<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan for the detailed design of traffic management systems | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Identify and confirm the *traffic management systems project requirements and information* for the completion of the detailed design  
1.3. Prepare a *design plan* which makes best use of the available resources and meets the design requirements |
| 2. Undertake the detailed design of traffic management systems | 2.1. Interpret and analyse the relevant data and identify the available viable options for the detailed design of traffic management systems  
2.2. Interpret and analyse relevant data and recommend the *preferred option* that best meets the required project outcomes  
2.3. Complete the *detailed design* of the traffic management systems that safely, effectively and efficiently meets the required project outcomes  
2.4. Prepare a cost estimate of the execution of the designed traffic management systems  
2.5. Participate in the review of the traffic management systems design with peers and stakeholders  
2.6. Complete the documentation of the traffic management systems design  
2.7. Monitor and coordinate the progress of other team members involved in the design process  
2.8. Gain design approval |
| 3. Finalise design processes of traffic management systems | 3.1. Ensure filing of design records is completed  
3.2. Complete and submit design cost and other reporting  
3.3. Participate in performance review of the design process  
3.4. Seek client feedback and contribute to the verification of the design  
3.5. Close out all systems |
4. Support and review the application of the design of traffic management systems

| 4.1. Provide clarification and advice to those applying the design |
| 4.2. Review the application of the design and recommend changes for the continuous improvements of traffic management systems detailed designs |
| 4.3. Contribute to the validation of the design |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete the detailed design and documentation of traffic management systems:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret design briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret meteorological data
- interpret cultural and heritage data
- carry out risk assessments
- interpret traffic analysis data
- determine traffic management systems capacity requirements
- select traffic management systems options
- size traffic management systems components
- provide leadership and coordination
- choose appropriate implementation techniques
- develop and apply design plans
- apply computer based design technology
- apply industry or government standard design software
- apply engineering graphical presentation techniques
- calculate of flow rates, level of service, capacities and percentages
- maintain design cost records
- maintain design records
- provide clarification and advice
- apply client feedback techniques

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete the detailed design and documentation of traffic management systems:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
• occupational health and safety requirements and procedures
• environmental management requirements and procedures
• cultural and heritage requirements and procedures
• quality management requirements and procedures
• communication requirements and procedures
• Australian and other relevant standards requirements and procedures
• industry and organisational design procedures and practice
• principles of road user behaviour
• current industry best practice
• traffic management systems options
• traffic management systems geometric requirements
• potential hazards, constraints and conditions that may affect traffic management systems design and implementation
• current industry best practice in traffic management systems design and implementation
• techniques for choosing preferred options
• team leadership techniques
• operational techniques required for the execution of traffic management systems implementation tasks
• traffic management systems implementation structures capabilities
• cost estimation techniques
• design review principles and procedures
• documentation requirements
• reporting requirements and procedures
• design approval requirements and procedures
• design records filing requirements and procedures
• performance review requirements and procedures
• systems close out requirements and procedures
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
</table>

- The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
  - knowledge of the requirements, procedures and instructions for the completion of the detailed design and documentation of traffic management systems
  - implementation of procedures and techniques for the safe, effective and efficient completion of the detailed design and documentation of traffic management systems
  - the identification of the relevant information and scope of the work required to meet the required outcomes
  - the identification of viable options and the selection of traffic management systems that best meet the required outcomes
  - working with others to undertake and complete the detailed design and documentation of traffic management systems
  - consistent successful completion of the detailed design and documentation of traffic management systems

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
</table>

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of

|                                   | but does not include detailed design of the following:         |
|                                   | pavement                                                       |
|                                   | surface treatment                                              |
|                                   | traffic signals                                                |
|                                   | sub-surface drainage                                           |
| **Project requirements and information** may include: | • project specifications  
• contractual requirements  
• client's requirements  
• project site geological data  
• project site hydrological data  
• project site engineering survey data  
• project site cultural and heritage constraints  
• existing project design and drawings  
• Australian or other relevant standards |
| **Design plan** may include: | • human resource requirements  
• design hardware and software  
• coordination requirements  
• scheduling  
• review requirements  
• design process communication and reporting requirements |
| **Preferred option** factors may include: | • cost  
• site constraints  
• available resources  
• risk assessment of:  
  • the existing conditions  
  • the application of the design  
  • maintainability of the completed works |
| **Detailed design** may include: | • calculations, including:  
  • level of service  
  • capacity  
  • construction materials and services quantities  
  • construction cost estimates  
• selection and specification of traffic management structures and systems, including:  
  • roundabouts  
  • mediums  
  • entry and exit lanes  
  • merging lanes |

- underground services  
- civil structures  
- lighting  
- environmental controls  
- landscaping
- traffic barriers
- line marking requirements
- traffic speed limits
- traffic signals
- warning signs
- drawings
- risk assessment of:
  - the existing conditions
  - the application of the design
  - maintainability of the completed works
- health, safety and environmental requirements
- contribution to ancillary documentation, which may include:
  - design notes
  - construction notes
  - supplementary drawings
  - input to the specifications

### Unit Sector(s)
Civil Works Design

### Competency field
Refer to Unit Sector(s).

### Co-requisite units
Not applicable.
RIICWD529A Prepare detailed design of underground services

Modification History
Not applicable.

Unit Descriptor
This unit covers the completion of the detailed design and documentation of underground services in Civil Construction. It includes the preparation and planning for the detailed design, undertaking of the detailed design, finalisation of the detailed design processes and supporting the application of the detailed design.

Application of the Unit
This unit requires the identification of design inputs, production of calculations, drawings, design options and solutions and specifications required for the completion of underground services works, it does not include the certification of the design. This unit is appropriate for those working in a management role or as a technical specialist, for the completion of the detailed design and documentation of underground services within:

- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete the detailed design and documentation of underground services:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret design briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret geotechnical information
- interpret underground services construction materials test results
- interpret meteorological data
- interpret cultural and heritage data
- carry out risk assessments
- interpret underground services options selection data
- determine underground services capacity requirements
- select underground services options
- size underground services components
- provide leadership and coordination
- choose appropriate construction techniques
- develop and apply design plans
- apply computer aided drafting design (CADD) and drafting technology
- apply industry or government standard design software
- apply engineering graphical presentation techniques
- calculate areas, volumes, densities, mass, percentages and grades
- maintain design cost records
- maintain design records
- provide clarification and advice
- apply client feedback techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete the detailed design and documentation of underground services:
- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- cultural and heritage requirements and procedures
- quality management requirements and procedures
- communication requirements and procedures
- Australian and other relevant standards requirements and procedures
- industry and organisational design procedures and practice
- current industry best practice
- underground services options
- underground services geometric requirements
- underground services surfacing requirements
- potential hazards, constraints and conditions that may affect underground services design and construction
- trench and pit shoring requirements
- current industry best practice in underground services design and construction
- techniques for choosing preferred options
- team leadership techniques
- operational techniques required for the execution of underground services construction tasks
- underground services construction plant and equipment capabilities
- cost estimation techniques
- design review principles and procedures
- documentation requirements
- reporting requirements and procedures
- design approval requirements and procedures
- design records filing requirements and procedures
- performance review requirements and procedures
- systems close out requirements and procedures
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of
assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

<table>
<thead>
<tr>
<th>Method of assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:</td>
</tr>
<tr>
<td>- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the completion of the detailed design and documentation of underground services</td>
</tr>
<tr>
<td>- observed, documented and/or first hand testimonial evidence of the candidate's:</td>
</tr>
<tr>
<td>- implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes</td>

|                                   | telecommunication cables                                     |
|                                   | data cables                                                  |
|                                   | power cables                                                 |
|                                   | but does not include detailed design of the following sub-surface drainage works: |
|                                   | stormwater                                                   |
|                                   | sewerage                                                     |
### Project requirements and information

**may include:**
- project specifications
- contractual requirements
- client's requirements
- project site geological data
- project site hydrological data
- project site engineering survey data
- project site cultural and heritage constraints
- existing project design and drawings
- Australian or other relevant standards

### Design plan

**may include:**
- human resource requirements
- design hardware and software
- coordination requirements
- scheduling
- review requirements
- design process communication and reporting requirements

### Preferred option factors

**may include:**
- cost
- site constraints
- available resources
- risk assessment of:
  - the existing conditions
  - the application of the design
  - maintainability of the completed works

### Detailed design

**may include:**
- calculations, including:
  - earthworks volumes
  - construction materials and services quantities
  - construction cost estimates
- drawings
- risk assessment of:
  - the existing conditions
  - the application of the design
  - maintainability of the completed works
- health, safety and environmental requirements
- contribution to ancillary documentation, which may include:
  - design notes
  - construction notes
  - supplementary drawings
  - input to the specifications
Unit Sector(s)
Civil Works Design

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIICWD530A Prepare detailed design of surface drainage

Modification History
Not applicable.

Unit Descriptor
This unit covers the completion of the detailed design and documentation of surface drainage in Civil Construction. It includes the preparation and planning for the detailed design, undertaking of the detailed design, finalisation of the detailed design processes and supporting the application of the detailed design.

Application of the Unit
This unit requires the identification of design inputs, production of calculations, drawings, design options and solutions and specifications required for the completion of surface drainage works, it does not include the certification of the design. This unit is appropriate for those working in a management role or as a technical specialist, for the completion of the detailed design and documentation of surface drainage within:

- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan for the detailed design of surface drainage | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Identify and confirm the *surface drainage project requirements and information* for the completion of the detailed design  
1.3. Prepare a *design plan* which makes best use of the available resources and meets the design requirements |
| 2. Undertake the detailed design of surface drainage | 2.1. Interpret and analyse the relevant data and identify the available viable options for the *detailed design* of surface drainage  
2.2. Interpret and analyse relevant data and recommend the *preferred option* that best meets the required project outcomes  
2.3. Prepare a cost estimate of the execution of the designed surface drainage  
2.4. Participate in the review of the surface drainage design with peers and stakeholders  
2.5. Complete the documentation of the surface drainage design  
2.6. Monitor and coordinate the progress of other team members involved in the design process  
2.7. Gain design approval |
| 3. Finalise design processes of surface drainage | 3.1. Ensure filing of design records is completed  
3.2. Complete and submit design cost and other reporting  
3.3. Participate in performance review of the design process  
3.4. Seek client feedback and contribute to the verification of the design  
3.5. Close out all systems |
| 4. Support and review the application of the design of surface drainage | 4.1. Provide clarification and advice to those applying the design  
4.2. Review the application of the design and recommend changes for the continuous improvements of surface drainage detailed designs  
4.3. Contribute to the validation of the design |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete the detailed design and documentation of surface drainage:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret design briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret meteorological data
- interpret geotechnical information
- interpret cultural and heritage data
- carry out risk assessments
- interpret surface drainage design data
- identify and analyse catchments
- interpret and apply rainfall and runoff data
- estimate surface drainage design flows
- solve channel flow problems
- select of surface drainage options
- provide leadership and coordination
- choose appropriate construction techniques
- develop and apply design plans
- apply computer based design technology
- apply industry or government standard design software
- apply engineering graphical presentation techniques
- calculate of areas, volumes, flow rates, capacities, densities, mass and grades
- maintain design cost records
- maintain design records
- provide clarification and advice
- apply client feedback techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete the detailed design...
and documentation of surface drainage:
- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- cultural and heritage requirements and procedures
- quality management requirements and procedures
- communication requirements and procedures
- Australian and other relevant standards requirements and procedures
- industry and organisational design procedures and practice
- current industry best practice
- surface drainage options
- surface drainage geometric requirements
- surface drainage surfacing requirements
- potential hazards, constraints and conditions that may affect surface drainage design and construction
- current industry best practice in surface drainage design and construction
- techniques for choosing preferred options
- team leadership techniques
- operational techniques required for the execution of surface drainage construction tasks
- surface drainage construction plant and equipment capabilities
- cost estimation techniques
- design review principles and procedures
- documentation requirements
- reporting requirements and procedures
- design approval requirements and procedures
- design records filing requirements and procedures
- performance review requirements and procedures
- systems close out requirements and procedures
- principles of road user behaviour
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>

<td>• consistent successful completion of the detailed design and documentation of surface drainage</td>
</tr>
</tbody>
</table>

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those...
Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.

Aboriginal people and other people from a non English speaking background may have second language issues.

Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.

Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.

<table>
<thead>
<tr>
<th>Method of assessment</th>
</tr>
</thead>
</table>

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the completion of the detailed design and documentation of surface drainage
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of surface drainage that best meet the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial and documentary evidence of the candidate's:
  - working with others to undertake and

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete the detailed design and documentation of subsurface drainage:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret design briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret geotechnical information
- interpret meteorological data
- interpret cultural and heritage data
- carry out risk assessments
- interpret subsurface drainage design data
- identify and analyse catchments
- interpret and apply rainfall and runoff data
- estimate subsurface drainage design flows
- solve pipe flow problems and sizing of subsurface drainage components
- design storm water and sewerage drainage systems
- provide leadership and coordination
- choose appropriate construction techniques
- develop and apply design plans
- apply computer based design technology
- apply industry or government standard design software
- apply engineering graphical presentation techniques
- calculate of areas, volumes, flow rates, capacities, densities, mass and grades
- maintain design cost records
- maintain design records
- provide clarification and advice
- apply client feedback techniques

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete the detailed design
and documentation of subsurface drainage:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- cultural and heritage requirements and procedures
- quality management requirements and procedures
- communication requirements and procedures
- Australian and other relevant standards requirements and procedures
- industry and organisational design procedures and practice
- current industry best practice
- subsurface drainage options
- subsurface drainage geometric requirements
- subsurface drainage surfacing requirements
- potential hazards, constraints and conditions that may affect subsurface drainage design and construction
- trench and pit shoring requirements
- current industry best practice in subsurface drainage design and construction
- techniques for choosing preferred options
- team leadership techniques
- operational techniques required for the execution of subsurface drainage construction tasks
- subsurface drainage construction plant and equipment capabilities
- cost estimation techniques
- design review principles and procedures
- documentation requirements
- reporting requirements and procedures
- design approval requirements and procedures
- design records filing requirements and procedures
- performance review requirements and procedures
- systems close out requirements and procedures
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

| may include:                                                                 |
|----------------------------------------------------------------------------|---|
| legislative, organisational and site requirements and procedures         |
| manufacturer's guidelines and specifications                               |
| Australian standards                                                       |
| code of practice                                                           |
| Employment and workplace relations legislation                             |
| Equal Employment Opportunity and Disability Discrimination legislation    |

### Confirm

| may include:                                                                 |
|----------------------------------------------------------------------------|---|
| consultation with the client                                               |
| consultation with others within the organisation                           |
| consultation with relevant authorities                                      |
| conducting a risk assessment of the existing and potential hazards         |
| obtaining further site data, including:                                    |
| known and potential hazards, constraints and conditions                     |
| cultural and heritage data                                                  |
| geological data                                                             |
| geotechnical data                                                           |
| hydrological data                                                           |
| survey data                                                                 |
| meteorological data                                                         |

### Subsurface drainage

| may include:                                                                 |
|----------------------------------------------------------------------------|---|
| the layout and sizing of:                                                  |
| culverts                                                                    |
| drainage pits                                                               |
| stormwater drainage systems                                                 |
| sewerage drainage systems                                                   |
| subsoil drainage systems                                                    |
| but does not include detailed design of associated civil structures         |

### Project requirements and

| may include:                                                                 |
|----------------------------------------------------------------------------|---|
| project specifications                                                      |
| contractual requirements                                                    |
| **information** may include: | client's requirements  
|                          | project site geological data  
|                          | project site hydrological data  
|                          | project site engineering survey data  
|                          | project site cultural and heritage constraints  
|                          | existing project design and drawings  
|                          | Australian or other relevant standards  |
| **Design plan** may include: | human resource requirements  
|                          | design hardware and software  
|                          | coordination requirements

|                          | contribution to ancillary documentation, which may include:  
|                          | design notes  
|                          | construction notes  
|                          | supplementary drawings  
|                          | input to the specifications  |
Unit Sector(s)
Civil Works Design

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIICWD532A Prepare detailed design of tunnels

Modification History
Not applicable.

Unit Descriptor
This unit covers the completion of the detailed design and documentation of tunnels in Civil Construction. It includes the preparation and planning for the detailed design, undertaking of the detailed design, finalisation of the detailed design processes and supporting the application of the detailed design.

Application of the Unit
This unit requires the identification of design inputs, production of calculations, drawings, design options and solutions and specifications required for the completion of tunnels works, it does not include the certification of the design. This unit is appropriate for those working in a management role or as a technical specialist, for the completion of the detailed design and documentation of tunnels within:

- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan for the detailed design of tunnels | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Identify and confirm the tunnels project requirements and information for the completion of the detailed design  
1.3. Prepare a design plan which makes best use of the available resources and meets the design requirements |
| 2. Undertake the detailed design of tunnels | 2.1. Interpret and analyse the relevant data and identify the available viable options for the detailed design of tunnels  
2.2. Interpret and analyse relevant data and recommend the preferred option that best meets the required project outcomes  
2.3. Complete the detailed design of the tunnels that safely, effectively and efficiently meets the required project outcomes  
2.4. Prepare a cost estimate of the execution of the designed tunnels  
2.5. Participate in the review of the tunnel design with peers and stakeholders  
2.6. Complete the documentation of the tunnel design  
2.7. Monitor and coordinate the progress of other team members involved in the design process  
2.8. Gain design approval |
| 3. Finalise design processes of tunnels | 3.1. Ensure filing of design records is completed  
3.2. Complete and submit design cost and other reporting  
3.3. Participate in performance review of the design process  
3.4. Seek client feedback and contribute to the verification of the design  
3.5. Close out all systems |
| 4. Support and review the application of the design of tunnels | 4.1. Provide clarification and advice to those applying the design  
4.2. Review the application of the design and recommend changes for the continuous |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete the detailed design and documentation of tunnels:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret design briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret geotechnical information
- interpret tunnels construction materials test results
- interpret meteorological data
- interpret cultural and heritage data
- carry out risk assessments
- interpret tunnels option selection data
- determine tunnels loadings and capacity requirements
- select tunnels options
- size tunnels components
- provide leadership and coordination
- choose appropriate construction techniques
- develop and apply design plans
- apply computer aided drafting design (CADD) and drafting technology
- apply industry or government standard design software
- apply engineering graphical presentation techniques
- calculate areas, volumes, densities, mass, percentages and grades
- maintain design cost records
- maintain design records
- provide clarification and advice
- apply client feedback techniques

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete the detailed design and documentation of tunnels:
- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- cultural and heritage requirements and procedures
- quality management requirements and procedures
- communication requirements and procedures
- Australian and other relevant standards requirements and procedures
- industry and organisational design procedures and practice
- current industry best practice
- tunnels options
- tunnels geometric requirements
- potential hazards, constraints and conditions that may affect tunnels design and construction
- trench and pit shoring requirements
- current industry best practice in tunnels design and construction
- techniques for choosing preferred options
- team leadership techniques
- operational techniques required for the execution of tunnels construction tasks
- tunnels construction plant and equipment capabilities
- cost estimation techniques
- design review principles and procedures
- documentation requirements
- reporting requirements and procedures
- design approval requirements and procedures
- design records filing requirements and procedures
- performance review requirements and procedures
- systems close out requirements and procedures
- principles of road user behaviour
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the completion of the detailed design and documentation of tunnels</td>
</tr>
<tr>
<td></td>
<td>• implementation of procedures and techniques for the safe, effective and efficient completion of the detailed design and documentation of tunnels</td>
</tr>
<tr>
<td></td>
<td>• the identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• the identification of viable options and the selection of the detailed design and documentation of tunnels that best meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the detailed design and documentation of tunnels</td>
</tr>
<tr>
<td></td>
<td>• consistent successful completion of the detailed design and documentation of tunnels</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
<td></td>
</tr>
<tr>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those</td>
<td></td>
</tr>
</tbody>
</table>
### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- Written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the completion of the detailed design and documentation of tunnels
- Observed, documented and/or first hand testimonial evidence of the candidate's:
  - Implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - Identification of the relevant information and scope of the work required to meet the required outcomes
  - Identification of viable options and the selection of the detailed design and documentation of tunnels that best meet the required outcomes
  - Consistently achieving the required outcomes
  - First hand testimonial and documentary evidence of the candidate's:
- working with others to undertake and complete the detailed design and documentation of tunnels
- provision of clear and timely required support and advice on the completion of the detailed design and documentation of tunnels

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation**

<table>
<thead>
<tr>
<th>Relevant compliance documentation may include:</th>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete the detailed design and documentation of civil concrete structures:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret design briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret geotechnical information
- interpret meteorological data
- interpret cultural and heritage data
- carry out risk assessments
- interpret civil concrete structures components selection data
- select civil concrete structures component options
- calculate of loads, shear forces, bending moments, stresses, areas, volumes and mass
- size civil concrete structures components
- provide leadership and coordination
- choose appropriate construction techniques
- develop and apply design plans
- apply computer aided drafting design (CADD) and drafting technology
- apply industry or government standard design software
- apply engineering graphical presentation techniques
- maintain design cost records
- maintain design records
- provide clarification and advice
- apply client feedback techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete the detailed design and documentation of civil concrete structures:

- risk assessment and management requirement and procedures

RIICWD534A Prepare detailed design of civil steel structures

Modification History
Not applicable.

Unit Descriptor
This unit covers the completion of the detailed design and documentation of civil steel structures in Civil Construction. It includes the preparation and planning for the detailed design, undertaking of the detailed design, finalisation of the detailed design processes and supporting the application of the detailed design.

Application of the Unit
This unit requires the identification of design inputs, production of calculations, drawings, design options and solutions and specifications required for the completion of civil steel structures works, it does not include the certification of the design. This unit is appropriate for those working in a management role or as a technical specialist, for the completion of the detailed design and documentation of civil steel structures within:

- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete the detailed design and documentation of civil steel structures:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret design briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret geotechnical information
- interpret meteorological data
- interpret cultural and heritage data
- carry out risk assessments
- interpret civil steel structures component selection data
- select civil steel structures component options
- calculate of loads, sheer forces, bending moments, stresses, areas, volumes and mass
- size civil steel structures components
- select civil steel structure joint and fastening options
- provide leadership and coordination
- choose appropriate construction techniques
- develop and apply design plans
- apply computer aided drafting design (CADD) and drafting technology
- apply industry or government standard design software
- apply engineering graphical presentation techniques
- maintain design cost records
- maintain design records
- provide clarification and advice
- apply client feedback techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete the detailed design and documentation of civil steel structures:
- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- cultural and heritage requirements and procedures
- quality management requirements and procedures
- communication requirements and procedures
- Australian and other relevant standards requirements and procedures
- industry and organisational design procedures and practice
- current industry best practice
- civil steel structures design principles
- civil steel structures options
- civil steel structures geometric requirements
- civil steel structures surface treatment requirements
- potential hazards, constraints and conditions that may affect civil steel structures design and construction
- current industry best practice in civil steel structures design and construction
- techniques for choosing preferred options
- team leadership techniques
- operational techniques required for the execution of civil steel structures construction tasks
- civil steel structures construction plant and equipment capabilities
- cost estimation techniques
- design review principles and procedures
- documentation requirements
- reporting requirements and procedures
- design approval requirements and procedures
- design records filing requirements and procedures
- performance review requirements and procedures
- systems close out requirements and procedures
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the completion of the detailed design and documentation of civil steel structures</td>
</tr>
<tr>
<td></td>
<td>• implementation of procedures and techniques for the safe, effective and efficient completion of the detailed design and documentation of civil steel structures</td>
</tr>
<tr>
<td></td>
<td>• the identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• the identification of viable options and the selection of the detailed design and documentation of civil steel structures that best meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the detailed design and documentation of civil steel structures</td>
</tr>
<tr>
<td></td>
<td>• consistent successful completion of the detailed design and documentation of civil steel structures</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
<td></td>
</tr>
<tr>
<td>• The assessment environment should not disadvantage the participant. For example,</td>
<td></td>
</tr>
<tr>
<td><strong>Method of assessment</strong></td>
<td>This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:</td>
</tr>
<tr>
<td>-------------------------</td>
<td>------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td></td>
<td>• written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the completion of the detailed design and documentation of civil steel structures</td>
</tr>
<tr>
<td></td>
<td>• observed, documented and/or first hand testimonial evidence of the candidate's:</td>
</tr>
<tr>
<td></td>
<td>• implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• identification of viable options and the selection of the detailed design and documentation of civil steel structures that best meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistently achieving the required outcomes</td>
</tr>
</tbody>
</table>

language, literacy and numeracy demands of assessment should not be greater than those required on the job. Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.

- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.
| **Guidance information for assessment** | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |

- first hand testimonial and documentary evidence of the candidate's:
  - working with others to undertake and complete the detailed design and documentation of civil steel structures
  - provision of clear and timely required support and advice on the completion of the detailed design and documentation of civil steel structures
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisational and site requirements and procedures |
| | manufacturer's guidelines and specifications |
| | Australian standards |
| | code of practice |
| | Employment and workplace relations legislation |
| | Equal Employment Opportunity and Disability Discrimination legislation |

| Confirm may include: | consultation with the client |
| | consultation with others within the organisation |
| | consultation with relevant authorities |
| | conducting a risk assessment of the existing and potential hazards |
| | obtaining further site data, including: |
| | known and potential hazards, constraints and conditions |
| | cultural and heritage data |
| | geological data |
| | geotechnical data |
| | hydrological data |
| | survey data |
| | meteorological data |

| Civil steel structures may include: | bridges |
| | sign gantries |
| | vertical sign supports |
| | noise barrier supports |
| | guardrails |

| Project requirements and information may include: | project specifications |
| | contractual requirements |
| | client's requirements |
| | project site geological data |
| | project site hydrological data |
- project site engineering survey data
- project site cultural and heritage constraints
- existing project design and drawings
- Australian or other relevant standards

**Design plan**
may include:

- human resource requirements
- design hardware and software
- coordination requirements
- scheduling
- review requirements
- design process communication and reporting requirements

**Preferred option** factors
may include:

- cost
- site constraints
- available resources
- risk assessment of:
  - the existing conditions
  - the application of the design
  - maintainability of the completed works

**Detailed design**
may include:

- calculations, including:
  - loads
  - sheer forces
  - bending moments
  - stresses
  - construction materials and services quantities
  - construction cost estimates
- recommended sizing of components
- recommended concrete strength
- recommended reinforcement sizing and location
- drawings
- risk assessment of:
  - the existing conditions
  - the application of the design
  - maintainability of the completed works
- health, safety and environmental requirements
- contribution to ancillary documentation, which may include:
  - design notes
  - construction notes
  - supplementary drawings
• input to the specifications

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete the detailed design and documentation of civil timber structures:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret design briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret geotechnical information
- interpret meteorological data
- interpret civil timber structures construction materials test results
- interpret cultural and heritage data
- carry out risk assessments
- interpret civil timber structures components selection data
- select civil timber structures options
- calculate of loads, sheer forces, bending moments, stresses, areas, volumes and mass
- size civil timber structures components
- select civil timber structure joint and fastening options
- provide leadership and coordination
- choose appropriate construction techniques
- develop and apply design plans
- apply computer aided drafting design (CADD) and drafting technology
- apply industry or government standard design software
- apply engineering graphical presentation techniques
- maintain design cost records
- maintain design records
- provide clarification and advice
- apply client feedback techniques

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete the detailed design.
and documentation of civil timber structures:
- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- cultural and heritage requirements and procedures
- quality management requirements and procedures
- communication requirements and procedures
- Australian and other relevant standards requirements and procedures
- industry and organisational design procedures and practice
- current industry best practice
- civil timber structures options
- civil timber structures geometric requirements
- civil timber structures surface treatment requirements
- potential hazards, constraints and conditions that may affect civil timber structures design and construction
- current industry best practice in civil timber structures design and construction
- techniques for choosing preferred options
- team leadership techniques
- operational techniques required for the execution of civil timber structures construction tasks
- civil timber structures construction plant and equipment capabilities
- cost estimation techniques
- design review principles and procedures
- documentation requirements
- reporting requirements and procedures
- design approval requirements and procedures
- design records filing requirements and procedures
- performance review requirements and procedures
- systems close out requirements and procedures

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete the detailed design and documentation of civil masonry, crib and gabion structures:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret design briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret geotechnical information
- interpret masonry, crib and gabion structures construction materials test results
- interpret meteorological data
- interpret cultural and heritage data
- carry out risk assessments
- interpret civil masonry, crib and gabion structures options selection data
- select civil masonry, crib and gabion structures options
- calculate areas, volumes, loads, pressures, mass and grades
- size civil masonry, crib and gabion structures components
- provide leadership and coordination
- choose appropriate construction techniques
- develop and apply design plans
- apply computer aided drafting design (CADD) and drafting technology
- apply industry or government standard design software
- apply engineering graphical presentation techniques
- maintain design cost records
- maintain design records
- provide clarification and advice
- apply client feedback techniques

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete the detailed design and documentation of civil masonry, crib and gabion structures:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- cultural and heritage requirements and procedures
- quality management requirements and procedures
- communication requirements and procedures
- Australian and other relevant standards requirements and procedures
- industry and organisational design procedures and practice
- current industry best practice
- civil masonry, crib and gabion structures options
- civil masonry, crib and gabion structures geometric requirements
- civil masonry, crib and gabion structures surfacing requirements
- potential hazards, constraints and conditions that may affect civil masonry, crib and gabion structures design and construction
- current industry best practice in civil masonry, crib and gabion structures design and construction
- techniques for choosing preferred options
- team leadership techniques
- operational techniques required for the execution of civil masonry, crib and gabion structures construction tasks
- civil masonry, crib and gabion structures construction plant and equipment capabilities
- cost estimation techniques
- design review principles and procedures
- documentation requirements
- reporting requirements and procedures
- design approval requirements and procedures
- design records filing requirements and procedures
- performance review requirements and procedures
- systems close out requirements and procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

<table>
<thead>
<tr>
<th>May include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>legislative, organisational and site requirements and procedures</td>
</tr>
<tr>
<td>manufacturer's guidelines and specifications</td>
</tr>
<tr>
<td>Australian standards</td>

- site constraints
- available resources
- risk assessment of:
  - the existing conditions
  - the application of the design
  - maintainability of the completed works
Unit Sector(s)
Civil Works Design

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIICWD537A Prepare detailed design of marine structures civil works

Modification History
Not applicable.

Unit Descriptor
This unit covers the completion of the detailed design and documentation of marine structures civil works in Civil Construction. It includes the preparation and planning for the detailed design, undertaking of the detailed design, finalisation of the detailed design processes and supporting the application of the detailed design.

Application of the Unit
This unit requires the identification of design inputs, production of calculations, drawings, design options and solutions and specifications required for the completion of marine structures civil works, it does not include the certification of the design. This unit is appropriate for those working in a management role or as a technical specialist, for the completion of the detailed design and documentation of marine structures civil works within:

- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>

</thead>
</table>

### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1. Plan for the detailed design of marine structures civil works** | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Identify and *confirm* the *marine structures civil works project requirements and information* for the completion of the detailed design  
1.3. Prepare a *design plan* which makes best use of the available resources and meets the design requirements |
| **2. Undertake the detailed design of marine structures civil works** | 2.1. Interpret and analyse the relevant data and identify the available viable options for the detailed design of marine structures civil works  
2.2. Interpret and analyse relevant data and recommend the *preferred option* that best meets the required project outcomes  
2.3. Complete the *detailed design* of the marine structures civil works that safely, effectively and efficiently meets the required project outcomes  
2.4. Prepare a cost estimate of the execution of the designed marine structures civil works  
2.5. Participate in the review of the marine structures civil works design with peers and stakeholders  
2.6. Complete the documentation of the marine structures civil works design  
2.7. Monitor and coordinate the progress of other team members involved in the design process  
2.8. Gain design approval |
| **3. Finalise design processes of marine structures civil works** | 3.1. Ensure filing of design records is completed  
3.2. Complete and submit design cost and other reporting  
3.3. Participate in performance review of the design process  
3.4. Seek client feedback and contribute to the verification of the design  
3.5. Close out all systems |
4. Support and review the application of the design of marine structures civil works

| 4.1. Provide clarification and advice to those applying the design |
| 4.2. Review the application of the design and recommend changes for the continuous improvements of marine structures civil works detailed designs |
| 4.3. Contribute to the validation of the design |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to complete the detailed design and documentation of marine structures civil works:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret design briefs
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret geotechnical information
- interpret meteorological data
- interpret cultural and heritage data
- carry out risk assessments
- interpret marine structures civil works component selection data
- select marine structures civil works component options
- calculate of loads, sheer forces, bending moments, stresses, areas, volumes and mass
- size marine structures civil works components
- provide leadership and coordination
- choose appropriate construction techniques
- develop and apply design plans
- apply computer aided drafting design (CADD) and drafting technology
- apply industry or government standard design software
- apply engineering graphical presentation techniques
- maintain design cost records
- maintain design records
- provide clarification and advice
- apply client feedback techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to complete the detailed design and documentation of marine structures civil works:

- risk assessment and management requirement and procedures
• statutory compliance requirements and procedures
• occupational health and safety requirements and procedures
• environmental management requirements and procedures
• cultural and heritage requirements and procedures
• quality management requirements and procedures
• communication requirements and procedures
• Australian and other relevant standards requirements and procedures
• industry and organisational design procedures and practice
• current industry best practice
• marine structures civil works design principles
• marine structures civil works options
• marine structures civil works geometric requirements
• potential hazards, constraints and conditions that may affect marine structures civil works design and construction
• current industry best practice in marine structures civil works design and construction
• techniques for choosing preferred options
• team leadership techniques
• operational techniques required for the execution of marine structures civil works construction tasks
• marine structures civil works materials characteristics
• marine structures civil works construction plant and equipment capabilities
• cost estimation techniques
• design review principles and procedures
• documentation requirements
• reporting requirements and procedures
• design approval requirements and procedures
• design records filing requirements and procedures
• performance review requirements and procedures
• systems close out requirements and procedures
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

language, literacy and numeracy demands of assessment should not be greater than those required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the completion of the detailed design and documentation of marine structures civil works
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of the detailed design and documentation of marine structures civil works that best meet the required outcomes
  - consistently achieving the required
### outcomes
- first hand testimonial and documentary evidence of the candidate's:
- working with others to undertake and complete the detailed design and documentation of marine structures civil works
- provision of clear and timely required support and advice on the completion of the detailed design and documentation of marine structures civil works

### Guidance information for assessment
Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

| may include: | • legislative, organisational and site requirements and procedures  
|             | • manufacturer's guidelines and specifications  
|             | • Australian standards  
|             | • code of practice  
|             | • Employment and workplace relations legislation  
|             | • Equal Employment Opportunity and Disability Discrimination legislation |

### Confirm

| may include: | • consultation with the client  
|             | • consultation with others within the organisation  
|             | • consultation with relevant authorities  
|             | • conducting a risk assessment of the existing and potential hazards  
|             | • obtaining further site data, including:  
|             | • known and potential hazards, constraints and conditions  
|             | • cultural and heritage data  
|             | • geological data  
|             | • geotechnical data  
|             | • hydrological data  
|             | • survey data  
|             | • meteorological data |

### Marine structures civil works

| may include: | • jetties, wharves and mariners, including:  
|             | • substructure  
|             | • superstructure  
|             | • concrete, steel and timber components |

### Project requirements and information

| may include: | • project specifications  
|             | • contractual requirements  
|             | • client's requirements  
|             | • project site geological data  
|             | • project site hydrological data  
|             | • project site engineering survey data |
| **Design plan** may include: | • project site cultural and heritage constraints  
  • existing project design and drawings  
  • Australian or other relevant standards |
|-------------------------------|------------------------------------------------------------------------------------------------|
| **Preferred option** factors may include: | • human resource requirements  
  • design hardware and software  
  • coordination requirements  
  • scheduling  
  • review requirements  
  • design process communication and reporting requirements |
| **Detailed design** may include: | • cost  
  • site constraints  
  • available resources  
  • risk assessment of:  
    • the existing conditions  
    • the application of the design  
    • maintainability of the completed works |
| | • calculations, including:  
  • loads  
  • sheer forces  
  • bending moments  
  • stresses  
  • construction materials and services quantities  
  • construction cost estimates  
  • recommended sizing of components  
  • recommended materials  
  • recommended joints and fastening  
  • recommended surface treatment  
  • drawings  
  • risk assessment of:  
    • the existing conditions  
    • the application of the design  
    • maintainability of the completed works  
  • health, safety and environmental requirements  
  • contribution to ancillary documentation, which may include:  
    • design notes  
    • construction notes  
    • supplementary drawings  
    • input to the specifications |
Unit Sector(s)
Civil Works Design

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIICWD601A Manage the civil works design process

Modification History
Not applicable.

Unit Descriptor
This unit covers the management of the civil works design process in Civil Construction. It includes the requirements to interpret and scope design requirements; identify project design options and determine the preferred design option; initiate, monitor and support, the design process; prepare and maintain documentation during the design process; review design to achieve acceptance; and support the application of designs.

Application of the Unit
This unit is appropriate for those working in a management role or as a technical specialist, for the management of the civil works design process within:

- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Interpret and scope civil works design requirements | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Access, interpret and clarify the client's requirements for the *design of civil works*  
1.3. Advise the client on the implications for sustainability and options for an improved environmental outcome in the project  
1.4. Analyse the client requirements for the design criteria to ensure all appropriate specifications are included in the design requirements  
1.5. *Confirm* that all *development and implementation factors* are accounted for in the design requirements  
1.6. Prepare functional specifications applying engineering standards and the design specifications  
1.7. Document and obtain the client's agreement on the criteria for the design |
| 2. Identify civil works project design options and determine the preferred design option | 2.1. Identify innovative approaches to the development of the possible design concept  
2.2. Investigate and analyse the possible design concepts capable of achieving the design requirements  
2.3. Seek advice from appropriate personnel and sources where the concept proposal has non standard engineering requirements or where new technology may apply  
2.4. Collaborate with the client to adapt the design concept to improve the outcomes and overcome problems  
2.5. Advise the client of the likely impacts on the community |
| 3. Initiate, monitor and support the design of civil works | 3.1. Analyse and select resources, processes and systems to develop the design  
3.2. *Arrange design tasks* to meet the agreed outcomes and cost structure  
3.3. Develop and check the design solution using the engineering specification  
3.4. Create (when appropriate) a demonstration |
<p>| | | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
</table>
| 4. | Prepare and maintain documentation during the civil works design process | 4.1. Establish the documentation management process  
4.2. Ensure that the supporting documentation required to implement the design is accurate, concise, complete and clear  
4.3. Ensure that the designed item is identified by agreed design documentation and records  
4.4. Apply the agreed documentation control process when making changes to design  
4.5. Ensure that the documentation for the design remains accurate and current during the design development |
| 5. | Review civil works design to achieve acceptance | 5.1. Review the design to ensure that the client's requirements are met  
5.2. Inform the user of the likely impact on the user's lifestyle  
5.3. Incorporate corrections and make improvements to the design ensuring social responsibilities, such as sustainability are met  
5.4. Review the design with the client to gain documented acceptance |
| 6. | Support the application of civil works designs | 6.1. Prepare and implement plans to verify that completed physical work meets client's requirements  
6.2. Develop periodic test schedules to monitor performance and enable others to take any corrective action necessary  
6.3. Seek feedback from the commissioning process to facilitate corrective actions or improvements  
6.4. Evaluate the performance of the design outcomes in the user's environment using appropriate tools  
6.5. Evaluate community reaction to the design outcome |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to manage the civil works design process:

- apply legislative, organisation and site requirements and procedures
- interpret project plans and drawings
- interpret project specifications
- interpret project design briefs
- interpret Australian and other appropriate standards
- interpret project engineering survey information
- interpret project hydrological data
- interpret meteorological data
- interpret project geotechnical data
- interpret cultural and heritage data
- carry out risk assessments
- provide team leadership and coordination
- apply innovative solutions and new technology
- apply consultative processes
- choose appropriate operational techniques
- develop and apply design plans
- prepare civil works functional specifications
- apply computer aided design (CADD) technology
- apply engineering graphical presentation techniques
- calculate of design costs
- maintain design cost records
- provide clarification and advice
- apply negotiation techniques
- apply client feedback techniques
- apply principles of road user behaviour

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to manage the civil works design process:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- cultural and heritage requirements and procedures
- quality management requirements and procedures
- communication requirements and procedures
- Australian and other relevant standards requirements and procedures
- industry and organisational design procedures and practice
- current industry best practice
- civil works options
- civil works geometric requirements
- civil works surfacing requirements
- potential hazards, constraints and conditions that may affect civil works design and construction
- current industry best practice in civil works design and construction
- techniques for choosing preferred options
- team leadership techniques
- operational techniques required for the execution of civil works construction tasks
- civil works construction plant and equipment capabilities
- cost estimation techniques
- design review principles and procedures
- documentation requirements
- reporting requirements and procedures
- design approval requirements and procedures
- design records filing requirements and procedures
- performance review requirements and procedures
- systems close out requirements and procedures
- principles of road user behaviour
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for the management of the civil works design process
- implementation of procedures and techniques for the safe, effective and efficient completion of the civil works design process
- the identification of the relevant information and scope of the work required to meet the required outcomes
- the identification of viable program options and the selection of programs that best meet the required outcomes
- working with others to undertake and complete the management of the civil works design process
- consistent and timely completion of the civil works design process

Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
• Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
• Aboriginal people and other people from a non English speaking background may have second language issues.
• Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.
• Where applicable, physical resources should include equipment modified for people with disabilities.
• Access must be provided to appropriate learning and/or assessment support when required.

Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
• written and/or oral assessment of the candidate's required knowledge
• observed, documented and/or first hand testimonial evidence of the candidate's:
  • implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  • identification of the relevant information and scope of the work required
  • identification of viable options and the selection of the civil works design process that best meet the required outcomes
  • consistently achieving the required outcomes
• first hand testimonial and documentary evidence of the candidate's:
  • working with others to undertake and complete the civil works design process
  • consistent and timely gaining of approval of civil works designs
  • provision of clear, timely required support

Unit Sector(s)
Civil Works Design

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIICWM401B Supervise civil works

Modification History
Not applicable.

Unit Descriptor
This unit covers the supervision of civil works tasks in Civil Construction. It includes the requirements for planning, preparing, initiating, monitoring, adjusting and reporting of civil works tasks.

Application of the Unit
This is a general civil works supervision unit and specialist units will be required to cover the skills and knowledge in specific areas of civil works. This unit is appropriate for those working in a supervisory role or as a technical specialist, supervising of civil works tasks within:

- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for civil works tasks | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Access and share with team members the *specific task information and requirements* relevant to civil works tasks  
1.3. Prepare a *job plan*, in conjunction with *relevant team members*, which makes best use of the available resources and meets the task requirements |
| 2. Initiate civil works tasks | 2.1. Acquire and make available the necessary *resources* for the safe, effective and efficient conduct of the tasks  
2.2. Issue clear and timely *instructions* to team members and others involved, for the safe, effective and efficient conduct of the tasks  
2.3. *Set out* tasks as required for the effective completion of the task |
| 3. Oversee the execution of tasks | 3.1. *Monitor* the civil works task performance to ensure it achieves the *required outcomes*  
3.2. *Initiate* adjustments to civil works practice or job plan to ensure safe execution of work and achievement of required outcomes  
3.3. Ensure plant equipment and tools maintenance requirements are carried out and recorded |
| 4. Report on the execution of tasks | 4.1. Complete and submit reports as required  
4.2. Recommend changes to improve the safety, efficiency and effectiveness of civil works tasks |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to supervising civil works tasks:

- apply legislative, organisation and site requirements and procedures
- interpret client requirements and procedures
- interpret project contract requirements and procedures
- interpret manufacturer's requirements and procedures
- interpret project site soil and geological data
- identify soil and rock types
- interpret meteorological data
- interpret project site geotechnical data
- interpret project site hydrological data
- interpret project engineering survey information
- interpret project plans and drawings
- interpret project specifications
- interpret material properties and test results
- drainage issues
- choose appropriate operational techniques for the execution of civil works tasks
- choose and assign appropriate plant and equipment for the execution civil works tasks
- calculate quantities for the execution of civil works tasks, including:
  - volumes
  - grades
  - percentages
  - areas
  - resource consumption figures
- determine task resource requirements
- schedule activities and materials delivery
- draft and administer job plans
- implement work zone traffic management plans
- prepare for and conducting of briefings, toolbox and site meeting
- prepare short messages
- prepare and present job reports
- prepare and maintain log books and diaries
- provide team leadership
- assess individuals' performances
apply task performance monitoring skills
interpret civil works test results materials properties and test results
provide recommendations for the improvement of the safe, effective and efficient execution of civil works task
apply set out requirements and procedures
set up and use levelling devices
establish construction offsets
apply supervisory skills
develop workplace relationships
develop individuals and the team
apply inspection requirements and procedures
calculate quantities for the execution of tasks, including:
- volumes
- tonnage required
- grades
- percentages
- areas
- resource consumption figures, including required supply rates

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to supervising civil works tasks:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- work zone traffic management requirements and procedures
- contract management requirements and procedures
- communication requirements and procedures
- administrative requirements and procedures
- procurement requirements and procedures
- plant, equipment and tools maintenance requirements and procedures
- reporting requirements and procedures
- employment requirements and procedures
- workplace relationship requirements and procedures
- organisational and site operational requirements
- relationship between various areas of civil works
- operational techniques required for the execution of civil works construction tasks
- civil works plant and equipment capabilities
- team leadership techniques
- works planning techniques
- civil works monitoring methods
- engineering survey principles
- materials quality and delivery requirements and procedures
- mentoring techniques
- estimating principles
- civil works construction sequencing
- set out requirements and procedures
- road geometry
- drainage requirements
- works planning techniques
- monitoring methods
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>

</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the supervision of civil works tasks</td>
</tr>
<tr>
<td></td>
<td>• implementation of appropriate procedures and techniques for the safe, effective and efficient supervision of civil works tasks</td>
</tr>
<tr>
<td></td>
<td>• working with others to plan, prepare and conduct civil works tasks</td>
</tr>
<tr>
<td></td>
<td>• provision of clear and timely instruction and supervision by the individual of those involved in civil works tasks</td>
</tr>
<tr>
<td></td>
<td>• evidence of the consistent successful supervision of civil works tasks</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Evidence for assessment is best gathered using the outcomes of products and processes in the workplace.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery
environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

|                                             | Equal Employment Opportunity and Disability Discrimination legislation  
| Specific task information and requirements may include: | site geological and geotechnical data, including:  
|                                             | rock types and characteristics  
|                                             | soil types and characteristics  
|                                             | site hydrological data, including:  
|                                             | surface water  
|                                             | ground water  
|                                             | site meteorological data, including:  
|                                             | rainfall  
|                                             | humidity  
|                                             | temperature  
|                                             | wind  
|                                             | site engineering survey data  
|                                             | known and potential site hazards, constraints and conditions  
|                                             | site cultural and heritage information  
|                                             | task specifications  
|                                             | task drawings  
|                                             | sources of materials  
|                                             | types of asphalt  
|                                             | other organisations and contractors involved in the task or related tasks  
|                                             | coordination, timing and budgeting requirements  
| Civil works may include: | road and pavement construction and maintenance, including:  
|                                             | flexible pavement construction  
|                                             | rigid pavement construction  
|                                             | stabilisation of materials  
|                                             | pavement maintenance  
|                                             | bituminous surfacing, including:  
|                                             | asphalt paving and compaction  
|                                             | application of bituminous spray treatment  
|                                             | application of polymer modified binders  
|                                             | selection and use of bituminous emulsions  

### Civil works tasks may include:
- application of slurry surfacing
- pavement profiling, using a profiler
- manufacture and delivery of hot mix asphalt
- manufacture of cold mix
- manufacture of polymer modified binders
- manufacture of bituminous emulsion
- manufacture of slurry surfacing
- civil structures, including:
  - civil concrete structure construction
  - civil steel structure construction
  - civil timber structure construction
  - civil masonry, crib and gabion construction
  - inspection of civil structures
  - maintenance of civil structures
  - tunnel construction
  - demolitions

### Job plan is to include:
- site preparation methods
- extraction methods
- load and haulage methods
- placement methods
- distribution methods
- surface finishing methods
- line, grade and level control methods
- compaction methods
- water application methods
- sediment control methods
- installation of underground services
- human resource requirements
- plant and machinery requirements
- construction materials requirements
- sub-contractor support requirements
- waste disposal requirements
- coordination requirements
- activity scheduling
- materials delivery scheduling
- risk assessment and management requirements
- occupational health and safety requirements
- quality management requirements, including testing scheduling requirements
- traffic management requirements
- environmental requirements
- task monitoring requirements
### Relevant team members may include:
- other members of the organisation’s management team
- suppliers representatives
- sub-contractors representatives
- supervisors or managers of other organisations who are involved in related tasks
- experienced members of the team directly involved in the task

### Resources are to include:
- labour
- plant, equipment and tools
- highway haulage vehicles
- construction materials
- sub-contractor services

### Instructions are to include:
- briefings
- handovers
- work orders
- toolbox meetings
- site meetings

### Set out is to include:
- control lines
- cleared width
- batters
- off-sets

### Monitor is to include:
- ongoing risk assessment
- engineering survey
- sampling and testing
- recording and observation of construction practice
- general supervision

### Required outcomes may include:
- task specifications requirements
- task drawings requirements
- coordination requirements
- activity scheduling requirements
- unit cost requirements
- overall task cost requirements
- waste management requirements

### Initiate is to include:
- written communication
- oral communication
Unit Sector(s)
Civil Works (Management and Supervision)

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIICWM402A Supervise civil works contractors

Modification History
Not applicable.

Unit Descriptor
This unit covers the supervision of civil works contractors in Civil Construction. It includes the requirements for ensuring that the planning, preparing, initiating, monitoring, adjusting and reporting of civil works tasks are carried out by the contractor in accordance with the contract requirements.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, supervising of civil works contractors within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. # Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Ensure appropriate planning and preparation of tasks is carried out | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Access, interpret and clarify the task information and requirements relevant to undertaking specific civil works tasks  
1.3. Ensure the contractor has a job plan available which makes best use of the available resources and meets the task requirements |
| 2. Ensure appropriate initiation of tasks is carried out | 2.1. Confirm that the contractor has the necessary resources available for the safe, effective and efficient conduct of the tasks  
2.2. Ensure the contractor has communicated clear and timely instructions to team members and others involved, for the safe, effective and efficient conduct of the tasks  
2.3. Set out tasks as required for the effective completion of the task |
| 3. Oversee the execution of tasks | 3.1. Monitor civil works contractors' performance to ensure they achieve the required outcomes  
3.2. Initiate adjustments to civil works practice or job plan to ensure safe execution of work and achievement of required outcomes  
3.3. Ensure plant equipment and tools maintenance requirements are carried out and recorded |
| 4. Report on the execution of tasks | 4.1. Complete and submit reports as required  
4.2. Recommend changes to improve the safety, efficiency and effectiveness of the execution of tasks |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to supervise civil works contractors:

- apply legislative, organisation and site requirements and procedures
- interpret project contract and specification requirements and procedures
- interpret project site soil and geological data
- identify soil and rock types
- interpret meteorological data
- identify drainage issues
- interpret material properties and test results, including compaction test results
- interpret project site geotechnical data
- interpret project site hydrological data
- interpret project engineering survey information
- interpret project plans and drawings
- interpret project specifications
- prepare for and conduct briefings, toolbox and site meeting
- prepare short messages
- prepare and present job reports
- prepare and maintain log books and diaries
- provide leadership
- apply performance monitoring skills
- apply set out requirements and procedures
- set up and use levelling devices
- establish construction offsets
- apply supervisory skills
- develop workplace relationships
- apply inspection requirements and procedures
- calculate quantities for the execution of tasks, including:
  - volumes
  - tonnage required
  - grades
  - percentages
  - areas
  - resource consumption figures, including required supply rates
- interpret civil works test results materials properties and test results
Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to supervise civil works contractors:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- work zone traffic management requirements and procedures
- contract management requirements and procedures
- communication requirements and procedures
- administrative requirements and procedures
- civil works plant and equipment capabilities and application
- plant, equipment and tools maintenance requirements and procedures
- operational techniques for the execution of civil works tasks
- civil works task resource requirements and procedures
- activities scheduling requirements and procedures
- materials delivery requirements and procedures
- job plan drafting of and administration requirements and procedures
- reporting requirements and procedures
- workplace relationship requirements and procedures
- organisational, client and site operational requirements
- relationship between various areas of civil works
- team leadership techniques
- works planning techniques
- civil works monitoring methods
- engineering survey principles
- materials quality and delivery requirements and procedures
- mentoring techniques
- estimating principles
- civil works construction sequencing
- set out requirements and procedures
- pavement drainage requirements
- works planning techniques
- monitoring methods
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Overview of assessment | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
| --- | --- |
| Critical aspects for assessment and evidence required to demonstrate competency in this unit | - knowledge of the requirements, procedures and instructions for the supervision of civil works contractors
- implementation of appropriate procedures and techniques for the safe, effective and efficient supervision of civil works contractors
- working with others to plan, prepare and carry out civil works contracts
- provision of clear and timely instruction and supervision by the individual of those involved in the supervision of civil works contractors
- evidence of the consistent successful supervision of civil works contractors |
| Context of and specific resources for assessment | - This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Evidence for assessment is best gathered using the outcomes of products and processes in the workplace.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery |
environment to sensitively accommodate cultural diversity.

- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to plan, prepare and carry out civil works contracts
    - provision of clear and timely instruction and supervision by the individual of those involved in the conduct of the supervision of civil works contractors

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Civil works may include:

- land clearing
- bulk earthworks
- surface drainage construction and maintenance
- subsurface drainage construction and maintenance
- water storage dams construction and maintenance
- tailings dams construction and maintenance
- topsoil management
- rehabilitation works
- road works preparation (including the sub grade)
- pavement construction and maintenance, including:
  - flexible pavements, including:
    - natural pavement materials
    - manufactured pavement materials
- asphalt placement
- spray seal application
- stabilisation
  - rigid pavement
- underground services construction and maintenance
- applying trenchless technology
- construction and maintenance of civil structures
- tunnelling
Civil works tasks may include:
- site preparation methods
- extraction methods
- load and haulage methods
- placement methods
- distribution methods
- surface finishing methods
- line, grade and level control methods
- compaction methods
- water application methods
- sediment control methods

Specific task information and requirements may include:
- site geological and geotechnical data, including:
  - rock types and characteristics
  - soil types and characteristics
- site hydrological data, including:
  - surface water
  - ground water
- site meteorological data, including:
  - rainfall
  - humidity
  - temperature
  - wind
- site engineering survey data
- known and potential site hazards, constraints and conditions
- site cultural and heritage information
- task specifications
- task drawings
- sources of materials
- other organisations and contractors involved in the task or related tasks
- coordination, timing and budgeting requirements

Job plan is to include:
- human resource requirements
- plant and machinery requirements
- construction materials requirements
- sub-contractor support requirements
- waste disposal requirements
- coordination requirements
- activity scheduling
- materials delivery scheduling
- risk assessment and management requirements
- occupational Health And Safety requirements
- quality management requirements, including testing scheduling requirements
- traffic management requirements
- environmental requirements
- task monitoring requirements
- task performance monitoring requirements
- communication requirements
- reporting requirements

**Resources are to include:**

- labour
- plant, equipment and tools
- highway haulage vehicles
- construction materials
- sub-contractor services

**Instructions are to include:**

- briefings
- handovers
- work orders
- toolbox meetings
- site meetings

**Set out is to include:**

- control lines
- cleared width
- batters
- off-sets

**Monitor is to include:**

- ongoing risk assessment
- engineering survey
- sampling and testing
- recording and observation of construction practice
- general supervision

**Required outcomes may include:**

- task specifications requirements
- task drawings requirements
- coordination requirements
- activity scheduling requirements
- unit cost requirements
- overall task cost requirements
- waste management requirements

**Initiate is to include:**

- written communication
- oral communication
Unit Sector(s)
Civil Works (Management and Supervision)

Competency field

Co-requisite units
Not applicable.
RIICWM501A Implement civil construction plan

Modification History
Not applicable.

Unit Descriptor
This unit covers the implementation of civil construction plans in Civil Construction. It includes the requirements to prepare for planning, as well as preparing detailed implementation plans and initiating the implementation; monitoring, adjusting, reporting and supporting the implementation of civil construction plans.

Application of the Unit
The civil construction implementation plan could cover the execution of a specific part of an overall civil works construction plan. It could cover a specific geographic section or a specific class of work (e.g. land clearing) that forms part of a larger project. This unit is appropriate for those working in a management role or as a technical specialist, to implement civil construction plans within:

- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>
</thead>
</table>

---
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for the planning of the implementing of civil construction plans | 1.1. Access, interpret and apply **compliance documentation** relevant to the work activity  
1.2. Access, interpret and clarify the civil construction plan requirements for the **implementation of civil construction plan**  
1.3. **Confirm** the availability and accuracy of the **project information**  
1.4. Prepare the scope of work required for the safe effective and efficient implementation |
| 2. Prepare the detailed plan for the implementation of civil construction | 2.1. Identify the viable available options for the implementation of the specific civil construction  
2.2. Select the preferred option and draft the implementation program in consultation with relevant team members, which makes best use of the available resources and meets the specific civil construction requirements  
2.3. Identify contingency requirements to be allowed for in the execution of the plan  
2.4. **Monitor** and coordinate the progress of other team members involved in the planning process  
2.5. Identify and schedule the resources required for the execution of the implementation plan  
2.6. Identify the key performance indicators to be used in the monitoring and assessment of the project performance  
2.7. Identify and clarify the construction milestones required in the construction plan  
2.8. Prepare an accurate estimate of the cost of execution of the implementation plan in consultation with relevant team members  
2.9. Gain approval of the implementation plan  
2.10. Document the implementation plan |
| 3. Initiate civil construction implementation plans | 3.1. Acquire and make available the necessary resources for the safe, effective and efficient conduct of the plan  
3.2. Issue clear and timely **instructions** to team members and others involved, for the safe, |
| 4. Monitor, adjust and report on the execution of civil construction plans | 4.1. Monitor the civil construction implementation plan performance to ensure it achieves the required outcomes  
4.2. Initiate adjustments to civil construction implementation plan to ensure achievement of required outcomes  
4.3. Provide ongoing clarification and advice to those applying the plan to ensure the successful completion of the project  
4.4. Ensure reports are complete and submit as required  
4.5. Participate in performance review the implementation plan  
4.6. Recommend changes to improve the safety, efficiency and effectiveness of the civil construction implementation plan |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to implement civil construction plans:

- apply legislative, organisation and site requirements and procedures
- interpret project plans and drawings
- interpret project specifications
- interpret project construction briefs
- interpret project engineering survey information
- interpret project hydrological data
- interpret meteorological data
- interpret project geotechnical data
- provide team leadership and coordination
- apply innovative solutions and new technology
- apply consultative processes
- choose appropriate operational techniques
- develop and apply construction plans
- apply project scheduling and resource management technology
- calculate of construction resource quantities and project costs
- maintain construction cost records
- provide clarification and advice
- apply negotiation techniques
- apply feedback techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to implement civil construction plans:

- risk management requirement and procedures
- statutory compliance requirements and procedures
- construction implementation plan development and implementation requirements and procedures
- occupational health and safety requirements and procedures
- environmental requirements and procedures
- quality management requirements and procedures
- communication requirements and procedures
- Australian and other relevant standards
- industry and organisational construction procedures and practice
- civil construction works options
- sources of information on innovation and new technology
- techniques for choosing preferred options
- team leadership techniques
- operational techniques required for the execution of civil construction projects
- civil construction plant and equipment capabilities
- cost estimation techniques
- construction plan review principles and procedures
- construction plan documentation requirements
- construction plan reporting requirements and procedures
- construction plan approval requirements and procedures
- construction plan records filing requirements and procedures
- performance review requirements and procedures
- principles of road user behaviour
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</tbody>
</table>
**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• code of practice  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
|---|---|
| Civil construction may include: | • land clearing  
• bulk earthworks  
• surface drainage works  
• water storage dams construction  
• tailings dams construction  
• topsoil management  
• rehabilitation works  
• road works preparation (including the sub grade)  
• pavement construction, including:  
  • flexible pavements, including:  
  • natural pavement materials  
  • manufactured pavement materials  
• asphalt placement  
• spray seal application  
• stabilisation  
  • rigid pavement construction  
• underground services construction  
• construction of civil structures  
• tunnelling  
• dredging |
| Implementation of civil construction plan may include: | • risk management requirements and procedures  
• statutory compliance requirements and procedures  
• occupational health and safety requirements |
and procedures
• environmental management requirements and procedures
• quality requirements and procedures
• inspection and testing requirements and procedures
• communication and consultation requirements and procedures
• community relations requirements and procedures
• traffic management requirements and procedures
• training requirements and procedures
• allocation of responsibilities
• position descriptions
• administration requirements and procedures, including records and reporting
• operational techniques required for the execution of civil construction projects
• cost management requirements and procedures
• client liaison requirements and procedures
• construction plan review requirements and procedures
• construction plan documentation requirements and procedures
• construction plan reporting requirements and procedures
• implementation plan approval requirements and procedures
• construction plan records filing requirements and procedures
• performance review requirements and procedures
• scheduling requirements and procedures
• resource requirements and procedures
• production rates requirements and procedures
• coordination requirements and procedures
• review requirements
• communication and reporting requirements
• drawings
• ancillary documentation, which may include:
  • construction notes
  • construction notes
| Confirm may include: | • consultation with the client  
• consultation with others within the organisation  
• obtaining further site data, including:  
  • geological data  
  • survey data  
  • hydrological data  
  • meteorological data |
|---|---|
| Project information may include: | • project designs  
• project specifications  
• project site geological data  
• project site hydrological data  
• project site engineering survey data  
• project site meteorological data  
• project site environmental requirements  
• community considerations  
• heritage issues  
• impact assessment information  
• available resources  
• existing project drawings  
• relevant Australian or other standards |

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to implement civil works maintenance programs:

- apply legislative, organisation and site requirements and procedures
- interpret project plans and drawings
- interpret project specifications
- interpret project maintenance works briefs
- interpret project engineering survey information
- interpret project hydrological data
- interpret meteorological data
- interpret project geotechnical data
- schedule of inspection programs
- interpret of inspection data
- classify the levels of the serviceability of assets
- prioritise maintenance works
- provide team leadership and coordination
- apply innovative solutions and new technology
- apply consultative processes
- choose appropriate maintenance operational techniques
- develop and apply works maintenance programs
- apply project scheduling and resource management technology
- calculate of maintenance works resource quantities and project costs
- maintain maintenance works cost records
- provide clarification and advice
- apply negotiation techniques
- apply feedback techniques

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to implement civil works maintenance programs:

- risk management requirement and procedures
- statutory compliance requirements and procedures
- maintenance works implementation plan development and implementation requirements and procedures
- occupational health and safety requirements and procedures
- environmental requirements and procedures
- quality management requirements and procedures
- communication requirements and procedures
- Australian and other relevant standards
- inspection program scheduling requirements and procedures
- inspection data interpreting requirements and procedures
- asset condition classification requirements and procedures
- maintenance works prioritisation requirements and procedures
- industry and organisational maintenance works procedures and practice
- civil works maintenance options
- sources of information on innovation and new technology
- techniques for choosing preferred options
- team leadership techniques
- operational techniques required for the execution of civil works maintenance projects
- civil works maintenance plant and equipment capabilities
- cost estimation techniques
- maintenance program review principles and procedures
- maintenance program documentation requirements
- maintenance program reporting requirements and procedures
- maintenance program approval requirements and procedures
- maintenance program records filing requirements and procedures
- performance review requirements and procedures
- principles of road user behaviour
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan for the civil works bills of quantities | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Identify and confirm the civil works *project requirements and information* required for the preparation of the cost estimate  
1.3. Review and confirm the draft works program that details the various tasks or activities to be undertaken to complete the required *civil works*  
1.4. Confirm agreement on the draft works program |
| 2. Confirm bills of quantities | 2.1. Review and confirm the on-site labour bill of quantities for the civil works project  
2.2. Review and confirm the materials bill of quantities for the civil works project  
2.3. Review and confirm the sub-contractor services bill of quantities for the civil works project |
| 3. Confirm the schedule of rates | 3.1. Review and confirm the on-site labour bill of quantities for the civil works project  
3.2. Review and confirm the materials bill of quantities  
3.3. Review and confirm the sub-contractor services bill of quantities |
| 4. Develop and gain agreement on the estimated cost of the civil works project | 4.1. Apply the appropriate confirmed schedule of rates to the confirmed bill of quantities and estimate the civil works project cost  
4.2. Gain approval of the civil works cost estimate  
4.3. Complete and submit the documentation of the civil works cost estimate |
| 5. Support and review the application of the cost estimate | 5.1. Provide clarification and advice to those applying the cost estimate  
5.2. Review the application of the cost estimate and recommend changes for the continuous improvements of civil works cost estimate preparation processes |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to prepare civil works cost estimates:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret geotechnical information
- interpret civil works construction materials test results
- interpret meteorological data
- interpret cultural and heritage data
- carry out risk assessments
- interpret civil works options selection data
- select civil works options
- size civil works components
- chose appropriate construction techniques
- calculate areas, volumes, labour hours, materials quantities, sub-contractor service capabilities, productivity and required hours
- apply computer based works planning technology
- maintain cost records
- provide clarification and advice
- apply client feedback techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to prepare civil works cost estimates:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- cultural and heritage requirements and procedures
- quality management requirements and procedures

# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the preparation of civil works cost estimates</td>
</tr>
<tr>
<td></td>
<td>• implementation of procedures and techniques for the safe, effective and efficient preparation of civil works cost estimates</td>
</tr>
<tr>
<td></td>
<td>• the identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• the identification of viable options and the selection of civil works cost estimates that best meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the preparation of civil works cost estimates</td>
</tr>
<tr>
<td></td>
<td>• consistent successful preparation of civil works cost estimates</td>
</tr>
</tbody>
</table>

## Context of and specific resources for assessment

| | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
| | • Evidence for assessment is best gathered using the outcomes of products and processes of the workplace. |
| | • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of |
assessment should not be greater than those required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the preparation of civil works cost estimates
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of civil works cost estimates that best meet the required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial and documentary evidence of the candidate's:
<table>
<thead>
<tr>
<th>Guidance information for assessment</th>
<th>Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.</th>
</tr>
</thead>
</table>

- working with others to undertake and complete the preparation of civil works cost estimates
- provision of clear and timely required support and advice on the preparation of civil works cost estimates
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• code of practice  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
|---|---|
| Confirm may include: | • consultation with the client (internal and external)  
• consultation with others within the organisation  
• consultation with relevant authorities  
• conducting a risk assessment of the existing and potential hazards  
• review and confirmation of bills of materials data  
• review and confirmation of the schedule of rates data  
• obtaining further site data, including:  
  • known and potential hazards, constraints and conditions  
  • cultural and heritage data  
  • geological data  
  • survey data  
  • hydrological data  
  • meteorological data |
| Project requirements and information may include: | • project specifications  
• contractual requirements  
• client's requirements  
• project site geological data  
• project site hydrological data  
• project site engineering survey data  
• project site cultural and heritage constraints  
• existing project design and drawings |
Civil works may include:

- Australian or other relevant standards
- land clearing
- bulk earthworks
- surface drainage works
- water storage dams construction
- tailings dams construction
- topsoil management
- rehabilitation works
- road works preparation (including the sub grade)
- pavement construction, including:
  - flexible pavements, including:
  - natural pavement materials
  - manufactured pavement materials
- asphalt placement
- spray seal application
- stabilisation
  - rigid pavement construction
- underground services construction
- construction of civil structures
- tunnelling
- dredging

**Unit Sector(s)**
Civil Works (Management and Supervision)

**Competency field**
Refer to Unit Sector(s).

**Co-requisite units**
Not applicable.
RIICWM504A Prepare civil works bill of quantities

Modification History
Not applicable.

Unit Descriptor
This unit covers the preparation of civil works bills of quantities in Civil Construction. It includes planning for the civil works bills of quantities process, identifying and calculating the on-site labour, materials and on-site sub-contractor service requirements, the finalising of the civil works bills of quantities process and supporting and reviewing the application of the bill of quantities.

Application of the Unit
This unit is appropriate for those working in a management role or as a technical specialist, for the preparation of a civil works bills of quantities within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>
<thead>

</tr>
</thead>
</table>
| 1. Plan for the civil works bills of quantities | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Identify and confirm the civil works *project requirements and information* for the preparation of a *civil works* bill of quantities  
1.3. Prepare a draft works program that details the various tasks or activities to be undertaken to complete the required civil works  
1.4. Gain agreement on the draft works program |
| 2. Identify and calculate on-site labour requirements | 2.1. Interpret and analyse the relevant data and identify the types and numbers of on-site labour required to undertake each task  
2.2. Analyse and identify the total number of on-site labour required at each stage and overall to safely, effectively and efficiently meets the required project outcomes  
2.3. Complete the documentation of the stage by stage and overall labour requirements |
| 3. Identify and calculate materials requirements | 3.1. Interpret and analyse the relevant data and identify the types and quantities of materials required to undertake each task in the agreed draft works program  
3.2. Analyse and identify the total quantity of materials required to safely, effectively and efficiently meets the required project outcomes  
3.3. Complete the documentation of the total materials requirements |
| 4. Identify and calculate the on-site sub-contractor service requirements | 4.1. Interpret and analyse the relevant data and identify the types and numbers on-site sub-contractor services required to undertake each task  
4.2. Analyse and identify the number of on-site sub-contractor services required to undertake each stage of the works  
4.3. Complete the documentation of the stage by stage and overall on-site subcontractor services requirements |
| 5. Finalise civil works bills of quantities process | 5.1. Ensure filing of bill of quantities is completed  
5.2. Complete and submit bill of quantities and other reporting  
5.3. Gain approval of the bill of quantities |
|------------------------------------------------|----------------------------------------------------------------------------------|
| 6. Support and review the application of the bill of quantities | 6.1. Provide clarification and advice to those applying the bill of quantities  
6.2. Review the application of the bill of quantities and recommend changes for the continuous improvements of civil works bill of quantities preparation processes |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to prepare a civil works bills of quantities:

- apply legislative, organisation and site requirements and procedures
- interpret plans and drawings
- interpret specifications
- interpret Australian and other appropriate standards
- interpret engineering survey information
- interpret hydrological data
- interpret geotechnical information
- interpret civil works construction materials test results
- interpret meteorological data
- interpret cultural and heritage data
- carry out risk assessments
- interpret civil works options selection data
- select civil works options
- size civil works components
- choose appropriate construction techniques
- calculate areas, volumes, labour hours, materials quantities, sub-contractor service capabilities, productivity and required hours
- apply computer based works planning technology
- maintain cost records
- provide clarification and advice
- apply client feedback techniques

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to prepare a civil works bills of quantities:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational Health and Safety requirements and procedures
- environmental management requirements and procedures
- cultural and heritage requirements and procedures
- quality management requirements and procedures
- communication requirements and procedures
- Australian and other relevant standards requirements and procedures
- industry and organisational construction procedures and practice
- current industry best practice
- civil works options
- potential hazards, constraints and conditions that may affect civil works construction
- current industry best practice in civil works construction
- techniques for choosing preferred options
- operational techniques required for the execution of civil works construction tasks
- civil works construction plant and equipment capabilities
- labour, materials and sub-contractor services estimation techniques
- bill of quantities review principles and procedures
- documentation requirements
- reporting requirements and procedures
- bills of quantities approval requirements and procedures
- bills of quantities records filing requirements and procedures

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the preparation of civil works schedule of rates
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of a civil works schedule of rates that best meet the required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial and documentary evidence of the candidate's:
- working with others to undertake and complete the preparation of civil works schedule of rates
- provision of clear and timely required support and advice on the preparation of civil works schedule of rates

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation | legislative, organisational and site requirements and procedures
|                               | manufacturer's guidelines and specifications
|                               | Australian standards
|                               | code of practice
|                               | Employment and workplace relations legislation
|                               | Equal Employment Opportunity and Disability Discrimination legislation

| Civil works may include: | land clearing
|                         | bulk earthworks
|                         | surface drainage works
|                         | water storage dams construction
|                         | tailings dams construction
|                         | topsoil management
|                         | rehabilitation works
|                         | road works preparation (including the sub grade)
|                         | pavement construction, including:
|                         |   flexible pavements, including:
|                         | natural pavement materials
|                         | manufactured pavement materials
|                         | asphalt placement
|                         | stabilisation
|                         |   rigid pavement construction
|                         | underground services construction
|                         | construction of civil structures
|                         | tunnelling
|                         | dredging

| Relevant teams members may include: | other members of the organisation’s management team
|                                      | suppliers representatives
|                                      | sub-contractors representatives
- supervisors or managers of other organisations who are involved in related tasks
- experienced members of the team directly involved in the task

Unit Sector(s)
Civil Works (Management and Supervision)

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIICWM601A Establish civil constructions plans

Modification History
Not applicable.

Unit Descriptor
This unit covers establishing of civil construction plans in Civil Construction. It includes the requirements to interpret and scope civil construction plan requirements; identify project construction plan options and determine the preferred construction plan option; initiate, monitor and support, the construction planning process; prepare and maintain documentation during the construction planning process; review construction plan and achieve acceptance; and support the application of construction plans.

Application of the Unit
This unit is appropriate for those working in a management role or as a technical specialist, for the establishment of civil construction plans within:

- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for establishing civil construction plans | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Access, interpret and clarify the client's requirements for the *construction of civil works*  
1.3. *Confirm* the availability and accuracy of the *project information* required for completion of the *civil construction plan*  
1.4. Prepare the scope of work required for the safe effective and efficient completion of the project |
| 2. Conduct the civil construction planning process | 2.1. Identify the viable available options for the construction program  
2.2. Select the preferred option and draft the construction program in consultation with relevant team members, which makes best use of the available resources and meets the project requirements  
2.3. Identify contingency requirements to be allowed for in the execution of the program  
2.4. *Monitor* and coordinate the progress of other team members involved in the planning process  
2.5. Identify and schedule the resources required for the execution of the construction program  
2.6. Identify the key performance indicators to be used in the monitoring and assessment of the project performance  
2.7. Gain client agreement on construction milestones  
2.8. Prepare an accurate estimate of the cost of execution of the plan in consultation with relevant team members  
2.9. Gain approval of the civil construction plan  
2.10. Document the civil construction plan |
| 3. Initiate civil construction plans | 3.1. Acquire and make available the necessary resources for the safe, effective and efficient conduct of the plan  
3.2. Issue clear and timely *instructions* to team |
| 4. Monitor, adjust and report on the execution of civil construction plans | 4.1. Ensure the safe, effective and efficient execution of the plan  
4.2. Monitor the civil construction plan performance to ensure it achieves the required outcomes  
4.3. Initiate adjustments to civil construction plan to ensure achievement of required outcomes  
4.4. Provide ongoing clarification and advice to those applying the plan  
4.5. Ensure reports are complete and submit as required  
4.6. Conduct performance review the construction plan  
4.7. Recommend changes to improve the safety, efficiency and effectiveness of civil construction planning process |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to establish civil construction plans:

- apply legislative, organisation and site requirements and procedures
- interpret project plans and drawings
- interpret project specifications
- interpret project construction briefs
- interpret project engineering survey information
- interpret project hydrological data
- interpret meteorological data
- interpret project geotechnical data
- provide team leadership and coordination
- apply innovative solutions and new technology
- apply consultative processes
- choose appropriate operational techniques
- develop and apply construction plans
- apply project scheduling and resource management technology
- calculate of construction resource quantities and project costs
- maintain construction cost records
- provide clarification and advice
- apply negotiation techniques
- apply feedback techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to establish civil construction plans:

- risk management requirement and procedures
- statutory compliance requirements and procedures
- construction plan development and implementation requirements and procedures
- occupational health and safety requirements and procedures
- environmental requirements and procedures
- quality management requirements and procedures
- communication requirements and procedures
- Australian and other relevant standards
• industry and organisational construction procedures and practice
• civil construction works options
• sources of information on innovation and new technology
• techniques for choosing preferred options
• team leadership techniques
• operational techniques required for the execution of civil works projects
• civil construction plant and equipment capabilities
• cost estimation techniques
• construction plan review principles and procedures
• construction plan documentation requirements
• construction plan reporting requirements and procedures
• construction plan approval requirements and procedures
• construction plan records filing requirements and procedures
• performance review requirements and procedures
• principles of road user behaviour
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to establish civil works maintenance programs:

- apply legislative, organisation and site requirements and procedures
- interpret asset plans and drawings
- interpret maintenance program specifications
- interpret maintenance program briefs and contracts
- interpret engineering survey information
- interpret hydrological data
- interpret meteorological data
- interpret geotechnical data
- schedule of inspection programs
- interpret of inspection data
- classify the levels of the serviceability of assets
- prioritise maintenance works
- provide team leadership and coordination
- apply innovative solutions and new technology
- apply consultative processes
- choose appropriate maintenance operational techniques
- develop and apply works maintenance programs
- apply project scheduling and resource management technology
- calculate of maintenance resource quantities and program costs
- maintain maintenance program cost records
- provide clarification and advice
- apply negotiation techniques
- apply feedback techniques

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to establish civil works maintenance programs:

- risk management requirement and procedures
- statutory compliance requirements and procedures
- works maintenance program development and implementation requirements and procedures
- occupational health and safety requirements and procedures
- environmental requirements and procedures
- quality management requirements and procedures
- communication requirements and procedures
- Australian and other relevant standards
- inspection program scheduling requirements and procedures
- inspection data interpreting requirements and procedures
- asset condition classification requirements and procedures
- maintenance works prioritisation requirements and procedures
- industry and organisational maintenance procedures and practice
- civil works maintenance options
- sources of information on innovation and new technology
- techniques for choosing preferred options
- team leadership techniques
- operational techniques required for the execution of civil works maintenance programs
- civil works maintenance plant and equipment capabilities
- cost estimation techniques
- maintenance program review principles and procedures
- maintenance program documentation requirements
- maintenance program reporting requirements and procedures
- maintenance program approval requirements and procedures
- maintenance program records filing requirements and procedures
- performance review requirements and procedures
- principles of road user behaviour
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Civil Works (Management and Supervision)

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIDES301 Inspect, test and maintain diesel engine systems and their ancillary systems

Modification History
Not applicable.

Unit Descriptor
This unit covers the inspection, testing and maintenance of diesel engines systems and their ancillary systems for underground coal mines to provide the means of confirming the effectiveness of their explosion and fire protection and emission control. It includes: planning, preparing for and carrying out diesel engine and their ancillary systems inspection, testing, maintenance and overhaul tasks; and the completion of post work activity requirements

Application of the Unit
This unit is appropriate for those undertaking the inspection, testing and maintenance of diesel engine systems for underground coal mines.

Licensing/Regulatory Information
Not applicable.
**Pre-Requisites**

Not applicable.

**Pre-qualification:**

Metal, mechanical, electrical or automotive trades or mechanical or electrical engineering

**Employability Skills Information**

This unit contains employability skills.

**Elements and Performance Criteria Pre-Content**

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>
</thead>
</table>

**Elements and Performance Criteria**

| 1. Plan for inspection, testing and/or maintenance tasks | 1.1 Access, interpret and apply compliance and other documentation relevant to the inspection, testing and maintenance of the ancillary systems of diesel engine systems  
1.2 Obtain, interpret and clarify work requirements for the satisfactory completion of tasks  
1.3 Resolve coordination requirements with others at the site prior to commencing and during work activities |
|---|---|
| 2. Prepare for inspection, testing and/or maintenance tasks | 2.1 Inspect and prepare work area in coordination with others  
2.2 Identify and obtain items and tools required for the safe, effective and efficient completion of the tasks  
2.3 Identify and arrange support required for completion of tasks  
2.4 Select and use personal protection equipment appropriate to the task  
2.5 Carry out required equipment pre-start procedures  
2.6 Carry out required isolation and lock-out of all equipment necessary for the safe execution of tasks  
2.7 Recognise and respond to hazardous and emergency situations |
| 3. Carry out inspection of diesel engines and their ancillary systems | 3. Inspect diesel engine systems and their ancillary systems  
3.2 Report outcomes of inspection to appropriate person |
|---|---|
| 4. Carry out testing of diesel engines and their ancillary systems | 4.1 Select and operate testing equipment and methods  
4.2 Carry out safe effective and efficient testing and fault finding of diesel engine systems  
4.3 Carry out testing and fault finding of ancillary systems on diesel engine systems  
4.4 *Diagnose* and record existing or identified faults |
| 5. Carry out routine maintenance of diesel engines and their ancillary systems | 5.1 Select and use maintenance items, tools and equipment  
5.2 Rectify diagnosed and identified faults  
5.3 Carry out *routine maintenance* of diesel engine systems and their ancillary systems in accordance with the work requirements  
5.4 Carry out maintenance of diesel engine ancillary systems in accordance with the work requirements |
| 6. Carry out the overhaul of diesel engines and their ancillary systems | 6.1 Select and use overhaul items, tools and equipment  
6.2 Carry out *overhaul* of diesel engine systems in accordance with the work requirements and Australian Standards  
6.3 Carry out overhaul of ancillary systems on diesel engine systems in accordance with work requirements and Australian Standards |
| 7. Complete post-work activity requirements | 7.1 Tidy up work area  
7.2 Dispose of used oil, lubricant and other waste  
7.3 Return and secure all tools and re-usable items  
7.4 Report outcomes of inspection, testing, maintenance and overhaul tasks to appropriate person  
7.5 Complete and maintain inspection, testing and maintenance records |
Required Skills and Knowledge

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied.

This includes the ability to carry out the following to inspect, test and maintain diesel engine systems and their ancillary systems:

- apply legislative, organisation and site requirements and procedures
- apply site risk, statutory compliance, health, safety, environmental, quality and communication requirements and procedures
- apply site and manufacturer’s requirements and procedures
- apply surface and underground worksite hazard identification and risk management requirements and procedures
- apply task hazard identification and risk management requirements and procedures
- apply technical literacy
- interpret and apply technical and scientific/industry terminology
- communicate with those providing support
- apply work area and equipment inspection procedures
- apply work area safeguarding options and requirements
- apply isolation and lock-out requirements and procedures
- apply hazard and emergency procedures
- apply site service and maintenance reporting requirements and procedures
- work wearing appropriate personal protective equipment
- apply mechanical trade/engineering skills and experience
- use tools for inspection, testing and maintenance

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used.

This includes knowledge of the following, to inspect, test and maintain diesel engine systems and their ancillary systems:

- site risk, statutory compliance, health, safety, environmental, quality and communication requirements and procedures
- limitations on allowable maintenance including work in hazardous environments
- limitations on allowable modifications and the required controls and procedures
- site and manufacturer’s requirements and procedures
- the relative characteristics, performance and suitability for the underground use of common diesel engine types including:
- two stroke or four stroke,
- directly injected or indirectly injected (pre-combustion),
- naturally aspirated or charge boosted (turbocharged or supercharged) intake systems
- basic type of mechanical fuel delivery systems including;
- distributor type pumps (VE)
- jerk type pumps
- pressure/time type pumps (PT)
- hydraulic injectors (internal pintle)
- basic type of electrical/electronic fuel delivery and engine management systems including;
- unit injectors [HEUI (hydraulic electric unit injectors), MEUI (mechanical electric unit injectors and piezo)]
- the effect of increased injection pressure on performance and emissions
- the controls, sensors and management systems integrated into ECMs
- characteristics of materials used in the diesel engine system,
- items required to be used in performance of inspection, testing and maintenance tasks
- tools required for the performance of inspection, testing and maintenance tasks
- provisions of AS/NZS3584.1, 2 and 3 relating to fasteners and joints
- recognise the requirements and performance of various types of fasteners, including bolts, studs, threads and washers
- site inspection, testing and maintenance support requirements and availability
- site work area inspection requirements
- site work area safeguarding options and requirements
- site isolation and lock-out requirements and procedures
- site hazard and emergency procedures
- site inspection, testing and maintenance reporting requirements and procedures
- site inspection, testing and maintenance record procedures
- site requirements and procedures for working in isolation
- site requirements for the use of personal protective equipment

### Evidence Guide

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Knowledge of the requirements, procedures and instructions for the inspection, testing and maintenance of diesel engine systems and their ancillary systems</td>
<td>Knowledge of the requirements, procedures and instructions for the inspection, testing and maintenance of diesel engine systems and their ancillary systems</td>
</tr>
<tr>
<td>Implementation of requirements, procedures and techniques for the safe, effective and efficient</td>
<td>Implementation of requirements, procedures and techniques for the safe, effective and efficient</td>
</tr>
</tbody>
</table>
completion of the inspection, testing and maintenance of diesel engine systems and their ancillary systems

- Working with others to undertake and complete the inspection, testing and maintenance of diesel engine systems and their ancillary systems that meets all of the required outcomes.
- Consistent timely completion of the inspection, testing and maintenance of diesel engine systems and their ancillary systems that safely, effectively and efficiently meets the required outcomes.

| Context of and specific resources for assessment | This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

<p>| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application |</p>

and not blocked
• confirming that the starter motor is securely mounted

| Testing may include: | • conduct surface temperature test and confirm that the location and temperature are within a reasonable tolerance of the information provided on the drawings |

| Maintenance is: | • the combination of actions carried out to retain a diesel engine system in, or to restore it to, conditions in which it is able to meet the requirements of the relevant specification and perform its required function |

| Maintenance may include: | • service  
• adjust  
• replace  
• repair  
• overhaul  
• modify |

| Diesel engine ancillary equipment may include: | • air compressors |

| Diesel engine systems are: | diesel engines for underground coal mines and their:  
• inlet systems  
• exhaust systems  
• cooling systems  
• starting systems  
• shut-down and protection systems  
• electrical or electronic devices |

| Work requirements may come from briefings, handovers, and work orders and may include: | • nature and scope of tasks  
• procedures to be applied  
• quality standards to be applied  
• available resources  
• achievement targets  
• operational conditions  
• site layout  
• out-of-bounds areas  
• designated safe areas  
• explosion-risk zones  
• hazardous areas  
• other hazards and potential hazards  
• obtaining permits required  
• worksite inspection requirements  
• lighting conditions |
**plant or equipment defects**  
**coordination requirements or issues**

**Others may include:**
- other maintenance personnel  
- support providers  
- contractors  
- under-ground production personnel  
- mobile or fixed plant operators

**Inspect and prepare work area may include:**
- determining if the proposed work area is a designated safe area  
- identification of explosion-risk zones  
- identification of hazardous areas  
- identification of hazards, including:  
- workshop work area hazard  
- underground work area hazards, and  
- work activity hazards  
- fire  
- explosion  
- emissions  
- selection and implementation of control measures for the hazards identified  
- safeguarding site and non-site personnel by:  
- erection of barricades and posting of signs  
- selection of appropriate equipment to ensure personnel safety and protection

**Items may include:**
- authorised replacement parts  
- fasteners as specified in manufacturer’s drawings, which may include:  
  - tensile strength  
  - head and nut configuration  
  - thread form and engagement  
  - corrosion resistance (materials)  
  - coatings (materials and application)  
  - tolerances for fits and threads  
  - tolerances for mating surfaces  
  - dimensions of clearance holes  
  - fixing torques  
  - lubricants and anti-seize compounds used  
  - packing materials

**Tools may include:**
- hand tools  
- power tools  
- special tools  
- testing equipment
| **Support** may include: | • other site personnel  
• contractors  
• cranes  
• other lifting equipment |
| | |
| **Personal protection equipment may include:** | • hard hats  
• eye protection  
• hearing protection  
• breathing apparatus  
• gas/fume masks  
• prescribed footwear |
| | |
| **Pre-start procedures** include checking: | • cleanliness, particularly coal dust  
• diesel and other flammable liquid leaks  
• coolant leaks in radiator or radiator hoses  
• coolant level  
• that guards are in place and secure  
• engine oil level is correct |
| | |
| **Hazardous and emergency situations** may include: | • working alone  
• personal injury  
• fire  
• explosions  
• emissions  
• electrical  
• noise  
• dust  
• noxious gases  
• environmental  
• chemical |
| | |
| **Diagnose** faults may include: | • root cause analysis  
• troubleshooting techniques |
| | |
| **Routine maintenance** is to include: | • servicing, including:  
• cleaning  
• checking and filling lubricants, fuel and water  
• draining the fuel/water separator  
• draining all air receivers and water separators  
• emptying filters fitted to the pneumatic system  
• filling the pneumatic system lubricator  
• adjusting  
• changing (replacing), including  
• fuel filters  
• engine-oil and filter  
• pneumatic air filters |
Overhaul may include:

- removal
- dismantling
- cleaning
- inspecting
- replacing, eg:
- gaskets
- fasteners
- testing, including:
- flatness
- measuring dimensions
- hydrostatic
- reassembly
- reinstallation

Records may include:

- inspection and test results
- defect identified
- defect rectification carried out
- item consumed
- hazard/risk management reports

• apply site service and maintenance reporting requirements and procedures
• apply inspection requirements and procedures
• apply testing requirements and procedures
• apply fault finding techniques
• apply maintenance requirements and procedures
• work wearing appropriate personal protective equipment
• use tools for inspection, testing and maintenance
• use measuring instruments

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used.

This includes knowledge of the following, as required to safely, effectively and efficiently inspect, test and maintain joints on diesel engine systems:

• site risk, statutory compliance, health, safety, environmental, quality and communication requirements and procedures
• site and manufacturer’s requirements and procedures
• potential hazards in the use of diesel engine systems
• including:
  • explosions
  • fire
  • emissions
• limitations on allowable maintenance, including:
  • service
  • adjust
  • replace
  • repair
  • overhaul
• work in hazardous environments
• limitations on allowable modifications and their required controls and procedures
• tools and measuring instruments required for the performance of inspection, testing and maintenance tasks
• the types of and functionality of joints that may be integral to the design and maintenance of
a diesel engine system, including:

- fixed connection
- open joints
- the requirements for interposed gaskets and seals in joints, including
- materials
- dimensions
- form and shape
- provisions of AS/NZS3584.1, 2 and 3 relating to fasteners and joints
- recognise the requirements and performance of various types of fasteners, including bolts, studs, threads and washers
- site inspection, testing and maintenance support requirements and availability
- site work area inspection requirements
- site work area safeguarding options and requirements
- site isolation and lock-out requirements and procedures
- site hazard and emergency procedures
- site inspection, testing and maintenance reporting requirements and procedures
- site inspection, testing and maintenance record procedures
- site requirements and procedures for working in isolation
- site requirements for the use of personal protective equipment

• observed, documented and/or first hand testimonial evidence of the candidate’s: implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes  
• consistently achieving the required outcomes  
• first hand testimonial evidence of the candidate: working with others to undertake and complete the inspection, testing and maintenance of joints on diesel engine systems |
### Guidance information for assessment

- Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

### Range Statement

#### Compliance and other documentation may include:

- certification documentation
- approval documentation
- legislative, organisation and site requirements and procedures
- manufacturer’s specifications and guidelines
- Australian Standards, including: AS/NZS3584 and AS 4291
- codes of practice
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

#### Inspection may include:

- checking the marking of parts/components
- visually check that the fasteners securing explosion-protected joints are in place and correctly located, including:
  - nuts
  - bolts
  - studs
- confirmation of the dimensional, flatness and surface finish conformance of all joint mating parts
- confirmation of the conformance of all threaded holes and fasteners to drawings and specifications

#### Testing may include:

- testing the accessible external open joints (flamepaths) for compliance with the manufacturer’s specification and the drawings for maximum gap
- testing accessible external fixed connections for gas tightness in a manner recommended by the manufacturer
- correct tightening torque of all fasteners.
- conducting gas tightness tests for all joints within the exhaust system
- conducting gas tightness tests for all joints within the intake system

#### Maintenance is:

- the combination of actions carried out to retain a diesel engine system in, or to restore it to, conditions in which it is able to meet the requirements of the
relevant specification and perform its required function

| **Maintenance** may include authorised: | • service  
• adjusting  
• replacing  
• repair  
• overhaul  
• modification |
| **Joints may include:** | • fixed connections, including:  
• metallic and/or flameproof gaskets  
• o-rings on fuel systems  
• open joints, including:  
• valve stems and valve guides  
• intake and exhaust flametrap  
• water injection nozzles  
• turbo-charger and/or supercharger, where flame trap is fitted to inlet side  
• fuel injectors |
| **Diesel engine systems are:** | • diesel engines for underground coal mines and their:  
• inlet systems  
• exhaust systems  
• cooling systems  
• starting systems  
• shut-down and protection systems  
• electrical or electronic devices |
| **Work requirements** may come from briefings, handovers, and work orders and may include: | • nature and scope of tasks  
• procedures to be applied  
• quality standards to be applied  
• available resources  
• achievement targets  
• operational conditions  
• site layout  
• out-of-bounds areas  
• designated safe areas  
• explosion-risk zones  
• hazardous areas  
• other hazards and potential hazards  
• obtaining permits required  
• worksite inspection requirements  
• lighting conditions  
• plant or equipment defects |
<table>

</table>
Personal protection equipment may include:

- hard hats
- eye protection
- hearing protection
- breathing apparatus
- gas/fume masks
- prescribed footwear

Pre-start procedures include:

- checking:
  - cleanliness, particularly coal dust
  - diesel and other flammable liquid leaks
  - coolant leaks in radiator or radiator hoses
  - coolant level
  - that guards are in place and secure
  - engine oil level is correct
  - conduct exhaust conditioner/flametrap, low-water, shutdown tests

Hazardous and emergency situations may include:

- working alone
- personal injury
- fire
- explosions
- emissions
- electrical
- noise
- dust
- noxious gases
- environmental
- chemical

Diagnose faults may include:

- root cause analysis
- troubleshooting techniques

Routine maintenance is to include:

- servicing, including cleaning
- adjusting
- replacing

Overhaul may include:

- removal
- dismantling
- cleaning
- inspecting
- replacing, eg:
  - gaskets
  - fasteners
- testing, including:
• flatness
• measuring dimensions
• hydrostatic
• reassembly
• reinstallation

Records may include:
• inspection and test results
• defect identified
• defect rectification carried out
• item consumed
• hazard/risk management reports

Unit Sector(s)
Coal Mining (Diesel Engine Systems Maintenance)

Custom Content Section
Not applicable.
RIIDES303 Inspect, test and maintain cooling systems on diesel engine systems

Modification History
Not applicable.

Unit Descriptor
This unit covers the inspection, testing and maintenance of cooling systems of diesel engine systems for underground coal mines to provide the means of confirming their effectiveness. It includes: preparing for and carrying out cooling systems inspection, testing and maintenance tasks; and the completion of post-work requirements.

Application of the Unit
This unit is appropriate for those undertaking the inspection, testing and maintenance of diesel engine systems for underground coal mines.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Metal, mechanical, electrical or automotive trades or mechanical or electrical engineering

Employability Skills Information
This unit contains employability skills.
# Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

**Required Skills and Knowledge**

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied.

This includes the ability to carry out the following as required to inspect, test and maintain cooling systems on diesel engine systems:

- apply legislative, organisation and site requirements and procedures
- apply site risk, statutory compliance, health, safety, environmental, quality and communication requirements and procedures
- apply site and manufacturer’s requirements and procedures
- apply surface and underground worksite hazard identification and risk management requirements and procedures
- apply task hazard identification and risk management requirements and procedures
- apply technical literacy
- interpret and apply technical and scientific/industry terminology
- communicate with those providing support
- apply work area and equipment inspection procedures
- apply work area safeguarding options and requirements
- apply isolation and lock-out requirements and procedures
- apply hazard and emergency procedures
- apply site service and maintenance reporting requirements and procedures
- work wearing appropriate personal protective equipment
- use tools for inspection, testing and maintenance
- use calibrated/verified instruments

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used.

This includes knowledge of the following, as required to inspect, test and maintain cooling systems on diesel engine systems:

- site risk, statutory compliance, health, safety, environmental, quality and communication requirements and procedures
- limitations on allowable maintenance including work in hazardous environments
- limitations on allowable modifications and the required controls and procedures
- provisions of AS/NZS3584.1, 2 and 3 relating to fasteners and joints
- recognise the requirements and performance of various types of fasteners, including bolts, studs, threads and washers
- site and manufacturer’s requirements and procedures
- items required to be used in performance of inspection, testing and maintenance tasks
- tools required for the performance of inspection, testing and maintenance tasks
- site inspection, testing and maintenance support requirements and availability
- site work area inspection requirements
- site work area safeguarding options and requirements
- site isolation and lock-out requirements and procedures
- site hazard and emergency procedures
- critical temperatures and explosion limits for gasses, dusts and hydro-carbon liquids that may be encountered by a diesel engine system in an underground coal mines, including:
  - coal dust
  - methane
  - diesel fuel
- margins of safety provided by all relevant Legislation, Regulation, Standards and Guidelines are applied to surface and exhaust gas temperatures
- methods to limit temperatures including; maintenance, testing and monitoring for;
- exhaust manifold design & fitment
- adaptor pipe
- exhaust flametrap and/or cooler
- turbochargers
- air compressors
- possible failure modes maintenance procedures and practices required to provide controls
- causes of temperature rise as a gas is compressed, including:
- intake system to air compressors and failure modes resulting in excessive temperatures
- output side of air compressors and failure modes resulting in excessive temperatures
- risks and consequences of carbon build-up in the air stream (fittings, valves and hoses) types of heat exchange including:
- shell and tube
- plate
- plate and fin
- causes of the degradation of heat exchanger performance, caused by:
  - build up of the products of combustion on the ‘gas’ side of heat exchangers
  - build up of salts, chlorides and other materials on the ‘coolant’ side of heat exchangers
  - temperature controls applied to prevent the exhaust gas stream from exceeding nominate maximum temperatures
- materials including elastomeric hoses, metallic and synthetic fittings employed in critical components subject to temperature rise under the designed conditions of operation
- automatic shutdown controls, which may include:
  - the design of the system and the ‘safety margin’ provided in the design for some deterioration in performance
- coolant flow monitoring devices
- coolant temperature monitoring devices
- coolant loss monitoring devices
- direct exhaust gas temperature monitoring devices
- water-bath level monitoring devices
- site inspection, testing and maintenance reporting requirements and procedures
- site inspection, testing and maintenance record procedures
- site requirements and procedures for working in isolation
- site requirements for the use of personal protective equipment
## Evidence Guide

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Knowledge of the requirements, procedures and instructions for the inspection, testing and maintenance of cooling systems on diesel engine systems.</td>
</tr>
<tr>
<td></td>
<td>• Implementation of requirements, procedures and techniques for the safe, effective and efficient completion of the inspection, testing and maintenance of cooling systems on diesel engine systems</td>
</tr>
<tr>
<td></td>
<td>• Working with others to undertake and complete the inspection, testing and maintenance of cooling systems on diesel engine systems that meets all of the required outcomes.</td>
</tr>
<tr>
<td></td>
<td>• Consistent timely completion of the inspection, testing and maintenance of cooling systems on diesel engine systems that safely, effectively and efficiently meets the required outcomes.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
</tr>
<tr>
<td></td>
<td>• Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.</td>
</tr>
<tr>
<td></td>
<td>• Aboriginal people and other people from a non English speaking background may have second language issues.</td>
</tr>
<tr>
<td></td>
<td>• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
</tr>
</tbody>
</table>
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate’s required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate’s:
- implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
- consistently achieving the required outcomes
- first hand testimonial evidence of the candidate:
- working with others to undertake and complete the inspection, testing and maintenance of cooling systems on diesel engine systems

### Guidance information for assessment

- Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

### Range Statement

**Compliance and other documentation may include:**

- certification documentation, or
- approval documentation
- legislative, organisation and site requirements and procedures
- manufacturer’s specifications and guidelines
- Australian Standards, including: AS/NZS3584 and AS 4291
- codes of practice
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Inspection is to include:**

- checking for coolant leaks in radiator (core and tanks) and radiator hoses
- visually check that the coolant level is correct
- checking for coolant leaks in water pumps,
thermostats (housing) or from hoses associated with the jacket water cooling of air compressors, manifolds, manifold/conditioner adaptor pipes, etc
- checking that the hoses are in a good condition, correctly fitted, clamped and restrained
- checking that the radiator core is clean

Testing may include:
- checking the proper operation and function of the coolant loss detection sensor, and record the time taken to cause the engine to shut down
- Checking the proper operation and function of the coolant over-temperature sensor, and record the coolant temperature at which the engine shut down.

**NOTE** Testing this sensor by defeating other sensors and overheating the diesel engine system may be hazardous or cause damage to the diesel engine system. It is recommended that the sensor be removed from the engine and tested in heated water while remaining connected to the engine shutdown system.

Maintenance is:
- the combination of actions carried out to retain a diesel engine system in, or to restore it to, conditions in which it is able to meet the requirements of the relevant specification and perform its required function

Maintenance is to include:
- service
- adjust
- replace

Maintenance may include:
- repair
- overhaul
- modify
- draining and replacing the engine coolant and ensuring that the correct coolant formulation is used

Cooling systems may include:
- exhaust manifolds
- compressors or turbo chargers
- piping
- joints
- exhaust flame traps
- exhaust filters

Diesel engine systems are:
- diesel engines for underground coal mines and their:
  - inlet systems
  - exhaust systems
  - cooling systems
  - starting systems
| **Work requirements** may come from briefings, handovers, and work orders and may include: | • shut-down and protection systems  
• electrical or electronic devices  
• service and maintenance schedules  
• production requirements  
• nature and scope of tasks  
• achievement targets  
• operational conditions  
• operational requirements  
• site layout and out of bounds areas  
• worksite inspection requirements  
• plant or equipment defects  
• hazards and potential hazards  
• coordination requirements or issues |
|---|---|
| **Others** may include: | • yard persons  
• processing plant operators  
• mobile plant operators  
• other maintenance personnel |
| **Inspect and prepare work area** may include: | • determining if the proposed work area is a designated safe area  
• identification of hazards, including:  
  • workshop work area hazard  
  • underground work area hazards, and  
  • work activity hazards  
• selection and implementation of control measures for the hazards identified  
• safeguarding site and non-site personnel by:  
  • erection of barricades and posting of signs  
  • selection of appropriate equipment to ensure personnel safety and protection |
| **Items** may include: | • replacement parts  
• fasteners  
• packing materials |
| **Tools** may include: | • hand tools  
• power tools  
• special tools  
• testing equipment |
| **Support** may include: | • other site personnel  
• contractors  
• cranes  
• other lifting equipment |
| **Personal protection equipment** may include: | • hard hats |
include:
- eye protection
- hearing protection
- breathing apparatus
- gas/fume masks
- prescribed footwear

**Pre-start and inspection procedures**
include:
- checking:
- cleanliness, particularly coal dust
- diesel and other flammable liquid leaks
- coolant leaks in radiator or radiator hoses
- coolant level
- that guards are in place and secure
- engine oil level is correct
- conduct Exhaust Conditioner/Flametrap, low-water, shutdown tests

**Hazardous and emergency situations** may include:
- working alone
- personal injury
- fire
- explosions
- electrical
- noise
- dust
- environmental
- chemical

**Diagnose** faults may include:
- Root cause analysis
- Troubleshooting techniques

**Records** may include:
- inspection and test results
- defect identified
- defect rectification carried out
- item consumed
- hazard/risk management reports

| 7.2 Dispose of used oil, lubricant and other waste |
| 7.3 Return and secure all tools and re-usable items |
| 7.4 Report outcomes of inspection, testing, maintenance and overhaul tasks to appropriate person |
| 7.5 Complete and maintain inspection, testing and maintenance *records* |
## Required Skills and Knowledge

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied.

This includes the ability to carry out the following to safely, effectively and efficiently inspect, test and maintain inlet systems on diesel engine systems:

- apply legislative requirements and procedures
- apply surface and underground worksite hazard identification and risk management requirements and procedures
- apply task hazard identification and risk management requirements and procedures
- apply technical literacy
- interpret and apply technical and scientific/industry terminology
- apply hazard and emergency procedures
- apply site health and safety requirements and procedures
- apply site environmental requirements and procedures
- apply site quality requirements and procedures
- apply site communication requirements and procedures
- apply manufacturer’s requirements and procedures
- communicate with those providing support
- apply work area and equipment inspection procedures
- apply work area safeguarding options and requirements
- apply isolation and lock-out requirements and procedures
- apply site service and maintenance reporting requirements and procedures
- apply inspection requirements and procedures
- apply testing requirements and procedures
- apply fault finding techniques
- apply maintenance requirements and procedures
- work wearing appropriate personal protective equipment
- select appropriate bolts, studs, threads and washers to specific applications within a diesel engine system
- use tools
- use calibrated/verified instruments

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used.

This includes knowledge of the following to safely, effectively and efficiently inspect, test and maintain inlet systems on diesel engine systems:

- site risk, statutory compliance, health, safety, environmental, quality, (including quality information), and communication requirements and procedures
• use of site & manufacturer’s requirements and procedures
• provisions of AS/NZS3584.2 and 3 relating to inlet systems flametrap (for explosion protected diesel engine systems)
• the failure modes of the inlet system that may affect the explosion protection characteristics and the emissions from diesel engine systems
• potential hazards in the use of diesel engine systems including:
  • explosions
  • fire, and
  • emissions
• the relative performance (including emissions) of increased air induction systems
• systems for the reduction of the harmful emissions from diesel engines
• functions of the management and treatment systems and principles employed to limit the creation of and to manage harmful emissions from diesel engines
• the function, performance criteria and protection employed in inlet (induction) systems, including:
  • function
  • features, including:
    • fire-protection
    • explosion protection
    • emergency stop
• fitment (including location)
• induction boosted considerations, including:
  • temperature considerations
• the effect on emissions
• the effect on performance
• the effect of induction cooling (after cooling)
• inlet filters
• the features and the requirements for maintenance of the inlet manifold, including:
  • function,
  • features, and
  • fitment (including the requirements for gaskets and seals)
• requirements and test requirements for inlet flametrap and the issues related to:
• fitting assemblies into housings
• maintenance (including cleaning)
• routine inspection
• types of flametaps permitted and the performance features of each type
• the types of joints that may be integral to the design and maintenance of a diesel engine system, including:
  • fixed connection
  • open joints
• the requirements for interposed gaskets and seals in joints, including
  • materials
  • dimensions
- form and shape
- limitations on allowable maintenance, including:
  - service
  - adjust
  - replace
  - repair
  - overhaul
- work in hazardous environments
- limitations on allowable modifications and their required controls and procedures
- items required to be used in performance of inspection, testing and maintenance tasks
- tools required for the performance of inspection, testing and maintenance tasks
- provisions of AS/NZS3584.1, 2 and 3 relating to fasteners and joints
- recognise the requirements and performance of various types of fasteners, including bolts, studs, threads and washers
- site inspection, testing and maintenance support requirements and availability
- site work area inspection requirements
- site work area safeguarding options and requirements
- site isolation and lock-out requirements and procedures
- site hazard and emergency procedures
- site inspection, testing and maintenance reporting requirements and procedures
- site inspection, testing and maintenance record procedures
- site requirements and procedures for working in isolation
- site requirements for the use of personal protective equipment
## Evidence Guide

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for the inspection, testing and maintenance of inlet systems on diesel engine systems
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of the inspection, testing and maintenance of inlet systems on diesel engine systems
- working with others to undertake and complete the inspection, testing and maintenance of inlet systems on diesel engine systems that meets all of the required outcomes
- consistent timely completion of the inspection, testing and maintenance of inlet systems on diesel engine systems that safely, effectively and efficiently meets the required outcomes.

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
Where applicable, physical resources should include equipment modified for people with disabilities.
Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate’s required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate’s:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate:
  - working with others to undertake and complete the inspection, testing and maintenance of inlet systems on diesel engine systems

### Guidance information for assessment

- Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

SkillsDMC
**Work requirements** may come from briefings, handovers, and work orders and may include:

- nature and scope of tasks
- procedures to be applied
- quality standards to be applied
- available resources
- achievement targets
- operational conditions
- site layout
- out-of-bounds areas
- designated safe areas
- explosion-risk zones
- hazardous areas
- other hazards and potential hazards
- obtaining permits required
- worksite inspection requirements
- lighting conditions
- plant or equipment defects
- coordination requirements or issues

**Others** may include:

- other maintenance personnel
- support providers
- contractors
- underground production personnel
- mobile or fixed plant operators

**Inspect and prepare work area** may include:

- determining if the proposed work area is a designated safe area
- identification of explosion-risk zones
- identification of hazardous areas
- identification of hazards, including:
  - workshop work area hazard
  - underground work area hazards
  - work activity hazards
  - fire
  - explosion
  - emissions
- selection and implementation of control measures for the hazards identified
- safeguarding site and non-site personnel by:
  - erection of barricades and posting of signs
  - selection of appropriate equipment to ensure personnel safety and protection

**Items** may include:

- authorised replacement parts
- fasteners as specified in manufacturer’s drawings,
which may include:
- tensile strength
- head and nut configuration
- thread form and engagement
- corrosion resistance (materials)
- coatings (materials and application)
- tolerances for fits and threads
- tolerances for mating surfaces
- dimensions of clearance holes
- fixing torques
- lubricants and anti-seize compounds used
- packing materials

**Tools** may include:
- hand tools
- power tools
- special tools
- testing equipment

**Support** may include:
- other site personnel
- contractors
- cranes
- other lifting equipment

**Personal protection equipment may include:**
- hard hats
- eye protection
- hearing protection
- breathing apparatus
- gas/fume masks
- prescribed footwear

**Pre-start procedures include:**
- checking:
- cleanliness, particularly coal dust
- diesel and other flammable liquid leaks
- coolant leaks in radiator or radiator hoses
- coolant level
- that guards are in place and secure
- engine oil level is correct
- conduct exhaust conditioner/flametrap, low-water, shutdown tests

**Hazardous and emergency situations** may include:
- working alone
- personal injury
- fire
- explosions
- emissions
- electrical
### RIDES304 Inspect, test and maintain inlet systems on diesel engine systems

</table>

**Fault**

- Root cause analysis
- Troubleshooting techniques

**Forced induction systems**

- Super-charging
- Turbo-charging

**Routine maintenance**

- Servicing, including:
  - Cleaning, including:
    - Emptying air intake pre-cleaner
    - Cleaning air filter elements
    - Cleaning air intake flametrap
    - Checking and filling lubricants, fuel and water
    - Adjusting
    - Replacing, including:
      - Air intake pre-cleaner
      - Air filter elements
      - Cleaned or new air intake flametrap

**Overhaul**

- Removal
- Dismantling
- Cleaning
- Inspecting
- Replacing, eg:
  - Gaskets
  - Fasteners
  - Testing, including:
    - Flatness
    - Measuring dimensions
    - Hydrostatic
    - Reassembly
    - Reinstallation

**Records**

- Inspection and test results
- Defect identified
- Defect rectification carried out
- Item consumed
- Hazard/risk management reports
Unit Sector(s)
Coal Mining (Diesel Engine Systems Maintenance)

Custom Content Section
Not applicable.
RIIDES305 Inspect, test and maintain exhaust systems on diesel engine systems

Modification History
Not applicable.

Unit Descriptor
This unit covers the inspection, testing and maintenance of exhaust systems of diesel engine systems for underground coal mines to provide a means of confirming the effectiveness of their explosion and fire protection and emission control. It includes: planning and preparing for and carrying out of exhaust system inspection, testing, routine maintenance and overhaul tasks; and the completion of post-work requirements

Application of the Unit
This unit is appropriate for those undertaking the inspection, testing and maintenance of diesel engine systems for underground coal mines

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Metal, mechanical, electrical or automotive trades or mechanical or electrical engineering

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

### Elements and Performance Criteria

| 1. Plan for inspection, testing and/or maintenance tasks | 1.1 Access, interpret and apply compliance and other documentation relevant to the inspection, testing and maintenance of exhaust systems on diesel engine systems  
1.2 Obtain, interpret and clarify work requirements for the satisfactory completion of tasks  
1.3 Resolve coordination requirements with others at the site prior to commencing and during work activities |
|---|---|
| 2. Prepare for inspection, testing and/or maintenance tasks | 2.1 Inspect and prepare work area in coordination with others  
2.2 Identify and obtain items and tools required for the safe, effective and efficient conduct of the tasks.  
2.3 Identify and arrange support required for completion of tasks  
2.4 Select and use personal protection equipment appropriate to the task  
2.5 Carry out required equipment pre-start procedures  
2.6 Carry out required isolation and lock-out of all equipment necessary for the safe execution of tasks  
2.7 Recognise and respond to hazardous and emergency situations |
| 3. Carry out inspection of exhaust systems | 3.1 Carry out inspection of exhaust systems on diesel engine systems  
3.2 Carry out inspection and fault finding of exhaust system flame traps for effectiveness of explosion protection  
3.3 Carry out inspection and fault finding of exhaust gas cooling systems  
3.4 Carry out inspection and fault finding of exhaust system joints  
3.5 Diagnose and record existing or identified faults |
<p>| 4. Carry out testing of | 4.1 Select and operate testing equipment and methods in an |</p>

# Required Skills and Knowledge

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following to safely, effectively and efficiently inspect, test and maintain exhaust systems on diesel engine systems:

- apply legislative requirements and procedures
- apply surface and underground worksite hazard identification and risk management requirements and procedures
- apply task hazard identification and risk management requirements and procedures
- apply hazard and emergency procedures
- apply technical literacy
- interpret and apply technical and scientific/industry terminology
- identify health effects of emissions and nominate controls to minimise potential health effects
- apply site health and safety requirements and procedures
- apply site environmental requirements and procedures
- apply site quality requirements and procedures
- apply site communication requirements and procedures
- apply manufacturer’s requirements and procedures
- communicate with those providing support
- apply work area and equipment inspection procedures
- apply work area safeguarding options and requirements
- apply isolation and lock-out requirements and procedures
- apply site service and maintenance reporting requirements and procedures
- apply inspection requirements and procedures
- apply testing requirements and procedures
- apply fault finding techniques
- apply maintenance requirements and procedures
- work wearing appropriate personal protective equipment
- use tools for inspection, testing and maintenance
- use calibrated/verified instruments

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following to safely, effectively and efficiently inspect, test and maintain exhaust systems on diesel engine systems:

- site risk, statutory compliance, health, safety, environmental, quality and communication requirements and procedures
- site and manufacturer’s requirements and procedures
- provisions of AS/NZS3584.1,2 and 3 relating to exhaust systems, fasteners, joints and flametraps
- potential hazards in the use of diesel engine systems in underground coal mines, including:
  - explosions
  - fire, and
  - emissions
- limitations on allowable maintenance, including:
  - service
  - adjust
  - replace
  - repair
  - overhaul
- work in hazardous environments
- limitations on allowable modifications and their required controls and procedures
- methods to limit surface temperatures for;
- exhaust manifold design and fitment
- adaptor pipe
- possible failure modes in maintenance procedures and practices required to provide controls (including, flametraps, cooling systems, treatment systems, filtration)
- the heat energy generating characteristics of forced induction systems and the control measures provided to manage surface temperatures, including; maintenance, testing and monitoring
- causes of the degradation of heat exchanger performance;
- function and performance criteria and protection employed in exhaust, including;
  - cooling
  - flametrap
  - spark arrestor
  - emissions reduction
  - fire-protection
  - explosion protection
- types of flametraps permitted by the relevant Standard, including;
  - water-based flametraps
  - positive flametraps
- properties and functional characteristics of exhaust flametraps, including;
  - positive flametraps
  - water-based flametraps
- failure modes and inherent risks and hazards for each type of exhaust flametrap
- operational and installation requirements for heat exchangers when installed in conjunction with positive flametraps
- maintenance processes and procedures required to ensure ongoing safe operation
- importance of the application of appropriate components and fasteners, including the selection of appropriate bolts, studs, threads and washers to specific applications within a
- Inspect, test and maintain exhaust systems on diesel engine systems

</tr>
</tbody>
</table>
Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate’s required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate’s:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate:
  - working with others to undertake and complete the inspection, testing and maintenance of exhaust systems on diesel engine systems

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

### Compliance and other documentation may include:
- certification documentation
- approval documentation
- legislative, organisation and site requirements and procedures
- manufacturer’s specifications and guidelines
- Australian Standards, including: AS/NZS3584 and AS 4291
- codes of practice
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Inspection may include:
- checking the marking of parts/components
- determine that there is no evidence of carbon build-up on or heating of joints that may suggest a leakage of exhaust gas
- check that the positive exhaust flametrap and exhaust gas cooling system is clean
- check that the floats used for the low water shutdown in the exhaust system conditioner/flame trap/spark arrester are free, clean, unobstructed and correctly installed
- check that the static water level on any water-based exhaust system conditioner/flame trap/spark arrester is at or above the level indicated
- checking materials and gaskets/seals
- the conformity of threads and fasteners to registration and/or certification drawings

### Testing may include:
- conduct exhaust conditioner/ flametrap, low-water, shutdown tests (i.e. both low water test systems are tested separately)
- check that the engine system shuts down at or higher than the minimum shutdown water level and record the water levels after shut-down.
- conduct gas tightness tests for all joints within the exhaust system  
  *Note:* A soapy water test may meet this requirement
- measurement of joints for dimensional compliance, surface finish, flatness

### Maintenance is:
- the combination of actions carried out to retain a diesel engine system in, or to restore it to, conditions in which it is able to meet the requirements of the relevant specification and perform its required function
| Maintenance may include authorised: | • service  
• adjusting  
• replacing  
• repair  
• overhaul  
• modification |
| --- | --- |
| Exhaust systems may include: | • exhaust manifolds  
• turbo-chargers or superchargers  
• pipe work  
• hoses  
• joints  
• fastenings  
• exhaust flametrap, which may include:  
  • positive flametrap, (with temperature sensors)  
  • water-based flametrap, (with water level sensors and test valves)  
• spark arrestor  
• exhaust cooling system, which may include:  
  • water bath  
  • air dilution  
  • heat exchanger  
  • water Injection  
  • monitoring or shutdown devices  
  • surface temperature control systems  
  • catalytic converters, including DOCs and SCRs  
  • fume diluters and forced-air systems  
  • particulate filters  
  • replacement element-type filters  
  • exhaust gas recirculation |
| Diesel engine systems are: | diesel engines for underground coal mines and their:  
• inlet systems  
• exhaust systems  
• cooling systems  
• starting systems  
• shut-down and protection systems  
• electrical or electronic devices |
| Work requirements may come from briefings, handovers, and work orders and may include: | • nature and scope of tasks  
• procedures to be applied  
• quality standards to be applied  
• available resources  
• achievement targets |
<table>

</table>

**Others may include:**
- other maintenance personnel
- support providers
- contractors
- underground production personnel
- mobile or fixed plant operators

**Inspect and prepare work area may include:**
- determining if the proposed work area is a designated safe area
- identification of explosion-risk zones
- identification of hazardous areas
- identification of hazards, including:
  - workshop work area hazard
  - underground work area hazards
  - work activity hazards
  - fire
  - explosion
  - emissions
  - selection and implementation of control measures for the hazards identified
  - safeguarding site and non-site personnel by:
    - erection of barricades and posting of signs
    - selection of appropriate equipment to ensure personnel safety and protection

**Items may include:**
- authorised replacement parts
- fasteners as specified in manufacturer’s drawings, which may include:
  - tensile strength
  - head and nut configuration
  - thread form and engagement
  - corrosion resistance (materials)
  - coatings (materials and application)
### Tolerances
- Tolerances for fits and threads
- Tolerances for mating surfaces
- Dimensions of clearance holes
- Fixing torques
- Lubricants and anti-seize compounds used
- Packing materials

### Tools
- Hand tools
- Power tools
- Special tools
- Testing equipment

### Support
- Other site personnel
- Contractors
- Cranes
- Other lifting equipment

### Personal Protection Equipment
- Hard hats
- Eye protection
- Hearing protection
- Breathing apparatus
- Gas/fume masks
- Prescribed footwear

### Pre-Start Procedures
- Checking:
  - Cleanliness, particularly coal dust
  - Diesel and other flammable liquid leaks
  - Coolant leaks in radiator or radiator hoses
  - Coolant level
  - That guards are in place and secure
  - Engine oil level is correct
  - Conduct exhaust conditioner/flametrap, low-water, shutdown tests

### Hazardous and Emergency Situations
- Working alone
- Personal injury
- Fire
- Explosions
- Emissions
- Electrical
- Noise
- Dust
- Noxious gases
- Environmental
- Chemical

### Diagnose
- Root cause analysis
Routine maintenance is to include:

- troubleshooting techniques
- servicing, including:
  - cleaning, including the gas path of any exhaust system
  - conditioner
  - flametrap and/or
  - spark arrestor
  - checking and filling lubricants, fuel and water
  - adjusting
  - replacing

Overhaul may include:

- removal
- dismantling
- cleaning
- inspecting
- replacing, eg:
  - gaskets
  - fasteners
- testing, including:
  - flatness
  - measuring dimensions
  - hydrostatic
  - reassembly
  - reinstallation, (e.g. cleaned or new exhaust positive flametrap assembly)

Records may include:

- inspection and test results
- defect identified
- defect rectification carried out
- item consumed
- hazard/risk management reports

### Elements and Performance Criteria

| 1. Plan for inspection, testing and/or maintenance tasks | 1.1 Access, interpret and apply *compliance and other documentation* relevant for the *inspection, testing* and *maintenance* of *safety shutdown systems* on *diesel engine systems*  
1.2 Obtain, interpret and clarify *work requirements* for the satisfactory completion of tasks  
1.3 Resolve coordination requirements with *others* at the site prior to commencing and during work activities |
|---|---|
| 2. Prepare for inspection, testing and/or maintenance tasks | 2.1 *Inspect and prepare work area* in *coordination with others*  
2.2 Identify and obtain *items and tools* required for the safe, effective and efficient conduct of the tasks  
2.3 Identify and arrange *support* required for completion of tasks  
2.4 Select and use *personal protection equipment* appropriate to the task  
2.5 Carry out required equipment *pre-start and inspection procedures*  
2.6 Carry out required isolation and lock-out of all equipment necessary for the safe execution of tasks  
2.7 Recognise and respond to *hazardous and emergency situations* |
| 3. Carry out inspection of safety shutdown systems | 3.1 Carry out inspection of engine safety shutdown systems (fuel shutdown systems)  
3.2 Carry out inspection of emergency safety shutdown systems  
3.3 Carry out inspection of manual fuel shut-off valves  
3.4 Carry out inspection of safety shutdown systems sensing devices  
3.5 Carry out inspection of hoses, tubes cables and connectors associated with safety shutdown systems  
3.6 *Diagnose* and record existing or identified faults |
<table>
<thead>
<tr>
<th>Task</th>
<th>Description</th>
</tr>
</thead>
</table>
| 4. Carry out testing of safety shutdown systems | 4.1 Select and operate testing equipment and methods  
4.2 Carry out testing and fault finding of engine safety shutdown systems (fuel shutdown systems)  
4.3 Carry out testing and fault finding of emergency safety shutdown systems  
4.4 Carry out testing and fault finding of manual fuel shut-off valves  
4.5 Carry out testing and fault finding of safety shutdown systems sensing devices  
4.6 **Diagnose**, record and rectify existing identified faults |
| 5. Carry out routine maintenance of safety shutdown systems | 5.1 Select and use maintenance items, tools and equipment  
5.2 Rectify diagnosed and identified faults  
5.3 Carry out **routine maintenance** of engine safety shutdown systems (fuel shutdown systems)  
5.4 Carry out routine maintenance of emergency safety shutdown systems  
5.5 Carry out routine maintenance of manual fuel shut-off valves  
5.6 Carry out routine maintenance of safety shutdown systems sensing devices |
| 6. Carry out the overhaul of safety shutdown systems | 6.1 Select and use overhaul items, tools and equipment  
6.2 Carry out **overhaul** of safety shutdown systems in accordance with work requirements and Australian Standards |
| 7. Complete post-work activity requirements | 7.1 Tidy up the work area  
7.2 Dispose of used oil, lubricant and other waste  
7.3 Return and secure all tools and re-usable items  
7.4 Report outcomes of inspection, testing, maintenance and overhaul tasks to appropriate person  
7.5 Complete and maintain inspection, testing and maintenance **records** |
## Required Skills and Knowledge

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied.

This includes the ability to carry out the following as required to safely, effectively and efficiently inspect, test and maintain safety shutdown systems on diesel engine systems:

- apply legislative, organisation and site requirements and procedures
- apply surface and underground worksite hazard identification and risk management requirements and procedures
- apply task hazard identification and risk management requirements and procedures
- apply hazard and emergency procedures
- apply site health and safety requirements and procedures
- apply site environmental requirements and procedures
- apply site quality requirements and procedures
- read, explain and apply:
  - technical information including scheduled drawings
  - site/legislative requirements
  - records and reports
  - apply registration/certification information and implement conditions and recommendations
  - apply feedback procedures
  - apply technical and routine reporting requirements and procedures
  - apply investigation procedures
  - apply technical literacy, including reading and interpreting fluidic and logic schematic drawings
  - interpret and apply technical and scientific/industry terminology
  - analyse the function of the devices within an integrated system
  - operate manual fuel shutoff valve
  - apply site communication requirements and procedures
  - apply manufacturer’s requirements and procedures
  - communicate with those providing support
  - apply work area and equipment inspection procedures
  - apply work area safeguarding options and requirements
  - apply isolation and lock-out requirements and procedures
  - apply site service and maintenance reporting requirements and procedures
  - apply inspection requirements and procedures
  - apply testing requirements and procedures
  - apply fault finding techniques
  - apply maintenance requirements and procedures
  - work wearing appropriate personal protective equipment
  - use tools for inspection, testing and maintenance
  - use calibrated/verified instruments
**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used.

This includes knowledge of the following, as required to safely, effectively and efficiently inspect, test and maintain safety shutdown systems on diesel engine systems:

- site risk, statutory compliance, health, safety, environmental, quality and communication requirements and procedures
- site and manufacturer’s requirements and procedures
- legislative requirements and procedures
- site and legislative safety inspection requirements
- provisions of relevant Standards and guidelines
- potential hazards in the use of diesel engine systems in underground coal mines, including:
  - explosions
  - fire, and
  - emissions
- limitations on allowable maintenance, including:
  - service
  - adjust
  - replace
  - repair
  - overhaul
- work in hazardous environments
- limitations on allowable modifications and their required controls and procedures
- engine system shut-down devices required by AS/NZS3584.1&2
- water-bath level monitoring devices, including the methods employed to determine minimum safe shut-down levels and the testing methods and procedures required to confirm compliance
- functionality and performance of the various type of ‘automatic safety shutdown systems, including;’
  - pneumatically operated
  - engine oil (pressure) operated
  - a mix of pneumatic and engine oil (pressure) operated
  - electrically or electronically operated
- failure modes of safety shutdown systems, including
  - contamination
  - incorrect adjustment
  - unauthorised adjustment
- testing procedures required to detect failures
- recommended maintenance procedures required to reduce the probability of failures
- features, function and performance of electrical / electronic safety shutdown system and sufficient knowledge of the Group I explosion protection techniques used for devices to identify a component failure by inspection (only) and to seek expert competent advice, such
as:

- Ex.d — flameproof
- Ex.i a-b — intrinsic safety
- Ex.m a-b — dncapsulation
- Ex.e — increased safety
- Ex.o — oil immersion
- Ex.s — special protection

- requirements for cables and connections used for electrical / electronic safety shutdown system, including those nominated in AS/NZS4871.6
- features, function, performance of the various type of emergency stop systems, including:
  - strangler valves in the air intake system
  - inert gas injection
  - decompression
  - operation of the manual fuel shut off valve
- items required to be used in performance of inspection, testing and maintenance tasks
- tools required for the performance of inspection, testing and maintenance tasks
- provisions of AS/NZS3584.1, 2 and 3 relating to fasteners and joints
- recognise the requirements and performance of various types of fasteners, including bolts, studs, threads and washers
- site inspection, testing and maintenance support requirements and availability
- site work area inspection requirements
- site work area safeguarding options and requirements
- site isolation and lock-out requirements and procedures
- site hazard and emergency procedures
- site inspection, testing and maintenance reporting requirements and procedures
- site inspection, testing and maintenance record procedures
- site requirements and procedures for working in isolation
- site requirements for the use of personal protective equipment
## Evidence Guide

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>

</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
</tr>
<tr>
<td></td>
<td>• Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.</td>
</tr>
<tr>
<td></td>
<td>• Aboriginal people and other people from a non English speaking background may have second language issues.</td>
</tr>
<tr>
<td></td>
<td>• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
</tr>
</tbody>
</table>
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate’s required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate’s:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate:
  - working with others to undertake and complete the inspection, testing and maintenance of safety shutdown systems on diesel engine systems

**Guidance information for assessment**

- Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

### Range Statement

**Compliance and other documentation include:**

- certification documentation
- approval documentation
- legislative, organisation and site requirements and procedures
- manufacturer’s specifications and guidelines
- Australian Standards, including: AS/NZS3584 and AS 4291
- codes of practice
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Inspection may include:**

- checking the marking of parts/components
- inspecting the fuel shutdown linkages to ensure they are in good condition and fully operative
**Testing** may include:

- conducting exhaust conditioner/flametrap, low-water, shutdown tests (both low water test systems are tested separately)
- checking that all gauges and indicators are operating correctly and are clearly visible
- checking the proper operation and function of:
  - low oil engine pressure detection sensor
  - coolant loss protection sensor
  - coolant over temperature protection sensor
- confirming that the manual fuel valve operates correctly to stop the diesel within the time determined by the original type testing including a reasonable margin
- test that the air receiver safety (pressure relief) valves are in place, not blocked/seized and operating correctly
- checking the engine system shuts down at, or higher than, the minimum shutdown water level, (record the water levels after shut-down)
- testing the emergency safety shutdown system to ensure that the engine stops under the operation of the emergency safety shutdown system working in isolation of other engine safety shutdown systems, record the time taken for the engine to stop with the engine running at high idle, (Note: The diesel engine system manufacturer may provide test instructions to minimise the risk of engine damage during testing (see AS/NZS 3584.2)
- checking the proper operation and function of the low oil engine pressure detection sensor, and recording the engine oil pressure at the time of shutdown
- checking the proper operation and function of the coolant loss detection sensor, and recording the time taken to cause the engine to shut down
- checking the proper operation and function of the coolant over-temperature sensor, and recording the coolant temperature at which the engine shut down, (Note: Testing this sensor by defeating other sensors and overheating the diesel engine system may be hazardous or cause damage to the diesel engine system. It is recommended that the sensor be removed from the engine and tested in heated water while remaining connected to the engine shutdown system)
- checking the proper operation and function of the exhaust gas over-temperature sensor, and recording
| **Maintenance** is: | • the combination of actions carried out to retain a diesel engine system in, or to restore it to, conditions in which it is able to meet the requirements of the relevant specification and perform its required function |
| **Maintenance** may include authorised: | • service  
• adjusting  
• replacing  
• repair  
• overhaul  
• modification |
| **Safety shutdown systems** may include: | • engine safety shutdown system (fuel shutdown system), including:  
• manual actuation system  
• fault indication system  
• emergency safety shutdown system, may be:  
• a strangler valve  
• inert gas injection  
• decompression  
• manually actuated  
• automatically operated  
• manual fuel shut-off valve  
• sensing devices, including:  
• engine cooling system  
• engine oil pressure  
• water-based flametrap  
• exhaust cooling  
• particulate filter |
| **Diesel engine systems** are: | diesel engines for underground coal mines and their:  
• inlet systems  
• exhaust systems  
• cooling systems  
• starting systems  
• shut-down and protection systems  
• electrical or electronic devices |
| **Work requirements** may come from briefings, handovers, and work orders | • nature and scope of tasks  
• procedures to be applied |
and may include:

- quality standards to be applied
- available resources
- achievement targets
- operational conditions
- site layout
- out-of-bounds areas
- designated safe areas
- explosion-risk zones
- hazardous areas
- other hazards and potential hazards
- obtaining permits required
- worksite inspection requirements
- lighting conditions
- plant or equipment defects
- coordination requirements or issues

**Inspect and prepare work area** may include:

- determining if the proposed work area is a designated safe area
- identification of explosion-risk zones
- identification of hazardous areas
- identification of hazards, including:
  - workshop work area hazard
  - underground work area hazards, and
  - work activity hazards
- fire
- explosion
- emissions
- selection and implementation of control measures for the hazards identified
- safeguarding site and non-site personnel by:
  - erection of barricades and posting of signs
  - selection of appropriate equipment to ensure personnel safety and protection

**Others** may include:

- other maintenance personnel
- support providers
- contractors
- underground production personnel
- mobile or fixed plant operators

**Items** may include:

- authorised replacement parts
- fasteners as specified in manufacturer’s drawings
- packing materials

**Tools** may include:

- hand tools
- power tools
| **Support** may include: | • special tools  
• other site personnel  
• contractors  
• cranes  
• other lifting equipment |
| **Personal protection equipment** may include: | • hard hats  
• eye protection  
• hearing protection  
• breathing apparatus  
• gas/fume masks  
• prescribed footwear |
| **Pre-start and inspection procedures** include: | • checking:  
  - cleanliness, particularly coal dust  
  - diesel and other flammable liquid leaks  
  - coolant leaks in radiator or radiator hoses  
  - coolant level  
  - guards are in place and secure  
  - engine oil level is correct  
  - conduct exhaust conditioner/flametrap, low-water, shutdown tests |
| **Hazardous and emergency situations** may include: | • working alone  
• personal injury  
• fire  
• explosions  
• emissions  
• electrical  
• noise  
• dust  
• noxious gases  
• environmental  
• chemical |
| **Diagnose faults** may include: | • root cause analysis  
• troubleshooting techniques |
| **Routine maintenance** is to include: | • servicing, including cleaning  
• adjusting  
• replacing |
| **Overhaul** may include: | • removal  
• dismantling  
• cleaning  
• inspecting  
• replacing, eg:

- defect identified
- defect rectification carried out
- item consumed
- hazard/risk management reports

**Unit Sector(s)**

Coal Mining (Diesel Engine Systems Maintenance)

**Custom Content Section**

Not applicable.
RIIDES307 Test, determine the cause and rectify excessive emission levels on diesel engine systems

Modification History
Not applicable.

Unit Descriptor
This unit covers the testing, determining the cause of and rectifying excess emission levels of diesel engine systems for underground coal mines. It includes: planning and preparing for and carry out emission testing; determination of the cause of excessive emission levels and carrying out maintenance to rectify the situation; and the completion of post work activity requirements

Application of the Unit
This unit is appropriate for those undertaking the inspection, testing and maintenance of diesel engine systems for underground coal mines

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Metal, mechanical, electrical or automotive trades or mechanical or electrical engineering

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

## Elements and Performance Criteria

| 1. Plan for testing and/or rectification tasks | 1.1 Access, interpret and apply compliance and other documentation relevant to the testing, determining the cause of and rectification of excessive emission levels on diesel engine systems |
| | 1.2 Obtain, interpret and clarify work requirements for the completion of tasks |
| | 1.3 Resolve coordination requirements with others at the site prior to commencing and during work activities |

| 2. Prepare for testing and/or rectification tasks | 2.1 Inspect and prepare work area in coordination with others |
| | 2.2 Identify and obtain items and tools required for the safe, effective and efficient conduct of the tasks |
| | 2.3 Identify and arrange support required for the safe, effective and efficient completion of the tasks |
| | 2.4 Select and use personal protection equipment appropriate to the task |
| | 2.5 Carry out required equipment pre-start and inspection procedures |
| | 2.6 Carry out isolation and lock-out of all equipment necessary for the safe execution of tasks |
| | 2.7 Recognise and respond to hazardous and emergency situations |

| 3. Carry out testing of emission levels and determine the cause of excessive emission levels | 3.1 Select and operate testing equipment and methods |
| | 3.2 Carry out testing on diesel engine systems |
| | 3.3 Test and report on the performance of diesel oxidation catalyst system |
| | 3.4 Determine the cause of any excessive emission levels |
| | 3.5 Report outcomes of testing to appropriate person |

<p>| 4. Rectify excessive emission levels | 4.1 Select and use maintenance items, tools and equipment |
| | 4.2 Carry out maintenance to rectify excessive emission levels on diesel engine systems |</p>

• consistent timely completion of the testing, determination of the cause of and rectification of excessive emission levels on diesel engine systems that safely, effectively and efficiently meets the required outcomes |
## Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate’s required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate’s:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate:
  - working with others to undertake and complete the testing, determination of the cause of and rectification of excessive emission levels on diesel engine systems

## Guidance information for assessment

- Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
**Range Statement**

| Compliance and other documentation to include: | • certification documentation  
• registration documentation  
• legislative, organisation and site requirements and procedures  
• manufacturer’s specifications and guidelines  
• Australian Standards and Guidelines, including:  
  - AS/NZS3584 and MDG 29  
  - codes of practice  
  - Employment and Workplace Relations legislation  
  - Equal Employment Opportunity and Disability Discrimination legislation |
|---|---|
| Testing may include: | • testing the composition of exhaust emissions within the exhaust stream under load conditions  
• testing the diesel engine system for;  
  - NO\(_x\) (oxides of nitrogen),  
  - CO (carbon monoxide),  
  - CO\(_2\) (carbon dioxide)  
  - diesel particulate matter |
| Determining the cause may include: | • root cause analysis  
• troubleshooting techniques |
| Rectification is: | • the combination of actions carried out to restore a diesel engine system to, a condition in which it is able to meet the requirements of the relevant specification and perform its required function |
| Emissions may include: | • NO\(_x\) (oxides of nitrogen)  
• CO (carbon monoxide)  
• CO\(_2\) (carbon dioxide)  
• diesel particulate matter |

**Excessive emissions may be contributed to by:**

- inlet or exhaust restriction  
- engine wear  
- component failure  
- contaminated or non-compliant fuel  
- incorrect fuel/air ratio  
- lubrication oil in the combustion chamber  
- the product of abnormal combustion (unintended fuels being breathed by an engine) 

**Diesel engine systems are:**

diesel engines for underground coal mines and their:
## Work requirements

- inlet systems
- exhaust systems
- cooling systems
- starting systems
- shut-down and protection systems
- electrical or electronic devices

### Work requirements may come from briefings, handovers, and work orders and may include:

- service and maintenance schedules
- production requirements
- nature and scope of tasks
- achievement targets
- operational conditions
- operational requirements
- site layout and out of bounds areas
- worksite inspection requirements
- plant or equipment defects
- hazards and potential hazards
- coordination requirements or issues

<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Ensure appropriate planning and preparation of tasks is carried out | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Access, interpret and clarify the specific task information and requirements relevant to undertaking the demolition tasks  
1.3. Ensure a job plan is available which makes best use of the available resources and meets task requirements |
| 2. Ensure appropriate initiation of tasks is carried out | 2.1. Confirm that the necessary resources are available for the safe, effective and efficient conduct of the tasks  
2.2. Ensure clear and timely instructions are communicated to team members and others involved, for the safe, effective and efficient conduct of the demolition tasks, to meet the specific task requirements  
2.3. Set out tasks as required for the effective completion of the task |
| 3. Oversee the execution of tasks | 3.1. Monitor demolition tasks performance to ensure it achieves the required outcomes  
3.2. Initiate adjustments to work practice or job plan to ensure safe execution of work and achievement of required outcomes |
| 4. Report on the execution of tasks | 4.1. Complete and submit reports as required  
4.2. Recommend changes to improve the safety, efficiency and effectiveness of the execution of tasks |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to supervise demolitions:

- apply legislative, organisation and site requirements and procedures
- interpret project contract and specification requirements and procedures
- interpret project site soil and geological data
- identify soil and rock types
- interpret meteorological data
- identify drainage issues
- interpret material properties and test results, including compaction test results
- interpret project site geotechnical data
- interpret project site hydrological data
- interpret project engineering survey information
- interpret project plans and drawings
- interpret project specifications
- prepare for and conduct briefings, toolbox and site meeting
- prepare of short messages
- prepare and presenting of job reports
- prepare and maintaining of log books and diaries
- provide leadership
- apply performance monitoring skills
- apply set out requirements and procedures
- set up and use levelling devices
- establish construction offsets
- apply supervisory skills
- develop workplace relationships
- develop individuals and the team
- apply inspection requirements and procedures
- calculate quantities for the execution of tasks, including:
  - volumes
  - grades
  - percentages
  - areas
  - resource consumption figures, including required supply rates
- interpret demolitions materials properties and test results
- provide recommendations for the improvement of the safe, effective and efficient execution of demolition tasks
### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to supervise demolitions:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational Health and Safety requirements and procedures
- excavation shoring requirements and procedures
- slope management requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- work zone traffic management requirements and procedures
- contract management requirements and procedures
- communication requirements and procedures
- administrative requirements and procedures
- demolitions plant and equipment capabilities and application
- plant, equipment and tools maintenance requirements and procedures
- operational techniques for the execution of demolition tasks
- demolitions task resource requirements and procedures
- Activities scheduling requirements and procedures
- demolitions materials delivery requirements and procedures
- job plan drafting of and administration requirements and procedures
- reporting requirements and procedures
- workplace relationship requirements and procedures
- organisational, client and site operational requirements
- relationship between various areas of civil works
- team leadership techniques
- works planning techniques
- demolitions monitoring methods
- engineering survey principles
- materials quality and delivery requirements and procedures
- mentoring techniques
- estimating principles
- civil works construction sequencing
- demolition and related activities' terminology
- works planning techniques
- monitoring methods
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the supervision of demolitions</td>
</tr>
<tr>
<td></td>
<td>• implementation of appropriate procedures and techniques for the safe, effective and efficient supervision of demolitions</td>
</tr>
<tr>
<td></td>
<td>• working with others to plan, prepare and conduct demolition tasks</td>
</tr>
<tr>
<td></td>
<td>• provision of clear and timely instruction and supervision of demolition tasks</td>
</tr>
<tr>
<td></td>
<td>• evidence of the consistent successful supervision of demolitions</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Evidence for assessment is best gathered using the outcomes of products and processes in the workplace.</td>
</tr>
<tr>
<td></td>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
</tr>
<tr>
<td></td>
<td>• Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.</td>
</tr>
</tbody>
</table>
Aboriginal people and other people from a non English speaking background may have second language issues.

Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.

Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to plan, prepare and conduct demolitions
  - provision of clear and timely instruction and supervision by the individual of those involved in the conduct of demolitions

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• code of practice  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
| --- | --- |
| Specific task information and requirements may include: | • site geological and geotechnical data, including:  
  • rock types and characteristics  
  • soil types and characteristics  
  • site hydrological data, including:  
  • surface water  
  • ground water  
  • site meteorological data, including:  
  • rainfall  
  • humidity  
  • temperature  
  • wind  
  • site engineering survey data  
  • known and potential site hazards, constraints and conditions  
  • site cultural and heritage information  
  • task specifications  
  • task drawings  
  • sources of materials  
  • other organisations and contractors involved in the task or related tasks  
  • coordination, timing and budgeting requirements |
| Demolitions may include: | • buildings  
• civil works |
**Demolition tasks** may include:
- site preparation methods
- site set out methods
- scaffolding erection methods
- excavation shoring methods
- bulk demolitions methods
- detailed demolitions methods
- haulage vehicle access methods
- demolition materials conveyancing methods
- structure propping methods
- sediment control methods

**Job plan** is to include:
- human resource requirements
- plant and machinery requirements
- construction materials requirements
- sub-contractor support requirements
- waste disposal requirements
- coordination requirements
- activity scheduling
- materials delivery scheduling
- risk assessment and management requirements
- occupational Health and Safety requirements
- quality management requirements, including testing scheduling requirements
- traffic management requirements
- environmental requirements
- task monitoring requirements
- task performance monitoring requirements
- communication requirements
- reporting requirements

**Resources** are to include:
- labour
- plant, equipment and tools
- material supply vehicles
- construction materials
- sub-contractor services

**Instructions** are to include:
- briefings
- handovers
- work orders
- toolbox meetings
- site meetings

**Team members** may include:
- other members of the organisation’s management team
- members of the team directly involved in the

</table>
| 1. Plan for operating in remote environments | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Collate and record information relating to operating in the *remote environment*  
1.3. Establish detailed operating and travel plans, including a disaster plan and fallback position, in consultation with supervising staff  
1.4. Notify *appropriate authorities* of the action plans and time schedules according to enterprise policy  
1.5. Identify and source relevant maps |
| 2. Prepare for operating in remote environments | 2.1. Prepare *personal needs* for activities or travel in remote areas  
2.2. Prepare transportation and equipment for use in prescribed work location or along prescribed routes  
2.3. Obtain and study relevant maps prior to departure  
2.4. Report and record planned activities and itinerary accurately prior to departure |
| 3. Prepare for emergency situations | 3.1. Check provisioning meets expected operational and possible emergency needs  
3.2. Check that initial planning and regular monitoring ensures *structured use of available provisions* and resources  
3.3. Structure operating plan to include *training in remote area survival techniques* prior to operating in remote situations  
3.4. Include emergency management procedures as an integral part of operating plans and enterprise policy |
| 4. Operate in remote environments | 4.1. Complete activities according to instructions and established time schedules  
4.2. Carry out all activities in remote situations in accordance with prescribed procedures  
4.3. Handle *emergency situations* in accordance with prescribed procedures and enterprise policy  
4.4. Follow established reporting procedures on |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to operate in isolated and remote situations:

- apply legislative, organisation and site requirements and procedures for operation in isolated and remote situations
- plan for operating in remote environments
- prepare for operating in remote environments
- prepare for emergency situations
- operate in remote environments

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to operate in isolated and remote situations:

- map reading and navigation skills including direction finding (e.g., GPS, use of compass, stars or watch)
- local topography, nearby inhabitants and locations within that area
- survival techniques and human needs relating to survival situations
- clothing requirements for sun or heat protection
- basic First Aid
- bush craft including making a fire, cooking and wild food gathering
- water supplies, sources and generation methods
- emergency vehicle and mechanical equipment repair
- the operation of communication equipment (e.g., field communications by two-way, satellite telephony and HF radio), and distress signalling including use of signalling mirrors
- weather and weather indicators
- basic rope skills including useful knots (reef, clove hitch, truckie's hitch, bowline); simple lashings and tying down loads
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</table>

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for operation in isolated and remote situations
- implementation of requirements, procedures and techniques for the safe, effective and efficient operation in isolated and remote situations
- working with others to operate in isolated and remote situations that meets all of the required outcomes
- consistent timely completion of operation in isolated and remote situations that safely, effectively and efficiently meets the required outcomes

This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.

Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.

The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those.
required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the operation in isolated and remote situations

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation
- guidelines and reporting procedures for personnel operating in remote environments
- personal diary records as well as property records

Remote environment may include:
- any workplace where the ability to get help because of distance is such that personal safety may be at risk

Appropriate authorities may include:
- the property manager, other staff or recognised regulatory authorities (e.g., Police, Maritime Safety Authority, State Emergency Service, and Civil Aviation Authority)

Personal needs may include:
- water generating and shade generating gear
- non-perishable survival rations
- clothing to provide for the worst case scenario

Emergency needs may include:
- First Aid supplies
- spare parts
- telephones
- two way radios
- repair tools for the selected form of transportation
- retrieval, communications, prescribed emergency equipment for water travel
- emergency beacons and other position location devices
- emergency planning including establishment of contingency plans ("fall back position")

Planning may include:
- establishment of time schedules and intended outcomes in consultation with managers and
supervising staff
- provisioning for extreme circumstances, including worst case scenario
- identification of alternative routes, available water supplies and travel conditions such as checks of actual and forecast weather conditions
- consideration of any unplanned deviation from the planned route, itinerary or timing including the work processes involved
- establishment of rescue plans and the consideration of what circumstances might require such an operation to be mounted

**Structured usage of provisions** may include:
- available provisions and resources used at a rate that sustains the individual or party and will last if possible until the end of any possible delays or emergency situations

**Training in remote area survival techniques** may include:
- managing emergencies
- location and/or distilling of water
- provision and erection of shelter
- conservation of energy
- the identification and use of wild food (bush tucker)
- GPS position locating
- setting out beacons and distress signalling
- staying put or remaining with transport
- communicating with rescue teams

**Emergency situations** may include:
- vehicle or equipment breakdown
- lack of food, water or protective clothing
- flood, fire or storm

**Types of working situations** may include:
- working alone or in teams

**Operational strategies** may include:
- planned provision of water and other survival clothing and requisites sufficient to meet the needs of all personnel

**Personnel briefings** may include:
- provision of advice on intended routes, work locations, maps and direction finding equipment

**Communication** may include:
- 2-way radio, satellite radio/phone, marine radio or mobile telephone

**Distress signalling** may include:
- EPIRBs, signalling mirrors, fire or signals scratched on the ground
| Licensing may include: | • operating vehicles on roads, heritage reserves or public reserves, radio communications equipment |

Exploration and Field Work
Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIEGS301A Operate and maintain instruments and field equipment

Modification History
Not applicable.

Unit Descriptor
This unit covers the operation and maintenance of instruments and field equipment in the metalliferous mining industry. It includes planning and preparing for the use of instruments and field equipment, testing instruments and field equipment, calibrating instruments and field equipment, operating instruments and field equipment, mainlining instruments and field equipment, identifying faults in instruments and field equipment, and commissioning new instruments and equipment. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for use of **instruments and field equipment** | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Plan and prepare work  
1.3. Communicate with other personnel using approved communication methods  
1.4. Select personal protective equipment appropriate for work activities  
1.5. Select appropriate type of auxiliary equipment for work activities  
1.6. Perform equipment pre-start checks to ensure *equipment* is ready for operation  
1.7. Identify, address and report *potential risks and hazards*  
1.8. Identify, address and report *environmental issues*  
1.9. Adhere to emergency procedures to ensure safety of personnel and plant |
| 2. Test **instrument/field equipment**                  | 2.1. Perform safety checks  
2.2. Identify potential faults and/or malfunctions of **instruments/field equipment**  
2.3. Label and report damaged or unsafe **instruments/field equipment** and remove from service  
2.4. Ensure operational log books are up dated |
| 3. Calibrate **instruments/field equipment**            | 3.1. Closely follow calibration schedules  
3.2. Label out calibration **instruments/equipment** and advise other operatives promptly  
3.3. Identify cause/s of incorrect calibration  
3.4. Perform new base calibration  
3.5. Recommission instrument/equipment  
3.6. Prepare compliance and calibration report as required |
| 4. Operate **instruments/field equipment**               | 4.1. Optimise instrument/equipment settings for the particular measurement or analysis  
4.2. Perform measurements with the optimum precision given field and technical |
| Constraints | 4.3. Use time and materials efficiently and perform measurements in priority order  
4.4. Assess data against quality control information, known standards and references for accuracy and precision  
4.5. Repeat measurements where non-standard results are obtained |
|---|---|
| 5. Maintain instruments/field equipment | 5.1. Perform preventative *maintenance*  
5.2. Identify and report equipment wear and faults  
5.3. Perform minor repairs within limits of authorisation  
5.4. Replace defective parts and makes adjustments  
5.5. Seek expert help where difficulties are encountered  
5.6. Update *maintenance* and calibration records |
| 6. Identify faults in instruments/field equipment | 6.1. Identify and clarify the nature of the fault  
6.2. Determine and rank likely causes of fault  
6.3. Apply simple checks and tests  
6.4. Obtain suitable tools and equipment to test faults  
6.5. Apply fault finding methodology |
| 7. Commission new instruments and equipment | 7.1. Arrange commissioning procedures with manufacturer's agent as required  
7.2. Unpack, check and assemble *instruments/equipment* according to manufacturer's warranty requirements  
7.3. Calibrate instrument/equipment to meet manufacturer's specifications  
7.4. Check instrument/equipment performance against specifications prior to acceptance of item  
7.5. Prepare and make operating instructions available |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to operate and maintain instruments and field equipment:

- apply legislative, organisation and site requirements and procedures for operating and maintaining instruments and field equipment
- use hand and power tools
- use calibration equipment
- use test equipment
- employ fault finding procedures

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to operate and maintain instruments and field equipment:

- manufacturer's operating requirements for instruments and equipment
- manufacturer's calibration procedures
- company and site policy and procedures regarding instrument and equipment use
- instrument and equipment test methods
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Critical aspects for assessment and evidence required to demonstrate competency in this unit</td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
</tbody>
</table>

- knowledge of the requirements, procedures and instructions for operating and maintaining instruments and field equipment
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of instrument and field equipment operation and maintenance
- working with others to undertake and complete the operation and maintenance of instruments and field equipment that meets all of the required outcomes
- consistent timely completion of instrument and field equipments operation and maintenance that safely, effectively and efficiently meets the required outcomes

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
<td></td>
</tr>
<tr>
<td>• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
<td></td>
</tr>
<tr>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of</td>
<td></td>
</tr>
</tbody>
</table>
assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the operation and maintenance of instruments and field equipments

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- instrument/equipment manual
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Instruments and field equipment may include:
- motors
- generators
- two way radios
- mobile communications equipment
- theodolite
- satellite navigation system
- memory magnetometer
- gravity meter
- IP transmitter and receiver
- tem transmitter and receiver
- gamma spectrometer
- seismograph
- well logger
- data logger
- portable PC

### Operating conditions may include:
- day and night
- laboratory
- field environment
- dry and wet
- stable ground
- broken ground
- various natural landscapes
- working over old underground workings and voids

### Potential risks and hazards may
- abandoned equipment
include:

- adverse weather conditions (electrical storms, floods, fires, extreme heat)
- chemicals
- contaminants (dust, noise, etc)
- equipment
- fences
- materials
- personnel
- pot holes
- unsafe ground
- vehicles
- old workings

**Maintenance of instruments/equipment may include:**

- replacing 'remove and replace' components
- lubrication
- working adjustments to tolerances
- cleaning and storing
- completing usage records

**Legislation** may include Acts and Regulation dealing with:

- mining safety and health
- mine inspection
- OHS
- explosives

**Environmental issues** may include:

- drainage
- dust
- emissions
- flora and fauna
- hazardous chemicals
- noise
- run-off
- spills
- waste management and disposal
- water quality

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to plan and undertake field trips:

- apply legislative, organisation and site requirements and procedures for planning and undertaking field trips
- erect shelters
- collect food and water
- light fires
- navigate with maps and stars
- use vehicle for survival
- plan and schedule
- apply interpersonal communication skills
- apply basic vehicle maintenance techniques
- use portable gas and electricity equipment

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to plan and undertake field trips:

- land-use permits
- relevant regulations, licences and permits
- communications systems
- historical mining data of field site
- trip planning and logistics
- supply sources, costs and availability
- remote hazards, risks and survival techniques
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

RIIEGS303A Provide geological field assistance

Modification History
Not applicable.

Unit Descriptor
This unit covers the provision of geological field assistance in the metalliferous mining industry. It includes planning and preparing for geological field assistance, collecting and classifying common rocks, ores and minerals, and using geological maps and sections. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for geological field assistance | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Plan and prepare work according to compliance documentation and *operating conditions*  
1.3. Receive, interpret and clarify roster changeover details  
1.4. Arrange *communications* method and protocols with field team members  
1.5. Select personal protective equipment appropriate for work activities  
1.6. Select and obtain relevant *geological instruments and field equipment* for work activities  
1.7. Perform *geological instrument and field equipment* checks to ensure instruments and equipment are ready for operation  
1.8. Identify, address and report *potential risks and hazards*  
1.9. Identify, address and report *environmental issues*  
1.10. Adhere to emergency procedures to ensure safety of personnel and equipment |
| 2. Collect and classify common rocks, ores and minerals | 2.1. Take *rock, ore and mineral samples* according to site procedures and geologists requirements  
2.2. *Communicate* field activities and results to relevant personnel  
2.3. Examine specimens or outcrops to identify the properties and classify specimens into geological types  
2.4. Compile *records* of all sampling results |
| 3. Use geological maps and sections | 3.1. Interpret correct *symbols* to read geological maps and sections  
3.2. Interpret and record geological problems using block diagrams  
3.3. Interpret and record geographical features from landforms and maps  
3.4. Identify, in weathered outcrop, simple features as signs of the fresh rock type  
3.5. Carry out basic geological surveying techniques |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to provide geological field assistance:

- apply legislative, organisation and site requirements and procedures for the provision of geological field assistance
- drive all-terrain vehicles
- access, interpret and apply technical and safety information
- communicate and coordinate activities with others
- keep plant and equipment records
- apply diagnostic/faultfinding techniques
- comply with environmental requirements
- work in a team environment

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to provide geological field assistance:

- methods of sampling and sample identification
- geology of rock, ore and mineral deposits
- classification of rock, ore and minerals
- geometry of geological structures on maps and in the field
- company and site policy and procedures regarding geological field work
- types and functions of geological instruments and field equipment
- safe and correct use of instruments and equipment in the field
- sampling procedures and requirements
- communications methods and protocols
- recording and reporting systems
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Exploration and Field Work

**Competency field**  
Refer to Unit Sector(s).
Co-requisite units

Not applicable.
RIIEGS304A Mobilise equipment and materials

Modification History
Not applicable.

Unit Descriptor
This unit covers the mobilisation of materials and equipment in the metalliferous mining industry. It includes preparing for mobilisation to site, carrying out pre-start and routine checks, proceeding to the exploration site, and carrying out basic operator maintenance. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for mobilisation to site | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Observe safety *rules and regulations* including site rules, safety plans and site specific instructions  
1.3. Check operational safety by carrying out pre-start inspection procedures according to manufacturer's specifications, company and/or site requirements  
1.4. Receive, interpret and clarify briefing details in accordance with requirements  
1.5. Prepare *vehicle*, vehicle kit, camping equipment, First Aid kit, survival kit and personal equipment for remote assignment |
| 2. Carry out pre-start and routine checks | 2.1. Carry out pre-start, daily engine, fuel and fluid level checks according to manufacturer/supplier instructions  
2.2. Observe safety procedures while checking hydraulic systems, high-pressure air, electrical circuits and batteries |
| 3. Proceed to exploration site | 3.1. Drive vehicle in accordance with policies and procedures and State regulation  
3.2. Apply safe driving techniques to all vehicles  
3.3. Position/arrange *loads* so they will be carried in a safe manner to prevent loss/damage to vehicle or cargo  
3.4. Use a *range of load restraints/lashings* to secure various loads to a vehicle  
3.5. Identify and assess ground conditions before driving vehicle across country  
3.6. Drive vehicle *off road* in a range of *terrains*  
3.7. Demonstrate stall recovery  
3.8. Use *maps, communication and navigation aids/equipment*  
3.9. Identify and avoid potential/actual hazards on the route  
3.10. Carry out emergency procedures in accordance with manufacturer's and/or site rules and regulations |
<p>| | |</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to mobilise equipment and materials:

- apply legislative, organisation and site requirements and procedures for the mobilisation of equipment and materials
- apply communication and recording skills
- perform manual and mechanical handling
- drive laden vehicles (on and off road)
- perform basic maintenance skills
- apply knots, load securing devices and attachment points for loaded vehicles
- apply recovery techniques for bogged plant/vehicles
- acquire required licences and permits
- apply diagnostic and troubleshooting procedures
- use hand tools
- solve problems

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to mobilise equipment and materials:

- provisions of the Workplace Health and Safety Acts, their regulations and code of practice
- particular state or territory regulations relating to operations
- reasons loads shift and methods of preventing shifting
- number and types of lashings to apply, fixing points and basic knots
- safe carrying of loads
- a range of acquired safety and survival skills
- driving with the minimum of damage to vehicles, equipment and structures
- relevant OHS requirements for transport and storage of materials and equipment
- operational and maintenance procedures
- a basic knowledge of hydraulic systems, components and cleanliness requirements
- a basic knowledge of internal combustion motors and the major components
- a basic knowledge of electricity and in particular, the associated hazards
- use, transport and storage of LPG and LPG appliances
- recording and reporting
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for mobilising equipment and materials</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of equipment and materials mobilisation</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the mobilisation of materials and equipment that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of equipment and materials mobilisation that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensibly accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the mobilisation of equipment and materials

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisational and site requirements and procedures  
manUFACTURer's guidelines and specifications  
Australian standards  
Employment and workplace relations legislation  
Equal Employment Opportunity and Disability Discrimination legislation |
|---|---|
| Rules and regulations may be found in: | industrial safety regulations and legislation/organisation policy/procedures covering same  
driving manuals  
safety code of practice, signs and hazard codes  
materials safety data sheets (MSDS), container labels  
manufacturer's specifications  
employer's procedure manual/work instruction/safety analysis/directive  
company instructions  
maps and plans  
vehicle log books  
accident investigation forms |
| Vehicles may include: | any two-wheel drive passenger vehicle  
all-wheel drive sedan/utility/station wagon  
light trucks (usually table tops)  
heavy support vehicles  
heavy vehicles (such as drill rigs)  
towed vehicle/trailer |
| Loads may include: | materials for exploration operations  
spares for all equipment |

**Note:** State legislative requirements on road transport are adhered to
**Mobilise equipment and materials**

- fuels for all equipment, including oils and other lubricants
- other hazardous substances and equipment
- water tanks
- ancillary equipment (e.g. pumps, generators, lighting plant)
- compressors, caravans and/or vehicles
- pallets
- fluids
- bulk materials
- decontamination (cleaning) chemicals
- safety equipment including personal protective equipment
- towed loads

**Note:** Some of the materials to be transported are inherently hazardous

<table>
<thead>
<tr>
<th>Terrain over which vehicles can be driven may include:</th>
<th>state and federal roads, sealed and unsealed tracks or trails (e.g. mining and forestry access roads, fire trails)</th>
<th>off-road, where surface may vary in type, condition, gradient</th>
<th>barriers such as streams, gullies, sand dunes, banks</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hazards (other than those relating to terrain) may include:</td>
<td>power lines</td>
<td>fences, gates</td>
<td>natural disasters (e.g. floods)</td>
</tr>
<tr>
<td></td>
<td>LPG appliances/canisters</td>
<td>other transported gas cylinders</td>
<td>portable and fixed winches</td>
</tr>
<tr>
<td></td>
<td>road transport hazards (e.g. braking with loads, camber, hills, rough surfaces)</td>
<td>serviceability of slings, tow ropes, shackles, snatch blocks lashings, vehicle restraining structures, decks, steps and jacks</td>
<td></td>
</tr>
<tr>
<td>Range of load restraint/lashings may include:</td>
<td>direct lashings</td>
<td>indirect lashings</td>
<td>combination of direct and indirect lashings</td>
</tr>
<tr>
<td></td>
<td>knots (securing loads on vehicles)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Driving a vehicle off-road may include:</td>
<td>driving on rocky trails</td>
<td>steep gradients</td>
<td>driving in mud, snow and ice</td>
</tr>
</tbody>
</table>
- crossing sand dunes/crossing rivers
- stall recovery - ascent and descent

**Maps, communications and navigation aids** may include:
- compass
- global positioning system (GPS)
- range of maps and diagrams
- topographical information

**Basic survival techniques** may include:
- coping with breakdowns in the bush or isolated areas
- physical and emotional requirements in an emergency and in isolated areas
- methods of self protection to enhance survival
- sources of water
- making fire/protecting the environment
- signalling search parties/aircraft
- search party assistance
- determining directions/locations
- remaining in control/assisting other team members
- coping with accidents and illness/First Aid within limits of competency
- reading and interpreting maps

**Information communicated** may include:
- use of two way radio, CB radio
- SAT phones, mobile phones
- reporting defects, necessary detours, work hazards, changes in environmental patterns (e.g. storm, flood)
- phonetic alphabet
- call signs and radio protocols

**Documentation** may include:
- log books/service records
- pre-drive checks

**Minor repairs/replacements** may include:
- wheel changing/rotation
- using jumper leads
- charging/servicing batteries
- bleeding brakes
- bleeding hydraulic system
- adjusting clutch
- bleeding fuel system
- servicing air cleaners
- changing oil and oil filters
- greasing/lubrication
- basic pre-drive operational checks of a vehicle
### Recovery techniques

- jacking
- winching
- rigging
- towing

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to navigate in remote or trackless areas:

- apply legislative, organisation and site requirements and procedures for navigation in remote or trackless areas
- solve problems
- maintain a compass bearing in poor visibility and/or extreme conditions
- observe surroundings
- make decisions
- apply communication skills
- acquire required licences and permits
- apply diagnostic and troubleshooting procedures

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to navigate in remote or trackless areas:

- factors affecting navigation techniques in extreme environmental conditions
- map types and sources of error
- use of a compass and factors that affect their accuracy
- navigation techniques and aids
- navigation data sheets
- route planning and issues that should be considered in extreme environmental conditions
- estimation of travelling times in unmodified landscape and/or difficult terrain/conditions
- techniques for estimating distance travelled in poor visibility
- back-bearings and resections
- techniques to navigate around obstacles
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| | local inhabitants  
| | peers/local clubs  
| | digital resources |
| Potential hazards may include: | river crossings and rising water levels  
| | open water crossings  
| | cliff lines  
| | wet and slippery rocks  
| | extreme heat  
| | extreme cold  
| | fog and mist  
| | snow  
| | severe storms/squalls  
| | strong winds  
| | heavy rain  
| | man-made features |
### Other contextual issues may include:
- navigation and activity-specific abilities
- available clothing, equipment and resources
- fitness levels
- type of terrain or features of the location/access and escape routes
- number of people travelling
- natural protection or shelter

### Unmodified landscapes align to Class 6 Tracks within the Australian standard for Walking Tracks AS 2156.1. Standards Australia 2001, and may include those where:
- there are no modifications to the natural surface or the natural environment so that track alignment is indistinct
- there is no clearance along the track
- signage is generally not provided
- there may include steep sections of unmodified surfaces and other terrain and man-made hazards
- the track is not managed for public risk
- there is an appreciable risk of onset of poor visibility

### Obstacles may include:
- thick vegetation
- drops and climbs
- marshes and bogs
- fog
- rivers, lakes and dams

### Distance estimations may include:
- pacing
- time

### Navigation techniques may include:
- use of compass
- linear features/point features
- attack points
- aiming off
- collecting features
- spiral search
- sweep search
- back-bearings and resections
- use of Global Positioning Systems (GPS)
- use of stars and sun
- use of natural features

<tr>
<td></td>
<td>4.3. Store topsoil removed from sump construction separately to facilitate more effective rehabilitation</td>
</tr>
</tbody>
</table>

5. Manage rare flora

| 5.1. Determine the presence and type of rare flora before clearing vegetation, |
| 5.2. Seek advice on the **action to be taken** where rare flora are identified |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to prepare a drill site:

- apply legislative, organisation and site requirements and procedures for preparation of a drill site
- apply communication and recording skills
- perform manual and mechanical handling
- perform basic maintenance skills
- acquire required licences and permits
- apply diagnostic and troubleshooting procedures
- use hand tools
- solve problems

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to prepare a drill site:

- provisions of the Workplace Health and Safety Acts, their regulations and code of practice
- particular state or territory regulations relating to vegetation clearing
- drill site layout plans
- environmental work procedures
- hazards associated with drill site preparation work
- types and operational characteristics of plant/equipment used in creating access tracks and for drill site preparation operations
- basic maintenance
- fire control methods
- environmental principles and practices
- types and identification of rare flora
- type and identification of contaminated groundwater
- re-vegetation methods
- recording and reporting
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
|                     | • written and/or oral assessment of the candidate's required knowledge
|                     | • observed, documented and/or first hand testimonial evidence of the candidate's:
|                     |   • implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
|                     |   • consistent achievement of required outcomes
|                     |   • first hand testimonial evidence of the candidate's:
|                     |     • working with others to undertake and complete the preparation of a drill site

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>
<thead>
<tr>

</table>
- crawler dozers
- crawler loaders
- motor graders and scrapers
- backhoes
- chainsaw

**New tracks** should be cleared to a width no wider than three metres

**Natural contours** should be followed; straight line clearing of tracks and gridlines is not to occur

**Trim larger trees** should be carried out with a chainsaw rather than bulldozing

**Ground cover** may include:
- grass
- spinifex
- undergrowth

**Sumps** should:
- be located away from any significant vegetation to minimise disturbance to roots and to prevent horizontal transmission of saline water and potentially hostile material coming into contact with vegetation
- have one side that is ramped at approximately 45° to allow animals that may fall into the sump to escape

**Action to be taken** may include:
- if a single or small number of plants are found:
  - note location
- if work activity is planned for the area, relocate work activity
  - report to regulator
- if a large community of plants is located:
  - note location
- if work activity is planned for the area, contact regulator and determine course of action
- if sustained communities of plants are located:
  - note location
- if work activity is planned for the area, contact regulator and obtain concurrence to continue work program

RIIENV201A Identify and assess environmental and heritage concerns

Modification History
Not applicable.

Unit Descriptor
This unit covers identifying and assessing environmental and heritage concerns in resources and infrastructure industries. It includes identifying site specific environmental and heritage concerns; assessing and responding to environmental and heritage concerns; working within environmental and heritage guidelines.

Application of the Unit
This unit is appropriate for those working in a operational roles, at worksites within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

<table>
<thead>
<tr>

<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify site specific environmental and heritage concerns | 1.1. Access, interpret and apply *compliance documentation* relevant to *environmental and heritage issues*  
1.2. Identify and report environmental and heritage issues to *relevant authority* according to site procedures, regulations and other compliance requirements  
1.3. Accurately identify the nature of environment and/or heritage concerns from site information  
1.4. Enact emergency plan  
1.5. Enact relevant isolation procedures according to relevant requirements  
1.6. Remove and/or contain *contaminants* upon identification |
| 2. Assess and respond to environmental and heritage concerns | 2.1. Inspect site on receipt of relevant clearances to confirm environment and/or heritage issues  
2.2. Complete all required records and documentation accurately and promptly |
| 3. Work within environmental and heritage guidelines | 3.1. Adhere to environment and heritage issues  
3.2. Conform to environmental and heritage guidelines in the organisation of work activities  
3.3. Contact and inform appropriate authorities of environmental and/or heritage issues |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to identify and assess environmental and heritage concerns:

- apply legislative, organisation and site requirements and procedures for identifying and assessing environmental and heritage concerns
- apply diagnostic techniques
- make decisions
- apply procedures for operating, maintaining and cleaning equipment
- identify hazards
- apply hazardous goods handling techniques
- interpret plans, reports, maps, specifications
- apply records maintenance requirements and procedures
- organise work tasks
- apply safe work practices
- work in a team
- use communications equipment

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to identify and assess environmental and heritage concerns:

- contamination principles
- emergency procedures
- environmental and heritage procedures
- equipment safety requirements
- fire management strategies
- future land use principles
- hazardous goods procedures and consequences of spills
- isolation procedures
- mine operational system
- night and day working procedures
- OHS procedures
- open cut procedures
- operational procedures and checks
- site procedures
• site safety requirements
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>
|   | and/or site procedures  
3.2. Carry out routine operational servicing, lubrication and housekeeping tasks to manufacturer's instructions and/or site procedures  
3.3. Carry out minor maintenance to manufacturer instructions and/or site procedures  
3.4. Provide operator support to maintenance personnel in preparing for or during minor and major maintenance tasks in accordance with site requirements  
3.5. Process records in accordance with site requirements |
**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to suppress airborne contaminants:

- apply legislative, organisation and site requirements and procedures
- make decisions
- apply directing and signalling procedures
- apply equipment cleaning requirements and procedures
- apply equipment maintenance requirements and procedures
- apply equipment operating techniques
- follow instructions
- apply hazard identification procedures
- interpret plans, reports, maps, specifications
- apply record maintenance procedures
- follow safe work practices
- apply fault-finding procedures
- wear protective equipment

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to suppress airborne contaminants:

- emergency procedures
- environmental aspects
- equipment processes, technical capability and limitations
- equipment safety requirements
- geological and technical data (rock formation)
- maintenance procedures
- mine operation system
- OHS procedures
- plant terminology
- site procedures (operational and maintenance)
- site safety requirements
- suppression methods relevant to the workplace
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare and plan for monitoring | 1.1. Access, interpret and apply **compliance documentation** relevant to conduct environmental monitoring in underground coal mines  
1.2. Obtain, interpret and clarify/confirms **work requirements** before proceeding  
1.3. Access, interpret and apply **mine environmental data** required to complete the allocated work.  
1.4. Identify and obtain equipment and resources required for the work requirements.  
1.5. Access and apply safety information and procedures throughout the work |
| 2. Carry out surveys and sampling | 2.1. Establish a safe work environment and monitor throughout the job  
2.2. Coordinate activities with others at the site prior to commencement of, and during, the work activity  
2.3. Inspect and test **sampling** equipment to ensure functionality, safety and compliance with manufacturer instructions and/or site requirements  
2.4. Conduct **surveys** and sampling in accordance with site, and legislative requirements  
2.5. Recognise and respond to hazardous and emergency situations in accordance with manufacturer instructions and/or site procedures |
| 3. Conduct primary analysis and respond to results | 3.1. Record and compare the results of sampling and surveys in accordance with site requirements  
3.2. Initiate or refer/report action to rectify anomalies to the appropriate authority for further action |
| 4. Maintain equipment | 4.1. Carry out monitoring equipment inspections and fault finding in accordance with manufacturer instructions and/or site requirements  
4.2. Process records in accordance with site requirements |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct environmental monitoring:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- read mine plan
- apply sampling tools and equipment operating procedures
- read, interpret and report / record results
- apply instrument calibration and testing
- apply environmental requirements

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct environmental monitoring:

- site operational safety procedures
- site and legislative requirements
- survey and sampling methods
- characteristics of samples taken
- tools and sampling equipment and use
- mine plan
- geological and survey data
- monitoring equipment maintenance systems and procedures
- site environmental requirements and constraints related to monitoring
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

language issues.

- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete environmental monitoring

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisation and site requirements and procedures |
| | manufacturer's guidelines and specifications |
| | Australian standards |
| | code of practice |
| | Employment and workplace relations legislation |
| | Equal Employment Opportunity and Disability Discrimination legislation |

| Work requirements may be in the form of: | shift briefings |
| | handover details, and/or |
| | work orders |

| Mine environmental data may be in the form of: | ventilation/gas data |
| | deputy reports |
| | survey data |

| Sampling may be conducted by: | fixed monitoring |
| | volumetric monitoring |
| | personnel monitoring |
| | hand held instruments |

| Surveys may be conducted: | daily |
| | weekly |
| | monthly |
| | as required |

| Surveys may include: | ventilation surveys |
| | stone dust samples |
| | goaf samples |
| | noise readings |
| | atmospheric analysis |
| | respirable dust samples |
| | water samples |
| | diesel particulates |
Unit Sector(s)

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIENV302A Apply environmentally sustainable work practices

Modification History
Not applicable.

Unit Descriptor
This unit describes the performance outcomes, skills and knowledge required to effectively implement environmentally sustainable work practices. This unit requires the ability to access industry information, and applicable legislative and occupational health and safety (OHS) guidelines. While no licensing, legislative, regulatory or certification requirements apply holistically to this unit at the time of publication, relevant national, state and territory legislation, regulations and codes of practice impact upon this unit.

Application of the Unit
This unit applies to operators/team members required to follow workplace procedures and instructions, and to work in an environmentally sustainable manner. This unit is appropriate for those working in operational roles at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify current practices in relation to resource usage | 1.1. Access, interpret and apply compliance documentation relevant to implementing and monitoring environmentally sustainable work practices  
1.2. Identify environmental regulations applying to the enterprise  
1.3. Identify procedures for assessing compliance with environmental/sustainability regulations |
| 2. Review and communicate identified improvements | 2.1. Review current work processes to access information and data to assist in identifying areas for improvement  
2.2. Collect and organise information from a range of sources to provide information/advice and tools/resources for improvement opportunities  
2.3. Seek input from stakeholders, key personnel and specialists  
2.4. Communicate proposed improvements according to site procedures |
| 3. Apply performance improvement strategies | 3.1. Source and use appropriate techniques and tools to assist in achieving efficiency targets  
3.2. Apply continuous improvement strategies to own work area of responsibility through environmental and resource efficiency improvement plans  
3.3. Apply suggestions and ideas about environmental and resource efficiency management from stakeholders where appropriate |
| 4. Monitor performance | 4.1. Use evaluation and monitoring tools and technology  
4.2. Report on progress against efficiency targets to key personnel and stakeholders  
4.3. Promote organisational improvement strategies |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to apply environmentally sustainable work practices:

- comply with all relevant legislation associated with job specifications and procedures
- apply communication and problem solving skills to question, seek clarification and make suggestions relating to work requirements and efficiency
- apply communication/consultation skills to support information flows
- apply communication and teamwork skills to recognise procedures; to follow instructions; to respond to change, such as current workplace environmental/sustainability frameworks; and to support team work and participation in a sustainable organisation
- apply literacy, numeracy and technology skills to interpret workplace information in relation to work role, and to document and measure resource use
- apply technology skills to select and use technology appropriate for a task

### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required apply environmentally sustainable work practices:

- change management/continuous improvement processes
- best practice approaches relevant to own area of responsibility and industry
- compliance requirements within work area for all relevant environmental/sustainability legislation, regulations and codes of practice including resource hazards/risks associated with work area, job specifications and procedures
- environmental and energy efficiency issues, systems and procedures specific to industry practice
- OHS issues and requirements
- organisational structure and reporting channels and procedures
- quality assurance systems relevant to own work area
- sustainability in the workplace
- terms and conditions of employment including policies and procedures, such as daily tasks, work area responsibilities, employee, supervisor and employer rights, equal opportunity.
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>

</table>
disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency.

The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's ability to participate in environmentally sustainable work practices

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Compliance documentation may include: | legislative, organisation and site requirements and procedures |
| | Australian standards |
| | environmental agencies regulations |
| | Environmental Protection Act |
| | isolation procedures |
| | manufacturer's specifications and recommendations |
| | OHS legislation and regulations |
| | site regulations, requirements and procedures |
| | code of practice |

| Compliance may include: | meeting relevant laws, by-laws and regulations, or best practice or codes of practice, to support compliance in environmental performance and sustainability at each level as required (such as Environmental Protection or Biodiversity Conservation Act): |
| | international |
| | commonwealth |
| | state/territory |
| | industry |
| | organisation |

| Sources may include: | organisation specifications |
| | regulatory sources |
| | relevant stakeholders |
| | resource use |

| Stakeholders, key personnel and specialists may include: | individuals and groups both inside and outside the organisation who have direct or indirect interest in the organisation's conduct, actions, products and services, including: |
| | customers |
| | employees at all levels of the organisation |
| | government |
| | investors |
**Techniques and tools** may include:

- examination of invoices from suppliers
- examination of relevant information and data
- measurements made under different conditions
- others as appropriate to the specific industry context

**Environmental and resource efficiency improvement plans** may include:

- addressing environmental and resource sustainability initiatives such as environmental management systems, action plans, green office programs, surveys and audits
- applying the waste management hierarchy in the workplace
- determining the organisation's most appropriate waste treatment including waste to landfill, recycling, re-use, recoverable resources and wastewater treatment
- initiating and/or maintaining appropriate organisational procedures for operational energy consumption, including stationary energy and non-stationary (transport)
- preventing and minimising risks, and maximising opportunities such as:
  - improving resource/energy efficiency
  - reducing emissions of greenhouse gases
  - reducing use of non-renewable resources
- referencing standards, guidelines and approaches such as:
  - ecological footprinting
  - Energy Efficiency Opportunities Bill 2005
  - Global Reporting Initiative
  - green office program - a cultural change program
  - green purchasing
  - Greenhouse Challenge Plus (Australian government initiative)
  - ISO 14001:1996 Environmental management systems life cycle analyses
  - product stewardship

- local community
- other organisations
- suppliers
- key personnel within the organisation, and specialists outside the organisation who may have particular technical expertise
<table>
<thead>
<tr>
<th>Suggestions may include ideas that help to:</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• prevent and minimise risks and maximise opportunities such as:</td>
<td></td>
</tr>
<tr>
<td>• usage of solar or renewable energies where appropriate</td>
<td></td>
</tr>
<tr>
<td>• reducing emissions of greenhouse gases</td>
<td></td>
</tr>
<tr>
<td>• reducing use of non renewable resources</td>
<td></td>
</tr>
<tr>
<td>• making more efficient use of resources, energy and water</td>
<td></td>
</tr>
<tr>
<td>• maximising opportunities to re use, recycle and reclaim materials</td>
<td></td>
</tr>
<tr>
<td>• identifying strategies to offset or mitigate environmental impacts:</td>
<td></td>
</tr>
<tr>
<td>• purchasing carbon credits</td>
<td></td>
</tr>
<tr>
<td>• energy conservation</td>
<td></td>
</tr>
<tr>
<td>• reducing chemical use</td>
<td></td>
</tr>
<tr>
<td>• reducing material consumption</td>
<td></td>
</tr>
<tr>
<td>• expressing purchasing power through the selection of suppliers with improved environmental performance e.g. purchasing renewable energy</td>
<td></td>
</tr>
<tr>
<td>• eliminating the use of hazardous and toxic materials</td>
<td></td>
</tr>

RIIENV401A Supervise dust and noise control

Modification History
Not applicable.

Unit Descriptor
This unit covers the supervision of dust and noise control in the mining and extractive industries. It includes: accessing and sharing requirements and procedures; planning and implementing site requirements; and monitoring, adjusting and reporting performance.

Application of the Unit
This unit is appropriate for those working in supervisory or technical specialist roles, within:

- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>
<thead>

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1. Access and share requirements and procedures** | 1.1. Access, interpret and share *compliance documentation* relevant to controlling dust and noise on the site  
1.2. Provide information in a language, style and format that is understood by colleagues  
1.3. Make clear the health and environmental implication of non-conformance to all within the workplace |
| **2. Plan and implement site requirement** | 2.1. Plan *control measures* and *work practices* with colleagues to ensure compliance  
2.2. Implement control measures and work practices to ensure compliance with requirements and procedures  
2.3. Plan and implement *dust and noise monitoring*  
2.4. Identify training needs and implement training, coaching and mentoring support to colleagues in applying the work and requirements for dust and noise control |
| **3. Monitor, adjust and report** | 3.1. Identify, rectify and report actual and potential dust and noise problems promptly and decisively to ensure workplace compliance  
3.2. Manage activities so that potential non-compliance with dust and noise control requirements are minimised  
3.3. Submit recommendations on improvements in dust and noise control to designated persons/groups  
3.4. Inform individuals/teams of the results of improvements in dust and noise control in the workplace  
3.5. Maintain systems, records and reporting procedures |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to supervise dust and noise control:

- apply legislative, organisation and site requirements and procedures
- provide information
- apply techniques to identify potential dust and noise problems
- apply work procedure and instruction preparation requirements and procedures
- apply procedures for developing and introducing practices to improve the work environment
- use effective consultative mechanisms to negotiate processes and procedures appropriate to statutory/legal requirements
- explain complex information to superiors/subordinates
- apply coaching and mentoring support techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to supervise dust and noise control:

- legislative, requirements and procedures
- organisation's requirements and procedures
- manufacturer's requirements and procedures
- identification of harmful dust and noise levels that effect human health
- health and environmental implication of non-conformance
- potential dust and noise problems
- dust and noise control measures
- dust and noise monitoring requirements and procedures
- work practices that minimise the potential and impact of dust and noise problems
- procedures for identifying training needs and implement training
- recording and reporting procedures
- human resource management
- providing information
- work procedure/instruction writing
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to implement and monitor environmental policies:

- apply communication/consultation skills to ensure information is supplied to the work team
- apply literacy skills for comprehending documentation and interpreting environmental and energy efficiency requirements
- apply technology skills, including the ability to operate and shut-down equipment
- ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to implement and monitor environmental policies:

- legislation from all levels of government that affects business operation, especially in regard to occupational health and safety, environmental and energy efficiency issues, equal opportunity, industrial relations and anti-discrimination
- environmental and energy efficiency issues, especially in regard to recycling and wastewater treatment, catchments, air, noise, ecosystems, habitat, and waste minimisation relevant to own work area
- environmental and energy efficiency management systems, policies and procedures relevant to own work area
- best practice approaches relevant to own work area
- quality assurance systems relevant to own work area
- supply chain procedures
- strategies to maximise opportunities and minimise impacts relevant to own work area
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for implementing and monitoring environmental policies
- implementation of requirements, procedures and techniques for the safe, effective and efficient implementation and monitoring of environmental policies
- working with others to plan, prepare, implement and monitor environmental policies
- evidence of the consistent successful implementation and monitoring of environmental policies

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery
environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

<table>

RIIENV501A Implement and maintain environmental management plan

Modification History
Not applicable.

Unit Descriptor
This unit covers the implementation and maintenance of site environmental management plans in resources and infrastructure industries. It includes the requirements to: develop the framework of the plan, the processes to support the plan; prepare and implement the plan; and monitoring, reviewing and updating the management processes.

Application of the Unit
This unit is appropriate for those working in a management or as a technical specialist roles, within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. ## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Develop the framework for the site environmental management plan | 1.1. Access, interpret and apply *compliance documentation* relevant to the implementation and maintenance of site environmental management plans  
1.2. Develop and document site *environmental objectives* in *consultation with relevant personnel*, and conforming to the organisation's *policy* and *system's procedures*  
1.3. Develop and document the structures for the application of the environmental management system, in consultation with relevant personnel, and conforming to the organisation's *policy* and *system's procedures*  
1.4. Define, allocate and document the responsibilities for applying the environmental management plan in job descriptions and duty statement for all relevant site positions |
| 2. Develop the processes to support the site environmental management plan | 2.1. Identify existing and potential site environmental *hazards* and *risks* from trends identified from site inspection and the record system  
2.2. Access, interpret and clarify the organisation's criteria for assessing and treating risks  
2.3. Develop and document detailed site procedures and practices for the application of the environmental management system in consultation with relevant personnel  
2.4. Identify, obtain and maintain information sources and expert advice required to support the environmental management plan |
| 3. Prepare and implement the plan | 3.1. Plan, schedule and document how the environmental management plan will be introduced to the entire worksite  
3.2. Identify, seek and/or provide *resources* for the operation of the environmental management plan, in a timely and consistent manner |
<p>| | |</p>
<table>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to implement and maintain environmental management plans:

- apply legislative, organisation and site requirements and procedures
- apply site procedures and practices development and maintenance techniques
- read, interpret, apply and communicate technical information, rules, procedures and regulations
- apply management planning documentation and facilitation procedures
- apply records and documents maintenance requirements
- apply procedures for monitoring and deciding on changes to process
- provide leadership and guidance for group activities
- communicate effectively in the workplace
- explain complex information to superiors and subordinates
- apply coaching and mentoring support
- apply active listening
- show sensitivity to the needs and feelings of others
- actively encourage the free exchange of information

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to implement and maintain environmental management plans:

- the organisation's environmental policies, goals and objectives
- legislative requirements
- roles and responsibilities of personnel within the organisation
- action planning methods
- negotiation skill
- written and oral communication methods
- receptive listening skills
- human resource management processes
- method of identifying appropriate action based on cost, safety, and welfare issues
- work procedure and instruction writing
- environmental management reporting and recording procedures
- worksite operating procedures
- environmental hazard identification processes
• environmental risk assessment processes
• environmental risk treatment processes
• environmental management system documentation methods
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the implementation and maintenance of site environmental management plans</td>
</tr>
<tr>
<td></td>
<td>• implementation of procedures and techniques for the safe, effective and efficient implementation and maintenance of site environmental management plans</td>
</tr>
<tr>
<td></td>
<td>• the identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• the identification of viable options and the selection of options that best meet the site environmental management plan required outcomes</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the implementation and maintenance of site environmental management plans</td>
</tr>
<tr>
<td></td>
<td>• consistent successful implementation and maintenance of site environmental management plans</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
<td></td>
</tr>
<tr>
<td>• The assessment environment should not disadvantage the participant. For example,</td>
<td></td>
</tr>
<tr>
<td>Language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
<td></td>
</tr>
<tr>
<td>---</td>
<td></td>
</tr>
<tr>
<td>Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.</td>
<td></td>
</tr>
<tr>
<td>Aboriginal people and other people from a non English speaking background may have second language issues.</td>
<td></td>
</tr>
<tr>
<td>Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.</td>
<td></td>
</tr>
<tr>
<td>Where applicable, physical resources should include equipment modified for people with disabilities.</td>
<td></td>
</tr>
<tr>
<td>Access must be provided to appropriate learning and/or assessment support when required.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Method of assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:</td>
</tr>
<tr>
<td>written and/or oral assessment of the candidate's knowledge required to undertake the implementation and maintenance of site environmental management plans</td>
</tr>
<tr>
<td>observed, documented and/or first hand testimonial evidence of the candidate's:</td>
</tr>
<tr>
<td>implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes</td>
</tr>
<tr>
<td>identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td>identification of viable options and the selection of site environmental management plans that best meet the required outcomes</td>
</tr>
<tr>
<td>consistently achieving the required outcomes</td>
</tr>
<tr>
<td>first hand testimonial and documentary</td>
</tr>
</tbody>
</table>
evidence of the candidate’s:

- working with others to undertake and complete the implementation and maintenance of site environmental management plans
- provision of clear and timely required support and advice on the implementation and maintenance of site environmental management plans

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

<table>
<thead>
<tr>
<th>may include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• legislative, organisation and site requirements and procedures</td>
</tr>
<tr>
<td>• manufacturer's guidelines and specifications</td>
</tr>
<tr>
<td>• Australian standards</td>
</tr>
<tr>
<td>• code of practice</td>
</tr>
<tr>
<td>• Employment and workplace relations legislation</td>
</tr>
<tr>
<td>• Equal Employment Opportunity and Disability Discrimination legislation</td>
</tr>
</tbody>
</table>

### Consultation with relevant personnel

<table>
<thead>
<tr>
<th>would typically include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• senior management</td>
</tr>
<tr>
<td>• subject matter experts</td>
</tr>
<tr>
<td>• regulatory authorities</td>
</tr>
<tr>
<td>• tenderers</td>
</tr>
<tr>
<td>• project managers</td>
</tr>
<tr>
<td>• contractors</td>
</tr>
<tr>
<td>• employees</td>
</tr>
<tr>
<td>• community</td>
</tr>
<tr>
<td>• customers</td>
</tr>
<tr>
<td>• suppliers</td>
</tr>
</tbody>
</table>

### The policy is:

| • the statement of overall intent and direction of the organisation in respect of the environmental management |

### The system's procedures are:

| • the procedures that support and expand on the policy and set out the requirements for implementing the environmental management system on individual sites. They provide direction and guidance to those responsible for implementation and the preparation of site-specific work procedures, instruction and practices |

### System's procedures may include:

| • identification of hazards                                               |
| • risk identification                                                     |
| • risk assessment                                                         |
| • risk treatment                                                          |
| • interim solutions                                                       |
| **Hazards** are: | • sources of potential harm or situations with the potential to cause loss |
| **Risk identification** is: | • the process of determining what can happen, why and how |
| **Risk assessment** is: | • the overall process of risk analysis and risk evaluation |
| **Risk treatment** is: | • the selection and implementation of appropriate options for dealing with risk |
| **Risk treatment** should: | • consider using options in sequence from eliminating the hazard, substitution, engineering controls, administrative controls and, finally, PPE |
| **Site procedures and practices may include:** | • standard operating procedures |
| | • safe operating procedures |
| | • work instructions |
| | • emergency procedures |
| | • allocation of responsibilities |
| | • permit requirements |
| | • sampling, testing and worksite inspection requirements |
| | • documentation and reporting requirements |
| **Site personnel** may include: | • employees |
| | • contractors |
| **Records and reports may include:** | • results |
| | • recommendations |
| | • assessment forms |
| | • action planning documents |
| **Monitor is to:** | • check, supervise, observe critically, or record the progress of an activity, action or system on a regular basis in order to identify change |
| **Resources** may include: | • people |
| | • finance |
| | • equipment |
• buildings/facilities
• technology
• information

Co-requisite units
Not applicable.
RIIENV502A Undertake process or project environmental impact assessment

Modification History
Not applicable.

Unit Descriptor
This unit covers undertaking of process or project environmental impact assessment in the mining or extractive industries. It includes: describing the process or project and the development environment; identifying their environmental issues; assessing environmental impacts; and evaluating alternatives.

Application of the Unit
This unit applies to undertaking a local environmental impact assessment of site based processes or projects dealing with mine operations. It may include conduct of a simple checklist audit against company and local requirements. It is appropriate for those working in a management or technical specialist role, within:

- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information

Unit Descriptor
This unit covers the establishment and maintenance of the environmental management systems in resources and infrastructure industries. It includes establishing and maintaining: the framework and participative arrangements for the environmental management system; procedures for identifying environmental hazards, for assessing environmental risk, and for treating environmental risk; organisational procedures for dealing with hazardous environmental events; environmental training programs; a system for environmental records; and evaluation of the organisation's environmental system and related policies, procedures and programs.

Application of the Unit
This unit is appropriate for those working in management or technical specialist role, within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Establish and maintain the framework for the environmental management system | 1.1. Access, interpret and apply **compliance documentation** relevant to establishing and maintaining environmental management systems  
1.2. Develop, document and have approved **policies** and **system procedures** that clearly express the organisation's commitment to environmental management and how relevant environmental legislation will be implemented, consistent with overall organisational policies  
1.3. Define, allocate and include in job descriptions and duty statements for all **relevant positions**, responsibilities and duties that will allow implementation and integration of the **environmental management systems**  
1.4. Identify, source and/or provide the **resources** for the operation of the environmental system in a timely and consistent manner  
1.5. Provide and explain information on environmental management system and procedures for the area of responsibility in a form readily accessible to employees |
| 2. Establish and maintain participative arrangements for the environmental management system | 2.1. Establish and ensure the maintenance of appropriate consultative processes, in consultation with employees and their representatives  
2.2. Ensure issues raised through participation and **consultation** are dealt with and resolved promptly and effectively in accordance with procedures for issue resolution  
2.3. Ensure information about the outcomes of participation and consultation is provided in a manner accessible to employees |
<p>| 3. Establish and maintain procedures for identifying environmental hazards | 3.1. Ensure existing and potential environmental hazards are identified and confirmed through site inspection and trends identified from the environmental record system |
| 3.2. | Develop and maintain system procedures for the ongoing identifying of existing and potential environmental hazards and ensure the implementation of these procedures in site procedures and systems of work |
| 3.3. | Monitor activities to ensure that environmental hazard identification procedure is adopted effectively throughout the organisation |
| 3.4. | Ensure procedures are in place and applied for environmental hazard identification at the planning, design and evaluation stages of any change in the workplace to ensure that new hazards are not created |
| 4. | Establish and maintain procedures for assessing environmental risk |
| 4.1. | Ensure appropriate assessment of risks presented by identified environmental hazards is carried out |
| 4.2. | Develop a system procedure for ongoing assessment of risks and ensure its integration within site procedures and systems of and work |
| 4.3. | Monitor activities to ensure that risk assessment procedure is adopted effectively throughout the organisation |
| 4.4. | Ensure procedures are in place for risk assessment to be addressed at the planning, design and evaluation stages of any change within the organisation to ensure that risks are not created |
| 5. | Establish and maintain procedures for treating environmental risks |
| 5.1. | Develop and ensure implementation of measures to treat assessed risks |
| 5.2. | Ensure the implementation of interim solutions until a permanent control measure is developed when measures which treat a risk at its source are not immediately practicable |
| 5.3. | Develop system procedures for ongoing control of risks and ensure their integration within site procedures and general systems of work |
| 5.4. | Monitor activities to ensure that the risk treatment procedure is adopted effectively throughout the organisation |
| 5.5. | Ensure risk treatment is addressed at the planning, design and evaluation stages of |</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to establish and maintain the environmental management system:

- apply legislative, organisation and site requirements and procedures
- access and analyse archival and historical information on worksite environmental matters
- access, interpret and apply technical environmental information
- apply and manage research techniques and activities
- apply systems audit procedures
- communicate effectively in the workplace
- develop and introduce practices to improve environmental performance in the workplace
- develop and maintain risk management procedures and policies
- develop and maintain statutory/legal and organisational policies and procedures
- explain complex information to superiors/subordinates
- apply records and documents maintenance requirements
- apply procedures to monitor and decide on changes to process
- provide coaching and mentoring support
- take a leading role in initiating action and making decisions
- use effective consultative mechanisms to negotiate processes and procedures appropriate to workplace environmental performance

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to establish and maintain the environmental management system:

- environmental legislation, policies and code of practice
- environmental auditing
- statutory/legal control
- duty of care
- training design and management
- emergency procedures
- strategic planning
- human resource management
- statutory and site rules, policies, procedures and regulations
- risk management processes and techniques
- action planning methods
- continuous improvement processes
- company policies
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:

- legislative, organisation and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Environmental policy is:

- the statement by the organisation of its intentions and principles in relation to its overall environmental performance which provides a framework for action and for the setting of its environmental objectives and targets

### System's procedures are:

- the procedures that support and expand on the policy and set out the requirements for implementing the system on individual sites
- they provide direction and guidance to those responsible for implementation of the system and in the preparation of site specific work procedures, instruction and practices to put the system into effect

### System's procedures may include:

- identification of hazards
- risk identification
- risk assessment
- risk treatment
- interim solutions
- dealing with unplanned incidents and events
- consultation
- communication
- monitoring
- review
- record keeping
- reporting
- training
| **Relevant positions** may include: | • managers  
• supervisors  
• environmental officer/manager  
• laboratory personnel  
• all worksite personnel |
| **Environmental Management Systems (EMS)** are the part of the overall management system which includes | • organisational structure, planning activities, responsibilities, practices, procedures, processes and resources for developing, implementing, achieving, reviewing and maintaining the environmental policy, and so managing the environmental risks associated with the business of the organisation |
| **Resources** may include: | • people  
• finance  
• buildings/facilities  
• technology  
• information |
| **Consultation** may include: | • environmental committees  
• consultation with health and safety representatives  
• issue resolution procedures  
• participative/consultative procedures conducted by supervisory staff within the area of managerial responsibility |
| **Existing and potential hazards** can be identified from: | • site inspections  
• checklists  
• hazard identification processes  
• hazardous event reports  
• significant incident reports |
| **Hazard** is: | • a source of potential harm or a situation with the potential to cause loss |
| **Monitoring** may include: | • review of written reports  
• performance appraisal  
• auditing procedures |
| **Hazard identification** is: | • the process of recognising that a hazard exists and defining its characteristics |
| **Risk** is: | • the chance of something happening that will have an impact upon objectives  
• It is measured in terms of consequence and likelihood |
| **Risk assessment** is: | • the overall process of risk analysis and risk evaluation |
Risk treatment is:
- the selection and implementation of appropriate options for dealing with risk

Risk control is:
- that part of risk management which involves the implementation of policies, standards, procedures and physical changes to eliminate or minimise adverse risks

Unit Sector(s)
Environment

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIERR201A Conduct fire team operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conducting of fire team operations in resources and infrastructure industries. It includes the planning and preparing for work, fighting or containing fires and finalising operations.

Application of the Unit
This unit is appropriate for those working in operational, service or maintenance roles, at worksites within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for work | 1.1. Access, interpret and apply *compliance documentation* relevant to fire team operations  
1.2. Identify and confirm personal safety requirements and the individual's role in the fire team  
1.3. Identify and clarify fire risks in the site and the likely impact and responses to site specific hazards  
1.4. Identify *types of fire fighting appliances* and confirm their applications  
1.5. Identify and confirm location and range of appliances held at relevant fire boards, depots, sub-stations and stations by site visit |
| 2. Fight or contain fires | 2.1. Receive, clarify and confirm notification of fire operations from the appropriate authority  
2.2. Move to the fire site in accordance with site procedures  
2.3. Identify and pass details, or receive and clarify the type, nature, source and intensity of the fire to appropriate authorities  
2.4. Select appliances and equipment appropriate to the fire circumstances and apply in accordance with manufacturer and/or site instructions  
2.5. Continually monitor conditions in the fire area and modify fire fighting techniques/applications to reduce the impact of identified and *potential hazards*  
2.6. Avoid unnecessary risks to the individual and other team members and follow evacuation procedures in accordance with site rules  
2.7. Apply isolation procedures in accordance with site rules |
| 3. Finalise the operation | 3.1. Avoid fire recurrence by the appropriate processes, including watering, rake down and chemical means  
3.2. Isolate, rope-off, secure and monitor fire |
<p>| | |</p>

</table>
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct fire team operations:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- access, interpret and apply technical fire operational information
- apply hazard and potential hazard identification procedures
- assess required responses
- apply evacuation procedures
- apply fire fighting techniques
- administer First Aid
- use hand tools
- work as a team member
- apply isolation and tagging

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct fire team operations:

- legislative and site rules
- causes, characteristics, hazards and responses to the types of fire
- site gases and characteristics
- basic site geology and survey information related to fire operations
- basic building structural information related to fire operations
- fire fighting equipment
- fire fighting techniques
- isolation and tagging procedures
- basic teamwork
- critical situation dynamics and control
- communication and reporting procedures
- initial response First Aid
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to contribute to the control of emergencies and critical situations:

- apply legislative, organisation and site requirements and procedures
- apply personal protection requirements appropriate to the environment
- recognise effects of changes of ambient conditions on operations
- locate sources of information and interpret drawings and manuals
- operate equipment
- set and pull manual slips
- operate manual make-up tongs
- operate manual break-out tongs
- move drills, tools and equipment around drill floor
- wear correct protective clothing for the execution of duties and tasks
- assist in the risk assessment of a manual handling task
- demonstrate correct manual handling techniques
- act as chairman of safety meeting

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to contribute to the control of emergencies and critical situations:

- occupational health and safety obligations
- company and statutory guidelines, procedures and practices
- emergency procedures
- fire and gas control system
- permit to work system
- well kicks
- operation of full-opening safety valve, and inside bop
- manual duties of each rig crew member during a well kick drill
- emergency shutdown control system
- effects of loss of any utility and its reinstatement
- functioning of process control, including instrumentation
- equipment layout and its connection with other systems
- lockout/tag out operations
- rig audit
• rig maintenance
• normal drilling operations
• non-routine drilling operations
• man management/rig management
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</table>
English speaking background may have second language issues.

- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to control emergencies and critical situations

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Critical situation** may include, but are not limited to:

- operational difficulties
- extreme weather
- equipment failure
- leaks
- fires
- kicks

**Work instructions** may come from briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include:

- participate in pre-tour safety meetings
- review hazard control procedures (e.g. JSA)
- follow safe operating procedures
- assist as required and trained
- safety briefing/induction
- weekly safety meetings
- agreed procedures may include:
  - company
  - facility
  - client
  - toolbox
  - permit to work

**Reporting requirements** may include:

- oral
- written

**Coordination requirements** may include:

- rig team
- other equipment operators
- maintenance personnel
- supervisors
**Working practices** may include:
- individual operation
- team operation
- use of personal protective equipment
- consideration of toxic substances (e.g. H₂S)
- continuous communication maintained
- reacting to on-site emergencies
- hang-off procedures
- securing for severe weather
- signalman’s duties

**Alarms** may include:
- audible
- warning gestures
- oral warnings
- fixed system specific to installation

**Relevant actions** taken to control and alleviate critical situations may include:
- make safe
- isolate
- shutdown
- evacuate work area
- report
- record
- contain
- rectify

**Safety management systems** may include, but are not limited to:
- organisational
- installation

**Information formats** may include:
- oral
- telephone
- public address system
- radio
- hand signals

**Personal protective equipment** may include:
- safety helmet
- safety footwear
- safety glasses
- gloves
- riding belt
- safety belt
- life vest
- safety goggles
- H₂S equipment
- fire resistant clothing
- breathing apparatus
Unit Sector(s)
Emergency Response and Rescue

Competency field

Co-requisite units
Not applicable.
RIIERR203B Escape from hazardous situation unaided

Modification History
Not applicable.

Unit Descriptor
This unit covers escaping from hazardous situation unaided in the underground mining industries. It includes: assessing and withdrawing from hazardous situations; evacuating to fresh air; reporting and debriefing.

Application of the Unit
This unit is appropriate for those working in operational, service and maintenance roles, in underground mines, within:
- Coal mining
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Assess and withdraw from hazardous situation | 1.1 Access, interpret and apply *compliance documentation* relevant to escaping from hazardous situation unaided  
1.2 Interpret alarms and indicators to determine the type, *cause* and severity of the hazard  
1.3 Assess threat/danger and decide on the safest escape option and *escape route* in liaison with other workers in the vicinity and notify appropriate personnel as per site requirements  
1.4 If safe, withdraw from hazardous situation by proceeding to selected escape route  
1.5 Don self-contained self rescuer and/or other recommended personal protective equipment according to manufacturer’s instructions and/or site requirements  
1.6 Evaluate the need to barricade-in and wait for external aided rescue |
| 2. Evacuate to fresh air | 2.1 Evacuate from hazardous situation by the established or alternative escape route and notify appropriate personnel as per site requirements  
2.2 Follow escape route markers and guidance system to navigate escape route at optimum rate of travel  
2.3 Continuously monitor and observe the mine atmosphere and *mine environmental conditions* and respond to adverse conditions  
2.4 Evaluate if it is an *irrespirable atmosphere* and locate and access self rescuer/breathing apparatus caches and utilise according to manufacturer’s and site requirements  
2.5 Evaluate the need for, and locate and retreat to, a place of safety or build barricade/s for protection from adverse conditions  
2.6 Monitor air/oxygen usage and adjust rate of travel where necessary, and ensure efficient changeover of *self rescuer/breathing apparatus* within determined operational timeframes |
| 3. Report and debrief | 3.1 Provide details of escape to relevant personnel in accordance with legislation and site requirements  
3.2 Evaluate the need for voluntary counselling |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct local risk control:

- apply legislative, organisation and site requirements and procedures
- apply risk management processes and techniques
- inspect, put on and use self rescuer/breathing apparatus
- interpret and respond to adverse environmental conditions
- read mine plans and orientate and navigate in mine
- identify alternative escape routes
- access and use self escape equipment
- observe hygiene requirements
- communicate effectively
- access, interpret and apply data from monitoring systems and equipment

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct local risk control:

- legislative and site requirements for self escape
- risk management processes and techniques
- types and causes of hazards and incidents in underground mines
- key indicators of mine incidents
- relevant geological and survey data
- effects of hot and humid atmospheres
- location and distribution of caches
- trigger points to initiate emergency response to alarms
- barricades and barricading methods
- location and purpose of a place of safety
- orientation and navigation in mines
- guidance systems and markers
- site emergency plans
- implications of lack of visibility
- site communication systems
- escape routes and alternative escape routes
- types of adverse environmental conditions such as smoke, visibility, dust, water, and mud
- basic ventilation systems
- types and effects of mine gases
- travel speeds
- monitoring systems
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

RIIERR204A Provide aided rescue to endangered personnel

Modification History
Not applicable.

Unit Descriptor
This unit covers providing aided rescue to endangered personnel in underground mines. It includes assessing the incident scene and planning the rescue strategy; extricating and evacuating to fresh air; and carrying out post-incident requirements.

Application of the Unit
This unit is appropriate for those working in operational, service and maintenance roles, in underground mines, within:
- Coal mining
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Assess incident scene and plan rescue strategy | 1.1. Access, interpret and apply *compliance documentation* relevant to providing aided rescue to endangered personnel in underground mines  
1.2. Obtain and interpret *incident* information and data to determine the hazards involved in the rescue operation, including mine monitoring data and trends  
1.3. Determine the locations of endangered mine worker(s) and the best route and method to travel to that location  
1.4. Determine the best location for a fresh air base  
1.5. Establish *communication* with emergency control personnel and fresh air base  
1.6. Test and check emergency equipment  
1.7. Test the mine atmosphere and determine if it is an *irrespirable atmosphere*  
1.8. Obtain the personal protective equipment (PPE) and breathing apparatus as determined by the incident management team  
1.9. Assess the situation to select the safest, most effective, extrication method from entrapment  
1.10. Assess threats/dangers to mine worker and rescuer  
1.11. Communicate effectively with emergency control personnel  
1.12. Locate and access emergency breathing apparatus caches  
1.13. Identify the need for, and organise additional *rescue resources and equipment*  
1.14. With reference to the mine plan, identify escape route and alternative escape route from the incident scene to fresh air base  
1.15. Confirm the rescue strategy as determined by the incident management team |
<p>| 2. Extricate and evacuate to fresh | 2.1. Isolate mine services when required, and |</p>
<table>
<thead>
<tr>
<th>Air</th>
<th>secure incident site for safe entry</th>
</tr>
</thead>
<tbody>
<tr>
<td>2.2. Assess physical and emotional conditions of mine workers and administer emergency First Aid and provide support where necessary</td>
<td></td>
</tr>
<tr>
<td>2.3. Don and test the breathing apparatus to manufacturer's guidelines</td>
<td></td>
</tr>
<tr>
<td>2.4. Extricate mine worker from entrapment according to the agreed plan</td>
<td></td>
</tr>
<tr>
<td>2.5. Evacuate from incident scene, following escape strategy, by the established or alternative escape route</td>
<td></td>
</tr>
<tr>
<td>2.6. Follow determined route of travel at optimum rate of travel</td>
<td></td>
</tr>
<tr>
<td>2.7. Continuously monitor the mine atmosphere and mine environmental conditions</td>
<td></td>
</tr>
<tr>
<td>2.8. Evaluate the need for, and locate and retreat to a place of safety/build barricade to protect personnel from adverse conditions if necessary</td>
<td></td>
</tr>
<tr>
<td>2.9. Maintain communication with emergency control and fresh air base personnel to advise of progress and receive support information/instruction</td>
<td></td>
</tr>
<tr>
<td>2.10. Monitor physical and emotional condition of mine worker(s) and other rescue team members and provide support</td>
<td></td>
</tr>
<tr>
<td>2.11. Monitor air/oxygen usage and adjust rate of travel where necessary</td>
<td></td>
</tr>
<tr>
<td>2.12. Ensure efficient changeover/refill of self resuer/breathing apparatus within determined operational timeframes</td>
<td></td>
</tr>
</tbody>
</table>

3. Carry out post-incident requirements

| 3.1. Provide details of rescue to relevant personnel in accordance to legislation and site requirements |
| 3.2. Evaluate the need for, and refer mine worker(s) and self for voluntary counselling |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to provide aided rescue to endangered personnel:

- apply legislative, organisation and site requirements and procedures
- obtain and interpret incident information and data
- apply risk management processes and techniques
- inspect, put on and use breathing apparatus
- interpret and respond to adverse environmental conditions
- read mine plans and orientate and navigate in mine
- use communication systems
- identify alternative escape routes
- access and use self escape equipment
- work as a team member
- communicate effectively
- observe and report mine conditions
- access, interpret and apply data from monitoring systems and equipment
- operate hand held monitoring equipment
- observe hygiene requirements

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to provide aided rescue to endangered personnel:

- legislative and site requirements for rescue operations
- risk management and assessment
- types and causes of incidents in underground mines
- key indicators of mine incidents
- relevant geological and survey data
- effects of hot and humid atmospheres
- location and distribution of caches
- trigger points to initiate emergency response to alarms
- barricades and barricading methods
- location and purpose of a place of safety
- orientation and navigation in mines
- evacuation resources and equipment
- guidance systems and markers
- mine emergency plans
- implications of lack of visibility
- escape routes and alternative escape routes
- types of adverse environmental conditions such as smoke, visibility, dust, water
- basic ventilation systems
- types and effects of mine gases
- emotional conditions experienced by mine workers
- emergency First Aid
- travel speeds
- signs and symptoms of heat-related illnesses
- isolation of mine energy sources
- monitoring systems
- communication systems
## Evidence Guide

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Assess the situation | 1.1. Identify *physical hazards* to own and others' health and safety  
1.2. Minimise immediate *risk* to self, and health and safety of the casualty, by controlling hazards in accordance with site and OHS requirements  
1.3. Assess casualty's *vital signs* and physical condition in accordance with workplace procedures |
| 2. Apply First Aid | 2.1. Provide *First Aid management* in accordance with established *First Aid* procedures  
2.2. Reassure casualty in a caring and calm manner and make them comfortable  
2.3. Use First Aid *resources and equipment* appropriate to the identified risks and hazard controls  
2.4. Seek First Aid or appropriate medical assistance from appropriate personnel using relevant *communication media and equipment*, to site requirements  
2.5. Monitor and respond to casualty's *condition* in accordance with effective *First Aid principles* and site procedures  
2.6. Finalise casualty management according to casualty's needs and First Aid principles |
| 3. Record and report incident | 3.1. Accurately record details of casualty's physical condition, changes in conditions, management and response to management in line with organisational procedures  
3.2. Accurately convey details of casualty's condition and management activities to emergency services/relieving personnel  
3.3. Prepare reports to supervisors in a timely manner, presenting all relevant facts according to established site procedures |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to apply initial response First Aid:

- access, interpret and apply relevant safety rules and procedures
- prepare and process reports
- show assertiveness
- communicate effectively
- make decisions
- apply infection control measures

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to apply initial response First Aid:

- initial response First Aid
- manual handling procedures
- incident reporting systems and procedures
- basic anatomy and physiology
- dealing with confidentiality
- knowledge of the First Aiders' skills and limitations
- OHS legislation and regulations
- how to gain access to and interpret materials safety data sheets (MSDS)
- basic anatomy and physiology
- duty of care
- resuscitation
- bleeding control
- care of unconscious
- legal requirements
- airway management
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>- knowledge of the requirements, procedures and instructions for the application of initial response First Aid</td>
</tr>
<tr>
<td></td>
<td>- implementation of requirements, procedures and techniques for the safe, effective and efficient application of initial response First Aid</td>
</tr>
<tr>
<td></td>
<td>- working with others to undertake and complete the initial response First Aid that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>- consistent timely application of initial response First Aid that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
<td></td>
</tr>
<tr>
<td>- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
<td></td>
</tr>
<tr>
<td>- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.</td>
<td></td>
</tr>
<tr>
<td>- Aboriginal people and other people from a non English speaking background may have second</td>
<td></td>
</tr>
</tbody>
</table>
Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.

Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.

<table>
<thead>
<tr>

poisoning and toxic substances
asthma and/or choking
shock
smoke inhalation
soft tissue injuries, including sprains, strains, dislocations
substance abuse, including drugs
unconsciousness, including not breathing and no pulse

Established First Aid principles may include:

- checking the site for danger to self, casualty and others and minimising the danger
- checking and maintaining the casualty's airway, breathing and circulation

**Unit Sector(s)**

Emergency Response and Rescue

**Competency field**

Refer to Unit Sector(s).

**Co-requisite units**

Not applicable.
RIIERR301A Respond to mine incident

Modification History
Not applicable.

Unit Descriptor
This unit covers responding to incidents in the metalliferous mines. It includes: evaluating readiness for incident response; responding to incidents; and preparing for mine entry.

Application of the Unit
This unit is appropriate for those working in operational roles, at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Evaluate readiness for incident response | 1.1. Access, interpret and apply compliance documentation relevant to responding to incident in metalliferous mines  
1.2. Identify, obtain and test emergency equipment  
1.3. Evaluate personal fitness for operation  
1.4. Maintain individual competencies, medical standards and fitness levels in accordance with mine and statutory medical standards and fitness standards |
| 2. Respond to incident | 2.1. Assemble at designated assembly point in accordance with standard operating procedures and guidelines  
2.2. Report to appropriate official or Incident Control and receive briefing on incident and mine conditions  
2.3. Confirm the location, nature and personnel involved in the incident and record on mine plan  
2.4. Identify and access standard rescue operation equipment  
2.5. Access any identified necessary additional equipment required for the rescue operation |
| 3. Prepare for mine entry | 3.1. Establish safest route to be taken from current mine plans and verify with Team Leader  
3.2. Evaluate mine atmosphere to determine location and establish incident control point(s)  
3.3. Establish communications systems and brief team members on communication protocols  
3.4. Constitute team with numbers between the maximum and minimum specified in rescue guidelines, and allocate team roles  
3.5. Ensure that any required stand-by team is available  
3.6. Receive and verify pre-operational briefing from Team Leader  
3.7. Identify recommended routes from the |
3.8. Select appropriate gas measurement instruments and equipment and make pre-operational tests and inspections
3.9. Identify, check and test minimum and additional mines rescue equipment for the tasks
3.10. Commence operations from established incident control point(s)
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to respond to incident in metalliferous mines:

- apply legislative, organisation and site requirements and procedures
- operate gas testing and monitoring instruments
- interpret mine gas testing instruments
- wear and use escape apparatus
- operate in breathing apparatus
- select extrication methods and operate extrication equipment
- take and analyse gas samples
- use communications and signals
- read and interpret mine plan symbols
- work as a team member
- assess a situation and make effective, safe decisions
- plan and apply contingency plans
- read mine plans and orientate in the mine
- carry out risk assessments
- select and use appropriate PPE
- take air measurement and ventilation readings
- take temperature and relative humidity measurements

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to respond to incident in metalliferous mines:

- rescue guidelines
- call-out procedures
- rescue team structure, roles and responsibilities
- mining environment
- types and effects of mine gases
- entrapment procedures
- gas testing and monitoring instruments - types, limitations, function and operation
- operation and limitations of breathing apparatus
- air measurement and ventilation systems
- effects on people working in hot and humid atmospheres
- minimum equipment requirements for rescue operations
- requirements for personal readiness
- rescue team call-out procedures and equipment
- specialised rescue equipment
- standby/emergency procedures for incident control
- ground support types and construction
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| **1. Prepare for emergency procedures** | 1.1. Access, interpret and apply compliance documentation relevant to the response to local emergencies and incidents  
1.2. Locate and maintain emergency equipment in accordance with statutory requirements, site procedures and manufacturer’s specifications  
1.3. Identify and confirm nature, scope and location of the emergency or incident  
1.4. Assess emergency or incident and determine appropriate course of action in keeping with requirements for personal safety  
1.5. Notify emergency or incident in accordance with authorised procedures and methods of communication |
| **2. Respond to emergency or incident situations** | 2.1. Follow emergency evacuation procedures where appropriate and in accordance with site procedures  
2.2. Coordinate and control response to emergency or incident to ensure continuing safety of personnel at the site  
2.3. Isolate potential sources of danger and put in place warning signs/signals/barriers  
2.4. Select emergency equipment and use appropriately to deal with the emergency  
2.5. Take local measures to reduce impact of emergency or incident  
2.6. Continually monitor and assess emergency situation and changes in circumstances, communicate requests for further assistance or evacuation to appropriate officials  
2.7. Exercise control of the emergency or incident situation until formal relief is notified/received |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to respond to local emergencies and incidents:

- apply legislative, organisation and site requirements and procedures
- apply hazard and potential hazard identification procedures
- observe, analyse and report emergencies/incidents
- read and interpret site plans
- apply initial response first aid
- apply fire fighting techniques
- apply communication procedures
- read, interpret and apply relevant geological and survey data

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to respond to local emergencies and incidents:

- statutory requirements
- site emergency procedures
- site incident procedures
- initial response First Aid
- breathing apparatus
- fire fighting
- hazards and potential hazards
- relevant geological and survey data
- relevant ventilation information
- site plans
- site communication systems
Evidence Guide

RIIERR303A Operate in self-contained regenerative oxygen breathing apparatus

Modification History
Not applicable.

Unit Descriptor
This unit covers operating in self-contained regenerative oxygen breathing apparatus in the metalliferous mining industry. It includes: preparing for operation, operating in irrespirable atmosphere and carrying out post-operation activities.

Application of the Unit
This unit is appropriate for those working in operational roles, in underground mines within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for operations | 1.1. Access, interpret and apply *compliance documentation* relevant to operating in *self-contained regenerative oxygen breathing apparatus*  
1.2. Ensure fitness levels are suitable to operate breathing apparatus  
1.3. Carry out *pre-operational equipment tests*  
1.4. Record test outcomes  
1.5. Inspect apparatus for damage and missing components and readiness for operation before entering mine  
1.6. Don and adjust self-contained regenerative oxygen breathing apparatus for comfort and correct operation  
1.7. Select additional personal protective equipment appropriate for work activities |
| 2. Operate in irrespirable atmosphere | 2.1. Navigate in breathing apparatus in adverse underground conditions, including *irrespirable atmosphere*  
2.2. Identify, monitor and control *hazards*  
2.3. Establish and maintain *communication* with team members and leader throughout the activity  
2.4. Apply breathing apparatus techniques and procedures by undertaking activities as a member of a team  
2.5. Monitor the operation of the breathing apparatus and the *condition of the wearer*  
2.6. Operate in breathing apparatus in *emergency situations*  
2.7. Follow *entrapment procedures*  
2.8. Maintain personal safety at all times |
| 3. Carry out post-operation activities | 3.1. Close down self-contained regenerative oxygen breathing apparatus  
3.2. Remove self-contained regenerative oxygen breathing apparatus  
3.3. Report operational activities to appropriate personnel  
3.4. Strip, clean, service, check, reassemble and test breathing apparatus in accordance with |
|   | procedures, specification and the code of practice on transmittable diseases  
|---|---
| 3.5. | Store equipment ready for operational use |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to operate in self-contained regenerative oxygen breathing apparatus:

- apply legislative, organisation and site requirements and procedures
- select and use appropriate PPE
- apply pre operational checks and testing of equipment
- apply procedures for operating in escape apparatus
- work as a team member
- read mine plans and symbols and orientate in the mine
- use communications and signals
- identify adverse conditions
- interpret monitoring device readings
- apply basic life support
- interpret manufacturer's specifications
- apply equipment stripping and reassembly requirements and procedures
- apply equipment cleaning, servicing and testing requirements and procedures

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to operate in self-contained regenerative oxygen breathing apparatus:

- respiratory system, effects of irrespirable atmospheres on the body
- protective equipment
- characteristics, component parts, operation of self-contained regenerative oxygen breathing apparatus
- testing parameters and methods
- operational testing
- standard operating procedures
- safe work practices when wearing breathing apparatus
- operating breathing apparatus
- use of distress signals
- communication methods and protocols
- use of the breathing apparatus control equipment
- self-contained regenerative oxygen breathing apparatus cleaning and hygiene requirements
- operating limits/entrappedment procedure
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
</table>
|  | • knowledge of the requirements, procedures and instructions for operating in self-contained regenerative oxygen breathing apparatus  
• implementation of requirements, procedures and techniques for safe, effective and efficient operating in self-contained regenerative oxygen breathing apparatus  
• working with others while using self-contained regenerative oxygen breathing apparatus that meets all of the required outcomes  
• consistent timely operating in self-contained regenerative oxygen breathing apparatus that safely, effectively and efficiently meets the required outcomes |

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non-Indigenous background.
English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others while using self-contained regenerative oxygen breathing apparatus

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

</table>

| Self-contained regenerative oxygen breathing apparatus may be defined as: | "an apparatus which is worn by the wearer which contains all the functions to allow breathing in a hostile atmosphere without any connection to normal atmospheric conditions, and where the exhaled atmosphere is cleansed of carbon dioxide and the remaining oxygen can be re-used" |

| Pre-operational equipment tests may include: | visual inspection |
|                                               | exhalation and inhalation valve operation                   |
|                                               | positive and negative pressure leak tests                   |
|                                               | pre-flushing                                               |
|                                               | cylinder contents                                          |
|                                               | pressure relief valve                                      |
|                                               | dosage                                                     |
|                                               | high pressure leaks                                        |
|                                               | lung demand valve opening pressure                         |
|                                               | pressure gauge zero test                                   |

| Irrespirable Atmosphere is considered an atmosphere which is unsafe for a person to breathe as a result of either oxygen depletion or the presence of: | toxic fumes |
|                                                                                         | gases       |
|                                                                                         | contaminants|
|                                                                                         | smoke or suspended particles |
|                                                                                         | heated atmospheres |

| Hazards may include: | fire |
|                     | explosion |
|                     | failure to maintain a face seal |
|                     | exhaustion of oxygen supply |
| **Communications** may include: | • malfunction of equipment  
| | • disorientation in smoke/darkness or confinement  
| | • structural hazards and/or hazardous materials  
| | • entrapment  
| **Condition of wearer** may include: | • distress signals  
| | • portable radio  
| | • communications equipment  
| | • signal lines  
| | • hand signals  
| | • telephone  
| | • mobile phone  
| **Emergency Situations** may include: | • economic breathing techniques  
| | • oxygen capacity and temperature  
| | • wearer stress  
| **Entrapment procedures** may include: | • high pressure oxygen leak  
| | • collapsed team member  
| | • entrapment  
| | • low pressure oxygen leak  
| | • high pressure leak  
| | • evacuation  
| | • ceasing all strenuous activity  
| | • activating distress signals  
| | • relocating to safest available place  
| | • calling for assistance

| 1. Plan and prepare operations | 1.1. Access, interpret and apply *compliance documentation* relevant to controlling emergencies and critical situations  
1.2. Obtain, confirm and apply *work instructions* for the allocated task  
1.3. Identify, manage and report all potential hazards  
1.4. Resolve *coordination requirements* with others at the site prior to commencing and during work activities |
| 2. Control critical situations | 2.1. Identify developing, emerging and existing critical situations and take actions appropriate to the situation  
2.2. Activate relevant alarms  
2.3. Take actions to control and alleviate the situation  
2.4. Recognise symptoms/effects of contaminants, toxic materials and heat stress and take appropriate action  
2.5. Monitor the situation and take relevant actions to minimise risks to personnel, environment, process, plant and equipment  
2.6. Maintain reporting requirements in the event of a critical situation |
| 3. Coordinate the response to emergencies | 3.1. Identify developing, emerging and existing critical situations and take actions appropriate to the situation  
3.2. Activate relevant alarms  
3.3. Give information and instructions clearly, accurately and in a suitable format for the needs of relevant personnel  
3.4. Clarify and act upon advice received as appropriate to the situation  
3.5. Adhere to agreed emergency procedures  
3.6. Record information on relevant documentation accurately, completely and legibly  
3.7. Take immediate action to make the situation safe and minimise risks to personnel, environment, process, plant and equipment |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to control emergencies and critical situations:

- apply legislative, organisation and site requirements and procedures
- implement personal protection requirements appropriate to the environment
- recognise effects of changes of ambient conditions on operations
- locate sources of information and interpret drawings and manuals
- operate equipment

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to control emergencies and critical situations:

- occupational health and safety obligations
- company and statutory guidelines, procedures and practices
- emergency procedures
- evacuation procedures and personnel responsibilities
- fire and gas control system
- alarm system
- emergency shutdown control system
- effects of loss of any system upon the operation
- functioning of process control, including instrumentation
- equipment layout and its connection with other systems
- consequences of emissions to the environment
- operating parameters and tolerances
- rig maintenance
- normal drilling operations
- non-routine drilling operations
- man management/rig management
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation
may include:

- legislative, organisation and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Work instructions may come from briefings, toolbox meetings, handovers, plans and work orders and may be written or verbal, formal or informal and may include:

- potential hazards
- personal protective equipment requirements
- consideration of h,s and other toxic substances
- communication requirements
- Job Safety Analysis (JSA)
- emergency and critical situation response procedures
- agreed procedures may include:
  - company
  - facility
  - client

Reports may include:

- hazard observation reports
- rig safety audits

Coordination requirements may include:

- other equipment operators
- maintenance personnel
- supervisors
- site emergency response personnel

Critical situation may include:

- operational difficulties
- extreme weather
- equipment failure
- leaks
- fires
- kicks

Alarms may include:

- audible
- warning gestures
### Actions to control and alleviate critical situations may include:
- oral warnings
- fixed system specific to installation

### Reporting requirements may include:
- oral
- written

### Immediate actions may include:
- inform external services
- do nothing
- activate internal emergency response teams
- inform duty personnel
- inform adjacent facilities
- activate ESD
- account for people
- evacuate
- assist in rescue of personnel

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Assess situation and prepare for fire control operations | 1.1. Access, interpret and apply *compliance documentation* relevant to controlling fires in underground metalliferous mines  
1.2. Interpret data and reports to determine cause and location of *fire* and record on the mine plan  
1.3. Assess type, size and spread of fire to determine risk to people and plant/machinery  
1.4. Identify and assess *potential ignition sources* for further fires to determine control measures, and record on the mine plan  
1.5. Assess *secondary risks* and recommend actions to control these risks and protect people  
1.6. Assess *fire-fighting* personnel’s exposure to fire, and identify methods and equipment to control these identified risks  
1.7. Determine personnel numbers, equipment and *personal protective equipment* requirements for fire control operations  
1.8. Determine fire-fighting strategy and procedures to best control the situation  
1.9. Assess *fire control equipment* and *fire fighting media* capability and quantity and make decisions about the most appropriate course of action  
1.10. Assign duties to personnel available to control the fire  
1.11. Identify and apply ventilation monitoring and control measures  
1.12. Assess need for evacuation of personnel and take appropriate action  
1.13. Prepare *action plan* for fire control operations |
| 2. Control the fire | 2.1. Secure fire area/zone to prevent entry of non-involved personnel  
2.2. Access, assemble and test equipment determined in the action plan to manufacturer’s instructions and |
| 2.1. | recommended/site practices and safety parameters |
| 2.2. | Employ fire-fighting techniques and methods determined in the action plan, within given personnel competence and availability and equipment constraints to standard operating procedures |
| 2.3. | Maintain communication with other fire-fighters and Incident Control on condition of fire and status of fire control operations |
| 2.4. | Continuously monitor fire and put controls in place to ensure the safety of personnel in the vicinity of the fire |
| 2.5. | Continuously reassess and apply ventilation control measures to operations |
| 2.6. | Continuously monitor fire and fire-fighting activities to determine ability to continue to handle the situation, and take action |
| 2.7. | Minimise damage and disruption to mine working during the fire control operation, consistent with safety requirements |
| 2.8. | Assess fire intensity and magnitude and withdraw from fire zone and relocate fire control equipment to a safe place if fire is uncontrollable |
| 2.9. | Bring fire safely under control and extinguish |
| 2.10. | Monitor fire site and take actions to prevent possible re-ignition according to site-recommended procedures |
| 2.11. | Report to Incident Control according to site-recommended procedures |
| 2.12. | Monitor for structural and ground support integrity |
| 3. | Restore and refurbish fire equipment to operational condition |
| 3.1. | Inspect equipment for any damage sustained in fire control operations |
| 3.2. | Repair, replenish or replace defective/depleted equipment to meet manufacturer's specifications and/or Australian standards |
| 3.3. | Tag and quarantine unusable equipment |
| 3.4. | Return fire control system and equipment to operational readiness |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to control fires in underground metalliferous mines:

- apply legislative, organisation and site requirements and procedures
- locate fire fighting equipment on mine sites
- interpret emergency preparedness plans
- navigate in underground mines
- read maps and interpret symbols
- apply fires call-outs response procedures
- work as a member of a team
- handle and control hazardous substances in a fire situation
- locate plant and fire suppression systems on a mine layout plan
- locate and operate fixed and portable fire suppression equipment
- locate and demonstration the correct use of ladders and other approved devices
- select appropriate extinguishing media for fire control and extinguishment
- operate emergency communications systems
- carry out effective fire-ground management procedures
- utilise and troubleshoot water supply systems and identify alternative systems
- interpret and use signals
- access, interpret and apply technical and safety information
- apply diagnostic/faultfinding techniques
- comply with environmental requirements
- apply isolation procedures

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to control fires in underground metalliferous mines:

- the location of fire fighting equipment on mine sites
- interpretation of emergency preparedness plans
- response to call-outs to fires
- types of fire and associated risks and control measures
- mine plant and fire suppression systems
- ventilation management during fire situations
- operation of fixed and portable fire suppression equipment
• the correct use of ladders and other devices
• interpretation of Hazchem labels and signs
• hazard/risk management principles and practices (including assessment and control)
• the hazards associated with hazardous chemicals and how to handle them in a fire situation
• identification, selection and operation of appropriate equipment
• identification and application of appropriate personal safety equipment
• identification of the properties of extinguishing media and the selection of those appropriate to the situation
• communications systems’ types and protocols
• fire-ground management procedures
• utilisation and troubleshooting of water supply systems and identification of alternative systems
• interpretation and use of signals
• refurbishment of fire-fighting equipment and systems
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Fire-fighting is limited to:
- fires within the capability of the rescue team members

### Personal protective equipment may include:
- industrial clothing
- thermal suits
- face shields
- eye protection
- respiratory protection
- safety footwear
- head protection
- hand protection

### Fire control equipment may include:
- fire hoses and fittings
- extinguishers
- mine water supply systems
- hydrants
- foam generators
- water turbine
- vehicles
- fixed and mobile fire suppression plant
- ladders

### Fire fighting media may include:
- water
- low expansion foam
- high expansion foam
- dry chemical powder
- Carbon Dioxide
- vaporising liquid
- alcohol rated foam
- dry agents

### Action plans may include:
- RECEO VS - (rescue exposures control/contain extinguish overhaul - ventilate and salvage) International Response
- fire control equipment requirements
- fire fighting capability
- personnel numbers and experience
- duties assigned to fire control and support personnel
- fire fighting strategy and procedures
- PPE requirements
- communications methods and protocols
Unit Sector(s)
Emergency Response and Rescue

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIERR306A Conduct underground search

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting searches in underground metalliferous mines. It includes: planning for the search; conducting the search; managing unplanned events or changed in circumstances; and finalise search.

Application of the Unit
This unit is appropriate for those working in operational roles, in underground mines, within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>
</thead>
</table>

### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Plan underground search</td>
<td>1.1. Access, interpret and apply <em>compliance documentation</em> relevant to conducting searches in underground metalliferous mines</td>
</tr>
<tr>
<td></td>
<td>1.2. Receive and analyse information and clarify <em>factors to be considered</em> in the search plan</td>
</tr>
<tr>
<td></td>
<td>1.3. Identify, liaise and clarify roles with relevant <em>external agencies</em> which may be called upon to assist with the search</td>
</tr>
<tr>
<td></td>
<td>1.4. Develop a workable search plan and contingency plans in consultation with external agencies and mine operational personnel</td>
</tr>
<tr>
<td></td>
<td>1.5. Identify and access <em>equipment</em> required for the search operation</td>
</tr>
<tr>
<td></td>
<td>1.6. Select personal protective equipment appropriate for search activities</td>
</tr>
<tr>
<td></td>
<td>1.7. Document search strategy and plot search patterns and routes on mine plan</td>
</tr>
<tr>
<td>2. Conduct search</td>
<td>2.1. Define possible and probable search areas based on mine configuration and personal/work factors</td>
</tr>
<tr>
<td></td>
<td>2.2. Conduct risk assessment to identify the risks to the search party, and identify the necessary controls according to site procedures and legislative requirements</td>
</tr>
<tr>
<td></td>
<td>2.3. Make sure search period/area does not exceed air/oxygen working duration and search personnel fitness</td>
</tr>
<tr>
<td></td>
<td>2.4. Establish and maintain <em>communications</em> procedures and protocols</td>
</tr>
<tr>
<td></td>
<td>2.5. Conduct search methodically using appropriate, recommended pattern and techniques</td>
</tr>
<tr>
<td></td>
<td>2.6. Maneuvre hostile ground using standard equipment, techniques and procedures</td>
</tr>
<tr>
<td></td>
<td>2.7. Maintain <em>physical contact</em> with other search team members at all times during the search</td>
</tr>
<tr>
<td></td>
<td>2.8. <em>Mark route</em> to allow safe egress from mine</td>
</tr>
</tbody>
</table>
| 3. Manage unplanned event or change in circumstances | 3.1 Evaluate the *unplanned event and changes in circumstances*
3.2 Identify, implement and monitor procedures to deal with the event
3.3 Communicate details of the event or changes in circumstances to *Incident Control* for advice on actions to be taken
3.4 Communicate requests for further assistance or advice of withdrawal |
|---------------------------------------------------|---------------------------------------------------------------|
| 4. Finalise search                                 | 4.1 Negotiate the *conclusion of the search* in consultation with external agencies and mine operational personnel
4.2 Collect and preserve all relevant information
4.3 Debrief with relevant personnel
4.4 Complete all required reports
4.5 Review search operation and recommend improvements |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct searches in underground metalliferous mines:

- apply legislative, organisation and site requirements and procedures
- apply flexibility to change plans
- apply adaptability and resourcefulness
- apply problem solving and planning to organise an immediate response
- apply questioning to determine accurate details concerning the situation
- apply decision making to determine the best course of action
- apply observations skills
- navigate in underground mines
- read maps and interpret symbols
- apply call-outs response procedures
- work as a member of a team

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct searches in underground metalliferous mines:

- search procedures and techniques
- local communication systems
- roles of external agencies
- local hazards and environmental threats
- operation of communication systems
- legal requirements in the event of a death or accident
- search equipment
- navigating in underground mines
- breathing apparatus
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
|                                                  | • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. |
|                                                  | • Customisation of assessment and delivery environment to sensitively accommodate cultural diversity. |
|                                                  | • Aboriginal people and other people from a non |
English speaking background may have second language issues.

- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency.

The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to conduct searches in underground metalliferous mines

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation | • legislative, organisation and site requirements and procedures  
| may include: | • manufacturer's guidelines and specifications  
| | • Australian standards  
| | • code of practice  
| | • Employment and workplace relations legislation  
| | • Equal Employment Opportunity and Disability Discrimination legislation  
| Factors to be considered may include: | • timeframe for survival of search object  
| | • other time factors  
| | • ground/structural conditions  
| | • human resources  
| | • communications  
| | • capacity of the missing person/party  
| | • place and time last seen  
| | • size of search area  
| | • availability of food and water  
| | • availability of shelter  
| | • availability of respirable air  
| External agencies may include: | • police search and rescue service  
| | • State Emergency Service  
| | • Ambulance service  
| | • mine rescue services (mutual aid agreements/arrangements)  
| | • Critical Incident Stress Debriefing (CISD) agencies  
| | • fire and rescue services  
| | • counselling agencies  
| Equipment may include: | • communication systems and equipment  
| | • respiratory protection for team and casualty  
| | • First Aid equipment  
| | • casualty/equipment transport (stokes litter)  
| | • site/area map  

© Commonwealth of Australia, 2014
SkillsDMC
| **Communications** may include: | • telephone contact details  
• gas detection equipment  
• self rescuer  
• rope bag and contents  
• scaling bars  
• portable lights  
• PPE  
• guide lines  
• tag lines  
• vehicles  
• ropes  
• lights  
• breathing apparatus  
• search kits |
| **Search techniques** may include: | • 2-way radio  
• telephone  
• mobile phone  
• hand signals  
• runners  
• light signals |
| **Physical contact** may include: | • line of sight  
• systematic coverage of area radiating from last point of contact of search object  
• link lines/guide lines  
• walking/crawling  
• sweep  
• grid patterns  
• feelings |
| **Route marking** may include: | • personal contact  
• link line/guide line  
• visual  
• radio communication |
| **Unplanned event or change in circumstances** may include: | • route impassable  
• collapsed team member  
• unacceptable environment changes  
• communications failure  
• search team member equipment failure |
- directed withdrawal
- team time expiry
- team lost, withdrawal
- notification to team from incident control

**Incident Control:**
- has control and makes decisions on the operations associated with dealing with the incident
- could be located at a *fresh air base* which can be defined as a continuously monitored station for dispatch or return of teams in close proximity to active zones in known fresh air

**Conclusion of search may include:**
- object of search found
- recommendation that search be called off
- further search

**Unit Sector(s)**
Emergency Response and Rescue

**Competency field**
Refer to Unit Sector(s).

**Co-requisite units**
Not applicable.
RIIERR307A Extricate casualties from underground incident

Modification History
Not applicable.

Unit Descriptor
This unit covers extricating casualties from underground incident in metalliferous mines. It includes: preparing for extrication; establishing the extrication system; stabilising the casualty; transporting the casualty to a place of safety; and restoring and refurbishing equipment.

Application of the Unit
This unit is appropriate for those working in operational roles, in underground mines within:

- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required extricate casualties from underground incident in metalliferous mines:

- apply legislative, organisation and site requirements and procedures
- locate extrication equipment on mine site
- navigate in underground mines
- read maps and interpret symbols
- apply call-out response procedures
- work as a member of a team
- locate and demonstrate the correct use of ladders and other devices
- operate emergency communications systems
- interpret and use signals
- access, interpret and apply technical and safety information
- apply diagnostic/faultfinding techniques
- apply environmental compliance requirements
- apply isolation procedures
- use hand and power tools

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to extricate casualties from underground incident in metalliferous mines:

- extrication equipment - types, construction and operation
- manufacturer's recommendations for safe use and care of extrication equipment
- basic life support
- primary assessment/secondary assessment
- hazard/risk management principles and practices (including assessment and control)
- types and availability of transport resources
- types and availability of medical facilities
- lashing techniques for stretchers
- systems and methods of extrication
- location of extrication equipment
- inspection and refurbishment of extrication equipment
- hazards of underground mine operations
• hazards associated with large mobile mine equipment
• mine traffic procedures and rules
• communication systems and protocols
• infectious disease and waste management
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<th>RIERR307A Extricate casualties from underground incident</th>
</tr>
</thead>
</table>

English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to extricate casualties from underground incident in metalliferous mines

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

May include:
- legislative, organisation and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Incidents

May include those associated with:
- heights
- depths
- plant and equipment entrapment
- light vehicles
- heavy vehicles
- mining equipment
- transport equipment
- shafts and winders
- toxic environment

### Safety equipment

May include:
- breathing apparatus
- industrial clothing
- thermal suits
- face shields
- eye protection
- respiratory protection
- safety footwear

### Hazards

May include:
- environmental
- electrical
- smoke
- chemicals
- toxic atmosphere/gases
- loss of visibility
- volatile substances
- heat
- heights/depths
- ground/wall collapse
- unstable ground
- engulfment
- bulk fuel storage
- fuel transportation
- unsafe working practices
- explosives

**Action plans** may include:
- extrication equipment requirements
- personnel capability and numbers
- duties assigned to extrication and support personnel
- extrication strategy and procedures
- safety equipment requirements
- communications methods and protocols
- risk assessment requirements
- emergency procedures
- life support arrangements
- transport
- contingency plans

**Extrication equipment** may include:
- hydraulic rescue equipment
- pneumatic lifting equipment
- crowbars
- hand tools
- hacksaws
- abrasive saws
- cutting equipment
- Tirfor
- oxygen therapy/resuscitation equipment
- rescue boards
- First Aid equipment
- roping equipment
- ladders

**Communications** may include:
- reports
- 2-way radio
- telephone
- mobile phone
- hand signals
- runners
- light signals

**Incident Control**: has overall planning, approval and control of an incident
Medical personnel may include:

- doctors
- ambulance officers
- paramedics
- site medical officer
- Royal Flying Doctor Service

Returning equipment to operational readiness may include:

- inspection
- cleaning
- repair
- replacement/re-fill

**Unit Sector(s)**

Emergency Response and Rescue

**Competency field**

Refer to Unit Sector(s).

**Co-requisite units**

Not applicable.
RIIERR308A Extricate and transport people involved in incidents

Modification History
Not applicable.

Unit Descriptor
This unit covers the extraction and transporting of people involved in incidents in surface mining and extractive industries. It includes: selection of the extraction method, accessing and cooperating with emergency services, establishing the extrication system, extricating casualties, re-assess the condition of and stabilising of casualty, transport of casualties to appropriate facilities, handing over casualties to emergency services, and restoring and refurbishing equipment to operational condition.

Application of the Unit
This unit is appropriate for those working in operational roles, at worksites within:

- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

| 1. Select extrication method | 1.1. Access, interpret and apply compliance documentation relevant to extricate and transport people involved in incidents in surface operations  
1.2. Assess situation to determine the appropriate method and procedures of extrication with due recognition of hazards and the entrapped person |
| 2. Access and cooperate with emergency services | 2.1. Assess the incident to determine the emergency service type to be called in  
2.2. Contact emergency services and call in to mine emergency protocols  
2.3. Establish the roles and responsibilities of the emergency service and communicate to rescue team members  
2.4. Establish the roles and responsibilities of rescue team members in relation to emergency service people and communicate to both parties |
| 3. Establish extrication system | 3.1. Identify and obtain appropriate equipment and check for operational ability  
3.2. Set up equipment to extricate casualty according to manufacturer recommendations and within the guidelines of Accredited Rescue Services  
3.3. Test the extrication system within the guidelines of accredited rescue services before any casualty is lifted or lowered |
| 4. Extricate casualty | 4.1. Select and use equipment and techniques according to manufacturer recommendations to extricate people within the guidelines of Accredited Rescue Services |
| 5. Re-assess condition of casualty and stabilise | 5.1. Perform primary and secondary assessments to Mines Rescue Advisory Standard to check casualty's condition  
5.2. Apply the identified life support requirements  
5.3. Continuously monitor casualty and record vital signs |
<table>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to extricate and transport people involved in incidents:

- apply legislative, organisation and site requirements and procedures
- identify extrication equipment to suit situation and check for operational readiness
- assess and control hazards and associated risks
- apply basic life support to casualties
- apply primary assessment to casualties
- apply secondary assessment to casualties
- locate and obtain transport resources
- apply stretcher lashing techniques
- apply procedures for the safe operation of extrication equipment
- apply systems and methods of extrication
- locate extrication equipment
- operate communication systems and observe communication protocols
- operate radios during the extrication operation
- apply procedures for gaining access to and liaising with support services and mine officials
- apply procedures for refurbishing and quarantining extrication equipment

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to extricate and transport people involved in incidents:

- extrication equipment - types, construction and operation
- manufacturer recommendations for safe use and care of extrication equipment
- Accredited Rescue Service guidelines for the operation and care of extrication equipment
- basic life support
- primary assessment procedures
- secondary assessment procedures
- cross-infection precautions
- hazard / risk management principles and practices, including assessment and control
- types and availability of transport resources
• types and availability of medical facilities
• lashing techniques for stretchers
• safe operation of extrication equipment
• systems and methods of extrication
• location of extrication equipment
• inspection and refurbishment of extrication equipment
• structural design of mine plant and equipment
• blasting sequences
• hazards of open-cut operations
• hazards associated with large mobile mine equipment
• mine traffic procedures and rules
• accident investigation techniques and legislation
• liaison protocols with support services
• communication systems and protocols
• radio systems and operations
• types, role and responsibilities of emergency services and mine officials
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for extricating and transporting people involved in incidents in surface operations</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient extricating and transporting people involved in incidents in surface operations</td>
</tr>
<tr>
<td></td>
<td>• working with others to extricate and transport people involved in incidents in surface operations that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely extricating and transporting people involved in incidents in surface operations that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
<td></td>
</tr>
<tr>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
<td></td>

<tr>
<td>• Customisation of assessment and delivery environment to sensitively accommodate</td>
<td></td>
</tr>
</tbody>
</table>
cultural diversity.

- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to extricate and transport people involved in incidents in surface operations

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Surface operations may include:

- open-cut mines
- coal preparation plants
- surface operations of underground mines
- quarries

### Extrication situations may include:

- heights
- depths
- plant and equipment entrapment
- light vehicles
- heavy vehicles

### Hazards may include:

- environmental
- electrical
- hazardous substances

### Hazards inherent to surface mining methods and equipment may include:

- electrical
- mechanical
- magnitude / size of equipment
- heights / depths
- wall collapse
- engulfment
- traffic movements
- water
- weather conditions
- chemicals
- night conditions
- bulk fuel storage and transportation
- unsafe working practices

</thead>
</table>
| 1. Prepare to establish fresh air base | 1.1. Access, interpret and apply *compliance documentation* relevant to establishing and operating from *fresh air base* in underground metalliferous mines  
1.2. Develop strategy for the establishment of the fresh air base  
1.3. Analyse mine plans, characteristics, data and reports to locate and assess potential affected zones  
1.4. Confirm effected fresh air zones through *atmospheric testing*  
1.5. Identify and organise/obtain *fresh air base resources*  
1.6. Check all fresh air base resources for correct, safe operation to manufacturer's specifications and mine requirements  
1.7. Check selected testing and monitoring instruments for correct operation to manufacturer's specifications and mine requirements  
1.8. Appoint fresh air base personnel with required competence |
| 2. Establish the fresh air base | 2.1. Transport to and install all allocated fresh air base resources  
2.2. Test site gas levels to ensure they are within specified limits  
2.3. Inspect roof, sides and floor for stability and safety  
2.4. Install *monitoring equipment* in appropriate locations  
2.5. Monitor atmosphere to maintain integrity of fresh air base in event of atmospheric changes  
2.6. Maintain fresh air base in respirable air  
2.7. Ensure escape strategy and equipment are available to enable fresh air base personnel to effect escape in emergency conditions  
2.8. Install *communication* equipment in fresh air base and test for effective, clear and reliable operation |
3. **Operate from fresh air base**

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to establish and operate from fresh air base in underground metalliferous mines:

- apply legislative, organisation and site requirements and procedures
- work as a team member
- apply procedures to assess a situation and make effective, safe decisions
- plan and apply contingency plans
- apply basic life support
- read mine plans and orientate in the underground mine
- apply requirements and procedures for locating and setting up a fresh air base
- use communications and signals
- establish search patterns and mark underground routes
- identify ground conditions
- brief and de-brief team members and Incident Control
- apply report writing techniques
- apply risk assessments processes
- select and use appropriate PPE
- apply procedures for the use of escape and relevant breathing apparatus
- read and interpret mine plan symbols
- apply procedures for monitoring and interpreting atmospheric conditions

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to establish and operate from fresh air base in underground metalliferous mines:

- role and responsibilities of the fresh air base controller
- standby / emergency procedures for fresh air base
- entrapment procedures
- underground environment
- underground transport systems
- ignition sources
- gas testing and monitoring instruments - types, limitations, function and operation
- types of fire and fire control methods
- detection, effects and contingencies with explosions
- call-out procedures
- equipment requirements for rescue operations
- rescue team procedures and equipment
- standby/emergency procedures for fresh air base
- effects on people working in hot and humid atmospheres
- atmospheric monitoring
- types of breathing apparatus, their construction, operating principles and limitations
- factors affecting oxygen / air consumption
- fresh air base procedures and communications
- structure, role and responsibilities of Incident Control
- extrication methods
- ground support types and construction
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second
### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete rescue operations

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:

- legislative, organisation and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Incident Control:

- has control and makes decisions on the operations associated with dealing with the incident

Equipment may include:

- vehicles
- competent personnel
- breathing apparatus
- team safety equipment
- atmospheric monitoring equipment
- hydraulic and pneumatic rescue equipment
- rope equipment
- incident-specific equipment such as body bags

Fresh air base can be defined as:

- a continuously monitored station for dispatch or return of teams in close proximity to active zones in known fresh air

RIIERR311A Assess and implement life support systems and stabilise casualties

Modification History
Not applicable.

Unit Descriptor
This unit covers assessing and implementing of life support systems and stabilising casualties in the coal mining industry. It includes: assessing danger to rescuers, bystanders and casualties; accessing and cooperating with emergency services; gaining access to casualties; assessing casualties’ condition and implementing life support systems; stabilising casualties in situ; handing over to emergency services; and restoring and refurbishing equipment to operational condition.

Application of the Unit
This unit is appropriate for those working in operational roles, at worksites within:

- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to assess and implement life support systems and stabilise casualties:

- apply legislative, organisation and site requirements and procedures
- select appropriate types of equipment and apply safe methods of operation to gain access to casualties
- assess and control hazards and associated risks
- apply TRIAGE
- apply basic life support to casualties
- apply primary assessment to casualties
- fault-find and remedy equipment
- record operations for incident reports
- operate communication systems and observe communication protocols
- gain access to and liaise with emergency services and mine officials

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to assess and implement life support systems and stabilise casualties:

- TRIAGE principles, protocols and techniques
- basic life support
- primary assessment
- secondary assessment
- hazard/risk management principles and practices, including assessment and control
- CISD procedures and agencies
- mine site plant type and construction in relation to access methods and equipment
- accident investigations
- equipment used for gaining access to casualties - types, selection, application, safe method of operation, fault-finding
- recording systems and protocols (sequence of events and actions taken)
- liaison protocols with support services
- communication systems and protocols
- types, role and responsibilities of emergency services and mine officials
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>

</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for assessment and implementation of life support systems and the stabilising of casualties</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient assessing and implementing of life support systems and stabilising casualties</td>
</tr>
<tr>
<td></td>
<td>• working with others to assess and implement life support systems, stabilise casualties and meet all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely assessing and implementing of life support systems and stabilising casualties that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

#### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to assess and implement life support systems and stabilise casualties

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to apply and monitor surface operations emergency preparedness and response systems:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply technical information relevant to emergency preparedness and response
- access, interpret and apply emergency preparedness and response information related to the site
- apply emergency preparedness and response systems and plans
- collect, collate, interpret and report incident/emergency data
- perform basic mathematical calculations
- apply investigation and reporting procedures
- apply effective workplace communication procedures
- access, interpret and apply data from monitoring systems and equipment
- operate hand held monitoring equipment
- apply risk management processes and techniques
- apply procedures to initiate emergency preparedness and response training
- propose practical recommendations for identified key issues

## Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to apply and monitor surface operations emergency preparedness and response systems:

- legislative and site requirements for emergency preparedness and response
- audit and review processes and techniques
- training and assessment principles
- training systems
- emergency response and evacuation planning processes and techniques
- structure of emergency procedures guidelines
- legal requirements of incident management teams
- self escape, aided rescue and respond to incident philosophies, systems and equipment
- risk management principles and techniques
- structure of emergency organisations
- intervention/control techniques for heating, fires, explosions, outburst, or inrushes
- effects of heat and humidity
- effects of visibility
- escape strategies and technology
- site environmental risks and controls
- equipment requirements for different types of emergency
- call-out procedures
- emotional effects of emergencies on rescuers and site personnel
- titles and roles of members of incident management team
- equipment handling
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to plan, prepare and conduct surface operations emergency preparedness and response
  - provision of clear and timely instruction and supervision by the individual of those involved in the conduct of the surface operations emergency preparedness and response
| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Interpret** is defined as:
- understanding of what is needed by the person within their job role

Relevant compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Communications may include:
- radio/PED
- telephone/DAC
- telemetry
- oral
- written
- computers
- runners

Resources may include:
- internal site services and resources
- contractors
- local community
- Inspectorate
- police
- Mines Rescue Service
- fire brigades
- ambulance
- hospitals
- critical incident stress debriefing organisations
- media
- district check inspector
- other sites
- entrapment procedures

Incidents can be caused by:
- explosion
- fire
- strata failure
- inrush
- outburst
- irrespirable atmosphere
- environmental incident
- hazardous chemicals
- explosives
- vehicle accidents
- wind blast
- failure of ventilation control devices/appliances

### Incidents can be identified as:

- minor accident
- major accident or fatality
- underground explosion
- fire
- ignition
- outburst
- inrush
- spontaneous combustion
- surface fire which disrupts operations
- environmental incidents
- bomb threat
- terrorist attack
- high potential incidents
- biological incidents
- sabotage

### Emergency preparedness and response data may include:

- gas levels and trends
- change in temperature
- change in ventilation
- visibility
- escape route conditions
- status of caches, quick fill stations and first response stations
- root cause of the emergency incident
- status of communication equipment
- status of monitoring equipment
- location and condition of persons
- hazards identified on escape

### Audit is defined as:

- a systematic examination against defined criteria to determine whether activities and related results conform to planned arrangement, and whether these arrangements
are implemented effectively and are suitable to achieve the organisation's policy and objectives

| **Equipment** refers to that needed to control the incident and may include: | • self escape and first response equipment  
• fire fighting equipment  
• rescue equipment  
• mining equipment  
• transport  
• specialised equipment from external sources  
• monitoring and analysis equipment |

- access, interpret and apply emergency preparedness and response information related to the mine
- apply emergency preparedness and response systems and plans
- collect, collate, interpret and report incident / emergency data
- perform basic mathematical calculations
- apply investigation and report preparation procedures
- communicate effectively in the workplace
- access, interpret and apply data from monitoring systems and equipment
- operate hand held monitoring equipment
- apply risk management processes and techniques
- initiate the emergency preparedness and response training

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to apply and monitor underground coal mine emergency preparedness and response systems:

- legislative and site requirements for emergency preparedness and response
- audit and review processes and techniques
- training and assessment principles
- training systems
- emergency response and evacuation planning processes and techniques
- structure of emergency procedures guidelines
- legal requirements of incident management teams
- self escape, aided rescue and respond to incident philosophies, systems and equipment
- risk management principles and techniques
- structure of emergency organisations
- intervention and control techniques for heating, fires, explosions, outburst, or inrushes
• effects of heat and humidity
• effects of visibility
• escape strategies and technology
• mine environmental risks and controls
• equipment requirements for different types of emergency
• ventilation and its influence on incidents
• deployment of personnel underground under deputies control
• procedure/policy for re-deployment of personnel underground after evacuation
• call-out procedures
• emotional effects of emergencies on rescuers and mine personnel
• titles and roles of members of incident management team
• the requirements and structure for place of safety/fresh air base
• equipment handling
• sealing procedures and the legislative implications
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>

</tr>
</tbody>
</table>

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
|                                               | • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of |
assessment should not be greater than those required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non-English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to plan, prepare, apply and monitor underground coal mine emergency preparedness and response systems
  - provision of clear and timely instruction and supervision by the individual of those involved in the conduct of the underground coal mine emergency preparedness and response systems
| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for rescue operation | 1.1. Access, interpret and apply *compliance documentation* relevant to the underground metalliferous mine rescue  
1.2. Obtain and verify *information* about the rescue operation  
1.3. Obtain mine plan and determine route of travel and mark on mine plan  
1.4. Develop, or agree with *Incident Control*, the strategy search patterns and contingency plans for the rescue operation  
1.5. Implement *communication* system and equipment  
1.6. Assess team members' competence to meet the rescue situation and task requirements and constitute *team*  
1.7. Allocate *team roles* to best utilise individual team member competence  
1.8. Identify, test and allocate rescue and safety *equipment* and materials to team members  
1.9. Determine and ensure availability of any ancillary equipment required with Incident Control and/or mining personnel |
| 2. Brief team members | 2.1. Provide information to team members on their roles, tasks and responsibilities to allow effective, safe rescue operation  
2.2. Ascertain team members understanding of their roles, tasks and responsibilities |
| 3. Report to and liaise with Incident Control | 3.1. Observe reporting formats and protocols  
3.2. Confirm rescue strategies with Incident Control  
3.3. Receive and follow *operational advice* from Incident Control  
3.4. Relay information to Incident Control which can affect team operations or safety to team members  
3.5. Complete records required in accordance with legislative requirements or site requirements |
<p>| 4. Lead and monitor rescue team | 4.1. Carry out recommended procedures for entering hazardous or <em>irrespirable</em> conditions |</p>
<table>
<thead>

<tr>
<td><strong>4.3.</strong> Continuously assess hazards and implement controls to minimise risk</td>
<td></td>
</tr>
<tr>
<td><strong>4.4.</strong> Monitor team member's <strong>physical</strong> and <strong>emotional</strong> condition and take appropriate action to address any problems</td>
<td></td>
</tr>
<tr>
<td><strong>4.5.</strong> Provide information to team members about changes which can affect their operations or safety</td>
<td></td>
</tr>
<tr>
<td><strong>4.6.</strong> Ensure team adheres to team rescue procedures according to standard rescue guidelines</td>
<td></td>
</tr>
<tr>
<td><strong>4.7.</strong> Implement coaching processes within the team and identify further assistance</td>
<td></td>
</tr>
<tr>
<td><strong>5. Complete team operation</strong></td>
<td><strong>5.1.</strong> Provide verbal report to Incident Control to advise of status of operation and significant variations to expected conditions</td>
</tr>
<tr>
<td></td>
<td><strong>5.2.</strong> Formally de-brief team to obtain and collate incident and procedural information</td>
</tr>
<tr>
<td></td>
<td><strong>5.3.</strong> Provide comprehensive oral and written report on team's deployment and consequential outcomes to Incident Control</td>
</tr>
<tr>
<td></td>
<td><strong>5.4.</strong> <strong>Report</strong> on significant physical or emotional condition of team members</td>
</tr>
<tr>
<td></td>
<td><strong>5.5.</strong> Offer team members critical incident stress debriefing and counselling in an appropriate environment</td>
</tr>
</tbody>
</table>
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to lead rescue teams:

- apply legislative, organisation and site requirements and procedures
- apply leadership skills
- work with teams
- assess a situation and make effective, safe decisions
- apply basic life support
- apply procedures to establish search patterns and mark routes
- apply risk assessments processes
- apply contingency measures with breathing apparatus in emergency situations
- select and use personal protection equipment
- operate in escape apparatus
- read and interpret mine plans and symbols
- take air measurement and ventilation readings
- take temperature and relative humidity measures
- interpret and use signals
- access, interpret and apply technical and safety information
- apply diagnostic/faultfinding techniques
- apply isolation procedures

### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to lead rescue teams:

- principles of leadership
- counselling techniques
- rescue guidelines
- reporting and recording methods and protocols
- entrapment procedures
- mining methods and environment
- transport systems
- ignition sources
- gas testing and monitoring instruments - types, limitations, function and operation
- types of fire and fire control methods
- call-out procedures
- rescue team procedures and equipment
standby / emergency procedures
• effects on people working in hot and humid atmospheres
• air measurement and ventilation systems
• atmospheric monitoring and ventilation systems
• types of breathing apparatus: their construction, operating principles and limitations
• factors affecting oxygen/air consumption
• techniques for resuscitation in irrespirable atmospheres
• fresh air base procedures and communications
• structure, role and responsibilities of Incident Control
• critical incident stress debriefing
• hazardous substances: their effects and controls
• extrication methods
• risk management procedures
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

| may include: | legislative, organisation and site requirements and procedures |
| | manufacturer's guidelines and specifications |
| | Australian standards |
| | code of practice |
| | Employment and workplace relations legislation |
| | Equal Employment Opportunity and Disability Discrimination legislation |

### Information may include:

| | arrivals |
| | departures |
| | team names |
| | suit/set identification numbers |
| | route of travel |
| | expected time of return |

### Incident Control:

| | has overall planning, approval and control of an incident |

### Communications may include:

| | reports |
| | 2-way radio |
| | telephone |
| | mobile phone |
| | hand signals |
| | runners |
| | light signals |

### Teams may comprise two or more members, depending on such factors as:

| | respiratory protection |
| | distance/communications |

### Team roles may include:

| | rescue team leader |
| | deputy rescue team leader |
| | rescue team member |

### Equipment is:

| | the equipment specified in the mine’s rescue guidelines and protocols |

### Operational advice may include:

| | re-location |
| | evacuation |
|**Irrespirable atmosphere** is considered as an atmosphere which is unsafe for a person to breathe as a result of either oxygen depletion or the presence of: | • toxic fumes  
• gases  
• contaminants |
|---|---|
|**Physical condition** may be affected by: | • heat exhaustion  
• dehydration  
• injuries from slipping / tripping / falls  
• respiratory problems  
• physical exhaustion  
• vomiting  
• workload |
|**Emotional condition** may be affected by: | • panic  
• fright  
• stress  
• distress  
• claustrophobia |
|**Reports** may be: | • written or oral |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to apply and monitor underground metalliferous mine emergency preparedness and response systems:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply technical information relevant to emergency preparedness and response
- access, interpret and apply emergency preparedness and response information related to the site
- apply emergency preparedness and response systems and plans
- collect, collate, interpret and report incident/emergency data
- perform basic mathematical calculations
- apply investigation and reporting procedures
- apply effective workplace communication procedures
- access, interpret and apply data from monitoring systems and equipment
- operate hand held monitoring equipment
- apply risk management processes and techniques
- apply procedures to initiate emergency preparedness and response training
- propose practical recommendations for identified key issues

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to apply and monitor underground metalliferous mine emergency preparedness and response systems:

- legislative and site requirements for emergency preparedness and response
- audit and review processes and techniques
- training and assessment principles
- training systems
- emergency response and evacuation planning processes and techniques
- structure of emergency procedures guidelines
- legal requirements of incident management teams
- self escape, aided rescue and respond to incident philosophies, systems and equipment
- risk management principles and techniques
- structure of emergency organisations
- intervention/control techniques for heating, fires, explosions, outburst, or inrushes
- effects of heat and humidity
- effects of visibility
- escape strategies and technology
- site environmental risks and controls
- equipment requirements for different types of emergency
- ventilation and its influence on incidents
- deployment of personnel underground under deputies control
- procedure/policy for re-deployment of personnel underground after evacuation
- call-out procedures
- emotional effects of emergencies on rescuers and site personnel
- titles and roles of members of incident management team
- the requirements and structure for place of safety/fresh air base
- equipment handling
- sealing procedures and the legislative implications
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to plan, prepare and apply underground metalliferous mine emergency preparedness and response
  - provision of clear and timely instruction and supervision by the individual of those involved in the conduct of the underground metalliferous mine emergency preparedness and response
| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>
<thead>

**Incidents** can be identified as:

- minor accident
- major accident or fatality
- underground explosion
- fire
- ignition
- outburst
- inrush
- spontaneous combustion
- surface fire which disrupts operations
- environmental incidents
- bomb threat
- terrorist attack
- high potential incidents
- biological incidents
- sabotage

**Emergency preparedness and response data** may include:

- gas levels and trends
- change in temperature
- change in ventilation
- visibility
- escape route conditions
- status of caches, quick fill stations and first response stations
- root cause of the emergency incident
- status of communication equipment
- status of monitoring equipment
- location and condition of persons
- hazards identified on escape

**Audit** is defined as:

- a systematic examination against defined criteria to determine whether activities and related results conform to planned arrangement, and whether these arrangements
are implemented effectively and are suitable to achieve the organisation's policy and objectives

**Equipment** refers to that needed to control the incident and may include:

- self escape and first response equipment
- fire fighting equipment
- rescue equipment
- mining equipment
- transport
- specialised equipment from external sources
- monitoring and analysis equipment

**Unit Sector(s)**

Emergency Response and Rescue

**Competency field**

Refer to Unit Sector(s).

**Co-requisite units**

Not applicable.
RIIERR501A Implement underground coal mine emergency preparedness and response systems

Modification History
Not applicable.

Unit Descriptor
This unit covers implementing and maintaining underground coal mine emergency management systems. It includes: planning and preparing for implementation of and implement the management system; implementing post-incident management procedures; and auditing the management system.

Application of the Unit
This unit is appropriate for those working in management or technical specialist roles, within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for implementation of management system | 1.1. Access, interpret and apply *compliance documentation* relevant to implementing and maintaining underground coal mine *emergency management systems*  
1.2. Identify and *interpret* the legislative and site requirements related to emergency preparedness and response management  
1.3. Access, interpret and clarify the management system  
1.4. Identify and *communicate* to all persons, roles and responsibilities, as specified in the emergency preparedness and response plans  
1.5. Identify, forecast, obtain and *allocate/schedule resources* required for the implementation of the management system  
1.6. Identify training needs |
| 2. Implement the management system | 2.1. Implement the allocation and installation of resources in accordance with the management system  
2.2. Receive and communicate *incident* information in accordance with the management system  
2.3. Assess and communicate the nature and scope of the incident in accordance with the management system  
2.4. Identify and implement emergency response and evacuation plans in accordance with the management system  
2.5. Implement procedures for monitoring, recording and reporting on emergency incidents according to legislative requirements and those of the management system  
2.6. Implement procedures for the collection, analysis and validation of *emergency preparedness and response data*  
2.7. Implement the emergency management system training plan  
2.8. Develop and implement *action plans* to manage the situation / incident in accordance with the emergency plan |
<p>| | |</p>

- structure of emergency organisations
- structure, roles, capabilities and limitations of external services and agencies relevant to emergency preparedness and response
- intervention and control techniques for heating, fires, explosions, outburst, extrication or inruses
- the effects of heat and humidity
- the effects of visibility
- escape strategies and technology
- environmental risks and controls
- equipment requirements for different types of emergency
- ventilation and its influence on incidents
- deployment of personnel underground
- procedure/policy for re-deployment of personnel underground after evacuation
- call-out procedures
- emotional effects of emergencies on rescuers and mine personnel
- titles and roles of members of incident management team
- the requirements and structure for fresh air base
- legal implications of incidents
- the role of stakeholders
- numbers needed to run the mine at planned operational levels
- equipment handling
- economic considerations and decisions
- insurance policies and considerations
- mine closure procedures and the legislative implications
- sealing procedures and the legislative implications
- de-briefing processes
- emergency incident management
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Critical aspects for assessment and evidence required to demonstrate competency in this unit</strong></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>- knowledge of the requirements, procedures and instructions for implementing and maintaining underground coal mine emergency management systems</td>
</tr>
<tr>
<td></td>
<td>- implementation of procedures and techniques for the safe, effective and efficient implementation and maintenance of underground coal mine emergency management systems</td>
</tr>
<tr>
<td></td>
<td>- the identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>- the identification of viable options and the selection of options that best meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>- working with others to implement and maintain underground coal mine emergency management systems</td>
</tr>
<tr>
<td></td>
<td>- consistent successful implementation and maintenance of underground coal mine emergency management systems</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
</tr>
<tr>
<td></td>
<td>- The assessment environment should not disadvantage the participant. For example,</td>
</tr>
</tbody>
</table>
language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

<table>
<thead>
<tr>
<th>Method of assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:</td>
</tr>
<tr>
<td>- written and/or oral assessment of the candidate's required knowledge to apply in implementing and maintaining underground coal mine emergency management systems</td>
</tr>
<tr>
<td>- observed, documented and/or first hand testimonial evidence of the candidate's:</td>
</tr>
<tr>
<td>- implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes</td>
</tr>
<tr>
<td>- identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td>- identification of viable options and the selection of options that best meet the required outcomes</td>
</tr>
<tr>
<td>- consistently achieving the required outcomes</td>
</tr>
<tr>
<td>- first hand testimonial and documentary</td>
</tr>
</tbody>
</table>
### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

<table>
<thead>
<tr>
<th>evidence of the candidate's:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• working with others to implement and maintain underground coal mine emergency management systems</td>
</tr>
<tr>
<td>• provision of clear and timely required support and advice on the implementation and maintenance of underground coal mine emergency management systems</td>
</tr>
</tbody>
</table>
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisation and site requirements and procedures |
|                                               | manufacturer’s guidelines and specifications |
|                                               | Australian standards |
|                                               | code of practice |
|                                               | Employment and workplace relations legislation |
|                                               | Equal Employment Opportunity and Disability Discrimination legislation |

| Emergency management system is a documented system for the control of emergencies and the resources put in place as a requirement of this system, including: | hazard identification and quantification |
|                                                                                       | risk assessment |
|                                                                                       | authority and responsibility |
|                                                                                       | controls established to manage identified risks |
|                                                                                       | reporting and communication |
|                                                                                       | document control |
|                                                                                       | audit and review |

| Emergency management system may include procedures for: | mine atmosphere monitoring |
|                                                         | ventilation systems and usage |
|                                                         | inertisation techniques |
|                                                         | mine plans |
|                                                         | trigger action response plans |
|                                                         | emergency procedures |
|                                                         | training and education |
|                                                         | liaison with external agencies |

| Interpret is defined as: | the understanding needed by the person within their job role |

| Communications can include: | radio / PED |
|                            | telephone / DAC |
|                            | telemetry |
|                            | verbal |
|                            | written |
|                            | computers |
|                            | runners |

| Resources may include: | mine services |
- mine personnel
- emergency equipment
- Internet mine services and resources
- contractors
- insurance companies
- suppliers
- local community
- manufacturers
- Inspectorate
- Joint Coal Board
- police
- Mines Rescue Service

- self escape and first response equipment
- fire fighting equipment
- rescue equipment
- mining equipment
- transport
- specialised equipment from external sources
- monitoring and analysis equipment

**Incidents** may include:

- explosion
- fire
- roof fall
### Types of incident can be identified as:

- fatality
- serious accident
- high potential incidents
- medically treated
- accident
- underground explosion or fire
- ignition
- spontaneous combustion
- surface fire which disrupts operations
- environmental incidents
- bomb threat
- terrorist attack
- biological incidents
- sabotage

### Emergency preparedness and response data may include:

- gas levels and trends
- change in temperature
- change in ventilation
- visibility
- escape route conditions
- status of caches, quick fill stations and first response stations
- root cause of the emergency incident
- status of communication equipment
- status of monitoring equipment
- location and condition of persons
- hazards identified on escape

### An Action Plan is:

- A list of activities developed as a prepared response to assist in the control of an incident, e.g. fire, where such controls are not covered by the site emergency management system. Action plans may be different for each.
incident and developed at the time of the incident occurring

<table>
<thead>
<tr>
<th>Post-incident management</th>

RIIERR503A Implement emergency preparedness and response systems

Modification History
Not applicable.

Unit Descriptor
This unit covers the implementation of emergency preparedness and response systems in resources and infrastructure industries. It includes planning and preparing for implementing site procedures, implementing site procedures and post-incident management procedures, and auditing the procedures.

Application of the Unit
This unit is appropriate for those working in management or technical specialist roles within:
- Civil construction
- Surface coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>
</thead>
</table>

The elements and performance criteria for the unit of competency RIERR503A Implement emergency preparedness and response systems are outlined above. Each element is accompanied by its corresponding performance criteria, which detail the specific actions and skills required to demonstrate achievement.

The document emphasizes the importance of maintaining consistent assessment with the evidence guide to ensure that the evaluation process is both fair and effective. It highlights the value of bold italicised text in providing additional context and clarification, particularly within the required skills and knowledge section and the range statement.
# Elements and Performance Criteria

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to implement emergency preparedness and response systems:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply technical information relevant to emergency preparedness and response
- access and analyse emergency preparedness and response information related to the site
- interpret and apply design criteria for emergency preparedness and response systems and plans
- collect, collate and interpret incident/emergency data
- apply fault-tree analyses
- apply procedures for conducting enquiries/investigations and prepare reports
- communicate effectively in the workplace
- conduct an incident de-brief
- access, interpret and apply data from monitoring systems and equipment
- operate hand held monitoring equipment
- apply procedures to implement the emergency preparedness and response training program
- apply risk management processes and techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to implement emergency preparedness and response systems:

- legislative and statutory requirements for emergency preparedness and response systems
- legislation applicable to sites
- rescue guidelines
- emergency response system design and functionality
- emergency response planning processes and techniques
- audit review process and techniques
- site document control requirements
- training and assessment principles
- industry and legislative stakeholders
- site incidents and risks
- classification of incidents
- structure of emergency procedures guidelines
- legal requirements of incident management teams
- hazard identification
- self-escape philosophies, systems and equipment
- risk management principles and techniques
- structure of emergency organisations
- structure, roles, capabilities and limitations of external services and agencies relevant to emergency preparedness and response
- intervention and control techniques for heating, fires, explosions, outburst, extrication or irushes
- the effects of heat and humidity
- the effects of visibility development, administration and review of procedures that apply to the system
- rescue team structure, procedures and equipment
- escape strategies and technology
- environmental risks and controls
- equipment requirements for different types of emergency
- ventilation and its influence on incidents

<td></td>
<td>• working with others to undertake and complete the implementation of emergency preparedness and response systems</td>
</tr>
<tr>
<td></td>
<td>• consistent successful implementation of emergency preparedness and response systems</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those
<table>
<thead>
<tr>
<th>Method of assessment</th>
</tr>
</thead>
</table>

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking the implementation of emergency preparedness and response systems
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of options that best meet the required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial and documentary evidence of the candidate's:
    - working with others to undertake and

</tr>
</tbody>
</table>

**RIERR503A Implement emergency preparedness and response systems**
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Emergency preparedness and response systems is:
- a documented system for the control of emergencies and the resources put in place as a requirement of this system, including but not limited to:
  - hazard identification and quantification
  - risk assessment
  - authority and responsibility
  - controls established to manage identified risks
  - reporting and communication
  - document control
  - audit and review
- They may include procedures for:
  - workplace atmosphere monitoring
  - ventilation systems and usage
  - inertisation techniques
  - site plans
  - trigger action response plans
  - emergency procedures
  - training and education
  - liaison with external agencies

### Communications may include:
- radio
- telephone
- telemetry
- verbal
- written
- computers
- runners

**Incidents** may include:
- explosion
- fire
- roof fall
- strata
- inrush
- outburst
- irrespirable atmosphere
- environmental incident
- Hazchem
- explosives
- vehicle accidents
- wall collapse
- minor accident
- major accident or fatality
- underground explosion or fire
- ignition
- spontaneous combustion
- surface fire which disrupts operations
- bomb threat
- terrorist attack
- wind blast
- failure of ventilation control devices/appliances

**Operations facilities** may include:
- operations centre
- press room
- mortuary
- muster areas
- meeting rooms
- communications centres
- networks

**Required Services, personnel, equipment and resources** may include:
- internet mine services and resources
- contractors
- insurance companies
- suppliers
- local community
- manufacturers
- inspectorate
- police
- mines rescue services

RIIERR504A Manage major incidents and emergencies

Modification History
Not applicable.

Unit Descriptor
This unit covers the management of major incidents and emergencies in resources and infrastructure industries. It includes: reviewing the systems; managing the incident and emergency response; accessing and responding to information, advice and support; applying post-incident management procedures; and auditing and reviewing the effectiveness of the incident and emergency management response.

Application of the Unit
This unit is appropriate for those working in management and technical specialist roles within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>
</thead>
</table>
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Review emergency preparedness and response systems | 1.1. Access, interpret and apply *compliance documentation* relevant to the management of major incidents and emergencies  
1.2. Review the emergency preparedness plan and confirmed for relevance and timeliness on a regular basis  
1.3. Review the organisational structure for the management of emergency preparedness and response for relevance and accuracy on a regular basis  
1.4. Review emergency response procedures for management of classes of *incident* for relevance and accuracy on a regular basis  
1.5. Confirm the emergency response procedures for management of decision-making processes and decision monitoring systems  
1.6. Confirm plans with relevant *stakeholders* and specialists |
| 2. Manage the incident/emergency response | 2.1. Access incident information receipt and recording systems in accordance with site requirements  
2.2. Access and apply emergency response and evacuation plans and procedures in accordance with site requirements  
2.3. Establish *operations facilities*, including *communications* to support them, in accordance with the emergency plan  
2.4. Apply action planning processes to manage the situation/incident in accordance with the emergency plan  
2.5. Identify and apply *required services*, personnel, *equipment* and *resources* for the incident in accordance with the emergency plan  
2.6. Confirm and clarify roles and responsibilities, as specified in the emergency response and evacuation plans and procedures and communicated to all persons |
<p>| 3. Access and respond to | 3.1. Bring together specialist technical and |</p>

- self-escape philosophies, systems and equipment
- services and agencies available to assist in an emergency
- structure of emergency guidelines
- structure of emergency organisations
- structure, roles, capabilities and operational limitations of external resources and agencies used during worksite incidents
- support services role and access
- the requirements and structure for fresh air base/refuge chambers
- the role of stakeholders
- the techniques and equipment used for collecting and analysing atmospheric conditions
- titles and roles of members of incident management team
- training and assessment principles
- ventilation and its influence on incidents, and decisions to be made
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
</table>
| Critical aspects for assessment and evidence required to demonstrate competency in this unit | • knowledge of the requirements, procedures and instructions for the management of major incidents and emergencies  
• implementation of procedures and techniques for the safe, effective and efficient management of major incidents and emergencies  
• the identification of the relevant information and scope of the work required to meet the required outcomes  
• the identification of viable options and the selection of options that best meet the required outcomes  
• working with others to undertake and complete the management of major incidents and emergencies  
• consistent successful management of major incidents and emergencies |

| Context of and specific resources for assessment                                      | This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.  
• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those |
required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate’s required knowledge to apply in undertaking of the management of major incidents and emergencies
- observed, documented and/or first hand testimonial evidence of the candidate’s:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of options that best meet the required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial and documentary evidence of the candidate’s:
    - working with others to undertake and
complete the management of major incidents and emergencies

- provision of clear and timely required support and advice on the management of major incidents and emergencies

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisation and site requirements and procedures |
|                                              | manufacturer's guidelines and specifications |

workers compensation/WorkCover |

| Audit is: | a systematic examination against defined criteria to determine whether activities and related results conform to planned arrangements and whether these arrangements are implemented effectively and are suitable to achieve the organisation's policy and objectives |
Unit Sector(s)
Emergency Response and Rescue

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIERR601A Establish and maintain mine emergency preparedness and response systems

Modification History
Not applicable.

Unit Descriptor
This unit covers the establishing and maintaining of emergency preparedness and response systems in resources and infrastructure industries. It includes: establishing emergency preparedness and response systems and the organisation’s emergency facilities, equipment and personnel; planning and preparing for the implementation of the emergency preparedness and response plans; establishing post-incident management procedures; and auditing and reviewing the emergency preparedness and response plan and equipment.

Application of the Unit
This unit is appropriate for those working in management and technical specialist roles within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to establish and maintain emergency preparedness and response systems:

- apply legislative, organisation and site requirements and procedures
- apply procedures to formulate and develop emergency preparedness plans
- read and interpret site plans
- apply procedures to assess hazards and associated risks
- evaluate systems and equipment
- write reports
- identify or establish site facilities for incident management
- access and apply site information and recording systems
- communicate effectively with people personally or through technical devices during incidents
- apply procedures to organise personnel and resources
- apply procedures to handle members of the media
- develop action plans
- analyse information
- make effective decisions
- participate as team member
- facilitate groups to work together
- apply brainstorming to collect maximum information
- apply effective questioning techniques
- apply effective interview techniques
- delegate responsibility and tasks
- apply effective negotiation techniques
- apply incident investigation requirements and procedures

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to establish and maintain emergency preparedness and response systems:

- mines rescue guidelines
- emergency response and disaster planning processes and techniques
- audit review process and techniques
- incident resources and how to access them
- legislation applicable to sites
- training and assessment principles
- industry and legislative stakeholders
- site-type incidents and risks
- structure of emergency procedures guidelines
- legal requirements of incident management teams
- hazard identification
- self-escape, aided rescue and incident response philosophies, systems and equipment
- the techniques and equipment used for collecting and analysing atmospheric conditions
- risk management principles and techniques
- classification of types of incidents
- decision-making processes
- structure of emergency organisations
- structure, roles, capabilities and operational limitations of external resources and agencies used during site incidents
- rescue team structure, procedures and equipment and standby team requirements
- effects of heat and humidity
- effects of visibility
- escape strategies and technology
- environmental risks and controls
- media policies and procedures
- equipment required for types of emergency
- ventilation and its influence on incidents, and decisions to be made
- deployment of staff underground
- call-out procedures
- emotional effects of emergencies on rescuers, site personnel, families and community
- titles and roles of members of incident management team
- services and agencies available to assist in an emergency
- intervention and control techniques for heating, fires, explosions, outburst, extrication or inruses
- the requirements and structure for fresh air base
- support services role and access
- legislation regarding resumption of normal operations
- the role of stakeholders
- numbers needed to run the site at planned operational levels
- mobilisation, deployment and utilisation of equipment
- economic considerations and decisions
- insurance policies and considerations
- site closure procedures and the legislative implications
- sealing procedures and the legislative implications
- requirements for site security and access control
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>

</table>

- Assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required
  - identification of viable options and the selection of options that best meet the required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial and documentary evidence of the candidate's:
    - working with others to undertake and complete the establishment and maintenance of emergency preparedness

RIIERR602A Establish and maintain underground coal mine emergency preparedness and response systems

Modification History
Not applicable.

Unit Descriptor
This unit covers establish and maintain emergency preparedness and response systems in underground coal mines. It includes: establishing mine emergency preparedness and response systems and mine emergency systems; planning and preparing for the implementation of the plans; establishing post-incident management procedures; and auditing and reviewing the plan and equipment.

Application of the Unit
This unit is appropriate for those working in a management or technical specialist roles, within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Establish mine emergency preparedness and response systems | 1.1. Access, interpret and apply *compliance documentation* relevant to emergency preparedness and response systems in underground coal mines  
1.2. Identify the requirements of mine emergency preparedness and response  
1.3. Design and develop the emergency preparedness plan from an analysis of all relevant technical and operational information  
1.4. Design and develop an organisational structure for the management of emergency preparedness and response from an analysis of all relevant technical and operational information  
1.5. Develop emergency response procedures for management of identified potential incident scenarios from an analysis of all relevant technical and operational information  
1.6. Establish decision-making processes, operating protocols and information/communication control systems within the mine emergency preparedness and response procedures, including decision monitoring systems  
1.7. Establish emergency preparedness and response *maintenance program* and procedures  
1.8. Review the plan with relevant *stakeholders* and specialists  
1.9. Establish a program, including systems and procedures, to satisfy identified mine emergency preparedness and response training requirements  
1.10. Establish procedures that may include simulation events, to *audit* and review mine emergency preparedness and response compliance with legislative and site requirements  
1.11. Establish procedures for incorporating feedback from site and...

</thead>
</table>
| 2. Establish mine emergency systems | 2.1. Establish *incident* information, recording and reporting systems  
2.2. Establish emergency response and evacuation plans and procedures  
2.3. Establish *operations facilities*, including *communications* to support them, in accordance with the emergency plan  
2.4. Establish action planning processes to manage the situation / incident in accordance with the emergency plan  
2.5. Identify required *services, personnel, equipment and resources* for *types of incidents* in accordance with the emergency plan |
| 3. Plan and prepare for the implementation of the plans | 3.1. Identify and interpret the legislative and site requirements related to emergency preparedness and response management  
3.2. Access, interpret and clarify the emergency preparedness and response plans  
3.3. Identify, clarify and communicate to all personnel roles and responsibilities, as specified in the emergency preparedness and response plans  
3.4. Identify, forecast, obtain and allocate / schedule resources required for the implementation of the emergency preparedness and response plans  
3.5. Implement the emergency preparedness and response training program  
3.6. Develop review mechanisms to include suggestions and recommendations from both internal and external sources to facilitate ongoing improvement of emergency preparedness and response plans |
| 4. Establish post-incident management procedures | 4.1. Establish plans to *manage post-incident*  
4.2. Establish processes to investigate nature and cause of situation / incident  
4.3. Establish processes to evaluate the effectiveness of emergency response and action plans to achieve objectives |
| 5. Audit and review the plan and equipment | 5.1. Audit emergency preparedness and response monitoring systems for |
| 5.1. | Audit compliance with legislative and management plan standards |
| 5.2. | Audit emergency preparedness and response processes / resources for compliance with legislative and mine site requirements |
| 5.3. | Audit recording systems for compliance with the emergency preparedness and response plan |
| 5.4. | Audit emergency preparedness and response training program for currency, relevance and compliance with the requirements of the emergency preparedness and response plan |
| 5.5. | Identify and correct non-compliance or other discrepancies/ deficiencies revealed by audit |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to establish and maintain emergency preparedness and response systems in underground coal mines:

- apply legislative, organisation and site requirements and procedures
- apply emergency response and disaster planning processes and techniques
- apply emergency procedures guidelines
- read and interpret mine plans
- apply procedures to assess hazards and associated risks
- evaluate systems and equipment
- write reports
- identify or establish mine-site facilities for incident management
- access and use mine-site information and recording systems
- apply effective communication techniques with people personally or through technical devices during incidents
- organise personnel and resources
- handle members of the media
- develop action plans
- analyse information
- apply effective decision making techniques
- participate as team member
- facilitate groups to work together
- brainstorm to collect maximum information
- apply effective questioning techniques
- apply effective interview techniques
- delegate responsibility and tasks
- apply effective negotiation techniques
- investigate incidents

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to establish and maintain emergency preparedness and response systems in underground coal mines:

- mines rescue guidelines
- emergency response and disaster planning processes and techniques
- audit review process and techniques
- incident resources and how to access them
- legislation applicable to mines
- training and assessment principles
- industry and legislative stakeholders
- mine-type incidents and risks
- structure of emergency procedures guidelines
- legal requirements of incident management teams
- hazard identification
- self-escape, aided rescue and incident response philosophies, systems and equipment
- the techniques and equipment used for collecting and analysing atmospheric conditions
- risk management principles and techniques
- classification of types of incidents
- decision-making processes
- structure of emergency organisations
- structure, roles, capabilities and operational limitations of external resources and agencies used during mine incidents
- rescue team structure, procedures and equipment and standby team requirements
- effects of heat and humidity
- effects of visibility
- escape strategies and technology
- environmental risks and controls
- media policies and procedures
- equipment required for types of emergency
- ventilation and its influence on incidents, and decisions to be made
- deployment of staff underground
- call-out procedures
- emotional effects of emergencies on rescuers, mine personnel, families and community
- titles and roles of members of incident management team
- services and agencies available to assist in an emergency
- intervention and control techniques for heating, fires, explosions, outburst, extrication or inrushes
- the requirements and structure for fresh air base
- support services role and access
- legislation regarding resumption of normal operations
- the role of stakeholders
- numbers needed to run the mine at planned operational levels
- mobilisation, deployment and utilisation of equipment
- economic considerations and decisions
- insurance policies and considerations
- mine closure procedures and the legislative implications
- sealing procedures and the legislative implications
- requirements for site security and access control
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

<table>
<thead>
<tr>

#### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example,
| Language, literacy and numeracy demands of assessment should not be greater than those required on the job. |
| Customisation of assessment and delivery environment to sensitively accommodate cultural diversity. |
| Aboriginal people and other people from a non English speaking background may have second language issues. |
| Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances. |
| Where applicable, physical resources should include equipment modified for people with disabilities. |
| Access must be provided to appropriate learning and/or assessment support when required. |

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required
  - identification of viable options and the selection of options that best meet the required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial and documentary evidence of the candidate's:
    - working with others to establish and maintain emergency preparedness and response systems
| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. | response systems in underground coal mines  
- consistent and timely gaining of approval of emergency preparedness and response systems for underground coal mines  
- provision of clear, timely required support and advice on the implementation of emergency preparedness and response systems in underground coal mines |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Maintenance program is the confirmation of system and equipment operability and may include checks of:
- personal protection equipment (PPE)
- signage
- monitoring and alarms
- mines rescue equipment
- communication devices
- guidance systems
- provisions of plans, maps and documentation
- escape and rescue equipment
- first response equipment
- escape routes
- information technology (IT) systems

Stakeholders are those parties who may be directly or indirectly affected by incidents and may include, but are not limited to:
- shareholders
- board of directors
- employees
- unions
- families
- contractors
- insurance companies
- suppliers
- local community
- manufacturers
- Inspectorate
- Coal Services
- police
- Mines Rescue Service
- fire brigades
- ambulance
- medical staff
- hospitals
- critical incident stress debriefing organisations
- local emergency management organisations
- Salvation Army
- clergy
- state, federal, local government

Audit is defined as:

- a systematic examination against defined criteria to determine whether activities and related results conform to planned arrangement, and whether these arrangements are implemented effectively and are suitable to achieve the organisation's policy and objectives

Incident is:

- an unplanned and undesirable event resulting in damage to property, environment or people and may be caused by:
  - explosion
  - fire
  - strata failure
  - inrush
  - outburst
  - irrespirable atmosphere
  - environmental incident
  - Hazchem
  - explosives
  - vehicle accidents
  - wind blasts
  - failure of ventilation control device/appliances
  - ignition of gas
  - situation where a hazard gets out of control

Operations facilities are those which are set up to manage an incident and may include:

- operations centre
- press room
- mortuary
- muster areas
- meeting rooms
- communication centres
- networks
- control rooms

</table>
| 1. Prepare/receive invoices | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Estimate all *job components* accurately using company procedures  
1.3. Follow company procedures for presentation of financial data and recording of quotations  
1.4. Levy charges according to services, and render accounts to clients  
1.5. Promptly and accurately prepare invoices to help ensure desired cash flow  
1.6. Verify accounts received for accuracy and pay promptly |
| 2. Maintain cost records | 2.1. Follow office procedures for financial controls and accountability  
2.2. Record all *costs* promptly, legibly and accurately |
| 3. Prepare reports on variances from cost estimates | 3.1. Analyse cost *records* to detect variances/reasons for variances  
3.2. Compare final costing with original job tender  
3.3. Prepare reports in accordance with organisation format |
4.2. Determine and calculate cost to enterprise requirements  
4.3. Complete reporting and pricing records in line with business policy  
4.4. Produce financial reports in a clear and timely manner for distribution to relevant stakeholders |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to manage financial resources:

- apply communication skills to liaise with suppliers and end users of purchases
- apply literacy skills to identify financial information and the organisation's accounting procedures, document purchases, and write reports on financial activities
- apply information management and research skills to analyse and assess expenditure
- apply finance skills to maintain up-to-date records accurately and legibly
- apply data collection skills to identify and access financial data
- apply numeracy skills to calculate data and to reconcile figures
- interpret and balance a budget
- estimate and calculate time/costs of repairing, replacing and servicing equipment

**Required knowledge**

Specific knowledge is required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to manage financial resources:

- codes of ethics and conduct
- understanding of provisions of relevant legislation affecting business operations, codes of practice and national standards, such as:
  - anti-discrimination legislation
  - ethical principles
  - codes of practice
  - privacy laws
  - financial legislation
  - occupational health and safety (OHS)
  - consumer protection legislation
  - contract law
  - Trade Practices Act
- organisation policy and procedures relating to:
  - service delivery, quotation and payment policies and procedures
  - standard contracting arrangements
- purchasing and procurement principles for:
- accountability
- probity and transparency
- risk management
- value for money
- federal government taxes and charges
- equipment and ancillary attachment characteristics, technical capabilities and limitations
- wear parts and relative frequency of replacement
- purpose of stock control
- financial transactions such as cash flow and cost benefit analysis
- record keeping systems
- budgeting procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>

<tbody>
<tr>
<td><strong>Overview of assessment</strong></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
</tbody>
</table>
| **Critical aspects for assessment and evidence required to demonstrate competency in this unit** | • organising financial data to highlight relevant features  
• presenting financial data in comprehensive format  
• knowledge of relevant legislation  
• preparation of timely and accurate reports in accordance with company requirements |

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.  
• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.  
• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.  
• Customisation of assessment and delivery environment should sensitively accommodate cultural diversity.  
• Aboriginal people and other people from a non English speaking background may have second |
Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the management of financial resources

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Compliance documentation** may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- relevant state/territory environmental protection legislation
- relevant state/territory OHS legislation
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Job components** may include:
- wages
- overheads
- accommodation and travel
- bank and other financial fees
- office administration, accounting and purchasing
- printing and stationery
- accounting
- vehicles and transport
- purchased services on location
- freight
- communications (e.g. phone)
- consumables
- contractors
- hire charges
- GST

Information regarding **costs** may be obtained from:
- timesheets
- log books
- invoices
- requisitions
- quotations
- petty cash records
- bank and credit card statements
**Records** may include:

- cash book
- petty cash book
- wages and salaries
- paid purchase and service invoices
- sales invoices
- machine usage
- consumables of fuel usage
- parts usage

RIIGO201A Comply with site work processes/procedures

Modification History
Not applicable.

Unit Descriptor
This unit covers the compliance with site work processes/procedures in the resources and infrastructure industries. It covers the workers' contribution to planning, preparing for quality outcomes, application of site safety and health management systems to individual work activities. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an assistant role at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

</table>
| 1. Plan and prepare for work outcomes | 1.1. Access, interpret and clarify *relevant work procedures/standards*  
1.2. Identify and confirm *roles and responsibilities* for individual work with the appropriate persons  
1.3. Prepare *work plans* that will ensure compliance with mine procedures and safe work outcomes |
| 2. Apply work procedures to individual work activities | 2.1. Carry out allocated work to site procedures/standards  
2.2. Adjust and confirm on roles and responsibilities to meet changing circumstances personnel  
2.3. Monitor work processes, report incidents and apply local risk control processes to minimise injury, loss, equipment damage and environmental harm, in accordance with site safety and health management system  
2.4. Identify and report non compliance in the application of site procedures and recommend improvements to relevant site personnel  
2.5. Complete *relevant documentation* in accordance with site requirements/standards |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following:

- access, interpret and apply site procedures/standards
- communicate effectively in the workplace
- monitor and recommend changes to overcome non compliance with site procedures/standards
- maintain relevant site documents and reports
- identify hazards in the workplace
- apply risk management practices

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, site work processes/procedures:

- site safety and health management systems
- work planning processes
- site and equipment safety requirements
- technical and operational capability and limitations of resources and equipment being used
- relevant safety and health legislation including obligations under duty of care
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to apply, monitor and report on compliance systems:

- apply legislative, organisation and site requirements to compliance systems
- display effective communication skills to report, consult and negotiate processes that satisfy legal requirements
- display time management skills to prioritise tasks and meet targets
- provide coaching and mentoring support
- identify and clearly communicate key compliance issues

**Required knowledge**

Specific knowledge is required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to apply, monitor and report on compliance systems:

- national, state/territory and local government legislative requirements affecting business operation, especially in regard to:
  - anti-discrimination
  - relevant OHS requirements
  - environmental issues
  - EEO
  - industrial relations
- business registration and licensing requirements
- legal rights and obligations of alternative ownership structures
- relevant taxation and related legislative requirements and legal rights and responsibilities related to the business
- bookkeeping and record keeping procedures to meet minimum financial and legal requirements
- award and enterprise agreements, where required
- industrial law relevant to recruitment and dismissal of employees
- creation and termination of relevant legal contracts
- duty of care imposed by the Law of Torts
- work procedure/instruction writing in compliance with legal requirements and company policy
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</table>
| **1.** Provide information about the scope of legal and organisational compliance procedures | 1.1. Access, interpret and apply **compliance documentation** relevant to the work activity  
1.2. Explain relevant provisions of **legislation and code of practice relevant to the workplace** and how they impact on business arrangements  
1.3. Provide information on the organisation’s policies, procedures, programs and business arrangements within the **legal compliance context**  
1.4. Evaluate, provide information and **documentation** to the work group regarding legal compliance  
1.5. Obtain approval of plans from relevant personnel |
| **2.** Implement and monitor organisation's procedures for the management of legal compliance | 2.1. Implement and monitor **legal compliance management systems** and procedures to maximise compliance opportunities  
2.2. Search for, identify, review and report on legal compliance requirements regularly so issues may be raised and dealt with in a prompt and appropriate manner  
2.3. Identify and periodically review if adequate **resources** have been allocated to implement legal compliance and inform appropriate parties promptly  
2.4. Ensure all members of the workgroup have the opportunity to contribute to issues on legal compliance and ensure information is stored and reviewed within the organisation |
| **3.** Implement, monitor and prioritise compliance requirements within organisational procedures | 3.1. Collect and review information on legal compliance and report any existing or potential non-compliance issues so they can be addressed appropriately  
3.2. Evaluate and clarify compliance information to all relevant personnel  
3.3. Identify implications of non-compliance  
3.4. Group legal compliance requirements into critical, important and incidental classifications so that non-compliance issues can be prioritised and appropriate |
| 4. Implement, monitor and document procedures and training for compliance requirements | 4.1. Identify, implement, monitor and provide documentation on training needs and workplace procedures to ensure compliance
4.2. Monitor and report to relevant personnel **legal compliance measures** to ensure legal compliance is part of the organisation's general training program
4.3. Implement appropriate legal compliance training programs in consultation with relevant personnel
4.4. Identify and report inadequacies in existing legal compliance measures and resource allocation to management |
|---|---|
| 5. Implement and monitor procedures for maintaining legal records and for dealing with non-compliance events | 5.1. Implement workplace procedures to deal with non-compliance events in a timely manner while keeping **accurate legal records**
5.2. Identify and investigate the cause of non-compliance events using the work areas records in accordance with investigation procedures
5.3. Minimise recurrence of non-compliance by using systems for reporting maintenance of legal compliance |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to identify, implement and maintain legal compliance including:

- apply legislative, organisation and site requirements and procedures for identification, implementation and maintenance of legal compliance requirements
- maintain legal and organisational compliance procedures and policies
- use effective consultative mechanisms to negotiate compliance processes and procedures appropriate to statutory/legal requirements
- explain complex compliance information to relevant personnel
- provide coaching and mentoring support to encourage compliance
- read, interpret and apply compliance legislation
- relate to people from a range of social, cultural and ethnic backgrounds
- source information on compliance requirements
- organise and review information on compliance requirements

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, implementation and maintenance legal compliance requirements including:

- legal compliance rights
- environmental compliance requirements
- compliance insurance requirements
- contractual rights and responsibilities
- record-keeping systems required for compliance management
- complaints handling systems
- continuous improvement processes for compliance including:
  - monitoring
  - reporting
  - evaluation
  - review
- relevant Australian and international standards including but not limited to:
  - AS 3806: Compliance Programs
  - AS 4269: Complaints Handling
  - A/NZS 4360: Risk Management
  - AS ISO 15489: Records Management
### Relevant organisation policies and procedures including:
- Policies in various compliance areas
- Organisational standards for operations and ethics
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites.
The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge in undertaking the identification, implementation and maintenance of legal compliance requirements
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of legal compliance requirements that best meet the required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the identification, implementation
| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |

and maintenance of legal compliance requirements
- provision of clear and timely required support and advice on the legal compliance requirements
**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RIIGO601A Establish, maintain and develop a statutory compliance management system

Modification History
Not applicable.

Unit Descriptor
This unit covers the establishment, maintenance and development of a statutory compliance management system in the resources and infrastructure industries. It includes planning, establishing, maintaining, monitoring and reviewing a compliance management system, consultation and audit procedures, feedback procedures and auditing systems. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a management or supervisory role at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. ### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan, establish and maintain compliance management framework | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Document the collaborative development of policies and objectives with relevant personnel that express the organisation's commitment to statutory compliance management  
1.3. Establish and implement the framework for the statutory compliance management system  
1.4. Determine the scope of proposed compliance requirements in consultation with relevant personnel and resources and integrate statutory compliance to all relevant job descriptions and procedures  
1.5. Document the consultation process and explain information on the statutory compliance system and procedures ensuring this information is readily accessible to all relevant stakeholders  
1.6. Prepare plan for the development of compliance requirements  
1.7. Identify and maintain resources required to support the plan and gain approval for the statutory compliance management system plan from relevant personnel |
| 2. Establish and monitor consultation and audit procedures with relevant stakeholders | 2.1. Identify relevant stakeholders and develop and document system procedures to maximise opportunities for implementation of compliance  
2.2. Consult with relevant stakeholders and monitor reports on compliance requirements and audit procedures to maximise opportunities for identifying existing and potential non-compliance  
2.3. Summarise the findings from consultation with relevant stakeholders and develop procedures for monitoring, reviewing and auditing in a supportive environment  
2.4. Monitor existing compliance measures in the initial draft report and submit to the development team for consideration |
| 3. Establish and monitor procedures for obtaining feedback on statutory compliance procedures | 3.1. Establish measures to maximise compliance by validating processes in collaboration with a sample of relevant stakeholders in accordance with established project methodology  
3.2. Disseminate to a sample of relevant stakeholders the draft compliance requirements  
3.3. Collate, interpret and analyse feedback received on the draft compliance requirements and use it to develop a system procedures for ongoing treatment of compliance by integrating compliance requirements within general systems of work and procedures  
3.4. Summarise, organise and monitor outcomes of the feedback process in preparation for the editing of the draft compliance requirements to be adopted throughout the area of managerial responsibility  
3.5. Incorporate system procedures in consultation with authorised personnel from within the organisation and from appropriate statutory bodies when reviewing the documentation and presentation of compliance requirements |
| 4. Establish, maintain and review a statutory compliance auditing system | 4.1. Establish and monitor the system for keeping statutory compliance records that allow identification of compliance patterns  
4.2. Assess the effectiveness of the statutory compliance system according to organisational aims and legislation, codes and national standards relevant to the |

• worksite compliance operating procedures
• hazard identification processes
• risk assessment processes
• risk treatment processes
• compliance documentation methods
• project methodology aimed at the development and creation of compliance requirements either as part of broader regulations, license requirements, or internal standards, code of practice, procedures and policies
• sources of data relevant to compliance requirements
• relevant Australian and international standards including:
  • AS 3806: Compliance Programs
  • AS 4269: Complaints Handling
  • A/NZS 4360: Risk Management
  • AS ISO 15489: Records Management
• specification of compliance management function
• compliance accountabilities and responsibilities within the organisation
• compliance related management information systems
• breach compliance management policies and processes
• compliance reporting procedures
• corporate induction and training processes related to compliance management
• continuous improvement processes for compliance including strategies for development of a positive compliance culture within the organisation
• relevant organisational policies and procedures such as compliance plans and policies in various areas and organisational standards for operations and ethics
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
</table>
| Critical aspects for assessment and evidence required to demonstrate competency in this unit | • knowledge of the requirements, procedures and instructions for establishing, maintaining and developing a statutory compliance management system  
• implementation of procedures and techniques for the safe, effective and efficient development of a statutory compliance management system  
• the identification of the relevant information and scope of the work required to meet the required outcomes  
• the identification of viable options and the selection of a statutory compliance management system that best meet the required outcomes  
• working with other to undertake and complete the establishment, maintenance and development of a statutory compliance management system  
• consistent successful establishment, maintenance and development of a statutory compliance management system |
| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.  
• Assessment of this competency requires typical
resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.

- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment should sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the establishment, maintenance and development of a statutory compliance management system
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of a statutory compliance management system that best meet the required outcomes
  - consistent achievement of required

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Statutory compliance may include:
- trade practices
- weights and measures
- waterways
- workers compensation
- work cover
- planning
- assessment
- local government
- dangerous goods
- minerals and extractive industry licensing
- navigation
- Mines Act
- Common Law
- development of training policies/programs to aid compliance
- maintenance of all records regarding compliance incidents
- information sharing
- regulations and code of practice relating to compliance
- site representatives and committees
- issue resolution

### Compliance requirements may include:
- cross-industry, industry-specific and internal organisational compliance requirements
- appropriate training for those who have responsibilities within the statutory compliance management system
### Statutory Compliance System

- interim solutions when a permanent measure is not immediately practical when treating a non-compliance
- procedures for issue resolution
- external authorities such as state, national and/or international:
  - regulatory authorities
  - licensing authorities
  - professional associations and institutes
  - government departments
  - standards authorities
  - educational institutions and organisations
- internal authorities of an organisation such as:
  - chief executive officer
  - senior managers
  - compliance manager
  - internal audit manager
  - quality control manager

### Consultation

- regulatory authorities
- project managers
- employees
- community
- customers
- tenderers
- suppliers
- contractors

### Resources

- people
- finance
- buildings
- facilities
- technology
- information

### Statutory Compliance System

- establishing, maintaining and developing the management system's framework and participative arrangements
- procedures for identifying non-compliance, treating compliance and controlling statutory compliance
- organisational procedures for statutory compliance
- statutory compliance records system
- evaluation of the system and related policies
| Relevant stakeholders may include: | • chief executive officer  
| | • board of directors  
| | • senior management team  
| | • frontline managers  
| | • compliance management team  
| | • compliance specialists at the management level  
| | • compliance specialists at the operational level  
| | • representatives of relevant authorities with an interest in the compliance requirements  
| | • chief executives and managers in organisations with an interest in the compliance requirements being developed  
| | • representatives of professional associations and institutes relevant to the compliance requirements being developed  
| | • legal and business advisors and consultants with expertise and interest in compliance requirements and related management systems  
| Plan may include: | • details of the objectives and deliverables  
| | • methodology  
| | • timelines and milestones  
| | • costs  
| | • personnel required who may be consulted during the course of the project activities  
| Project methodology may include: | • literature searches including web searches  
| | • environmental scans  
| | • interviews, focus groups, questionnaires  
| | • desk analysis  
| | • validation interviews  
| | • workshops  
| | • surveys  
| System procedures may include: | • identification of hazards  
| | • risk identification  
| | • risk assessment  
| | • risk treatment  
| | • interim solutions  
| | • dealing with unplanned incidents and events  
| | • consultation  
| | • communication  

- procedures, standards or code of practice and programs  
- policies, programs and records
- monitoring
- review
- record keeping
- reporting
- training

**Development team** may include:
- project manager
- team members
- steering or advisory committee
- reference panels
- internal and external consultants and advisors

**Authorised personnel** may include:
- project manager
- project steering committee
- chief executive officer
- manager
- nominated representative of a regulatory authority
- nominated representative of a statutory standards authority
- nominated representative of a professional association or institutes
- nominated representative of an educational institution or organisation

**Legislation, codes and national standards relevant to the workplace** may include:
- award and enterprise agreements and relevant industrial instruments
- relevant legislation from all levels of government that affects business operation, especially in regard to:
  - OHS
  - environmental issues
  - equal opportunity
  - industrial relations
  - anti-discrimination
  - relevant industry code of practice
  - AS 3806: Compliance Programs
  - AS 4269: Complaints Handling
  - A/NZS 4360: Risk Management

| **1. Plan and prepare for forklift operations** | **1.1.** Access, interpret and apply *compliance documentation* relevant to the work activity  
**1.2.** Obtain, interpret and clarify/confirm *work requirements and briefings* before proceeding  
**1.3.** Fit and remove *forklift attachments*  
**1.4.** Coordinate activities with others at the site prior to commencement of, and during, the work activity |
| **2. Operate forklift** | **2.1.** Carry out pre-start, start-up, park-up and shutdown procedures  
**2.2.** Monitor and anticipate traffic flow and work area conditions to facilitate safe operations and to ensure the most efficient route of travel is selected and used  
**2.3.** Manoeuvre and position forklift smoothly  
**2.4.** Secure, lift, transfer and place load  
**2.5.** Use forklift attachments in accordance with manufacturer specifications and site requirements  
**2.6.** Act on or report monitoring systems and alarms  
**2.7.** Recognise and respond to *site hazards* and emergency situations  
**2.8.** Complete work in accordance with the agreed plan and outcomes and within the operating capacities of the allocated equipment |
| **3. Carry out operator maintenance** | **3.1.** Carry out forklift inspections and fault finding in accordance with manufacturer instructions and site requirements  
**3.2.** Carry out routine operational servicing, lubrication and housekeeping tasks  
**3.3.** Carry out minor *maintenance*  
**3.4.** Process records |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to operate a forklift:

- apply legislative, organisation and site requirements and procedures for the operation of a forklift
- apply operational safety requirements
- access, interpret and apply technical information
- maintain equipment records
- apply hand-eye coordination in the control of forklift
- use relevant hand tools
- apply diagnostic techniques
- apply site environmental constraints
- dispose of environmentally sensitive oils, fluids and materials

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to operate a forklift:

- site and equipment safety requirements
- forklift equipment characteristics, technical capabilities and limitations
- forklift operational procedures
- forklift maintenance systems and procedures
- basic geological and survey data related to forklift operations
- site environmental requirements and constraints related to forklift operations
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

Unit Descriptor
This unit covers handling and storing cargo in the resources and infrastructure industries. It includes preparing equipment, handling and storing cargo, and handling and storing bulk cargo. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare equipment | 1. Access, interpret and apply *compliance documentation* relevant to the work activity  
2. Obtain operational instructions and *shift briefing* details and organise the work to be carried out accordingly  
3. Clarify *difficulties* in carrying out the instructions with relevant personnel  
4. Confirm availability and status of necessary permits  
5. Confirm availability of necessary auxiliary *equipment*  
6. Identify errors, omissions and shortages and take appropriate *remedial action* within functional responsibility  
7. Use equipment, tools and *communications* suitable for the job and the environment  
8. Prepare storage area for cargo arrival |
| 2. Handle and store cargo | 2. Comply with safe working practices, safety and operational requirements  
2. Handle *cargo* using safe handling techniques  
2. Provide assistance with crane operations  
2. Pack and unpack containers  
2. Check cargo using marks, numbers, quantities/weights, to ensure correct identification  
2. Identify and report faults accurately and take appropriate remedial action within functional responsibility  
2. Store equipment and cargo safely and securely in the designated location according to operational requirements |
| 3. Handle and store bulk cargo | 3. Carry out bulk cargo transfer  
3. Monitor transfer of cargo  
3. Identify and report faults accurately and take appropriate remedial action within functional responsibility |
| 4. Assist with crane operations | 4. Use appropriate signals to direct movement of loads |
4.2. Identify and report faults and take appropriate remedial action within functional responsibility
4.3. Relay information to crane operator in accordance with operational requirements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to handle and store cargo:

- apply legislative, organisation and site requirements and procedures for handling and storing cargo
- implement safe working limits when handling and lifting cargo
- assess, interpret and apply information including technical information

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to handle and store cargo:

- OHS obligations
- company and statutory guidelines, procedures and practices
- safe lifting and handling techniques
- slinging requirements
- permit to work system
- operational requirements and principles of equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions to handle and secure cargo</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of handling and securing cargo</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete handling and securing cargo that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of handling and securing cargo that safely, effectively and efficiently meets the required outcomes</td>
</tr>

<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
<td></td>
</tr>
<tr>
<td>• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
<td></td>
</tr>
<tr>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
<td></td>
</tr>
<tr>
<td>• Customisation of assessment and delivery</td>
<td></td>
</tr>
</tbody>
</table>
Environment should sensitively accommodate cultural diversity.

- Aboriginal people and other people from a non-English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the handling and securing of cargo

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan for lifting            | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, interpret and clarify/confirm work requirements in the form of *shift briefings*, handover details or work orders before proceeding  
1.3. Develop a *preliminary lifting plan* taking account of essential information  
1.4. Check and confirm job feasibility and schedule with the load designer and other relevant persons  
1.5. Confirm hazards associated with the use of cranes and other load moving equipment and identify and check measures to eliminate or control these hazards with appropriate parties  
1.6. Finalise and confirm lifting plan, including the scheduling of required resources |
| 2. Prepare for lifting         | 2.1. Identify, select, inspect, assemble and certify *lifting equipment, materials and tools* required for the plan  
2.2. Label unserviceable equipment, materials and tools                                                                                          |
| 3. Move loads                  | 3.1. Deduce and confirm appropriate safe working loads and centre of gravity using load charts and sling tags/charts prior to load moving  
3.2. Direct the movement of the load using standard *signals for load moving*  
3.3. Perform load moving in accordance with the plan  
3.4. Perform work safely  
3.5. Connect lifting gear to load  
3.6. Connect load to movement device using appropriate and certified equipment  
3.7. Ensure stability of the load by application of load movement procedure, temporary bracing and/or load support  
3.8. Follow appropriate specifications during the placement and securing of the load |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to conduct lifting operations:

- apply legislative, organisation and site requirements and procedures for the conduct of lifting operations
- apply operational safety requirements
- access, interpret and apply technical information
- maintain equipment records
- apply diagnostic techniques
- use relevant hand tools
- identify hazards

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to conduct lifting operations:

- appropriate approved scheme of training
- site and equipment safety requirements
- equipment characteristics, technical capabilities and limitations
- operational and maintenance procedures
- hand signals
- potential hazards
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery
environment should sensitively accommodate cultural diversity.

- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete lifting operations

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Compliance documentation may include: | legislative, organisational and site requirements and procedures |
| | manufacturer's guidelines and specifications |
| | Australian standards |
| | management plans |
| | manager's rules |
| | OHS policy |
| | code of practice |
| | manufacturer's instructions |
| | safe working or job procedures |
| | Employment and workplace relations legislation |
| | Equal Employment Opportunity and Disability Discrimination legislation |

Shift briefings may include:
- site plans and drawings
- work specifications
- basic working plans and material schedules
- the confirmed mass and dimensions of loads
- capacities and availability of load shifting equipment

Preliminary lifting plan may include:
- confirmed details of lifting and slinging requirements
- confirmed dimensions
- site access and egress
- suitability and availability of materials
- tools and equipment
- identification of potential hazards
- probable control measures
- identification of site coordination requirements

Lifting equipment, materials and tools may include:
- slings
- ropes
- shackles and eye-bolts
- motive power including:
  - overhead
| Signals for load moving | are to include: | • vehicle loading cranes  
• non-slewing cranes | • those that are communicated verbally and with hand signals, to Australian standards |

</tr>
</thead>
</table>
| 1. Prepare for loading activities | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Receive, interpret and clarify shift changeover details  
1.3. Communicate with other personnel  
1.4. Select personal protective equipment appropriate for work activities  
1.5. Select appropriate type of *auxiliary equipment* for work activities  
1.6. Perform equipment *pre-start checks* to ensure equipment is ready for operation  
1.7. Identify, address and report potential risks and hazards  
1.8. Identify, address and report *environmental issues*  
1.9. Adhere to emergency procedures to ensure safety of personnel and plant |
| 2. Load goods/cargo       | 2.1. Identify load characteristics and use appropriate loading techniques to safely and efficiently move load  
2.2. Identify hazardous and dangerous goods and adhere to relevant legislation and permit requirements  
2.3. Assess and ensure that load characteristics and transport capacity meet approved parameters  
2.4. Erect physical barricades and signage to prevent unauthorised entry to the area  
2.5. Load *goods/cargo* in accordance with relevant mass and loading regulations and site procedures |
| 3. Secure goods/cargo     | 3.1. Check the distribution of the load to ensure it is even, legal and within safe working capacity  
3.2. Secure load at approved anchorage points  
3.3. Adjust load restraint devices to ensure load is secure during *transport*  
3.4. Protect load from weather conditions using approved coverage devices |
| 4. Protect goods/cargo | 4.1. Inspect the load for security to travel  
4.2. Complete all required documentation |
|-----------------------|----------------------------------------------------------------------------------|
| 5. Conduct housekeeping activities | 5.1. *Clean* equipment to maintain condition of equipment and ensure safe and efficient operations  
5.2. Clean and store auxiliary service equipment  
5.3. Control and report hazards to maintain a safe working environment |
| 6. Unload goods/cargo | 6.1. Assess location, stowage and remaining load before commencement  
6.2. Unload in a safe and effective way making use of lifting aids and applications if required  
6.3. Identify any goods requiring special handling  
6.4. Relocate material in a manner that considers the heights, weight loading, size and crushability of the goods/cargo |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to load and unload goods/cargo:

- apply legislative, organisation and site requirements and procedures for loading and unloading goods/cargo
- apply safe driving techniques
- identify hazards
- handle hazardous goods
- interpret plans, reports, maps, specifications
- apply lifting techniques (manual, cranes and loads)
- monitor operations
- report defects
- apply safe work practices
- use hand and power tools
- read and comprehend simple statements in English
- identify containers and goods coding, ADG and IMDG markings and, where applicable, emergency information panels and take appropriate action

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to load and unload cargo/goods:

- relevant Australian standards and regulations including state/territory mass and loading regulations
- Australian and international regulations and code of practice for the handling and transport of dangerous goods and hazardous substances
- breakdown procedures
- bund construction and maintenance procedures
- contaminant identification and control
- approved dust suppression and extraction methods
- drainage principles
- hauling procedures
- emergency procedures
- environmental procedures
- equipment processes, technical capability and limitations
- equipment safety requirements
- hazardous goods procedures and consequences of spills
- identifying repair requirements
- isolation procedures
- site operational system
- night and day working procedures
- relevant OHS procedures
- operational procedures and checks
- road rules
- signage erection procedures
- site procedures
- site safety requirements
- wet and dry working procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to secure cargo:

- apply legislative, organisation and site requirements and procedures for securing cargo
- establish plans
- describe consequences
- complete tasks
- identify improvements
- apply safety precautions relevant to the task
- assess operational capability of equipment used and work processes selected

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to secure cargo:

- site layout and operating procedures
- focus of operation of work systems, equipment, management and site operating systems
- impact of job on enterprise and individual performance
- application of relevant industrial requirements
- relevant bond, quarantine or other legislative requirements
- identification and correct use of equipment, processes and procedures used within context of the job
- modification of activities dependant of differing workplace contexts, risk situations and environments
- identification of cargo, container and goods, coding IMDG markings and, where applicable, emergency information panels
- relevant bond, quarantine other legislative requirements
- identification and correct use of equipment, processes and procedures
- relevant handling and safety codes
- lashing and protection procedures
- marking and numbering of cargo
- use of the lashing and protection equipment
- receiving knowledge and sending messages with communications equipment whilst operating other equipment
- relevant regulations such as Hazchem and Australian Dangerous Goods
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Critical aspects for assessment and evidence required to demonstrate competency in this unit</strong></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>- knowledge of the requirements, procedures and instructions for securing cargo</td>
</tr>
<tr>
<td></td>
<td>- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of securing cargo</td>
</tr>
<tr>
<td></td>
<td>- working with others to undertake and complete the securing of cargo that meet all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>- consistent timely completion of securing cargo that safely, effectively and efficiently meet the required outcomes</td>
</tr>
</tbody>
</table>

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
| | • Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances. |
| | • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. |
| | • Customisation of assessment and delivery environment should sensitively accommodate... |
cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the securing of cargo |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>
<thead>
<tr>
<th>Compliance documentation may include:</th>

Not applicable.
RIIHAN206A Transport plant, equipment and personnel

Modification History
Not applicable.

Unit Descriptor
This unit covers transporting plant, equipment and personnel in the resources and infrastructure industries. It includes preparing for the transfer of plant, equipment and/or personnel; loading, transporting and unloading plant, equipment and personnel; and completing the transfer of loads. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare the transfer of plant, equipment and/or personnel | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Identify *load* characteristics and any *environmental issues* and determine if there are any special handling or equipment requirements  
1.3. Determine location of transfer, establish transfer pathway and prepare *equipment* and/or authorised *personnel* according to transportation schedule  
1.4. Identify, manage and report potential risks and *hazards*  
1.5. Conduct pre-operational checks to establish the readiness of equipment for operation and report unsafe equipment to appropriate personnel |
| 2. Load, transport and unload plant, equipment and personnel | 2.1. Carry out start-up, *park-up and shutdown procedures*  
2.2. *Calculate* the load according to manufacturer’s specifications to prevent damage to carrying equipment and load and/or loss of load  
2.3. Lift and shift load safely using appropriate devices and protective *restraints* for personnel, and appropriate *personal protective equipment*  
2.4. Transport load within the *operating capacity of the transport vehicle*, using appropriate devices and protective restraints for personnel  
2.5. Transport load to the specified destination, via approved transport routes, within speed limits, on time and in original condition  
2.6. Safely unload without any damage to load and/or carrying equipment |
| 3. Complete transfer of load | 3.1. Complete relevant *documentation* accurately and in a timely manner  
3.2. Clean equipment and return to store area  
3.3. Restore work area to normal working conditions |
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to transport plant, equipment and personnel:

- apply legislative, organisation and site requirements and procedures for transporting plant, equipment and personnel
- identify, select and use relevant equipment, processes and procedures when preparing, transporting, loading and unloading of load
- modify the preparation, loading, transporting and unloading procedures for varying workplace contexts, risk situations and environments
- read and interpret instructions, procedures and labels relevant to the preparation, loading, transporting and unloading of loads
- identify cargo, container and goods, coding, ADG/IMDG markings and where applicable emergency information panels
- estimate the size, shape and special requirements of loads
- acknowledge and send messages with communications equipment whilst operating other equipment
- describe consequences of load movement
- provide customer/client service
- work effectively with others
- communicate effectively
- evaluate ground conditions
- interpret load plans, reports, maps and specifications
- maintain transportation records

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to transport plant, equipment and personnel:

- Australian and international codes and regulations relevant to the transportation of plant, equipment and personnel, including the Australian and international dangerous goods codes
- OHS and environmental protection procedures and guidelines relevant to the preparation and transportation of plant, equipment and personnel
- workplace procedures and policies for the preparation and transportation of plant, equipment and personnel
- operations of work systems, equipment, management and site operating systems
for the preparation and transportation of plant, equipment and personnel
- problems that may occur when preparing for and transporting plant, equipment and personnel
- appropriate action to be taken to resolve problems and potential problems
- relevant handling and safety codes
- types of equipment used to transfer loads in terminals/wharves, their applications and procedures and precautions for their use
- requirements for safe working load (SWL) and working load limit (WLL) of load shifting equipment
- the marking and numbering systems for cargo
- relevant bond, quarantine or other legislative requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</tbody>
</table>
- hand tools
- cutting implements
- drill rig and associated drilling components such as:
  - rods
  - bits
  - augers
  - down hole hammer
  - down hole tools of all types
- support vehicles
- earth moving equipment
- equipment components
- flags
- float
- laser profile
- lifting and handling equipment such as:
  - winch
  - crane
  - block
  - tackle
  - pegs
- pipes
- pump system and components
- rope measuring tape
- signs
- tapes
- vehicles approved for dangerous goods
- water
- water trucks
- witches hats

**Personnel** may include:
- supervisors
- drivers
- drillers
- blasters
- tradespersons
- maintenance staff/service personnel
- contractors
- inspectors
- visitors
- holders of appropriate tickets
- personnel authorised by worksite management
### Hazards
- exposure to chemicals
- dangerous goods
- movement of dangerous goods
- equipment
- movement of equipment
- vehicular traffic

### Start-up, par-up and shutdown procedures
- correct identification and location of equipment
- safety mechanisms check including:
  - horn
  - operating lights
  - vehicle is left secured

### Calculation
- height
- weight
- width
- transport routes may include:
  - haul roads
  - major and minor site access roads
  - major and minor site roads
  - pit access roads
  - public and private roads
  - service roads

### Restraints
- seatbelts

### Personal protective equipment
- gloves
- safety headwear
- safety footwear
- safety glasses
- two-way radios
- protective clothing
- high visibility clothing

### Operating capacity of the transport vehicle
- duration of operation
- efficient and safe operating speed
- operating limitations/weight/ and or load
- pre-operational checks may include:
  - air filter restriction indicator
  - cab including:
    - horn
    - lights
    - air conditioner
- computer systems
- display instrumentation such as indicators and gauges
- orange and red engine and stop engine lights
- fluid levels including:
  - windscreen washer tank
  - hydraulic oil
  - coolant
  - grease
  - water
  - engine oil
  - fuel
- visual and audio warning devices and lights
- SWL or WLL is calculated using formulae for the particular type of lifting equipment
- lifting equipment is checked to determine safe working order for the transfer

### Documentation may include:

- goods identification numbers and codes
- manifests
- bar codes
- goods and container identification/serial numbers
- manufacturer's specifications
- enterprise operating procedures and policies
- supplier and/or client instructions
- materials safety data sheet
- communication records including:
  - phone exchange
  - electronic data interchange
  - fax
  - email
  - internet
  - radio
  - oral
  - aural
  - written
  - signed communications
- Australian and international code of practice and regulations relevant to the transfer of cargo including:
  - relevant Australian standards for manual

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for work | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Receive, interpret and clarify work instructions including shift changeover details, quality requirements, plans and specifications  
1.3. Apply *safety requirements* throughout activity in accordance with site procedures and relevant legislation  
1.4. Arrange *signals and communication* with other workers including barricade requirements  
1.5. Identify, address and report *potential hazards* and *environmental issues*  
1.6. Identify materials, *equipment* and tools required to complete work and check these for serviceability. Faults are reported  
1.7. Conduct equipment pre-start checks in accordance with site procedures |
| 2. Prepare personnel/material hoist | 2.1. *Inspect personnel cage/platform* structure and SWL plate  
2.2. Assess weather conditions for safe hoist operation  
2.3. Conduct test run through full height of travel without a load, check mast and wall bolting  
2.4. Check all safety systems including braking system  
2.5. If required, ensure that attachment is lowered to ground safely and does not crush feet of personnel  
2.6. If required, check personnel's lanyards/harnesses and anchors comply with relevant Australian standards and are securely fitted to railing/anchor points and personnel harness attachment points |
| 3. Operate personnel/material hoist | 3.1. Lift personnel cage/platform and test all equipment in range positions, operating controls smoothly and carefully, considering working clearances and potential crushing risks to workers |
### 3.2. Travel personnel cage/platform

As low as possible and operating in low gear and low speed, ensuring maximum stability at all times.

### 3.3. Remain seated at controls whenever workers are on/in attachment and in the raised position.

### 3.4. Communicate with personnel cage/platform using recommended signals.

### 4. Perform post-operation activities

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to operate personnel and material hoists:

- apply legislative, organisation and site requirements and procedures for the operation of personnel and material hoists
- access, interpret and apply technical and safety information
- communicate and coordinate activities with others
- keep plant and equipment records
- apply diagnostic/faultfinding techniques
- comply with environmental requirements
- work at heights
- apply isolation procedures
- read and appreciate ground conditions
- conduct work area risk assessment techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to operate personnel and material hoists:

- communication procedures and hand signals
- emergency shutdown procedures
- worksite inspections
- workplace and equipment safety requirements
- quality requirements
- plant, tools and equipment types, characteristics, uses and limitations
- hoist operation techniques
- personnel and material hoist equipment
- processes for the calculation of load mass requirements
- materials safety data sheet
- plans, drawings and specifications
- materials handling, storage and environmentally friendly waste management
- relevant acts, regulations and code of practice
- designs and functions of hoisting equipment
- signalling methods and communications
- fault finding and identification
• working at heights procedures
• emergency procedures (hoist specific)
• JSA's/safe work method statements
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>

<thead>
<tr>
<th>Context of and specific resources for assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
</tr>
<tr>
<td>- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
</tr>
<tr>
<td>- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
</tr>
</tbody>
</table>
- Customisation of assessment and delivery environment should sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the operation of personnel and material hoists

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Compliance documentation may include: | legislative, organisation and site requirements and procedures including Acts and regulations dealing with: |
|                                      | • worksite safety and health |
|                                      | • mine inspection |
|                                      | • OHS |
|                                      | • explosives |
|                                      | • environment |
|                                      | • manufacturer's guidelines and specifications |
|                                      | • Australian standards |
|                                      | • Employment and workplace relations legislation |
|                                      | • Equal Employment Opportunity and Disability Discrimination legislation |

| Safety requirements may include:     | fall restraint devices, lanyards, anchors, harnesses |
|                                      | • safety glasses |
|                                      | • hearing protection |
|                                      | • gloves |
|                                      | • cap lamps |

| Signals and communications could be hand, verbal or lights and may include: | raising |
|                                                                         | lowering |
|                                                                         | stopping |
|                                                                         | slewing left |
|                                                                         | slewing right |
|                                                                         | moving forwards |
|                                                                         | moving backwards |
|                                                                         | creeping and 'dead' slow travel and movement speeds |
|                                                                         | ensuring all persons are clear on operations before starting job |
|                                                                         | discussion of job dangers/hazards |

| Potential hazards may include: | unbalancing of raised attachment and load or bucket by rough and uneven ground |
|                               | crushing of personnel against roofs, walls or |
fixed objects
- poor visibility
- crushing of hands and fingers between top rail/bucket lip and walls if personnel wrap their hand/body parts over top rail
- accidentally tipping personnel out by using tilt lever instead of lift
- not securing attachment to bucket/hitching system (QDS/hook or similar) correctly can lead to crushing of personnel by platform as it slides forward and falls to ground on sudden stopping or tilting
- personnel falling from attachment or bucket by over-reaching or standing on rails or bucket top edge incorrectly
- incorrect procedures used at height
- equipment falling or being knocked from attachment striking workers
- personnel travelling in attachment at speeds above 10 KPH cannot secure themselves in a sudden braking situation and will be thrown out of basket or bucket if not wearing a lanyard/harness or restraint system
- risk of being run over
- ripping vent bag or causing damage to services with raised attachment
- striking walls and other fixed objects due to dimensions of platform or attachment
- inaccurate operation or lack of skills for attachment dimensions

Environmental issues may include:
- drainage
- dust
- emissions
- flora and fauna
- hazardous chemicals
- noise
- run-off
- spills
- waste management and disposal
- water quality

Equipment may include:
- loader
- personnel cage/platform/attachment
- kibble
- integrated tool carrier
### Inspections of personnel cage/platform may include:

- railings
- floor
- kick or toe boards
- mesh infill in floor structure and sides
- securing pins
- gate/ door/ access/ chain damage
- clear platform floor
- even equipment stacking
- safe working loads
- general overall structural damage and condition considering protection integrity (cracks, welds, damage to main structural components)

### Travel personnel cage/platform may include:

- no riders on attachment between jobs, levels or on declines
- travelling at low speed
- travelling at low height
- travelling considering prevailing conditions

### Unit Sector(s)

Load Handling

### Competency field

Refer to Unit Sector(s).

### Co-requisite units

Not applicable.
RIIHAN208A Perform dogging

Modification History

Not applicable.

Unit Descriptor

This unit covers the performance of dogging in the resources and infrastructure industries. It includes planning for dogging, preparing for dogging, moving loads and cleaning up. The work required in this unit relates to the National Standard for High Risk Work. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit

This unit is appropriate for those working in an operational role at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Plan for dogging</td>
<td>1.1. Access, interpret and apply <em>compliance documentation</em> relevant to the work activity</td>
</tr>
<tr>
<td></td>
<td>1.2. Obtain, interpret and clarify <em>work requirements and safety information</em> before proceeding</td>
</tr>
<tr>
<td></td>
<td>1.3. Develop a <em>preliminary dogging plan</em> and site sketch taking account of essential information</td>
</tr>
<tr>
<td></td>
<td>1.4. Check and confirm job feasibility and schedule with the load designer and other persons as appropriate</td>
</tr>
<tr>
<td></td>
<td>1.5. Confirm hazards associated with the use of cranes and other load moving <em>equipment</em> and identify and check measures to eliminate or control these hazards with appropriate parties</td>
</tr>
<tr>
<td></td>
<td>1.6. Finalise and confirm dogging plan, including the scheduling of required resources, as meeting the applicable standards and codes</td>
</tr>
<tr>
<td></td>
<td>1.7. Identify and implement signage or barricading requirements</td>
</tr>
<tr>
<td>2. Prepare for dogging</td>
<td>2.1. Identify, select, inspect, and verify as serviceable dogging equipment, materials and tools required for the plan</td>
</tr>
<tr>
<td></td>
<td>2.2. Label for repair or destroy unserviceable equipment, materials and tools</td>
</tr>
<tr>
<td></td>
<td>2.3. Communicate job sequencing schedule with team members to ensure coordination</td>
</tr>
<tr>
<td></td>
<td>2.4. Calculate load mass and centre of gravity using load charts and standard calculations</td>
</tr>
<tr>
<td></td>
<td>2.5. Calculate load in slings and equipment to suit job requirements</td>
</tr>
<tr>
<td>3. Move loads</td>
<td>3.1. Perform load moving in accordance with the plan and acceptable safe work practices, standards and codes and specifications</td>
</tr>
<tr>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to perform dogging:

- apply legislative, organisation and site requirements and procedures for performing dogging
- apply operational safety requirements
- access, interpret and apply technical information
- maintain equipment records
- apply eye-hand coordination
- use hand and power tools
- identify hazards

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to perform dogging:

- relevant Acts, regulations and code of practice
- designs and functions of lifting equipment
- signalling methods and communications
- appropriate national certification standards
- site and equipment safety requirements
- equipment characteristics, technical capabilities and limitations
- operational and maintenance procedures
- hand and whistle signals
- potential hazards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>Context of and specific resources for assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions to perform dogging</td>
<td>• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of the performance of dogging</td>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and perform dogging that meets all of the required outcomes</td>
<td>• Customisation of assessment and delivery environment should sensitively accommodate</td>
</tr>
</tbody>
</table>
cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and perform dogging |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Compliance documentation may include:                           | • legislative, organisation and site requirements and procedures  |
|                                                               | • manufacturer's guidelines and specifications                  |
|                                                               | • Australian standards                                          |
|                                                               | • management plans                                              |
|                                                               | • relevant OHS policy                                           |
|                                                               | • relevant code of practice                                     |
|                                                               | • manufacturer's instructions                                   |
|                                                               | • safe working procedures (or equivalents)                      |
|                                                               | • Employment and workplace relations legislation                |
|                                                               | • Equal Employment Opportunity and Disability Discrimination legislation |

| Work requirement and safety information and procedures may include:                                                                 |
| • shift briefings                                                                                                               |
| • handover details                                                                                                             |
| • work orders                                                                                                                  |
| • relevant legislation and regulations                                                                                         |
| • relevant Australian standards                                                                                            |
| • management plans                                                                                                             |
| • relevant OHS policy                                                                                                          |
| • relevant code of practice                                                                                                   |
| • manufacturer's instructions                                                                                                  |
| • safe working or job procedures (or equivalents)                                                                             |
| • work briefings including:                                                                                                    |
| • site plans and drawings                                                                                                      |
| • work specifications                                                                                                          |
| • basic working plans                                                                                                          |
| • material schedules                                                                                                           |
| • confirmed mass and dimensions of loads                                                                                       |
| • capacities and availability of load shifting equipment                                                                      |

| Preliminary dogging plan may include:                                                                                          |
| • confirmed details of dogging requirements                                                                                   |
| • confirmed dimensions                                                                                                        |
- site access and egress
- suitability and availability of materials
- tools and equipment
- identification of potential hazards
- probable control measures
- identification of site coordination requirements

**Equipment** may include:

- slings
- ropes
- shackles
- eye bolts
- spreader beams
- tools and equipment are to include:
  - brick cages
  - personnel cages
  - kibbles
  - rubbish bins
  - spreader bars and beams
  - rescue cages

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to perform basic rigging:

- apply legislative, organisation and site requirements and procedures for performing basic rigging
- apply operation safety requirements
- access, interpret and apply technical information
- maintain equipment records
- apply hand-eye coordination
- use relevant hand tools
- apply diagnostic techniques
- identify potential hazards

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to perform basic rigging:

- applicable national certification standards
- site and equipment safety requirements
- equipment characteristics, technical capabilities and limitations
- operational and maintenance procedures
- hand and whistle signals
- materials handling, storage and environmentally friendly waste management
- relevant acts, regulations and code of practice
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
</table>

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for performing basic rigging
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of performing basic rigging
- working with others to undertake and complete the performance of basic rigging that meets all of the required outcomes
- consistent timely completion of basic rigging that safely, effectively and efficiently meets the required outcomes

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
</table>

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery
The environment should sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the performance of basic rigging

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- safety requirements
- management plans
- applicable OHS policy
- applicable code of practice
- manufacturer's instructions
- safe working or job procedures (or equivalents)
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

#### Work requirements may include:
- shift briefings
- handover details
- work orders

#### Preliminary rigging plan may include:
- confirmed details of rigging requirement
- confirmed dimensions
- site access and egress
- suitability and availability of materials
- tools and equipment
- identification of potential hazards
- control measures
- identification of site coordination requirements
- unless otherwise specified, rigging is to conform with the requirements of the National Occupational Health and Safety Certification Standards for Users and Operators of Industrial Equipment (NOHSC: 1006)

#### Equipment may include:
- steel erection
- particular hoists
- placement of pre-cast concrete
### Unit Sector(s)

Load Handling

### Competency field

Refer to Unit Sector(s).

### Co-requisite units

Not applicable.
RIIHAN210A Perform intermediate rigging operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the performance of intermediate rigging operations in the resources and infrastructure industries. It includes planning for rigging, preparing for rigging, moving loads and cleaning up. The work required in this unit relates to the National Standard for High Risk Work. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

SkillsDMC
Rigging equipment may include:

- rigging of cranes
- hoists
- conveyors
- dredges and excavators
- tilt-slabs
- rigging work associated with demolition
- dual lifts
- but *excludes* the following:
  - rigging of gin poles
  - shear legs
  - flying foxes and cableways
  - guyed derricks and structures
  - suspended and hung scaffolds
- equipment range for dogging and rigging work associated with steel erection includes:
  - all hoists
  - placement of pre-cast concrete
  - safety nets and static lines
  - mast climbers
  - perimeter safety screens and shutters
  - cantilevered crane loading platforms
  - slinging and directing of loads

| 1. Plan and prepare for scaffolding operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Access and interpret *work requirements*  
1.3. Develop the *preliminary scaffolding plan* in accordance with *safety* requirements  
1.4. Confirm *site preparation* with other appropriate personnel and implement hazard control measures if necessary  
1.5. Identify and select *equipment* consistent with work requirements  
1.6. Check equipment is ready for use and report, label and repair any defects  
1.7. Confirm scaffolding plan in accordance with Statutory/regulatory authorities and *environmental requirements* |
| 2. Erect and maintain scaffolding | 2.1. Erect scaffolding in accordance with *safe work practices*  
2.2. Adhere to safety requirements at heights, on incomplete structures and in confined spaces  
2.3. Install static lines when specified  
2.4. Assemble and erect lifting device where specified  
2.5. Inspect *critical structural and safety areas* and equipment periodically while in use to identify any variation from the plan and record inspection in inspection log  
2.6. Perform alteration or repair to critical structural and safety areas and equipment |
| 3. Dismantle scaffolding | 3.1. Isolate scaffolding and appropriately sign and barricade to enable safe dismantling  
3.2. Inspect, classify, label and dismantle scaffolding safely using the reverse procedure for erection  
3.3. Clear work area and dispose of used and recycled materials in accordance with job specification, relevant statutory/regulatory authorities and environmental requirements  
3.4. Clean and check equipment and store in accordance with manufacturer's |
| recommendations and standard work practices |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to conduct basic scaffolding operations:

- apply legislative, organisation and site requirements and procedures for conducting basic scaffolding operations
- apply scaffolding operational safety requirements
- access, interpret and apply technical scaffolding information
- maintain scaffolding equipment records
- apply hand-eye coordination
- operate/use relevant hand tools
- identify hazards and potential hazards at scaffolding site
- communicate scaffolding ideas and information
- work in a team environment on site

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to conduct basic scaffolding operations:

- workplace and scaffolding equipment safety requirements
- quality scaffolding requirements
- plant, tools and equipment types, characteristics, uses, limitations and relevance to scaffolding
- materials safety data sheet
- scaffolding plans, drawings and specifications
- scaffolding materials handling, storage and environmentally friendly waste management
- JSAs/safe work method statements
- relevant legislation, regulations and code of practice relating to the erection, alteration and dismantling of scaffolding
- scaffolding lifting devices
- relevant national certification standards relating to scaffolding
- scaffolding site and equipment safety requirements
- scaffolding equipment characteristics, technical capabilities and limitations
- scaffolding operational and maintenance procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

|                                          | estimation of types and quantities of components |
|                                          | identification of scaffolding coordination requirements |
|                                          | transportation of required equipment |

| Safety may include:                   | relevant OHS requirements in accordance with the following: |
• applicable legislation
• applicable regulations
• applicable code of practice
• applicable organisational safety policies and procedures
• project safety plan
• protective clothing and equipment
• use of tools and equipment
• workplace environment
• handling of materials
• use of fire fighting equipment
• First Aid
• hazard control including hazardous materials and substances
• safe operating workplace procedures
• conduct an operational risk assessment and treatments associated with power cables including:
  • overhead service trays
  • cables and conduits
  • lighting
  • earth leakage boxes
  • trip hazards
  • working with dangerous materials
  • working in confined spaces
  • surrounding structures
  • restricted access barriers
• traffic control
• working at heights
• working in proximity to others
• worksite visitors
• the public
• emergency procedures including:
  • extinguishing fires
  • organisational First Aid requirements
  • evacuation
• management plans
• manufacturer's instructions
• reporting defects in equipment

**Site preparation** may include:
• site isolation
• worksite inspection

Safe work practices may include:
- planned hazard prevention and control measures
- whipping designated rope ends in accordance with regulations and project specifications
- splicing designated rope ends in accordance with regulations and project specifications
- applying bends and hitches and inspecting them in accordance with project specifications
- maintenance of an inspection log for the inspection and repair of scaffolding

Critical structural and safety areas may include:
- damage
- corrosion
- wear
- stability
- current usage reconciled with changes to the plan via the inspection log
- scaffold stability

Unit Sector(s)
Load Handling

Competency field

Co-requisite units
Not applicable.
RIIHAN212A Conduct non-slewing crane operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the operation of non-slewing cranes, other than gantry cranes in the resources and infrastructure industries. It includes planning and preparation, operating the crane and crane operator maintenance. The work required in this unit relates to the National Standard for High Risk Work. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>

# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for non-slewing crane operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Access, interpret and confirm *work requirements* prior to proceeding  
1.3. Identify and control site hazards and access, interpret and apply *safety information and procedures* throughout the work  
1.4. Coordinate activities at the site prior to commencement of and during operations |
| 2. Operate non-slewing crane | 2.1. Carry out pre-start, start-up, park-up and shut-down procedures in accordance with Australian standards, manufacturer's and/or site requirements  
2.2. Position crane safely prior to commencement of lift operations in accordance with Australian standards, manufacturer's specifications and approved man-basket operation procedures  
2.3. Use relevant *crane controls and functions* within manufacturer's specifications to effectively lift and position loads or personnel as required  
2.4. Respond to monitoring systems and alarms in accordance with manufacturer's instructions and site procedures  
2.5. Recognise and respond to hazardous and emergency situations in accordance with manufacturer's instructions and site procedures  
2.6. Complete work in accordance with the agreed plan and within the operating capacities of the allocated equipment  
2.7. Interpret signals in accordance with AS2550 |
| 3. Travel crane | 3.1. Plan the route so crane will travel on firm and level surfaces  
3.2. Identify and control hazards en route  
3.3. Maintain Australian standards, manufacturer's instructions and site requirements when crane is travelling |
4. **Perform multiple crane lift**
   
   4.1. Obtain approval to perform a multiple crane lift from the appropriate statutory authority.
   
   4.2. Plan *multiple crane lift* and obtain approval for lifting plan by an authorised person.
   
   4.3. Perform the multiple crane lift under the supervision of an authorised person in accordance with the appropriate Australian standard and other statutory regulations.

5. **Perform crane operator maintenance**
   
   5.1. Inspect non slewing crane report/repair faults in accordance with manufacturer instructions and site requirements.
   
   5.2. Perform routine operational servicing, lubrication and housekeeping tasks in accordance with manufacturer instructions and site authorised procedures and practices.
   
   5.3. Perform minor maintenance to manufacturer instructions and site requirements.
   
   5.4. Support operator during the preparation and procedure of major maintenance tasks in accordance with site requirements.
   
   5.5. Process *records* in accordance with site requirements.
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to conduct non-slewing operations:

- apply legislative, organisation and site requirements and procedures for the operation of non-slewing cranes
- calculate volume and weights
- access interpret and apply technical information relating to the operations of non-slewing cranes other than gantry cranes
- maintain equipment records
- use hand and power tools
- apply fault finding techniques when planning to operate a non-slewing cranes other than gantry cranes
- comply with environmental requirements
- dispose of environmentally sensitive fluids and materials

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to operate a non-slewing crane:

- Australian standards related to cranes/lifting
- site and equipment safety requirements
- non-slewing crane other than gantry crane equipment characteristics, technical capabilities and limitations
- non-slewing crane other than gantry crane operational procedures
- non-slewing crane other than gantry crane maintenance systems and procedures
- basic geological and survey data related to non-slewing cranes other than gantry cranes
- basic rigging and slinging methods
- hand and whistle signals
- site environmental requirements and constraints related to non-slewing cranes other than gantry cranes
- Hazchem relevant to non-slewing cranes other than gantry cranes
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the operation of non-slewing cranes</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of non-slewing crane operations</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the operation of non slewing cranes that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of non-slewing crane operations that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

#### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
| Customisation of assessment and delivery environment should sensitively accommodate cultural diversity. |
| Aboriginal people and other people from a non English speaking background may have second language issues. |
| Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required. |

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods: |
| wrote and/or oral assessment of the candidate's required knowledge |
| observed, documented and/or first hand testimonial evidence of the candidate's: |
| implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes |
| consistent achievement of required outcomes |
| first hand testimonial evidence of the candidate's: |
| working with others to undertake and complete the operation of non slewing cranes |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Compliance documentation may include: | legislative, organisation and site requirements and procedures  
|                                           | manufacturer's guidelines and specifications  
|                                           | Australian standards, particularly AS2550  
|                                           | Employment and workplace relations legislation  
|                                           | Equal Employment Opportunity and Disability Discrimination legislation |

| Work requirements may include: | shift briefings  
|                               | handover details  
|                               | work orders  
|                               | crane equipment to be used  
|                               | nature and scope of tasks  
|                               | details of load chart/factors  
|                               | achievement targets  
|                               | working conditions  
|                               | site lighting arrangements  
|                               | defects on equipment  
|                               | hazards and potential hazards identification and control  
|                               | coordination of work |

| Hazards may include: | power lines  
|                      | trees  
|                      | overhead service lines  
|                      | bridges  
|                      | surrounding buildings  
|                      | obstructions  
|                      | structures  
|                      | facilities  
|                      | other equipment  
|                      | dangerous materials  
|                      | earthworks  
|                      | earthworks  
|                      | underground services |

| Safety information and | legislation and regulations |
### procedures may include:
- relevant Australian standards
- hazard identification and control
- management plans
- OHS policy
- code of practice
- manufacturer’s instructions
- safe working or job procedures
- control and safety of travelling speed
- selection and observance of safe working levels and angles
- boarding and disembarking procedures
- communications and signalling procedures

### Prepare for operations may include:
- selection of stable base
- avoidance of obstacles
- hazard identification and hazard control
- identification of load
- identification and selection of lifting equipment
- inspection and certification of lifting equipment
- management of permits and tags

### Crane controls and functions may include:
- boom up
- boom down
- boom extensions
- hoist up
- hoist down
- manual jib extensions

### Multiple crane lift may include:
- assessment of the load to be carried by each crane
- determination of the types of cranes suitable for use
- safety margins to be used in the lift
- hazard identification and control measures
- sequence of operations

### Records may include:
- maintenance records
- handover records
- records of breaks
- log books

RIIHAN213A Work effectively in the drilling industry

Modification History
Not applicable.

Unit Descriptor
This unit covers working effectively in the drilling industry. It includes following safe manual handling procedures, routinely practicing good housekeeping, completing pre-start checks and refuelling vehicles and plant and driving vehicles. The work required in this unit relates to the National Standard for High Risk Work. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those assisting with a variety of tasks within:
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Follow safe manual handling procedures | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Assess load to be moved  
1.3. Plan lift transport route and lay down position for stability  
1.4. Use necessary *manual handling aids* safely and efficiently and seek assistance where required |
| 2. Routinely practice good housekeeping | 2.1. Keep all relevant *housekeeping areas* clean, neat and tidy  
2.2. Keep all tools and equipment clean and stored in the correct place when not in use  
2.3. Identify possible hazards from poor housekeeping  
2.4. Implement good housekeeping practice  
2.5. Report equipment problems |
| 3. Complete pre-start checks | 3.1. Walk around plant/equipment/vehicle checking all items are serviceable and in good condition and complete documentation as required by company procedures  
3.2. Check and top up fluids as required  
3.3. Check all guards and safety devices are in place and serviceable  
3.4. Ensure all personnel are clear or in a safe position before starting  
3.5. Complete required records and reporting |
| 4. Refuel vehicles and plant | 4.1. Enforce no-smoking zone while *refuelling*  
4.2. Select correct fuel  
4.3. Refuel engine in accordance with company/site procedures  
4.4. Clean up any spills  
4.5. Leave fuel storage area clean and tidy  
4.6. Note remaining fuel supply and complete required records/reporting |
| 5. Drive vehicle | 5.1. Check *vehicle* roadworthiness and load distribution and security before commencing  
5.2. Identify *potential vehicle hazards* from |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to work effectively in the drilling industry:

- apply legislative, organisation and site requirements and procedures for working effectively in the drilling industry
- apply skills for safe lifting
- demonstrate literacy skills to complete required reporting
- demonstrate basic mathematical skills to make calculations relating to linear measurements, volumes weights and distances

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to work effectively in the drilling industry:

- housekeeping standards and the contribution of housekeeping to safety and efficiency
- pre-start check procedures
- driving hazards
- fuels and fuelling hazards
- jacking and wheel changing hazards and techniques
- manual handling techniques
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Evidence for assessment is best gathered using the outcomes of products and processes in the workplace.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those
| **Method of assessment** | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete working effectively in the drilling industry |
| **Guidance information for assessment** | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Manual handling aids may include:
- truck mounted cranes (e.g. HIAB)
- overhead cranes
- jib cranes
- fork lift trucks
- integrated tool carrier (IT)

### Housekeeping areas may include:
- rig and environs
- fuel dumps
- chemical storage
- camp environs
- lay down and storage areas
- workshop, store, yard
- vehicles
- crib rooms
- offices
- ablution facilities

### Refuelling may include:
- diesel/petrol
- bowser/drum
- fire hazards - smoking, mobile phones, hot equipment

### Vehicles may include:
- two/all wheel drive
- heavy rigid trucks
- articulated vehicles
- tracked vehicles

### Potential vehicle hazards may include:
- hazardous driving conditions
- jacking on uneven/uncompacted ground
- different wheel types

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to operate an elevating work platform:

- apply legislative, organisation and site requirements and procedures for elevating work platforms
- apply operational safety requirements
- identify hazards and potential hazards
- apply hand-eye coordination to control functions
- access, interpret and apply technical information relating to the planning and operation of an elevating work platform to perform work requirements
- maintain equipment records
- use relevant hand tools
- apply environmental constraints and procedures
- dispose of environmentally sensitive oils, fluids and materials

## Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to operate elevating work platforms:

- the appropriate National Certification Standards
- site and equipment safety requirements
- equipment characteristics, technical capabilities and limitations
- elevating work platform operational procedures
- basic geological and survey data related to elevating work platforms
- site environmental requirements and constraints related to elevating work platforms
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</tbody>
</table>

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
|                                                | • Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances. |
|                                                | • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those |
required on the job.
- Customisation of assessment and delivery environment should sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the operation of elevating work platforms |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Compliance documentation may include: | • legislative, organisation and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• Employment and Workplace Relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
| Work requirements may include: | • shift briefings  
• handover details  
• work orders  
• equipment to be used  
• nature and scope of tasks  
• load details  
• achievement targets  
• working conditions  
• site lighting arrangements  
• defects on equipment  
• hazards and potential hazards  
• coordination requirements |
| Safety information and procedures may include: | • legislation and regulations  
• relevant Australian standards  
• management plans  
• OHS policy  
• code of practice  
• manufacturer's instructions  
• safe working or job procedures (or equivalents) |
| Specific safety requirements may include: | • control and safety of raising and lowering booms  
• slewing and telescoping  
• deployment of outriggers  
• stabilisers  
• preparation of safety harnesses and blocking |
| Pre-operational checks may include: | • selection of stable base  
• avoidance of obstacles and hazards  
• identification of load  
• inspection and certification of equipment  
• management of permits and tags |
|----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Site hazards may include:        | • power lines  
• facilities  
• trees  
• other equipment  
• overhead service lines  
• dangerous materials  
• bridges  
• underground services  
• surrounding buildings  
• recently filled trenches  
• obstructions  
• structures  
• weather |
| Elevating work platform may be titled locally: | • EWP  
• cherry pickers  
• skyworkers  
• scissor lift  
• trailer-mounted lifts  
• sky-cranes  
• boom lift  
Note: the definition of equipment to be covered by this unit will need to be made by the site in accordance with appropriate legislative and regulatory requirements, which may vary with industry sector and with jurisdiction. |
| Emergency situations may include: | • loss of power  
• failure of controls  
• equipment fires |
| Minor operator maintenance procedures are those: | • established and authorised for the site  
Note: depending on the site requirements, there may be circumstances in which operators do not perform these functions. |

Co-requisite units
Not applicable.
RIIHAN302A Conduct intermediate scaffolding operations

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting intermediate scaffolding operations in the resources and infrastructure industries. It includes planning for operations, preparing for scaffolding, erecting scaffolding, maintaining scaffolding and dismantling scaffolding. The work required in this unit relates to the National Standard for High Risk Work. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
**Elements and Performance Criteria Pre-Content**

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>
</thead>
</table>

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan for operations | 1.1. Access, interpret and apply compliance documentation and OHS requirements relevant to the work activity  
1.2. Obtain, interpret and clarify/confirm work requirements before proceeding  
1.3. Develop a preliminary scaffolding plan and site sketch taking account of essential information  
1.4. Check and confirm job feasibility and schedule with others as appropriate  
1.5. Confirm hazards associated with scaffolding and identify and check measures to eliminate or control these hazards with the appropriate parties  
1.6. Finalise and confirm the scaffolding plan including the scheduling of required resources |
| 2. Prepare for scaffolding | 2.1. Identify, select, inspect and certify as serviceable scaffolding equipment, materials and tools required for the job in accordance with code of practice and guides  
2.2. Label and repair or destroy unserviceable scaffolding equipment, materials and tools  
2.3. Prepare scaffolding/equipment gear  
2.4. Arrange and coordinate transportation of equipment and tools to the worksite in accordance with the scaffolding plan  
2.5. Prepare the site for scaffolding |
| 3. Erect scaffolding | 3.1. Carry out erection for appropriate types of scaffolding  
3.2. Perform work safely at heights, on incomplete structures and in confined spaces  
3.3. On completion leave the site clean of all surplus components, equipment, tools and debris and inspect the scaffolding/equipment |
| 4. Maintain scaffolding | 4.1. Inspect critical structural and safety areas of the scaffolding/equipment to identify any |
variation from the plan

4.2. Perform alteration or repair with due regard for the critical safety and structural areas of the scaffolding/equipment

5. Dismantle scaffolding

5.1. Dismantle scaffolding in a safe and orderly manner
5.2. Inspect, classify, label and remove equipment from the site

---

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to conduct intermediate scaffolding operations:

- apply legislative, organisation and site requirements and procedures for conducting intermediate scaffolding operations
- apply operational safety requirements
- access, interpret and apply technical information
- maintain equipment records
- apply hand-eye coordination
- use relevant hand tools
- identify hazards

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to conduct intermediate scaffolding operations:

- workplace and equipment safety requirements
- quality requirements relating to scaffolding
- appropriate national certification standards
- site and equipment safety requirements
- equipment characteristics, technical capabilities and limitations
- operational and maintenance procedures
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to operate a slewing crane:

- apply legislative, organisation and site requirements and procedures for the operation of a slewing crane
- apply operational safety requirements
- access interpret and apply technical information
- calculate volume weights
- maintain equipment records
- apply hand-eye coordination to control functions
- use relevant hand tools
- apply diagnostic techniques
- comply with environmental requirements
- dispose of environmentally sensitive fluids and materials

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to operate a slewing crane:

- Australian standards related to cranes/lifting
- site and equipment safety requirements
- crane equipment characteristics, technical capabilities and limitations
- crane operational procedures
- crane maintenance systems and procedures
- basic geological and survey data related to slewing cranes
- basic rigging and slinging requirements
- hand and whistle signals
- site environmental requirements and constraints related to slewing cranes
- Hazchem relevant to slewing cranes
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
|---|---|
|  | • knowledge of the requirements, procedures and instructions for conducting slewing crane operations
|  | • implementation of requirements, procedures and techniques for the safe, effective and efficient completion of conducting slewing crane operations
|  | • working with others to undertake and complete the slewing crane operations that meet all of the required outcomes
|  | • consistent timely completion of slewing crane operations that safely, effectively and efficiently meet the required outcomes

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment should sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate’s:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate’s:
    - working with others to undertake and complete the slewing crane operations

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Compliance documentation may include: | • legislative, organisation and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards, including AS2550  
• relevant state based legislation and regulations in relation to cranes  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
| Work requirements may include: | • crane equipment to be used  
• nature and scope of tasks  
• details of load chart/factors  
• achievement targets  
• working conditions  
• site lighting arrangements  
• defects on equipment  
• hazards and potential hazards  
• coordination requirements/issues |
| Safety information and procedures may include: | • relevant legislation and regulations  
• relevant Australian standards  
• management plans  
• relevant OHS policy  
• relevant code of practice  
• manufacturer's instructions  
• safe working or job procedures |
| Safety requirements may include: | • control and safety of slewing speed  
• selection and observance of safe working levels and angles  
• avoidance of obstacles and hazards  
• boarding and disembarking procedures  
• observation of wind restrictions  
• communications and signalling procedures |
| Prepare load may include: | • identification of load |
### Crane controls and functions

May include:

- boom up
- boom down
- boom extensions
- hoist up
- hoist down
- manual jib and fly-jib extensions
- slew

### Hazards

May include:

- power lines
- trees
- overhead service lines
- bridges
- surrounding buildings
- obstructions
- structures
- facilities
- other equipment
- dangerous materials
- earthworks
- underground services
- time of day

### Plan multiple lifts

May include:

- assessment of the load to be carried by each crane
- determination of the types of cranes suitable for use
- safety margins and hazard control measures to be used in the lift
- sequence of operations

### Minor operator maintenance

Procedures are those:

- established and authorised for the site

Note: depending on the site requirements, there may be circumstances in which operators do not perform these functions.

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to operate a gantry or overhead crane:

- apply legislative, organisation and site requirements and procedures for the operation of a gantry or overhead crane
- calculate volume, weights
- access interpret and apply technical crane information
- maintain crane equipment records
- use hand tools
- apply fault finding techniques with cranes
- comply with environmental requirements
- dispose of environmentally sensitive fluids and materials

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to operate a gantry or overhead crane:

- Australian standards related to cranes/lifting
- site and equipment safety requirements
- crane equipment characteristics, technical capabilities and limitations
- crane operational procedures
- crane maintenance systems and procedures
- basic rigging and slinging requirements
- hand and whistle signals
- site environmental requirements and constraints related to cranes
- Hazchem relevant to overhead cranes
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the operation of a gantry or overhead crane</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of the operation of a gantry or overhead crane</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the operation of a gantry or overhead crane that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of gantry or overhead crane operations that safely, effectively and efficiently meet the required outcomes</td>
</tr>
</tbody>
</table>

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those
required on the job.

- Customisation of assessment and delivery environment should sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the operation of a gantry or overhead crane

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Work requirements may include:
- shift briefings
- handover details
- work orders
- crane equipment to be used
- nature and scope of tasks
- details of load chart/factors
- achievement targets
- working conditions
- site lighting arrangements
- defects on equipment
- hazards and potential hazards
- coordination requirements

### Safety information and procedures may include:
- relevant legislation and regulations
- relevant Australian standards
- management plans
- relevant OHS policy
- relevant code of practice
- manufacturer’s instructions
- safe working procedures
- control and safety of travelling speed
- selection and observance of safe working levels and angles
- boarding and disembarking procedures
- communications and signalling procedures

### Prepare site may include:
- hazard identification and control
- identification of load
<table>
<thead>
<tr>
<th>Identification and selection of lifting equipment</th>

<td>any relevant legislation</td>
</tr>
</tbody>
</table>

**Hazards** may include:

- Environment
- People
- Other equipment
- Dangerous materials
- Facilities

**Signals** may include:

- Verbal
- Hand signals to Australian standards
- Whistles/hooters to Australian standards
- Two-way radio/telephones
- Light signals to Australian standards

**Records** may include:

- Maintenance records
- Handover records
- Records of breaks
- Log books

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to carry out lifting using multiple cranes:

- apply legislative, organisation and site requirements and procedures for carrying out lifting using multiple cranes
- apply operational safety requirements
- access, interpret and apply technical information
- calculate volume, weights
- maintain equipment records
- apply fault finding techniques
- comply with environmental requirements
- dispose of environmentally sensitive fluids and materials

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to carry out lifting using multiple cranes:

- Australian standards related to cranes/lifting
- site and equipment safety requirements
- crane equipment characteristics, technical capabilities and limitations
- multiple lift plans and planning
- multiple lifting operational procedures
- basic rigging and slinging requirements
- hand and whistle signals
- site environmental requirements and constraints related to crane operations
- hazardous chemicals
- emergency procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to operate a vehicle loading crane:

- apply legislative, organisation and site requirements and procedures for operating a vehicle loading crane
- apply vehicle loading crane operational safety requirements
- access and interpret technical information relevant to the operation and maintenance of a vehicle loading crane
- calculate volume weights
- maintain equipment records
- manage hand tools
- diagnose problems associated with a vehicle loading crane
- apply environmental constraints and procedures
- dispose of environmentally sensitive fluids and materials

## Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to operate a vehicle loading crane:

- no-go areas in the vicinity of vehicle loading cranes
- never work under crane booms
- crane hook location and movement
- Australian standards related to loading cranes and lifting
- site and equipment safety requirements
- vehicle equipment characteristics, technical capabilities and limitations associated with loading cranes
- vehicle loading crane and other relevant operational procedures
- vehicle loading crane and other relevant maintenance systems and procedures
- basic geological and survey data knowledge relating to loading cranes
- basic rigging and slinging requirements
- hand and whistle signals related to loading crane operations
- site environmental requirements and constraints
- Hazchem relevant to loading cranes
- quality requirements relating to loading crane operations
- loading crane related plant, tools and equipment types, characteristics, uses and
- limitations
- crane preparation and operational techniques
- processes for the calculation of load mass requirements
- materials safety data sheet
- plans, drawings and specifications
- safe handling and storage procedures
- relevant acts, regulations and code of practice
- JSAs/safe work method statements
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to load and unload plant:

- apply legislative, organisation and site requirements and procedures for loading and unloading plant
- apply operational safety requirements
- safely drive mobile plant
- access interpret and apply technical information
- calculate volume, weights
- maintain equipment records
- apply fault finding techniques
- comply with environmental requirements
- dispose of environmentally sensitive fluids and materials

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to load and unload plant:

- site and equipment safety requirements
- understanding of required hand signals
- techniques and processes for preparing plant for transportation
- basic motion and restraint theory related to heavy plant on floats or trailers
- basic centre of gravity and balance theory related to heavy plant on floats or trailers
- types, operation, uses and imitations of load securing equipment
- site isolation and traffic control responsibilities and authorities
- materials safety data sheet
- levelling techniques
- JSA’s/safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Compliance documentation may include:

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- graphical instructions, signage, work schedules/plans/specifications, load tables, tie-down instructions and charts and materials safety data sheet (MSDS)
- safe work procedures related to the loading and unloading of plant items from floats or trailers
- regulatory/legislative requirements pertaining to the loading and unloading of plant items from floats or trailers
- quality requirements including those relating to dimensions, tolerances, standards of work and material standards as detailed in the project drawings, specifications and project documentation to meet client satisfaction
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Safety requirements may include:

- State or Territory legislation and regulations, organisational safety policies and procedures, and project safety plan. This may include protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- personal protective equipment prescribed under legislation, regulation and workplace policies and practices
- safe operating procedures that include but not be limited to recognising and preventing hazards associated with underground and overhead services, other machines, securing
devices under strain, centre of gravity and balance requirements, personnel, restricted access barriers, traffic control, working at heights, working in proximity to others, worksite visitors and the public

- safe parking practices that include but not be limited to ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement

- emergency procedures that include but may not be limited to emergency shutdown and stopping, extinguishing fires, organisational First Aid requirements and evacuation

| The float or trailer may include: | • of generic construction or purpose designed for a particular item or range of plant  
• normally have self loading aids although some may require an established drive on/off ramp |
| Plant may include: | • loaded and unloaded may be wheeled or tracked |

**Unit Sector(s)**

RIIHAN309A Conduct telescopic materials handler operations

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting telescopic materials handler operations in the resources and infrastructure industries. It includes planning and preparing; conducting machine pre-operational checks; operating the telescopic materials handler; attaching, securing, lifting, carrying and placing materials; selecting, removing and fitting attachments; relocating the telescopic materials handler; carrying out machine operator maintenance; and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to conduct telescopic materials handler operations:

- apply legislative, organisation and site requirements and procedures for conducting telescopic materials handler operations
- apply operational safety requirements
- access interpret and apply technical information
- calculate volume, weights
- maintain equipment records
- apply fault finding techniques
- comply with environmental requirements
- dispose of environmentally sensitive fluids and materials

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to conduct telescopic materials handler operations:

- telescopic materials handler types, characteristics, technical capabilities and limitations
- site and equipment safety requirements
- techniques for calculating safe working loads
- telescopic materials handler and attachment operating techniques related to essential tasks
- processes for interpreting drawings and sketches
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheet and materials handling methods
- project quality requirements
- methods of changing machine attachments
- safe operating techniques in all terrain
- basic earthworks calculations
- levelling techniques
- JSA's/safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Compliance documentation may include:

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- environmental requirements including those outlined in organisational/project environmental management plan, waste management, water quality protection, noise, vibration, dust and clean-up management
- quality requirements including dimensions, tolerances, standards of work and material standards as detailed in the project drawings, specifications and project documentation to meet client satisfaction
- graphical instructions, signage, work schedules/plans/specifications, work bulletins, charts and hand drawings, memos, maps, materials safety data sheet (MSDS) and diagrams or sketches
- safe work procedures related to the operation of telescopic materials handlers on construction sites
- regulatory/legislative requirements pertaining to telescopic materials handler operations and the environment
- instructions issued by authorised organisational or external personnel
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Safety requirements may include:

- State or Territory legislation and regulations, organisational safety policies and procedures, and project safety plan. This may include protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment,
hazard control and hazardous materials and substances
- personal protective equipment, which is to include that prescribed under legislation, regulation and workplace policies and practices
- safe operating procedures, which are to include but not be limited to recognising and preventing hazards associated with underground and overhead services, other machines, personnel, restricted access barriers, traffic control, working at heights, working in proximity to others, worksite visitors and the public
- emergency procedures include but may not be limited to emergency shutdown and stopping, extinguishing fires, organisational First Aid requirements and evacuation

| Tools and equipment may include: | tools and equipment are to include hand tools, lifting equipment including chains and slings and maintenance equipment relevant to the telescopic materials handler |
| Attachments may include: | various types of buckets, various types of material handling arms (jibs), various types of forklift attachments and carriages and lifting hooks |
| Hazards may include: | but not be limited to uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials |
| Telescopic materials handler may include: | (sometimes referred to as a 'telehandler') is a self-propelled wheeled machine with a hydraulically operated telescopic boom assembly. It is a versatile machine due to its manoeuvring capabilities, reach height and the varying types of attachments that may be fitted generally via the integral quick coupler. On some equipment there may also be outriggers fitted
- tasks are to include lifting and carrying materials and may include forklift activities and working with front bucket attachments |
| Communication may include: | communications are to include but not be limited to verbal instructions and fault reporting and may include two way radio, hand signals, mobile phone, site specific instructions,
written instructions or instructions related to job/task
- on site meeting processes may include notification/scheduling (time, place, purpose), task discussions and local coordination of procedural and operational issues

| Safe working load requirements may include: | equipment load charts are provided for each attachment fitted to telescopic materials handlers. For each attachment utilised correct understanding and use of the applicable load chart is mandatory |
| Safely parked includes: | ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement |
| Operator maintenance may include: | cleaning, authorised servicing and the monitoring, recording and reporting of faults. It may also include the conduct of authorised minor replacements and the provision of assistance to maintenance personnel during maintenance and repair activities |

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Receive, interpret and clarify shift changeover details  
1.3. Check *indicators* and perform *pre-start checks* on *equipment and attachments*  
1.4. Identify, address and report *potential risks and hazards*  
1.5. Carry out start-up procedures  
1.6. Communicate with other equipment operators and personnel using approved communication methods  
1.7. Identify, address and report *environmental issues*  
1.8. Scale loose material and make site safe  
1.9. Use approved *dust suppression and extraction methods*  
1.10. Ensure area is well ventilated before entry into work area |
| 2. Lift and shift load | 2.1. Determine rigging and slinging requirements after assessing site and load conditions  
2.2. Determine lifting technique according to the nature of the load being moved and the required location  
2.3. Operate equipment safely within work environment and equipment limitations whilst observing *safe driving conventions*  
2.4. Monitor and manage equipment performance using appropriate indicators to aid efficient operations  
2.5. Assess *ground conditions* and position equipment to maximise efficiency, ensuring stability of crane and safety of other equipment and personnel  
2.6. Complete all required documentation clearly, concisely and on time  
2.7. Pass on end of shift information to oncoming shift |
| 3. Carry out operator | 3.1. Carry out *shutdown procedures* |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to conduct crane operations underground:

- apply legislative, organisation and site requirements and procedures for conducting crane operations underground
- perform dogging techniques
- perform driving techniques
- operate, maintain and clean equipment
- interpret ground conditions
- perform lifting techniques
- monitor loads
- use hand and power tools
- towing
- refuel vehicle

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to conduct crane operations underground:

- towing methods
- refuelling vehicle
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• knowledge of the requirements, procedures and instructions for conducting crane operations underground</td>

<td></td>
</tr>
</tbody>
</table>

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment should sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the conduct of crane operations underground

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Load Handling
RIIHAN401A Organise and monitor wharf/terminal operations

Modification History
Not applicable.

Unit Descriptor
This unit covers organising and monitoring wharf/terminal operations in the resources and infrastructure industry. It includes organising equipment, machinery and personnel; identifying, assessing and managing potential risks; monitoring work performance and progress; monitoring status of pending work; solving problems and making decisions; completing the shift and preparing for the next shift. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

---
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Organise equipment, machinery and personnel | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Organise equipment, machinery and personnel to facilitate the safe and efficient loading and unloading of the ship  
1.3. Maintain liaison with supervisors to ensure the availability of adequate resources |
| 2. Identify, assess and manage potential risks | 2.1. Identify, address and report potential risks and hazards  
2.2. Remove potential risks to safe and efficient operations from the work area or make other arrangements to ensure conditions for safe work  
2.3. Advise supervisors of potential risks and maintain liaison until the risk has been removed |
| 3. Monitor work performance and progress | 3.1. Monitor work performance and progress to ensure work is performed in accordance with established guidelines and procedures and that safe work practices are maintained  
3.2. Monitor and refine methods and procedures of work in consultation with supervisors and operational personnel  
3.3. Monitor work performance rates with delays minimised to ensure work program objectives are met  
3.4. Monitor work practices to ensure compliance  
3.5. Monitor environmental conditions to ensure safe working conditions are maintained |
| 4. Monitor status of pending work | 4.1. Monitor the status of pending work, in order of priorities, taking into account the needs of the ship and the wharf/terminal |
| 5. Solve problems and make decisions | 5.1. Solve problems and make decisions to ensure optimum efficiency of operations  
5.2. Resolve complaints and grievances where possible, at the point of work |
<p>| 6. Complete shift and prepare for next shift | 6.1. Complete shift ensuring that a report summarising the shift is compiled and the |</p>

</tbody>
</table>
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to organise and monitor wharf/terminal operations:

- apply legislative, organisation and site requirements and procedures for organising and monitoring wharf/terminal operations
- establish plans
- describe consequences
- complete tasks
- identify improvements
- apply safety precautions relevant to the task
- assess operational capability of equipment used and work processes selected
- take account of work environment when planning and coordinating work
- use leadership skills to ensure a safe and efficient work area is maintained

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to organise and monitor wharf/terminal operations:

- site layout
- focus of operation of work systems, equipment, management and site operating systems
- impact of job on enterprise and individual performance
- application of relevant industrial requirements
- relevant bond, quarantine or other legislative requirements
- identification and correct use of equipment, processes and procedures used within context of the job
- modifying activities dependent on differing workplace contexts, risk situations and environments
- estimation of size, shape and special requirements of loads
- identification of container and goods coding, IMDG markings and, where applicable, emergency information panels
- identification of protective clothing and safety precautions appropriate to the task
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Critical aspects for assessment and evidence required to demonstrate competency in this unit</strong></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for organising and monitoring wharf/terminal operations</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of organising and monitoring wharf/terminal operations</td>
</tr>
<tr>
<td></td>
<td>• working with others to organise and monitor wharf/terminal operations</td>
</tr>
<tr>
<td></td>
<td>• evidence of the consistent successful organising and monitoring wharf/terminal operations</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
</tr>
<tr>
<td></td>
<td>• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
</tr>
<tr>
<td></td>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
</tr>
<tr>
<td></td>
<td>• Customisation of assessment and delivery</td>
</tr>
</tbody>
</table>
environment should sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to organise and monitor wharf/terminal operations
  - provision of clear and timely instruction and supervision by the individual or those involved in the conduct of organising and monitoring wharf/terminal operations

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RIIHAN311A Conduct operations with integrated tool carrier

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of integrated tool carrier operations in the resources and infrastructure industries. It includes planning and preparing for work; lifting and moving loads; selecting, removing and fitting attachments; and carrying out post-operational procedures. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

</tbody>
</table>

### 3. Complete operations

3.1. Safely move integrated tool carrier between worksites, observing relevant codes and traffic management requirements

3.2. Prepare integrated tool carrier for relocation in accordance with the manufacturer's specifications

3.3. Safely park integrated tool carrier and prepare for maintenance and shutdown in accordance with manufacturer's manual and organisational requirements

3.4. Inspect integrated tool carrier for faults in accordance with manufacturer's specifications and/or organisational requirements

### 4. Select, remove and fit attachments

4.1. Select attachment for the task

4.2. Remove attachment, fit and test

4.3. Use attachment in accordance with manufacturer's recommendations and design limits

4.4. Remove and clean attachments and store in designated location

### 5. Carry out post-operational procedures

5.1. Inspect, fault find and report faults

5.2. Carry out routine *operator servicing, maintenance and housekeeping tasks*

5.3. Maintain and process *records and reports*

5.4. Carry out regular programmed maintenance in accordance with manufacturer's and/or organisational requirements
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to conduct integrated tool carrier operations:

- apply legislative, organisation and site requirements and procedures
- interpret ground conditions
- use hand and power tools
- employ driving techniques
- use lifting techniques/tow
- refuel vehicle

### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to operate an integrated tool carrier:

- site and equipment safety requirements
- techniques for calculating safe working loads
- materials safety data sheet and materials handling methods
- safe operating techniques in all terrain
- basic earthworks calculations
- site procedures
- geological and technical data (basic)
- equipment parking
- primary and secondary ventilation
- isolation procedures
- site safety requirements
- equipment safety requirements
- start-up and shutdown procedures
- operational procedures and checks
- equipment processes, technical capability and limitations
- lifting procedures/loading procedures
- slinging
- towing procedures
## Evidence Guide

<tbody>
<tr>
<td>• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
<td></td>
</tr>
<tr>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
<td></td>
</tr>
</tbody>
</table>
- Customisation of assessment and delivery environment should sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
- working with others to undertake and complete the integrated tool carrier operations |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Legislation may include:
- site safety and health
- site inspection
- relevant OHS
- explosives
- environment

### Safety (OHS) means:
- OHS requirements are to be in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and site or project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control, hazardous materials and substances
- personal protective equipment is to include that prescribed under legislation, regulation and workplace policies and practices
- safe operating procedures are to include the following:
  - recognising and preventing hazards associated with underground and overhead services
  - other machines
  - personnel
  - restricted access barriers
  - traffic control
  - working at heights
- working in proximity to others
- worksite visitors and the public

- safe parking practices including ensuring:
  - access ways are clear
  - equipment/machinery is away from overhangs and refueling sites, a safe distance from excavations and secured from unauthorised access or movement

- hazards and risks including
  - uneven/unstable terrain
  - trees
  - fires
  - overhead and underground services
  - bridges
  - buildings
  - excavations
  - traffic
  - embankments
  - cuttings
  - structures
  - hazardous materials

- ventilation
- dust suppression may include:
  - watering down site
  - use of water trucks
  - mobile/fixed sprays
  - screens (vent doors, vent blinds)

- ventilation bags operational emergency procedures related to this unit are:
  - emergency shutdown and stopping
  - extinguishing fires
  - organisational First Aid requirements
  - evacuation

### Tools and equipment may include:

- lifting and maintenance equipment relevant to the integrated tool carrier

### Pre-start checks may include:

- visual and audio warning devices and lights
- engine and stop engine lights (orange and red)
- fluid levels (windscreen washer tank, hydraulic oil, coolant, grease, water, engine oil, fuel transmission)
- cab (horn, lights, air conditioner)
- air filter restriction indicator
- display instrumentation and gauges (indicators, gauges, laser levels)
- computer system
- vehicle number
- danger tags
- personnel proximity
- tyres and rim condition/wheel nuts and studs
- light positioning and cleanliness
- radiator top up tank
- oil leaks (engine, transmission, hydraulic hoses, on ground) fuel leaks (engine, on ground)
- water leaks (radiator, hoses)
- no combustible material around exhaust
- damage to equipment
- portable fire extinguisher (bracket, gauge, hose, ease of access)
- fire suppression unit (pins in position in triggers)
- cab mounts
- windows (clean, emergency exit tag in place)
- engine oil to be checked before starting engine
- grease lines
- cab condition (no rags in air conditioner vent, dirt around brake and accelerator pedals, seat condition, all gear secured)

**Risks and hazards** may include:

- equipment malfunction
- unsafe ground
- adjoining pit walls
- road conditions
- rocks
- pot holes
- spillage
- decline traffic
- visibility
- unauthorised personnel
- mount dismount injuries

**Communication methods** may include:

- signage
- hand signals
- horn and/or whistles
- radio

Unit Sector(s)
Load Handling

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIHAN402A Process movement of containers and cargo

Modification History
Not applicable.

Unit Descriptor
This unit covers processing the movement of containers and cargo in the resources and infrastructure industry. It includes checking the stacking/discharge list at commencement of shift, assessing and planning container/cargo consolidation, allocating and accommodating movement between stack positions, identifying and checking containers/cargo, checking and completing documentation, issuing gate passes and checking clearances. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, at worksites within:

- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

</tr>
</tbody>
</table>
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Check stacking/discharge list at commencement of shift | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Check yard stacking/discharge lists against container/cargo documentation and operational order or work, taking into account both ship and shore operations  
1.3. Continually update stacking discharge lists to reflect the correct location of containers and cargo |
| 2. Assess and plan container/cargo consolidation | 2.1. Assess yard plans and, where appropriate, plan consolidation of container/cargo within the yard  
2.2. Prepare consolidation plans are to ensure efficient use of available yard space  
2.3. Prepare consolidation plans to ensure efficient use of operation  
2.4. Obtain final yard positions from consolidation plans and record |
| 3. Allocate and accommodate movement between stack positions | 3.1. Allocate stack positions according to the nature of the container/cargo and to facilitate yard operations  
3.2. Reassign stack positions where necessary to accommodate additional cargo |
| 4. Identify and check containers/cargo | 4.1. Identify containers/cargo and check at the point of entry to the yard and prior to stacking to ensure no damage to container or cargo, and to ensure agreement between numbers and marks on container/cargo and shipping documentation  
4.2. Follow stacking plans and facilitate efficient movement within the yard |
| 5. Check and complete documentation | 5.1. Check documentation prior to performing completion procedures ensuring compliance |
| 6. Issue gate pass and check clearances | 6.1. Issue gate pass to carrier when all documentation requirements have been completed including customs clearance  
6.2. Check documentation ensuring that all necessary signatures are on the prepared delivery sheets, confirming that container/cargo meets all requirements |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to process movement of containers and cargo:

- apply legislative, organisation and site requirements and procedures for processing the movement of containers and cargo
- establish plans/complete tasks
- identify improvements
- apply safety precautions relevant to the task
- assess operational capability of equipment used and work processes selected
- interpret organisational and statutory operating requirements

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to process the movement of containers and cargo:

- site layout stacking plans and available stacking space
- focus of operation of work systems, equipment, management and site operating systems
- impact of job on enterprise and individual performance
- application of relevant industrial requirements
- identification and correct use of equipment, processes and procedures used within context of the job
- modifying activities according to workplace contexts, risk situations and environments
- estimation of size, shape and special requirements of loads
- identification of container and goods coding, IMDG markings and, where applicable, emergency information panels
- eye-hand coordination
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>

<td>• evidence of the consistent successful processing of the movement of containers and cargo</td>
</tr>
</tbody>
</table>

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery
environment should sensitively accommodate cultural diversity.

- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to process the movement of containers and cargo
  - provision of clear and timely instruction and supervision by the individual of those involved in the processing the movement of containers and cargo

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Compliance documentation may include:

- legislation, including:
  - relevant OHS
  - workplace relations
  - workers compensation
  - relevant water and road use and license arrangements
  - relevant license, patent or copyright arrangements
  - relevant dangerous goods and air freight regulations
  - export/import/quarantine/bond requirements
  - marine orders
  - relevant environmental protection legislation
  - emergency procedures
- organisation and site requirements and procedures, including:
  - code of practice
  - issue resolution procedures
  - job procedures and work instructions
  - relevant guidelines relating to the use of machinery, equipment capability and limitations
  - quality procedures
  - security procedures
  - action taken promptly, accidents and incidents reported in accordance with statutory requirements and enterprise procedures
  - work completed systematically with attention to detail without damage to goods, equipment or personnel
  - manufacturer’s guidelines and specifications
  - Australian standards
  - Employment and workplace relations legislation
  - Equal Employment Opportunity and Disability
### Discrimination legislation

RIIIMG301A Maintain site records

Modification History
Not applicable.

Unit Descriptor
This unit covers the maintenance of site records in resources and infrastructure industries. It includes: identifying records, processing details; and reviewing and filing records.

Application of the Unit
This unit is appropriate for those working in a operational roles, at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify records         | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Obtain multiple copies of records to match job requirements  
1.3. Identify and comply with document storage, filing and handling requirements  
1.4. Check registered documents against register  
1.5. Report or replace missing registered documents according to organisation policy  
1.6. Recognise and adhere to quality assurance requirements of company operations  
1.7. Select equipment that is consistent with the task of maintaining site records, check for serviceability and rectify or report any faults |
| 2. Process details          | 2.1. Accurately and legibly record details in accordance with organisation instructions  
2.2. Record details to specified quality control procedures  
2.3. Ensure alterations to records are initialed by the responsible person  
2.4. Record signatures, dates and times as per organisation procedures  
2.5. Ensure records/entries are counter signed as per organisation procedures checked to ensure currency of information |
| 3. Review and file records  | 3.1. Ensure records are referred to for historical data  
3.2. Make records available to authorised personnel for checking purposes  
3.3. Bring trends indicated by records that affect work in progress to the attention of appropriate personnel  
3.4. Process and file records in accordance with company procedures |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to maintain site records:

- apply legislative, organisation and site requirements and procedures
- communication skills required to explain and clarify procedures, and to interview users to identify their records/information needs
- literacy skills to read and interpret nature of record content, functions and problems
- problem-solving and analysis skills to identify and manage records

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to maintain site records:

- basic records management systems and processes (both manual and computer aided)
- records filing and retrieval systems and processes
- registered document control systems
- site diary systems
- quality control administration
- environmental record requirements
- inventory control record systems
- project quality requirements
- civil construction terminology
- JSA's/Safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
|                                                                                      | • knowledge of the requirements, procedures and instructions for the maintaining of site records
|                                                                                      | • implementation of requirements, procedures and techniques for the safe, effective and efficient completion of the maintaining of site records, including: minimum of one significant civil construction project including:
|                                                                                      |   • site diary
|                                                                                      |   • materials received and dispatched
|                                                                                      |   • quality records
|                                                                                      |   • OHS records
|                                                                                      |   • environmental records
|                                                                                      |   • inventory control records
|                                                                                      | • working with others to undertake and complete the maintaining of site records that meets all of the required outcomes
|                                                                                      | • consistent timely completion of the maintaining of site records that safely, effectively and efficiently meets the required outcomes |

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
|                                                                                      | • The assessment environment should not
disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the maintaining of site records |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Records may include:

- site diaries
- materials received or dispatched
- incidents on site which may be subject to investigation or query at a later date
- quality management records
- OHS records
- environmental records
- inventory control records
- records required by regulation or legislation
- drawings, which may include:
  - site plans
  - locality plans
  - cross sectional plans
  - longitudinal plans
  - structural detail
  - specification providing illustrations and dimensions and project plans, drawings and specifications
  - plans and specifications, which may include:
    - detail relating to materials and quality of work
    - quality assurance
    - nominated sub-contractors
    - provision of site access/facilities
    - cost
| Document storage, filing and handling systems may include | • paper based systems  
• electronic systems |
| Registered documents are to include: | • permits  
• other regulatory requirements |
| Quality assurance requirements may include: | • dimensions  
• tolerances  
• standards of work and material standards as detailed in the project drawings, specifications and project documentation to meet client satisfaction |
| Equipment is to include: | • record filing and retrieval systems (manual and computer aided)  
• stationery |
| Information sources may include | • verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, charts and hand drawings, memos, material safety data sheets (MSDS) and diagrams or sketches  
• safe work procedures or equivalent related to maintaining site records  
• regulatory/legislative requirements pertaining to maintaining site records  
• manufacturers’ specifications and instructions  
• organisation work specifications and requirements  
• instructions issued by authorised organisational or external personnel  
• relevant Australian Standards |
| Historical data may be referred to for comparing: | • quantities  
• costs  
• equipment usage  
• timeframes  
• material types |
| Trends indicated by records may include | • time spent in activities  
• equipment requirements  
• material usage |
Unit Sector(s)
Information Management

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIILAT401A Provide leadership in the supervision of Indigenous employees

Modification History
Not applicable.

Unit Descriptor
This unit describes the performance outcomes, skills and knowledge required to provide supervision, support and leadership to work teams which include Indigenous Australian employees. This unit should be regarded as an addition to general team supervision and leadership in its focus on awareness and knowledge of Indigenous culture and the application of skills to effectively lead and support Indigenous and diverse work teams. This unit may apply to supervisors who work in partnership with a dedicated workplace mentor.

Application of the Unit
This unit is appropriate for those working in a supervisory role in any industry sector and may be contextualised for use in a range of culturally diverse workplace settings.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

| 1. Identify the support requirements for Indigenous employees | 1.1. Determine the scope and boundaries of the *supervisory role* in line with organisation policies, procedures and objectives in the employment and supervision of Indigenous employees  
1.2. Identify the strengths and *support* requirements of Indigenous employees  
1.3. Establish realistic *expectations and conditions* with *stakeholders* through negotiation  
1.4. Discuss the benefits of mentoring with stakeholders and establish agreement on *relationships and conditions*  
1.5. Identify and explore cultural factors, obligations and potential conflict using *appropriate networks* to effectively support and lead work group  
1.6. Apply a framework for *performance expectations* consistent with the organisation's objectives, values and practices |
| 2. Facilitate support for Indigenous employees | 2.1. Use a range of strategies to support, report on and promote the development of Indigenous team members in the work role and environment  
2.2. Develop work practices that acknowledge diversity and encourage team members to develop empathy, respect, and collaboration  
2.3. Provide encouragement and advice to support *decision making* which is consistent with personal and workplace goals and career development  
2.4. Use appropriate networks to provide assistance to team members  
2.5. Provide information, guidance and constructive feedback incorporating reflective practice to enhance engagement in the workplace  
2.6. Address *cultural differences*, and personal and workplace *barriers* consistent with maintaining positive support and |
| 3. Monitor individual and team performance and relationships | 3.1. Provide planning guidance and support in a form and style to suit team member and workplace requirements  
3.2. Provide regular and consistent feedback on progress towards achieving agreed expectations and personal and workplace goals  
3.3. Recognise and negotiate changes in behaviour, expectations and outcomes with appropriate stakeholders  
3.4. Recognise potential and experienced tension and conflict and seek advice and support to provide resolutions  
3.5. Consult with team, other supervisors, mentors, and management to ensure corporate, workplace, team and individual goals are achieved |
|---|---|
| 4. Provide advice on the effectiveness of support strategies for Indigenous team members | 4.1. Identify and analyse the benefits of culturally effective leadership in relation to work practices, objectives and workplace outcomes  
4.2. Identify and recommend strategies to achieve individual and organisational objectives  
4.3. Identify and report on the benefits and barriers in policies and practices for supporting Indigenous employees and make recommendations for improving individual and organisational outcomes |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to demonstrate leadership in the supervision of Indigenous employees:

- **Communication:**
  - use a range of strategies including active listening, questioning, determining comprehension, giving and receiving feedback
  - use direct, indirect and searching questions
  - use visual representations and plain English strategies to overcome literacy and numeracy issues
  - use stories and case studies to increase understanding and empathy
  - adapt to different communication styles, tone of voice and language code switching (where different languages are mixed)
  - support team members in developing their communication skills
  - interpret and use body language and culturally determined gestures

- **Teamwork:**
  - establish the role of supervision and leadership in a culturally diverse team
  - select appropriate strategies to influence and motivate individual performance and workplace outcomes
  - negotiate development plans with individual team members to promote team and autonomous work practices
  - seek advice from experienced team members and cultural experts
  - build relationships including building trust, inclusiveness and maintaining confidence in team members
  - respond to cultural diversity in the community and workplace

- **Problem solving:**
  - accommodate, address or resolve differences in areas of complex and sensitive cultural requirements and expectations
  - demonstrate cross cultural negotiation and conflict resolution
  - support team members to address and resolve their issues and problems

- **Initiative and enterprise:**
  - provide flexible and adaptable role modelling and mentoring
  - advocate with colleagues and management
  - interpret and respond to the cultural basis for different behaviour and responses

- **Planning and organising:**
  - plan performance feedback and development opportunities
• select the right time and place for personal feedback
• network, consult and facilitate with relevant stakeholders
• network, consult and facilitate in different cultural contexts
• monitor, review and record management plans
• Self management:
  • develop cultural empathy and respect
  • develop self awareness and reflection on your own personal cultural identity and values
• Learning:
  • confirm workplace policies and practices
  • reflect on supervision, role model and mentoring practice
  • assist and coach others
  • meet the training needs of team members using appropriate training strategies, depending on the skill needs of individuals
  • increase cultural knowledge and experiences
  • take advice from experts inside and outside the workplace
• Technology:
  • maintain current information on the impact of new technologies on team members
  • use appropriate technology to enhance the development of team members

**Required knowledge**

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to demonstrate leadership in the supervision of Indigenous employees:

• organisation's policies and procedures relevant to supervising Indigenous employees
• relevant commonwealth and state legislation
• historic and contemporary local Indigenous issues including:
  • participation in family and community rituals and celebrations
  • responsibilities for wider family members
  • concepts of time
  • traditional authority and power
  • concepts of ownership and property
  • relationship to land and traditional ownership
• cultural climate and politics of individuals and teams
• concepts of cultural identity including:
  • home and land
  • welcome to country
  • kin relationships
• language
• skin group
• position and status in family and community
• loss of identity
• grief and sorry business
• impact of stolen generation
• impact of colonisation including:
  • loss of cultural identity
  • forced removal of children
  • forced resettlement
  • mission values
  • urbanisation
  • dispossession
  • denigration
  • cultural values including:
  • shared property
  • child raising
  • taboos
  • obligations
• key stakeholders and agents in the organisation, the community and Indigenous networks
• use and role of language in cross-cultural communication
• issues of power and influence in cultural differences
• customs, language and environment of the dominant and traditional cultures
• conditions and requirements of employment contracts and agreements
• training plans and responsibilities
• mentoring methods and strategies
• acceptable behaviour in supervision including ethical practices, code of conduct, boundaries and confidentiality
• strategies and options for skills, learning support and career development
• team relationships and dynamics
• impact of values on culture and relationships
• awareness of the applications of workplace technology and its relevance to the work team
• occupational health and safety issues related to supervision responsibilities
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the ability to:</th>
</tr>
</thead>
</table>
|  | • prepare personal development plans in partnership with Indigenous team members that reflect both individual and organisational goals and performance outcomes  
• monitor and review the performance and development of Indigenous team members through performance feedback and addressing barriers to progress  
• identify and respond to cultural needs, obligations, identity and values  
• address potential and experienced conflict in the workplace  
• identify community networks, and liaise with relevant workplace networks to provide support and resources for Indigenous team members  
• report and recommend on effective support and outcomes for Indigenous team members |

#### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires resources that reflect a culturally diverse environment that includes Indigenous employees. Selection and use of resources for particular worksites may differ due to the site circumstances and local Indigenous issues.
The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.

Customisation of assessment and delivery environment should sensitively accommodate cultural diversity.

Aboriginal people and other people from a non English speaking background may have second language issues.

Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

It is recommended that this unit be assessed with advice from appropriate Indigenous cultural advisers who may be included on an assessment panel.

Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical applications using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge of specific cultural issues and strategies in undertaking the support and supervision of individual Indigenous employees and diverse work teams. This may include case studies to demonstrate the candidate's ability to develop strategies for effectively supporting and supervising diverse groups in particular industry and cultural contexts.

- observed, documented and/or first hand testimonial evidence of the candidate's:
  
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  
  - identification of the relevant information and scope of the work required to meet the required outcomes
  
  - identification of viable options and the
<table>
<thead>
<tr>
<th><strong>Guidance information for assessment</strong></th>
<th>Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.</th>
</tr>
</thead>
</table>
| **selection of individual and group process management that best meet the required outcomes** | • consistent achievement of required outcomes  
• first hand testimonial evidence of the candidate's:  
• working with others to undertake and complete the support and supervision of individual Indigenous employees and diverse work teams  
• provision of clear and timely required support and advice on the management of Indigenous employees and diverse work teams |
### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Tension and conflict
Tension and conflict may include:
- perception of nepotism and favouritism
- racism
- clash of values
- inconsistent behaviour and responses
- failure of communication
- conflicting expectations
- false or misleading assumptions
- stereotyping
- concepts of identity
- concepts of belonging and group behaviour

### Work practices, objectives and workplace outcomes
Work practices, objectives and workplace outcomes may include:
- work routines and timeframes
- management and supervision
- roles and responsibilities
- compliance with policies and procedures
- relationship with authority
- work effectiveness and behaviour
- levels of literacy and numeracy
- communication
- employee retention
- induction, training and skills development
- career progression

### Strategies
Strategies may include:
- taking time to develop personal relationships and trust with individual team members
- developing trust and credibility through honest and reliable communication and actions
- fair and open feedback and advice
- taking account of personal styles in learning and working
- flexible allowances made in times and rosters
- separating or combining individuals and groups
- clarification and review of objectives
- negotiated individual management plans
- recognising and acknowledging good work
| **Benefits** may include: | • increased levels of commitment, engagement and confidence  
• team harmony and mutual respect  
• increased productivity and worksite safety  
• development of workplace competence and self-confidence  
• skills recognition and job satisfaction  
• improved retention and career progression  
• developing insight into organisational culture, attitudes and expected behaviours  
• supportive environment in which strengths, weaknesses, successes and failures can be evaluated  
• improved networking opportunities and support  
• improved relations with local communities |

**Unit Sector(s)**

Leadership and Teamwork

**Competency field**

**Co-requisite units**

Not applicable.
RIILAT601A Manage group processes

Modification History
Not applicable.

Unit Descriptor
This unit covers management of group processes in the resources and infrastructure industries. It includes developing working relationship frameworks and processes, negotiating work plans with teams and individuals, and managing inter-group and intra-group processes. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a management or supervisory role at worksites within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to manage group processes:

- apply legislative, organisation and site requirements and procedures for managing group processes
- set objectives and create cultures which are ethical
- clearly identify and raise ethical concerns relevant to your worksite
- work towards the resolution of ethical dilemmas based on reasoned approaches
- actively build relationships with others
- make time available to support others
- provide feedback designed to improve people’s future performance
- show sensitivity to the needs and feelings of others
- keep others informed about plans and progress
- identify the information needs of listeners
- adopt communication styles appropriate to listeners and situations, including selecting an appropriate time and place
- reconcile and make use of a variety of perspectives when making sense of a situation
- produce ideas from experience and practice
- take decisions which are realistic for the situation
- focus on facts, problems and solutions when handling an emotional situation

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to manage group processes:

- industrial awards/enterprise agreements
- advanced negotiation techniques
- human resource management
- strategic planning
- resource quantification
- organisational change and development
- OHS
- statutory and site rules, policies, procedures and regulations
- assertive techniques
- risk management processes and techniques
• action planning methods
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for managing group processes</td>
</tr>
<tr>
<td></td>
<td>• implementation of procedures and techniques for the safe, effective and efficient management of group processes</td>
</tr>
<tr>
<td></td>
<td>• the identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• the identification of viable options and the selection of group process management that best meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• working with other to undertake and complete the management of group processes</td>
</tr>
<tr>
<td></td>
<td>• consistent successful management of group processes</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example,
<table>
<thead>
<tr>
<th>Method of assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical applications using more than one of the following assessment methods:</td>
</tr>
<tr>
<td>• written and/or oral assessment of the candidate's required knowledge in undertaking the management of group processes</td>
</tr>
<tr>
<td>• observed, documented and/or first hand testimonial evidence of the candidate's:</td>
</tr>

RIIMCO201A Conduct spreader operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of spreader operations in the coal industry. It includes planning and preparing for operations, operating the spreader, relocating the spreader, and carrying out operator maintenance. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an assistant role at worksites within:

- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for operations | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Access, interpret and apply geological and survey data required to complete the allocated work |
| 2. Operate spreader | 2.1. Coordinate activities with others at the site prior to commencement of, and during, the work activity  
2.2. Carry out pre-start, start-up, park-up and shutdown procedures  
2.3. Operate spreader controls to place burden  
2.4. Act or report on monitoring systems and alarms  
2.5. Recognise and response to hazardous and emergency situations  
2.6. Complete work in accordance with the agreed plan and outcomes and within the operating capacities of the allocated equipment |
| 3. Relocate spreader | 3.1. Receive and confirm route and location plan, if necessary by site inspection  
3.2. Complete ground preparation  
3.3. Carry out cable location and handling  
3.4. Coordinate issues, including support equipment and personnel |
| 4. Carry out operator maintenance | 4.1. Carry out spreader inspections and fault-finding  
4.2. Carry out routine operational servicing, lubrication and housekeeping tasks  
4.3. Carry out minor maintenance  
4.4. Provide operator support during preparation for, and conduct of, major maintenance tasks  
4.5. Process records |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct spreader operations:

- apply legislative, organisation and site requirements and procedures for conducting spreader operations
- apply environment safety requirements
- access, interpret and apply technical information
- apply hand-eye coordination
- work at heights
- apply diagnostic techniques
- use relevant hand tools
- apply environmental constraints in spreader operations
- maintain equipment records
- dispose of environmentally sensitive fluids and materials
- apply chemical and fuel safety measures

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct spreader operations:

- site and equipment safety procedures
- site operational procedures
- spreader equipment characteristics, technical capabilities and limitations
- spreader operational procedures
- site environmental requirements and constraints related to spreader operations
- hazard identification and response procedures
- spreader maintenance systems and procedures
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for conducting spreader operations</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of spreader operations</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the spreader operations in a way that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of spreader operations that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery
environment to sensitively accommodate cultural diversity.

- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the spreader operations

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct control centre operations:

- apply legislative, organisation and site requirements and procedures for the conduct of control centre operations
- apply legislative, organisation and site requirements and procedures for conduct of control centre operations
- apply emergency, disaster, safety and security requirements
- access, interpret and apply technical information to production plans
- maintain records
- apply hand-eye coordination
- apply diagnostic techniques and resolve operational problems
- comply with environmental requirements
- use basic keyboard skills

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct control centre operations:

- legislative and regulatory requirements relating to this competency
- site and equipment permit and access procedures
- state and mine emergency and disaster procedures and safety requirements, including fire and flood
- site plant and systems configuration, alternative configurations, capacities and limitations
- environmental compliance requirements
- control centre monitoring and communication systems
- personnel/shift systems
- maintenance and contractor procedures
- mine geological conditions and survey data and associated operating precautions
# Evidence Guide

|   | • implementation of requirements, procedures and techniques for the safe, effective and efficient completion of control centre operations  
|   | • working with others to undertake and complete the control centre operations in a way that meets all of the required outcomes  
|   | • consistent timely completion of control centre operations that safely, effectively and efficiently meets the required outcomes |

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.

- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.

- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those
### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the control centre operations

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisational and site requirements and procedures |
|                                             | manufacturer's guidelines and specifications |
|                                             | Australian standards |
|                                             | Employment and workplace relations legislation |
|                                             | Equal Employment Opportunity and Disability Discrimination legislation |

| Information may be transmitted by the following means: | 2-way radio |
|                                                          | telephone |
|                                                          | PA |
|                                                          | verbal |
|                                                          | CB |
|                                                          | written |
|                                                          | computer monitor |
|                                                          | printouts |

| Operations may be conducted in all weather conditions, including extreme conditions by day or night and may include: | hot and dusty |
|                                                                 | heavy rain/flood |
|                                                                 | fog |
|                                                                 | high wind |

| Shift requirements may include: | operating plant identified |
|                                 | outages and breakdowns |
|                                 | maintaining schedules |
|                                 | digging tonnage requirements |
|                                 | personal requirements |
|                                 | conditions of plant and weather |

<p>| The previous shift report may include: | production results, including input and output tonnages and coal quality/blending requirements |
|                                        | breakdown details |
|                                        | availability and location of coal by type, seam, blend |
|                                        | system and plant defects, including faults of plant equipment |
|                                        | maintenance and outage coordination |</p>

Coordination with other sections may include:
- power station operations
- fire services
- police and emergency services
- planning
- maintenance

Environmental and ground conditions may include:
- stress relief
- cracking
- fire holes
- aquifers

Faults may be identified by the following:
- alarms
- indicator lights
- amp gauges
- computer monitor
- camera monitor
- visual inspection

Adjustments may be made directly using automatic or manual controls, or remotely through third parties.

Factors governing coal quality may include:
- coal type
- moisture
- ash content

Plant identification codes may vary between mine sites.

Unit Sector(s)
Coal Mining (Open Cut)

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIMCO302A Conduct surface miner operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of surface miner operations in the coal industry. It includes planning and preparing for operations, operating the surface miner, and carrying out operator maintenance. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1. Plan and prepare for operations** | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Access, interpret and apply geological and survey data required to complete the allocated work |
| **2. Operate surface miner** | 2.1. Resolve coordination activities with others at the site prior to commencement of, and during, the work activity  
2.2. Carry out pre-start, start-up, park-up and shutdown procedures  
2.3. Conduct, control and monitor mining procedures, milling, loading and manoeuvring  
2.4. Select required loading method, drive-by or other appropriate method, and position the equipment and haulage units to meet this requirement  
2.5. Act on monitoring systems and report on alarms  
2.6. Recognise and respond to hazardous and emergency situations  
2.7. Complete work in accordance with the agreed plan and outcomes and within the operating capacities of the allocated equipment |
| **3. Carry out operator maintenance** | 3.1. Carry out surface miner inspections and fault-finding  
3.2. Carry out routine operational servicing, lubrication and housekeeping tasks  
3.3. Carry out minor maintenance  
3.4. Provide operator support during preparation for, and conduct of, major maintenance tasks  
3.5. Process records |
**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct surface miner operations:

- apply legislative, organisation and site requirements and procedures for conducting surface miner operations
- apply legislative, organisation and site requirements and procedures for conducting surface miner operations
- apply operational safety requirements
- access, interpret and apply technical information
- maintain records
- apply hand-eye coordination
- use relevant hand tools
- apply diagnostic techniques
- apply environmental constraints in surface miner operations
- dispose of environmentally sensitive fluids and materials

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct surface miner operations:

- site and equipment safety requirements
- mining systems and site procedures
- miner characteristics, technical capabilities and limitations
- surface miner operational procedures
- basic geological and survey data
- surface miner maintenance systems and procedures
- hazard identification and response procedures
- site environmental requirements and constraints related to surface miner operations
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</table>
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the surface miner operations

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer’s guidelines and specifications
- management plans
- OHS policy
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Surface miners may be:
- diesel electrical
- diesel mechanical

### Work requirements may include:
- nature and scope of work
- working conditions
- achievement targets
- site lighting arrangements
- defects on machine
- hazards and potential hazards
- coordination requirements/issues

### Specific safety requirements are to include:
- boarding and disembarking procedures
- lowering of implements
- relocating
- operational signal procedures

### Loading methods may include:
- drive-by
- single and double side
- windrow stockpiling

### Haulage units may include:
- rear dump
- belly dumps
- road trucks

### Surface miner operations are to include mining coal and roadworks and may include:
- material removal
- road profiling
- boxing out
- milling to correct mining depths and horizons
- responding to changes in depth
| Operator maintenance is: | • grade and cross fall  
• loading and manoeuvring  
• those maintenance activities established and authorised for the site |

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct auger miner operations:

- apply legislative, organisation and site requirements and procedures for conducting auger miner operations
- apply operational safety requirements
- access, interpret and apply technical information
- monitor wall stability
- apply hand-eye coordination
- apply diagnostic techniques
- use relevant hand tools
- maintain equipment records
- apply environmental constraints in auger mining operations
- dispose of environmentally sensitive fluids and materials

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct auger miner operations:

- relevant statutory requirements
- site mining systems and procedures
- site and equipment safety procedures
- auger equipment characteristics, technical capabilities and limitations
- auger mining operational procedures
- auger mining maintenance systems and procedures
- geological and survey data
- hazard identification and response procedures
- site environmental requirements and constraints related to auger mining

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conducting rail dispatch operations:

- apply legislative, organisation and site requirements and procedures for conducting rail dispatch operations
- apply operational safety requirements
- access, interpret and apply technical information
- apply communication skills (oral and written)
- use communications equipment
- calculate dispatch details
- operate loading systems
- prepare and maintain documentation and records
- comply with site/rail environmental requirements and constraints

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct rail dispatch operations:

- conditions agreed with the rail authority
- site and equipment safety requirements
- coal product quality procedures
- stockpile and dispatch management systems and procedures
- coal dispatch systems components, their characteristics, functions and limitations
- freight rail operational procedures
- freight rail/customer communication systems
- rail dispatch documentation and recording systems
- coal and rail industry environmental requirements and constraints
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

environment to sensitively accommodate cultural diversity.

- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the rail dispatch operations |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| **Relevant compliance documentation** may include: | • legislative, organisational and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
| **Dispatch requirements** may include the: | • quantity, quality and stockpile source of coal  
• train identification  
• essential timings  
• coordination requirements/issues |
| **Dispatch systems components** for inspection/test run may include: | • conveyors  
• feeders  
• hydraulics (loaders)  
• rail line  
• signals  
• samplers  
• communications equipment |
| **Documentation** may include: | • ticketing  
• report sheets  
• consignment notes  
• others agreed with the rail and port/receiving authority |
| **Safety information and procedures** may be contained in: | • legislation and regulations  
• relevant Australian standards  
• management plans  
• OHS policy  
• code of practice  
• manufacturer's instructions  
• safe working procedures (or equivalent) |
| **Coordination** with others may include: | • servicing rail authority  
• train operator  
• discharge port samplers and plant/equipment |

RIIMCP301A Monitor plant operations for coal preparation

Modification History
Not applicable.

Unit Descriptor
This unit covers the monitoring of coal preparation plant operations in the coal industry. It includes preparing for plant operations, monitoring preparation processes, and supporting coal preparation processes. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an assistant technician role at worksites within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. |
| Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for plant operations      | 1.1. Access, interpret and apply **compliance documentation** relevant to the work activity  
                                         1.2. Locate and identify by name, number and/or code and function all appropriate **process equipment and plant**  
                                         1.3. Carry out pre-start check of all equipment and provide reports to control in accordance with manufacturer and/or site procedures  
                                         1.4. Interpret and apply basic mineralogy information required to complete the **processes** in accordance with site requirements |
| 2. Monitor preparation plant processes| 2.1. Identify the limitations and capabilities of plant processes and report detail to control  
                                         2.2. **Monitor** plant **processes** and pass reports to control  
                                         2.3. **Monitor** the operation of equipment and the use of materials and pass reports to control  
                                         2.4. **Report and record** all **information** required to maintain coal preparation plant **processes** in accordance with site procedures |
| 3. Support coal preparation processes | 3.1. Note the results of continuous inspections and identify and locate all **faults** by name, number and/or code and rectify and/or report in accordance with site procedures  
                                         3.2. Complete housekeeping duties throughout the worksites  
                                         3.3. Carry out operational reporting and complete and process documents in accordance with site requirements |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to monitor coal preparation plant operations:

- apply legislative, organisation and site requirements and procedures for monitoring coal preparation plant operations
- apply operational safety requirements
- access, read, interpret and apply technical information
- identify process equipment and plant
- apply hand-eye coordination
- diagnose faults
- apply preventative control measures
- use relevant hand tools
- prepare and communicate reports
- maintain equipment records
- comply with environmental requirements
- enter basic computer data

### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to monitor coal preparation plant operations:

- site and equipment/plant safety requirements
- coal preparation processes
- manual process control techniques
- equipment/plant characteristics, technical capabilities and limitations
- equipment/plant operating procedures
- basic mineralogy related to coal quality
- basic geological and survey data
- relevant chemicals, materials and their environment effects
- Hazchem related to the work area
- site environmental requirements and constraints related to coal plant operations
- recording and reporting procedures
- impact of processes on customer quality requirements
## Evidence Guide

3.4. Provide operator support during preparation for, and conduct of, major maintenance tasks in accordance with site requirements
3.5. Process records in accordance with site requirements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following, as required to operate power trams:

- apply legislative, organisation and site requirements and procedures for operating power trams
- start, operate and shutdown equipment
- use diagnostic techniques
- conduct relevant maintenance requirements
- use hand tools
- conduct emergency shutdowns
- maintain appropriate records
- dispose of environmentally sensitive oils, fluids and materials

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be applied. This includes knowledge of the following, as required to operate power trams:

- operational safety requirements
- power tram equipment characteristics, technical capabilities and limitations
- power tram operational procedures
- location of equipment relative to working environment
- ventilation system and conditions
- power tram maintenance requirements and procedures
- recording, reporting and handover procedures
- site environmental requirements and constraints related to power trams
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Method of assessment |
| This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods: |
| - written and/or oral assessment of the candidate's required knowledge |
| - observed, documented and/or first hand testimonial evidence of the candidate's: |
| | - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes |
| | - consistent achievement of required outcomes |
| | - first hand testimonial evidence of the candidate's: |
| | - working with others to undertake and complete the power tram operations |

| Guidance information for assessment |
| Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation
- shift briefings including: nature and scope of the work, working conditions, defects of equipment, achievement targets, hazards, potential hazards, coordination requirements/issues
- handover details
- work orders

Mine environmental data may be in the form of:
- ventilation/gas data
- deputy report

Power tram may be:
- rubber tyred
- skid mounted
- tracked

Power tram may be used with:
- continuous miner/road header
- mules
- shuttle car
- ratio feeders
- mobile bootend

Operator (operational) maintenance procedures are:
- those established and authorised for the site

Unit Sector(s)
Coal Mining (Underground)
Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIMCU202A Conduct tracked vehicle/plant operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of tracked vehicle/plant operations in the coal mining industry. It includes: planning and preparing for operations, operating equipment and associated attachments, and carrying out operator maintenance. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between States, Territories, and industry sectors. Relevant information must be sourced prior to the application of the unit.

Application of the Unit
This unit is appropriate for those working in an assistant role, at worksites within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>

| 1. Plan and prepare operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, interpret and clarify/confirm *work requirements* before proceedings  
1.3. Access, interpret and apply *mine environmental data* required to complete the allocated work |
| 2. Operate equipment and associated attachments | 2.1. Coordinate activities with others at the site prior to commencement of, and during, the work activity  
2.2. Carry out pre-start, start-up, park-up, shutdown procedures in accordance with manufacturer's instructions and/or site procedures  
2.3. Use vehicle controls and systems to ensure smooth and effective operations  
2.4. Operate vehicle within equipment limitations, and gauges and systems are monitored and responded to in accordance with manufacturer's specifications and/or site requirements  
2.5. Safely load/unload personnel or materials in accordance with manufacturer's site requirements  
2.6. Safely carry out towing and pushing of equipment and plant in accordance with the manufacturer's specifications and/or site requirements  
2.7. Recognise and respond to hazardous and emergency situations in accordance with manufacturer's instructions and/or site procedures  
2.8. Perform work in accordance with the agreed plan and outcomes and within the operating capacities of the equipment |
| 3. Carry out operator maintenance | 3.1. Carry out *tracked vehicle/plant* inspections and fault finding in accordance with manufacturer's instructions and/or site requirements  
3.2. Carry out routine operational servicing, lubrication and housekeeping tasks in |

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following, as required to conduct tracked vehicle/plant operations:

- apply legislative, organisation and site requirements and procedures for conducting tracked vehicle/plant operations
- apply operational safety requirements
- access, interpret and apply technical and environmental information
- start, operate and shutdown equipment
- use diagnostic techniques
- conduct relevant maintenance requirements
- use hand tools
- conduct emergency shutdowns
- maintain appropriate records
- apply environmental constraints and procedures
- dispose of environmentally sensitive oils, fluids and materials

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be applied. This includes knowledge of the following, as required to conduct tracked vehicle/plant operations:

- operational safety requirements
- tracked vehicle/plant equipment characteristics, technical capabilities and limitations
- tracked vehicle/plant operational procedures
- location of equipment relative to working environment
- ventilation system and conditions
- tracked vehicle / plant maintenance requirements and procedures
- recording, reporting and handover procedures
- site environmental requirements and constraints related to tracked vehicle / plants
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Critical aspects for assessment and evidence required to demonstrate competency in this unit</strong></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td>- knowledge of the requirements, procedures and instructions for conducting tracked vehicle/plant operations</td>
<td></td>
</tr>
<tr>
<td>- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of tracked vehicle/plant operations</td>
<td></td>
</tr>
<tr>
<td>- working with others to undertake and complete the tracked vehicle/plant operations in a way that meets all of the required outcomes</td>
<td></td>
</tr>
<tr>
<td>- consistent timely completion of tracked vehicle/plant operations that safely, effectively and efficiently meets the required outcomes</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
</tr>
<tr>
<td>- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
</tr>
<tr>
<td>- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those</td>
</tr>
</tbody>
</table>
| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the tracked vehicle operations |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- management plans
- OHS policy
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Specific safety requirements may include:
- personnel safety and control
- load security and safety
- transport rules
- operational signals procedures

### Work requirements may be in the form of:
- shift briefings including:
  - nature and scope of the work
  - route
  - working conditions
  - achievement targets
  - defects of equipment
  - hazards and potential hazards
  - coordination requirements/issues
  - handover details
  - work orders

### Mine environmental data may be in the form of:
- ventilation/gas data
- deputy reports

### Associated attachments may include:
- drill rigs
- forks
- winches
- cranes
- jibs
- blades
Operator (operational) maintenance procedures are those established and authorised for the site.

| Tracked vehicle/plant types may be: | • electric drive  
• mechanical drive  
• pneumatic drive  
• hydraulic drive  
• single or multiple drive |
|-----------------------------------|-----------------------------------------------|
| Tracked vehicle/plant may include: | • material transport and towing equipment  
• dozers/mule  
• drill platforms  
• breaker-line supports  
• feeder-breakers  
• auxiliary fans  
• mobile bootends |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following, as required to conduct wheeled vehicle operations (non-articulated):

- apply legislative, organisation and site requirements and procedures for conducting wheeled vehicle operations (non-articulated)
- apply operational safety requirements
- access, interpret and apply technical and environmental information
- start, operate and shutdown equipment
- use diagnostic techniques
- conduct relevant maintenance requirements
- use hand tools
- conduct emergency shutdowns
- maintain appropriate records
- apply environmental constraints and procedures
- dispose of environmentally sensitive oils, fluids and materials

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct wheeled vehicle operations (non-articulated):

- operational safety requirements
- non-articulated wheeled vehicle equipment characteristics, technical capabilities and limitations
- non-articulated wheeled vehicle operational procedures
- location of equipment relative to working environment
- ventilation system and conditions
- non-articulated wheeled vehicle maintenance requirements and procedures
- recording, reporting and handover procedures
- site environmental requirements and constraints related to non-articulated wheeled vehicles

---

RIIMCU203A Conduct wheeled vehicle operations (non-articulated)
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>

</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example,
Language, literacy and numeracy demands of assessment should not be greater than those required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the wheeled vehicle operations (non-articulated)

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following, as required to conduct wheeled vehicle operations (articulated):

- apply legislative, organisation and site requirements and procedures for conducting wheeled vehicle operations (articulated)
- apply operational safety requirements
- access, interpret and apply technical and environmental information
- start, operate and shutdown equipment
- use diagnostic techniques
- conduct relevant maintenance requirements
- use hand tools
- conduct emergency shutdowns
- maintain appropriate records
- apply environmental constraints and procedures
- dispose of environmentally sensitive oils, fluids and materials

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be applied. This includes knowledge of the following, as required to conduct wheeled vehicle operations (articulated):

- operational safety requirements
- articulated wheeled vehicle equipment characteristics, technical capabilities and limitations
- articulated wheeled vehicle operational procedures
- location of equipment relative to working environment
- ventilation system and conditions
- articulated wheeled vehicle maintenance requirements and procedures
- recording, reporting and handover procedures
- site environmental requirements and constraints related to articulated wheeled vehicles
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

2.4. Record and report findings and anomalies in accordance with site specific requirements  
2.5. Recognise and respond to emergency and *hazardous situations* in accordance with manufacturer's instructions and/or site procedures |
| 3. Carry out operator maintenance | 3.1. Carry out *drilling* equipment inspections and fault finding in accordance with manufacturer's instructions and/or *site requirements*  
3.2. Carry out *drilling* equipment inspections and fault finding in accordance with manufacturer's instructions and/or *site* |
3.3. Carry out minor maintenance to manufacturer's instructions and/or site requirements

3.4. Provide operator support during preparation for, and conduct of, major maintenance tasks in accordance with site requirements

3.5. Process records in accordance with site requirements
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct rotational drilling:

- apply legislative, organisation and site requirements and procedures for the conduct of rotational drilling
- apply operational safety requirements
- read, interpret and apply technical information
- isolate and tag
- install, maintain and recover drilling equipment
- apply geological and survey data
- identify hazards and potential hazards
- read gas detection equipment
- apply emergency procedures
- identify defects and damage
- maintain records and reports
- comply with environmental requirements

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct rotational drilling:

- site operational safety procedures
- site drilling operations
- drilling equipment characteristics and limitations
- isolation and tagging procedures
- mine gases
- outburst phenomena
- ventilation principles
- geological and survey data
- down hole survey and logging
- visual inspection procedures
- site drilling equipment maintenance systems and procedures
- recording and reporting
- site environmental requirements and constraints related to drilling
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Overview of assessment</strong></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>- knowledge of the requirements, procedures and instructions for conducting rotational drilling</td>
</tr>
<tr>
<td></td>
<td>- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of rotational drilling operations</td>
</tr>
<tr>
<td></td>
<td>- working with others to undertake and complete the rotational drilling in a way that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>- consistent timely completion of rotational drilling operations that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Context of and specific resources for assessment</strong></td>
<td>- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
</tr>
<tr>
<td></td>
<td>- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
</tr>
<tr>
<td></td>
<td>- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
</tr>
</tbody>
</table>
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the rotational drilling operations

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisational and site requirements and procedures |
|                                             | manufacturer's guidelines and specifications |
|                                             | management plans |
|                                             | OHS policy |
|                                             | Australian standards |
|                                             | code of practice |
|                                             | Employment and workplace relations legislation |
|                                             | Equal Employment Opportunity and Disability Discrimination legislation |

| Work requirements may be in the form of: | shift briefings |
|                                          | handover details |
|                                          | work orders |

| Nature and scope of work includes: | sequencing of operations |
|                                    | achievement targets |
|                                    | locations and essential survey information |
|                                    | working conditions |
|                                    | geological conditions |
|                                    | hazard |
|                                    | potential hazards |
|                                    | coordination requirements/issues |

| Mine environmental, geological and survey data may be in the form of: | ventilation/gas data |
|                                                                      | deputy reports |
|                                                                      | geological hazard plan |
|                                                                      | longitudinal and cross sectional survey plans |

| Site requirements may include: | SOPs |
|                               | work instructions |

| Drilling may be for: | geological exploration |
|                     | old workings |
|                     | water |
|                     | gas |

| Rotary drilling may include: | collaring |
|                             | reaming |
- drilling
- coring
- core recovery
- rod retrieval
- standpiping
- connecting hose to suction
- monitoring suction

**Drill power** types may be:
- electric
- air
- hydraulic

**Hazardous situations** may include:
- pollution of work station by release of seam gas
- rotating parts
- ejection of material from hole
- inrush
- rod ejection

**Records** may include:
- logs
- work completed
- equipment defects and requirements

**Operator (operational) maintenance** procedures are those established and authorised for the site.

Coal Mining (Underground)

**Competency field**
Refer to Unit Sector(s).

**Co-requisite units**
Not applicable.
RIIMCU206A Install, maintain and recover gas drainage systems

Modification History
Not applicable.

Unit Descriptor
This unit covers the installation, maintenance and recovery of gas drainage systems in the coal mining industry. It includes: planning and preparing for operations, installing and recovering services, and carrying out operator maintenance. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between States, Territories, and industry sectors. Relevant information must be sourced prior to the application of the unit.

Application of the Unit
This unit is appropriate for those working in an assistant role, at worksites within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, transport and prepare *materials* and resources required for the work in accordance with the plan and relevant manufacturer and/or site requirements. |
| 2. Install and recover services | 2.1. Resolve coordination activities with others at the site prior to commencement of, and during, the work activity.  
2.2. Establish and monitor safe work environment throughout the job.  
2.3. Install services in accordance with site specific installation instructions and practices.  
2.4. Identify and mark services in accordance with site hazards.  
2.5. Inspect and test installation to ensure functionality, safety and compliance with specifications.  
2.6. Recognise and respond to hazardous and emergency situations in accordance with manufacturer’s instructions and/or site procedures.  
2.7. Recover services systematically, in accordance with authorised mine procedures and with minimal loss and damage to the recovered equipment and the site. |
| 3. Carry out operator maintenance | 3.1. Inspect and maintain services in accordance with legislative requirements and site procedures.  
3.2. Process reports on *gas* drainage maintenance requirements in accordance with legislative requirements and site procedures. |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following, as required to install, maintain and recover gas drainage systems:

- apply legislative, organisation and site requirements and procedures for installing, maintaining and recovering gas drainage systems
- apply operational safety requirements
- read, interpret and apply technical information
- install, maintain and recover equipment
- identify potential hazards
- apply equipment/manual handling techniques
- identify defects
- isolate, tag and drain
- use relevant hand tools
- comply with environmental requirements

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be applied. This includes knowledge of the following, as required to install, maintain and recover gas drainage systems:

- site operational safety procedures
- legislative and environmental requirements related to gas drainage
- site operational procedures
- gas characteristics
- gas related safety requirements and emergency procedures
- gas drainage installation, recovery and maintenance techniques
- gas drainage equipment characteristics, technical capabilities and limitations
- gas drainage operational and maintenance procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for work | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Access, interpret and apply mine environmental, geological and survey data required to complete the allocated work  
1.3. Determine, obtain and transport resources required for the work to the worksite |
| 2. Install and secure support | 2.1. Resolve coordination activities with others at the site prior to commencement of, and during, the work activity  
2.2. Carry out equipment, materials and services check in accordance with the work plan, site and legislative requirements  
2.3. Carry out pre-start, start-up, park-up and shutdown procedures on equipment/plant in accordance with manufacturer's instructions and/or site procedures  
2.4. Scale down roof and ribs prior to commencing operation  
2.5. Drill holes for rib/roof bolt installation in accordance with manufacturer's and/or site requirements  
2.6. Install support and secure in accordance with manufacturer and/or site and legislative requirements  
2.7. Identify/monitor and respond to changing geological conditions in accordance with site procedures  
2.8. Recognise and respond to hazardous and emergency situations in accordance with manufacturer's instructions and/or site procedures |
| 3. Carry out operator maintenance on equipment | 3.1. Carry out equipment inspections and fault finding in accordance with manufacturer's instructions and/or site requirements  
3.2. Carry out routine operational servicing, lubrication and housekeeping tasks in accordance with manufacturer's instructions and/or site procedures and practices  
3.3. Carry out minor maintenance to manufacturer's instructions and/or site |
3.4. Provide operator support during preparation for, and conduct of, maintenance tasks in accordance with site requirements
3.5. Process records in accordance with site requirements
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct basic strata operations:

- apply legislative, organisation and site requirements and procedures for basic strata operations
- apply operational safety requirements
- access, interpret and apply technical information
- read and interpret mine plans
- identify basic support equipment and materials
- communicate orally
- coordinate team work
- identify hazards
- operate basic support equipment
- install supports
- use relevant hand tools

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct basic strata operations:

- statutory requirements for support
- site personnel and equipment safety requirements
- support procedures/plan
- types, uses and limitations of basic strata control systems
- strata control equipment characteristics, technical capabilities and limitations
- support installation procedures
- site ventilation procedures
- strata hazard identification techniques
- basic geological and survey data
- site environmental requirements and constraints related to basic support operations
- Hazchem related to basic support operations
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for conducting basic strata operations</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of basic strata operations</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the basic strata operations in a way that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of basic strata operations that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

#### Context of and specific resources for assessment

|  | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
|  | • Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances. |
|  | • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. |
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the basic strata operations

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• management plans  
• OHS policy  
• code of practice  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
| Work requirements may be in the form of: | • shift briefings  
• handover details  
• work orders |
| Mine environmental, geological and survey data may be in the form of: | • ventilation/gas data  
• deputy reports  
• geological hazard plan  
• longitudinal and cross sectional survey plans |
| Resources required for the work may include: | • support materials  
• equipment/plant  
• power and water  
• personnel |
| Equipment may include: | • pneumatic, hydraulic and electric drill/bolting rigs  
• hand held  
• machine mounted  
• miner mounted |
| Bolts may be anchored chemically or mechanically and may be: | • point anchor  
• fully encapsulated  
• split wedge  
• shell  
• dowel  
• wood  
• synthetic |
### Install support
- setting of props
- drilling of holes and installing roof/rib bolts

### Supports
Supports used in basic strata control may include:
- roof/rib bolts
- mesh/straps/timber
- props (timber hydraulic and manual)

### Work instructions
Work instructions may include:
- nature and scope of task
- next support sequence
- achievement targets
- survey data
- geological conditions
- environmental conditions
- defects on equipment/plant
- hazards
- potential hazards
- coordination requirements/issues

### Hazards and potential hazards
Hazards and potential hazards may include:
- personal injuries
- gas accumulation
- roof, rib and floor conditions
- falls
- chemical hazards
- compressed air
- hydraulic pressure
- dust
- heat

### Operator (operational) maintenance procedures are:
- those established and authorised for the site

---

### Unit Sector(s)
Coal Mining (Underground)

### Competency field
Refer to Unit Sector(s).
Co-requisite units

Not applicable.
RIIMCU209A Conduct roadway maintenance

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting roadway maintenance in the coal mining industry. It includes: planning and preparing for maintenance, conducting roadway maintenance, finalising work procedures, and carrying out operator maintenance on equipment. Licensing, legislative, regulatory and certification requirements vary between States, Territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an assistant role, at worksites within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for maintenance | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Access, interpret and apply *mine environmental data* required to complete the allocated work  
1.3. Coordinate and transport *resources* required for the work to the worksite |
| 2. Conduct roadway maintenance | 2.1. Resolve coordination activities with others at the site prior to commencement of, and during, the work activity  
2.2. Carry out *equipment, materials* and services checks in accordance with the *work requirements* and site procedures  
2.3. Erect/post warning signals and signs prior to commencement of task in accordance with site procedures  
2.4. Apply ballast to roadways in accordance with site requirements  
2.5. Carry out roadway dust suppression in accordance with site procedures  
2.6. Divert and drain roof and floor water in accordance with site procedures  
2.7. Recognise and respond to hazardous and emergency situations in accordance with manufacturer's instructions and/or site procedures |
| 3. Finalise work procedures | 3.1. Perform work in accordance with the *work requirements* and targets and within the operating capabilities of the *equipment*  
3.2. Isolate services in accordance with site procedures  
3.3. Complete job/task reports in accordance with site requirements and hand over details |
| 4. Carry out *operator maintenance* on equipment | 4.1. Carry out *equipment* inspections and fault finding in accordance with manufacturer's instructions and/or site requirements  
4.2. Carry out routine operational servicing, lubrication and housekeeping tasks in accordance with manufacturer's instructions and/or site procedures and practices |
4.3. Carry out minor maintenance to manufacturer’s instructions and site requirements
4.4. Process records in accordance with site requirements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following, as required to conduct roadway maintenance:

- apply legislative, organisation and site requirements and procedures for roadway maintenance
- apply personnel and operational safety requirements
- access, interpret, apply and communicate technical information
- use and maintain the roadway maintenance equipment
- identify, select and apply roadway maintenance materials
- perform the maintenance tasks required at the site
- use hand tools
- comply with environmental requirements

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be applied. This includes knowledge of the following, as required to conduct roadway maintenance:

- mine personnel and operational safety procedure
- mine operational procedures, layout and plan
- road maintenance equipment capabilities, limitations and maintenance requirement
- roadway maintenance materials and their application
- roadway maintenance techniques
- mine geological conditions
- mine environmental requirements and constraints related to roadway maintenance
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the roadway maintenance

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

*relevant compliance documentation* may include:

- legislative, organisational and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- management plans
- OHS policy
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Work requirements

*work requirements* may be in the form of:

- shift briefings
- handover details
- work orders

### Work requirement details

*work requirement details* may include:

- nature and scope of the work
- achievement targets
- equipment allocation, including any defects
- locations of work
- essential survey data
- locations of service facilities
- site working conditions
- environmental conditions
- hazards and potential hazards
- next area of work and coordination requirements/issues

### Mine environmental data

*mine environmental data* may be in the form of:

- ventilation/gas data
- deputy reports
- geological hazard plan
- survey data

### Resources required for the work

*resources required for the work* may include:

- personnel
- machinery
- materials
- power
- water
**Equipment** may include:
- pumps
- pumping equipment
- signs
- barriers
- tools

**Material** may include:
- ballast
- concrete (readymix and quickset)
- timber
- salt
- flyash

**Maintenance of roadways** may include:
- grading
- contouring
- dust suppression
- ballasting holes
- cutting drains

**Machinery** may include:
- grader
- load haul dump and attachments
- ram car
- roller
- bobcat

**Operator (operational) maintenance** procedures are those established and authorised for the site.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct stonedusting operations:

- apply legislative, organisation and site requirements and procedures for stonedusting operations
- apply personnel and operational safety requirements
- access, interpret, apply and communicate technical information
- operate stonedusting equipment
- maintain stonedusting equipment
- identify and respond to changing environmental and ventilation conditions
- use hand tools
- comply with environmental requirements

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct stonedusting operations:

- mine personnel and operational safety procedures
- mine operational procedures, layout and plan
- stonedusting requirements and techniques
- stonedusting equipment capabilities, limitations and maintenance requirements
- stonedusting equipment maintenance procedures
- mine ventilation
- mine environmental requirements and constraints related to stonedusting
## Evidence Guide

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to install and maintain explosion barriers:

- apply legislative, organisation and site requirements and procedures for installing and maintaining explosion barriers
- apply personal and operational safety requirements
- access, interpret, apply and communicate technical information
- apply construction techniques
- perform barrier maintenance
- use hand tools
- comply with environmental requirements

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to install and maintain explosion barriers:

- operational safety requirements
- mine operational procedures and mine layout
- types and applications of barriers
- barrier construction processes and techniques
- barrier maintenance procedures
- mine environmental requirements and constraints related to barrier construction
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
|                                                 | • Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances. |
|                                                 | • The assessment environment should not disadvantage the participant. For example, |
language, literacy and numeracy demands of assessment should not be greater than those required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the installation and maintenance of explosion barriers

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation
- management plans
- OHS policy
- code of practice

### Work requirements may be in the form of:
- shift briefings
- handover details
- work orders

### Work requirement details may include:
- the types and specification of barriers
- locations
- essential survey data
- achievement targets
- site conditions
- equipment/plant allocation, including any defects
- hazards
- potential hazards
- coordination requirements/issues

### Mine environmental data may be in the form of:
- ventilation/gas data
- deputy reports
- geological data
- survey data

### Explosion barriers may include:
- stone dust
- water

### Machinery may include:
- load haul dump
- multipurpose vehicles
- trailer
- sled
Equipment may include:

- chains
- eye bolts
- hand tools
- jacks
- bolter drills and bits
- level
- tubs and frames
- props
- trays and purlins
- bolts

Unit Sector(s)
Coal Mining (Underground)

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIMCU212A Construct and maintain basic ventilation devices

Modification History
Not applicable.

Unit Descriptor
This unit covers the constructing and maintenance of basic ventilation devices in coal mining industries. It includes: planning and preparing for operations, constructing basic ventilation devices, and maintaining basic ventilation devices. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between States, Territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an assistant role at worksites within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Access, interpret and apply *mine environmental data* required to complete the allocated work  
1.3. Obtain, transport and prepare *materials* and resources required for the work in accordance with the plan, site requirements and Hazchem procedures |
| 2. Construct basic ventilation devices | 2.1. Resolve coordination activities with others at the site prior to commencement of, and during, the work activity  
2.2. Prepare worksite in accordance with site procedures to ensure a safe working environment  
2.3. Construct ventilation *device* in accordance with manufacturer and/or site specific requirements  
2.4. Recognise and respond to *hazardous* and emergency situations in accordance with manufacturer's instructions and/or site procedures  
2.5. Perform work in accordance with agreed plan and outcomes |
| 3. Maintain basic ventilation devices | 3.1. Carry out inspections in accordance with legislative and/or site requirements  
3.2. Obtain, transport and prepare necessary replacement *materials/equipment* required for the work in accordance with work practices  
3.3. Carry out maintenance work in accordance with legislative and/or site requirements  
3.4. Maintain records/reports in accordance with site practices |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to construct and maintain basic ventilation devices:

- apply legislative, organisation and site requirements and procedures for constructing and maintaining basic ventilation devices
- apply operational safety requirements
- access, interpret, apply and communicate technical information
- use hand and power tools
- apply construction techniques
- inspect and maintain devices, equipment and materials
- comply with environmental requirements

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to construct and maintain basic ventilation devices:

- operational safety systems related to ventilation devices
- basic statutory and site ventilation requirements
- mine operational procedures
- basic mine geology and survey information related to ventilation devices
- types and applications of ventilation and sealing systems
- ventilation device construction processes and techniques
- ventilation device equipment and material characteristics including transportation requirements
- site environmental requirements and constraints related to ventilation devices
- identify and determine response to changing environmental conditions (including spontaneous combustion)
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to conduct feeder breaker operations:

- apply legislative, organisation and site requirements and procedures for feeder breaker operations
- apply operational safety requirements
- access, interpret, apply and communicate technical information
- interpret survey and geological data
- apply hand-eye coordination
- apply diagnostic and fault finding techniques
- use hand tools
- maintain equipment records
- comply with environmental requirements
- apply cable care and safety

### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to conduct feeder breaker operations:

- site operational safety procedures
- feeder breaker characteristics, technical capabilities and limitations
- feeder breaker operational procedures
- mine geology and survey data
- feeder breaker maintenance requirements and procedures
- site environmental requirements and constraints relevant to feeder breakers
- applying cable care and safety
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for conducting feeder breaker operations
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of feeder breaker operations
- working with others to undertake and complete the feeder breaker operations in a way that meets all of the required outcomes
- consistent timely completion of feeder breaker operations that safely, effectively and efficiently meets the required outcomes

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.

- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.

- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those
<table>
<thead>
<tr>
<th>Guidance information for assessment</th>
<th>Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.</th>
</tr>
</thead>
</table>

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the feeder breaker operations

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation
- management plans
- OHS policy

### Work requirements may be in the form of:
- shift briefings
- handover details
- work orders

### Work requirement details may include:
- equipment and plant, including any defects
- cutting sequence
- achievement targets
- essential survey data
- geological conditions
- essential environmental information
- hazards
- potential hazards
- coordination requirements/issues

### Mine environmental data may be in the form of:
- ventilation/gas data
- deputy reports
- geological data
- survey data

### Feeder breaker operations may include:
- sequencing of operations to set tramming arrangements
- relocating
- aligning and levelling relative to the belt
- reconnecting of services

### Breakers may be remotely controlled and may be:
- free wheel
- skid
- track driven

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- OHS policy
- code of practice
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Work requirements** may be in the form of:

- shift briefings
- handover details
- work orders

**Mine environmental data** may be in the form of:

- ventilation/gas data
- deputy reports
- geological data
- survey data

**Brattice** methods may include:

- wide side
- narrow side
- hurdles
- wings
- screens/stoppings

**Work Requirement** details may include:

- equipment and plant, including any defects
- cutting sequence
- achievement targets
- essential survey data
- geological conditions
- essential environmental information
- hazards
- potential hazards
- coordination requirements / issues

**Types of ventilation methods** may include:

- auxiliary fan (forcing and extracting)
- venturi blower
- stoppings
Defects of equipment may include:
- brattice line
- broken earth wire
- damaged ventilation tubes
- torn brattice
- broken ventilation tube rubbers
- fan malfunction

Potential hazards may include:
- gas
- dust
- static electricity
- condition of roof, floor and rib
- water accumulation
- recirculation of ventilating air

Environmental monitoring may be for dust and gas.

Unit Sector(s)
Coal Mining (Underground)

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIMCU215A Operate longwall ancillary equipment

Modification History
Not applicable.

Unit Descriptor
This unit covers the operation of longwall ancillary equipment in the coal industry. It includes: planning and preparing for operations, operating longwall ancillary equipment, and carrying out operator maintenance. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between States, Territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an assistant role at worksites within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>

</table>
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to operate longwall ancillary equipment:

- apply legislative, organisation and site requirements and procedures for longwall ancillary equipment operations
- apply operational safety requirements
- access, interpret, apply and communicate technical information
- interpret survey and geological data
- apply diagnostic and fault finding techniques
- use hand tools
- maintain equipment records
- comply with environmental requirements

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to operate longwall ancillary equipment:

- site operational safety procedures
- longwall operational processes and procedures
- longwall ancillary equipment operational procedures
- longwall ancillary equipment and associated equipment characteristics and limitations
- mine geology and survey information
- mine ventilation systems
- longwall ancillary equipment maintenance systems and procedures
- site environmental requirements and constraints relevant to longwall ancillary equipment operations
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Critical aspects for assessment and evidence required to demonstrate competency in this unit</strong></td>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer’s guidelines and specifications
- OHS systems
- management plans
- code of practice
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Work requirements may be in the form of:
- shift briefings
- handover details
- work orders

### Work details may include:
- equipment, including defects
- roof height
- next cutting sequence
- achievement targets
- essential survey data
- geological conditions
- defects on equipment
- hazards and potential hazards
- coordination requirements/issues

### Mine environmental, geological and survey Data may be in the form of:
- ventilation/gas data
- deputy reports
- geological hazard plan
- longitudinal and cross sectional survey plans

### Emergency situations may include:
- state of ventilation
- roof and rib fall
- fire
- flood
- flash/ignition
- emergency stop procedures
- explosion

| 1. Plan and prepare for operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Resolve coordination activities with others at the site prior to commencement of, and during, the work activity  
1.3. Obtain and prepare *materials and resources* required for work in accordance with the *work requirements* and relevant manufacturer and/or site requirements |
| 2. Operate and maintain lamp cabin | 2.1. Maintain safety and *personal equipment* in accordance with site requirements and safe working practices  
2.2. Maintain *records/list/logs* in accordance with site requirements  
2.3. Lamp cabin equipment is monitored and faults are identified and responded to in accordance with site requirements  
2.4. Perform work according to target outcomes  
2.5. Dispose of hazardous and *environmentally sensitive waste products* in accordance with site procedures.  
2.6. Complete general maintenance and *housekeeping* to maintain the lamp cabin in an operational condition |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to maintain lamp cabin operations:

- apply legislative, organisation and site requirements and procedures for maintaining lamp cabin operations
- apply operational safety requirements
- access, interpret, apply and communicate technical information
- plan maintenance and servicing schedules
- dispose of environmentally sensitive materials
- communicate and negotiate with contractors / suppliers and mine employees
- maintain records
- maintain and perform repairs on equipment
- use relevant hand tools

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to maintain lamp cabin operations:

- site personal and operational safety procedures
- mine operating procedures
- lamp cabin equipment characteristics, uses and limitations
- manufacturer and site equipment maintenance systems
- site chemical substances information system
- stock control procedures related to the lamp cabin operations
- relevant legislative and enterprise records systems
- site environmental requirements and constraints related to the lamp cabin
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for maintaining lamp cabin operations
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of lamp cabin operations maintenance
- working with others to undertake and complete the lamp cabins operations maintenance in a way that meets all of the required outcomes
- consistent timely completion of lamp cabin operations maintenance that safely, effectively and efficiently meets the required outcomes

#### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those...
required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues,
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

**Work requirements** may be in the form of:

- shift briefings  
- handover details, and/or  
- work orders

**Work requirement details may include:**

- servicing and maintenance schedules  
- notices of changes to shift personnel requirements  
- notice of visitors requiring equipment  
- defect reports on equipment and coordination

**Materials and resources** may include:

- cap lamp spares  
- personal safety equipment  
- locked oil flame safety lamp  
- shotfiring apparatus

**Records/lists/logs** are those prescribed under the relevant legislation and site procedures.

**Hazardous and environmentally sensitive waste products** may include:

- test gases  
- shellite  
- battery acid  
- chemical solvents

**Housekeeping** may include:

- area clean-up  
- clearing of walkways  
- hosing down  
- securing of equipment and materials  
- disposing of waste products
**Scheduled servicing and maintenance** requirements are those contained in site procedures or similar authorisations.

<table>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct specialised strata control operations:

- apply legislative, organisation and site requirements and procedures for specialised strata control operations
- apply operational safety requirements
- access, interpret and apply technical information
- read and interpret mine plans
- identify specialised support equipment and materials
- communicate orally
- coordinate team work
- identify hazards
- operate specialised support equipment
- install specialised supports
- use relevant hand tools

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct specialised strata control operations:

- statutory requirements for support
- site personnel and equipment safety requirements
- manager's support rules/plan
- types, uses and limitations of specialised strata control systems
- equipment characteristics, technical capabilities and limitations
- support installation procedures
- site ventilation procedures
- strata hazard identification techniques
- geological and survey data
- site environmental requirements and constraints related to specialised support operations
- Hazchem related to support operations
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

1.2. Access, interpret and apply *mine environmental data* required to complete the allocated work  
1.3. Obtain, transport and prepare materials and resources required for the work in accordance with the plan, site requirements and Hazchem procedures |
| 2. Construct ventilation devices | 2.1. Resolve coordination activities with others at the site prior to commencement of, and during, the work activity  
2.2. Prepare work site in accordance with site procedures to ensure a safe working environment  
2.3. Construct ventilation *device* in accordance with manufacturer and/or site specific requirements  
2.4. Recognise and respond to *hazardous* and emergency situations in accordance with manufacturer's instructions and/or site procedures  
2.5. Perform work in accordance with agreed plan and outcomes |
| 3. Maintain ventilation devices | 3.1. Carry out inspections in accordance with legislative and/or site requirements  
3.2. Obtain, transport and prepare necessary replacement materials/equipment required for the work in accordance with work practices  
3.3. Carry out maintenance work in accordance with legislative and/or site requirements  
3.4. Maintain records/reports in accordance with site practices |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to construct and maintain ventilation devices:

- apply legislative, organisation and site requirements and procedures for constructing and maintaining ventilation
- apply operational safety requirements
- access, interpret, apply and communicate technical information
- use hand and power tools
- apply construction techniques
- identify and respond to changing environmental conditions (including spontaneous combustion)
- inspect and maintain devices, equipment and materials
- comply with environmental requirements

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which the unit may be used. This includes knowledge of the following, as required to construct and maintain ventilation:

- operational safety systems related to ventilation devices
- statutory and site ventilation requirements
- mine operational procedures
- mine geology and survey information related to ventilation devices
- types and applications of ventilation and sealing systems
- ventilation device construction processes and techniques
- ventilation device equipment and material characteristics including transportation requirements
- site environmental requirements and constraints related to ventilation devices
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- management systems and plans
- OHS policy
- code of practice
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Work requirements may be in the form of:

- shift briefings
- handover details
- work orders

### Work requirement details may include:

- nature and scope of the construction/maintenance tasks
- achievement targets
- locations of work
- essential survey data
- environmental conditions
- work site conditions
- support equipment/plant, including any defects
- coordination requirements/issues

### Mine environmental data may be in the form of:

- ventilation/gas data
- deputy reports
- geological data
- survey data
- spontaneous combustion management plan

### Construction equipment may include:

- grout pumps
- cement mixer
- compressed air drill
- borer
- hoses
- hand tools
### Devices may include:

- stoppings
- seal
- bulkheads
- balance chambers
- regulators
- overcasts
- undercasts
- materials for devices under this unit including:
  - pre-fabricated steel
  - cementitious or bricks
  - together with foam or other secondary materials as necessary

### Hazards related to goaf atmospheres may include:

- irreproducible atmospheres
- noxious atmosphere
- flammable and explosive mixtures

## Unit Sector(s)

Coal Mining (Underground)

## Competency field

Refer to Unit Sector(s).

## Co-requisite units

Not applicable.
RIIMCU303A Conduct continuous miner operations

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting continuous miner operations in the coal mining industry. It includes: planning and preparing for operations, fitting the continuous miner, cutting and loading coal, and carrying out operator maintenance. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between States, Territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role, at worksites within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct continuous miner operations:

- apply legislative, organisation and site requirements and procedures for continuous miner operations
- apply operational safety requirements
- access, interpret, apply and communicate technical information
- apply hand-eye coordination
- interpret survey and geological data
- maintain horizon
- apply diagnostic and fault finding techniques
- use hand tools
- maintain equipment records
- comply with environmental requirements
- applying cable care and safety

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct continuous miner operations:

- mine operational safety procedures
- continuous miner characteristics, technical capabilities and limitations
- continuous miner operational procedures
- mine geology and survey data
- mine and face ventilation systems
- continuous miner maintenance requirements and procedures
- site environmental requirements and constraints relevant to continuous miners
- applying cable care and safety
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th></th>
</tr>
</thead>
</table>

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for conducting continuous miner operations
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of continuous miner operations
- working with others to undertake and complete the miner operations in a way that meets all of the required outcomes
- consistent timely completion of continuous miner operations that safely, effectively and efficiently meets the required outcomes

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those
| **Method of assessment** | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the continuous miner operations |
| **Guidance information for assessment** | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- management plans
- OHS policy
- code of practice
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Work requirements may be in the form of:
- shift briefings
- handover details
- work orders

Work requirement details may include:
- equipment and plant, including any defects
- cutting sequence
- achievement targets
- essential survey data
- geological conditions
- essential environmental information
- hazards
- potential hazards
- coordination requirements/issues

Mine environmental, geological and survey data may be in the form of:
- ventilation/gas data
- deputy reports
- geological hazard plan
- survey data
- longitudinal and cross sectional survey plan

Emergency situations may include:
- roof and rib fall
- fire
- cable flash
- injury to personnel
- explosion
- outbursts
### Continuous miners may be:
- radio remote controlled
- manually operated
- single pass
- dual pass

### Hazards and potential hazards may include:
- outburst
- gas accumulation
- flash
- ignition
- loss of ventilation
- breaking into old workings
- roof and rib collapse
- water
- floor condition
- creep

### Cutting sequence information may include locations and marking of areas to be mined.

### Operator (operational) maintenance procedures are those established and authorised for the site.

### Unit Sector(s)
Coal Mining (Underground)

### Competency field
Refer to Unit Sector(s).

### Co-requisite units

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct outburst mining operations:

- apply legislative, organisation and site requirements and procedures for conducting outburst mining operations
- apply and interpret mine rescue procedures and manager's rules
- apply resuscitation
- test and interpret gases
- read/identify geological change
- operate communications system
- operate breathing apparatus
- apply rescue techniques
- access and interpret outburst management plan

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct outburst mining operations:

- site personal and operational safety procedures
- outburst mining procedures
- operation of fresh air base/emergency equipment station
- breathing equipment
- mine/rescue procedures
- initial response First Aid
- communications systems
- mine gases and testing procedures
- geological conditions
- mining methods/sequence
- outburst manning equation
- pre-drilling data
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the outburst mining operations |

| **Guidance information for assessment** | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisational and site requirements and procedures | manufacturer's guidelines and specifications |
| | management plans | OHS policy |
| | safe working procedures (or equivalents) | Australian standards |
| | Employment and workplace relations legislation | Equal Employment Opportunity and Disability Discrimination legislation |

| Work requirements may be in the form of: | shift briefings | handover details | work orders |

| Mine environmental, geological and survey data may be in the form of: | ventilation/gas data | deputy reports | geological hazard plan | survey data |

| Outburst Management Plan may include: | ventilation | prediction procedures | mining systems and procedures | site specific information | authority to mine |

| Pre-operational checks may include: | emergency equipment base | miner | shuttle car | services |

| Equipment may include: | special miner (outburst fitted) | filtered air system | compressed air breathing equipment | air supply to face workers |

| Work briefings may include: | cutting sequence | hazards | potential hazards |
- survey data
- previous shift reports/inspections
- position of fresh air base/emergency equipment station
- monitoring the environment

**Machine operations** may include:
- manual
- remote

**Monitoring of environment** may include:
- stretch marks
- cutters
- calcite bands
- coal changing colour
- mylonite
- coal softening/hardening
- dyke stringers
- cindered coal
- change in gas make/type

**Operator (operational) maintenance** procedures are those established and authorised for the site.

**Unit Sector(s)**
Coal Mining (Underground)

**Competency field**
Refer to Unit Sector(s).

**Co-requisite units**
Not applicable.
RIIMCU306A Conduct shearer operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of shearer operations in the coal industry. It includes: planning and preparing, shearing and loading coal, and conducting operator maintenance. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between States, Territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |</p>

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct shearer operations:

- apply legislative, organisation and site requirements and procedures for shearer operations
- apply operational safety requirements
- access, interpret, apply and communicate technical information
- interpret survey and geological data
- apply hand eye coordination
- apply diagnostic and fault finding techniques
- use hand tools
- maintain equipment records
- comply with environmental requirements

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct shearer operations:

- site operational safety procedures
- longwall operational processes and procedures
- shearer operational procedures
- shearer equipment characteristics and limitations
- mine geology and survey information
- mine ventilation systems
- shearer maintenance systems and procedures
- site environmental requirements and constraints relevant to the shearer
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for conducting shearer operations</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of shearer operations</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the shearer operations that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of shearer operations that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery
<table>
<thead>
<tr>

<tbody>
<tr>
<td>Method of assessment</td>
<td>This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:</td>
</tr>
<tr>
<td></td>
<td>• written and/or oral assessment of the candidate's required knowledge</td>
</tr>
<tr>
<td></td>
<td>• observed, documented and/or first hand testimonial evidence of the candidate's:</td>
</tr>
<tr>
<td></td>
<td>• implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent achievement of required outcomes</td>
</tr>
<tr>
<td></td>
<td>• first hand testimonial evidence of the candidate's:</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the shearer operations</td>
</tr>
<tr>
<td>Environment to sensitively accommodate cultural diversity.</td>
<td>• Aboriginal people and other people from a non English speaking background may have second language issues.</td>
</tr>
<tr>
<td></td>
<td>• Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.</td>
</tr>
</tbody>
</table>
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
• manufacturer's guidelines and specifications  
• management plans  
• OHS policy  
• Australian standards  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
| Work requirements may be in the form of: | • shift briefings  
• handover details  
• work orders |
| Work requirements may be in the form of: | • equipment, including any defects  
• cutting height  
• next cutting sequence  
• achievement targets  
• essential survey data  
• geological conditions  
• hazards  
• potential hazards  
• coordination requirements/issues |
| Mine environmental, geological and survey data may be in the form of: | • ventilation/gas data  
• deputy reports  
• geological hazard plan  
• survey data  
• longitudinal and cross sectional survey plans |
| Emergency situations may include: | • roof and rib fall  
• fire  
• flash/ignition  
• loss of ventilation  
• injury to personnel  
• explosion  
• inrush |
### Hazards/potential hazards may include:
- outburst  
- high pressure hoses  
- gas accumulation  
- friction ignition  
- roof  
- water  
- dust  
- windblast  
- weighting on the face  
- heat

### Coordination may include:
- support personnel and chocks  
- pantech  
- armoured face conveyors  
- breaker stage loader  
- panel belt

### Operator (operational) maintenance
**procedures are those established and authorised for the site.**

### Unit Sector(s)
Coal Mining (Underground)

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct longwall face operations:

- apply legislative, organisation and site requirements and procedures for longwall face operations
- apply operational safety requirements
- access, interpret, apply and communicate technical information
- interpret survey and geological data
- apply diagnostic and fault finding techniques
- use hand tools
- maintain equipment records
- comply with environmental requirements

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct longwall face operations:

- site operational safety procedures
- longwall operational processes and procedures
- longwall face equipment operational procedures
- longwall face equipment characteristics and limitations
- mine geology and survey information
- mine ventilation systems
- longwall face equipment maintenance systems and procedures
- site environmental requirements and constraints relevant to longwall face equipment

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to install and recover longwall equipment:

- apply legislative, organisation and site requirements and procedures for the installation and recovery of longwall equipment
- apply operational safety requirements
- access, interpret, apply and communicate technical information
- interpret survey and geological data
- apply hand-eye coordination
- apply diagnostic and fault finding techniques
- use hand tools
- maintain equipment records
- comply with environmental requirements

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to install and recover longwall equipment:

- site operational safety procedures
- longwall equipment operational processes and procedures
- longwall equipment characteristics, uses and limitations
- site geology and survey data
- site ventilation systems
- longwall equipment maintenance systems and procedures
- site environmental requirements and constraints relevant to longwall equipment installation and recovery
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</tr>
</tbody>
</table>

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

The language, literacy and numeracy demands of assessment should not be greater than those required on the job.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisational and site requirements and procedures  
| | manufacturer's guidelines and specifications  
| | management plans  
| | OHS policy  
| | Australian standards  
| | Employment and workplace relations legislation  
| | Equal Employment Opportunity and Disability Discrimination legislation |

| Work requirements may be in the form of: | shift briefings  
| | handover details  
| | work orders |

| Work requirements details may include: | equipment, including defects  
| | cutting height  
| | next cutting sequence  
| | achievement targets  
| | essential survey data  
| | geological conditions  
| | hazards  
| | potential hazards  
| | coordination requirements/issues |

| Mine environmental, geological and survey data may be in the form of: | ventilation/gas data  
| | Deputy reports  
| | geological hazard plan  
| | survey data |

| Emergency situations may include: | roof and rib fall  
| | fire  
| | flash  
| | explosion  
| | outbursts  
| | inrush |

| Longwall equipment to be installed or recovered may include: | pantech  
| | AFC |
### Hazards/potential hazards may include:
- heavy machinery
- gas accumulation
- roof-rib
- water
- dust
- diesel fumes
- high pressure hoses
- lifting
- pulling equipment
- heat

### Equipment may include:
- chock transporter
- impro
- mine dozer (electric or diesel)
- chainblocks
- winches
- roof bolters
- multipurpose vehicles
- re-reelers
- load haul dump vehicles
- E-Frame
- diesel locos

### Coordination activities may include those with:
- equipment operators
- transportation operators

### Operator (operational maintenance) procedures are those established and authorised for the site.

---

### Unit Sector(s)
Coal Mining (Underground)
Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIMCU309A Operate breaker line supports

Modification History
Not applicable.

Unit Descriptor
This unit covers the operation of breaker line supports in the coal industry. It includes planning and preparing, tramming and positioning breaker line supports, and carrying out operator maintenance. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between States, Territories, and industry sectors. Relevant information must be sourced prior to application of the unit

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, interpret and clarify/confirm *work requirements* before proceeding  
1.3. Access, interpret and apply *mine environmental, geological and survey data* required to complete the allocated work |
| 2. Tram and position breaker line supports | 2.1. Resolve *coordination activities* with others at the site prior to commencement of, and during, the work activity.  
2.2. Carry out pre-start, start-up, shutdown and isolation procedures in accordance with manufacturer's instructions and/or site procedures  
2.3. Operate *breaker line support* in accordance with manufacturer's instructions and/or site procedures  
2.4. Recognise and respond to *hazardous and emergency situations* in accordance with manufacturer's instructions and/or site procedures |
| 3. Carry out *operator maintenance* | 3.1. Carry out *breaker line support* inspections and fault finding in accordance with manufacturer's instructions and/or site requirements  
3.2. Carry out routine operational servicing, lubrication and housekeeping tasks in accordance with manufacturer's instructions and/or site procedures and practices  
3.3. Carry out minor maintenance to manufacturer's instructions and/or site requirements  
3.4. Provide operator support during preparation for, and conduct of, maintenance tasks in accordance with site requirements  
3.5. Process records in accordance with site requirements. |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to operate breaker line supports:

- apply legislative, organisation and site requirements and procedures for breaker line supports operations
- apply operational safety requirements
- access, interpret, apply and communicate technical information
- interpret survey and geological data
- apply diagnostic and fault finding techniques
- use hand tools
- maintain equipment records
- comply with environmental requirements
- apply hand-eye coordination

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to operate breaker line supports:

- site operational safety systems
- site operational procedures and support rules
- breaker line support characteristics, technical capabilities and limitations
- site geology and survey information
- site and face ventilation systems
- breaker line support maintenance requirements and procedures
- site environmental requirements and constraints related to BLS
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
|                      |   - written and/or oral assessment of the candidate's required knowledge
|                      |   - observed, documented and/or first hand testimonial evidence of the candidate's:
|                      |     - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
|                      |     - consistent achievement of required outcomes
|                      |     - first hand testimonial evidence of the candidate's:
|                      |       - working with others to undertake and complete the breaker line supports operations

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- management plans
- OHS policy
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Work requirements may be in the form of:
- shift briefings
- handover details
- work orders

### Work requirements details may include:
- machines, including any defects
- cutting sequences
- cut cycles
- essential survey data
- geological conditions
- essential environment information
- hazards
- potential hazards
- coordination requirements/issues

### Mine environmental, geological and survey data may be in the form of:
- ventilation/gas data
- deputy reports
- geological data
- survey data
- longitudinal and cross sectional survey plans

### Breaker line support operations may include:
- tramming/positioning/storing
- setting
- lowering
- radio/pendant controls
- cable handling
- shutdown procedures

### Emergency situations may
- roof/rib falls
Hazards/potential hazards may include:
- roof, rib and floor conditions
- gas accumulation
- setting
- cable damage

Operational procedures may be varied depending on the number of breaker line supports used.

Coordination activities may include those with:
- shuttle car operator
- cable handler
- tradespersons
- miner driver
- deputy

Operator (operational) maintenance procedures are those established and authorised for the site.

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct FCT operations:

- apply legislative, organisation and site requirements and procedures for FCT operations
- apply operational safety requirements
- access, interpret, apply and communicate technical information
- interpret survey and geological data
- apply diagnostic and fault finding techniques
- use hand tools
- maintain equipment records
- comply with environmental requirements
- apply hand-eye coordination

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct FCT operations:

- mine operational safety procedures
- FCT operational procedures
- FCT characteristics, technical capabilities and limitations
- site geology and survey information
- mine and face ventilation systems
- FCT maintenance requirements and procedures
- site environmental requirements and constraints related to FCT
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to monitor control processes:

- apply legislative, organisation and site requirements and procedures for monitoring control processes
- apply personal and operational safety requirements
- start, operate and close down monitoring equipment
- read and interpret technical/operational monitoring information and reports
- communicate effectively on monitoring information
- maintain records

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to monitor control processes:

- site personnel and operational safety procedures
- mining systems in use
- mine operational procedures
- monitoring systems characteristics, uses and limitations
- monitoring equipment and its operations/procedures
- mine plan and layout
- mine system schematics
- site communication procedures
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Unit Descriptor
This unit covers the conduct of special roadway operations in the coal industry. It includes planning and preparing, driving special roadways/faceline, brushing floor and roof, and carrying out operator maintenance. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between States, Territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, at worksites within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, interpret and clarify/confirm *work requirements* before proceeding  
1.3. Access, interpret and apply *mine environmental, geological and survey data* required to complete the allocated work in accordance with site procedures |
| 2. Drive special roadways/faceline | 2.1. Resolve coordination activities with others at the site prior to commencement of, and during, the work activity  
2.2. Carry out pre-start, start-up, park-up and shutdown procedures in accordance with manufacturer’s instructions and/or site procedures  
2.3. Operate *equipment* according to manufacturer’s specifications and/or site requirements  
2.4. Form *roadway/headings/face line* to sequence, maintaining line and level and other site conditions, in accordance with site requirements  
2.5. Monitor changes to geological conditions and maintain ventilation in accordance with the site requirements  
2.6. Recognise and respond to *hazardous and emergency situations* in accordance with manufacturer’s instructions and/or site procedures |
| 3. Brush floor and roof | 3.1. Observe survey marks and roof and rib support rules in accordance with site requirements  
3.2. Profile *roadways/headings* to sequence, maintaining line and level and other site conditions, in accordance with site requirements |
| 4. Carry out operator maintenance | 4.1. Carry out *equipment/plant* inspections and fault finding in accordance with manufacturer’s instructions and/or site requirements  
4.2. Carry out routine operational servicing, |
<p>| | |</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct special roadway operations:

- apply legislative, organisation and site requirements and procedures for conducting special roadway operations
- apply operational safety requirements
- access, interpret and apply technical information and plans
- predict likely changes in roadway/faceline conditions and geology
- operate plant and equipment efficiently in special and difficult conditions
- interpret and apply survey data

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct special roadway operations:

- operational safety requirements
- geological features of special conditions, including faults, dykes, intrusions and high stress zones
- mine operational procedures
- the impact of changing conditions on equipment plant and mining operations
- support techniques and their applications in special operations
- ventilation techniques for special operations
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the conduct of special roadway operations</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of special roadway operations</td>
</tr>
<tr>
<td></td>
<td>• working with others to plan, prepare and conduct special roadway operations</td>
</tr>
<tr>
<td></td>
<td>• evidence of the consistent successful special roadway operations</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery
environment to sensitively accommodate cultural diversity.

- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the special roadway operations
  - provision of clear and timely instruction and supervision by the individual of those involved in the conduct of the special roadway operations

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
• manufacturer's guidelines and specifications  
• management plans  
• OHS policy  
• code of practice  
• Australian standards  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
|---|---|
| Work requirements may be in the form of: | • shift briefings  
• handover details  
• work orders |
| Mine environmental, geological and survey data may be in the form of: | • ventilation/gas data  
• deputy reports  
• geological hazard plan  
• longitudinal and cross sectional survey plans |
| Work requirement details may include: | • nature and scope of task  
• achievement targets  
• locations  
• headings and other essential survey information  
• working and geological conditions  
• ventilation conditions  
• equipment/plant allocation, including any defects  
• other resources  
• hazards and potential hazards  
• coordination requirements/issues |
| Equipment may include: | • continuous miner  
• shuttle cars  
• drills  
• explosives |
<table>

<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for the identification and recognition of hazards | 1.1. Identify the fundamentals of spontaneous combustion  
1.2. Identify hazards related to mine gases and variations in barometric pressure  
1.3. Identify the effects of mine ventilation structures and the potential to bring about spontaneous combustion  
1.4. Identify and clarify physical spontaneous combustion indicators relevant to the work area  
1.5. Identify and clarify gaseous spontaneous combustion indicators relevant to the work area  
1.6. Identify the range of causes of spontaneous combustion hazards related to the underground coal stowage and conveyor systems |
| 2. Identify and clarify operational requirements and control measures | 2.1. Access, interpret and apply compliance documentation relevant to the work activity  
2.2. Identify methods and purposes of the mine atmosphere monitoring systems  
2.3. Identify the methods and purposes of control measures for the elimination or minimisation of spontaneous combustion risks |
| 3. Implement and contribute to spontaneous combustion management measures | 3.1. Monitor and report on the spontaneous combustion status of the local work area  
3.2. Minimise hazards associated with the stowage of coal through: inspections and monitoring; maintenance of high standards of housekeeping; timely reporting of situations requiring further actions  
3.3. Identify and report errors or omissions in spontaneous combustion procedures |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to apply spontaneous combustion management measures:

- apply legislative, organisation and site requirements and procedures for the application of spontaneous combustion management measures
- access, interpret, apply:
  - general information on spontaneous combustion
  - site/legislative requirements with respect to spontaneous combustion
  - records and reports
- briefings and handover details
- plan and organise work
- recognise and report incidents and potential hazards associated with spontaneous combustion

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to apply spontaneous combustion management measures:

- spontaneous combustion causes and hazards
- spontaneous combustion management plan requirements
- mine ventilation structures
- mine gases
- geological data
- hazard assessment procedure
- mine operation procedures
- gas monitoring systems
- spontaneous combustion indicators
- general housekeeping and reporting measures with respect to spontaneous combustion
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- management plans
- OHS policy
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Hazards resulting from spontaneous combustion may include:
- production of noxious and irrespirable gases
- fires
- explosive mixtures

### Mine gases may include seam gases or gases from other than mined seam such as:
- methane
- carbon dioxide
- hydrogen sulphide
- normal atmospheric gases
- carbon monoxide

### Ventilation structures may include:
- stoppings
- overcasts
- regulators
- preparation seals
- fire doors
- bulk heads
- goaf seals
- final seals
- pressure chambers

### Physical spontaneous combustion indicators may include:
- smoke
- haze
- sweating
- smell
- heat

### Gaseous spontaneous combustion indicators may include:
- CO make
- Graham's ratio
include increased production of carbon monoxide, hydrogen and hydrocarbons or the use of indicator ratios such as:

- other ratios as determined suitable

### Coal stowage hazards

- spillage coal
- waste products

### Mine atmosphere monitoring systems

- continuous monitoring
- portable (hand held) monitoring
- collection of bag samples
- gas chromatography
- ventilation measurements
- status monitoring, including:
  - physical indications of spontaneous combustion
  - gaseous indications of spontaneous combustion
  - changes in ventilation conditions
  - defective seals
- damage to monitoring systems / equipment

### Spontaneous combustion management plan

- mine atmosphere monitoring
- reporting requirements
- auditing
- ventilation systems and usage
- inertisation techniques
- mine plan
- action plan
- response plans
- emergency procedures
- individual group responsibilities
- training and education procedures

### Minimisation of risks

- inspections and monitoring
- maintenance of high standards of housekeeping
- timely reporting of situation requiring further actions

### Control measures for the elimination or minimisation of spontaneous combustion risks

- grouting
- digging-out
- sealing
- water infusion
- inertisation

| 3. Apply gas management system maintenance procedures | 3.1. Carry out inspections and ensure that repair and maintenance activities are conducted in accordance with the gas management plan  
3.2. Record, report and review maintenance activities in accordance with the gas management plan |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to apply and monitor the gas management plan:

- apply legislative, organisation and site requirements and procedures for applying and monitoring the gas management plan
- access, interpret and apply technical information
- access and interpret archival and historical gas information related to the mine
- interpret and apply mathematical and scientific theorems/laws related to gas management
- collect, collate evaluate and report gas data
- conduct investigations and prepare reports
- communicate effectively in the workplace
- access, evaluate and apply data from monitoring systems and equipment
- operate hand held monitoring equipment
- identify training needs
- apply risk management processes and techniques

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to apply and monitor the gas management plan:

- legislative and site requirements for ventilation, including air quality, air quantity, maximum/minimum values, control and distribution, flammable gas limits, ventilation fan, gas monitoring inspections and recording/reporting
- the methods of panel gas management and their application/limitations, including forcing and exhausting, homotropal and antitropal (and in conjunction with these, the use of goaf bleed or back return), auxiliary fans, coursed ventilation (narrow side/wide side), recirculation, machine mounted scrubber systems, ducted systems, compressed air venturis and bleeders
- the impact of mining techniques and mine and panel layout on panel gas management
- the impact of differing geological features and conditions on gas management, including faults, dykes, intrusions and strata deformities
- the impact of coal characteristics and coal seam gradients on mine gas management
- mine gases; the types and their characteristics, sources, physiological effects and methods of detection
• mine fires; the types, sources of ignition, possible impacts on gas management
• mine explosions; the types, ignition sources and possible effects on gas management
• pressure changes; causes and the impacts on gas management
• heat/humidity; the sources and factors which may impact on gas management
• mine fans; fan types, applications and limitations
• gas control devices; the types, purposes, design criteria and specifications, distribution/placement criteria and limitations
• fixed gas monitoring systems types, uses and limitations
• portable monitoring equipment, types, uses and limitations
• computer-based systems used for mine gas analysis
• the development requirements and processes of the gas management plan
• types, characteristics, purposes and responses to alarms and trigger points/levels
• ventilation surveys, the types, frequency and method for conducting, including pressure/temperature/gas
• audit and review processes and techniques
• emergency procedures and disaster plan responses/measures
• the general use and application of ventilation theory, including
  • gas laws, including Charles and Boyle
  • natural ventilation
  • Coward's Triangle
  • Graham's Ratio
  • Ellicott's Triangle
  • gas make
  • air quantity measurement
  • control device leakage
  • duct leakage
• mine and goaf ventilation systems
• the impact of water on ventilation
• site environmental monitoring requirements
• inertisation techniques
• general purpose and application of sling psychrometer, anemometer, velometer
• the general effects of velocity pressure, duct and stopping leakage
• strata geology, including coal seam gradient, moisture content, friability, the porous features of the coal seam, stresses and intrusions, and its impact on gas drainage
• gas surveys; the types, frequency and method for conducting, including pressure/quantity/temperature and gas
• impacts of intersecting holes and hole design
• in-seam drilling techniques
• the impact of differing geological features and conditions on outburst, including faults, dykes, intrusions and strata deformities
- outburst indicators
- core sampling techniques
- training systems
- emergency response and evacuation planning processes and techniques
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

**Changes to mine atmosphere conditions** may include those resulting from:

- seam thickness
- multiple and rider seams
- seam dip
- depth of cover
- cleats
- friability

**Gas drainage management plan** may include procedures for:

- gas drainage drilling program
- gas or geological anomaly detection
- mine atmosphere monitoring
- stimulation techniques
- installation, inspection and maintenance of goaf seals
- reporting requirements
- auditing
- ventilation systems and usage
- mine plan
- action plans
- systems of mining
- response plans
- emergency procedures
- individual and group responsibilities
- training and education procedures

**Gas drainage system monitoring** may include:
- continuous monitoring
- leakage monitoring (laser beam technology)
- portable (hand held) monitoring
- collection of bag samples
- identifying pipeflow and pressure requirements
- ventilation measurements from relevant areas

**Gas make characteristics** may include:
- gas content
- gas pressure
- adsorption
- desorption
- hydrostatic pressure
- strata moisture content
- permeability and porosity

**Gas management** includes controls for gas drainage and gas outburst.

**Gas management devices and methods** may include:
- gas drainage
- infusion
- scrubbers
- automatic gas detectors
- tube bundle systems
- de-gassing device on auxiliary fans
- gas monitoring systems
- inertisation systems
- monitoring devices, including:
  - barograph
  - tube bundle
  - real time telemetry
  - portable (hand held) monitoring
  - bag samples
  - gas chromatography

**Ventilation devices** may include:
- stoppings
- overcasts
- regulators
- preparation seals
- ventilation doors
- bulk heads
- goaf seals
- final seals
- pressure chambers
- air locks

**Gas management plan** may include procedures for:

**Mine gases** may include:

- mine atmosphere monitoring
- reporting requirements
- auditing
- ventilation systems and usage
- inertisation techniques
- mine plan
- trigger action response plans
- emergency procedures
- individual group responsibilities
- training and education
- indicators for the requirement to develop a gas drainage management plan
- indicators for the requirement to develop a gas outburst management plan
- criteria for mine ventilation including:
  - legislative requirements
  - mine ventilation management plan
  - measures to reduce and/or control seam gas
  - introduced gas
  - fumes and dust
  - temperature/humidity and maximum/minimum velocity specifications
  - ventilation efficiency
  - pressure and quantity

**Gas management plans** establish procedures for maintaining a safe environment may include:

- hazard identification and quantification
- risk assessment
- authority and responsibility
- controls established to managed identified risks
- reporting and communication
- document control
- audit and review

**Gas management procedures** may include those for:

- construction
- action response
- permit to work/mine
- condition monitoring

**Hazard** is defined as: *a source of potential harm or a situation with a potential to cause loss* (definition from AS/NZS 4360:1999 Risk Management).

**Hazards** may include:

- irrespirable atmosphere
- noxious atmospheres
- flammable or explosive mixtures
- outburst

Installations where gas drainage hazards may be assessed include:

- vacuum pumps
- pipes
- stand pipes
- gas separators and casing
- surface installations
- gas drainage plant including building and surface location
- valves
- hoses
- water pumps
- flame and lightning arresters
- power supply to bore holes
- cleaning equipment
- air compressors

- authority to mine

**Risk** is defined as: *the chance of something happening that will have an impact upon objectives. It is measured in terms of consequences and likelihood.*
Specific gas emissions may include seam gases or gases from introduced sources and may include but not be limited to:

- methane
- carbon dioxide
- hydrogen sulphide

**Unit Sector(s)**

Coal Mining (Underground)

**Competency field**

Refer to Unit Sector(s).

**Co-requisite units**

Not applicable.
RIIMCU404A Apply and monitor the gas drainage management plan

Modification History
Not applicable.

Unit Descriptor
This unit covers the application and monitoring of the gas drainage management plan in the coal industry. It includes planning and preparing for the application of the gas management plan, applying the gas drainage management procedures, apply gas drainage management system maintenance procedures. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, at worksites within:

- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for the application of the gas management plan | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Identify and clarify roles and responsibilities, as specified in the gas drainage management plan  
1.3. Communicate and clarify work group and individual responsibilities and tasks in an effective and timely manner  
1.4. Identify, obtain and allocate resources required for the application of the gas drainage management plan  
1.5. Identify and satisfy individual training needs by accessing the established gas drainage management training program and systems  
1.6. Encourage, receive, review and, where appropriate, implement suggestions and recommendations for changes to gas drainage management procedures |
| 2. Apply the gas drainage management procedures | 2.1. Identify and interpret the impact of changes of gas make, composition, concentration of gas on the mine atmosphere  
2.2. Identify and apply hazard control procedures associated with gas drainage  
2.3. Apply gas monitoring system installation, operation and maintenance procedures  
2.4. Apply drainage service extension and recovery procedures  
2.5. Apply gas drainage system maintenance requirement procedures  
2.6. Apply procedures incorporating methods and practices to minimise potential damage to the gas drainage system  
2.7. Apply and monitor action levels established to minimise the hazards of gas drainage  
2.8. Apply gas drainage system information recording and reporting procedures  
2.9. Contribute to systems audit and review requirements in accordance with the gas drainage management plan |
3. Apply gas drainage management system maintenance procedures

|   | 3.1. Carry out inspections, repair and maintenance activities, in accordance with the *gas drainage management plan*
|   | 3.2. Record, report and review maintenance activities in accordance with the *gas drainage management plan* |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

<tr>
<td>• outburst mining monitoring procedures</td>
</tr>
<tr>
<td>• drilling options and related equipment and techniques</td>
</tr>
</tbody>
</table>
• hazard management processes and techniques
• the effects of the type and quantity of gas in the coal seam
• the impacts of accumulation of coal dust after gas drainage has been completed
• pressure changes; causes, the impacts on the ventilation system, and the effects on gas drainage
• heat/humidity; the sources and factors which may impact on gas drainage and personnel
• mine fans; fan laws, fan types, performance characteristics, configurations, applications and limitations in association with the gas drainage management plan
• ventilation control devices; the types, purposes, design criteria and specifications, distribution/placement criteria and limitations in association with the gas drainage management plan
• ventilation control devices; the types, purposes, design criteria and specifications, distribution/placement criteria and limitations
• de-gassing; methods of control - including brattice, auxiliary fans, compressed air venturis, sails, hurdles and bleeders
• fixed gas drainage monitoring systems types, characteristics, uses and limitations
• portable monitoring equipment for gas drainage purposes, types, characteristics, uses and limitations
• functions, capabilities, advantages, limitations and uses of gas drainage computer modelling and simulation techniques
• computer-based systems for mine environment analysis
• gas drainage management plan development requirements and processes
• gas drainage surveys; the types, frequency and method for conducting including pressure/quantity/temperature and gas
• processes and techniques for determining alarms and trigger points/levels
• audit and review processes and techniques
• emergency response and disaster planning processes and techniques
• general uses and applications of ventilation theory, including:
  • gas laws including Charles and Boyle
  • natural ventilation pressures
  • gas make
  • leakage
  • Kirchoff's laws
• mine operational procedures
• strata control systems and their affects on gas drainage
• mine and goaf ventilation systems
• underground water management principles and systems
• impacts of intersecting holes and hole design
• site environmental monitoring requirements
• statutory and mine reporting procedures
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for applying and monitoring the gas drainage management plan</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of gas drainage management plan application and monitoring</td>
</tr>
<tr>
<td></td>
<td>• working with others to plan, prepare and conduct the application and monitoring of the gas drainage management plan</td>
</tr>
<tr>
<td></td>
<td>• evidence of the consistent successful application and monitoring of the gas drainage management plan</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
<td></td>
</tr>
<tr>
<td>• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
<td></td>
</tr>
<tr>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those</td>
<td></td>
</tr>
</tbody>
</table>
required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
| | - written and/or oral assessment of the candidate's required knowledge
| | - observed, documented and/or first hand testimonial evidence of the candidate's:
| | | - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
| | | - consistent achievement of required outcomes
| | | - first hand testimonial evidence of the candidate's:
| | | | - working with others to undertake and complete the application and monitoring of the gas drainage management plan
| | | | - provision of clear and timely instruction and supervision by the individual of those involved in the conduct of the application and monitoring of the gas drainage management plan

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Gas drainage management plan** establish procedures for maintaining a safe environment including:

- hazard identification and quantification
- risk assessment
- authority and responsibility
- controls established to manage identified risks
- reporting and communication
- document control
- audit and review

**Gas drainage management plan** may include procedures for:

- gas drainage drilling program
- gas or geological anomaly detection
- mine atmosphere monitoring
- stimulation techniques
- goaf walls
- reporting requirements
- auditing
- ventilation systems and usage
- mine plan
- action plans
- systems of mining
- response plans
- emergency procedures
- individual and group responsibilities
- training and education procedures

**Gas drainage management training** applies to:

- mine workers
- tradesperson
- permanent employees
- contractors

**Audit** is the validation process to ensure the system, procedures, processes meet the established objectives and are implemented.

**Risk** is defined as: *the chance of something happening that will have an impact upon objectives. It is measured in terms of consequences and likelihood* (definition from AS/NZS 4360:1999 Risk Management).

**Principles of mine design** include:
- recovery
- reserve optimisation
- mining direction
- geological structures
- ventilation
- strata control
- mining method
- productivity
- environmental considerations
- access

**Standard operating procedures** (SOP) are also known as safe working procedures, safe operating procedures and standard working procedures.

**Mine gases** may be seam gases or gases from introduced sources and may include but not be limited to:

**Ventilation systems** may include the use of:
- main mine fan
- auxiliary fans
- brattice
- regulators
- seals
- stoppings
- overcasts
- ventilation doors
- surface drainage boreholes
- pressure chambers

**Geological conditions** may include:
- faults
- dykes
include:

| Coal seam characteristics may include inherent factors such as: | • intrusions  
|                                                            | • strata deformities  
|                                                            | • induced stresses

| • power supply to bore holes  
| • cleaning equipment  
| • air compressors  
| • electricity and water services  
| • pressure gauges  
| • hydration plants |

**Alarm systems and action plans** may include those for gas concentration / make, combustion indicators, condition monitoring for fans (vibration / temperature / current failures), ventilation devices, monitoring hardware and temperature alarms.

**Maintenance of the gas drainage system** may include inspection, servicing and repair.

**Unit Sector(s)**

Coal Mining (Underground)

**Competency field**

Refer to Unit Sector(s).

**Co-requisite units**

Not applicable.
RIIMCU405A Apply and monitor the outburst management plan

Modification History
Not applicable.

Unit Descriptor
This unit covers the application and monitoring of the outburst management plan in the coal industry. It includes planning and preparing for the application of the outburst mining management plan, applying and monitoring the outburst mining activities, and applying outburst mining management system maintenance procedures. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, at worksites within:

- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for the application of the outburst mining management plan | 1.1. Access, interpret and apply **compliance documentation** relevant to the work activity  
1.2. Identify and clarify roles and responsibilities, as specified in the **outburst mining management plan**  
1.3. Communicate and clarify work group individual responsibilities and tasks in an effective and timely manner  
1.4. Identify, obtain and allocate resources required for the application of the **outburst mining management plan**  
1.5. Identify and satisfy individual training needs through accessing the established outburst mining management training program and systems  
1.6. Encourage, receive, review and, where appropriate, implement suggestions and recommendations for changes to outburst mining management procedures |
| 2. Apply and monitor the outburst mining activities | 2.1. Interpret and apply procedures covering the relocation, operation and maintenance of the drilling rig  
2.2. Interpret, apply and monitor core sampling techniques, procedures and processes  
2.3. Interpret and apply environmental monitoring, recording and reporting procedures  
2.4. Interpret, apply and monitor ventilation control measures which impact on outburst mining  
2.5. Interpret, apply and monitor actions and procedures in response to gas threshold levels  
2.6. Confirm, apply, communicate and post permit to mine procedures  
2.7. Interpret, apply and monitor procedures covering outburst mining personnel safety measures and techniques  
2.8. Inspect equipment protection/defensive requirements and measures to ensure compliance with standards |

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to apply and monitor the outburst management plan:

- apply legislative, organisation and site requirements and procedures for applying and monitoring the outburst management plan
- access, interpret and apply technical information
- access and interpret archival and historical outburst information related to the mine
- access and interpret design criteria for outburst management systems and devices
- interpret computer spreadsheets and outburst modelling / simulations
- conduct enquiries/investigations and prepare reports
- communicate effectively in the workplace
- access and interpret data from monitoring systems and equipment
- operate hand held monitoring equipment
- interpret outburst training requirement

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to apply and monitor the outburst management plan:

- legislative and statutory requirements for mining structures, including mine plans, ventilation, gas monitoring, strata support and safety management plans
- mine planning and design
- the systems of mining, including tunnels, drifts, stone drivage, shaft sinking, pillar extraction, partial extraction, punch mining and fault drivage
- stress analysis, including mining induced stress and topography
- sedimentology, including subsidence, water bearing strata, permeability of seam and strata, hydrology, physical property testing, caving characteristics, windblast, outburst, gas content and over and underlying strata
- systems of work, including bord and pillar, place changing, longwall, highwall, auger mining, pillar extension, partial extension and punch mining
- mining structure failure modes
- exploration techniques
- geology, lithology and strata gas characteristics
- mining and general engineering principles relevant to the behaviour of excavations in rock
- ground support systems
• audit methodologies
• geotechnical engineering
• excavation engineering
• tunnel engineering and shaft sinking
• rock mechanics
• mine surveying
• mining of coal deposits
• thermodynamics
• the impact of differing geological features and conditions on outburst, including faults, dykes, intrusions and strata deformities
• mine gases; the types and their characteristics, sources, physiological effects and methods of detection
• de-gassing; methods of control, including brattice, auxiliary fans, compressed air venturis, sails, hurdles and bleeders
• fixed monitoring systems types, uses/limitations, design criteria, specifications and design processes
• portable monitoring equipment, types, uses/limitations
• computer-based systems for outburst analysis
• mine outburst management plan development requirements and processes
• processes and techniques for determining alarms and trigger points/levels
• audit and review processes and techniques
• emergency response and disaster planning processes and techniques
• the effects of coal seam characteristics on outburst
• methods of control of outburst
• outburst indicators and ratios
• risk management procedures
• applicable mine rescue procedures
• roles and responsibilities in accordance with outburst mining management plan
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• knowledge of the requirements, procedures and instructions for the application and monitoring of the outburst management plan</td>
<td></td>
</tr>
<tr>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of the application and monitoring of the outburst management plan</td>
<td></td>
</tr>
<tr>
<td>• working with others to plan, prepare and conduct the application and monitoring of the outburst management plan</td>
<td></td>
</tr>
<tr>
<td>• evidence of the consistent successful application and monitoring of the outburst management plan</td>
<td></td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those
required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the application and monitoring of the outburst management plan
    - provision of clear and timely instruction and supervision by the individual of those involved in the conduct of the application and monitoring of the outburst management plan

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Outburst mining management plans establish procedures for maintaining a safe environment including:
- hazard identification and quantification
- risk assessment
- authority and responsibility
- controls established to manage identified risks
- reporting and communication
- document control
- audit and review

Actions (alarm or trigger) level is a generic term used to describe a level determined at the mine site at which action is initiated or a response made.

Audit is the validation process to ensure the system, procedures, processes meet the established objectives and are implemented.

Risk is defined as: *the chance of something happening that will have an impact upon objectives. It is measured in terms of consequences and likelihood* (definition from AS/NZS 4360:1999 Risk Management).

Hazard is defined as: *a source of potential harm or a situation with a potential to cause loss* (definition...

- water bearing strata
- permeability of seam and strata
- hydrology
- physical property testing results
- caving characteristics and ground stress behaviour

**Mine atmosphere** refers to all areas in the general mine ventilation district and beyond into waste working and goafs in the mine.

**Mine gases** may include CO or methane in addition to normal atmosphere gases.

**Ventilation structures** may include:
- stoppings
- overcasts
- regulators
- preparation seals
- fire doors
- bulk heads
- goaf seals
- final seals
- pressure chambers

**Geological conditions** may include:
- faults
- dykes
- intrusions and strata deformities
- existing or induced stress or strain

**Coal seam characteristics** may include inherent factors such as:
- rank
- petrology
- moisture
- particle size
- seam gas
- pyrites

*Or depositional factors such as:*
- seam thickness
- multi seams
- seam dip
- depth of cover
Mine atmosphere monitoring may include:
- continuous monitoring
- portable (hand held) monitoring
- collection of bag samples
- gas chromatography
- ventilation measurements from all areas of the mine, including sealed area and waste workings

Defects to mine structures may include:
- deterioration of materials
- quality of construction
- effects of surrounding strata
- physical damage
- water damage

Infrastructure includes:
- pipes
- valves
- hoses
- pumps
- drainage plant
- flame arresters
- power supply to bore holes
- cleaning equipment
- all other plant and equipment

SkillsDMC
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to apply and monitor the inrush management plan:

- apply legislative, organisation and site requirements and procedures for applying and monitoring the inrush management plan
- access, interpret and apply technical information
- access and interpret archival and historical inrush information related to the mine
- access and interpret design criteria for inrush prevention/management systems and devices
- interpret computer spreadsheets and inrush modelling/simulations
- conduct enquiries/investigations and prepare reports
- communicate effectively in the workplace
- access and interpret data from monitoring systems and equipment
- operate hand held monitoring equipment
- interpret inrush training requirement

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to apply and monitor the inrush management plan:

- legislative and site requirements for mining structures, including mine plans, ventilation, gas monitoring, strata support and safety management plans
- mine planning and design
- the systems of mining, including tunnels, drifts, stone drivage, shaft sinking, pillar extraction, partial extraction, punch mining and fault drivage
- stress analysis, including mining induced stress and topography
- sedimentology, including subsidence, water bearing strata, permeability of seam and strata, hydrology, hydrogeology, physical property testing, caving characteristics, over and underlying strata

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:

- legislative, organisational and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Interpret is defined as: the understanding needed by the person within their job role.

Risk is defined as: the chance of something happening that will have an impact upon objectives. It is measured in terms of consequences and likelihood (definition from AS/NZS 4360:1999 Risk Management).

Hazard is defined as: a source of potential harm or a situation with a potential to cause loss (definition from AS/NZS 4360:1999 Risk Management).

Mine site historical information may include:

- sedimentology aspects of the mine site relating to subsidence
- previous inrushes
- gas content and composition
- roof and floor technical data
- over and underlying strata
- water bearing strata
- permeability of seam and strata
- hydrology
- physical property testing results
- caving characteristics
**Inrush** may be defined as:

- water or other fluid material, or any material that flows when wet; or
- flammable or noxious gas
- which may put the mine or persons at the mine at risk

**Inrush control zones** are those areas of heightened awareness, necessitating specialised mining, monitoring and assessment techniques e.g. protective drilling.

**Inrush controls** may include, but are not limited to:

- controls that eliminate the hazard by removing the damaging energy, e.g. drainage including pumping and ventilation
- controls that reduce the magnitude of the hazard (less water, less pressure etc), e.g. drainage, including pumping and ventilation
- controls that reduce the likelihood of the event through engineering or hard barriers, e.g. seals
- controls that reduce the likelihood of the event through procedural or soft barriers, e.g. establishment of inrush control zones, protective drilling
- controls that reduce the likelihood of the event through warnings, e.g. action levels associated with increased water make

**Systems of work** may include:

- drilling operations
- bord and pillar
- place changing
- long wall
- high wall
- auger mining
- pillar extraction
- partial extraction
- punch mining
- shaft sinking and drifting

**Geological and physical conditions** may include:

- rank
- petrology
- moisture
- particle size
- seam gas
- pyrites
| **Monitoring systems** may include, but are not limited to: | • continuous and/or periodic monitoring  
• portable (hand held) monitoring  
• core samples  
• visual observation  
• geological mapping  
• borehole pressure readings |
|---|---|
| **Inrush hazards and potential sources** may include, but are not limited to: | • subsidence or failure of barriers and dam walls  
• strata failure  
• gas content and composition  
• abnormal rainfall events  
• over and underlying strata  
• water bearing strata  
• any peat, moss, sand, gravel, silt, or other material that flows when wet which may exist on or near a mine  
• any coal peat, moss, sand, gravel, silt, or other material that may flow from a bin or storage facility/structure  
• permeability of seam and strata  
• physical properties  
• caving characteristics  
• faults  
• intrusions  
• surface sources  
• tidal waters  
• oceans

activities and related results conform to planned arrangement, and whether these arrangements are implemented effectively and are suitable to achieve the organisation's policy and objectives (AS/NZS 4804: 2001).

Unit Sector(s)
Coal Mining (Underground)

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIMCU407A Apply and monitor the strata management plan

Modification History
Not applicable.

Unit Descriptor
This unit covers the application and monitoring of the strata management plan in the coal industry. It includes planning and preparing for the application of the strata management plan, applying the strata management plan, and applying monitoring and maintenance procedures. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, at worksites within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

---
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for the application of the strata management plan | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Communicate and explain work group and individual roles, responsibilities and tasks  
1.3. Identify obtain and allocate *resources* required for the application of the strata management plan  
1.4. Identify individual training needs.  
1.5. Identify and interpret the *risks* associated with unstable *mining structures* |
| 2. Apply the strata management plan | 2.1. Communicate, apply and monitor site mining system in accordance with the strata management plan  
2.2. Communicate and apply primary, secondary and other support systems in accordance with the strata management plan  
2.3. Identify and assess the impact of mining on the stability of *mining structures* in accordance with the strata management plan  
2.4. Install, monitor and assess strata support systems  
2.5. Install, monitor and assess *strata monitoring devices*  
2.6. Identify and assess strata supports and failure mechanisms and apply *appropriate controls*  
2.7. Apply, monitor and record mining sequences in accordance with the strata management plan  
2.8. Identify and assess and record *stress* changes in the mining structure  
2.9. Identify, assess and record geological structures encountered during the mining process  
2.10. Apply action response plans in accordance with site requirements  
2.11. Apply and monitor site procedures relating to strata management  
2.12. Participate in *audit* and review |
| 3. Apply monitoring and maintenance procedures | 3.1. Carry out inspection to ensure that repair and maintenance activities are conducted in accordance with strata management plan  
3.2. Record, report and review maintenance and monitoring requirements and activities in accordance with strata management plan |
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to apply and monitor the strata management plan:

- apply legislative, organisation and site requirements and procedures for applying and monitoring the strata management plan
- access, interpret and apply technical information
- access and analyse historical strata management information related to the mine and failure mode of mine structures
- interpret and apply design criteria for strata management
- communicate effectively in the workplace
- apply operational procedures relating to strata management
- conduct and report on audits
- identify and evaluate fundamental geological and geotechnical information

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to apply and monitor the strata management plan:

- legislative and site requirements for mining structures, including mine plans, ventilation, gas monitoring, strata support and safety management plans
- the systems of underground mining, including tunnels, drifts, stone drivage, shaft sinking, pillar extraction, partial extraction, punch mining and fault drivage
- stress, including mining induced stress, vertical and horizontal stress, tectonics, virgin stress, topographical features
- sedimentology, including subsidence, water bearing strata, permeability of seam and strata, hydrology, rock property testing, caving characteristics, windblast, faults, dykes, outburst, gas content and over and underlying strata
- systems of work, including bord and pillar, place changing, longwall, highwall, auger mining, pillar extraction, partial extension and punch mining
- mining structure failure modes
- exploration techniques
- geology and strata gas characteristics
- strata support and monitoring systems
- audit methodologies
- historical information
- training systems
- emergency response and evacuation planning processes and techniques
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for applying and monitoring the strata management plan</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of strata management plan application and monitoring</td>
</tr>
<tr>
<td></td>
<td>• working with others to plan, prepare and conduct strata management plan application and monitoring</td>
</tr>
<tr>
<td></td>
<td>• evidence of the consistent successful strata management plan application and monitoring</td>

</table>
environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the strata management plan application and monitoring
  - provision of clear and timely instruction and supervision by the individual of those involved in the conduct of the strata management plan application and monitoring

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisational and site requirements and procedures  
manufacturer's guidelines and specifications  
Australian standards  
Employment and workplace relations legislation  
Equal Employment Opportunity and Disability Discrimination legislation |
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Interpret is defined as: the understanding needed by the person within their job role.</td>

RIIMCU408A Apply the spontaneous combustion management plan

Modification History
Not applicable.

Unit Descriptor
This unit covers the application of the spontaneous combustion management plan in the coal industry. It includes identifying and explaining the fundamentals of spontaneous combustions hazards and risks, identifying and explaining the fundamentals of spontaneous combustion control systems and procedures, identifying and applying resources to the spontaneous combustion management plan, indentifying and responding to spontaneous combustion indicators, applying mine atmosphere monitoring systems and procedures, and applying control measures. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, at worksites within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1.** Identify and explain the fundamentals of spontaneous combustion hazards and risks | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Identify the fundamentals of spontaneous combustion.  
1.3. Identify and explain the effects of *mine gases* and barometric variations on the risks of spontaneous combustion  
1.4. Identify and explain the *hazards* associated with goaf and waste working atmosphere  
1.5. Identify the impact of ventilation and *ventilation structures* on the risks of spontaneous combustion  
1.6. Identify spontaneous combustion risks associated with the coal stowage |
| **2.** Identify and explain the fundamentals of spontaneous combustion control systems and procedures | 2.1. Identify the principles of ventilation design and related procedures and their impact on spontaneous combustion management  
2.2. Identify the methods and purposes of natural and induced *inertisation* in the goaf and waste workings, in relation to spontaneous combustion  
2.3. Identify the method, purpose, operation and procedures for installation of *mine atmosphere monitoring systems*, with regards to spontaneous combustion |
| **3.** Identify and apply *resources* to the spontaneous combustion management plan | 3.1. Identify, access, *interpret* and apply relevant legislative requirements and site safety management systems including statutory inspection requirements related to spontaneous combustion  
3.2. Identify, *interpret* and apply procedures and responsibilities in the *spontaneous combustion management plan*  
3.3. Monitor the actions of the *work group* to ensure the application of required spontaneous combustion procedures are complied with  
3.4. Identify and apply appropriate response procedures in situations where *trigger levels* are reached  
3.5. Participate in the development, review and
| 4. Identify and respond to spontaneous combustion indicators | 4.1. Identify, monitor, investigate, respond and **report** on **spontaneous combustion indicators**  
4.2. Respond to indicators in accordance with site procedures |
|---|---|
| 5. Apply mine atmosphere monitoring systems and procedures | 5.1. Conduct **mine atmosphere monitoring**, **interpret** the results and prepare and process **reports** in accordance with site procedures  
5.2. Identify and report defects to monitoring systems and, where appropriate, affect repairs in accordance with site procedures |
| 6. Apply control measures | 6.1. Identify, investigate and **report** changes in ventilation which may affect spontaneous combustion  
6.2. Report incidents of connection to other workings and take immediate action according to site procedures  
6.3. Select, apply and report on the appropriate action to remedy impact of water accumulation on the ventilation system  
6.4. Identify, rectify and report defects to ventilation structures and seals  
6.5. Identify hazards associated with the coal accumulations and **transport systems** and apply action to minimise the spontaneous combustion risks |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to apply the spontaneous combustion management plan:

- apply legislative, organisation and site requirements and procedures for the application of the spontaneous combustion management plan
- access, interpret, apply:
  - technical information
  - site/legislative requirements
  - records and reports
  - briefing and handover details
- plan and coordinate work
- interpret and respond to spontaneous combustion indicators and ratios
- conduct inspections related to spontaneous combustion
- interpret and record data related to spontaneous combustion
- identify workgroup training needs related to spontaneous combustion management plans
- identify and investigate incidents and potential hazards associated with spontaneous combustion
- apply spontaneous combustion control procedures or methods
- conduct mine atmosphere monitoring

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to apply the spontaneous combustion management plan:

- spontaneous combustion management plan requirements
- fundamental knowledge of spontaneous combustion causes and hazards
- fundamental knowledge of methods of control of spontaneous combustion
- mine gases
- legislative, site requirements and instructions
- spontaneous combustion indicators and trigger points
- fundamentals of mine design and plan relating to spontaneous combustion
- basic knowledge of coal seam characteristics, depositional factors and geological conditions on spontaneous combustion
- basic types of environmental monitoring systems
- mine and goaf ventilation systems
- sealing procedures
- hazard assessment procedures
- site inspection requirements
- site reporting procedures
- training systems
- emergency response and evacuation planning processes and techniques
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the application of the spontaneous combustion management plan</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of the application of the spontaneous combustion management plan</td>
</tr>
<tr>
<td></td>
<td>• working with others to plan, prepare and conduct the application of the spontaneous combustion management plan</td>
</tr>
<tr>
<td></td>
<td>• evidence of the consistent successful application of the spontaneous combustion management plan</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the application of the spontaneous combustion management plan
