion of the detailed design and documentation of traffic signals in Civil Construction. It includes the preparation and planning for the detailed design, undertaking of the detailed design, finalisation of the detailed design processes and supporting the application of the detailed design.

Application of the Unit
This unit requires the identification of design inputs, production of calculations, drawings, design options and solutions and specifications required for the completion of traffic signals works, it does not include the certification of the design. This unit is appropriate for those working in a management role or as a technical specialist, for the completion of the detailed design and documentation of traffic signals within:

- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Plan for the detailed design of traffic signals</td>
<td>1.1. Access, interpret and apply <em>compliance documentation</em> relevant to the work activity &lt;br&gt;1.2. Identify and confirm the <em>traffic signals project requirements and information</em> for the completion of the detailed design &lt;br&gt;1.3. Prepare a <em>design plan</em> which makes best use of the available resources and meets the design requirements</td>
</tr>
<tr>
<td>2. Undertake the detailed design of traffic signals</td>
<td>2.1. Interpret and analyse the relevant data and identify the available viable options for the detailed design of traffic signals &lt;br&gt;2.2. Interpret and analyse relevant data and recommend the <em>preferred option</em> that best meets the required project outcomes &lt;br&gt;2.3. Complete the <em>detailed design</em> of the traffic signals that safely, effectively and efficiently meets the required project outcomes &lt;br&gt;2.4. Prepare a cost estimate of the execution of the designed traffic signals &lt;br&gt;2.5. Participate in the review of the traffic signals design with peers and stakeholders &lt;br&gt;2.6. Complete the documentation of the traffic signals design &lt;br&gt;2.7. Monitor and coordinate the progress of other team members involved in the design process &lt;br&gt;2.8. Gain design approval</td>
</tr>
<tr>
<td>3. Finalise design processes of traffic signals</td>
<td>3.1. Ensure filing of design records is completed &lt;br&gt;3.2. Complete and submit design cost and other reporting &lt;br&gt;3.3. Participate in performance review of the design process &lt;br&gt;3.4. Seek client feedback and contribute to the verification of the design &lt;br&gt;3.5. Close out all systems</td>
</tr>
<tr>
<td>4. Support and review the application of the design of traffic signals</td>
<td>4.1. Provide clarification and advice to those applying the design &lt;br&gt;4.2. Review the application of the design and</td>
</tr>
<tr>
<td></td>
<td>recommend changes for the continuous improvements of traffic signals detailed designs,</td>

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete the detailed design and documentation of traffic signals:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret design briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret meteorological data
- interpret cultural and heritage data
- carry out risk assessments
- interpret traffic signals selection data
- interpret traffic management systems
- determine traffic signals traffic capacity requirements
- select traffic signals options
- size traffic signals components
- provide leadership and coordination
- choose appropriate construction techniques
- develop and apply design plans
- apply computer aided drafting design (CADD) and drafting technology
- apply industry or government standard design software
- apply engineering graphical presentation techniques
- calculate of flow rates, level of service, capacities and percentages
- maintain design cost records
- maintain design records
- provide clarification and advice applying client feedback techniques

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete the detailed design and documentation of traffic signals:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
• occupational health and safety requirements and procedures
• environmental management requirements and procedures
• cultural and heritage requirements and procedures
• quality management requirements and procedures
• communication requirements and procedures
• Australian and other relevant standards requirements and procedures
• industry and organisational design procedures and practice
• current industry best practice
• traffic signals options
• traffic signals geometric requirements
• potential hazards, constraints and conditions that may affect traffic signals design and construction
• current industry best practice in traffic signals design and construction
• techniques for choosing preferred options
• team leadership techniques
• operational techniques required for the execution of traffic signals construction tasks
• traffic signals construction plant and equipment capabilities
• cost estimation techniques
• design review principles and procedures
• documentation requirements
• reporting requirements and procedures
• design approval requirements and procedures
• design records filing requirements and procedures
• performance review requirements and procedures
• systems close out requirements and procedures
• principles of road user behaviour
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the completion of the detailed design and documentation of traffic signals</td>
</tr>
<tr>
<td></td>
<td>• implementation of procedures and techniques for the safe, effective and efficient completion of the detailed design and documentation of traffic signals</td>
</tr>
<tr>
<td></td>
<td>• the identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• the identification of viable options and the selection of traffic signals that best meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the detailed design and documentation of traffic signals</td>
</tr>
<tr>
<td></td>
<td>• consistent successful completion of the detailed design and documentation of traffic signals</td>
</tr>
</tbody>
</table>

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
|                                                  | • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those |
required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

<table>
<thead>
<tr>
<th>Method of assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:</td>
</tr>
<tr>
<td>- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the completion of the detailed design and documentation of traffic signals</td>
</tr>
<tr>
<td>- observed, documented and/or first hand testimonial evidence of the candidate's:</td>
</tr>
<tr>
<td>- implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes</td>
</tr>
<tr>
<td>- identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td>- identification of viable options and the selection of traffic signals that best meet the required outcomes</td>
</tr>
<tr>
<td>- consistently achieving the required outcomes</td>
</tr>
<tr>
<td>- first hand testimonial and documentary evidence of the candidate's:</td>
</tr>
<tr>
<td>- working with others to undertake and</td>
</tr>
<tr>
<td><strong>Guidance information for assessment</strong></td>
</tr>
</tbody>
</table>
**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>
<thead>
<tr>
<th>Relevant compliance documentation may include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• legislative, organisational and site requirements and procedures</td>
</tr>
<tr>
<td>• manufacturer's guidelines and specifications</td>
</tr>
<tr>
<td>• Australian standards</td>
</tr>
<tr>
<td>• code of practice</td>
</tr>
<tr>
<td>• Employment and workplace relations legislation</td>
</tr>
<tr>
<td>• Equal Employment Opportunity and Disability Discrimination legislation</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Confirm may include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• consultation with the client</td>
</tr>
<tr>
<td>• consultation with others within the organisation</td>
</tr>
<tr>
<td>• consultation with relevant authorities</td>
</tr>
<tr>
<td>• conducting a risk assessment of the existing and potential hazards</td>
</tr>
<tr>
<td>• obtaining further site data, including:</td>
</tr>
<tr>
<td>• known and potential hazards, constraints and conditions</td>
</tr>
<tr>
<td>• cultural and heritage data</td>
</tr>
<tr>
<td>• geological data</td>
</tr>
<tr>
