| 4. Establish systems for the operation and maintenance of production and transport systems and equipment | 4.1. Establish operational procedures for production and transport systems and equipment and incorporate into site documentation  
4.2. Establish *maintenance* procedures for production and transport systems and equipment from site and legislative requirements, and incorporate into *site documentation*  
4.3. Establish procedures for reviewing and modifying work processes  
4.4. Establish emergency response and evacuation plans and procedures in accordance with site requirements  
4.5. Establish the system of recording and reporting production and transport equipment information |
| 5. Establish systems for audit and review of production and transport systems and equipment | 5.1. Establish mechanical procedures to audit and review equipment compliance in accordance with legislative and site requirements  
5.2. Identify and assess future production and transport systems and equipment requirements, and incorporate into planning processes  
5.3. Establish procedures to audit and review the currency and compliance of operation and maintenance relating to production and transport systems and equipment  
5.4. Establish procedures for incorporating feedback into the *audit/review* system  
5.5. Establish procedures to confirm the currency, relevance and compliance of the training program against identified requirements  
5.6. Establish procedures for response to instances of non-compliance or other discrepancies/deficiencies revealed by audit  
5.7. Establish procedures to audit emergency response and evacuation systems for compliance with site requirements |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to establish and maintain mechanical standard and engineering practices for transport and production equipment:

- apply legislative, organisation and site requirements and procedures
  - access, interpret and apply:
    - technical information
    - briefings and handover details
- apply the principles of mine design
- apply hazard identification and risk management processes
- apply work planning and coordination processes
- apply training needs analysis
- interpret and apply manufacturers’ instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to establish and maintain mechanical standard and engineering practices for transport and production equipment:

- legislative requirements and instructions, including transport rules, maintenance schemes, standard operating procedures, training, testing on diesel vehicles, battery charging, underground fuel depots, conveyor belts
- mine operation procedures
- geological structures
- mine plans
- mine design relating to production and transport systems and equipment
- production and transport systems and equipment management requirements
- site environmental monitoring requirements
- risk management procedures
- production and transport systems and equipment legislative inspection requirements
- mine reporting procedures
- emergency response and evacuation planning processes and techniques
- audit review processes and techniques
- production and transport equipment and systems (types, uses, characteristics and limitations appropriate for safe operation at the mine site)
- energy sources, including electrical, hydraulic, pneumatic, diesel
• safety design features of production and transport systems
• standard operating procedures relating to production and transport equipment
• stores system
• specification design criteria, including noise, dust, lighting, ergonomics, remote control, physical clearance, confined space, visibility, seating vibration and machine equipment and personal protection
• training programs
• a basic knowledge of computer based systems relating to production and transport systems
• fire fighting systems
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

<table>
<thead>
<tr>
<th>Method of assessment</th>
</tr>
</thead>
</table>

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required
  - identification of viable options and the selection of options that best meet the required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial and documentary evidence of the candidate's:
**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

- working with others to establish and maintain mechanical standard and engineering practices for transport and production equipment
- consistent and timely gaining of approval of mechanical standard and engineering practices for transport and production equipment
- provision of clear, timely required support and advice on the implementation of mechanical standard and engineering practices for transport and production equipment
**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:

- legislative, organisation and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Transport systems** include capacities for personnel, equipment/materials and product and may be:

- wheeled, which may include:
  - rubber tyred man transport
  - multipurpose vehicles
  - load haul dump
  - forklifts
  - front end loader
  - skid steer loader and grader
- railed, which may include:
  - locomotives (electric/diesel)
  - rail mounted personnel carriers
  - rolling stock
  - drift haulage systems
- tracked, which may be fixed or mobile and may include:
  - shearer carriers
  - personnel carriers
  - chock recovery vehicles (mules)
  - mine dozer
  - skidded
- conveyor systems, which may include:
  - conveyor belts
  - drive heads
  - tail ends transfer points
  - surge bins
- inter seam bins
- fabricated bins
- product slurry pump systems, which may include:
  - batching stations
  - dewatering systems
  - watering reticulation pumping stations
- shaft/drift winding, which may include product, personnel and material and may include:
  - head gear
  - cages and skips
  - winding apparatus and communications
  - control system
  - discharge and loading facilities
  - counter balances

**Specifications** may include:

- performance requirement
- costs
- dimensions
- capacity
- OHS requirements
- training requirements
- key selection criteria

**Production equipment** may include:

- shearer
- armoured face conveyor
- pantech
- chocks
- stage loader
- face drill rigs
- shuttle cars
- ram cars
- ratio feeders
- breaker line support
- roof bolters (mobile and hand held)
- rib bolters
- road header
- continuous miners
- in-seam miners
- high wall miners
- auger miners
- loaders

RIIRAI611A Establish and maintain a surface mine mechanical plant management system

Modification History
Not applicable.

Unit Descriptor
This unit covers establishing and maintaining a surface mine mechanical plant management system in the coal mining industry. It includes: Identifying, analysing and evaluating hazards and risks associated with the use of mechanical equipment and the control options and measures; establishing, implementing, auditing and reviewing the mechanical plant management system.

Application of the Unit
This unit is appropriate for those working in a management role or as a technical specialist, within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to establish and maintain a surface mine mechanical plant management system:

• apply legislative, organisation and site requirements and procedures
• access, interpret and apply:
  • technical information
  • site/legislative requirements
  • records and reports
  • briefings and handover details
• apply the principles of mine design
• apply hazard identification and risk management processes
• apply work planning and coordination processes
• apply training needs analysis
• interpret and apply manufacturer instructions
• apply effective communication techniques
• access, evaluate and apply data from monitoring systems and equipment

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to establish and maintain a surface mine mechanical plant management system:

• legislative and statutory requirements for mechanical plant and equipment
• the emergency response and disaster planning processes and techniques
• audit review processes and techniques
• mechanical engineering standards
• safety critical function of mechanical equipment
• mine operating procedures for mechanical plant and equipment
• mine design relating to mechanical plant and equipment
• options to control hazards and risks relating to mine mechanical plant and equipment, including fire protection and prevention, lifting and towing systems, storage of hazardous substances and the interrelationship between people and mechanical equipment
• energy sources, including protection and reticulation systems for electrical, hydraulic, compressed air, diesel
• mine fires; the types, sources of ignition and possible impacts on plant and
- a basic knowledge of computer based systems relating to the monitoring, and operation of mine mechanical plant and equipment
- fire fighting systems
- specification for mine plant and equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Mechanical plant management system

- hazard identification and quantification
- risk management
- consultation
- authority and responsibility
- controls established to manage identified risks
- reporting and communication
- document control
- audit and review

### Hazardous environment may include but not limited to:

- coal storage bins
- reclaim tunnels
- confined spaces
- gases
- restricted work area
- flammable environments, i.e. those related to heat sources, fuel sources and ignition sources, e.g. engine wiring, hydraulics in engine bays

### Hazards and risks to be identified, analysed and clarified in the mechanical plan management system include:

- explosion initiate from mechanical equipment
- fire initiate and/or supported by mechanical equipment
- hazardous substances used for mechanical equipment
- toxic substances generated by mechanical equipment
- the release of uncontrolled kinetic energy (unplanned movements) on mechanical

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to establish and maintain underground product haulage and transport systems:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply:
  - technical information
  - briefings and handover details
- apply hazard identification and risk management processes
- apply work planning and coordination procedures
- apply training needs analysis
- interpret and apply manufacturer's instructions
- apply maintenance survey requirements and procedures

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to establish and maintain underground product haulage and transport systems:

- audit review processes and techniques
- computer based systems
- emergency response and evacuation planning processes and techniques
- fire fighting systems and precaution rules
- geological structures
- legislative and statutory requirements and instructions including transport rules, maintenance schemes, standard operating procedures, training, battery charging, positioning of fuel depots, conveyor belts
- maintenance surveys
- mine design relating to product haulage and transport systems and equipment
- mine operation procedures
- mine plans
- mine reporting procedures
- power sources including electrical, hydraulic, pneumatic, diesel
- product haulage and transport systems and equipment statutory inspection requirements
- product haulage and transport systems equipment management requirements
- product haulage and transport equipment and systems; the types, uses,
characteristics and limitations appropriate for safe operation at the mine site
  • risk management procedures
  • safety design features of product haulage and transport systems
  • site environmental monitoring requirements
  • specification design criteria including noise, dust, lighting, ergonomics, remote control, physical clearance, confined space, visibility, seating vibration and machine equipment and personal protection
  • stores system
  • training and assessment systems
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the establishing and maintaining of underground product haulage and transport systems</td>
</tr>
<tr>
<td></td>
<td>• implementation of procedures and techniques for the safe, effective and efficient completion of the establishing and maintenance of underground product haulage and transport systems</td>
</tr>
<tr>
<td></td>
<td>• the identification of the relevant information and scope of the work required to meet the required outcomes</td>

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
|                                                  | • The assessment environment should not disadvantage the participant. For example, |
language, literacy and numeracy demands of assessment should not be greater than those required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required
  - identification of viable options and the selection of options that best meet the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial and documentary evidence of the candidate's:
  - working with others to establish and maintain underground product haulage and transport systems
| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |

- consistent and timely gaining of approval of underground product haulage and transport systems
- provision of clear, timely required support and advice on the implementation of underground product haulage and transport systems
**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisation and site requirements and procedures  
| | • manufacturer's guidelines and specifications  
| | • Australian standards  
| | • code of practice  
| | • Employment and workplace relations legislation  
| | • Equal Employment Opportunity and Disability Discrimination legislation  

| Transport systems include capacities for personnel, equipment/materials and product and may include: | • wheeled, including:  
| | • rubber tyred man transport  
| | • multipurpose vehicles  
| | • forklifts  
| | • front end loader  
| | • skid steer loader  
| | • railed, including:  
| | • locomotives (electric/diesel)  
| | • rolling stock  
| | • skidded  
| | • water borne  
| | • pipeline, including:  
| | • batching stations  
| | • dewatering systems  
| | • water reticulation pumping station  
| | • conveyor system, including:  
| | • conveyor belts  
| | • drive heads  
| | • tail ends transfer points  
| | • surge bins  
| | • fabricated bins  

| Specifications may include: | • performance requirements  
| | • costs  
| | • dimensions

**Co-requisite units**

Not applicable.
RIIRIS201B Conduct local risk control

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of local risk control in resources and infrastructure industries. It includes identifying hazards; assessing risk and identifying unacceptable risk; identifying, assessing and implementing risk treatments; and completing records and reports.

Application of the Unit
This unit is appropriate for those working in entry level operational roles, at worksites within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>
</thead>
</table>

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify hazards | 1.1. Access, interpret and apply *compliance documentation* relevant to conducting local risk control  
1.2. Inspect work area conditions to identify potential *hazards* in the workplace  
1.3. Apply existing procedures to deal with recognised hazards  
1.4. Recognise the type and scope of unresolved hazards and their likely impact |
| 2. Assess *risk* and identify unacceptable risk | 2.1. Assess and determine *consequence* if the event should occur  
2.2. Consider and determine *likelihood* of the event  
2.3. Identify criteria for the acceptability/unacceptability of the *risk* or source from the appropriate party  
2.4. Assess risk against criteria to identify if it warrants *unacceptable risk* status and either action or refer to the appropriate party |
| 3. Identify, assess and implement risk treatments | 3.1. Identify and consider all possible *risk treatment options*  
3.2. Identify options by preliminary analysis and consideration of possible options  
3.3. Analyse options, including the identification of resource requirements  
3.4. Select most appropriate action for dealing with the situation  
3.5. Plan and prepare the course of action in detail and acquire/obtain required resources  
3.6. Implement the risk treatment  
3.7. Review risk management processes |
| 4. Complete records and reports | 4.1. Communicate information on the course of action and implementation  
4.2. Complete *records and reports* for hazards and actions from personal risk assessment as specified by legislation and site requirements |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct local risk control:

- apply legislative, organisation and site requirements and procedures
- speak clearly and directly, listen carefully to instructions and information, respond to and clarify directions
- collect, analyse and organise information
- access, interpret and apply site information
- work with other team members
- apply teamwork to a range of situations
- apply problems solving skills
- apply decision making skills
- show initiative in adapting to changing work conditions or contexts
- apply time management
- take responsibility for self organisation of work priorities
- apply mathematical skills to perform a basic risk ranking of hazards
- interpret and apply material safety data sheets (MSDS)

### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to conduct local risk control:

- risk management processes and methods, including: identifying hazards, assessing risks, determining acceptability of risks, identifying controls
- AS/NZS 4360-2004 Risk Management
- specific worksite risk management procedures
- specific worksite safety systems information
- specific worksite communication, reporting and recording procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisation and site requirements and procedures
- Australian standards
- code of practice
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Hazard is defined as:
- a source of potential harm or a situation with a potential to cause loss

### Hazards may include:
- equipment
- stored energy
- methods
- plans
- people
- the work environment

### Risk is defined as:
- The chance of something happening that will have an impact upon objectives. It is measured in terms of consequences and likelihood

### Risk treatment is defined as:
- selection and implementation of appropriate options for dealing with risk

### Consequence is defined as:
- the outcome of an event or situation expressed qualitatively or quantitatively, being a loss, injury, disadvantage or gain

### Frequency is defined as:
- a measure of likelihood expressed as the number of occurrences of an event in a given time

### Likelihood is used as:
- a qualitative description of probability and frequency

### Probability is defined as:
- the measure of the chance of occurrence expressed as a number between 0 and 1

### Criteria for the acceptability/unacceptability of the risk must be determined by:
- the organisation's internal policy, goals and/or objectives in reference to relevant legislation
| Risk treatment options may include: | • eliminating the hazard  
• substitution  
• engineering controls  
• administrative controls (procedures, etc)  
• personal protective equipment. |
|-------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Records and reports may include:    | • hazard reporting forms  
• supervisor/deputy/OCE reports  
• incident reports  
• near miss reports  
• shift reports  
• JSAs  
• Take 5  
• Step Back |

### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify hazards | 1.1 Access, interpret and apply *compliance documentation* relevant to the application of risk management processes  
1.2 Inspect and analyze work area conditions regularly and systematically to identify potential *hazards*  
1.3 Access interpret and apply *existing procedures* to control identified hazards  
1.4 Identify hazards not controlled by existing procedures  
1.5 Recognise the type and scope of yet to be resolved *hazards* and their likely impact |
| 2. Assess and identify unacceptable risk | 2.1 Consider and determine the *likelihood* of the event happening  
2.2 Evaluate and determine the *consequence* if the event should occur  
2.3 Consider and determine the risk level (likelihood and consequence combined)  
2.4 Identify or source the *criteria for determining the acceptability/unacceptability of the risk*  
2.5 Evaluate the risk against criteria to identify if it warrants ‘unacceptable risk’ status and refer the findings to the appropriate person |
| 3. Identify and recommend controls | 3.1 Identify the range of *controls* which may eliminate or minimise the risk  
3.2 Conduct a detailed analysis of feasible options including the identification of resource requirements  
3.3 Select the most appropriate control for dealing with the situation |
| 4. Contribute to the implementation of control | 4.1 Plan selected control in detail, including the identification of *resource requirements*  
4.2 Gain authorisation for selected control in accordance with site requirements  
4.3 Document and review controls in accordance with site working instructions (or equivalent) for the job  
4.4 Apply procedures to control recognised hazards  
4.5 Communicate information on the control and its implementation to the relevant people |
5. Review safety system documentation

5.1 Monitor and review site working instructions (or equivalent) for adherence to compliance documentation and site requirements

5.2 Action amendments to the site working instructions (or equivalent) or refer the matter to the appropriate party for follow up

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required for the safe, effective and efficient application of risk management processes:

- apply legislative, organisation and site requirements and procedures
- research, analyse and apply relevant operational information
- demonstrate and apply common industry terminology
- interpret work procedures and processes
- use effective communication skills, including questioning and active listening skills with supervisors and other employees
- write reports
- apply planning and organising skills to the risk management processes
- demonstrate teamwork to involve and engage the employers/supervisors in the risk management processes
- apply problem solving skills to technical resources and infrastructure issues

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required for the safe, effective and efficient application of risk management process:

- OHS legislation and regulations
- appropriate resources and infrastructure context and language
- topics or subject areas which are target for assessment and treatment
- site risk management systems and their application
- conventions and requirements for written communications including report writing
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Overview of assessment | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for applying risk management processes
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of risk management processes
- working with others to undertake and complete the application of risk management processes that meets all of the required outcomes
- consistent timely completion of risk management processes that safely, effectively and efficiently meets the required outcomes |

| Context of and specific resources for assessment | This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second |
### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the application of risk management processes

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

### Relevant compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Risk Management is defined as:
- the culture, processes and structures that are directed towards the effective management of potential opportunities and adverse effects

### Existing procedures may include those focussed on:
- personal safety (e.g. personal protective equipment, medical standards, drug and alcohol, stress management and evacuation)
- equipment and machinery isolation
- protection and guarding
- hazard identification and monitoring
- chemical safety
- fire safety
- other potential emergency related circumstances
- uncontrolled energy
- change

### Risk is defined as:
- the chance of something happening that will have an impact upon objectives. It is measured in terms of consequences and likelihood

### Hazard is defined as:
- a source of potential harm or a situation with a potential to cause loss

### Hazards may involve:
- equipment
- methods/plans
- people
- the work environment
- uncontrolled energy
- changeover
- nearby activities
- different conditions

### Likelihood is defined as:
- a qualitative description of probability and frequency

### Probability is defined as:
- the measure of the chance of occurrence expressed as a number between 0 and 1

### Consequence is defined as:
- The outcome of an event or situation expressed qualitatively or quantitatively, being a loss, injury,
### Criteria for the acceptability/unacceptability of the risk

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Provide information to the work group | 1.1. Access, interpret and apply *compliance documentation* relevant to applying the site risk management system  
1.2. Accurately explain relevant compliance documentation to the work group  
1.3. Provide information on the organisation's *risk management policies, procedures and programs* to the work group in an accessible manner  
1.4. Regularly provide and clearly explain information about *identified hazards* and the outcomes of *risk assessment* and control to the work group |
| 2. Apply and monitor participative arrangements | 2.1. Explain the importance of effective consultative mechanisms in managing risk to the work group  
2.2. Conduct and monitor consultative procedures to facilitate participation of work groups in managing work area hazards  
2.3. Promptly deal with issues raised through *consultation* in accordance with *organisational consultation procedures*  
2.4. Record and promptly communicate the outcomes of consultation over risk management issues to the work group |
| 3. Apply and monitor the procedures for providing training | 3.1. Systematically identify *risk management training needs* in line with organisational requirements  
3.2. Make arrangements, in consultation with relevant individuals, to meet risk management training needs of team members.  
3.3. Provide workplace learning opportunities and coaching and mentoring assistance to facilitate team and individual achievement of identified training needs  
3.4. Identify and report costs associated with provision of training for work team for inclusion in financial planning |
| 4. Apply and monitor procedures | 4.1. *Identify* and report *hazards and risks* in the |
| for identifying hazards and assessing risks | work area in accordance with risk management and related *policies* and procedures |
| 4.2. Action team members hazard reports promptly in accordance with organisational procedures |

| 5. Apply and monitor the procedures for controlling risks | 5.1. Apply procedures for *controlling risk* using the hierarchy of controls and organisational requirements |
| 5.2. Identify and report inadequacies in existing risk control measures in accordance with hierarchy of controls |
| 5.3. *Monitor* outcomes of reported inadequacies where appropriate to ensure a prompt organisational response |

| 6. Apply and monitor the procedures for maintaining records | 6.1. Ensure accurate completion and maintenance of *risk management records* of incidents in the work area in accordance with organisational requirements |
| 6.2. Use aggregate information and data from work area records to identify hazards and monitor risk control procedures in work area |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to apply site risk management systems:

- apply analyse skills to identify hazards and assess risks in the work area
- apply data analysis skills including:
  - incident monitoring
  - environmental monitoring
  - evaluation of effectiveness of risk control measures
- apply assessment skills to assess resources required to apply risk control measures
- apply literacy skills for comprehending documentation and interpreting risk management requirements
- apply coaching and mentoring skills to provide support to colleagues
- demonstrate the ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to apply site risk management systems:

- relevant legislation from all levels of government that effect business operations
- legal responsibilities of employers, supervisors and employees in the workplace
- site policies and procedures relating to hazard management, fire emergency, evacuation, incident and accident investigation and reporting
- relevance of consultation as a key mechanism for improving workplace risk management
- principles and practices of risk management
- characteristics and composition of the workgroup
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</tbody>
</table>
environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances
- Where applicable, physical resources should include equipment modified for people with disabilities
- Access must be provided to appropriate learning and/or assessment support when required

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to plan, prepare and apply the site risk management system
    - provision of clear and timely instruction and supervision by the individual of those involved in the applying of the site risk management system

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Compliance documentation may include:

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Organisation's risk management policies, procedures and programs may include:

- risk management policy
- site procedures and work instructions for hazard identification
- site procedures and work instructions for risk assessment, selection and implementing of risk control measures
- site incident (accident) investigation requirements
- site risk audits and investigations requirements
- site consultative arrangements for employees in work area
- site incident (accident) investigation procedures
- site operating procedures and instructions
- site emergency and evacuation procedures
- site purchasing policies and procedures
- site plant and equipment maintenance and use instructions
- site hazardous substances use and storage procedures and work instructions
- site dangerous goods transport and storage procedures and work instructions
- site OHS arrangements for on site contractors, visitors and members of the public
- site First Aid provisions/medical practitioner contacts and attention instructions
- site access procedures and instructions
| **Risk management** is: | • the culture, processes and structure that are directed towards the effective management of potential opportunities and adverse risk |
| **Risk management may be applied to:** | • statutory compliance  
  • OHS  
  • environment  
  • quality  
  • property security  
  • business risks, such as:  
  • credit management  
  • capital expenditure  
  • sales and marketing  
  • finance and accounting |
| **Risk management processes are:** | • the systematic application of management policies, procedures and practices to the task of establishing the context, identifying, analysing, evaluating, treating, monitoring and communicating risk |
| **Hazard is:** | • a source of potential harm or a situation with a potential to cause loss |
| **Hazards identification may occur through activities such as:** | • workplace inspections in area of responsibility  
  • consulting work team members  
  • housekeeping  
  • risk audits and review of audit reports  
  • daily informal employee consultation and regular formal employee meetings  
  • checking equipment before and during work  
  • review of health, safety, environmental, quality and other risk related records |
| **Risk assessment is:** | • the overall process of risk analysis and risk evaluation |
| **The policy is:** | • the statement of overall intent and direction of the organisation in respect of the specific area of managerial responsibility |
| **Consultation would typically include:** | • regulatory authorities  
  • tenderers  
  • project managers  
  • contractors  
  • employees  
  • community  
  • customers  
  • suppliers |
| Organisational consultation procedures may include: | • formal and informal meetings  
• health and safety committees  
• other committees, such as, planning and purchasing  
• involvement of employees in management and planning meetings  
• early response to employee suggestions, requests, reports and concerns put forward to management  
• counselling/disciplinary processes |
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Risk control is:</td>
<td>• the selection and implementation of appropriate options for dealing with risk</td>
</tr>
</tbody>
</table>
| Procedures for controlling risk may include: | • removing the cause of the risk at its source (eliminating the hazard)  
• selecting control measures in accordance with the hierarchy (i.e. work through the hierarchy from most effective to least effective)  
• job/process/workplace re-design  
• consultation with employees and their representatives |
| Monitoring is: | • checking, supervising, observing critically, or recording the progress of an activity, action or system on a regular basis in order to identify change |
| Risk management records may include: | • audit and inspection reports  
• hazard registers  
• risk analysis records  
• risk treatment reports  
• minutes of meetings (risk management, occupational health and safety, environmental etc)  
• induction, instruction, training and assessment  
• manufacturer's and supplier's information  
• dangerous goods and hazardous substances registers  
• plant and equipment maintenance and testing reports  
• workers compensation and rehabilitation records  
• First Aid/medical records  
• major incident and emergency response instructions  
• emergency contact lists |
• financial records
• contract documents

**Unit Sector(s)**
Risk Management

**Competency field**
Refer to Unit Sector(s).

**Co-requisite units**
Not applicable.
RIIRIS402A Carry out the risk management processes

Modification History
Not applicable.

Unit Descriptor
This unit covers the skills and knowledge required to carry out risk management processes in the coal and metalliferous mining industries. It includes: determining the risk management process; identifying hazards; assessing risk; identifying unacceptable risk and potential actions; deciding on, implementing or facilitating of actions; reviewing the implementation of action; auditing the risk management process; and completing records and reports.

Application of the Unit
This unit is appropriate for those working in supervisory and risk management technical specialist roles within:
- Coal mining
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>
</thead>
</table>

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Determine the risk management process | 1.1. Access, interpret and apply *compliance documentation* relevant to carry out risk management processes  
1.2. Identify and determine the process to be used for *risk management*  
1.3. Identify, develop and document *parameters of the risk assessment task*  
1.4. Access, interpret and apply the data required to complete the risk assessment task |
| 2. Identify hazards | 2.1. Identify and confirm types of potential *hazards* by reference to site circumstances, history and/or precedence  
2.2. Break process into steps or parts for detailed hazard identification  
2.3. Add to the defined process any potential variations from changes to work practices, systems or technology  
2.4. Analyse the steps or parts of the process, and identify and document *loss scenarios* |
| 3. Assess risk | 3.1. Determine the *likelihood* of the loss scenario  
3.2. Analyse and determine the *consequence* if the loss scenario should occur  
3.3. Determine the *risk level* of the loss scenario |
| 4. Identify unacceptable risk | 4.1. Source or determine site criteria for assessing the *acceptability of risks* in conjunction with the appropriate party  
4.2. Determine the risk level or score by the application of the approved site criteria  
4.3. Clarify findings which are ambiguous, unclear or of doubtful accuracy by seeking expert advice |
| 5. Identify potential actions | 5.1. Identify existing controls  
5.2. Identify, analyse and document the range of *risk controls* which may be appropriate for identified unacceptable risks  
5.3. Identify possible options for risk control by the use of the *hierarchy of controls*. |
5.4. Verify feasible options for risk control by preliminary analysis and consideration, including potential to provide an integrated response to the range of issues

### 6. Decide on action

- **6.1.** Select most appropriate risk controls for the situation from the feasible options
- **6.2.** Confirm the selected course of action following analysis of resource requirements, cost, safety and welfare issues within site constraints
- **6.3.** Document the selected course of action

### 7. Implement or facilitate action

- **7.1.** Implement directly, or facilitate through others, the course of action
- **7.2.** Observe and apply all *safety regulations and procedures*
- **7.3.** Communicate to all involved parties relevant information related to the new/revised *work procedures* and their implementation in accordance with site requirements

### 8. Review the implementation of action

- **8.1.** Determine and facilitate an ongoing review process to ensure implementation and application of risk controls in accordance with risk assessment outcomes, new or revised work procedures and accident investigation outcomes
- **8.2.** Review process, actions and controls to ensure continuing effectiveness in the changing work environment.
- **8.3.** Respond to, or refer to the appropriate party for follow-up action, anomalies and shortcomings identified during the review process

### 9. Audit the risk management process

- **9.1.** Conduct *audits* of risk management processes and work procedures to ensure compliance and effectiveness
- **9.2.** Respond to changed requirements identified during audits in a systematic and timely manner
- **9.3.** Complete and retain all risk management documentation covering the reason for, and changes made
| 10. Complete records and reports | 10.1. Produce, process and maintain all risk management documentation and reports |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to carry out a risk management processes:

- apply legislative, organisation and site requirements and procedures risk management processes
- read, interpret, apply and communicate technical information, procedures, regulations in the workplace
- apply effective communication with a range of people in the workplace
- facilitate a group of people to achieve a required outcome
- apply interview processes
- facilitate and document scoping sessions for risk assessment
- facilitate risk assessment exercises
- participate in a risk assessment as team members
- apply proactive hazard identification
- apply hazard analyse to identify and score the risk
- select the appropriate treatments reduce unacceptable risk
- apply Risk Assessment documentation requirements
- apply Risk Management documentation requirements and procedures
- maintain relevant records and documents
- audit systems for compliance and effectiveness, and recommend changes to improve effectiveness
- monitor and recommend changes to processes
- identify hazards which may have acute and long-term effects on people

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to carry out a risk management processes:

- relevant site and equipment safety requirements
- statutory and site rules, policies, procedures and regulations
- the risk management process
- risk assessment scoping methods
- risk assessment methods including:
  - identifying hazards
  - assessing risks
- determining acceptability of risks
- identifying existing controls
- determining adequacy of current controls
- identifying new potential controls
- risk management documentation and reporting methods used at a mine site
- methods of identifying Risk Control actions based on cost, safety and welfare issues
- action planning and implementation methods
- review and auditing methods
- basic human physiology
- the effects of hazards on people's health and hygiene
- causes and effects of common diseases and disabilities
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

RIIRIS501A Implement and maintain management system to control risk

Modification History
Not applicable.

Unit Descriptor
This unit covers the implementation and maintenance of management systems to control risk in resources and infrastructure industries. It includes developing the framework for and processes to support site risk management systems; planning and implementing risk management systems; and monitoring, reviewing and updating risk management processes.

Application of the Unit
This unit is appropriate for those working in a management roles or risk management technical roles, managing or advising the implementation and maintenance of management systems to control risk within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

|
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Develop the framework for the site risk management system | 1.1. Access, interpret and apply compliance documentation relevant to implementing and maintaining management systems to control risk  
1.2. Develop and document site objectives in the area of managerial responsibility, in consultation with relevant personnel, and conforming to the organisation's policy and system's procedures  
1.3. Develop and document the structures for the application of the management system, in consultation with relevant personnel  
1.4. Define, allocate and document the responsibilities for applying the management system in job descriptions and duty statement for all relevant site positions |
| 2. Develop the processes to support the site risk management system | 2.1. Identify existing and potential site hazards and risks in the area of managerial responsibility from site inspection and trends identified from the record system  
2.2. Access, interpret and clarify the organisation's criteria for assessing and treating risks  
2.3. Develop and document detailed site procedures and practices for the application of the management system in consultation with relevant personnel  
2.4. Identify, obtain and maintain information sources and expert advice required to support the management system |
| 3. Plan and implement the risk management system | 3.1. Plan, schedule and document how the management systems will be introduced to the entire work site  
3.2. Identify, seek and/or provide resources for the operation of the management system, in a timely and consistent manner  
3.3. Provide and explain information on the site management system in a form readily accessible to site employees  
3.4. Provide or arrange appropriate development and/or training for site |
personnel on the risk management systems’ site procedures and practices

3.5. Make available information on known and intended process changes and enhancements to site personnel

3.6. Provide support and encouragement to those responsible for the detailed system activities

3.7. Ensure all management systems’ records and reports are produced, processed and maintained

| 4. Monitor, review and update the risk management processes | 4.1. Monitor the management systems’ activities and achievement targets and provide/focus resources to ensure the implementation plan is satisfied
4.2. Review and update the management systems’ implementation plan periodically and when changing circumstances are anticipated or occur
4.3. Complete and retain management system documentation including the reasons for and changes made to the system |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to implement and maintain management systems to control risk:

- apply legislative, organisation and site requirements and procedures to implement and maintain management systems to control risk
- develop and maintain site procedures and practices
- read, interpret, apply and communicate technical information, rules, procedures, regulations
- document and facilitate management planning
- maintain relevant records and documents
- monitor and decide on changes to process
- provide leadership and guidance for group activities
- explain complex information to superiors/subordinates
- provide coaching and mentoring support
- apply active listening
- apply negotiation skill
- apply sensitivity to the needs and feelings of others
- actively encourage the free exchange of information

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required for the implementation and maintenance of management systems to control risk:

- relevant legislative requirements
- roles and responsibilities of relevant personnel within the organisation
- action planning methods
- human resource management processes
- method of identifying appropriate action based on cost, safety, and welfare issues
- work procedure and instruction documentation requirements
- reporting and recording procedures
- work site operating procedures
- hazard identification processes
- risk assessment processes
- risk treatment processes
- documentation methods
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
</tr>
</thead>
</table>
| **Critical aspects for assessment and evidence required to demonstrate competency in this unit** | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
  - knowledge of the requirements, procedures and instructions for the implementation and maintenance of management systems to control risk
  - implementation of procedures and techniques for the safe, effective and efficient implementation and maintenance of management systems to control risk
  - the identification of the relevant information and scope of the work required to meet the required outcomes
  - working with others to undertake and complete the implementation and maintenance of management systems to control risk
  - consistent successful implementation and maintenance of management systems to control risk |

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
</tr>
</thead>
</table>
|  - This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.  
  - The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.  
  - Customisation of assessment and delivery |
environment to sensitively accommodate cultural diversity.

- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's knowledge required to undertake the implementation and maintenance of management systems to control risk
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial and documentary evidence of the candidate's:
    - working with others to undertake and complete the implementation and maintenance of management systems to control risk
    - provision of clear and timely required support and advice on the implementation
| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |

</table>

**Hazards** are:
- sources of potential harm or situations with the potential to cause loss

**Risk** is:
- the chance of something happening that will have an impact upon objectives. It is measured in terms of consequence and likelihood

**Risk Identification** is:
- the process of determining what can happen, why and how

**Risk Treatment** is:
- the selection and implementation of appropriate options for dealing with risk

**Risk Treatment** should:
- considered using options in sequence from eliminating the hazard, substitution, engineering controls, administrative controls, and finally PPE

**Site Procedures and Practices** may include:
- standard operating procedures
- safe operating procedures
- work instructions
- emergency procedures
- allocation of responsibilities
- permit requirements
- sampling, testing and worksite inspection requirements
- documentation and reporting requirements

**Consultation with Relevant Personnel** would typically include:
- senior management
- subject matter experts
- regulatory authorities
- tenderers
- project managers
- contractors
- employees
- community
- customers
- suppliers
**Resources** may include:
- people
- finance
- equipment
- buildings/facilities
- technology
- information

**Site personnel** may include:
- employees
- contractors

**Records and reports** may include:
- results
- recommendations
- assessment forms
- action planning documents, etc

**Monitor** is:
- to check, supervise, observe critically, or record the progress of an activity, action or system on a regular basis in order to identify change

**Management systems documentation** may need to include:
- requirements for the maintenance of records for statutory/legal breaches
- provision of information and training
- regulations and code of practice relating to statutory/legal compliance
- site representatives and committees
- issue resolution

RIIRIS601A Establish and maintain the risk management system

Modification History
Not applicable.

Unit Descriptor
This unit covers the establishing and maintaining of risk management systems in resources and infrastructure industries. It includes: establishing the framework processes to support the system; planning and facilitating the implementation of the system; auditing the risk management processes; and ensuring completion of records and reports.

Application of the Unit
This unit is appropriate for those working in a management role or as a technical specialist, within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to establish and maintain risk management systems:

- apply legislative, organisation and site requirements and procedures
- read, interpret and apply legislation
- apply procedures for developing and maintaining procedures and policies
- read, interpret, apply and communicate technical information, rules, procedures, regulations
- apply procedures for facilitating and documenting management planning
- apply procedures for monitoring and deciding on changes to process
- provide leadership and guidance for group activities
- communicate effectively in the workplace
- explain complex information to superiors/subordinates
- apply coaching and mentoring support
- apply active listening
- show sensitivity to the needs and feelings of others
- actively encourage the free exchange of information

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to establish and maintain risk management systems:

- organisation's policies, goals and objectives
- relevant legislative requirements
- action planning methods
- negotiation methods
- written and oral communication methods
- human resource management processes
- method of identifying appropriate action based on cost, safety, and welfare issues
- work procedure and instruction writing requirements
- reporting and recording procedures
- work site operating procedures
- hazard identification processes
- risk assessment processes
- risk treatment processes
• documentation methods and procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions that are to apply in establishing and maintaining of risk management systems</td>
</tr>
<tr>
<td></td>
<td>• implementation of procedures and techniques for the safe, effective and efficient establishment and maintenance of risk management systems</td>
</tr>
<tr>
<td></td>
<td>• the identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• working with others to establish and maintain risk management systems</td>
</tr>
<tr>
<td></td>
<td>• consistent and timely establishing and maintaining of risk management systems</td>
</tr>
</tbody>
</table>

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
|  | • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. |
|  | • Customisation of assessment and delivery environment to sensitively accommodate cultural diversity. |
### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and

| Aboriginal people and other people from a non English speaking background may have second language issues. |
| Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances. |
| Where applicable, physical resources should include equipment modified for people with disabilities. |
| Access must be provided to appropriate learning and/or assessment support when required. |

<table>
<thead>

| 1. Plan and prepare | 1.1. Access, interpret and apply **compliance documentation** relevant to the work activity  
1.2. Obtain, confirm and apply **work instructions, quality requirements** and operational details relevant to the allotted task  
1.3. Obtain, confirm and apply **safety requirements** from the site safety plan and organisational policies and procedures, relevant to the allotted task  
1.4. Identify and obtain and implement the signage requirements from the project traffic management plan  
1.5. Select **tools and equipment** to carry out tasks that are consistent with the requirements of the job, and check them for serviceability and rectify or report any faults  
1.6. Identify, confirm and apply **environmental protection requirements** from the project environmental management plan to the allotted task |
| 2. Handle and remove waste | 2.1. Comply with materials safety data sheets and requirements of regulatory authorities  
2.2. Identify **hazardous materials** for separate handling  
2.3. Use correct procedures to remove **non-toxic materials**  
2.4. Use **dust suppression procedures** to minimise health risks to work personnel and others materials from workplace traffic or access |
| 3. Clean Up | 3.1. Clean, check, maintain and store tools and equipment in accordance with manufacturers' recommendations and standard work practices  
3.2. Safely store/stack unused materials for future use  
3.3. Clear work area and dispose of or recycle materials in accordance with project environmental management plan |
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to handle resources and infrastructure materials and safely dispose of non toxic materials:

- apply legislative, organisation and site requirements and procedures
- apply teamwork to a range of situations, particularly in a safety context
- solve problems particularly in teams and in dealing practically with safety issues
- show initiative in adapting to changing work conditions or contexts particularly when working across a variety of work placements
- manage time, particularly in organising priorities and planning work
- take responsibility for self organisation of work priorities
- show a willingness to learn and to use a range of mediums to learn

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to handle resources and infrastructure materials and safely dispose of non toxic materials:

- the most commonly encountered waste materials on worksites
- environmental management requirements
- hazardous goods handling in accordance with company procedures
- systems for packing and securing materials for movement
- systems and equipments or materials for the short term protection of stacked/stored materials
- methods of dust suppression
- site and equipment safety requirements
- site isolation and traffic control responsibilities and authorities
- project quality requirements
- industry and worksite terminology
- JSA’s/Safe work method statement
### Evidence Guide

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisation and site requirements and procedures |
| | manufacturer's guidelines and specifications |
| | Australian standards |
| | code of practice |
| | Employment and workplace relations |
| | Equal Employment Opportunity, Disability Discrimination |

| Work instructions may include: | verbal or written and graphical instructions |
| | plans and specifications |
| | work bulletins |
| | charts and hand drawings |
| | memos |
| | materials safety data sheets (MSDS) and diagrams or sketches |
| | organisation's work specifications and requirements |
| | instructions issued by authorised organisational or external personnel |

| Quality Requirements may include: | dimensions |
| | tolerances |
| | standards of work |
| | material standards as detailed in: |
| | the project drawings, |
| | specifications and |
| | project documentation to meet client satisfaction |

| Safety requirements may include: | protective clothing and equipment and is include that prescribed under: |
| | legislation |
| | regulation and |
| | workplace policies and practices |
| | use of tools and equipment |
| | workplace environment and safety |
Handle resources and infrastructure materials safely and dispose of non toxic materials

- handling of materials
- use of fire fighting equipment
- use of First Aid equipment
- hazard control and
- hazardous materials and substances
- emergency procedures related to equipment operation which are to include but may not be limited to:
  - emergency shutdown and stopping
  - extinguishing equipment fires
  - organisational First Aid requirements
  - evacuation

**Tools and equipment** may include:

- brooms
- hoses
- shovels
- rakes
- wet and dry industrial vacuum cleaners
- wheelbarrows
- pallet trolley
- materials hoists
- forklifts

**Environmental protection requirements** may include:

- organisational/project environmental management plan
- waste management
- water quality protection
- noise
- vibration
- dust
- clean-up management

**Hazardous materials** are those materials that pose a health risk to humans and animals or cause irreversible damage to the environment and may include toxic chemicals, asbestos and radioactive materials

**Non toxic materials** are those materials that do not pose a health risk through poisoning to humans and animals and may include excavated material that exceeds requirements and off cuts of construction materials such as timber

**Dust suppression procedures** may include but not be limited to:

- spraying with water
- covering and
- use of vacuum cleaners

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to isolate and access plant:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- access, interpret and apply technical information/maintain accurate records
- identify plant status
- use safety equipment
- apply diagnostic techniques
- use oral and written communications

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to isolate and access plant:

- high and low voltage distribution and switching systems
- plant and equipment isolation points
- potential plant and site hazards
- site and equipment safety requirements
- operational and maintenance procedures
- permit-to-work system and documentation
- isolation devices type and purpose
- emergency, fire suppression, fire alert and disaster procedures
- relevant operational and maintenance procedures
- hazard identification and risk assessment response procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Critical aspects for assessment and evidence required to demonstrate competency in this unit</td>
</tr>
<tr>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td>• knowledge of the requirements, procedures and instructions for the isolation and accessing of plant</td>
</tr>
<tr>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient isolation and accessing of plant</td>
</tr>
<tr>
<td>• working with others to undertake and complete the isolation and accessing of plant that meets all of the required outcomes</td>
</tr>
<tr>
<td>• consistent timely completion of the isolation and accessing of plant that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
</tr>
<tr>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
</tr>
<tr>

</tr>
<tr>
<td>• Where applicable, physical resources should</td>
</tr>
</tbody>
</table>
include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

## Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the isolation and accessing of plant

## Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

                              | • recipients-in-charge        |
RIISAM203B Use hand and power tools

Modification History
Not applicable.

Unit Descriptor
This unit covers the use of hand and power tools in resources and infrastructure industries. It includes planning and preparing for work, selecting and using hand tools and power tools, and cleaning up.

Application of the Unit
This unit is appropriate for those working in operational, service or maintenance roles, at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
**Elements and Performance Criteria Pre-Content**

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare | 1.1 Access, interpret and apply *compliance documentation* relevant to the use of hand and power tools  
1.2 Obtain, confirm and apply *work instructions* for the allotted task  
1.3 Obtain, confirm and apply *safety requirements* from the site safety plan and organisational policies and procedures relevant to the allotted task  
1.4 Identify, confirm and apply *environmental protection requirements* for the allotted task from the project environmental management plan |
| 2. Select and use hand tools | 2.1 Select *hand tools* consistent with needs of the job  
2.2 *Check tools* for serviceability and safety, and report faults  
2.3 Clamp or fix *materials* in position  
2.4 Use *hand tools* safely and effectively according to their intended use  
2.5 Safely locate *hand tools* when not in immediate use |
| 3. Select and use power tools | 3.1 Select *power tools and equipment* consistent with needs of job and in accordance with standard work practice, and report any faults  
3.2 Check tools for serviceability and safety, and report faults  
3.3 Visually check power leads/hoses for serviceability/safety in accordance with the site safety plan  
3.4 Clear route for safe placement and connection of leads/hoses  
3.5 Clamp or fix material in position for power tool application where applicable  
3.6 Use power tools safely and effectively in application processes  
3.7 Locate power tools safely when not in use |
| 4. Clean up | 4.1 Clear work area and dispose of or recycle materials in accordance with project environmental management plan  
4.2 Clean, check, maintain and store machinery, tools and equipment in accordance with manufacturer’s recommendations and standard work practices |
Required Skills and Knowledge

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to use hand and power tools:

- apply legislative, organisation and site requirements and procedures
- speak clearly and directly, listening carefully to instructions and information
- interpret and understand the information required for the preparation and application of hand and power tools, including work instructions, quality assurance procedures, manufacturer’s instructions, materials safety data sheets and equipment
- apply teamwork to a range of situations, particularly in a safety context
- solve problems particularly in teams and in dealing practically with safety issues
- show initiative in adapting to changing work conditions or contexts particularly when working across a variety of work placements
- manage time, particularly in organising priorities and planning work including the scheduling and use of equipment, materials and tools to avoid back tracking and re work
- take responsibility for self organisation of work priorities
- show a willingness to learn and to use a range of mediums to learn
- use technology related to determining requirements, the planning and application of hand and power tools, including the use of calculations, mechanical equipment and the reporting/recording of results

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to use hand and power tools:

- site and equipment safety requirements
- hand tools and their application
- portable power tools and their application
- energy/power sources
- materials associated with use in the industry
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- materials safety data sheets (MSDS) and materials handling methods
- project quality requirements
- industry and worksite terminology
- electrical, hydraulic and compressed air safety
- JSA’s/safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the use of hand and power tools</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient use of hand and power tools</td>
</tr>
<tr>
<td></td>

</tr>
<tr>
<td></td>
<td>• consistent timely use of hand and power tools that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.

Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake the use of hand and power tools

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

### Relevant compliance documentation
- legislative, organisation and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Work instructions
- verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, charts and hand drawings, memos, materials safety data sheets (MSDS) and diagrams or sketches
- plans and specifications
- quality requirements, including: dimensions and tolerances, standards of work and material standards
- safe work procedures or equivalent related to using hand and power tools

### Safety requirements
- protective clothing and equipment
- use of tools and equipment
- workplace environment and safety
- handling of materials
- use of fire fighting equipment
- use of First Aid equipment
- hazard control
- hazardous materials and substances
- personal protective equipment
- emergency procedures related to equipment operation which may include
  - emergency shutdown and stopping
  - extinguishing equipment fires
  - organisational First Aid requirements and evacuation

### Environmental protection requirements
- organisational/project environmental management plan
- waste management
- water quality protection
- noise
- vibration
- dust and
- clean-up management

### Hand tools
- clamps
limited to at least one:

- cutting tool
- tightening tool
- impact tool
- digging/leverage tool
- measuring tool
- securing/clamping tool

| Checking tools is to include: | • checking of electrical safety/inspection tag for currency
|                            | • equipment defect identification
|                            | • assessment of conditions and hazards and determination of work requirements |

| Materials are: | • to include those associated with the use of hand and power tools such as: timber, rock, concrete, metals, plastics |

| Power tools will include at least two of those powered by but not limited to: | • 240 volt electricity
|                                                                         | • compressed air
|                                                                         | • battery driven and
|                                                                         | • hydraulics |

| Power tools may include: | • kanga hammers
|                         | • cut off saws
|                         | • drills |
- screwdrivers
- angle grinders
- pneumatic wrenches
- impact hammers
- tampers
- rotary hammers/drills
- circular saws
- planers
- sanders and
- scalers

**Equipment** is to include:

- power leads and
- safety switches and
- may include air hoses

**Unit Sector(s)**

Service and Maintenance

**Competency field**

Refer to Unit Sector(s).

**Co-requisite units**

Not applicable.
RIISAM204B Operate small plant and equipment

Modification History
Not applicable.

Unit Descriptor
This unit covers the operating of a range of small plant and equipment in resources and infrastructure industries. It includes the planning and preparation for work, the conducting of pre-operational checks, the use of the plant and/or equipment, and carrying out operator maintenance and cleaning up.

Application of the Unit
This unit is appropriate for those working in operational, service and maintenance roles, at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to operate small plant and equipment:

- apply legislative, organisation and site requirements and procedures
- apply clear and direct speaking and active listening skills
- apply teamwork to a range of situations, particularly in a safety context
- apply problem solving techniques, particularly in teams and in dealing with safety issues
- interpret and apply information
- show initiative in adapting to changing work conditions or contexts particularly when working across a variety of work placements
- manage time, particularly in organising priorities and planning work
- take responsibility for self organisation of work priorities
- use a range of mediums to learn

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to operate small plant and equipment:

- small plant and equipment types, characteristics, technical capabilities and limitations
- basic soil types and characteristics
- site and equipment safety requirements
- small plant and equipment operating techniques related to essential tasks
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets (MSDS) and materials handling methods
- project quality requirements
- industry and site specific terminology
- JSA's/Safe work method statement
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions to operate small plant and equipment</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient operating of small plants and equipment</td>
</tr>
<tr>
<td></td>

## Range Statement

### Relevant compliance documentation

- legislative, organisation and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Work instructions

- verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, charts and hand drawings, memos, materials safety data sheets (MSDS) and diagrams or sketches
- plans and specifications
- quality requirements, including dimensions, tolerances, standards of work and material standards
- safe work procedures related to the operation of small plant and equipment on construction sites

### Safety requirements

- protective clothing and equipment
- use of tools and equipment
- workplace environment and safety
- handling of materials
- use of fire fighting equipment
- use of First Aid equipment
- hazards and risks control, including:
  - uneven/unstable terrain
  - trees
  - fires
  - overhead and underground services
  - bridges
  - buildings
  - traffic
  - embankments
  - excavations and cuttings
  - structures and
  - hazardous materials and substances
  - safe operating procedures
  - underground and overhead services
  - other machines
  - personnel restricted access barriers
  - traffic control
  - working at heights
<table>
<thead>

<tr>
<td></td>
<td>• band saw</td>
</tr>
</tbody>
</table>
Maintenance equipment may include:
- mower
- brushcutter
- mulcher

Water equipment may include:
- pump
- spear
- pressure cleaner

Lighting equipment may include:
- mobile lighting plant

Lifting and materials handling
- pedestrian forklift
- pallet trolleys
- hoist

Traffic Management may include:
- mobile variable message sign

**Operator maintenance** is to include:
- cleaning
- authorised servicing
- the monitoring, recording and reporting of faults

**Operator maintenance** may also include:
- the conduct of authorised minor replacements

**Materials** may include:
- water
- clays, silts, stone, gravel, mud, rock sand, topsoil
- bituminous mixes
- timber
- fuels and oils
- power leads
- replacement parts and consumables

**Unit Sector(s)**
Service and Maintenance
Competency field

Refer to Unit Sector(s).

Co-requisite units

Not applicable.
RIISAM205A Cut, weld and bend materials

Modification History
Not applicable.

Unit Descriptor
This unit covers the cutting, welding and bending of materials in resources and infrastructure industries. It includes the planning and preparation for the work, the setting up and testing of the equipment, the cutting, heating and bending of materials using oxyacetylene, the shutdown of equipment and the completion of clean-up activities.

Application of the Unit
This unit covers the cutting, non load-bearing welding and bending of materials using manual metal arc welding, oxyacetylene and cutting equipment and systems and LPG. It is appropriate for those working in operational, service and maintenance roles, at worksites within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>
</thead>
</table>

# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply *compliance documentation* relevant to the cutting, welding and bending of materials  
1.2. Obtain, confirm and apply work instructions for the allocated work  
1.3. Follow safety requirements in accordance with safety plans and policies  
1.4. Identify and implement signage/barricade requirements  
1.5. Select plant, tools and equipment to carry out tasks that are consistent with the requirements of the job, and check them for serviceability and rectify or report any faults prior to commencement  
1.6. Calculate material quantity requirements in accordance with plans and/or specifications  
1.7. Identify, obtain, prepare, safely handle and locate materials ready for use appropriate to the work application  
1.8. Identify and apply environmental protection requirements for the project in accordance with environmental plans and regulatory obligations |
| 2. Set up and test equipment | 2.1. Select and locate correct fire extinguisher to be readily accessible prior to and during operations  
2.2. Attach regulators to Oxy and Acetylene bottles in accordance with manufacturer's specifications and OHS regulations  
2.3. Purge lines to manufacturer's recommendations prior to lighting up  
2.4. Test equipment for leaks and undertake corrective action or report faults  
2.5. Select correct pressures and cutting tips in accordance with material to be cut and manufacturer's specifications |
| 3. Cut material using oxyacetylene | 3.1. Accurately mark and secure or clamp material ready for cutting  
3.2. Light torch correctly and safely according to manufacturer's specifications  
3.3. Adjust setting of flame for cutting to |
<table>

manufacturer's recommendations

4. Cut and weld materials using electric welding equipment

4.1. Undertake and verify test runs in accordance with manufacturer instructions and site specifications
4.2. Carry out welding and cutting in accordance with site procedures
4.3. Clean welds using appropriate tools and techniques
4.4. Confirm weld and cut specifications by visual inspection and defects identified and repaired

5. Heat and bend material

5.1. Accurately mark and secure or clamp material ready for bending
5.2. Light torch correctly and safely according to manufacturer’s specifications
5.3. Apply heat to specified material and so weakening effects of the heating process are minimised
5.4. Bend material to specification and cool correctly

6. Shutdown

6.1. Switch off torch according to manufacturer’s specifications
6.2. Shut off gas supply according to manufacturer’s specifications

7. Clean up

7.1. Clear work area and dispose of, reuse or recycle materials in accordance with legislation/regulations/code of practice and job specification
7.2. Clean, check, maintain and store plant, tools and equipment in accordance with manufacturer’s recommendations and standard work practices
7.3. Process records in accordance with site requirements
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to cut, weld and bend materials:

- apply legislative, organisation and site requirements and procedures
- apply manufacturer’s requirements and procedures
- apply operational safety requirements
- access, interpret and apply technical information
- apply hand-eye coordination
- read and interpret sketches or basic drawings
- identify and select from a range of welding equipment and accessories
- identify and match cutting equipment with specified tasks
- apply environmental compliance requirements

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to cut, weld and bend materials:

- workplace and equipment safety requirements
- quality requirements
- construction and steel fixing terminology
- manual metal arc welding, oxyacetylene and LPG heating and cutting equipment types, characteristics, uses and limitations
- manual metal arc welding, oxyacetylene and LPG heating and cutting equipment set-up and operating techniques
- the types and properties of steel fixing materials
- processes for the calculation of material requirements
- materials safety data sheets (MSDS)
- plans, drawings and specifications
- materials handling, storage and environmentally friendly waste management
- JSA’s/safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Equipment may include:**
- cylinders
- regulators
- gas tubing
- cutting blowpipes
- flint lighters
- measuring tapes/rules
- clamps and support stands

**Materials are to include:**
- deformed bars, plain rods, mesh sheets of plain bars and mesh sheets of deformed bars, cutting consumables and may include scaffolding components, pipe sections and structural steel sections

**Environmental protection requirements may include:**
- organisational/project environmental management plan
- waste management
- water quality protection
- noise, vibration and dust management and clean-up management

**Cutting of steel may include:**
- cutting up of waste for salvage
- cutting reinforcement steel and cutting holes in plate

**Bending is to include:**
- reinforcement steel
Unit Sector(s)
Service and Maintenance

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIISAM207A Apply operational maintenance skills

Modification History
Not applicable.

Unit Descriptor
This unit covers the application of operational maintenance skills in resources and infrastructure industries. It includes: selecting, using and caring for tools; identifying and responding to basic faults in mechanical and electrical systems; and identifying, selecting and using fasteners.

Application of the Unit
This unit is appropriate for those working in operational, service, maintenance and trade support roles, at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information

4.3. Use/apply fasteners in accordance with |
manufacter's instructions and site procedures/practices

4.4. Dispose of discarded materials in accordance with site procedures
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to apply operational maintenance skills:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- access and interpret manufacturer's and site technical information
- match tools with work needs
- apply site isolation procedures
- respond to faults
- diagnose basic faults
- complete reporting systems
- comply with environmental requirements

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to apply operational maintenance skills:

- types and uses of oils, greases, hydraulic fluids, brake fluid and other commonly used servicing materials
- site isolation procedures
- site operational and safety procedures
- site procedures relating to operational maintenance
- site maintenance systems and procedures
- types, characteristics, uses and limitations of hand tools
- types, characteristics, uses and limitations of measuring devices
- hand tool maintenance, care and storage procedures
- types, characteristics, uses and limitations of power tools
- power tool maintenance, care and storage procedures
- the functions of major components of common mechanical systems
- the functions of major components of common hydraulic systems
- the functions of major components of common pneumatic systems
- the functions of major components of common lubrication systems
- basic diagnostic processes/techniques of mechanical systems
- major components within common electrical systems
- electrical system basic circuit diagnostic processes and techniques
• types, uses, grades and limitations of fasteners
• environmental constraints and requirements related to operational maintenance
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

RIISAM208A Perform plant operational maintenance

Modification History
Not applicable.

Unit Descriptor
This unit covers the performing plant operational maintenance in the coal mining industry. It includes: identifying and preparing for maintenance; conducting planned routine maintenance, breakdown maintenance and temporary repairs; and finalising the maintenance activity.

Application of the Unit
This unit is appropriate for those working in a operational or maintenance roles, at worksites within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify and prepare for maintenance | 1.1. Access, interpret and apply *compliance documentation* relevant to performing plant operational maintenance  
1.2. Obtain, interpret and clarify/confirm work requirements in the form of shift briefings, handover details or work orders before proceeding  
1.3. Select, prepare for use and transport equipment, materials and tools required for maintenance to the worksite  
1.4. Access and apply safety information and procedures throughout the operations |
| 2. Conduct planned routine maintenance | 2.1. Receive schedule for *planned routine maintenance* and coordinate resources to carry out maintenance  
2.2. Carry out maintenance  
2.3. Complete details of routine maintenance actions and record any follow-up action required |
| 3. Conduct breakdown maintenance | 3.1. Evaluate the extent of work required to fix the breakdown and put in place site procedures to minimise loss of production  
3.2. Carry out *breakdown maintenance*  
3.3. Record details of maintenance action completed and/or required |
| 4. Conduct temporary repairs | 4.1. Identify the location of the problem and prioritise the requirement to minimise loss of production  
4.2. Assess the requirement for *temporary repairs* and identify and acquire resources  
4.3. Carry out the repair  
4.4. Record details of temporary repairs |
| 5. Finalise the maintenance activity | 5.1. Complete site restoration and housekeeping  
5.2. Pass recommendations for changes and improvements to the maintenance processes and procedures to the appropriate person |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to perform plant operational maintenance:

- apply legislative, organisation and site requirements and procedures
- apply safety requirements to operational maintenance activities
- access, interpret and apply technical information
- locate and identify equipment and components within the plant
- apply diagnostic techniques
- use relevant hand tools
- maintain equipment records/reports
- comply with site environmental requirements
- dispose of environmentally sensitive oils, fluids and materials

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to perform plant operational maintenance:

- site and equipment safety requirements
- equipment and plant characteristics, technical capabilities and limitations,
- equipment and plant operational procedures
- site equipment and plant maintenance procedures
- site environmental requirements and constraints related to operational maintenance activities
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• knowledge of the requirements, procedures and instructions for performing plant operational maintenance</td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of plant operational maintenance</td>
</tr>
<tr>
<td>• working with others to undertake and complete plant operational maintenance that meets all of the required outcomes</td>
<td>• consistent timely completion of plant operational maintenance that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second
language issues.

- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete plant operational maintenance

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

 Relevant compliance documentation may include:

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Planned routine maintenance procedures are those established and authorised for the site and may include:

- screen inspections
- pump adjustments
- crusher adjustments
- belt tracking and tensions
- chute inspections
- oil levels
- roller changes
- unbolting pipes and flanges

Breakdown maintenance may include:

- any plant and equipment failure and electrical resets

Temporary repairs may include:

- patching
- bandaging
- plugging
- clipping
- stitching

Unit Sector(s)

Service and Maintenance

Competency field

Co-requisite units

Not applicable.
RIISAM209A Carry out operational maintenance

Modification History
Not applicable.

Unit Descriptor
This unit covers the carrying out of operational maintenance in drilling and metalliferous mining industries. It includes planning and preparing for carrying out of operational maintenance; performing pre-start checks, maintenance and equipment checks; maintaining tools, components and consumables; carrying out hot work; and perform equipment maintenance and field repairs.

Application of the Unit
The unit is appropriate for those in operator, operator assistant and maintenance roles; performing mechanical, hydraulic and electrical operational maintenance on exploration and drilling equipment including, at worksites within:

- Drilling
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to carry out operational maintenance:

- apply legislative, organisation and site requirements and procedures for carrying out of operational maintenance
- apply in service functions and procedures
- apply diagnostic and troubleshooting procedures
- interpret manufacturers' maintenance and operations manuals
- use hand tools
- solve problems
- use PC software

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to carry out operational maintenance:

- manufacturer's handbooks requirements and procedures
- characteristics, technical capabilities and limitations of equipment
- environmental requirements and procedures
- hot work procedures and techniques
- fire prevention and control techniques and equipment
- mechanical/electrical/hydraulic systems and power tools requirements and procedures
- isolation and tag out procedures
- lubricants and their uses
- purpose of equipment electric and hydraulic indicators and gauges
- characteristics of transmission and drive systems
- recording and reporting requirements and procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Coordination requirements may include
- other operators
- other maintenance personnel,
- supervisors
- other worksite personnel

### Personal protective equipment includes:
- steel-capped boots and hardhat
- gloves
- dust mask
- eye and hearing protection
- general protective and reflective clothing

### Equipment may include:
- drilling equipment
- camping equipment
- navigational aids
- mobile laboratory
- emergency aids
- First Aid pack
- communications devices
- surveying equipment
- sampling devices and storage
- 4WD vehicles
- mobile computers and associated devices

### Equipment checks may include:
- regular visual inspection including pre-start neutral for all control levers
- check on correct operation
- observation of display instruments and gauges function
- observation of recording instruments and gauges
- hydraulic system (including filters, strainers, hose, hose fitting and oils)
- air systems and filters
- vehicles (including wheels, tyres, clutch, brakes and fluid levels)
- batteries

### Symptoms of faults may include:
- indications on instruments or gauges
- noises
- vibrations
- smells
- overheated hydraulic motors or lines
- visual indicators (e.g. smoke)

### Procedures for keeping tools and consumables in good condition
- effective storage
- use of desiccants
- store chemicals (cement, bentonite, and so on)
may include: | in safe dry conditions secure from livestock
---|---
**Hot work** is any work or task that has the potential to create fire or explosion, and may include: | • welding  
• grinding  
• fuel transfer

**Spotters** are used to: | • ensure that no fires develop from slag or hot metal generated during hot work

**Maintenance** may include: | • operating checks  
• daily checks  
• programmed maintenance  
• breakdown maintenance  
• prescribed lubrication

**Reporting** requirements may include: | • tool records  
• service and maintenance  
• metres drilled  
• operating hours since last service

**Diagnostic and troubleshooting procedures** may include: | • diagnostics built into equipment  
• diagnostics applying externally  
• troubleshooting procedures recommended by manufacturers  
• troubleshooting procedures developed by organisation  
• knowledge of sources of help for more complex problems

RIISAM210A Remove and fit wheel assemblies

Modification History
Not applicable.

Unit Descriptor
This unit covers the removal and fitting of wheel assemblies in resources and infrastructure industries. It includes planning and preparing for work; assessing the risk in wheel assembly removal; removing wheel assemblies; inspecting wheel assemblies and fasteners; and fitting wheel assemblies.

Application of the Unit
This unit is applicable to all light and heavy wheeled vehicles and is appropriate for those working in operational, service and maintenance roles, at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to remove and fit wheel assemblies:

- apply legislative, organisation and site requirements and procedures
- apply risk assessment procedures
- apply enterprise procedures
- observe safety precautions
- access, interpret and apply technical information
- apply lift and support procedures for vehicles and/or machines
- apply wheel changing requirements and procedures including: removing and fitting wheel or rim
- apply tyre or tube deflating and inflating procedures
- apply tyre and wheel assembly handle procedures
- apply wheel assembly fastener tightening, torque and re-torque procedures

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to remove and fit wheel assemblies:

- potential hazards and their identification
- safety precautions to be observed throughout the removal and fitting process
- rubber tyred equipment safety requirements
- types and classifications of wheels and rims
- soft ground support procedures and systems
- personal safety requirements
- process used in undoing wheel or rim fasteners
- process used in torque measurement when tightening wheel or rim fasteners
- process used to inflate and deflate tyres
- distinguish the difference between a rim and a wheel
- jacking and support procedures
- manual handling techniques
- identifying components for compatibility
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Unit Sector(s)
Service and Maintenance

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIISAM211B Remove, repair and refit tyres and tubes

Modification History
Not applicable.

Unit Descriptor
This unit covers the removal, repair and refitting of tyres and tubes in resources and infrastructure industries. It includes; planning and preparing for work; the controlling of risk; removal of tyres and or tubes from wheel/rim assembly; inspection of wheel and rim assembly components prior to assembly; fitting of tyre and or tube to wheel and rim assembly; inflation; inspecting tyres, tubes, wheels and rims; and carrying out a minor tube and tyre repair.

Application of the Unit
This unit is applicable to heavy wheeled vehicles and is appropriate for those working in operational, service and maintenance roles, at worksites within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to remove, repair and refit tyres and tubes:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply technical information
- use relevant tools and equipment safely
- apply manual handling procedures
- apply personal safety requirements
- apply repair tyre and/or tube procedures
- apply tyre and/or tube removal and replacement procedures
- apply tube and tyre reparability assessment procedures
- apply fill substance addition and removal procedures

## Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to remove, repair and refit tyres and tubes:

- types of tubes and tyres and their construction
- inspection procedures to determine repairability
- company position in relation to tyre repair
- roadworthiness requirements relating to tyres and rims
- tyre and tube removal and refitting/replacement procedures, including rim types
- tyre and tube repair procedures
- ballast identification, types and application
- tyre fill identification, types and application
- tyre fill adding/removal methods and procedures
- safety precautions related to handling of tyre fill substances
- equipment safety requirements
- relevant manufacturer/company policies
- legislation where applicable
- manual handling procedures
- personal safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
|                                                                                         |
| • knowledge of the requirements, procedures and instructions for removing, fitting and repairing tyres and tubes on a site |
| • implementation of requirements, procedures and techniques for the safe, effective and efficient completion of the removal, fitting and repair tyres and tubes on a site |
| • working with others to undertake and complete the removal, fitting and repair of tyres and tubes that meets all of the required outcomes |
| • consistent timely completion of removal, fitting and repair of tyres and tubes that safely, effectively and efficiently meets the required outcomes |

<p>| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
|                                                 | • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. |
|                                                 | • Customisation of assessment and delivery environment to sensitively accommodate cultural diversity. |
|                                                 | • Aboriginal people and other people from a non |</p>
<table>

<tbody>
<tr>
<td><strong>Assessment</strong></td>
<td>Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.</td>
</tr>
<tr>
<td><strong>Where applicable, physical resources should</strong></td>
<td>Where applicable, physical resources should include equipment modified for people with disabilities.</td>
</tr>
<tr>
<td><strong>Access</strong></td>
<td>Access must be provided to appropriate learning and/or assessment support when required.</td>
</tr>
</tbody>
</table>

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the removal, fitting and repair of tyres and tubes

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Work requirement and safety information and procedures may include:
- safe work procedures
- site procedures
- OEM specifications and recommendations
- data recording
- materials safety data sheets (MSDS)

### Information may include:
- enterprise operating procedures
- industry/workplace code of practice
- product manufacturer specifications
- customer requirements
- materials safety data sheets (MSDS)
- statutory requirements
- tagging information
- specifications for torque settings and tightening sequences
- inflation pressure
- tyre additive and ballast volumes

### Wheel assemblies may include:
- tyre and rim
- tyre and wheel mounted to a wheel

### Tools and equipment may include:
- hand tools, power tools
- wheel assemble lifting equipment
- specialised equipment such as:
  - buffs
  - spreaders
  - tyre removal equipment
  - immersion tanks

Methods should apply to the

• indoors or outdoors
following conditions and may include:

- level or uneven ground conditions
- hard or soft ground conditions
- workshop or mining area
- surface or underground
- wet or dry
- night or day
- standard or non standard heavy rims

Wheels/rims may include:

- safety lock rim
- split 'industrial' rim (forklift or cranes)
- rim or hub mounted multi piece rim
- one piece wheel/rim

Fastening systems may include:

- wedges
- nuts
- bolts
- washers
- studs
- cleats
- wedge bands
- spacer bands
- reducers

Workplace documentation related to inflation may include records of:

- inflation pressure
- gas used
- ballast added

| 1. Plan and prepare for servicing | 1.1. Access, interpret and apply *compliance documentation* relevant to the servicing of plants and equipment  
1.2. Receive, interpret and clarify *shift servicing requirements*  
1.3. Access and apply safety information and procedures throughout the work  
1.4. Conduct pre-start checks on the *service vehicle* in accordance with manufacturer and/or site procedures  
1.5. Check and top up service vehicle levels of fuel, lubricants and water as required in the service plan  
1.6. Maintain the *service bay/equipment*  
1.7. Identify *replacement parts and service tools* from the servicing schedule and obtain them from the appropriate stores area |
| 2. Service plant and equipment | 2.1. Coordinate and liaise to arrange details of preparatory activities, timing and location of servicing  
2.2. Carry out start-up, park-up and shut-down procedures on service vehicle in accordance with manufacturer and/or *site specific requirements*  
2.3. Operate service vehicle in accordance with manufacturer and/or site requirements  
2.4. Carry out servicing of plant and equipment in accordance with the service schedule, manufacturer specifications and site requirements.  
2.5. Dispose of used oils and lubricants in accordance with environmental regulations and site requirements  
2.6. Maintain completed servicing schedule and/or records in accordance with site requirements |
**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to service plant and equipment:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- read, interpret and apply technical information
- apply diagnostic techniques
- use relevant hand tools
- apply oil sampling procedures
- apply environmental constraints in service operations
- apply equipment records maintenance procedure
- apply environmentally sensitive fluids and materials disposal procedures

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to service plant and equipment:

- site and equipment safety requirements
- isolation and tag-out procedures
- emergency fire procedures
- equipment characteristics, technical capabilities and limitations
- fuel and lubricant applications and specifications
- filter applications and specifications
- additives applications and specifications
- hazardous chemical (Hazchem) systems
- hazard identification and response procedures
- site environmental requirements and constraints related to servicing
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for mobile lighting | 1.1. Access, interpret and apply *compliance documentation* relevant to the positioning and setting up of mobile lighting  
1.2. Receive, interpret and clarify shift changeover details  
1.3. Select appropriate type of equipment and/or attachments according to job specifications and to maximise efficiency and effectiveness of work activities  
1.4. Identify, address and report *potential hazards and risks*  
1.5. Select personal protective equipment appropriate for work activities  
1.6. Conduct equipment pre-start checks to ensure equipment is ready for operation  
1.7. Secure all equipment in preparation for towing in accordance with site procedures  
1.8. Identify, address and report *environmental issues*  
1.9. Communicate with other personnel using approved communication methods  
1.10. Adhere to emergency procedures to ensure safety of personnel, plant and equipment |
| 2. Position and activate lighting | 2.1. Isolate area using *physical barricades* and *signage*  
2.2. Position lighting to suit work activities and *site conditions*  
2.3. Test lights according to schedule, to include start-up and shutdown procedures  
2.4. Activate lights according to schedule  
2.5. Enhance visibility of site according to the position of the lighting  
2.6. Reassess risk to ensure enhanced illumination does not adversely affect safety of persons in the area |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to position and set up mobile lighting:

- apply legislative, organisation and site requirements and procedures
- apply diagnostic techniques
- apply hazard identification procedures
- apply record maintenance requirements
- organise work tasks
- apply defect reporting procedures
- apply safe work practices
- work in a team

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to position and set up mobile lighting:

- construction procedures
- emergency procedures
- environmental and heritage procedures
- equipment processes, technical capability and limitations
- equipment safety requirements
- hazardous goods procedures and consequences of spills
- isolation procedures
- lighting safety issues
- operational procedures and checks
- shutdown procedures
- start-up procedures
- towing procedures
- water and electricity hazards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| 5. Perform machinery maintenance                                             |
| 5.1. Minimise equipment breakdown by regular servicing and maintenance and performance of overhauls to manufacturer’s specifications |
| 5.2. Use tag out/lock out when servicing                                    |
| 5.3. Carry out minor servicing of equipment avoiding disruption to production |
| 5.4. Carry out routine inspection, servicing, lubrication and housekeeping tasks to manufacturer’s and/or site requirements |
| 5.5. Read and follow instructions on maintenance procedures, lubrication tasks, filter change/service accurately |
| 5.6. Identify and change wear parts, and record relative frequency of replacement |
| 5.7. Use **diagnostic and troubleshooting techniques** and take action       |
| 5.8. Identify operational faults in and maintain hydraulic systems          |
| 5.9. **Report** service and repair requirements and take action according to company procedures |

| 6. Perform field repairs                                                    |
| 6.1. Isolate and rectify equipment faults                                  |
| 6.2. Identify extent of repair needed and obtain spare parts                |
| 6.3. Identify, select and use tools required for maintenance and repairs correctly |
| 6.4. Return re-usable components or accessories in accordance with site requirements |
| 6.5. Review equipment and re-set in response to variations in production needs |
| 6.6. Recognise system faults and formulate appropriate responses within agreed time lines |
| 6.7. Maintain records of action taken in accordance with site requirements |
| 6.8. Dismantle, assess, service, repair, reassemble and test a given drill component in a safe manner |
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to carry out operational maintenance in the drilling industry:

- apply legislative, organisation and site requirements and procedures
- apply in service functions and procedures
- apply hazard identification procedures
- apply risk control procedures
- apply Job Safety Analysis (JSA)
- apply hazardous goods handling techniques
- apply tag out/lock out procedures
- apply defects reporting procedures
- apply safe work practices
- use hand and power tools
- apply communication and recording skills
- apply manual and mechanical handling techniques
- apply basic maintenance skills

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to carry out operational maintenance in the drilling industry:

- manufacturer’s maintenance requirements and procedures
- characteristics, technical capabilities and limitations of equipment
- environmental requirements
- mechanical/electrical/hydraulic systems and power tools characteristics
- isolation and tag out procedures
- lubricants and their uses
- all engine electric and hydraulic indicators and gauges
- transmission and drive systems
- recording and reporting requirements and procedures
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>

- eye and hearing protection
- general protective and reflective clothing

Checks may include:
- regular visual inspection including pre-start neutral for all control levers
- check on correct operation
- observation of display instruments and gauges function
- observation of recording instruments and gauges
- hydraulic system (including filters, strainers, hose, hose fitting and oils)
- air systems and filters
- vehicles (including wheels, tyres, clutch, brakes and fluid levels)
- batteries

Faults may be indicated by:
- indications on instruments or gauges
- noises
- vibrations
- smells
- overheated hydraulic motors or lines
- visual indicators (e.g. smoke)

Maintenance and storage of tools and consumables may include:
- effective storage
- use of desiccants
- store chemicals (cement, bentonite, and so on) in safe dry conditions secure from livestock

Consumables may include:
- oils - engine, gear box, hydraulic
- greases
- rig spare parts
- down hole tools spare parts

Machinery maintenance may include:
- operating checks
- daily checks
- programmed maintenance
- breakdown maintenance
- prescribed lubrication

Diagnostic and trouble shooting techniques may include:
- diagnostics built into equipment
- diagnostics applying externally
- troubleshooting procedures recommended by

RIISAM301A Test operational functions of vehicles and equipment

Modification History
Not applicable.

Unit Descriptor
This unit covers the testing of operational functions for vehicles and equipment in the coal and metalliferous mining industries. It includes: planning and preparing for testing, testing vehicles and equipment; and completing the testing sequence.

Application of the Unit
This unit is appropriate for those working in operational or maintenance roles, at worksites within:

- Coal mining
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for testing | 1.1. Access, interpret and apply *compliance documentation* relevant to testing of operational functions for vehicles and equipment  
1.2. Obtain, interpret and clarify work requirements before proceeding  
1.3. Access, interpret and apply geological and survey data required to complete the allocated work  
1.4. Identify and confirm *testing requirements*  
1.5. Identify and obtain *resources* required for the work  
1.6. *Prepare vehicle* to be worked on for the test  
1.7. Coordinate activities with others at the site prior to commencement of, and during, the work activity |
| 2. Test vehicles and equipment | 2.1. Carry out pre-start, start-up, shut-down and isolation procedures  
2.2. Test operational functions of the vehicle  
2.3. Move/relocate vehicle for testing purposes  
2.4. Identify and rectify faults where possible, or arrange for corrective action  
2.5. Act on or report monitoring systems warnings and alarms  
2.6. Recognise and respond to hazardous and emergency situations |
| 3. Complete the testing sequence | 3.1. Clean, maintain and store *equipment* and tools  
3.2. Restore worksite  
3.3. Complete records and documents |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to test operational functions of vehicles and equipment:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply technical information and drawings
- apply site safety procedures
- use hand and power tools
- carry out precision measurement
- access and use site inventory system
- identify and diagnose faults
- operate vehicles/equipment for test purposes
- interpret test results

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to test operational functions of vehicles and equipment:

- occupational health and safety requirements
- mine operational rules and procedures
- operations, characteristics, capabilities and limitations of mine vehicles and equipment
- diagnosis and fault finding techniques
- site equipment and maintenance documentation and procedures
- site inventory (parts) systems
- testing procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for testing the operational functions of vehicles and equipment
- implementation of requirements, procedures and techniques for the safe, effective and efficient testing of the operational functions of vehicles and equipment
- working with others to test the operational functions of vehicles and equipment that meets all of the required outcomes
- consistent timely completion of testing of operational functions of vehicles and equipment that safely, effectively and efficiently meets the required outcomes

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non
| English speaking background may have second language issues. |
| Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances. |
| Where applicable, physical resources should include equipment modified for people with disabilities. |
| Access must be provided to appropriate learning and/or assessment support when required. |

| Method of assessment |
| This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods: |
| written and/or oral assessment of the candidate's required knowledge |
| observed, documented and/or first hand testimonial evidence of the candidate's: |
| implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes |
| consistently achieving the required outcomes |
| first hand testimonial evidence of the candidate's: |
| working with others to test the operational functions of vehicles and equipment |

| Guidance information for assessment |
| Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisation and site requirements and procedures |
| | manufacturer's guidelines and specifications |
| | Australian standards |
| | code of practice |
| | Employment and workplace relations legislation |
| | Equal Employment Opportunity and Disability Discrimination legislation |

| Testing requirements may be identified through: | work orders or requests |
| | condition statements |
| | maintenance schedules |
| | initial diagnosis |
| | manufacturer specifications |

| Resources may include: | appropriate technical manuals |
| | information materials |
| | tools |

| Preparing vehicles may include: | locating |
| | positioning |
| | isolating |
| | cleaning |
| | checking for and removing hazardous materials/explosives |

| Vehicles may include | all machines involved in production/support roles at the mine site |

| Testing operational functions may include: | steering |
| | brakes |
| | lights |
| | exhaust emissions |
| | pneumatics |
| | hydraulics |
| | raw gas sampling |
| | production functionality in production mode |
| | movement |
### Equipment

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to service and hand over mine plant and machines:

- apply legislative, organisation and site requirements and procedures
- apply attachments securing procedures
- apply hazard identification procedures
- apply hierarchy of risk controls
- select appropriate equipment for task
- apply lever controls safely and effectively
- interpret communication
- apply service equipment operating procedures

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to service and hand over mine plant and machines:

- manufacturer's or equivalent specifications for conduct of external checks
- manufacturer's specification for securing attachments
- procedures for identifying hazards
- procedures for identifying hazard/risk control measures
- the hierarchy of risk control measures
- safeguards for ensuring personnel safety and protection
- requirements for appropriate path for movement for loads and equipment/vehicles
- permits required to carry out work
- manufacturer's specifications/operational manual requirements for pre-operational and post start-up checks
- site communication signals
- site procedures for reporting defects
- safe operating limits of hydraulic shovel/excavator
- site safe operating speed limits
- test load parameters
- requirements for stability of materials
- emergency procedures
- potential parking hazards
- manufacturer's specifications for shutdown and isolation of hydraulic
shovel/excavator
- site post-operational check requirements
- replacement parts and service tools and their source
- manufacturer's and/or site requirements for operating service equipment
- manufacturer's specifications and site servicing schedule requirements for plant and equipment
- environmental regulations and site rules for disposal of used oil and lubricant
- site requirements for the maintenance and completion of servicing schedule and/or records
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>

<td></td>
</tr>
</tbody>
</table>
Driving the machine to and in the work area may include:

- selecting correct controls
- raising attachments smoothly
- ensuring travel direction is clear of personnel and obstacles
- selecting appropriate route
- travelling at a safe speed
- carrying bucket at safe travelling height and crowded back
- the test load is the approved load designated for testing purposes under legislation

Safe and effective operation of equipment may include ensuring that:

- the force applied to shift load is appropriate to bulk of material
- the path of movement is monitored for obstacles and hazards
- hazard prevention control measures are selected and applied to ensure safe movement of load

Parking of plant/machinery may include ensuring that:

- vehicle/equipment safety locks are in place
- implements/attachments are rendered safe
- access ways are clear
- equipment/vehicle is away from overhangs/fuelling site
- excavations are fenced off and made secure
- securing against unauthorised movement

Post-operation checks may include:

- minor service requirements
- defects and damage reports

RIISAM303A Shut down dredge for operator maintenance

Modification History
Not applicable.

Unit Descriptor
This unit covers shutting down of dredges for operator maintenance in the resources and infrastructure industries. It includes: taking dredge off feed; moving boat lines; checking the ladder; conducting operational maintenance and housekeeping activities.

Application of the Unit
This unit is appropriate for those working in operational or maintenance roles, at worksites within:
- Civil Construction
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Take dredge off feed                      | 1.1. Access, interpret and apply *compliance documentation* relevant to the shutting down of dredges for operator maintenance  
  1.2. Raise and safely secure ladder above water  
  1.3. Conduct retreat away from working face to safe location to avoid brunt of possible face fall  
  1.4. Flush out *plant*  
  1.5. Adjust *spuds* and/or cable lengths to ensure dredge remains level on pond |
| 2. Move boat line                             | 2.1. Disconnect main power supply to dredge and *plant*  
  2.2. Move float line to new position ensuring enough slack is available for move |
| 3. Check ladder                               | 3.1. Confirm ladder is above water and safely secured  
  3.2. *Check ladder* at scheduled time to minimise downtime according to operational *plant* requirements  
  3.3. Inspect swing sheave action to assess ladder swing performance  
  3.4. Inspect *cutter* components and flush flow  
  3.5. Maintain communication with dredge operator and maintenance personnel using approved communication methods |
| 4. Conduct operational maintenance           | 4.1. *Visually inspect* dredge to identify faults  
  4.2. Conduct routine operational servicing to ensure peak performance of dredge  
  4.3. Repair or refer faults to relevant personnel for action |
| 5. Conduct housekeeping activities           | 5.1. *Clean* equipment  
  5.2. Clean and store attachments and equipment  
  5.3. Complete all required records and documentation accurately and promptly |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to shutdown dredge for operator maintenance:

- apply legislative, organisation and site requirements and procedures
- apply diagnostic techniques
- apply decision making processes
- direct operations
- apply hazard identification procedures
- handle hazardous goods
- interpret ground conditions
- interpret documents, plans, reports, maps, specifications
- apply record maintenance requirements
- apply operational monitoring
- organise work tasks
- apply defect reporting requirements
- employ safe work practices
- select and fit personal protective equipment
- work in a team
- apply troubleshooting techniques
- use communications equipment
- use computer systems

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to shutdown dredge for operator maintenance:

- anchoring procedures
- anchor move procedures
- dredge preparation procedures
- dredging clean-up procedures
- emergency procedures
- environmental and heritage procedures
- equipment processes, technical capability and limitations
- equipment safety requirements
- hazardous goods procedures and consequences of spills
- indicator readings
- isolation procedures
- ladder swing capability and limitations
- ladder maintenance procedures
- site operational system
- monitoring procedures
- night and day working procedures
- OHS procedures
- open cut procedures - dredging
- operational procedures and checks
- shutdown procedures
- site procedures
- site safety requirements
- sounding procedures
- float line movement procedures
- start-up procedures
- centre-line procedures
- dredge manoeuvring procedures
- plant move procedures
- retreat procedures
- side-line cable replacement procedures
- working face dangers

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisation and site requirements and procedures  
• manufacturer’s guidelines and specifications  
• Australian standards  
• code of practice  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
| --- | --- |
| Face fall may include: | • collapse on top of dredge  
• on side or at rear |
| Plant (processor) requirements may include: | • amount of tonnes  
• feed requirements  
• flush out requirements |
| Spuds may include: | • auxiliary spud (rear of pontoon)  
• caterpillar hoses  
• main spud  
• spud  
• spud carriage winch  
• working spud carriage |
| Adjustments to spuds may include: | • spud lifts and drops (varying degrees) |
| Ladder checks may include: | • automatic lubricator  
• barrel  
• cutlass bearing  
• cutter  
• deck hose used in emergency  
• dredge main pump  
• gland water  
• hydraulic oil lines  
• ladder angle indicating pendulum transmitter  
• ladder angle striker and sensor limit switches  
• ladder winch sheaves  
• mining hose |

RIISAM304A Install, commission and maintain major conveyor equipment and systems

Modification History
Not applicable.

Unit Descriptor
This unit covers the installation, commissioning and maintenance of major conveyor equipment and systems in the coal mining industry. It includes: planning and preparing for work; installing conveyor equipment; commissioning conveyor systems; carrying out operator maintenance.

Application of the Unit
This unit is appropriate for those working in operational roles, in surface and underground sites within:

- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
Elements and Performance Criteria

| 1. Plan and prepare for work | 1.1. Access, interpret and apply *compliance documentation* relevant to the installation, commissioning and maintenance of major conveyor equipment and systems  
1.2. Obtain, interpret and clarify/confirm *work requirements* before proceeding  
1.3. Access, interpret and apply geological and survey data required to complete the allocated work  
1.4. Obtain, transport and prepare materials and resources required for the work |
| 2. Install conveyor equipment | 2.1. Coordinate activities with others at the site prior to commencement of, and during, the work activity  
2.2. Apply and monitor *isolation and tag out* procedures to establish and maintain a safe work environment throughout the job  
2.3. *Install* conveyor equipment and systems  
2.4. Recognise and respond to hazardous and emergency situations  
2.5. Perform work in accordance with agreed plan and outcomes and within the operating capacities of the allocated equipment |
| 3. Commission conveyor systems | 3.1. Carry out inspection of *conveyors* and *belts* and *auxiliary componentry* to ensure compliance with relevant technical specifications  
3.2. Carry out start-up and shut-down procedures  
3.3. Test and test run equipment to ensure compliance with manufacturer instructions and site procedures |
| 4. Carry out operator maintenance | 4.1. Carry out conveyor equipment inspections and fault finding  
4.2. Carry out routine *operational maintenance*, servicing, lubrication and housekeeping tasks  
4.3. Carry out minor *maintenance* to manufacturer’s instructions and site requirements |
<p>| | |</p>

Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery
environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

<table>

RIISAM305A Repair and splice conveyor belting

Modification History
Not applicable.

Unit Descriptor
This unit covers repairing and splicing conveyor belting in the coal and metalliferous mining and extractive industries. It includes: planning and preparing for work; carrying out splicing operations; returning conveyors to service; and completing the work sequence.

Application of the Unit
This unit is appropriate for those working in operational or maintenance roles, at worksites within:
- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>

<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for work | 1.1. Access, interpret and apply *compliance documentation* relevant to the repairing and splicing conveyor belting  
1.2. Obtain, interpret and clarify/confirm *work requirements* before proceeding  
1.3. Access, interpret and apply geological and survey data required to complete the allocated work  
1.4. Identify and obtain resources, including appropriate technical manuals and information, *equipment*, materials and *tools* required for the work  
1.5. Locate, position, make safe and clean the *belting* in preparation for work  
1.6. Coordinate activities with others at the site prior to commencement of, and during, the work activity |
| 2. Carry out splicing operations | 2.1. Select tools and equipment appropriate to the tasks and correctly use and apply throughout the task  
2.2. Complete *splicing* operation or belt *repairs* without damage to adjacent structures or equipment |
| 3. Return conveyor to service | 3.1. Carry out inspection of conveyor and auxiliary equipment to ensure compliance with relevant technical specifications  
3.2. Test and test run conveyor belting to ensure compliance with manufacturer/site procedures  
3.3. Return conveyor to service |
| 4. Complete the work sequence | 4.1. Clean, service and store equipment and tools  
4.2. Restore worksite  
4.3. Complete records and documents |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to repair and splice conveyor belting:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply technical information
- apply site safety procedures
- use hand and power tools
- use marking out techniques
- sharpen knives
- operate pulling and lifting equipment
- dispose of environmentally sensitive oils, fluids and materials

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to repair and splice conveyor belting:

- legislative and site operation safety requirements and procedures
- site operational rules and procedures
- operations, characteristics, capabilities and limitations of vulcanising presses
- specialised cutting tools and conveyor belt types
- slinging and lifting procedures and related safety requirements
- hazardous chemicals
- site equipment and maintenance documentation and procedures
- site inventory (parts) systems
- marking out procedures
- site environmental requirements and constraints related to conveyor belting
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for repairing and splicing conveyor belting
- implementation of requirements, procedures and techniques for the safe, effective and efficient repairing and splicing of conveyor belting
- working with others to repair and splice conveyor belting that meets all of the required outcomes
- consistent timely repair and splicing of conveyor belting that safely, effectively and efficiently meets the required outcomes

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second
language issues.

- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to repair and splice conveyor belting

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisation and site requirements and procedures |
|                                             | manufacturer’s guidelines and specifications |

| 2. Carry out service and repairs | 2.1. Resolve coordination requirements with others at the site prior to commencing and during work activities  
2.2. Carry out inspection of conveyors, feeders and hoppers, fault find and report outcomes to appropriate person  
2.3. Select and use servicing and maintenance tools in a safe, effective and efficient manner  
2.4. Select and operate servicing and maintenance items safely, effectively and efficiently  
2.5. Carry out safe effective and efficient servicing of conveyors, feeders and hoppers in accordance with the work requirements  
2.6. Carry out the safe, effective and efficient maintenance of conveyors, feeders and hoppers in accordance with the work requirements  
2.7. Recognise and respond to *hazardous and* |
2.8. Dispose of used oil, lubricant and other waste in accordance with site requirements
2.9. Return and secure all tools and re-usable items
2.10. Maintain servicing and maintenance records
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to service and maintain conveyors, feeders and hoppers:

- apply legislative, organisation and site requirements and procedures
- apply site risk, statutory compliance, health, safety, environmental, quality and communication requirements and procedures
- apply site and manufacturer's servicing and maintenance requirements and procedures
- apply communication procedures with those providing support
- apply work area and equipment inspection procedures
- apply work area safeguarding options and requirements
- apply isolation and lock-out requirements and procedures
- apply hazard and emergency procedures
- apply site service and maintenance reporting requirements and procedures
- apply procedures for working in confined spaces
- work wearing appropriate personal protective equipment
- use tools

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to service and maintain conveyors, feeders and hoppers:

- site risk, statutory compliance, health, safety, environmental, quality and communication requirements and procedures
- site and manufacturer's servicing and maintenance requirements and procedures
- items required to be used in the servicing and maintenance
- characteristics of the items required in the servicing and maintenance
- tools required for the servicing and maintenance
- servicing and maintenance support requirements and availability
- site work area inspection requirements
- site work area safeguarding options and requirements
- site isolation and lock-out requirements and procedures
- site hazard and emergency procedures
- site service and maintenance reporting requirements and procedures
- site service and maintenance record procedures
- site requirements and procedures for working in confined spaces
- site requirements and procedures for working in isolation
- site requirements for the use of personal protection equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
|                                               | • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. |
|                                               | • Customisation of assessment and delivery environment to sensitively accommodate cultural diversity. |
|                                               | • Aboriginal people and other people from a non
English speaking background may have second language issues.

- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to service and maintain conveyors, feeders and hoppers

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

<table>
<thead>
<tr>
<th>may include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• legislative, organisation and site requirements and procedures</td>
</tr>
<tr>
<td>• manufacturer's guidelines and specifications</td>
</tr>
<tr>
<td>• Australian standards</td>
</tr>
<tr>
<td>• code of practice</td>
</tr>
<tr>
<td>• Employment and workplace relations legislation</td>
</tr>
<tr>
<td>• Equal Employment Opportunity and Disability Discrimination legislation</td>
</tr>
</tbody>
</table>

### Servicing may include:

| • inspection |
| • cleaning |
| • clearing blockages |
| • greasing |
| • checking and topping-up fluids, including: |
|   • coolants |
|   • lubricants |
|   • hydraulic oils |

### Maintenance may include:

| • replacing wear components, including; |
| • skirting material |
| • chute liners |
| • feeder liners |
| • replacing v-belts |
| • tensioning fasteners, v-belts and conveyor belts |
| • track conveyors |
| • temporary repairs to conveyor belts |

### Work requirements may come from briefings, handovers, and work orders and may include:

| • service and maintenance schedules |
| • production requirements |
| • nature and scope of tasks |
| • achievement targets |
| • operational conditions |
| • operational requirements |
| • site layout and out of bounds areas |
| • worksite inspection requirements |
plant or equipment defects  
hazards and potential hazards  
coordination requirements or issues

**Items** may include:
- replacement parts
- screening media
- fasteners
- packing materials

**Tools** may include:
- hand tools
- power tools
- special tools

**Support** may include:
- other site personnel
- contractors
- cranes
- other lifting equipment

**Inspect and prepare work area** may include:
- identification of hazards
- selection and implementation of control measures for the hazards identified
- safeguarding site and non-site personnel by:
  - erection of barricades and posting of signs
  - selection of appropriate equipment to ensure personnel safety and protection

**Coordination with others** may include with:
- stores personnel
- processing plant operators
- mobile plant operators
- other maintenance personnel

**Hazardous and emergency situations** may include:
- confined spaces
- working alone
- personal injury
- electrical
- dust
- noise
- environmental
- chemical
- fire

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to service and maintain screens:

- apply legislative, organisation and site requirements and procedures
- apply site risk, statutory compliance, health, safety, environmental, quality and communication requirements and procedures
- apply site and manufacturer's requirements and procedures for servicing and maintenance of the site's screens
- apply communication procedures with those providing support
- apply work area and equipment inspection procedures
- apply work area safeguarding options and requirements
- apply isolation and lock-out requirements and procedures
- apply hazard and emergency procedures
- apply site service and maintenance reporting requirements and procedures
- apply procedures for working in confined spaces
- work wearing appropriate personal protective equipment
- use tools

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to service and maintain screens:

- site risk, statutory compliance, health, safety, environmental, quality and communication requirements and procedures
- site and manufacturer's requirements and procedures for servicing and maintenance of the site's screens
- items required to be used in the servicing and maintenance of the site's screens
- characteristics of the items required in the servicing and maintenance of the site's screens
- tools required for the servicing and maintenance of the site's screens
- site screen servicing and maintenance support requirements and available
- site work area inspection requirements
- site work area safeguarding options and requirements
- site isolation and lock-out requirements and procedures
- site hazard and emergency procedures
- site service and maintenance reporting requirements and procedures
- site service and maintenance record procedures
- site requirements and procedures for working in confined spaces
- site requirements and procedures for working in isolation
- site requirements for the use of personal protective equipment

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to service and maintain pumps:

- apply legislative, organisation and site requirements and procedures
- apply site risk, statutory compliance, health, safety, environmental, quality and communication requirements and procedures
- apply site and manufacturer's requirements and procedures for servicing and maintenance of the site's pumps
- apply communication procedures with those providing support
- apply work area and equipment inspection procedures
- apply work area safeguarding options and requirements
- apply isolation and lock-out requirements and procedures
- apply hazard and emergency procedures
- apply site service and maintenance reporting requirements and procedures
- apply procedures for working in confined spaces
- work wearing appropriate personal protective equipment
- use tools

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to service and maintain pumps:

- site risk, statutory compliance, health, safety, environmental, quality and communication requirements and procedures
- site and manufacturer's requirements and procedures for servicing and maintenance of the site's pumps
- items required to be used in the servicing and maintenance of the site's pumps
- characteristics of the items required in the servicing and maintenance of the site's pumps
- tools required for the servicing and maintenance of the site's pumps
- site pump servicing and maintenance support requirements and available
- site work area inspection requirements
- site work area safeguarding options and requirements
- site isolation and lock-out requirements and procedures
- site hazard and emergency procedures
- site service and maintenance reporting requirements and procedures
- site service and maintenance record procedures
- site requirements and procedures for working in confined spaces
- site requirements and procedures for working in isolation
- site requirements for the use of personal protective equipment
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

</tr>
</tbody>
</table>
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to service and maintain pumps

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Servicing may include:
- inspection
- cleaning
- clearing blockages
- greasing
- checking and topping-up fluids, including:
  - coolants
  - lubricants
  - hydraulic oils

Maintenance may include:
- replacing wear components, including pump seals, liners and impellors
- replacing v-belts
- tensioning fasteners and v-belts
- adjust pump settings

Work requirements may come from briefings, handovers, and work orders and may include:
- service and maintenance schedules
- production requirements
- nature and scope of tasks
- achievement targets
- operational conditions
- operational requirements
- site layout and out of bounds areas
- worksite inspection requirements
- plant or equipment defects
- hazards and potential hazards
- coordination requirements or issues
Items may include:
- replacement parts
- fasteners
- packing materials

Tools may include:
- hand tools
- power tools
- special tools

Support may include:
- other site personnel
- contractors
- cranes
- other lifting equipment

Inspect and prepare work area may include:
- identification of hazards
- selection and implementation of control measures for the hazards identified
- safeguarding site and non-site personnel by:
  - erection of barricades and posting of signs
  - selection of appropriate equipment to ensure personnel safety and protection

Coordination with others may include with:
- stores personnel
- processing plant operators
- mobile plant operators
- other maintenance personnel

Hazardous and emergency situations may include
- confined spaces
- working alone
- personal injury
- electrical
- dust
- noise
- environmental
- chemical
- fire

RIISAM310A Install and commission plant, machinery and services

Modification History
Not applicable.

Unit Descriptor
This unit covers installing and commissioning of plant, machinery and services in the metalliferous mining and extractive industries. It includes: identifying the plant, machinery and services need; selecting plant, machinery and services delivery equipment; installing plant, machinery and services; and commissioning plant, machinery and services.

Application of the Unit
This unit is appropriate for those working in operational and maintenance roles, at worksites within:
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify plant, machinery and services need | 1.1. Access, interpret and apply *compliance documentation* relevant to the installing and commissioning of *plant, machinery and services*
| | 1.2. Access and clarify the *site's requirements and procedures* relevant to the acquisition of plant, machinery and services equipment
| | 1.3. Seek input and advice from *relevant parties* to assist in the identification of appropriate type of plant, machinery and services equipment
| | 1.4. Identify *parameters* to be applied in the selection of the plant, machinery and services equipment based on *relevant requirements*
| | 1.5. Draw up specifications for plant, machinery and services equipment that meet the requirements of the identified parameters and are in accordance with relevant legislative and mine requirements |
| 2. Select plant, machinery and mine services delivery equipment | 2.1. Identify options that meet the selection parameters
| | 2.2. Gather, validate and assess the data on the various options relevant to the selection parameters
| | 2.3. Analyse the various options and select the options that best meet the required parameters
| | 2.4. Procure/obtain and organise delivery of plant, machinery and mine services delivery equipment to the mine-site |
| 3. Install plant, machinery and services | 3.1. Obtain, transport and prepare materials and resources required for installation in accordance with plans and relevant manufacturer's or site requirements
| | 3.2. *Coordinate* activities with relevant parties at the site prior to commencement of, and during installation and commissioning
| | 3.3. Apply and monitor isolation procedures to establish and maintain a safe work environment throughout installation |
### 3. Install plant, machinery and services in accordance with manufacturer/supplier specifications, mine procedures and safety requirements

- 3.4. Install plant, machinery and services in accordance with manufacturer/supplier specifications, mine procedures and safety requirements
- 3.5. Recognise and respond to hazardous and emergency situations in accordance with manufacturer's instructions and site procedures
- 3.6. Perform installation work in accordance with agreed plan and outcomes and within the operating capacities of the plant, machinery and services

### 4. Commission plant, machinery and services

| 4.1. Carry out inspection of installed plant and machinery to ensure that it complies with relevant technical specifications and safety requirements |
| 4.2. Carry out pre-start checks according to plant and machinery configurations and system requirements |
| 4.3. Test and test run plant and machinery to ensure compliance with manufacturer/supplier instructions and site mine operational requirements |
| 4.4. Configure and test the operation and capacity of mine services delivery equipment/lines |
| 4.5. Return plant and machinery to service in accordance with site procedures and practices and environmental requirements |
| 4.6. Develop and document plant and machinery inspection and maintenance schedules in accordance with manufacturer/supplier instructions |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to install and commission small mine plant, machinery and services:

- apply legislative, organisation and site requirements and procedures
- apply operational safety procedures
- access, interpret and apply technical and safety information
- interpret and apply survey information and plans
- apply plant and machinery operating procedures
- apply communications procedures and coordinate activities with others
- apply equipment records maintenance requirements
- apply diagnostic/faultfinding techniques
- use hand tools
- apply environmental compliance requirements
- interpret tender documents
- draft and interpret contract management documents
- apply and manage purchasing procedures
- apply contract management requirements and procedures
- assess operating capacity
- assess the compatibility of items of plant and equipment
- determine ownership cost
- determine operating cost targets
- determine product support requirements

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to install and commission small mine plant, machinery and services:

- statutory compliance requirements
- development approval, mining licences (or equivalent)
- OHS requirements
- environmental management requirements
- quality requirements
- purchasing requirements and procedures
- capital expenditure requirements and procedures
- contract management requirements and procedures
- administration requirements (including records and reports)
- plant and equipment characteristics
- specification requirements
- contract requirements
- operating cost record and analysis procedures
- product support requirements
- market information
- operational requirements
- approved suppliers
- site machinery and plant safety requirements
- legislative and site requirements and procedures
- geological, geographical and survey data
- mining operations
- equipment characteristics, technical capabilities and limitations
- operational and maintenance procedures
- risk management procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

RIISAM311A Maintain winder equipment

Modification History
Not applicable.

Unit Descriptor
This unit covers maintaining winder equipment in the coal and metalliferous mining industries. It includes: preparing for winder equipment inspection and maintenance; conducting winder equipment maintenance and post-maintenance activities.

Application of the Unit
This unit applies in all contexts to the maintenance of winder equipment, not including shafts. It is appropriate for those working in a operational or maintenance roles, at worksites within:

- Coal mining
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to maintain winder equipment:

- apply legislative, organisation and site requirements and procedures
- apply standard operating practices and procedures around shafts
- apply safe work practices
- apply procedures to monitor critical components
- apply communication and reporting requirements and procedures
- use hand and power tools

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to maintain winder equipment:

- shaft winder operations
- the key areas of mine safety and health legislation pertaining to plant and winding
- winder types
- shaft infrastructure
- defects which have potential to occur in winder equipment/installations
- maintenance management requirements and procedures for winding systems
- trip and fault conditions and other abnormal conditions
- site emergency procedures
- reporting and recording requirements for winder drivers, electrical and mechanical maintenance personnel
- environmental procedures associated with maintenance of winders
- equipment processes that are applicable, including technical capability and limitations
- energy isolation methods
- operation of protective devices in shaft and winder operations
- mine ventilation system
- site procedures
- in-shaft communications equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Winder inspection/maintenance may include:
- winder performance tests
- monitoring of protective devices
- rope tensioning or replacement or examination
- replacement or examination of rope attachments
- conveyance change-over
- lubrication
- winder controller maintenance
- sheave wheels
- winder drums
- head frames
- hydraulics
- electrical and electronic control systems
- computer and communication systems

Winding operations include winder operations in:
- drifts
- tunnels
- slopes
- inclines

Site procedures may include:
- clean up
- equipment shutdown and isolation procedures
- evacuation procedures
- First Aid
- notifying relevant authorities
- permit-to-work systems
- safety equipment
- use of personal protective equipment
- communication procedures (e.g. with winder operator)
- portable electric apparatus procedures
- fall arrestor and harness procedures
- confined spaces

**Equipment cleaning** methods may include:

- degreasing
- forced air
- steam cleaning
- vacuum
- water
- rags and cotton waste
- solvents

**Potential hazards and risks** may include:

- communication failure
- falling objects
- movement of equipment
- plant failure
- power failure
- spillage
- unauthorised personnel
- visibility
- explosion
- asphyxiation and drowning

**Environmental issues** may include:

- dust
- water
- heat
- oxygen deficiency
- vibration
- fumes
- noise
- oil spills
- flammable and noxious gases
- flammable dust

2. Conduct shaft maintenance

2.1. Conduct work safely and efficiently and according to *site procedures*

2.2. Perform all necessary isolations and tagging

2.3. Establish communication system and perform checks

2.4. Communicate with winder driver and others involved in maintenance of shafts and structures to ensure clear and safe maintenance operations

2.5. Ensure person in charge of winder has placed winder in inspection/maintenance mode, including "inchng"

2.6. Perform inspection and maintenance work from top of conveyance

2.7. Carry out maintenance in accordance with site procedures and/or maintenance instructions

2.8. Complete inspection/maintenance and record any follow-up action in accordance with maintenance system requirements

2.9. Ensure all safety devices are in place and any tags placed removed before shaft is returned to service

2.10. Remove overhead protection and guard rails

2.11. Ensure area is clear of foreign materials, communication equipment and tools, and meets an acceptable standard of cleanliness

3. Conduct post-maintenance activities

3.1. Complete all required documentation

3.2. Ensure shaft operations and structures are tested and monitored

3.3. Advise appropriate personnel when maintenance activities are concluded
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to inspect and maintain shafts and structures:

- apply legislative, organisation and site requirements and procedures
- apply standard operating practices and procedures around shafts
- apply safe work practices
- apply procedures for operating and maintaining shafts and structures
- apply procedures of monitoring critical components
- apply communication and reporting requirements and procedures
- use hand and power tools

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to inspect and maintain shafts and structures:

- shaft operations
- shaft construction and infrastructure
- shaft geology
- the key areas of mining acts and regulations pertaining to winding
- shaft installations
- defects which have potential to occur in shafts and infrastructure
- trip and fault procedures and other abnormal conditions
- site emergency procedures
- reporting and recording requirements for winder drivers, and electrical and mechanical maintenance personnel
- environmental procedures associated with shaft maintenance
- equipment processes that are applicable, including technical capability and limitations
- energy isolation methods
- operation of protective devices in shaft and winder operations
- mine ventilation system
- site procedures
- skip and personnel cage operations
- in-shaft communications methods and equipment
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<td>Access must be provided to appropriate learning and/or assessment support when required.</td>
</tr>
</tbody>
</table>

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to inspect and maintain shafts and structures

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>
<thead>
<tr>

Co-requisite units
Not applicable.
RIISAM313A Monitor, inspect and service ropes and attachments

Modification History
Not applicable.

Unit Descriptor
This unit covers the monitoring, inspection and servicing of ropes and attachments in the coal and metalliferous mining industries. It includes: preparing for, conducting inspection and service: and conducting post-service and inspection activities.

Application of the Unit
This unit is appropriate for those working in operational and maintenance roles, in underground mining operations, within:
- Coal mining
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for inspection and servicing | 1.1. Access, interpret and apply compliance documentation relevant to the monitoring, inspection and servicing of ropes and attachments  
1.2. Receive, interpret and clarify inspection and/or servicing schedules and details  
1.3. Select personal protective equipment appropriate for work activities  
1.4. Perform equipment and work area pre-start checks to ensure equipment is ready for inspection and/or servicing  
1.5. Check records for outstanding inspections and/or maintenance and take appropriate action  
1.6. Identify the scope of the inspection, correct ropes and attachments, inspection and servicing tools, equipment and consumables according to the service schedule  
1.7. Identify, address and report potential hazards and risks  
1.8. Coordinate and liaise with appropriate persons concerning the work  
1.9. Establish that start-up procedures have been completed by the winder driver, and the area is clear for the work  
1.10. Identify, address and report environmental issues  
1.11. Establish emergency contingency plans with winder driver should an underground emergency arise, and adhere to site emergency procedures  
1.12. Ensure area is properly ventilated before entry into work area |
| 2. Conduct inspection and service | 2.1. Perform necessary isolation and tagging  
2.2. Carry out servicing and inspections of ropes according to site procedures  
2.3. Inspect, classify and report anomalies and defects  
2.4. Complete service actions and record any follow-up action required  
2.5. Ensure all physical guards and safety signs |
| 3. Conduct post-service/inspection activities | 3.1. Complete all required documentation  
3.2. Return all tools and equipment to storage |

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to monitor, inspection and servicing of ropes and attachments:

- apply legislative, organisation and site requirements and procedures
- apply auxiliary equipment operation, servicing, cleaning requirements and procedures
- apply equipment operation, servicing and cleaning requirements and procedures
- use of hand and power tools and measuring instruments

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to monitor, inspection and servicing of ropes and attachments:

- winder operations
- rope and attachment types, their construction and their defects
- the key areas of mining acts and regulations pertaining to winding
- inspection and servicing regimes for ropes and attachments
- use of precision measuring and inspection instruments such as vernier caliper, micrometer screw gauge, straight edge, hand lens
- winder type and operations
- shaft installations
- possible defects in winder equipment/installations
- trip and fault procedures and abnormal conditions
- site winder emergency procedures
- recording and logging requirements for rope servicing and inspection
- environmental procedures
- equipment processes, technical capability and limitations
- equipment safety requirements
- isolation procedures
- operation of protective devices for shafts
- operational procedures and checks
- site procedures
- site safety requirements
- skip and personnel cage operations
- start-up and shutdown procedures
• underground procedures
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Inspection and servicing of winder ropes and attachments and may include:

- visual inspection for defects such as wear, kinks, bends, corrosion, cracks, damage or loss of components, wire breaks, deterioration, distortion, loss of metal, nicks, corkscrewing, bird-caging, structural damage
- measurement of rope diameter/loss of metallic area
- measurement of rope lay length
- visual inspection of moving rope
- recording of monitoring and inspection results

#### Inspection and servicing does not include:

- rope replacement
- capping
- cropping
- destructive testing
- non-destructive examination/testing using:
  - magnetic detecting instruments
  - liquid penetrant
  - magnetic particle
  - eddy current
  - ultrasonic or radiography methods

#### Rope servicing may include:

- cleaning to remove oil and other lubricants
- lubrication (drum winders)
- marking location of rope defects

#### Potential hazards and risks may include:

- communication failure
- falling objects

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. |
| Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1. Prepare for equipment maintenance** | 1.1. Access, interpret and apply *compliance documentation* relevant to the managing of equipment maintenance in the oil and gas drilling industry  
1.2. Obtain, confirm and apply *work instructions* for the allocated task  
1.3. Identify, manage and report all potential *hazards*  
1.4. Resolve *coordination requirements* with others at the site prior to commencing and during work activities |
| **2. Check new and used equipment** | 2.1. Test materials and equipment regularly  
2.2. Monitor availability of new and used equipment  
2.3. Evaluate *costs/benefits* of replacing equipment, and recommend/implement the purchase/lease of replacement equipment  
2.4. Check *stock levels* and order *spare parts and consumables* in accordance with company procedure  
2.5. Maintain communication between operators, company and suppliers  
2.6. Check manufacturer's manuals/company procedures for currency and relevancy |
| **3. Plan and organise maintenance and overhauls** | 3.1. Determine type and frequency of maintenance tasks  
3.2. Organise equipment maintenance and service to ensure availability is maintained and downtime minimised  
3.3. Monitor performance of maintenance *schedules* and take corrective action if necessary  
3.4. Arrange sources for obtaining back up or replacement equipment  
3.5. Allocate personnel to carry out maintenance tasks |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to manage oil and gas drilling equipment maintenance:

- apply legislative, organisation and site requirements and procedures
- apply stocks checking and maintenance requirements and procedures
- apply cost benefit analysis
- apply equipment/consumables order procedures
- apply reporting procedures

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to manage oil and gas drilling equipment maintenance:

- equipment and ancillary attachment characteristics, technical capabilities and limitation
- wear parts and relative frequency of replacement
- purpose of stock control
- financial transactions (e.g. cash flow, cost benefit analysis)
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
|---|---|
| | • knowledge of the requirements, procedures and instructions for managing oil and gas drilling equipment maintenance
| | • implementation of requirements, procedures and techniques for the safe, effective and efficient management of oil and gas drilling equipment maintenance
| | • working with others to undertake and complete oil and gas drilling equipment maintenance that meets all of the required outcomes
| | • consistent timely completion of oil and gas drilling equipment maintenance that safely, effectively and efficiently meets the required outcomes

#### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Evidence for assessment is best gathered using the outcomes of products and processes of the workplace context.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery
| **Method of assessment** | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete oil and gas drilling equipment maintenance |

</table>
| 1. Plan, prepare for and initiate maintenance management procedures | 1.1. Access, interpret and apply *compliance documentation* relevant to applying the maintenance plan  
1.2. Access and share the *geological and survey data* required to complete the tasks  
1.3. Prepare an action plan, in consultation with involved people, which makes best use of the available *resource* and takes into account all applicable requirements and procedures  
1.4. Acquire and make available the necessary resources for the safe, effective and efficient conduct of maintenance management task in accordance with the *site plant, equipment and infrastructure maintenance management plan* and other requirements and procedures  
1.5. Issue clear and timely *instructions* to people involved in conducting maintenance tasks to ensure the safe, effective and efficient execution of the tasks |
| 2. Monitor, adjust and report on execution of the maintenance management plan | 2.1. Ensure safe, effective and efficient execution of tasks in accordance with the maintenance management plan and other requirements and procedures  
2.2. Monitor site plant, equipment and infrastructure maintenance management plan performance to ensure achievement of planned outcomes  
2.3. Initiate adjustments to work programs to take into account non achievement of planned outcomes  
2.4. Complete and submit reports as required by the maintenance management plan and other requirements and procedures  
2.5. Recommend changes to improve the safety, efficiency and effectiveness of the site plant, equipment and infrastructure maintenance management plan |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to apply site plant, equipment and infrastructure maintenance management plan:

- apply legislative, organisation and site requirements and procedures
- provide team leadership
- apply procedures for choosing appropriate operational and construction techniques
- apply procedures for choosing and assigning appropriate plant and equipment
- apply work plans development and administration procedures

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to apply the site plant, equipment and infrastructure maintenance management plan:

- site risk, legislative compliance, health, safety, environmental, quality and communication requirements and procedures
- the site plant, equipment and infrastructure maintenance management plan
- team leadership techniques
- operational techniques required for execution of the plan
- plant and equipment capabilities
- work planning techniques
- work monitoring methods
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• knowledge of the requirements, procedures and instructions for applying the site plant, equipment and infrastructure maintenance system</td>
<td></td>
</tr>
<tr>
<td>• implementation of appropriate procedures and techniques for the safe, effective and efficient application of the site plant, equipment and infrastructure maintenance system</td>
<td></td>
</tr>
<tr>
<td>• working with others to plan, prepare and apply the site plant, equipment and infrastructure maintenance system</td>
<td></td>
</tr>
<tr>
<td>• provision of clear and timely instruction and supervision by the individual of those involved in the application of the site plant, equipment and infrastructure maintenance system</td>
<td></td>
</tr>
<tr>
<td>• evidence of the consistent successful application of the site plant, equipment and infrastructure maintenance system</td>
<td></td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to plan, prepare and apply the site plant, equipment and infrastructure maintenance system
  - provision of clear and timely instruction and supervision by the individual of those involved in the application of the site plant, equipment and infrastructure maintenance system

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and
equity issues
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

## Plant, equipment and infrastructure maintenance

Plant, equipment and infrastructure maintenance may include:

- preserve the value of assets
- maintenance or serviceability

## Instructions

Instructions may be issued in briefings, handovers, and work orders and may include:

- nature and scope of tasks
- achievement targets
- operational conditions
- obtaining permits required
- site layout
- out-of-bounds areas
- worksite inspection requirements
- lighting conditions
- plant or equipment defects
- hazards and potential hazards
- coordination requirements or issues

## Unit Sector(s)

Service and Maintenance

## Competency field

Refer to Unit Sector(s).

## Co-requisite units

Not applicable.
RIISAM402A Supervise operation of electrical equipment and installations

Modification History
Not applicable.

Unit Descriptor
This unit covers supervising the operation of electrical equipment and installations in the extractive industries. It includes: accessing and sharing requirements and procedures; planning and implementing requirements; and monitoring, adjusting and reporting performance. This unit covers the electrical equipment and installations responsibilities of an employee with supervisory role.

Application of the Unit
This unit is appropriate for those working in supervisory or technical specialist roles, within:
- Extractive industries

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Access and share requirements and procedures | 1.1. Access, interpret, apply and share with *team members* the *compliance documentation* relevant to the operation of electrical equipment and installations on the site  
1.2. Provide information in a language, style and format that is understood by team members  
1.3. Make clear the implications of electrical hazards and inefficiencies to all in the workplace |
| 2. Plan and implement site requirement | 2.1. Plan and implement *control measures* and *work practices* with team members to ensure compliance with legislative, organisation and manufacturer's requirements and procedures  
2.2. Access, interpret and clarify *conditions of electrical supply* and take them into account in planning site use of electrical energy  
2.3. Ensure all electrical work is carried out to legislative requirements by *people with appropriate licenses and qualifications*  
2.4. Ensure *electrical plans and drawings* are kept up to date  
2.5. Identify training needs and implement training, coaching and mentoring support to colleagues to ensure safe and *efficient operation* of electrical equipment and installations |
| 3. Monitor, adjust and report performance | 3.1. Ensure actual and potential electrical hazards and inefficiencies are identified, rectified and reported promptly and decisively  
3.2. Manage activities so that potential hazards and inefficiencies with operation of electrical equipment are minimised  
3.3. Ensure all electrical equipment is maintained in a safe condition  
3.4. Interpret, clarify and apply *information from monthly electricity account in* |
<table>
<thead>
<tr>

<tr>
<td>3.6. Inform individuals/teams of the results of improvements in operation of electrical equipment in the workplace</td>
<td></td>
</tr>
<tr>
<td>3.7. Maintain systems, records and reporting procedures</td>
<td></td>
</tr>
</tbody>
</table>
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to supervise operation of electrical equipment and installations:

- apply legislative, organisation and site requirements and procedures
- apply procedures for providing information
- apply electrical hazards identification procedures
- apply electrical risk assessment procedures
- read electrical diagrams
- apply procedures for the preparation of work procedure and instructions
- apply procedures for developing and introducing practices to improve the work environment
- use effective consultative mechanisms to negotiate processes and procedures appropriate to statutory/legal requirements
- explain complex information to superiors/subordinates
- apply coaching and mentoring support procedures

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to supervise operation of electrical equipment and installations:

- legislative, requirements and procedures
- organisation's requirements and procedures
- manufacturer's requirements and procedures
- potential electrical hazards
- plant interlocking and its consequences
- risk management procedures
- basic electrical terminology and theory of operation of common electric motors and control equipment
- type of electrical supply systems (e.g. high medium and low voltage systems)
- electrical risk treatment procedures
- potential electrical inefficiencies
- electrical monitoring requirements and procedures
- work practices that minimise the potential and impact of electrical hazards
- procedures for identifying training needs and implement training
- recording and reporting procedures
- human resource management
- providing information relating to electrical management
- work procedure/instruction writing
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Overview of assessment | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for the management and operation of electrical equipment and installations
- implementation of appropriate procedures and techniques for the safe, effective and efficient operation of electrical equipment and installations
- working with others to plan, prepare and conduct the operation of electrical equipment and installations
- provision of clear and timely instruction and supervision by the individual of those involved in the operation of electrical equipment and installations
- evidence of the consistent successful supervision of the operation of electrical equipment and installations |

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery |
environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

<table>
<thead>
<tr>
<th>Method of assessment</th>
</tr>
</thead>
</table>
| This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to plan, prepare and conduct the operation of electrical equipment and installations
    - provision of clear and timely instruction and supervision by the individual of those involved in the conduct of the operation of electrical equipment and installations |

<table>

|                                              | Equal Employment Opportunity and Disability Discrimination legislation  

| Control measures may include:                 | isolation procedures  
|                                             | earthing procedures  
|                                             | lock-out procedures  
|                                             | tagging procedures  
|                                             | earth leakage installation and testing  
|                                             | formal authorisation requirements for carrying out of electrical work  
|                                             | use of appropriate tools, equipment, barriers and safety apparel  
|                                             | enclosures and/or guarding  
|                                             | procedures for restoring supply  
|                                             | start-up sequencing  
|                                             | routine maintenance  

| Work practices may be included:                | in site work instructions or standard operating procedures  

| Conditions of electrical supply may include:   | peak time rates  
|                                               | off-peak rates  
|                                               | special power payments  
|                                               | peak demand  
|                                               | general supply charges  

| People with appropriate licenses               | apply safe systems of work when carrying out  

© Commonwealth of Australia, 2014
SkillsDMC
or qualifications must:

- electrical work
- carry out electrical wiring work to comply with AS/NZS 3000 (Wiring Rules), as amended by local regulations
- ensure that they perform electrical work only of the type for which they are registered or licensed
- ensure they test work in accordance with the local regulations
- ensure that a Certificate of Electrical Safety is completed as required by the local regulations/power authorities
- ensure that completed prescribed work is inspected by a Licensed Inspector prior to connection to electrical supply or reconnection as appropriate
- report all electrical incidents, hazards and potential hazards, and take appropriate action to control risks
- check the operation of portable Residual Current Devices (Safety Switches) before each use
- electrical contractors:
  - keep a register of licensed electrical workers who are employed (directly or as sub-contractors) by the contractor
  - not permit a person to carry out on the contractor's behalf or direct a person to carry out electrical work that does not comply with the local legislative requirements

| Electrical plans and drawings should include: | underground services |
|                                             | overhead services   |
|                                             | electrical reticulation |
|                                             | control circuit diagrams |

| Training should include:                     | awareness of the location of and safe clearances to overhead power lines, underground cables and electrical equipment |
|                                             | all electrical incidents, hazards and potential hazards reporting requirements |
|                                             | the need to check the operation of portable Residual Current Devices (Safety Switches) before each use |
|                                             | the need to check operation of portable electrical equipment |
### Efficient operation

- the need to operate electrical equipment in accordance with site requirements
- specified starting sequences
- avoiding excessive loads caused by unnecessary mechanical resistance (jamming, blockages)
- routine maintenance
- routine inspections
- minimising demand charges

### Information from monthly electricity account

- break down of charges
- general supply charge
- peak hour charges
- off-peak charges
- peak demand charges
- prior year usage and costs

### Optimisation of energy

- identification of major uses of electrical energy
- maximising the use of off-peak rates (e.g. hot water and out of hours automated pumping)
- sequenced starting to minimise peak demand

| 1. Contribute to the design of plant/equipment | 1.1. Access, interpret and apply *compliance documentation* relevant to commissioning and recommissioning of plant  
1.2. Apply process understanding to the design process  
1.3. Identify the role and purpose of the plant and equipment  
1.4. Ensure design meets the identified need |
| 2. Participate in hazard and operability studies | 2.1. Identify process conditions and apply to *hazard* and operability studies  
2.2. Undertake investigations following hazard studies  
2.3. Record and report findings |
| 3. Participate in acceptance of plant/equipment | 3.1. Undertake pre Commissioning activities  
3.2. Complete safety acceptance *documentation*  
3.3. Identify, record and report problems or non-conformances |
| 4. Conduct test runs/trials | 4.1. Conduct trials/test runs  
4.2. Record and report performance data |
| 5. Evaluate results and identify modifications | 5.1. Identify modifications and improvements required  
5.2. Complete documentation and report to appropriate personnel |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to commission or recommission plant:

- apply legislative, organisation and site requirements and procedures
- apply policy management procedures
- liaise with other parties
- coordinate others
- manage information
- apply problem solving techniques
- apply clear report writing techniques
- access, interpret and apply technical and safety information
- communicate and coordinate activities with others
- apply plant and equipment record keeping requirements and procedures
- apply diagnostic/faultfinding techniques
- apply environmental compliance requirements and procedures
- apply task analyses
- apply atmospheric contaminant measure requirements and procedures
- apply First Aid
- apply fire fighting techniques
- apply negotiation procedures with employers and employees
- provide information, instruction, training and supervision
- apply procedures for proposing practical recommendations for identified key issues

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to commission or recommission plant:

- HAZOP study process and the interpretation of findings
- results and impact of a HAZAN study
- the process of hazard identification, risk assessment and control
- hierarchy of control
- sources of hazard information (such as material safety data sheets)
- principles of operation of equipment
- interpretation of design drawings, schematics and manuals
- principles of operation of instrumentation
- principles of basic control systems
- distinguish between the following problem sources, and their avoidance:
  - chemical
  - instrument
  - equipment (electrical/mechanical)
- maintenance as is relevant to the practical operation of equipment at that job level
- identifying and clearly communicating key issues
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Hazards may include:

- rail and road movement
- cranes
- molten metal
- hot materials
- noise
- air pollution
- sharp objects
- moving machinery
- heights
- falling objects
- gases

Documentation may include:

- tonnages
- quality
- analysis/testing
- identity
- tracking

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to implement and maintain the site plant, equipment and infrastructure maintenance plan:

- apply legislative, organisation and site requirements and procedures
- apply statutory and organisational requirements
- apply procedures for identifying maintenance needs
- apply maintenance programs planning techniques
- apply techniques to link maintenance requirements with operational availability opportunities
- apply the organisation plant, equipment and infrastructure maintenance requirements
- apply risk, statutory compliance, health, safety and environmental management principles
- apply financial and other resource estimates and budgets preparation procedures
- provide leadership in the workplace

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to implement and maintain the site plant, equipment and infrastructure maintenance plan:

- statutory and organisational requirements
- maintenance needs of site plant, equipment and infrastructure
- organisation plant, equipment and infrastructure maintenance requirements
- risk, statutory compliance, health, safety and environmental management principles
- financial and other resources
- analysis techniques
- approval processes
- reporting requirements
- training systems

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for the implementation and maintaining of site plant, equipment and infrastructure maintenance plans
- implementation of procedures and techniques for the safe, effective and efficient implementation and maintaining of the site plant, equipment and infrastructure maintenance plan
- the identification of the relevant information and scope of the work required to meet the required outcomes
- the identification of viable options and the selection of maintenance plan options that best meet the required outcomes
- working with others to undertake and complete the implementation and maintenance of the site plant, equipment and infrastructure maintenance plan
- consistent successful implementation and maintenance of the site plant, equipment and infrastructure maintenance plan

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not
disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the implementation and maintaining of the site plant, equipment and infrastructure maintenance plans
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of maintenance plan options that best meet the required outcomes
  - consistently achieving the required

Not applicable.
RIISAM502B Manage general drilling equipment maintenance

Modification History
Not applicable.

Unit Descriptor
This unit covers managing equipment maintenance in the general drilling industry. It includes: planning and preparing for equipment maintenance; managing movement of stock; planning and organising maintenance and overhauls; evaluating new and used equipment; and maintaining inventories of all items needed on site.

Application of the Unit
This unit is appropriate for those working in management roles, at worksites within:
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. # Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for equipment maintenance | 1.1. Access, interpret and apply *compliance documentation* relevant to managing equipment maintenance in the general drilling industry  
1.2. Obtain, confirm and apply *work instructions* for the allocated task  
1.3. Identify, manage and report all potential hazards  
1.4. Resolve *coordination requirements* with others at the site prior to commencing and during work activities |
| 2. Manage movement of stock | 2.1. Identify items needed for the worksite  
2.2. *Cost* and plan delivery of stock, parts and consumables from suppliers and an alternative supplier, having regard to delivery timeframes  
2.3. Prepare and maintain checklist of all materials and *spares* to ensure the drilling operation continues effectively  
2.4. Make arrangements for the safe and secure storage on site/in store/workshop, of materials and spare parts  
2.5. Identify wear parts and relative frequency of replacement and determine replacement costs  
2.6. Place orders for stock or equipment maintenance in advance of need, to ensure continuous availability  
2.7. Develop and implement procedures for issue, return and recording of stock movement  
2.8. Maintain inventory in accordance with company requirements  
2.9. Record parts usage accurately and in compliance with requirements |
| 3. Plan and organise maintenance and overhauls | 3.1. Determine type and frequency of maintenance tasks  
3.2. Organise equipment maintenance and service to ensure availability is maintained and downtime minimised  
3.3. Monitor performance of maintenance |
|  | schedules and take corrective action, if necessary  
3.4. Arrange sources for obtaining back-up or replacement equipment  
3.5. Allocate competent personnel to carry out maintenance tasks  
3.6. Ensure records are maintained in compliance with requirements  |
|---|---|
| 4. Evaluate new and used equipment | 4.1. Test materials and equipment to ensure continuing serviceability in compliance with requirements  
4.2. Monitor availability of new and used equipment  
4.3. Evaluate costs/benefits of replacing equipment, and recommend/implement the purchase/lease of replacement equipment  |
| 5. Maintain inventories of all items needed on site | 5.1. Monitor individual machine records in line with replacement policies  
5.2. Maintain economic stock levels by implementing a stock control system to record stock levels and stock usages  
5.3. Monitor performance of stock control system and take corrective action if required  
5.4. Use approved requisition/purchasing procedures to order parts and supplies at the appropriate time and in the appropriate quantity  
5.5. Carry out stocktaking and rotate and monitor ongoing stock levels to ensure continuing availability of spares and materials and in compliance with requirements  
5.6. Keep a hazardous substances register  
5.7. Ensure resources/stock required for servicing is available only on authorised access  
5.8. Prevent/minimise waste or damage to spare parts in storage  
5.9. Determine approximate timelines for re-ordering  
5.10. Calculate/estimate and order replacement of equipment, consumables, components and materials |
5.11. Report any problems with stock control or availability of parts to appropriate personnel

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to manage general drilling equipment maintenance:

- apply legislative, organisation and site requirements and procedures
- apply stocks checking and maintenance requirements and procedures
- apply cost benefit analysis
- apply equipment/consumables order procedures
- apply reporting procedures

### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to manage general drilling equipment maintenance:

- equipment and ancillary attachment characteristics, technical capabilities and limitations
- wear parts and relative frequency of replacement
- purpose of stock control
- financial transactions (e.g. cash flow, cost benefit analysis)
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

RIISAM601A Establish and maintain plant, equipment and infrastructure maintenance system

Modification History
Not applicable.

Unit Descriptor
This unit covers establishing and maintaining of plant, equipment and infrastructure maintenance systems in resources and infrastructure industries. It includes establishing and maintaining of installation and commissioning procedures; developing systems for the maintenance of plant and equipment; establishing and maintaining systems for the maintenance of worksite infrastructure; and establishing and maintaining systems for audit and review of maintenance systems.

Application of the Unit
Plant, equipment and infrastructure maintenance may include preserving their value as assets and their maintenance or serviceability. This unit is appropriate for those working in a management or technical specialist roles in organisations, within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

4.5. Ensure procedures for incorporating feedback into the audit/review system are developed and implemented

4.6. Ensure procedures to confirm the currency, relevance and compliance of the training program against identified requirements are developed and implemented

4.7. Ensure procedures for response to instances of non-compliance or other discrepancies or deficiencies revealed by audit are developed and implemented
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to establish plant, equipment and infrastructure maintenance systems:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply:
  - technical information
  - site/legislative requirements
  - records and reports
  - briefings and handover details
- apply procedures for assessing the risks
- apply work planning and coordination techniques
- apply procedures to identify training needs related to plant, equipment and infrastructure systems
- interpret manufacturer's instructions
- apply maintenance survey procedures

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to establish plant, equipment and infrastructure maintenance systems:

- legislative, Australian standards and site specific requirements
- worksite design principles and procedures
- safety design features for maintenance
- worksite operation systems and procedures including:
  - stores systems
  - roadway maintenance
  - protection systems
  - reticulation systems
- specifications for fixed plant and infrastructure
- audit processes
- computer based systems
- training programs
- fire fighting systems and precaution rules
- maintenance surveys techniques
## Evidence Guide

infrastructure maintenance systems
- consistent and timely establishment and maintenance of the plant, equipment and infrastructure maintenance systems
- provision of clear, timely required support and advice on the implementation of plant, equipment and infrastructure maintenance systems
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:

- legislative, organisation and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Hazard is:

- a source or a situation with a potential for harm in terms of human injury or ill-health, damage to property, damage to the environment, or a combination of these

Risk is:

- the combination of the frequency, or probability of occurrence, and consequence of a specified hazardous event

Maintenance system and procedures may include:

- scheduling requirements
- limitation on tasks to be performed by site personnel
- nominated suppliers
- purchasing
- contract management
- oil sampling requirements
- housekeeping requirements
- cleaning requirements
- waste disposal requirements
- records and report requirements and procedures
- inspection requirements
- stock take techniques and requirements
- risk, statutory compliance, health, safety, environmental, quality and communication requirements

Not applicable.

Unit Descriptor
This unit covers establishing and maintaining maintenance management systems for mechanical plant and equipment in the coal mining industry. It includes: developing, implementing and monitoring the system; auditing, reviewing and reporting on the system.

Application of the Unit
This unit is appropriate for those working in management or technical specialist roles, in open cut and underground operations within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to establish maintenance management system for mechanical plant and equipment:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply:
  - technical information
  - site / legislative requirements
  - records and reports
  - briefings and handover details
- apply procedures to assess the risks and consequences attached to mechanical systems
- apply processes to develop procedures appropriate to mine operations for management of mechanical maintenance systems
- plan and coordinate work
- apply procedures to manage work in confined spaces
- apply procedures to identify training needs related to mechanical maintenance systems
- interpret manufacturer's instructions
- apply maintenance survey requirements and procedures
- liaise with other parties
- coordinate others
- apply information management systems
- apply mechanical maintenance data analyse processes
- use measuring equipment
- write reports
- facilitate meetings

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to establish maintenance management system for mechanical plant and equipment:

- legislative, Australian standards and site specific requirements including communications, emergency procedures, risk management, recording and reporting, mines rescue, OHS, manufacturer's instructions, standard work procedures, training, fire fighting, handling and storing of dangerous goods, local government and power authority requirements
- mine operating systems and procedures, including transport systems, conveyor systems, systems of mining, ventilation systems, gas management systems and mine water management systems
- stores systems
- protection systems
- reticulation systems
- specifications from mechanical systems
- audit procedures
- mine design issues relating to mechanical systems
- organisation structure
- use of computer based systems relating to mechanical maintenance systems
- workplace training methods
- safety design features for maintenance of mechanical systems
- maintenance surveys
- work role definitions
- reporting methods and alternatives
- community expectations
- consultative strategies
- alternative documentation systems for procedures
- mine equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
|                                                  | • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of |
### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required
  - identification of viable options and the selection of option that best meet the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial and documentary evidence of the candidate’s:
  - working with others to establishing and maintaining of maintenance management system for mechanical plant and equipment

- assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Maintenance Management System is:
- the overarching combination of processes that is documented in policies, plans, procedures, schedules, audit and recording mechanisms, which determines how maintenance is implemented, controlled, monitored and reviewed at the mine

### Maintenance is to restore or keep at the level that it was originally designed to, by:
- inspecting and testing plant and equipment
- monitoring plant and equipment
- servicing equipment
- repairing equipment
- overhauling equipment

### Maintenance strategy may include:
- minimising risk to people and equipment
- defining the actions necessary to meet business and legislative requirements
- review of failure modes
- manufacturer's requirements

### Equipment may include:
- entire item of plant or individual components of the item of plant

### Stakeholders may include:
- regulatory authorities
- project managers
- contractors
- client representatives
- government authorities
- community groups
- engineers
- architects
Unit Sector(s)
Service and Maintenance

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIISDM501A Conduct mine surveying operations

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting mine surveying operations in the mining industries. It includes: planning and preparing for operations; gathering, organising, processing, analysing, evaluating, interpreting and assembling data; compiling and producing survey records; completing and presenting documentation; and maintaining survey equipment.

Application of the Unit
This unit is appropriate for those working in mine surveyor roles, within:
- Coal mining
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for survey operations | 1.1. Access, interpret and apply *compliance documentation* relevant to conducting mine surveying operations  
1.2. Schedule key activities and timelines  
1.3. Identify *stakeholders* and organise activities in consultation according to organisation's guidelines  
1.4. Plan survey work with due consideration to relevant technical and *legislative* requirements  
1.5. Conduct work according to site procedures, regulations, OHS, other relevant *legislation*, manufacturer specifications  
1.6. Identify, manage and report potential risks and hazards according to site procedures  
1.7. Select and use personal protective equipment  
1.8. Adhere to emergency procedures |
| 2. Gather data | 2.1. Operate equipment to gather spatial data according to manufacturer's specification, legislative and organisation's guidelines  
2.2. Correctly measure identified *spatial components*  
2.3. Validate and record *measurements* in accordance with legislative and project specifications  
2.4. Reduce measured spatial data to project spatial reference system for comparison against *design* parameters as required  
2.5. Identify inconsistencies in information by verification and recording them  
2.6. Determine uses and limitations of base data |
| 3. Organise and process data | 3.1. Identify the outcomes and elements of systems, and design and develop systems standards and integrate into data management quality programs  
3.2. Verify the integrity of base *spatial and textual data* and process and store those data to achieve specific outcomes  
3.3. Verify the integrity of processed data |
<table>
<thead>
<tr>
<th>3.4.</th>
<th>Select appropriate database and collate relevant spatial and textual data in one system for transfer and integration into other systems as required</th>

</tr>
</tbody>
</table>

**7. Complete and present documentation**

| 7.1. Record data according to accepted industry and legislative standards |
| 7.2. Resolve omissions and gaps in spatial data |
| 7.3. Complete promptly and accurately all required documentation according to legislative and organisational requirements |
| 7.4. Store all documentation according to legislative and organisational requirements |
| 7.5. Prepare **information and reports** in a format and detail appropriate to the client/stakeholder and employ appropriate **communication and display techniques** to present information and reports |
| 7.6. Apply effective validation procedures to verify the accuracy and reliability of data which are to be certified |
| 7.7. Certify and sign-off data and information to meet legislative and company/site requirements |

**8. Maintain survey equipment**

| 8.1. Check **survey instruments** and ensure accuracy and performance in accordance with site practices, legislation and manufacturer's instructions |
| 8.2. Calibrate survey instruments to ensure correct and accurate measurements in accordance with site practices, legislation and manufacturer's instructions |
| 8.3. Ensure safe storage and transport of **equipment** and survey instruments in |
|  | accordance with site practices and legislation  
|  | 8.4. Maintain equipment and survey instrument condition and cleanliness  |
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct mine surveying operations:

- apply legislative, organisation and site requirements and procedures
- apply procedures for consulting with stakeholders and others
- apply risk management practices
- apply investigation requirements and procedures
- apply effective communication techniques
- apply instructions
- apply strategic planning techniques
- apply professional judgement
- apply attention to detail
- interpret data/information
- perform under adverse conditions
- apply effective observation techniques
- apply policy management requirements and procedures
- apply interpersonal skills
- liaise with other parties
- apply coordination techniques
- apply information management requirements and procedures
- apply problem solving techniques
- analyse data/information
- use surveying equipment
- apply clear report writing techniques
- facilitate meetings

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct mine surveying operations:

- measurement techniques
- accuracy and precision requirements
- limitations of equipment, measuring and analysis guidelines
- map reading and spatial comprehension
- site geography and geology
• mine operations in their workplace
• cartographic principles
• surveying techniques
• survey equipment
• survey equipment care and maintenance
• project reporting guidelines
• spatial reference systems
• spatial data reduction and manipulation techniques
• GIS principles and techniques
• risk management principles
• company organisation
• work role definitions
• reporting methods and alternatives
• relevant standards, licenses and permits
• safe work practices
• emergency procedures and obligations
• community expectations
• consultative strategies
• alternative documentation systems for procedures
• environmental issues
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Relevant compliance documentation may include:

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

#### Stakeholders may include:

- clients
- client representatives
- government authorities
- community groups
- geologists
- engineers
- architects/cartographers
- operators
- supervisors
- contractors
- environmentalists/ecologists

#### Legislation may include:

- industry codes, regulations, standards and guidelines
- environmental legislation
- health and safety legislation
- mining tenure regulations
- third tier of legislation
- surveying legislation
- cultural and heritage legislation

#### Spatial components may include:

- position
- dimension
- height
- direction
- depth
- slope
| **Measurements** may be made with: | • volume  
• stratum  
• theodolite  
• EDM  
• GPS  
• tape/level  
• photogrammetry  
• remote sensing  
• tide gauge  
• current meter  
• echo sounder(seismic)  
• laser scanner  
• borehole camera |
|-------------------------------|-----------------------------------------------|
| **Design** may be represented by: | • hard copy plans or maps  
• digital plans or maps |
| **Spatial and textual data** may include: | • coordinates  
• AMG  
• lats/longs  
• grid systems  
• local grid systems |
| **Technology and procedures** may include: | • proven industry standard calculation procedures  
• hand held calculators, computer software applications  
• direct instrument download hardware and software applications  
• GPS  
• data recorders  
• text data management procedures |
| **Plans** may include: | • policies and procedures relevant to legislation, health and safety or environment,  
• documentation and records  
• regulatory and legal compliance  
• hazard plan  
• colliery development plan  
• fire fighting plan  
• stone dust plan  
• emergency evacuation plan  
• gas drainage plan  
• ventilation plan  
• risk zone management plan  
• Survey Memo/Work Instruction |
| Techniques and technology may include:                                      | • computer generated DTM modelling  |
|                                                                         | • CAD dxf format files             |
|                                                                         | • media including:                 |
|                                                                         | • plain paper hardcopies           |
|                                                                         | • CAD files (dxf)/GIS files        |
|                                                                         | • via e-mail - PDF Format, dxf files|

| Models may include:                                                      | • physical representation, at a different scale, of a real thing |
|                                                                         | • physical models                 |
|                                                                         | • computer generated models       |
|                                                                         | • virtual models                  |
|                                                                         | • digital models                  |

Co-requisite units
Not applicable.
RIISRM301B Blend stockpile materials

Modification History
Not applicable.

Unit Descriptor
This unit covers the blending of stockpile materials in the metalliferous mining industry. It includes: identifying and assessing materials; and blending materials.

Application of the Unit
This unit applies in all contexts to the blending of ore in the extractive process for the open cut environment. This unit is appropriate for those working in mobile plant operator roles, within:
- Coal mining
- Metalliferous mining
- Extractive industries

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1. Identify and assess material for blending** | 1.1. Access, interpret and apply *compliance documentation* relevant to the blending of stockpile materials  
1.2. Receive, interpret and clarify shift changeover details  
1.3. Identify, manage and report *potential hazards and risks* according to work plan  
1.4. Select personal protective equipment appropriate for work activities  
1.5. Use approved dust suppression and extraction methods  
1.6. Identify and locate correct *material grade* according to *stockpile plan*  
1.7. Communicate with other personnel using approved communication methods  
1.8. Adhere to emergency procedures to ensure safety of personnel, plant and *equipment* |
| **2. Blend materials** | 2.1. Select the correct quantity and grade of material and use appropriate blending techniques to achieve required blend of minerals  
2.2. Avoid contaminating surrounding site and access roads  
2.3. Monitor blending process to ensure correct grades of minerals are selected  
2.4. Remove and/or manage *contaminants* upon identification |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to blend stockpile materials:

- apply legislative, organisation and site requirements and procedures
- apply diagnostic techniques
- apply decision making techniques
- apply procedures for directing operations
- apply driving techniques
- apply procedures for operating, maintaining and cleaning equipment
- apply hazard identification procedures
- apply hazardous goods handling techniques
- interpret plans, reports, maps, specifications
- apply records maintenance requirements
- organise work tasks
- apply defect reporting requirements
- apply safe work practices
- select and fit personal protective equipment
- work in a team
- apply troubleshooting procedures
- use communications equipment
- use computer systems
- use hand and power tools

#### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to blend stockpile materials:

- blending procedures
- dust suppressant characteristics and limitations
- emergency procedures
- environmental and heritage procedures
- equipment processes, technical capability and limitations
- equipment safety requirements
- hazardous goods procedures and consequences of spills
- isolation procedures
- material grade recognition
- material placement procedures
- site operational system
- night and day working procedures
- OHS procedures
- open cut procedures
- operational procedures and checks
- principles of contamination
- start-up procedures
- shutdown procedures
- site procedures/site safety requirements
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for blending of stockpile materials</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of the blending of stockpile materials</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the blending of stockpile materials that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of the blending of stockpile materials that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
</tr>
<tr>
<td></td>
<td>• Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.</td>
</tr>
</tbody>
</table>
| | • Aboriginal people and other people from a non English speaking background may have second
language issues.

- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the blending of stockpile materials

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisation and site requirements and procedures  
| | manufacturer's guidelines and specifications  
| | Australian standards  
| | code of practice  
| | Employment and Workplace Relations legislation  
| | Equal Employment Opportunity and Disability Discrimination legislation  
| Potential hazards and risks may include: | abandoned equipment  
| | adjoining pit walls  
| | adverse weather conditions (electrical storms, floods, fires)  
| | chemicals  
| | contaminants  
| | equipment  
| | fences  
| | holes  
| | materials  
| | over-hanging rocks  
| | personnel  
| | pot holes  
| | unsafe ground  
| | unstable faces  
| | vehicles  
| Materials may include: | gravel  
| | overburden  
| | oxidised waste  
| | rejects  
| | road base  
| | rubbish  
| | sand  
| | sulphide rock fill  
| | tailings  
| | topsoil

| 1. Prepare for operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the conducting of stockpile reclaiming operations  
1.2. Obtain, interpret and clarify/confirm *work requirements* and *shift details* before proceeding  
1.3. Access, interpret and apply *geological and survey data* required to complete the allocated work  
1.4. Carry out worksite inspection and rectify or report *hazards* or other notifiable conditions  
1.5. Access and apply *safety information and procedures* throughout the work |
| 2. Operate plant and equipment | 2.1. *Coordinate activities* with others at the site prior to commencement of, and during, the work activity  
2.2. Carry out pre-start, start-up, park-up and shutdown procedures  
2.3. Operate controls to reclaim materials  
2.4. Act on or report monitoring systems and alarms  
2.5. Load, sample and despatch specified materials  
2.6. Recognise and respond to *hazardous and emergency situations*  
2.7. Complete work in accordance with the agreed plan and outcomes and within the operating capacities of the allocated equipment  
2.8. Carry out *reporting* and complete and process documents |
| 3. Carry out operator maintenance | 3.1. Carry out *plant and equipment* inspections and faultfinding  
3.2. Carry out routine *operational servicing, lubrication and housekeeping* tasks  
3.3. Visually inspect structures and components for fault conditions, wear and need of repair or replacement  
3.4. Process maintenance records |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills
Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct stockpile reclaiming operations:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- access, interpret and apply technical information
- apply diagnostic techniques
- use hand and power tools
- prepare and communicate reports
- apply environmental compliance requirements
- apply procedures for disposal of environmentally sensitive fluids and materials
- apply records maintenance requirements
- apply procedures for working at heights

### Required knowledge
Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to conduct stockpile reclaiming operations:

- site and equipment safety requirements and procedures
- stockpile management processes
- reclaimer characteristics, technical capabilities and limitations
- reclaimer maintenance procedures/reclaimer operating procedures
- basic mineralogy related to materials quality
- blending specifications and techniques
- causes of and responses to spontaneous combustion (coal mining only)
- environmental requirements and constraints related to reclaim operations
- recording and reporting processes
- impact of reclaiming operations on customer quality requirements

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

- legislative, organisational and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- code of practice
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Work requirements

- shift briefings
- handover details
- work orders

### Shift details

- nature and scope of the work
- working conditions
- achievement targets
- site lighting arrangements
- defects on equipment
- hazards and potential hazards
- coordination requirements/issues

### Geological and survey data

- safety factors relating to natural fall
- grades
- levels
- faults
- slips
- strata
- drainage

### Hazards

- spontaneous combustion
- wet weather operations
- electrical start-up and shutdown
- belt systems fires
- electrical fires
- working with other equipment

### Safety information and procedures

- legislation and regulations
- relevant Australian standards
- management plans
- OHS policy
- code of practice
- manufacturer's instructions
- safe working procedures (or equivalent)
- specific safety requirements including:
  - boarding and disembarking procedures
  - identifying and confirming potential hazards
  - relocating and operational signal procedures

**Coordination activities** may include:
- communication with personnel
- awareness of other support plant
- equipment

**Hazardous and emergency situations** may include:
- sinking
- spoil and highwall stabilisation
- wet weather operation
- electrical start-up and shutdown
- belt system fires
- electrical fires
- windy and dusty conditions
- working in close proximity to moving equipment and parts

**Reporting** and recording may include:
- control room log
- computer reports
- accident/incident reports
- check sheets
- pre-shift equipment reports/defect reports
- tags
- work orders

**Reclaimer equipment** may include:
- bucket wheel
- bridge
- A-frame
- driver reclaimers

**Other plant and equipment** may include:
- dozers
- loaders
- trucks

**Operator service, maintenance and housekeeping** tasks are those established and authorised for the site and may include:
- cleaning
- authorised servicing
- conduct of authorised minor replacements
- provision of assistance to maintenance
| personnel during maintenance and repair activities |

1.4. Select personal protective equipment appropriate for work activities  
1.5. Identify, address and report *environmental issues*  
1.6. Confirm stockpile *boundaries* and *signage* are erected according to site procedures  
1.7. Adhere to emergency procedures  
1.8. Identify, address and report potential risks and *hazards* |
| **2. Stockpile materials** | 2.1. Stockpile *materials* in specified location  
2.2. *Inspect* stockpile structure and surrounding area  
2.3. Identify and manage *contaminants* to protect quality of material and protect *equipment* and environment  
2.4. Construct stockpile according to site *stockpile plan*  
2.5. Ensure stockpile has adequate drainage to minimise contamination of stockpile and surrounding areas  
2.6. Maintain pad according to site parameters  
2.7. Complete all required documentation clearly, concisely and on time  
2.8. Pass on end of shift information to oncoming shift |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to move and position materials to form stockpiles:

- apply legislative, organisation and site requirements and procedures
- apply materials dumping techniques
- apply procedures for operating, maintaining and cleaning equipment
- apply hazard identification procedures
- interpret plans, maps, specifications
- apply procedures for monitoring operations
- apply OHS procedures
- apply defect reporting requirements
- use hand and power tools
- apply stockpile safety requirements

#### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to move and position materials to form stockpiles:

- bund construction and maintenance procedures
- drainage principles
- emergency procedures
- environmental principles
- isolation principles
- metallurgical and technical data
- selection of equipment
- operational procedures and checks
- road rules
- signage
- stockpile safety requirements
- stockpiling characteristics and limitations
- stockpiling procedures
- types of ores
- wet and dry working procedures
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:

- legislative, organisation and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- code of practice
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

A **stockpile** may be temporary or permanent and may be:

- a hole
- bulk storage
- formation of earthworks (cone, flat)
- silo
- warehouse

**Environmental issues** may include:

- drainage
- dust and fumes
- emissions
- hazardous chemicals
- noise
- run-off
- spills
- waste management and disposal
- water quality

**Boundaries** may be fixed or mobile and may include:

- chalk and paint markings
- cones
- flag and string fences
- wire

**Signage** may include:

- danger
- height
- one way
- safety
- stop
- stockpile numbering or name
Hazards may include:

- day and night
- degree of compaction
- dry and wet
- location of water table
- mobile equipment in area
- overhead power-lines
- persons on foot
- slope of working surface
- stable ground and broken ground
- working at heights
- working over old underground workings and voids

Materials may be wet or dry and may include:

- beneficiation product
- crushed ore
- road base
- run of mine ore
- sand
- gravel
- crushed aggregate
- tailings
- topsoil
- waste rock

Inspections may include:

- detection of contaminants and hazards
- isolations
- ore types
- overhead clearance (e.g. height limitations or power links for cranes or trucks)
- personal proximity
- possible faults and problems
- safety equipment

Contaminants are anything other than the ore or products and may include:

- containers
- packaging
- fuels
- metal
- oils
- piping
- rubbish
- timber

Equipment may include:

- bins
- conveyors
- dust suppression equipment

**Unit Sector(s)**

Stockpile and Reclaim Material

**Competency field**

Refer to Unit Sector(s).

**Co-requisite units**

Not applicable.
RIISRM304B Maintain stockpiles

Modification History
Not applicable.

Unit Descriptor
This unit covers maintaining stockpiles in the metalliferous mining and extractive industries. It includes: maintaining the stockpile; suppressing dust; and maintaining stockpile access roads and bunds. This unit applies in all contexts to the maintenance of stockpiles, suppression of dust and maintenance of stockpiles in the extractive process in the open cut environment.

Application of the Unit
This unit is appropriate for those working in mobile plant operator roles, at worksites within:

- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Maintain stockpile | 1.1. Access, interpret and apply *compliance documentation* relevant to maintaining stockpiles  
1.2. Receive, interpret and clarify shift changeover details  
1.3. Maintain battering angle of stockpile  
1.4. Select personal protective equipment appropriate for work activities  
1.5. Visually inspect stockpile structure and surrounding area to assess the safety and progress of stockpile formation  
1.6. Dump and move *stockpile material* using appropriate techniques to form stockpile battering angle and prevent slumping  
1.7. Inform appropriate *personnel* of spillage and take appropriate measures to manage and/or remove spill  
1.8. Remove and dispose of *contaminants* from stockpile upon identification  
1.9. Communicate with other personnel using approved communication methods  
1.10. Adhere to emergency procedures to ensure safety of personnel, plant and equipment  
1.11. Turn stockpile material utilising appropriate equipment and techniques |
| 2. Suppress dust | 2.1. Maintain stockpile structure to prevent dust creation and unwanted material movement  
2.2. Adjust stockpiling activities due to *weather conditions* and dust suppression policy |
| 3. Maintain stockpile access roads and bunds | 3.1. Maintain stockpile access roads  
3.2. Maintain safety and condition of *bunds*  
3.3. Maintain stockpile access roads free from spillages and obstructions to avoid restricting equipment movement to and from stockpiles |
**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to maintain stockpiles:

- apply legislative, organisation and site requirements and procedures
- apply diagnostic techniques
- apply decision making techniques
- apply procedures to direct operations
- apply procedures for operating, maintaining and cleaning equipment
- apply hazard identification procedures
- apply hazardous goods handling techniques
- interpret plans, reports, maps, specifications
- apply lifting techniques (manual, cranes and loads)
- apply records maintenance requirements
- apply work task organising procedures
- apply defect reporting requirements
- apply safe work practices
- select and fit personal protective equipment
- work in a team
- use communications equipment

### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to maintain stockpiles:

- bund construction
- drainage processes
- dumping procedures
- dust suppressant characteristics and limitations
- emergency procedures
- environmental and heritage procedures
- equipment processes, technical capability and limitations
- equipment safety requirements
- hauling procedures
- hazardous goods procedures and consequences of spills
- isolation procedures
- material placement procedures
- mine operational system
• night and day working procedures
• OHS procedures
• open cut procedures
• operational procedures and checks
• principles of contamination
• road rules
• start-up procedures
• shutdown procedures
• site procedures
• site safety requirements
• stockpiling characteristics and limitations
• stockpiling procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</table>
resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.

- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to maintain stockpiles

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisation and site requirements and procedures |
| Stockpile materials may include: | manufacturer’s guidelines and specifications |
| | Australian standards |
| | code of practice |
| | Employment and Workplace Relations legislation |
| | Equal Employment Opportunity and Disability Discrimination legislation |
| Personnel may include: | backfill |
| | dilution material |
| | gangue |
| | mineralised waste |
| | mullock |
| | rehabilitation soils and other materials (clay bands, gravel) |
| | road base |
| | rubbish |
| | sand |
| | secondary material |
| | various grades of ore |
| Contaminants may include: | animal carcasses (sheep, cows, kangaroos) |
| | cigarette butts |

RIISRM401A Apply and monitor the site stockpile management plan

Modification History
Not applicable.

Unit Descriptor
This unit covers the application and monitoring of site stockpile management plan in the coal mining and extractive industries. It includes: planning, preparing for and initiating site stockpile management tasks; and monitoring, adjusting and reporting on the execution of the stockpile management plan.

Application of the Unit
This unit is appropriate for those working in supervisory or technical specialist roles, within:
- Coal mining
- Extractive industries

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

</table>
| 1. Plan, prepare for and initiate tasks | 1.1. Access, interpret and apply *compliance documentation* relevant to site stockpile management  
1.2. Access and share with team members the *geological and survey data* required to complete the site stockpile management task  
1.3. Prepare an action plan, in consultation with team members, which makes best use of the available resource and takes into account the requirements of the *site stockpile management plan*  
1.4. Acquire and make available the necessary *resources* for the safe, effective and efficient conduct of site stockpile management task  
1.5. Issue clear and timely *instructions* to team members and others involved for the safe, effective and efficient conduct in the site stockpile management tasks |
| 2. Monitor, adjust and report on execution of the management plan | 2.1. Ensure safe, effective and efficient execution of tasks  
2.2. Monitor site stockpile management plan performance to ensure achievement of planned outcomes  
2.3. Initiate adjustments to work programs to take into account non-achievement of planned outcomes.  
2.4. Complete and submit reports as required  
2.5. Recommend changes to improve the safety, efficiency and effectiveness of the site stockpile management plan |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to apply and monitor site stockpile management plan:

- apply legislative, organisation and site requirements and procedures
- provide team leadership
- apply procedures for selecting operational and construction techniques
- apply procedures to selecting and assigning plant and equipment
- apply procedures to develop and administer work plans

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to apply and monitor site stockpile management plan:

- site risk, statutory compliance, health, safety, environmental, quality and communication requirements and procedures
- the site stockpile management plan
- team leadership techniques
- operational techniques required for execution of the plan
- plant and equipment capabilities
- work planning techniques
- work monitoring methods
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to implement the stockpile management plan:

- apply legislative, organisation and site requirements and procedures
- interpret and apply legislative and organisational requirements
- interpret and apply geological and survey data
- provide team leadership
- apply procedures for planning operations
- apply procedures for selecting construction techniques
- apply selecting and assign plant and equipment
- apply procedures for selecting development strategies
- apply procedures for developing, initiating and administering work plans
- interpret and apply operational performance data

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to implement the stockpile management plan:

- site risk, statutory compliance, health, safety, environmental, quality and communication requirements and procedures
- geological and survey data
- organisation stockpile management policy, objectives and procedures (where they exist)
- site stockpile management development options and procedures
- operational techniques required for execution of the plan
- plant and equipment capabilities
- work planning techniques
- team leadership techniques
- consultative and coaching techniques
- work monitoring methods
- recording and reporting systems
- training systems
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

RIISRM502A Design stockpile formations and reclaiming systems

Modification History
Not applicable.

Unit Descriptor
This unit covers designing of stockpile formations and reclaiming systems in the metalliferous mining industry. It includes: identifying stockpile requirements; designing the stockpile configuration; and monitoring stockpile operations.

Application of the Unit
This unit is appropriate for those working in a management or technical specialist role, within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

---
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify stockpile requirements                | 1.1. Access, interpret and apply *compliance documentation* relevant to the designing of stockpile formations and reclaiming systems  
|                                                  | 1.2. Identify *stockpiling requirements*  
|                                                  | 1.3. Evaluate economics and efficiency of the stock piling system and configuration to be used  
|                                                  | 1.4. Identify and implement statutory requirements for locating of plant and stockpile                                                                                                                                                                                                                                                        |
| 2. Design stockpile configuration                  | 2.1. Design *stockpile configuration* with appropriate drainage system  
|                                                  | 2.2. Design reclaim systems to match stockpile configuration  
|                                                  | 2.3. Match load mechanisms to stockpile requirements  
|                                                  | 2.4. Design and install dust control measures to ensure correct operations  
|                                                  | 2.5. *Plan*, organise and supervise safety requirements associated with the operation and machine movements                                                                                                                                                                                                                                    |
| 3. Monitor stockpile operations                    | 3.1. Instruct operators on the outcomes required including Occupational Health & Safety issues and safe work procedures  
|                                                  | 3.2. Monitor stockpiling operation including surveying, forming, order or dumping, ramp  
|                                                  | 3.3. Monitor material removal from stockpile in accordance to Quality Assurance specifications  
|                                                  | 3.4. Assess and reconcile stock quantities                                                                                                                                                                                                                                                                                                             |
Required Skills and Knowledge

RIISRM601A Establish and maintain the stockpile management system

Modification History
Not applicable.

Unit Descriptor
This unit covers the establishing and maintaining of stockpile management systems in the coal and metalliferous mining and extractive industries. It includes: identifying and researching the requirements; facilitating the designing of systems, selection of equipment, installation and commissioning procedures, systems for the operation and maintenance; and establishing systems for audit and review of the systems.

Application of the Unit
This unit is appropriate for those working in management or technical specialist role, within:
- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify and research requirements | 1.1. Access, interpret and apply *compliance documentation* relevant to stockpile management systems  
1.2. Analyse and document organisation goals, objectives and strategies in relation to the establishment of the management system  
1.3. Investigate and analyse worksite environments to develop options, strategies and anticipated outcomes  
1.4. Develop and implement strategies that translate the objective into the planning process |
| 2. Facilitate the design of system | 2.1. Ensure the requirements for and the purpose of stockpile management systems are identified in accordance with legislative requirements  
2.2. Ensure specifications for stockpile systems are developed from a comprehensive analysis of site requirements  
2.3. Ensure system options are identified from an analysis of all relevant technical, operational and financial information  
2.4. Ensure the economics and efficiency of the *stockpiling system and configuration* to be used is evaluated |
| 3. Facilitate the selection of equipment for the management systems | 3.1. Ensure the requirements for and the purpose of stockpile equipment is identified against systems requirements  
3.2. Ensure a detailed scoping of the work requirement is conducted, and that key selection criterion, including *hazard* identification and *risk* analysis, is developed  
3.3. Ensure a specification for the required stockpile equipment is developed  
3.4. Ensure the preferred equipment solutions are selected on the basis of performance against specification requirements |
| 4. Facilitate installation and commissioning procedures | 4.1. Ensure a procedure to identify hazards and analyse and evaluate risks associated with the installation of stockpiling systems and |
| 4. | Ensure the integration of new and existing systems and processes is planned and prepared to achieve optimum performance |
| 5. | Ensure safe operating procedures and rules are developed from a detailed analysis of site requirements |
| 6. | Ensure procedures for installing and commissioning stockpile systems and equipment are developed and implemented |
| 7. | Ensure a program to satisfy identified stockpiling training requirements is implemented |
| 8. | Ensure emergency response and evacuation systems, plans and procedures are implemented |

5. Facilitate the implementation of plans for the operation and maintenance of the systems

| 5.1 | Ensure operational procedures for stockpile systems and equipment are developed from legislative and organisation's requirements and are incorporated into site documentation |
| 5.2 | Ensure maintenance procedures for stockpile systems and equipment are developed from legislative and organisation's requirements and are incorporated into site documentation |
| 5.3 | Ensure procedures for reviewing and modifying work processes are developed and implemented |

6. Establish systems for audit and review of systems

<p>| 6.1 | Establish procedures to evaluate and confirm system/equipment compliance with statutory and site requirements |
| 6.2 | Ensure future stockpile systems and equipment requirements identified and assessed and incorporate into planning processes |
| 6.3 | Ensure procedures to confirm the currency and compliance of stockpile maintenance and safety standards are developed and implemented |
| 6.4 | Ensure the system for recording and reporting of stockpile and equipment information is developed and implemented |
| 6.5 | Audit the stockpile training program for |</p>
<table>
<thead>

</tbody>
</table>
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to establish and maintain the stockpile management system:

- apply legislative, organisation and site requirements and procedures
- apply procedures for designing and implementing stockpile configurations
- apply procedures for monitoring and maintaining stockpile operations
- apply techniques for managing people and processes
- apply requirements for preparing capital equipment proposals
- apply procedures for analysing and reviewing stockpile operations and costs
- apply procedures for managing projects and tasks
- apply procedures for coordinating resources, human, financial and physical
- apply procedures for delivering and maintaining services to required specifications
- apply worksite traffic management requirements and procedures
- apply procedures for managing equipment and maintenance systems
- apply techniques for evaluating new and used equipment
- apply operating cost control requirements and procedures
- interpret and comply with statutory requirements
- apply procedures for planning operations
- apply requirements for preparing tender specifications
- apply techniques for negotiating and finalising contracts
- access and use technologies
- apply requirements for preparing and presenting management reports
- apply techniques for negotiating with internal/external customers, community and statutory/legal authorities
- apply conflict resolution techniques

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to establish and maintain the stockpile management system:

- risk management, principle, strategies and applications
- statutory control requirement
- safety and health requirements
- environmental management requirements
- quality system requirements
- organisational objectives
- worksite plans and operations
- worksite products
- characteristics, uses and limitations of stockpile equipment
- stockpile configuration
- stockpile design
- training systems
- emergency response and evacuation planning processes and techniques
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Hazard is: | a source or a situation with a potential for harm in terms of human injury or ill-health, damage to property, damage to the environment or a combination of these |

| Risk is: | the combination of the frequency, or probability of occurrence and consequence of a specified hazardous event |

| Stockpile system and configurations may include: | access to and from stockpile |
|                                                | amount to be stored |
|                                                | edge control |
|                                                | material, size, shape |
|                                                | method of loading/unloading |
|                                                | method of storing |
|                                                | reconciliation of stocks transfers |
|                                                | delivery to stockpile |
|                                                | withdrawal methods |
|                                                | blending requirements |
|                                                | operating method |
|                                                | level or volume monitoring |
|                                                | spontaneous combustion |
|                                                | automation |
|                                                | segregation |
|                                                | site safety requirements |
|                                                | reporting |
|                                                | safety of area |
|                                                | segregation |
• site modification
• sprinkler systems to keep stockpiles damp to control dust
• stockpile floor
• stockpile identification

Audit is:
• a systematic examination against defined criteria to determine whether activities and related results conform to planned arrangements and whether these arrangements are implemented effectively and are suitable to achieve the organisation's policy and objectives

Unit Sector(s)
Stockpile and Reclaim Material

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIISTD201A Read and interpret maps

Modification History
Not applicable.

Unit Descriptor
This unit covers reading and interpreting maps in resources and infrastructure industries. It includes: preparing for navigation; planning the route; and conducting navigation.

Application of the Unit
This unit is appropriate for those working in operational roles, within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for navigation| 1.1. Access, interpret and apply compliance documentation relevant to reading and interpreting maps  
  1.2. Information is gathered and relevant factors identified and checked with appropriate personnel  
  1.3. Suitable maps, equipment and navigation aids are selected and checked for accuracy, currency and operational effectiveness  
  1.4. Faults or errors in maps and equipment are detected and corrected  
  1.5. Communication with others is established and maintained |
| 2. Plan the route        | 2.1. Traverse route to destination is selected using information from map or plan and field observations  
  2.2. Maps are examined to identify relevant symbols and information and navigation data  
  2.3. Current position in the field is identified on map or plan  
  2.4. Current position in the field is located using landmarks and key geographical features.  
  2.5. Required destination is identified on map or plan  
  2.6. Hazards and potential hazards in traversing from location to destination are recognised and interpreted from map or plan, field observations, and local knowledge.  
  2.7. Distance to required destination is estimated using map scale and selected traverse route |
| 3. Conduct navigation    | 3.1. Navigation is undertaken in accordance with planned route and schedule  
  3.2. Maps are correctly orientated to surroundings in accordance with planned route  
  3.3. Equipment and navigation aids are used correctly  
  3.4. Alternative routes are navigated to bypass |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to read and interpret maps:

- apply legislative, organisation and site requirements and procedures
- speak clearly and directly
- apply active listening
- access, interpret and apply technical and operational information, including: work instructions, quality assurance procedures, manufacturer's instructions, materials safety data sheets and equipment instructions
- apply teamwork to a range of situations, particularly in a safety context
- solve problems, such as: recognising clear discrepancies between available maps or other data and the actual site and taking action to correct these
- show initiative in adapting to changing work conditions or contexts, particularly when working across a variety of work areas
- manage time, particularly in organising priorities and planning work
- take responsibility for self organisation of work priorities
- use a range of mediums to learn
- apply mathematical skills, including: basic angles and geometry for compass bearings, estimation and measurement

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to read and interpret maps:

- types of maps, charts and scales and their uses
- representation of topographic features on maps and plans
- common scales used on maps and plans
- features and use of a compass and factors that affect compass accuracy
- advantages and disadvantages of different map and chart types and sources of error
- techniques for estimating distance travelled
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</table>
resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.

- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or Australian first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand Australian testimonial evidence of the candidate:
    - working with others to read and interpret maps

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisation and site requirements and procedures  
manufacturer’s guidelines and specifications  
Australian standards  
code of practice  
Employment and workplace relations legislation  
Equal Employment Opportunity and Disability Discrimination legislation |

Co-requisite units
Not applicable.
RIISTD202A Collect routine site samples

Modification History
Not applicable.

Unit Descriptor
This unit covers the collection of routine site samples in resources and infrastructure industries. It includes the requirements for the preparation for sampling, conducting sample collection; preparing samples, dispatching samples and maintaining the sampling environment.

Application of the Unit
This unit is appropriate for those working in production operator, field assistant and laboratory assistant roles, at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining
- Mineral exploration

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for sampling | 1.1. Access, interpret and apply *compliance documentation* relevant to the collection of routine site samples  
1.2. Confirm the purpose, priority and scope of the *sample* request or plan  
1.3. Liaise with relevant personnel to arrange site access and all necessary clearances/permits  
1.4. Identify *site hazards* and review enterprise *safety procedures*  
1.5. Use and document procedures to ensure *representative sampling*  
1.6. Confirm quantity, location, frequency or time of sampling and *types of samples* to be collected  
1.7. Assemble required *sampling tools and equipment* |
| 2. Conduct sample collection | 2.1. Collect samples as specified in sample request or plan  
2.2. Preserve sample integrity throughout collection  
2.3. Place samples in suitable containers and label accurately  
2.4. Store and transport samples  
2.5. Identify and record characteristics of sampling environment, in particular any non-standard aspects  
2.6. Maintain sampling equipment in a clean and safe working condition |
| 3. Prepare samples | 3.1. Verify sample, check documentation and required equipment for preparation  
3.2. Perform *sample preparation* according to plan using recommended procedures  
3.3. Contain loss of material and protect sample against contamination  
3.4. Recover and clean samples using techniques and equipment specified for the particular sample  
3.5. Store or dispose of residues and samples following OHS and environmental |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to collect routine site samples:

- apply legislative, organisation and site requirements and procedures
- apply established work practices
- wear personal protective equipment
- apply plan, report, map, specification interpretation skills
- apply record maintenance and operations monitoring procedures
- apply worksite communication procedures

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to collect routine site samples:

- key terminology and concepts, such as: sample, contamination, traceability, integrity, chain of custody
- purpose for which the samples have been collected
- the function of key sampling equipment/materials and principles of operation
- hazards, risks and enterprise safety procedures associated with routine sampling is undertaken
- enterprise procedures dealing with:
  - sampling
  - waste management, clean up and spillage
  - handling, transport and storage of dangerous goods
- health, safety and environment requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</table>
| **Sample preparation** may include: | • marking up  
• splitting  
• sub-sampling  
• sealing  
• size reduction  
• specific gravity  
• magnetic suspension  
• core-cutting  
• crushing/grinding  
• sieving  
• riffling  
• blending  
• homogenisation  
• coning  
• quartering  
• preparing sub-sample including: stain/polish  
• petrological and electron microscope/electron microprobes |
| **Maintenance of integrity of samples could include:** | • appropriate containers and lids (for example, glass, plastic, amber, opaque)  
• sealing of sample containers  
• purging of sample lines and bores  
• decontamination of sampling tools between collection of consecutive samples  
• use of appropriate preservatives (for example, sodium azide, toluene or antibiotics)  
• wrapping container in foil or wet newspaper |
- temperature control, which may involve prevention of direct contact between the sample and coolant
- transfer of sterile sample into sterile container
- monitoring of storage conditions
- enterprise/legal traceability through appropriate sample labelling and records

**Minimising environmental impacts** may involve:

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>
| | • replacement of soils and vegetation
| | • driving to minimise soil erosion and damage to fauna and vegetation
| | • disposal of surplus, spent or purged materials
| | • recycling of non-hazardous wastes
| | • appropriate disposal of hazardous waste
| | • cleaning of vehicles to prevent transfer of pests and contaminants

2.3. Take accurate *readings* and document at time of reading to avoid error |
| 3. Coordinate with scientists and laboratories | 3.1. Provide information clearly and accurately  
3.2. Provide for delivery of samples within required time constraints  
3.3. Ensure integrity of sample is maintained during packing and transport  
3.4. Act promptly upon receiving feedback from laboratories where environmental risk is identified |
| 4. Maintain sampling and measurement equipment | 4.1. Maintain equipment in specified operating condition  
4.2. Calibrate equipment in accordance with maintenance schedule  
4.3. Perform minor repairs and adjustments where authorised  
4.4. Program equipment software accurately where authorised |
| 5. Report, store and archive environmental data | 5.1. Prepare regular reports in accordance with environmental management system  
5.2. Store data accurately in manual and computer systems |
5.3. Ensure data are backed up regularly

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to take environmental samples and measurements:

- apply legislative, organisation and site requirements and procedures
- apply procedures for accurate recording of data
- use computers
- apply databases and spreadsheets
- set up measuring equipment
- apply procedures for packing and transporting environmental samples
- apply equipment calibration requirements and procedures
- apply equipment software programming requirements and procedures
- apply statistical report preparation procedures

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to take environmental samples and measurements:

- local mine operations environmental management system related to samples and measurements
- methods for retaining sample integrity
- common readings and measured expected
- relevant company procedures and policy
- sampling and measurement equipment operations
- company and statutory reporting requirements
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</tbody>
</table>

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non-English speaking background.
English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to take environmental samples and measurements

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>

RIISTD302A Process data and maintain accurate records

Modification History
Not applicable.

Unit Descriptor
This unit covers processing data and maintaining accurate records in resources and infrastructure industries. It includes using and maintaining data, analysing and presenting data, and maintaining accurate records.

Application of the Unit
This unit is appropriate for those working in operational or technical roles, within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

Elements and Performance Criteria

<table>

<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Use and maintain data | 1.1. Access, interpret and apply *compliance documentation* relevant to processing data and maintaining accurate records  
1.2. Use available computer technologies according to organisation licensing, manufacturers' specifications and local procedures  
1.3. Identify and code *data* suitable for database system  
1.4. Check and verify computer output  
1.5. Utilise suitable and appropriate *software* to store and retrieve data  
1.6. Transfer data effectively |
| 2. Analyse and present data | 2.1. Record accurate and relevant observations in a form accessible to others  
2.2. Use appropriate *conventions and symbols*  
2.3. Convert instrument readouts into a form suitable for interpretation  
2.4. Use computer technology to analyse data  
2.5. Present results in format that meets organisational standards |
3.2. File and store information |
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to processing data and maintaining accurate records:

- apply legislative, organisation and site requirements and procedures
- apply procedures for entering data into computer software
- apply data analysis techniques
- apply averaging techniques
- apply report writing requirements and procedures
- apply computer software report prepare requirements and procedures

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to processing data and maintaining accurate records:

- regulatory, organisational and site data processing and record maintenance requirements and procedures
- computer software (database, spreadsheet, word processing)
- data presentation modes
- filing systems
- storage methods
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

**may include:**
- legislative, organisation and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Data

**may include:**
- results of tests
- measurements and analyses
- computer database information
- manual notes
- maps
- sketches
- diagrams

### Software

**may include:**
- database software
- spreadsheet software
- statistical analysis software

### Conventions and symbols

**may be used on:**
- overlays
- maps
- reports

*and includes:*
- scientific notation
- terminology
- references

### Records

**may include:**
- equipment
- materials
- safety
- budgets
- test results
- product/process testing
- calibrations of equipment
- maintenance history of equipment

</table>
| 1. Plan and prepare for operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Plan and prepare work  
1.3. Receive, interpret and clarify shift change over details  
1.4. Select appropriate personal protective equipment  
1.5. Select appropriate type of *equipment*, safety equipment and ground control materials according to job type, work plan and *site conditions*  
1.6. Arrange for delivery of ground support materials to site  
1.7. Inspect and assess site conditions to determine if scaling is required and take action  
1.8. Conduct *equipment* pre-start checks to ensure equipment is ready for operation  
1.9. Identify, address and report potential risks and hazards  
1.10. Inspect and assess appropriateness of ground control mechanism/plan to ensure safety of site  
1.11. Use approved *dust suppression and extraction equipment and/or methods* |
| 2. Install ground support | 2.1. Assemble and install *reinforcement components* according to ground control plan  
2.2. Install *reinforcement components* with appropriate *fixative*  
2.3. Install *reinforcement components* following contour of ground and according to ground conditions  
2.4. Tension external *reinforcement components* according to ground control conditions |
| 3. Conduct housekeeping activities | 3.1. Complete all required documentation clearly, concisely and on time  
3.2. Clean *equipment* to maintain condition and ensure safe and efficient operations |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to install ground support:

- apply legislative, organisation and site requirements and procedures for the installation of ground support
- identify hazards
- monitor operations
- organise work tasks
- report defects
- perform troubleshooting
- use hand and power tools

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to install ground support:

- environmental procedures
- equipment safety requirements
- geological and technical data (basic)
- ground control characteristics and applications
- hazardous substances (handling and transport)
- inspection procedures
- isolation procedures
- manufacturer's specifications
- operational procedures and checks
- working at heights
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Equipment may include:
- power tools and hand tools
- bolt cutters
- lifting and handling equipment
- lighting
- support vehicles
- recommended/required PPE

### Dust suppression and extraction equipment and/or methods may include:
- mobile/ixed sprays
- screens (vent doors, vent blinds)
- use of water trucks
- ventilation bags operational
- watering down site
- hoses
- portable air fan (air mover)

### Reinforcement components may include:
- ground anchors
- rock-bolts
- expansion shells
- plates
- nuts and washers
- other approved components used for ground control
- butterfly bars
- plates
- rope
- steep straps
- wire

### Fixatives may include:
- point anchors
Site conditions may include:

- accessibility
- amount of scale
- ground conditions (e.g. dry, wet)
- ground stability (e.g. broken, blocky, flaky, stable, compacted)
- location of water table
- slope of working surface
- ventilation characteristics (e.g. fumes, dust)
- visibility

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to install and maintain vents:

- apply legislative, organisation and site requirements and procedures for installation and maintenance of vents
- operate, maintain and clean equipment
- interpret ground conditions
- repair vent bags
- use hand and power tools

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to install and maintain vents:

- equipment parking
- equipment processes, technical capability and limitations
- geological and technical data (basic)
- isolation procedures
- operational procedures and checks
- primary and secondary ventilation
- site procedures
- start-up and shutdown procedures
- underground procedures
- ventilation systems

Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Vents** may be secondary or temporary and include fans.

**Pre-start checks** may include:
- air filter restriction indicator
- cab (horn, lights, air conditioner)
- computer systems
- display instrumentation and gauges (indicators, gauges, laser levels)
- engine and stop engine lights (orange and red)
- fluid levels (windscreen washer tank, hydraulic oil, coolant, grease, water, engine oil, fuel, transmission)
- no kinks
- no leaks
- no tears
- vent bag affixed in position
- visual and audio warning devices and lights

**Equipment** may include:
- 4WD
- cutting implements
- elevating work platform
- hand and power tools
- integrated tool carrier
- light trucks
- velcro
- minsup clip
- recommended/required PPE

**Dust suppression and extraction**
- mobile/fixed sprays
### Methods

- screens (vent doors, vent blinds)
- use of water trucks
- ventilation bags operational
- watering down site
- fans

### Personnel

- blasters
- contractors
- drillers
- drivers
- holders of appropriate tickets
- licensed operators
- maintenance staff
- personnel authorised by mine management
- service personnel
- supervisors
- surveyors
- tradespersons

### Legislation

- Australian standards
- environmental agencies regulations
- Environmental Protection Act
- isolation procedures
- mine safety and health legislation and regulations
- OHS legislation
- lead code of practice

### Environmental issues

- dust
- fumes
- noise
- water

2.6. Maintain a *suitable working posture* for manual scaling  
2.7. Ensure maintenance of safe egress  
2.8. Conduct manual scaling according to site procedures  
2.9. Maintain services  
2.10. Maintain *dust controls* as manual scaling operations advance |
| 3. Conduct housekeeping activities           | 3.1. Clean and return *ancillary equipment*  
3.2. Complete all required documentation to site requirements |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to prepare and perform manual scaling operations:

- apply legislative, organisation and site requirements and procedures for preparation and performance of manual scaling operations
- identify hazards
- work safely
- communicate effectively
- manually handle

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to prepare and perform manual scaling operations:

- environmental procedures
- equipment safety requirements
- ground conditions
- ground control methods
- dealing with misfires
- inspection procedures
- isolation procedures
- mining legislation
- emergency procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<td></td>
</tr>
</tbody>
</table>

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the preparation and performance of manual scaling operations

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
| | • manufacturer's guidelines and specifications  
| | • Australian standards  
| | • Employment and workplace relations legislation  
| | • Equal Employment Opportunity and Disability Discrimination legislation  |

| Ancillary equipment may include: | • lighting  
| | • hoses water / air  
| | • lifting and handling equipment  
| | • mobile equipment (e.g. support vehicles)  
| | • paint (e.g. spray cans)  
| | • power tools and hand tools  
| | • scaling bars of various lengths  
| | • recommended/required PPE  
| | • work platforms (e.g. scissor lift, basket)  
| | • ventilation equipment  |

| Ventilated means quality and quantity of air is suitable for the work environment according to site and legislative requirements. | |

| Dust controls may include: | • mobile/fixed sprays  
| | • ventilation  
| | • hand watering  |

| Exclusion zone indicators may include: | • flags  
| | • tapes  
| | • witches hats  
| | • signs including:  
| | • danger  
| | • traffic control signs  |

| Shift change-over details may include: | • equipment and resource allocations/requirements  
| | • ground conditions  |
| Legislation may include Acts and regulation dealing with: | • mining safety and health  
• mine inspection  
• OHS  
• explosives |
|---|---|
| Site conditions may include: | • accessibility  
• ground conditions  
• ground stability (e.g. broken, blocky, flaky, stable, compacted, shears, faults, folds)  
• noise  
• ventilation  
• visibility  
• temperature, humidity |
| Hazards may include: | • ground control failure  
• lack of ventilation or oxygen  
• loose material on working surface  
• misfires  
• gases  
• entry by unauthorised personnel  
• uncovered open holes  
• unstable ground conditions  
• atmospheric contaminants  
• unstable footing  
• poor housekeeping |
| Inspections may include: | • visual inspection  
• sounding  
• watering  
• air flow  
• listening for rock noise (ground talking) |
| Suitable working posture may include: | • both feet on firm footing  
• holding bar in correct position  
• maintaining balance |
| Services may include: | • compressed air  
• water  
• ventilation |
Unit Sector(s)
Metalliferous Mining (Underground)

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIUMM301A Conduct wet filling activities

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of wet filling activities in the metalliferous mining industry. It includes organising for wet filling, filling voids, and draining and monitoring fills. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| 1. Organise for wet filling | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Plan and prepare work  
1.3. Receive, interpret and clarify shift changeover details  
1.4. Select appropriate personal protective equipment  
1.5. Select approved *dust suppression and extraction methods*  
1.6. Select appropriate type of *equipment*, materials and safety equipment according to job type  
1.7. Perform equipment pre-start checks to ensure *equipment* is ready for operation  
1.8. Identify, manage and/or report *potential risks and hazards*  
1.9. Erect physical barricades and signs and/or safety provisions to prevent unauthorised entry of personnel and equipment  
1.10. Manage environmental requirements  
1.11. Adhere to emergency procedures to ensure safety of personnel, equipment and site  
1.12. Inspect and assess site conditions to determine if scaling is required and take action according to site requirements  
1.13. Ensure area is well ventilated before entry into work area |
| 2. Fill voids | 2.1. Fill *void* in controlled manner according to characteristics of *fill* |
| 3. Drain and monitor fill | 3.1. Manage and monitor drainage system according to engineering specifications  
3.2. Inspect bulkheads for *faults, water flow and/or defects*  
3.3. Monitor and manage dimensions of fill utilising approved indicators  
3.4. Complete all required documentation clearly, concisely and on time  
3.5. Pass on end of shift information to |
oncoming shift

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct wet filling activities:

- apply legislative, organisation and site requirements and procedures for the conduct of wet filling activities
- identify hazards
- monitor filling
- apply safe work practices
- communicate with other personnel

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct wet filling activities:

- backfilling procedures
- emergency procedures
- equipment safety requirements
- hazardous substances (handling and transport)
- mine operational system
- mining legislation
- OHS procedures
- operational procedures and checks
- site safety requirements
## Evidence Guide

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to install sets:

- apply legislative, organisation and site requirements and procedures for installing sets
- cut and fit timbers
- cut and fix mesh
- identify hazards
- monitor operations
- organise work tasks
- report defects
- perform troubleshooting
- use hand and power tools

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to install sets:

- drilling procedures
- geological and technical data (basic)
- ground control characteristics and applications
- hazardous substances (handling and transport)
- manufacturer's specifications
- mining legislation
- operational procedures and checks
- footing installation techniques
- set assembly, erection and securing
- void packing techniques
- working at heights
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct hand held mining:

- apply legislative, organisation and site requirements and procedures for the conduct of hand held mining
- identify hazards
- communicate
- monitor operations
- organise work tasks
- assemble machinery
- interpret work plan
- report defects
- perform troubleshooting
- use hand tools

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct hand held mining:

- controlling atmospheric contaminants
- house keeping
- rock drilling procedures and equipment
- equipment safety requirements
- ground control characteristics and applications
- hand held equipment and equipment faults
- drill steel types and selection
- inspection procedures
- isolation procedures
- operational procedures and checks
- explosives and their associated hazards
- emergency reporting and evacuation procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
|                                                  | • Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances. |
|                                                  | • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. |
|                                                  | • Customisation of assessment and delivery |
environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the conduct of hand held mining

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
|---|---|
| Legislation may include Acts and regulation dealing with: | • mining safety and health  
• mine inspection  
• OHS  
• explosives |
| Machinery and equipment may include: | • airleg assembly and accessories  
• hand held  
• rising feed  
• drill steels  
• bits  
• raise ladder  
• water hoses  
• air hoses  
• lubrication devices |
| Hand held machine operational checks may include: | • checking and testing machine controls  
• rockdrill chuck wear  
• lubricator and lubrication  
• secure nuts and bolts  
• water tubes  
• bridle pins  
• security of air and water connections  
• inspection of hoses and connections  
• oil flow from exhaust outlet |
| Personal Protective Equipment may include: | • lamp  
• safety helmet  
• eye protection  
• hearing protection |
| **Rockdrill machine faults** may include: | • drop in penetration rate  
• loss of water or water pressure  
• loss of rotation  
• loss of air or air pressure  
• loss of lubrication  
• loss of gauge on bit  
• clogged air or water tubes  
• broken water tube  
• water in airline  
• airlag problems (e.g. broken crows foot) |
| **Unusable drill steels** may include: | • bent  
• broken  
• blocked  
• blunt  
• without necessary gauge/diameter |
| **Work area inspections** may include: | • travel ways  
• footings/access/retreat  
• fumes or dust  
• ventilation air flow  
• ground conditions  
• breakthrough locations (if accessible)  
• misfires  
• services including firing cables  
• workplace explosive storage |
| **Potential hazards and risks** may include: | • insufficient illumination  
• falling rocks  
• fire/flames/ignition sources  
• premature explosion  
• atmospheric contaminants  
• faulty equipment  
• debris  
• insufficient ventilation  
• unauthorised persons  
• high air or water pressures  
• breaking hoses  
• stuck or broken drill steels |
### Site procedures may include:
- pre-start check
- lock out and tagging procedures
- clean up
- blasting procedures and re-entry times
- permit-to-work systems
- safety equipment
- use of personal protective equipment
- communication and reporting procedures
- emergency procedures

### Dust suppression and/or extraction equipment may include:
- secondary fans (electric or compressed air) and ventilation bags
- mobile or fixed sprays
- ventilation doors or other vent devices
- air movers and ventilation bags
- use of water trucks
- watering down site
- wash down backs and blasted material

### Conditions may include:
- ground conditions(blocky, faulted, secure)
- floor stability (e.g. broken, blocky, flaky, stable, compacted)
- slope of working surface
- environmental conditions (e.g. hot, noisy, dry, wet)
- visibility and illumination conditions

---

### Unit Sector(s)
Metalliferous Mining (Underground)

### Competency field
Refer to Unit Sector(s).

### Co-requisite units
Not applicable.
RIIUMM304A Construct and maintain underground roads

Modification History
Not applicable.

Unit Descriptor
This unit covers the construction and maintenance of underground roads in the metalliferous mining industry. It includes planning and preparing for road construction and maintenance, constructing roads, maintaining roads, and conducting housekeeping activities. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for road construction and maintenance | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Plan and prepare work  
1.3. Receive, interpret and clarify shift change over details  
1.4. Select personal protective equipment appropriate for work activities  
1.5. Select appropriate type of equipment and materials according to job type and specifications to maximise efficiency and effectiveness of work activities  
1.6. Perform equipment pre-start checks  
1.7. Identify, address and report potential risks and hazards  
1.8. Identify, address and report environmental issues  
1.9. Adhere to emergency procedures as per site procedures  
1.10. Inspect and assess site conditions to determine if scaling is required and take action  
1.11. Use approved dust suppression and extraction methods  
1.12. Erect signs or barricades and/or safety provisions  
1.13. Ensure area is well ventilated before entry into work area |
| 2. Construct roads | 2.1. Prepare road surface and apply road material to meet planned road characteristics and engineering specifications  
2.2. Construct road to conform with road design and location as specified by work plan  
2.3. Check for and remove contaminants  
2.4. Construct drains and water crossing points as appropriate for the removal of run-off and avoid accumulation of excessive water to minimise road damage  
2.5. Ensure access ways are clear whilst constructing road |
### 2.6. Organise for excess road material to be removed

### 2.7. Suppress dust utilising approved method

### 2.8. Complete all required documentation clearly, concisely and on time

### 2.9. Pass on end of shift information to oncoming shift

| 3. Maintain roads | 3.1. Maintain condition of roads to meet volume of traffic  
3.2. Maintain effective drainage for the removal of excess water and ensure safe hauling surface |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------|

| 4. Conduct housekeeping activities | 4.1. Check road ensuring site is serviceable  
4.2. Carry out shutdown procedures  
4.3. Service and make minor adjustments to equipment |
|-------------------------------|----------------------------------------------------------------------------------------------------------------------------------|
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to construct and maintain underground roads:

- apply legislative, organisation and site requirements and procedures for construction and maintenance of underground roads
- use dumping techniques
- operate, maintain and clean equipment
- interpret ground conditions
- employ pushing techniques
- use hand and power tools
- observe driving regulations and rules
- use towing methods

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to construct and maintain underground roads:

- construction marking
- drainage construction methods
- drainage methods
- dumping procedures
- dust suppression techniques
- equipment parking
- equipment processes, technical capability and limitations
- equipment safety requirements
- geological and technical data (basic)
- hauling procedures
- hazardous substances (handling and transport)
- isolation procedures
- manufacturer's specifications (equipment, materials)
- material placement procedures
- mining legislation
- operational procedures and checks
- primary and secondary ventilation
- road construction sequence and methods
• road rules
• road stabilisation
• site procedures
• site safety requirements
• start-up and shutdown procedures
• towing procedures
• underground procedures
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

4.3. Pass on end of shift information to oncoming shift  
4.4. Complete all required documentation clearly, concisely and on time |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to install and remove a secondary fan:

- apply legislative, organisation and site requirements and procedures for the installation and removal of secondary fans
- operate, maintain and clean equipment
- interpret ground conditions
- use hand/power tools

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to install and remove a secondary fan:

- working at heights
- equipment parking
- technical capability and limitations
- geological and technical data (basic)
- isolation procedures
- operational procedures and checks
- primary and secondary ventilation
- site procedures
- start-up and shutdown procedures
- underground procedures
- maintenance schedules
- types of secondary fans
- installation and removal methods for secondary fans
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

• manufacturer's guidelines and specifications  
• Australian standards  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
|---|---|
| Secondary fan is any ventilation system other than the primary ventilation system, and may include: | • air movers  
• screamers  
• booster  
• exhaust |
| Secondary fan installation checks may include: | • air filter restriction indicator  
• computer systems  
• display instrumentation and gauges (indicators, gauges, levels)  
• vibration  
• correct alignment  
• visual and audio warning devices and lights  
• types of fans  
• power source connection |
| Equipment may include: | • 4WD  
• cutting implements  
• elevating work platform  
• hand tools  
• integrated tool carrier  
• light trucks  
• recommended/required PPE |
| Dust suppression and extraction methods may include: | • mobile/fixed sprays  
• screens (vent doors, vent blinds)  
• use of water trucks  
• ventilation bags operational  
• watering down site |
Personnel may include:
- blasters
- contractors
- drillers
- drivers
- holders of appropriate tickets
- licensed operators
- maintenance staff
- personnel authorised by mine management
- service personnel
- supervisors
- surveyors
- tradespersons

Legislation may include Acts and regulation dealing with:
- mining safety and health
- mine inspection
- OHS
- explosives

Environmental issues may include:
- dust
- fumes
- noise
- water

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct mechanical scaling:

- apply legislative, organisation and site requirements and procedures for the conduct of mechanical scaling
- apply operating techniques
- use hand and power tools
- identify hazards
- communicate effectively

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct mechanical scaling:

- dewatering procedures and characteristics
- drilling procedures
- environmental procedures
- equipment safety requirements
- geological and technical data (basic)
- ground control characteristics
- hazardous substances (handling and transport)
- inspection procedures
- isolation procedures
- manufacturer's specifications
- mining legislation
- operational procedures and checks

- start-up and shutdown procedures
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
</table>
|  | • knowledge of the requirements, procedures and instructions for the conduct of mechanical scaling  
• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of the conduct of mechanical scaling  
• working with others to undertake and complete mechanical scaling that meets all of the required outcomes  
• consistent timely completion of mechanical scaling that safely, effectively and efficiently meets the required outcomes |

#### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the conduct of mechanical scaling

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisational and site requirements and procedures including: |
| | • mining safety and health |
| | • mine inspection |
| | • OHS |
| | • explosives |
| | • manufacturer's guidelines and specifications |
| | • Australian standards |
| | • Employment and workplace relations legislation |
| | • Equal Employment Opportunity and Disability Discrimination legislation |

| Shift change-over details may include: | equipment and resource allocations/requirements |
| | • geo technical details |
| | • site drawings |
| | • type of ground control mechanisms |
| | • pre shift instructions |

| Site conditions may include: | limited accessibility |
| | • ground conditions (e.g. dry, wet) |
| | • ground stability (e.g. broken, blocky, flaky, stable, compacted, shears, faults, folds) |
| | • ground characteristics (high/low stress) |
| | • location of water table |
| | • noise |
| | • slope of working surface |
| | • ventilation characteristics |
| | • limited visibility |
| | • temperature, humidity |

<p>| Scaling equipment may include: | development drill rigs |
| | • mechanical ground support installation rigs |
| | • gate-end panel (jumbo box) |
| | • power tools and hand tools and attachments |
| | • services - air, water, electricity |</p>

Not applicable.
RIIUMM307A Maintain underground stockpiles

Modification History
Not applicable.

Unit Descriptor
This unit covers the maintenance of underground stockpiles in the metalliferous industry. It includes organising for stockpiling, stockpiling materials, and conducting housekeeping activities. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Metalliferous Mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Organise for stockpiling     | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
|                                 | 1.2. Plan and prepare work  
|                                 | 1.3. Receive, interpret and clarify shift changeover details  
|                                 | 1.4. Select personal protective equipment appropriate for work activities  
|                                 | 1.5. Inspect and assess site conditions to determine if scaling is required and take action  
|                                 | 1.6. Identify, address and report *potential risks and hazards*  
|                                 | 1.7. Identify, address and report *environmental issues*  
|                                 | 1.8. Adhere to emergency procedures in case of fire and/or accident  
|                                 | 1.9. Use approved dust *suppression and extraction methods*  
|                                 | 1.10. Ensure area is well ventilated before entry into work area  
| 2. Stockpile materials          | 2.1. Ensure *stockpile site* has adequate ground support and is accessible  
|                                 | 2.2. Place *stockpile materials* in correct location to ensure efficient identification and access and to prevent mixing of materials  
|                                 | 2.3. Operate *equipment* according to manufacturer’s instructions and avoid damaging to the stockpile and surrounding site  
|                                 | 2.4. Use appropriate stockpiling techniques to maximise the capacity of the stockpiling site  
|                                 | 2.5. Identify and remove *contaminants*  
|                                 | 2.6. Complete all required documentation clearly, concisely and on time  
|                                 | 2.7. Pass on end of shift information to oncoming shift  
| 3. Conduct housekeeping activities | 3.1. Clean *equipment* to maintain condition of equipment and ensure safe and efficient

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to maintain underground stockpiles:

- apply legislative, organisation and site requirements and procedures for the maintenance of underground stockpiles
- use driving techniques
- use dumping techniques
- operate, maintain and clean equipment
- interpret ground conditions
- employ lifting techniques
- employ pushing techniques
- use hand and power tools

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to maintain underground stockpiles:

- drainage processes
- dumping procedures
- equipment parking
- equipment processes, technical capability and limitations
- equipment safety requirements
- geological and technical data (basic)
- hauling procedures
- incline and decline rules
- isolation procedures
- material placement procedures
- mining regulations
- operational procedures and checks
- primary and secondary ventilation procedures
- principles of contamination
- signage erection procedures
- site procedures
- start-up and shutdown procedures
- stockpiling characteristics and limitations
- stockpiling procedures
- underground procedures
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to operate from elevated work platforms underground:

- apply legislative, organisation and site requirements and procedures for operating from elevated work platforms underground
- direct operations
- operate, maintain and clean equipment
- interpret ground conditions
- monitor operations
- use hand and power tools

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to operate from elevated work platform underground:

- environmental procedures
- equipment parking
- equipment processes, technical capability and limitations
- equipment safety requirements
- isolation procedures
- operational procedures and checks
- site procedures
- site safety requirements
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for operation from elevated work platforms underground</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of operation from elevated work platforms underground</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete operations from elevated work platform underground that meet all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely operation from elevated work platforms underground that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those
required on the job.

- Customisation of assessment and delivery environment should sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete operation from elevated work platform underground

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>

- safety mechanisms operational (horn, operating lights),
- correct location of equipment
- vehicle is left secured

**Operator maintenance** may include:
- checking fluid levels
- filter changing
- greasing
- keeping cab clean
- tightening loose fittings

**Clean** may include:
- degreasing
- forced air
- steam cleaning
- vacuum
- water
Environmental issues may include:

- dust
- fumes
- noise
- water

Unit Sector(s)
Underground Mining

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIUND204A Refuel vehicles/machines underground

Modification History
Not applicable.

Unit Descriptor
This unit covers the refuelling of vehicles/machines underground in the resources and infrastructure industries. It includes preparing for refuelling, refuelling the vehicle or machine, and conducting housekeeping functions. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an assistant role at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for refueling | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Comply with relevant regulations/standards  
1.3. Locate designated fuel bay and manoeuvre vehicle/machine to correct refuelling location  
1.4. Shutdown vehicle/machine by following correct *shutdown procedures* for refuelling area  
1.5. Check fire fighting equipment in refuelling area before commencing refuelling  
1.6. Check and/or activate for *ventilation* devices in refuelling area before commencing refuelling |
| 2. Refuel vehicle/machine | 2.1. Follow site *refuelling procedures* to refuel vehicle/machine, staying with vehicle during the entire operation  
2.2. Comply with *environmental procedures and response plans* |
| 3. Conduct housekeeping functions | 3.1. Correctly re-hang hose and conduct *fuel bay housekeeping*  
3.2. Complete all required records and documentation |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to refuel vehicles/machines underground:

- apply legislative, organisation and site requirements and procedures for refueling vehicles/machines underground
- apply diagnostic techniques
- make decisions
- direct operations
- use driving techniques in dark and enclosed conditions
- identify hazards
- use hazardous goods handling techniques
- interpret ground conditions
- interpret plans, reports, maps and specifications
- maintain records
- organise work tasks
- report defects
- follow safe work practices
- select and fit personal protective equipment
- work in a team
- troubleshoot
- use communications equipment
- use computer systems
- use protective equipment
- use hand tools

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to refuel vehicles/machines underground:

- emergency procedures
- environmental procedures
- equipment processes, technical capability and limitations
- equipment safety requirements
- geological and technical data
- hazardous goods procedures and consequences of spills
- isolation procedures
- mine operational system
- night and day working procedures
- OHS procedures
- underground mining procedures
- operational procedures and checks
- road rules
- shutdown procedures
- site procedures
- site safety requirements
- start-up procedures
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Shutdown procedures

- correct location of vehicle/machine
- safety mechanisms operational (horn, operating lights)
- vehicle/machine engine is switched off

### Ventilation

- warning lights
- regulator doors
- ventilation louvres
- warning alarms
- auxiliary fans

### Refuelling procedures

- checking hoses, nozzles and fittings prior to refuelling
- remove tank cap
- insert nozzle
- complete refuelling
- replace the fuel tank cap

### Environmental procedures and response plans

- runoff control procedures
- spills clean-up procedures
- water quality procedures
- major spill response plans

### Fuel bay housekeeping

- cleaning up any minor fuel spillage
- cleaning up any rags and debris
- keeping area clean and tidy
- notifying supervisor of any large spillages and potential hazards
- re-hanging of hoses

</table>
| 1. Assess incident scene and prepare for response | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Interpret alarms and indicators to determine the nature, scope and location of the *incident*  
1.3. Assess incident and determine appropriate course of action in keeping with requirements for personal safety that may include mine site Trigger Action Response Plans (TARPs)  
1.4. Locate, access and check serviceability of *emergency equipment*  
1.5. Locate all local workers and ensure that they are removed from the incident scene, and erect barriers to prevent access by other persons  
1.6. Notify occurrence and details of incident to appropriate people using appropriate methods of *communication* |
| 2. Respond to emergency or incident situations | 2.1. Select emergency equipment and use appropriately to deal with the incident  
2.2. Isolate potential sources of danger and put in place warning signs/signals/barriers  
2.3. Take local measures to reduce impact of incident  
2.4. Coordinate and control response to incident to ensure continuing safety of personnel at the site  
2.5. Exercise control of the incident situation until formal relief is notified/received  
2.6. Follow or implement evacuation procedures where appropriate in accordance with mine evacuation plan  
2.7. Continually monitor and assess emergency situation and changes in circumstances, communicate requests for further assistance or evacuation to appropriate officials |
| 3. Report and de-brief | 3.1. Provide details of incident to relevant personnel  
3.2. Provide information to investigating external agencies where required |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to respond to a workforce incident:

- apply legislative, organisation and site requirements and procedures for responding to a workforce incident
- identify hazards/potential hazards
- observe, analyse and report incidents
- read and interpret mine plans
- navigate in underground mines
- apply initial response First Aid
- apply fire fighting techniques
- communicate
- read, interpret and apply relevant geological and survey data

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to respond to a workforce incident:

- relevant legislative requirements
- mine emergency procedures
- mine incident procedures
- initial response First Aid
- breathing apparatus
- fire fighting
- hazards and potential hazards
- relevant geological and survey data
- relevant ventilation information
- mine plans
- mine communication systems
- TARPs for Hazard Management Plans
- relevant risk Management Procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for installing ground support | 1.1. Access, interpret and apply *compliance documentation* relevant to the installing of hand held ground support in underground metalliferous mines  
1.2. Plan and prepare work  
1.3. Receive, interpret and clarify shift changeover details  
1.4. Select appropriate personal protective equipment  
1.5. Inspect and assess site conditions to determine scaling requirements, misfires, starting points and to take action accordingly  
1.6. Conduct *equipment* pre-start and visual checks in readiness for operation  
1.7. Identify, address and report *potential risks and hazards*  
1.8. Assess site conditions and review historical information to clarify drilling requirements  
1.9. Use approved *dust suppression and extraction methods* if required |
| 2. Set up and prepare for installation | 2.1. Scale loose material and make site safe (where applicable)  
2.2. Connect *auxiliary services* where required  
2.3. Erect *boundaries* to prevent unauthorised access  
2.4. Complete all required documentation clearly, concisely and on time |
| 3. Install ground support | 3.1. Install reinforcements  
3.2. Conduct equipment shutdown procedures  
3.3. Pass on end of shift information to oncoming shift |
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to install hand held ground support in underground metalliferous mines:

- apply legislative, organisation and site requirements and procedures for setting up, preparing and installing ground support
- operation of hand and power tools
- hazard identification
- monitor operations
- operation of power tools
- report defects

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to install hand held ground support in underground metalliferous mines:

- dewatering procedures and characteristics
- environmental procedures
- equipment safety requirements
- geological and technical data (basic)
- ground support characteristics and applications
- hazardous goods procedures (handling and transport)
- inspection procedures
- isolation procedures
- manufacturer's specifications
- mining regulations
- operational procedures and checks
- site procedures
- start-up and shutdown procedures
- underground procedures
- working knowledge of all stope areas
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>

</tbody>
</table>
- overhanging rock
- tipping hazards
- unauthorised personnel
- wet holes
- uncontrolled radio frequencies and transmitters

**Dust suppression and extraction methods** may include:
- mobile/fixed sprays
- screens (vent doors, vent blinds)
- use of water trucks
- ventilation bags operational
- watering down site
- fans

**Auxiliary services** may include:
- compressed air
- de-watering pumps
- electricity
- ventilation
- water

**Boundaries** may be physical or manned and may include:
- cable across drive (wire, chain)
- witches hats, barricade tape

**Personnel** may include:
- contractors
- drillers
- drivers
- holders of appropriate tickets
- inspectors
- licensed operators
- maintenance staff
- personnel authorised by mine management
- service personnel
- supervisors
- surveyors
- trades persons

**Unit Sector(s)**
Underground Mining

Refer to Unit Sector(s).
Co-requisite units

Not applicable.
RIIUND207A Conduct underground lifting operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of underground lifting operations in the resources and infrastructure industries. It includes planning and preparing for underground lifting and moving loads. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an assistant role at worksites within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1. Plan for underground lifting** | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, interpret and clarify/confirm work requirements in the form of *shift briefings*, handover details or work orders before proceeding  
1.3. Develop a *preliminary underground lifting plan* or site sketch taking account of essential information  
1.4. Check and confirm job feasibility and schedule with the client and other relevant persons  
1.5. Confirm hazards associated with the use of cranes and other load moving equipment and identify and check measures to eliminate or control these hazards with appropriate parties  
1.6. Finalise and confirm the underground lifting plan, including the scheduling of required resources |
| **2. Prepare for underground lifting** | 2.1. Identify, select, inspect, assemble and certify *underground lifting equipment*, materials and tools required for the plan as serviceable  
2.2. Label unserviceable equipment, materials and tools in accordance with Mine Managers Rules and Schemes  
2.3. Select and prepare appropriate anchors in accordance with the Strata Control Plan |
| **3. Move loads** | 3.1. Deduce and confirm appropriate safe working loads and centre of gravity using load charts and sling tags/charts prior to load moving  
3.2. Direct the movement of the load using standard *signals for load moving*  
3.3. Perform load moving in accordance with the plan and acceptable *safe work practices*  
3.4. Perform work in an underground environment  
3.5. Connect lifting gear to load  
3.6. Connect load to *movement device* using |
3.7. Ensure stability of the load by application of load movement procedure, temporary bracing and/or load support appropriate to the task

3.8. Follow appropriate specifications during the placement and securing of the load

3.9. Dismantle and remove/restore load shifting

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to conduct underground lifting operations:

- apply legislative, organisation and site requirements and procedures for conducting underground lifting operations
- apply operational safety requirements
- access, interpret and apply technical information
- maintain equipment records
- apply diagnostic techniques
- use relevant hand tools
- ability to identify hazards

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to conduct underground lifting operations:

- appropriate approved scheme of training
- site and equipment safety requirements
- equipment characteristics, technical capabilities and limitations
- operational and maintenance procedures
- hand signals
- potential hazards
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
</table>
| Critical aspects for assessment and evidence required to demonstrate competency in this unit | • knowledge of the requirements, procedures and instructions for conducting underground lifting operations  
• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of conduct of underground lifting operations  
• working with others to undertake and complete the conduct of underground lifting operations that meet all of the required outcomes  
• consistent timely completion of underground lifting operations that safely, effectively and efficiently meet the required outcomes |

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.  
• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.  
• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. |
| Customisation of assessment and delivery environment should sensitively accommodate cultural diversity. |
| Aboriginal people and other people from a non English speaking background may have second language issues. |
| Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required. |

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete underground lifting operations

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:
- legislative, organisational and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Shift briefings** may include:
- site plans and drawings
- work specifications
- basic working plans and material schedules
- the confirmed mass and dimensions of loads
- capacities and availability of load shifting equipment

**Preliminary underground lifting plan** may include:
- confirmed details of underground lifting requirement
- confirmed dimensions
- site access and egress
- suitability and availability of materials
- tools and equipment
- identification of potential hazards
- probable control measures
- identification of site coordination requirements

**Underground lifting equipment** may include:
- slings
- ropes
- shackles
- eye-bolts

**Signals for load moving** are to include:
- those that are communicated verbally and with hand signals, to Australian standards

**Safe work practices** may include:
- legislation and regulations
- relevant Australian standards
- management plans
- manager’s rules
Movement devices may include:

- OHS policy
- code of practice
- manufacturer's instructions
- safe working or job procedures

4.1. Complete all required documentation clearly, concisely and on time  
4.2. Pass on end of shift information to oncoming shift |
| 5. Carry out operator maintenance  
5.1. Isolate skip before conducting *operator maintenance*  
5.2. Service and make minor adjustments to equipment  
5.3. Clean skip equipment  
5.4. Restore skip operations |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to conduct skip operations:

- apply legislative, organisation and site requirements and procedures for conducting skip operations
- apply standard operating practices and procedures around shafts
- work safely and within level of competence
- monitor operations
- communicate and report
- use hand and power tools

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to conduct skip operations:

- key areas of legislated safety and health requirements
- winder systems and operations
- shaft configuration and construction
- shaft services and installations (pipes, cables, ladders etc)
- identification of defects relevant to skip operations through inspection or observation
- trip and fault procedures and abnormal conditions
- site emergency procedures
- communication system between cage and winder
- recording and logging requirements for winder drivers, and electrical and mechanical maintenance personnel
- environmental procedures
- equipment processes, technical capability and limitations
- geological and technical data (basic)
- isolation and permit-to work systems and procedures
- mining regulation
- mine ventilation system
- site procedures
- in-shaft communications equipment
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

<table>
<thead>
<tr>

</tbody>
</table>

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment should sensitively accommodate...
cultural diversity.
- Aboriginal people and other people from a non
  English speaking background may have second
  language issues.
- Where applicable, physical resources should
  include equipment modified for people with
  disabilities. Access must be provided to
  appropriate learning and/or assessment support
  when required.

| Method of assessment | This unit may be assessed in a holistic way with
the other units of competency. The assessment
strategy for this unit must verify required
knowledge and skill and practical application using
more than one of the following assessment
methods:

- written and/or oral assessment of the
candidate's required knowledge
- observed, documented and/or first hand
testimonial evidence of the candidate's:
  - implementation of appropriate
    requirements, procedures and techniques
    for the safe, effective and efficient
    achievement of required outcomes
  - consistent achievement of required
    outcomes
  - first hand testimonial evidence of the
    candidate's:
    - working with others to undertake and
    complete skip operations |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further
information on assessment including access and
equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:

- legislative procedures including Acts and regulation dealing with:
  - mining safety and health
  - mine inspection
  - OHS
  - explosives
- organisational and site requirements and procedures including:
  - clean up
  - emergency procedures
  - equipment shutdown and isolation procedures
  - evacuation procedures
  - First Aid
  - notification of authorities
  - permit-to-work systems
  - safety equipment
  - use of personal protective equipment
  - portable electric apparatus procedures
  - fall arrestor and harness procedures
  - confined spaces
  - manufacturer's guidelines and specifications
  - Australian standards
  - Employment and workplace relations legislation
  - Equal Employment Opportunity and Disability Discrimination legislation

**Equipment utilised for skip operations** may include:

- winding engine
- bucket
- cage
- skip
- power supplies and equipment

**Potential hazards and risks** may

- blockages or obstructions
- communication failure
| **include:** | • oversized material  
• spillage  
• unauthorised personnel  
• unsafe ground  
• poor visibility  
• explosion  
• asphyxiation and drowning |
| --- | --- |
| **Start-up procedures** may include: | • external damage/defects/wear  
• cleanliness of skip operating station  
• computer systems  
• danger/out of service tags  
• display instrumentation and gauges (indicators, gauges, laser levels)  
• fire suppression unit (pins in position in triggers)  
• loose wheels  
• lubricant/hydraulic/coolant levels  
• idle positioned and running  
• light positioning and cleanliness  
• missing/loose bolts  
• oil leaks  
• personal proximity  
• portable fire extinguisher (bracket, gauge, hose, ease of access)  
• skip door (including locking arms)  
• skip rope  
• visual and audio warning devices and lights  
• weigh machines |
| **Environmental issues** may include: | • dust  
• fumes  
• noise  
• water  
• heat  
• flammable and noxious gases  
• flammable dust |
| **Materials** may include: | • gravel  
• ore  
• overburden  
• oxidised waste  
• rejects  
• road base  
• sand |
### Factors which affect the capacity of skip may include:

- duration of operation
- efficient and safe operating speed
- operating limitations
- type of activities performed
- weight and/or load limitations

<table>
<thead>
<tr>
<th>Site conditions may include:</th>
<th>Factors which affect the capacity of skip may include:</th>
</tr>
</thead>
<tbody>

<td></td>
</tr>
</tbody>
</table>

### Indicators may include:

- computer indicators
- skip indicators

### Contaminants may include:

- consumables
- debris
- explosives
- metal bucket teeth
- metal or steel rods
- piping
- plastic
- timber
- back-fill

### Blockage may include:

- oversize materials
- contaminants

### Safety provisions may include:

- barricades
- safety guards
- visible signage

### Remove blockages may include:

- firing
- water flushing
- hot work (including cutting, welding etc)

### Operator maintenance may include:

- greasing
- replacing broken or missing bolts
- rope adjustments
- skip door adjustments
- tightening loose fittings

### Clean may include:

- degreasing
- forced air
- steam cleaning

| **4. Carry out winder inspections** | 4.1. Isolate and prove isolation of equipment  
4.2. Inspect winder and *auxiliary equipment* and report faults/defects and prepare winder for routine servicing |
| **5. Conduct end-of-shift activities** | 5.1. Complete all required documentation  
5.2. Pass on end-of-shift information and hand over control to oncoming shift  
5.3. Ensure control room is *clean* and tidy |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to operate automated winders:

- apply legislative, organisation and site requirements and procedures for operating automated winders
- monitor shaft operations
- communicate and report
- use hand and power tools

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to operate automated winders:

- key areas of mining acts and regulations
- relevant key areas of legislated safety and health requirements pertaining to winding
- winder types, systems and operations
- shaft configuration and construction
- shaft services and installations (pipes, cables, ladders etc)
- possible defects in winder/winch equipment/installations
- identification of defects relevant to skip operations through inspection or observation
- daily/weekly/monthly inspection requirements and maintenance requirements and procedures for winding systems
- explosives handling and transport
- trip and fault procedures and abnormal conditions
- site winder emergency procedures
- communication system between cage and winder
- recording and logging requirements for winder drivers and electrical and mechanical maintenance personnel
- environmental procedures
- equipment processes, technical capability and limitations
- equipment safety requirements
- geological and technical data (basic)
- isolation and permit-to-work systems and procedures/manufacturer's specifications
- mining regulation/operational procedures and checks
- primary and secondary ventilation/mine ventilation system
- shaft installations
- site procedures
- in-shaft communications equipment and practices

Unit Sector(s)
Underground Mining

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIUND301A Operate manual winder

Modification History
Not applicable.

Unit Descriptor
This unit covers the operation of manual winder in the resources and infrastructure industries. It includes organising for winder operations, hauling personnel, hauling equipment/materials, carrying out winder inspections, and conducting end of shift activities. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Organise for winder operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Receive, interpret and clarify shift changeover details and take over control of winder  
1.3. Select and use personal protective equipment  
1.4. Perform *equipment* and work area *pre-operational checks* to ensure equipment is ready for operation  
1.5. Check records for outstanding maintenance/inspections, record defects to establish the operational status of equipment and take action  
1.6. Identify, address and report defects and *potential hazards and risks*  
1.7. Carry out *start-up procedures* including checking that area is clear for operations  
1.8. Manage relevant *environmental issues*  
1.9. Adhere to emergency procedures  
1.10. Apply *dust suppression and extraction methods*  
1.11. Ensure control cabin is environmentally and ergonomically sound |
| 2. Haul personnel | 2.1. Communicate with relevant personnel  
2.2. Confirm cage is ready for operations  
2.3. *Energise the system*, follow start-up procedures and operate personnel cage to comply with directions from person in charge of cage  
2.4. *Monitor and manage cage performance* using appropriate indicators  
2.5. Adjust speed and movement as required  
2.6. Carry out *shutdown procedures* |
| 3. Haul equipment/materials | 3.1. Communicate with relevant personnel  
3.2. Confirm cage/skip is ready for operation  
3.3. Energise the system, follow start-up procedures and transport equipment using manual winder |

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to operate manual winder:

- apply legislative, organisation and site requirements and procedures for operation of manual winder
- operate shaft winders
- operate, maintain and clean equipment
- monitor shaft operations
- communicate and report
- monitor conveyances
- use hand tools

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to operate manual winder:

- the key areas of mining acts and regulations
- the relevant key areas of legislated safety and health requirements pertaining to winding
- winder types, systems and operations
- shaft configuration and construction
- shaft services and installations (pipes, cables, ladders etc)
- possible defects in winder/winch equipment/installations
- identification of defects relevant to skip operations through inspection or observation
- daily/weekly/monthly inspection requirements and maintenance requirements and procedures for winding systems
- site winder emergency procedures
- recording and logging requirements for winder drivers, and electrical and mechanical maintenance personnel
- equipment safety requirements
- primary and secondary ventilation/mine ventilation system
- shaft installations
- site procedures
- in-shaft communications equipment
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:

- legislation including Acts and regulation dealing with:
  - mining safety and health
  - mine inspection
  - OHS
  - explosives
- organisational and site requirements and procedures including:
  - clean up
  - emergency procedures
  - equipment shutdown and isolation procedures
  - evacuation procedures
  - First Aid
  - notifying relevant authorities
  - permit-to-work systems
  - safety equipment
  - use of personal protective equipment
  - communication procedures (e.g. with platmen)
  - portable electric apparatus procedures
  - fall arrestor and harness procedures
  - confined spaces
  - manufacturer's guidelines and specifications
  - Australian standards
  - Employment and workplace relations legislation
  - Equal Employment Opportunity and Disability Discrimination legislation

**Equipment** may include:

- winding engine
- bucket/kibbles
- cage/working platforms including chinaman's protective top cover
- skip
### Pre-operational checks may include:

- power supplies and equipment
  - external damage/defects/wear
  - computer systems
  - communications systems
  - winder controls
  - protection and emergency devices
  - fire suppression systems
  - danger/out of service tags
  - display instrumentation and gauges (indicators, gauges, laser levels)
  - lubricant/hydraulic/coolant levels
  - idle positioned and running
  - light positioning and cleanliness
  - personal proximity
  - skip/cage doors
  - ropes
  - visual and audio warning devices and lights
  - weigh machines
  - head frame/sky shaft
  - shaft brace

### Potential hazards and risks may include:

- communication failure
- falling objects
- explosives
- moving equipment
- collisions
- plant failure
- electricity
- spillage
- hazardous substances
- unauthorised personnel
- visibility
- vibration
- noise
- explosion
- asphyxiation and drowning

### Start-up procedures may include:

- pre-start inspections, checks and tests
- setting winding mode
- advisory signals indicating impending movement of conveyance
- carrying out test-winding-cycle if required
- checking that equipment/system operations are normal
| **Environmental issues** may include: | • dust  
• fumes  
• noise  
• water  
• heat  
• flammable and noxious gases  
• flammable dust |
|--------------------------------------|---------------------------------------------------------------|
| **Dust suppression and extraction methods** may include: | • mobile/fixed sprays  
• manual watering down site |
| **Energise the system** may involve: | • activate power supply or start diesel motor-generator  
• running up hydraulic/pneumatic and other auxiliary equipment  
• check fault indicators |
| **Monitor and manage cage performance** may include: | • duration of operation  
• efficient and safe operating speed  
• operating limitations  
• type of activities performed  
• weight and/or load limitations |
| **Shutdown procedures** may include: | • de-activating power/stopping diesel prime mover  
• shutting down motor-generator set/exciters/exhaust and cooling fans/hydraulic drive  
• shutting down hydraulic/pneumatic & other auxiliary equipment |
| **Auxiliary equipment** may include: | • emergency power supplies  
• general mine services  
• emergency communications systems |
| **Clean** may include: | • degreasing  
• forced air  
• steam cleaning  
• vacuum  
• water  
• solvents  
• rags and cotton waste |
| **Winding operations** include: | • winder operations in drifts, tunnels, slopes or inclines |

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct cage operations:

- apply legislative, organisation and site requirements and procedures for conducting cage operations
- apply standard operating practices and procedures around shafts
- work safely and within level of competence
- clean equipment
- grease
- communicate and report
- use hand and power tools

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct cage operations:

- the key areas of mining acts and regulations pertaining to winding
- shaft operations
- shaft installations
- identification of defects relevant to cage operations through inspection or observation
- trip and fault procedures and abnormal conditions
- site winder emergency procedures
- communication system between cage and winder
- recording and logging requirements for winder drivers, and electrical and mechanical maintenance personnel
- isolation and permit-to-work procedures
- mine ventilation system
- site procedures
- in-shaft communication equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Co-requisite units**

Not applicable.
RIIUND303A Operate winder for shaft sinking

Modification History
Not applicable.

Unit Descriptor
This unit covers the operation of winder for shaft sinking in the resources and infrastructure industries. It includes organising for winder operations, conducting shaft sinking using manual winder, carrying out winder inspections, and conducting end-of-shift activities. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Organise for winder operations | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Receive, interpret and clarify shift changeover details  
1.3. Select personal protective equipment appropriate for work activities  
1.4. Perform equipment and work area pre-start checks to ensure equipment is ready for operation  
1.5. Check records for outstanding maintenance/inspections and recorded defects to establish the operational status of equipment and if defective take action  
1.6. Identify, address and report potential risks and hazards  
1.7. Carry out start-up procedures, including checking that area is clear for operations  
1.8. Adhere to emergency procedures  
1.9. Apply dust suppression and extraction methods  
1.10. Ensure control cabin is environmentally and ergonomically sound |
| 2. Conduct shaft sinking using manual winder | 2.1. Communicate with relevant personnel  
2.2. Confirm kibble is ready for operation  
2.3. Energise the system, follow start-up procedures and operate winder to comply with directions from the person in charge  
2.4. Monitor and manage winder performance using appropriate indicators  
2.5. Adjust speed and movement  
2.6. Operate winder (or winders) for shaft sinking operations  
2.7. Carry out shutdown procedures |
| 3. Carry out winder inspections | 3.1. Isolate and prove isolation of equipment  
3.2. Inspect winder and auxiliary equipment and report faults/defects and prepare winder for routine servicing |
| 4. Conduct end-of-shift | 4.1. Complete all required documentation  
4.2. Pass on end of shift information and hand |
4.3. Ensure control room is *clean* and tidy
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Critical aspects for assessment and evidence required to demonstrate competency in this unit</strong></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for operation of winder for shaft sinking</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of operation of winder for shaft sinking</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the operation of winder for shaft sinking that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely operation of winder for shaft sinking that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
</tr>
<tr>
<td></td>
<td>• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
</tr>
<tr>
<td></td>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
</tr>
</tbody>
</table>
- Customisation of assessment and delivery environment should sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to operate winder for shaft sinking

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislation which may include Acts and regulation dealing with: |
| | • mining safety and health |
| | • mine inspection |
| | • OHS |
| | • explosives |
| | • site procedures which may include: |
| | • clean-up |
| | • emergency procedures |
| | • equipment shutdown and isolation procedures |
| | • evacuation procedures |
| | • First Aid |
| | • notifying relevant authorities |
| | • permit-to-work systems |
| | • safety equipment |
| | • use of personal protective equipment |
| | • communication procedures |
| | • portable electric apparatus procedures |
| | • fall arrestor and harness procedures |
| | • confined spaces |
| | • manufacturer's guidelines and specifications |
| | • Australian standards |
| | • Employment and workplace relations legislation |
| | • Equal Employment Opportunity and Disability Discrimination legislation |

<p>| Equipment may include: | • winding engines and head frames |
| | • stages |
| | • kibble/skip/cage |
| | • power supplies and equipment |
| | • services |
| | • fans/pumps/compressors/super-sucker |
| | • shaft doors |</p>
<table>

|   | vibration  
|   | noise  
|   | explosion  
|   | asphyxiation and drowning |
| **Start-up procedures** may include: | pre-start inspections, checks and tests  
|   | advisory signals indicating impending movement of conveyance  
|   | carrying out test winding cycle if required  
|   | checking that equipment/system operations are normal |
| **Energise the system** may | activate power supply or start diesel |
| include:       | motor-generator  |
|               | • running up hydraulic/pneumatic and other auxiliary equipment |
|               | • check fault indicators |

**Monitor** may include:
- duration of operation
- efficient and safe operating speed
- operating limitations
- type of activities performed
- weight and/or load limitations

**Indicators** may include:
- computer indicators
- personnel cage/skip indicator

**Shutdown procedures** may include:
- de-activating power
- shutting down hydraulic/pneumatic and other auxiliary equipment

**Auxiliary equipment** may include:
- emergency power supplies
- emergency communications systems
- fans and pumps

**Clean** may include:
- degreasing
- forced air
- steam cleaning
- vacuum
- water
- solvents
- rags and cotton waste

| **1. Plan and prepare for recovery** | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, interpret and clarify details of the recovery requirements  
1.3. Access and apply *safety information and procedures* including use of personal protective equipment  
1.4. Select and prepare *materials* required for the task  
1.5. Identify, address and report *potential hazards and risks*, and *environmental and heritage issues*  
1.6. Conduct *pre-start checks* to ensure equipment is ready for operation  
1.7. Assist in the preparation of a recovery plan |
| **2. Recover and access equipment** | 2.1. If necessary, carry out pre-start, start-up, park-up and shutdown  
2.2. Install and operate *recovery equipment* within the limitations of the site  
2.3. Recover equipment systematically using approved methods/plans, with minimal loss and damage of equipment  
2.4. Carry out pushing and towing of equipment and plant safely and in accordance with equipment capabilities  
2.5. Apply and interpret diagnostic operations on recovered equipment  
2.6. Assess if decommissioning of equipment is required and take action if necessary |
| **3. Conduct housekeeping activities** | 3.1. Clean equipment  
3.2. Carry out, identify and manage removal of spills  
3.3. Clean and store attachments and other ancillary equipment  
3.4. Complete all required records and documentation accurately and promptly |
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to recover equipment:

- apply legislative, organisation and site requirements and procedures for recovery of equipment
- apply operational safety requirements
- access, interpret and apply technical, environmental and geological information
- communicate and coordinate activities with others
- apply risk analysis processes
- analyse recovery methods suitable to the situations
- operate equipment
- anticipate potential hazards
- analyse and respond to changing circumstances
- apply diagnostic techniques
- diagnose problems
- make decisions
- direct operations
- apply driving techniques
- identify hazards/handle hazardous goods
- interpret ground conditions
- interpret plans, reports, maps, specifications
- maintain records/monitor operations
- organise work tasks/employ safe work practices
- report defects
- select and fit personal protective equipment
- work in a team
- use communications equipment
- use computer systems
- use hand and power tools

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to recover equipment:

- operational safety requirements
- mine operational procedures
- geological and environmental conditions in the recovery area
- relevant risk management process
- potential hazards and remedial or response actions
- available recovery methods
- recovery equipment and materials capabilities and characteristics
- loss and damage causes and control techniques
- recovery site control procedures
- operational signalling procedures
- mine communication systems and procedures
- emergency procedures/ shutdown procedures/start-up procedures
- environmental and heritage procedures
- equipment processes, technical capability and limitations
- equipment safety requirements
- geological and technical data
- hazardous goods procedures and consequences of spills
- isolation procedures
- mine operational system
- night and day working procedures
- relevant OHS procedures
- operational procedures and checks
- recovery techniques
- relevant road rules
- site procedures
- site safety requirements

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to recover underground equipment:

- apply legislative, organisation and site requirements and procedures for recovery of underground equipment
- apply operational safety requirements
- access, interpret and apply technical, environmental and geological information
- communicate and coordinate activities with others
- apply risk analysis processes
- analyse recovery methods suitable to the situations
- anticipate potential hazards
- analyse and respond to changing circumstances
- apply diagnostic techniques
- use hand tools

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to recover underground equipment:

- operational safety requirements
- mine operational procedures
- geological and environmental conditions in the recovery area
- potential hazards and remedial or response actions
- a range of available recovery methods
- loss and damage causes and control techniques
- recovery site control procedures
- operational signalling procedures
- mine communication systems and procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
</tr>
</thead>
</table>
| **Critical aspects for assessment and evidence required to demonstrate competency in this unit** | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
  - knowledge of the requirements, procedures and instructions for recovery of underground equipment
  - implementation of requirements, procedures and techniques for the safe, effective and efficient completion of underground equipment recovery
  - working with others to undertake and complete the recovery of underground equipment that meets all of the required outcomes
  - consistent timely completion of underground equipment recovery that safely, effectively and efficiently meets the required outcomes

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
</tr>
</thead>
</table>
| • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. |
- Customisation of assessment and delivery environment should sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non-English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete underground equipment recovery

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for remote control operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Receive, interpret and clarify shift changeover details  
1.3. Select appropriate personal protective equipment  
1.4. Select appropriate type of *equipment* with *remote* capabilities according to job type and specifications to maximise efficiency and effectiveness of the work activities  
1.5. Perform equipment *pre-start checks* to ensure equipment is ready for operation  
1.6. Inspect and assess site conditions to determine if scaling is required and take action  
1.7. Identify, address and report *potential risks and hazards, and environmental issues*  
1.8. Carry out *start-up, park and shutdown procedures*  
1.9. Confirm location and construction of remoting area  
1.10. Erect *barricades* or *signage* and/or safety provisions where appropriate to prevent unauthorised access  
1.11. Adhere to *emergency procedures* to ensure safety of personnel, equipment and site  
1.12. Use approved *dust suppression and extraction methods*  
1.13. Ensure area is well ventilated before entry |
| 2. Set up line of sight remote operation | 2.1. Check transmitter functions for correct operation  
2.2. Ensure radio contact is available for operator at all times during operation  
2.3. Confirm operation of visible warning lights  
2.4. Check receivers are operational  
2.5. Check proximity devices or other safety devices are operational |
<p>| 3. Conduct line of sight remoting | 3.1. Wear or position remote controls in a <em>safe</em> |</p>

4. Carry out operator maintenance

| 4.1. Conduct **operator maintenance** |
| 4.2. Carry out park-up and shutdown |
| 4.3. Service and make minor adjustments to equipment |

5. Conduct housekeeping activities

| 5.1. Clean equipment and remoting area |
| 5.2. **Clean** and store auxiliary service equipment |
| 5.3. Complete all required records and documentation accurately and promptly |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to conduct line of sight remote operations:

- apply legislative, organisation and site requirements and procedures for the conduct of line of sight remote operations
- operate, maintain and clean equipment
- monitor remote equipment operation
- operate radio controlled transmitter/receiver
- test and identify remote control faults
- erect barrier systems

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to conduct line of sight remote operations:

- equipment processes, technical capability and limitations
- equipment safety requirements
- geological and technical data (basic)
- isolation procedures
- primary and secondary ventilation
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislation which may include Acts and regulation dealing with:
  - mining safety and health
  - mine inspection
  - OHS
  - explosives
- organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Equipment is:
- any piece of equipment with remote capabilities and may include:
  - drill rig
  - integrated tool carrier
  - LHD
  - rock breaker
  - bogger (mucking)
  - recommended/required PPE
  - laser
  - camera
  - proximity device
  - load-shifting equipment
  - shot-creting sprays
  - dozer

### Remote may include:
- hard wire (cable)
- radio signal

### Pre-start checks may include:
- approved remote testing areas
- computer systems
- display instrumentation and gauges (indicators, gauges, laser levels)

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to conduct tele-remote operations:

- apply legislative, organisation and site requirements and procedures for conducting tele-remote operations
- use hand and power tools
- operate radio controlled transmitter/receiver
- test and identify remote control faults

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to conduct tele-remote operations:

- environmental procedures
- equipment parking
- equipment processes, technical capability and limitations
- equipment safety requirements
- geological and technical data (basic)
- isolation procedures
- primary and secondary ventilation
- tele-remote operational procedures
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
|                                                                         | • knowledge of the requirements, procedures and instructions for conducting tele-remote operations  
|                                                                         | • implementation of requirements, procedures and techniques for the safe, effective and efficient completion of tele-remote operations  
|                                                                         | • working with others to undertake and complete tele-remote operations that meet all of the required outcomes  
|                                                                         | • consistent timely completion of tele-remote operations that safely, effectively and efficiently meet the required outcomes |

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery
environment should sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the tele-remote operations

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:

- legislation which may include Acts and regulations dealing with:
  - mining safety and health
  - mine inspection
  - OHS
  - explosives
- organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Tele-remote equipment may include:

- any piece of equipment with tele-remote capabilities and may include:
  - drill rig
  - integrated tool carrier
  - LHD
  - rock breaker
  - bogger (mucking)
  - recommended/required PPE
- remote may be:
  - hard wire (cable)
  - radio signal

### Equipment pre-start checks may include:

- approved remote testing areas
- computer systems
- display instrumentation and gauges (indicators, gauges, laser levels)
- remote controls
- visual and audio warning devices and lights

### Potential risks and hazards may include:

- communication failure
- remote failure
- spillage

**Unit Sector(s)**

Underground Mining

**Competency field**

Refer to Unit Sector(s).

**Co-requisite units**

Not applicable.
RIIUND308A Conduct control room operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of control room operations in the resources and infrastructure industries. It includes planning and preparing for control room operations, monitoring and managing operations and conducting housekeeping activities. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:

- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for control room operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Plan and prepare work  
1.3. Receive, interpret and clarify shift changeover details  
1.4. Select appropriate personal protective equipment  
1.5. Perform computer systems and equipment pre-start checks  
1.6. Identify, address and report *potential risks and hazards*  
1.7. Carry out *pre-operational checks* and start-up procedures  
1.8. Identify, address and report *environmental issues*  
1.9. Adhere to emergency procedures to ensure safety of personnel, equipment and site  
1.10. Check records and identify outstanding maintenance inspections and record identified defects  
1.11. Use approved *dust suppression and extraction methods* |
| 2. Monitor and manage operations | 2.1. *Monitor and manage operations* utilising appropriate *indicators*  
2.2. *Manage faults* according to site procedures  
2.3. Communicate with equipment operators and personnel using approved communication methods  
2.4. Complete all required documentation clearly, concisely and on time  
2.5. Pass on end-of-shift information to oncoming shift |
| 3. Conduct housekeeping activities | 3.1. *Clean* equipment  
3.2. Clean and store auxiliary service equipment |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for conducting control room operations</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of control room operations</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete control room operations that meet all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of control room operations that safely, effectively and efficiently meet the required outcomes</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery
environment should sensitively accommodate cultural diversity.

- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete control room operations |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislation, which may include Acts and regulation dealing with
  - mining safety and health
  - mine inspection
  - OHS
  - explosives
- organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Potential risks and hazards may include:
- spillage
- visibility
- communication failure
- unauthorised personnel
- control room malfunction
- power failure

### Pre-operational checks may include:
- all lights working
- checking stop buttons
- checks tags are in place
- control panel operations
- performing function tests
- personnel listings and clearances
- resetting
- security control
- video cameras operational and clean

### Environmental issues may include:
- live overhead wires
- humidity
- dust

### Dust suppression and extraction methods may include:
- mobile/ixed sprays
- screens (vent doors, vent blinds)

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures including:
  - relevant site safety and health
  - site inspection
  - explosives
  - manufacturer's guidelines and specifications
  - Australian standards
  - Employment and workplace relations legislation
  - Equal Employment Opportunity and Disability Discrimination legislation

Equipment may include:
- rig
- drilling
- approved anchor points
- approved charge hose
- approved cord cutters
- lanyatels (safety rope)
- lights
- line/string
- paint
- scaling bar
- signage
- tape measure
- recommended/required PPE

Potential risks and hazards may include:
- broken detonation leads
- contaminants
- eye hazards (flying chips)
- falling rock when collaring
- faulty equipment
- ground conditions
- high air and water pressures
- high voltage electricity
- hydraulic oil pressure
- lack of ventilation
- misfires
- overhanging rock
- tipping hazards
- unauthorised personnel
- wet holes
- uncontrolled radio frequencies and transmitters

**Dust suppression and extraction methods** may include:
- mobile/fixed sprays
- screens (vent doors, vent blinds)
- use of water trucks
- ventilation bags operational
- watering down site
- fans

**Auxiliary services** may include:
- compressed air
- de-watering pumps
- electricity
- ventilation
- water

**Boundaries** may be physical or manned and may include:
- cable across drive (wire, chain)
- witches hats, barricade tape

**Personnel** may include:
- contractors
- drillers
- drivers
- holders of appropriate tickets
- inspectors
- licensed operators
- maintenance staff
- personnel authorised by mine management
- service personnel
- supervisors
- surveyors
- trades persons

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
|---|---|
| | • knowledge of the requirements, procedures and instructions for application of shot-crete
| | • implementation of requirements, procedures and techniques for the safe, effective and efficient completion of application of shot-crete
| | • working with others to undertake and complete the application of shot-crete that meets all of the required outcomes
| | • consistent timely completion of application of shot-crete that safely, effectively and efficiently meets the required outcomes

### Context of and specific resources for assessment

| | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
| | • Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
| | • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
| | • Customisation of assessment and delivery
environment should sensitively accommodate cultural diversity.

- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the application of shot-crete

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislation including:
  - mining safety and health
  - mine inspection
  - OHS
  - explosives
  - organisational and site requirements and procedures
  - manufacturer's guidelines and specifications
  - Australian standards
  - Employment and workplace relations legislation
  - Equal Employment Opportunity and Disability Discrimination legislation

### Equipment may include:
- power tools and hand tools (including nail guns etc)
- hoses
- shot-creting equipment
- remote operating control box
- lifting and handling equipment
- lighting
- support vehicles
- recommended/required PPE

### Site conditions may include:
- accessibility
- amount of scale
- ground conditions (e.g. dry, wet)
- ground stability (e.g. broken, blocky, flaky, stable, compacted)
- location of water table
- slope of working surface
- ventilation characteristics (e.g. fumes, dust)
- visibility

### Dust suppression equipment and/or extraction methods may include:
- mobile/fixed sprays
- screens (vent doors, vent blinds)
- use of water trucks
### Unit Sector(s)

• fibrecrete  
• shot-crete  
• gypsum |
RIIUND401B Apply and monitor the ventilation management plan

Modification History
Not applicable.

Unit Descriptor
This unit covers the application and monitoring of the ventilation management plan in the resources and infrastructure industries. It includes planning and preparing for the application of the ventilation management plan, applying the plan, and applying ventilation system maintenance procedures. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, at worksites within:
- Coal Mining
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

</table>
| 1. Plan and prepare for the application of the ventilation management plan | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Access and interpret the ventilation management plan  
1.3. Identify and clarify roles and responsibilities, as specified in the ventilation management plan  
1.4. Communicate and clarify work group and individual responsibilities and tasks in an effective and timely manner  
1.5. Identify, obtain and allocate resources required for the application of the ventilation management plan  
1.6. Identify individual training needs and provide access to the established ventilation management training program and systems |
| 2. Apply the ventilation management plan | 2.1. Identify and interpret the impact of changes to the ventilation system on the mine atmosphere  
2.2. Apply installation and operation procedures for monitoring systems and equipment  
2.3. Install, monitor and maintain ventilation control device in the ventilation system  
2.4. Apply procedures for monitoring, recording and reporting on mine ventilation including defects to ventilation control devices  
2.5. Adjust mine control devices  
2.6. Carry out collection and analysis of ventilation data  
2.7. Record and report monitoring system data  
2.8. Apply water management procedures  
2.9. Respond to alarms raised  
2.10. Apply ventilation emergency and evacuation  
2.11. Contribute to systems audit and review requirements |
<p>| 3. Apply ventilation system maintenance procedures | 3.1. Schedule and carry out inspections, repair and maintenance activities |</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to apply and monitor the ventilation management plan:

- apply legislative, organisation and site requirements and procedures for application and monitoring of the ventilation management plan
- interpret and apply a limited range of mathematical and scientific theorems/laws related to ventilation
- collect, collate and interpret ventilation data
- interpret and apply ventilation device construction/installation specifications
- conduct enquiries/investigations and prepare reports
- communicate effectively in the workplace
- access, interpret and apply data from monitoring systems and equipment
- operate hand-held monitoring equipment
- apply risk management processes and techniques
- initiate ventilation training

Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to apply and monitor the ventilation management plan:

- legislative and statutory requirements for ventilation including air quality, maximum values, control and distribution, flammable gas and dust limits, ventilation fans, gas monitoring, respirable dust limits and inspections and recording/reporting
- methods of mine ventilation and their applications/limitations
- methods of panel ventilation and their applications/limitations
- impact of mining techniques and mine and panel design on ventilation
- mine roadways and shafts and their impact on mine ventilation
- impact of geological characteristics and seam gradients on mine ventilation design
- impacts on the ventilation system of gas drainage, spontaneous combustion, outburst and windblast
- mine gases; the types and their characteristics, sources, physiological effects and methods of detection
- dust, fumes and other particulate matter; the types, sources, physical and physiological effect and control/mitigation methods
- mine fires; the types, sources of ignition, possible effects on the ventilation circuit
and prevention/control/mitigation methods
- mine explosions; the types, ignition sources, possible effects on the ventilation circuits and prevention/control/mitigation methods
- pressure changes; causes, the impacts on the ventilation system, and responses
- heat/humidity; the sources and factors which may impact on mine ventilation and personnel
- mine fans
- ventilation control devices
- de-gassing
- methods of control
- fixed ventilation monitoring systems types, uses and limitations
- portable monitoring equipment, types, characteristics, uses and limitations
- ventilation management plan development requirements and processes
- ventilation surveys including the types, frequency and method for conduct including pressure/quantity/temperature and gas
- dust surveys for irrespirable quantity
- processes and techniques for determining alarms and trigger points/levels
- emergency and disaster plan response
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for application and monitoring of the ventilation management plan
- implementation of requirements, procedures and techniques for the safe, effective and efficient application and monitoring of the ventilation management plan
- working with others to plan, prepare and conduct application and monitoring of the ventilation management plan
- evidence of the consistent successful application and monitoring of the ventilation management plan

#### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment should sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the application and monitoring of the ventilation management plan
  - provision of clear and timely instruction and supervision by the individual of those involved in the application and monitoring of the ventilation management plan

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:

- legislative, organisational and site requirements and procedures
- standards and procedures required to support the ventilation management plan, which may include those for:
  - construction
  - action response
  - permit to work
  - condition monitoring
  - auditing
  - maintenance
  - document control
  - atmosphere monitoring
  - ventilation system control
  - communication systems
  - survey procedures
  - sealing procedures
  - changes
  - training and systems recording/reporting
  - manufacturer's guidelines and specifications
  - Australian standards
  - Employment and Workplace Relations legislation
  - Equal Employment Opportunity and Disability Discrimination legislation

### Ventilation management plan may include:

- establishing procedures for maintaining optimum mine ventilation including:
  - hazard identification and quantification
  - relevant emergency and evacuation procedures
  - risk assessment
  - authority and responsibility
  - controls established to manage identified risks
| **Ventilation management training applies to:** | • mine workers  
• trades people  
• permanent employees  
• contractors  
• mine officials  
• other relevant special requirements |
|---|---|
| **Mine atmosphere includes:** | • areas in the general mine district  
• areas into waste working  
• goafs in the mine  
and may include, but is not limited to:  
• temperature  
• gases  
• humidity  
• air flow  
• dust  
• other particulates  
• take out areas |
| **Ventilation control device includes:** | • door  
• regulator  
• seal  
• stopping  
• air crossings  
• pressure chambers  
• other control device to control or direct ventilation flows in a mine, and may include:  
• doors  
• regulators  
• seals  
• stoppages  
• air crossings  
• bulk heads  
• goaf seals and pressure chambers  
• air locks  
• fans  
• walls/barricades  
• vent bags  
• shafts |
Defects may include:
- inferior design/deterioration of materials
- inadequate quality of construction
- physical damage
- water damage

Water may impact on the mine ventilation management plan through liberation of:
- dissolved gases
- capture of soluble gases and fumes
- gas drainage efficiency
- seam moisture infusion or drainage
- dust liberation and suppression
- large ingresses disrupting ventilation networks
- ventilation requirements for pumping stations
- influence on sponcom propensity
- humidity
- hydrostatic pressure

Unit Sector(s)
Underground Mining

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to implement the ventilation management plan:

- apply legislative, organisation and site requirements and procedures for implementation of the ventilation management plan
- access, interpret and apply technical information
- access and analyse ventilation information related to the mine including archival and historical information
- measure air quality and quantity
- perform routine operational mathematical calculations (quantity, pressure, prediction)
- interpret and apply design criteria for ventilation systems and devices
- interpret computer spreadsheets and ventilation modelling/simulations
- collect, collate and interpret ventilation data
- conduct enquiries/investigations and prepare reports
- communicate effectively in the workplace
- access, interpret and apply data from monitoring systems and equipment
- operate hand held monitoring equipment
- implement the ventilation management training plan
- apply risk management processes and techniques
- implement emergency response and evacuation procedures

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to implement the ventilation management plan:

- legislative and site requirements for ventilation including:
  - air quality and quantity
  - maximum and minimum values
  - control and distribution
  - flammable gas and dust limits
  - ventilation fans
  - gas monitoring
  - respirable dust limits
  - inspections
recording/reporting

methods of mine ventilation and their applications/limitations including:
  - exhaust/force
  - antitropical
  - homotropical
  - flank returns
  - ascensional/descensional
  - bleeder
  - Z/U/Y systems
  - other combinations

methods of panel ventilation and their applications/limitations including:
  - homotropical and antitropical auxiliary fans
  - coursed ventilation (narrow side/wide side)
  - machine mounted scrubber systems
  - compressed air venturis and bleeders

impact of mining techniques

impact of mine and panel design on ventilation

mine roadways and shafts and their impact on mine ventilation

impact of material characteristics and seam gradients on mine ventilation design

impacts on ventilation system of gas drainage, spontaneous combustion, outburst and windblast

mine gases; types and characteristics, sources, physiological effects and methods of detection

dust, fumes and other particulate matter; the types, sources, physical and physiological effect and control/mitigation methods

mine fires; the types, sources of ignition, possible effects on the ventilation circuit and prevention/control/mitigation methods

mine explosions; types, ignition sources, possible effects on the ventilation circuits and prevention/control/mitigation methods

pressure changes; causes, impacts on the ventilation system, and responses (to include the causes and effects of natural ventilation and re-circulation)

heat/humidity; sources and factors which may impact on mine ventilation and personnel

mine fans including:
  - fan types
  - applications
  - limitations

ventilation control devices; types, purposes, design criteria and specifications, distribution/placement criteria and limitations

de-gassing; methods of control - including brattice, auxiliary fans, compressed air venturis, sails, hurdles and bleeders

fixed ventilation monitoring systems types, uses and limitations
- portable monitoring equipment, types, characteristics, uses and limitations
- functions, capabilities, advantages, limitations and use of computer modelling tools and simulation techniques
- basic computer-based systems used for mine ventilation monitoring and analysis
- ventilation management plan development requirements and processes
- ventilation surveys; the types, frequency and method for conducting including pressure/quantity/temperature and gas
- respirable dust survey requirements
- processes and techniques for determining alarms and trigger points/levels
- audit and review processes and techniques
- site document control requirements
- emergency preparedness and plan response/measures
- airway resistance and fan curves and duty points
- general use and application of ventilation theory including:
  - psychrometry and heat
  - gas laws including Charles and Boyle
  - natural ventilation pressures
  - air quality measurement
  - control device leakage
  - duct leakage
  - regulator
  - equivalent office calculation and Kirchoff's laws
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to establish and maintain the ventilation management system:

- apply legislative, organisation and site requirements and procedures for establishment and maintenance of the ventilation management system
- access, interpret and apply technical information
- access and analyse archival and historical ventilation information related to the mine
- interpret and apply mathematical and scientific theorems/laws related to ventilation
- perform ventilation planning mathematical calculations
- access, evaluate and apply design criteria for ventilation systems and devices
- interpret computer spreadsheets and ventilation modelling/simulations
- collect, collate and evaluate ventilation data
- establish technical procedures relating to ventilation
- conduct enquiries/investigations and prepare reports
- communicate effectively in the workplace
- access, evaluate and apply data from monitoring systems and equipment
- operate hand held monitoring equipment
- establish ventilation training requirement, programs, systems and procedures
- apply risk management processes and techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to establish and maintain the ventilation management system:

- legislative and site requirements for ventilation including air quality, maximum and minimum values, control and distribution, flammable gas and dust limits, ventilation fans, gas monitoring, respirable dust limits and inspections and recording/reporting
- methods of mine ventilation and their applications/limitations including exhaust/force, antitropal, homotropal, flank returns, ascensional/descensional, bleeder, ZUY systems and other combinations
- methods of panel ventilation and their applications/limitations including homotropal and antitropal auxiliary fans, coursed ventilation (narrow side/wide side), machine mounted scrubber systems, compressed air venturis and bleeders
- impact of mining techniques and mine and panel design on ventilation
• impact of coal characteristics and coal seam gradients on mine ventilation design
• principles and impacts of the ventilation system of gas drainage, spontaneous combustion, outburst and windblast
• mine gases; the types and their characteristics under varying circumstances, sources, physiological effects and methods of detection
• dust, fumes and other particulate matter; the types, sources, physical and physiological effect, and control/mitigation methods
• mine fires; the types, sources of ignition, possible effects on the ventilation circuit and prevention/control/mitigation methods
• mine explosions; types, ignition sources, possible effects on the ventilation circuit and prevention/control/mitigation methods
• pressure changes; causes, the impacts on the ventilation system, and responses (to include the causes and effects of natural ventilation and recirculation)
• heat/humidity; the sources and factors which may impact ventilation and personnel
• mine roadways and shafts; their design parameters and impact of mine ventilation
• mine fans; fan laws, fan types, performance characteristics, configurations, applications and limitations
• ventilation control devices; the types, purposes, design criteria and specifications, distribution/placement criteria and limitations
• de-gassing; methods of control - including brattice, auxiliary fans, compressed air
venturis, sails, hurdles and bleeder
• ventilation networks and individual circuit design criteria, specifications and design processes
• fixed ventilation monitoring systems types, characteristics, uses and limitations
• portable monitoring equipment, types, characteristics, uses and limitations
• functions, capabilities, advantages, limitation and uses of computer modelling and simulation techniques
• computer-based systems for mine environmental analysis
• ventilation management plan development requirements and processes
• ventilation surveys; the types, frequency and method for conducting including pressure/quantity/temperature and gas/dust
• processes and techniques for determining alarms and trigger points/levels
• audit and review processes and techniques
• emergency response and disaster planning processes and techniques
• general uses and application of ventilation theory, including: Atkinson's equation, methods of determining frictional resistance, frictional resistance values for mine airways and ducts, psychrometry and heat, gas laws including universal gas law, natural ventilation pressures, static/velocity/total pressures and shock loss, control device leakage, duct leakage, determination of mine resistance curves, combining system resistance and fan curves, regulator and equivalent orifice calculation, determination of fan operating/duty points and Kirchoff's laws
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for establishing and maintaining the ventilation management system
- implementation of procedures and techniques for the safe, effective and efficient establishment and maintenance of the ventilation management system
- the identification of the relevant information and scope of the work required to meet the required outcomes
- the identification of viable options for establishment and maintenance of the ventilation management system that best meet the required outcomes
- working with others to undertake and complete the establishment and maintenance of the ventilation management system
- consistent successful establishment and maintenance of the ventilation management system

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection
and use of resources for particular worksites may differ due to the site circumstances.

- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment should sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in the establishment and maintenance of the ventilation management system
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification and selection of viable options for the establishment and maintenance of the ventilation management system that best meet the required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the
| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |

**candidate’s:**
- working with others to undertake and complete the establishment and maintenance of the ventilation management system
- provision of clear and timely required support and advice on the establishment and maintenance of the ventilation management system
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisation and site requirements and procedures  
| | • manufacturer's guidelines and specifications  
| | • Australian standards  
| | • Employment and workplace relations legislation  
| | • Equal Employment Opportunity and Disability Discrimination legislation |

| Hazards of spontaneous combustion, fires and explosion may include: | • noxious and flammable gases  
| | • heat  
| | • contaminants  
| | • altered ventilation pressures/flows  
| | • direct physical impacts and weakening of the strata  
| | • complete disruption to the ventilation system |

| Temperature, pressure and humidity may be impacted by: | • climate conditions  
| | • ventilation quantities  
| | • location of workplaces  
| | • mine layout and design  
| | • location of mine entries  
| | • depth  
| | • adjacent strata type  
| | • number and types of machinery  
| | • seam gas composition under varying temperatures and pressures |

| Ventilation system may include: | • waste and sealed areas and all surface and underground fans and ventilation devices which control or impact on the mine ventilation |

| Effects of re-circulation may include: | • a build up of contaminant concentration (gas, fumes, dust, heat) and a decrease in oxygen |

| Water may: | • impact on the mine ventilation management plan through:  
<p>| | • liberation of dissolved gases |</p>
<table>

</thead>
</table>

- capture of soluble gases and fumes
- gas drainage efficiency
- seam moisture infusion or drainage
- dust liberation and suppression
- large ingresses disrupting ventilation networks
- ventilation requirements for pumping stations
- influence on spontaneous combustion propensity
- humidity and hydrostatic pressure

**Fires may include:**
- solid
- liquid
- gas
- metals

**Ventilation control devices may include:**
- doors
- regulators
- seals
- stoppings
- air crossings
- bulk heads
- goaf seals and pressure chambers
- air locks
- fans

**Impact of mine design on the ventilation system may include:**
- surface access
- mining method/rate
- barrier pillars and segregation of roadways
- system of mining
- bleeder or back returns
- number of headings
- bleeders
- geological features

**Mine gases may include:**
- gases from other introduced sources such as:
  - methane
  - carbon dioxide
  - carbon monoxide
  - oxides of nitrogen
  - hydrogen
  - sulphur dioxide
  - hydrogen sulphide
  - hydrocarbons

RIIUND602A Establish and maintain mine services systems

Modification History
Not applicable.

Unit Descriptor
This unit covers the establishment and maintenance of mine service systems in the resources and infrastructure industries. It includes designing mine services systems, selecting equipment for mine services systems, establishing installation and commissioning procedures, establishing systems for the operation and maintenance of mine service systems and equipment, planning and preparing for the implementation of systems for the operation and maintenance of mine services systems and equipment, and establishing systems for audit and review of mine services systems and equipment. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a management or supervisory role at worksites within:
- Coal mining
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

</thead>
</table>
| 1. Design mine services systems | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Identify the requirements for, and purpose of, *mine services systems* in accordance with relevant legislative requirements and the system of mining  
1.3. Develop a *specification* for the mine services system from a comprehensive analysis of site requirements  
1.4. Identify system options from an analysis of all relevant technical, operational and financial information  
1.5. Select the preferred service systems options, including *reticulation* on the basis of performance against specification requirements |
| 2. Select equipment for mine services systems | 2.1. Identify the requirements for, and purpose of, mine services equipment against systems requirements  
2.2. Conduct a detailed scoping of the work requirements and develop key selection criteria, including hazard identification and risk analysis  
2.3. Develop a specification for the required mine services equipment  
2.4. Select the preferred equipment solutions on the basis of performance against specification requirements |
| 3. Establish installation and commissioning procedures | 3.1. Establish a procedure to identify hazards and analyse and evaluate risks associated with the installation of mine services systems and equipment  
3.2. Plan and prepare for the integration of new and existing systems and processes to achieve optimum performance  
3.3. Develop safe operating procedures and rules from a detailed analysis of site requirements  
3.4. Develop and establish procedures for installing and commissioning mine services systems and equipment |
3.5. Establish a program, including systems and procedures, to satisfy identified mine services training requirements
3.6. Establish **emergency response** and evacuation systems, plans and procedures
3.7. Establish **protection systems**

| 4. Establish systems for the operation and maintenance of mine services systems and equipment | 4.1. Develop operational procedures for mine services systems and equipment from site and legislative requirements and incorporate into **site documentation**
4.2. Develop maintenance procedures for mine services systems and equipment from site and legislative requirements and incorporate into site documentation
4.3. Develop and establish procedures for reviewing and modifying work processes |

| 5. Plan and prepare for the implementation of systems for the operation and maintenance of mine services systems and equipment | 5.1. Identify and interpret the relevant legislative and site requirements related to the operation and maintenance of mine services systems and equipment
5.2. Access, interpret and clarify mine services systems and equipment procedures
5.3. Identify, clarify and communicate to all personnel roles and responsibilities, as specified in mine services systems and equipment procedures
5.4. Identify, forecast, obtain and allocate/schedule resources required for the implementation of mine services systems and equipment procedures
5.5. Implement the mine services systems and equipment procedures training program.
5.6. Encourage, receive, review and, where appropriate, implement suggestions and recommendations for changes to the operation and maintenance of mine services systems and equipment procedures |

| 6. Establish systems for audit and review of mine services systems and equipment | 6.1. Establish procedures to evaluate and confirm system/equipment compliance with legislative and site requirements
6.2. Identify, assess future mine services systems and equipment requirements and incorporate into planning processes
6.3. Establish procedures to confirm the |

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to establish and maintain mine services systems:

- access, interpret and apply technical information
- apply legislative, organisation and site requirements and procedures for establishment and maintenance of mine services systems
- site/legislative requirements
- records and reports
- briefings and handover details
- apply the principles of mine design
- assess the risks and consequences attached to mine services systems and equipment
- plan and coordinate work
- identify training needs related to mine services systems
- interpret and apply manufacturer's instructions
- conduct maintenance surveys

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to establish and maintain mine services systems:

- audit review processes and techniques
- computer based systems
- emergency response and disaster planning processes and techniques
- fire fighting systems and precautions
- legislative and site specific requirements for mine services including:
  - mine plans
  - electrical distribution
  - ventilation
  - compressed air
  - electrical/mechanical equipment
  - inspection requirements
  - environmental management
  - communication
  - emergency procedures
- risk management
- recording and reporting
- mines rescue
- OHS
- manufacturer's instructions
- standard work procedures
- training
- maintenance surveys
- mine design relating to mine services systems
- mine operating procedures including those applying to transport systems, conveyor systems, systems of mining, ventilation system, gas management and mine water management
- power sources including electrical, hydraulic, compressed air, diesel
- safety design features for maintenance of mine services systems
- safety design features of mine services systems
- stores systems
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:

- legislative, organisation and site requirements which may be contained in:
  - relevant legislation and regulations
  - relevant Australian standards
  - management plans
  - safety and health policy
  - relevant code of practice
  - manufacturer's instruction
  - standard/safe working procedures
  - industry guidelines
  - Employment and workplace relations legislation
  - Equal Employment Opportunity and Disability Discrimination legislation

### Mine services systems may include:

- design
- development
- establishment
- installation
- operations
- protection
- maintenance
- monitoring
- recording
- reporting process
- communication systems including:
  - oral
  - phones/radios
  - electronic
  - microwave
  - telemetry

### Mine services may include:

- power (air, gas, electricity, water, diesel, low energy source)
- water, wastewater
- fire fighting
- gas drainage
- fuel
- waste disposal
- condition monitoring
- dust suppression and refrigeration
- safety services including:
  - risk assessment process
  - fire fighting
  - First Aid
  - mines rescue

**Specification** may include:
- performance requirements
- costs
- dimensions
- capacity
- safety and health requirements
- training requirements
- key selection criteria

**Reticulation** may include:
- water management
- pumping of solids
- fluid reticulation and storage
- material reticulation and storage (hydraulic, electric, water and compressed air)

**Emergency response** systems may include:
- refuge chamber
- designated escape ways
- evacuation procedures
- alarm systems
- guidance systems
- emergency communication systems
- self-aided escape apparatus
- mines rescue capability

**Protection systems** may include:
- explosion barriers
- electrical protection
- compressed air protection
- hydraulic protection
- environment protection
- falling and roll-over protection
- mechanical protection
- frictional ignition protection
- guarding
- personal protection
**Site documentation** may include:
- relevant legislative and legislative requirements
- management plans and procedures
- training policy

**Recording and reporting systems** may include:
- phones
- radios
- computer systems
- verbal
- written

**Support systems** may include:
- mine plan
- signage
- stores system
- roadway
- development drives and openings
- maintenance
- drilling (raise boring and bore hole)
- emergency response systems

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to manage, operate and maintain the mine ventilation system:

- apply legislative, organisation and site requirements and procedures for management, operation and maintenance the mine ventilation system
- access, interpret and apply technical information
- access and analyse archival and historical ventilation information related to the mine
- interpret and apply mathematical and scientific theorems/laws related to ventilation
- interpret and apply design criteria for ventilation systems and devices
- interpret computer spreadsheets and ventilation modelling/simulations
- collect, collate and interpret ventilation data
- prepare technical procedures relating to ventilation
- conduct enquiries/investigations and prepare reports
- communicate effectively in the workplace
- access data from monitoring systems and equipment
- operate hand held monitoring equipment
- analyse and report on ventilation training needs
- apply risk management reports processes and techniques

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to manage, operate and maintain the mine ventilation system:

- legislative and statutory requirements for ventilation including air quality, maximum values, control and distribution, flammable gas limits, ventilation fans, gas monitoring, dust limits and inspections and recording/reporting
- methods of mine ventilation and their applications/limitations including exhaust/force, antitropical, homotropical, flank returns, ascensional/descensional, bleeder, ZUY systems and other combinations
- methods of panel ventilation and their applications/limitations including homotropical and antitropical (and in conjunction with these, the use of goaf bleed or back return), auxiliary fans, coursed ventilation (narrow side/wide side), machine mounted scrubber systems, compressed air venturi and bleeder
- impact of mining techniques and mine and panel design on ventilation
- inertisation techniques and applications including pressure swing absorption,
natural oxidation, evaporative and pumped liquefied inert gas, seam gas, exhaust gases (Thomlinson boiler or jet engine) and water

- impact of differing geological features and conditions on ventilation including faults, dykes, intrusions and strata deformities
- impact of coal characteristics and coal seam gradients on mine ventilation design
- effects of ventilation on the spontaneous combustion risk
- mine gases; the types and their characteristics, sources, physiological effects and methods of detection
- dust and other particulate matter; the types, sources, physical and physiological effect, and control/mitigation methods
- mine fires; the types, sources of ignition, possible effects on the ventilation circuit and prevention/control/mitigation methods
- mine explosions; the types, ignition sources, possible effects on the ventilation circuits and prevention/control/mitigation methods
- pressure changes; causes, the impacts on the ventilation system, responses (to include the causes and effects of natural ventilation and re-circulation)
- heat, humidity; the sources and factors which may impact on mine ventilation and personnel
- mine roadways and shafts; their design parameters and impact on mine ventilation
- mine fans; fan laws, fan types, performance characteristics, configurations, applications and limitations
- ventilation control devices; the types, purposes, design criteria and specifications, distribution/placement criteria and limitations
- de-gassing; methods of control - including brattice, auxiliary fans, compressed air venturis, sails, hurdles and bleeders
- ventilation networks and individual circuit design criteria, specifications and design processes
- fixed ventilation monitoring systems types, uses/limitations, design criteria, specifications and design processes
- portable monitoring equipment, types, uses/limitations, design criteria and specifications
- the use of computer modelling and simulation techniques and applications relevant to mine ventilation planning; their functions, capabilities, advantages and limitations
- computer-based systems for mine environment analysis
- ventilation management plan development requirements and processes
- ventilation surveys; the types, frequency and method for conducting including pressure/quantity/temperature and gas/dust
- processes and techniques for determining alarms and trigger points/levels
- audit and review processes and techniques
- emergency response and disaster planning process and techniques
- analytical and interpretive processes for gas mixtures and flammability including coward triangle, Ellicott diagram, gas make calculations and post explosion gases
- applied ventilation theory including:

### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for management, operation and maintenance of the mine ventilation system</td>
</tr>
<tr>
<td></td>
<td>• implementation of procedures and techniques for the safe, effective and efficient management, operation and maintenance of the mine ventilation system</td>
</tr>
<tr>
<td></td>
<td>• the identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• the identification of viable options for the management, operation and maintenance of the mine ventilation system that best meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the management, operation and maintenance of the mine ventilation system</td>
</tr>
<tr>
<td></td>
<td>• consistent successful management, operation and maintenance of the mine ventilation system</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
<td></td>
</tr>
<tr>
<td>• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites</td>
<td></td>
</tr>
</tbody>
</table>
may differ due to the site circumstances.

- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment should sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

<table>
<thead>
<tr>
<th>Method of assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:</td>
</tr>
<tr>
<td>- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the management, operation and maintenance of the mine ventilation system</td>
</tr>
<tr>
<td>- observed, documented and/or first hand testimonial evidence of the candidate's:</td>
</tr>
<tr>
<td>- implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes</td>
</tr>
<tr>
<td>- identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td>- identification of viable options for the management, operation and maintenance of the mine ventilation system that best meet the required outcomes</td>
</tr>
<tr>
<td>- consistent achievement of required outcomes</td>
</tr>
<tr>
<td>- first hand testimonial evidence of the candidate's:</td>
</tr>
<tr>
<td>- working with others to undertake and</td>

RIUND603A Manage, operate and maintain the mine ventilation system

|             | Complete the management, operation and maintenance of the mine ventilation system
|             | - Provision of clear and timely required support and advice on the management, operation and maintenance of the mine ventilation system

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>

</tr>
<tr>
<td></td>
<td>• fire</td>
</tr>
</tbody>
</table>
- explosion
- irrespirable atmosphere
- noxious atmosphere
- smoke
- roof collapse
- reversal of ventilation
- water/gas
- mechanisms which contribute to spontaneous combustion and may include:
  - coal seam characteristics
  - ventilation pressure difference
  - mining system
  - mine design
  - humidity
  - temperature
  - moisture
- physical spontaneous combustion indicators may include:
  - smoke
  - haze
  - sweating
  - smell
  - temperature
- gaseous spontaneous combustion indicators may include:
  - carbon monoxide
  - hydrogen and hydrocarbons
  - indicator ratios such as:
    - CO make
    - Graham's radio
    - other ratios as determined suitable

**Airborne** contaminants may include:
- respirable and combustible dust

**Outburst** hazards may include:
- ejection of materials
- asphyxiant
- toxic or flammable gas mixtures
- entrapment
- roof falls
- ventilation disruption
- mechanisms which contribute to an outburst
may include:
- maceral composition
- depth of cover
- gas content and composition
- porosity
- permeability
- geology
- stress
- mining rate

outburst detection methods may include:
- geological mapping
- long-hole drilling
- gas sampling
- micro-seismic detection
- changing face conditions and gas emission rates

outburst amelioration measures may include:
- pre-drainage
- methods of work

**Ventilation system is:**
- one which covers all the mine workings, including waste and sealed areas, and it includes all surface and underground fans and ventilation devices which control or impact on the mine ventilation
- methods of ventilation may include:
  - exhaust/force
  - antitropal
  - homotropal
  - flank returns
  - ascensional/decensional
  - bleeder
  - ZUY systems
  - other combinations

**Impacts of fire, ignition and explosion may include:**
- contaminants
- altered ventilation pressures/flows
- direct physical impacts
- complete disruption to the ventilation system

**Fire may include:**
- solid
- liquid
- gas
### Ignition

**is:**
- the rapid chemical reaction of a combustible material with oxygen when exposed to sufficient heat
- ignition sources may include:
  - electrical
  - friction
  - contraband
  - spontaneous combustion
  - naked flame
  - chemical
  - explosives

### Explosion

**is:**
- the sudden release of energy generated from the confinement of the rapid volumetric expansion of an ignition

### Ventilation pressure differentials

**may include those resulting from:**
- changes in barometric pressure
- fall of ground
- fan changes/failure
- ventilation control devices changes/failure
- outburst
- holing into previous workings
- re-circulation
- ventilation circuit changes
- natural ventilation pressure changes
- explosions
- changes in ambient temperature/humidity
- fires
- equipment moves

### Temperature and humidity

**may be impacted by:**
- climatic conditions
- ventilation quantities
- location of workplaces
- mine layout and design
- location of mine entries
- depth
- adjacent strata type
- seam gas composition
- sources of heat/humidity may include:
  - strata
  - equipment
  - oxidation
  - fire/spontaneous combustion
| **auto compression** | • the underground auxiliary/booster fans |
| **exothermic chemical reactions** | • scrubber systems |
| **seam moisture content** | • leaking ducts |

**Re-circulation** causes may include or be related to:

- failure or poor design of ventilation system
- ventilation velocity pressures
- natural ventilation pressures
- gas densities
- layering and wind blast

**Effect of re-circulation** may include:

- build up of contaminant concentration (gas, dust, heat)
- decrease in oxygen

**Ventilation control devices** may include:

- doors
- regulators
- seals
- stoppings
- air crossings
- bulk heads
- goaf seals
- pressure chambers
- other control device to control or direct ventilation flows in a mine

**Factors which impact on the selection of ventilation control systems** may include:

- the life of the installation
- ground conditions (stress/heave)
- operating duty (pressure/quantity)
- mining method
- design
- explosion rating
- statutory requirements
- water
- seam gas (make/composition)

**Criteria for safe mine ventilation** may include:

- statutory and regulatory requirements
- mine ventilation management plan
- measures to reduce and/or control seam gas
- introduced gas, fumes and dust
<table>
<thead>
<tr>
<th><strong>Impact of mine design on the ventilation system</strong> may be related to:</th>
<th><strong>monitoring</strong> may include:</th>
</tr>

<tr>
<td>• reserve optimisation</td>
<td>• alarms for process faults including PC/PLC failure</td>
</tr>
<tr>
<td>• mining direction</td>
<td>• analyser/sensor failure</td>
</tr>
<tr>
<td>• geological structures</td>
<td></td>
</tr>
</tbody>
</table>
- communication failure
- alarm system latching
- alarm system fail-safe requirement
- alarm/sensor likely gas matrix determination requirement
- required ranges and accuracies
- provision for calibration
- statutory compliance
- surface analysers combined gas monitoring capabilities
- logistic and maintenance support
- design criteria for portable monitoring equipment may include:
  - battery capacity (full shift)
  - battery recharge requirements
  - statutory compliance
  - required ranges and accuracies
  - provision for calibration
  - size
  - weight
  - light facility
  - ease of operation
  - robust construction

**Inertisation techniques** may include:
- pressure swing absorption
- natural oxidation
- evaporative and pumped liquefied inert gas
- seam gas
- exhaust gases (Thomlinson Boiler or jet engine)
- water
- inertisation may be defined as the displacing or reducing of oxygen to a level that will not support combustion. It may be either a natural process using seam gases or a process of introducing inert gases

**Fans** may include:
- axial flow
- centrifugal
- fan design considerations may include:
  - types
  - mine layout
  - user requirements and fan laws
  - characteristics
| Maintenance of the ventilation system may include: | • inspection  
• servicing repair |
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Audit is defined as:</td>
<td>• a systematic examination against defined criteria to determine whether activities and related results conform to planned arrangement, and whether these arrangements are implemented effectively and are suitable to achieve the organisation's policy and objectives (AS/NZS 4804: 2001)</td>
</tr>
</tbody>
</table>
| Ventilation training may include: | • include induction  
• basic miner  
• deputy and ventilation systems operators/special requirements |
| Alarm systems and action plans may include those for: | • gas concentration/make  
• spontaneous combustion (physical and gaseous)  
• combustion indicators |

**Action** (alarm or trigger) is:  
• a generic term used to describe an event determined at the mine site at which action is initiated or a response made

| Procedures required to support the ventilation management plan may include those for: | • construction  
• action response  
• permit to work  
• condition monitoring  
• auditing  
• maintenance  
• document control  
• atmosphere monitoring  
• ventilation system control  
• communication systems  
• survey procedures  
• sealing procedures  
• changes  
• training  
• recording/reporting |
### Mine atmosphere

- All areas in the general mine ventilation district and beyond into waste working goafs/gobs in the mine.

### Geological conditions

- Faults
- Dykes
- Intrusions
- Strata deformities

### Coal seam characteristics

- Rank
- Petrology
- Moisture
- Cleat
- Coal hardness
- Seam gas
- Friability
- Pyrites

**Order depositional factors such as**:

- Seam thickness
- Multiple and rider seams
- Seam dip
- Depth of cover

### Mining systems

- Longwall
- Main gate or single entry
- Board and total or partial pillar
- Pillar extraction methods

### Analytical and interpretive tools

- Ellicott diagrams
- Cowards triangle
- Fire-gas ratios
- Gas makes
- Trending
- Fan laws
- Airway resistance
- Network analysis
- Computer simulation
- Gas laws
- Psychrometry
- Ventilation laws
Surveys may include:

- pressure/quality/temperature survey and gas dust survey

Disruptions to ventilation circuits may result from changes in:

- barometric pressure
- fall of ground
- ventilation device changes/failure
- outburst
- holing into previous workings
- re-circulation
- ventilation circuit changes
- natural ventilation pressure changes
- failure (planned) unplanned
- explosions
- changes in ambient temperature/humidity
- fires
- equipment moves

Unit Sector(s)

Underground Mining

Competency field

Refer to Unit Sector(s).

Co-requisite units

Not applicable.
RIIVEH201B Operate light vehicle

Modification History
Not applicable.

Unit Descriptor
This unit covers the operation of a light vehicle in the resources and infrastructure industries. It includes planning and preparing for operations, operating a light vehicle, and carrying out operator maintenance. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>
</thead>
</table>

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, interpret and clarify *information, work requirements and details*  
1.3. Access and apply *safety information and procedures* when planning *light vehicle* operations  
1.4. Select appropriate types of equipment and/or *ancillary attachments* according to job specifications to maximise efficiency and effectiveness  
1.5. Identify, address and report potential *hazards and risks*  
1.6. Select appropriate personal protective equipment for planned work activities  
1.7. Identify, address and report environmental issues |
| 2. Operate a light vehicle | 2.1. Carry out *pre-start, start-up, park-up* and *shutdown* procedures  
2.2. Operate light vehicle with or without ancillary attachments  
2.3. Operate equipment within recommended speed, engine capability and limitations  
2.4. Use vehicle lights and *indicators* in accordance with traffic regulations  
2.5. Identify and respond appropriately to hazardous and/or emergency driving situations  
2.6. Complete light vehicle operations according to work plan |
| 3. Carry out operator maintenance | 3.1. Conduct *visual inspections* to identify faults  
3.2. Conduct *routine operational servicing* and housekeeping activities  
3.3. Carry out minor maintenance and repairs  
3.4. Report defective or irregular performance to relevant authorities  
3.5. Maintain and update vehicle records in accordance with workplace procedures |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

<table>
<thead>
<tr>
<th>Required skills</th>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment should sensitively accommodate
cultural diversity.

- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the operation of light vehicles |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Compliance documentation may include: | • legislative, organisation and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• relevant state/territory environmental protection legislation  
• relevant state/territory fatigue management regulations  
• relevant state/territory OHS legislation  
• relevant state/territory permit regulations and requirements  
• relevant state/territory road rules  
• Employment and Workplace Relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
| --- | --- |
| Information may include: | • geological and survey data  
• work plans  
• manufacturer's instructions |
| Work requirements and details may include: | • achievement targets  
• coordination requirements/issues  
• equipment defects  
• handover details  
• hazards and potential hazards  
• nature and scope of work  
• route  
• shift briefings  
• site lighting arrangements  
• vehicle identification  
• work orders  
• working conditions |
| Safety information and procedures may include: | • use of seat belts  
• security of door  
• conditions of brakes and braking system (air pressure) |
| **Light vehicles** may include: | • vehicles up to 4.5 tonne GVM  
• vehicles carrying up to 12 passengers  
• single or multiple drive |
| **Ancillary attachments** may include: | • vehicle loading cranes  
• tailgate loaders  
• sprayers |
| **Hazards and risks** may include: | • abandoned equipment  
• adjoining pit walls  
• adverse weather conditions (electrical storms, floods, fires)  
• animals and objects on road  
• chemicals  
• contaminants  
• equipment  
• faulty brakes  
• faulty steering mechanism on vehicle  
• fences  
• fire in vehicle  
• flooded sections of road  
• foggy conditions  
• holes  
• leaking fuel  
• materials  
• oil on road  
• over-hanging rocks  
• parked vehicles on the road  
• pedestrians crossing the road  
• pot holes  
• unsafe ground  
• unstable faces  
• vehicles  
• wet and iced roads  
• windy sections of road  
• worksite hazards |
| **Pre-start, start-up and shutdown checks** may include: | • air filter restriction indicator  
• cab (horn, lights, air conditioner)  
• computer systems  
• display instrumentation and gauges |
- engine and stop engine lights
- fluid levels (windscreen washer tank, hydraulic oil, coolant, grease, water, engine oil, fuel)
- visual and audio warning devices and lights
- vehicle handling procedures may include:
  - accelerating and braking
  - managing engine performance
  - operating vehicle controls, instruments and indicators using air brakes
  - positioning and stopping a vehicle
  - reversing a vehicle
  - starting a vehicle
  - steering and manoeuvring a vehicle
  - using defensive driving techniques

**Shutdown procedures** may include:
- safety mechanisms operational (horn, operating lights)
- vehicle is left secured

**Indicators** may include:
- brake air pressure
- brake oil temperature
- computer indicators
- engine oil pressure
- fuel filter
- oil temperature
- parking brake
- retarder
- service meter
- speedometer/odometer
- steering filters
- tachometer
- torque converter
- transmission filter
- voltmeter
- water temperature

**Visual inspection** may include:
- cab condition (no rags in air conditioner vent, dirt around brake and accelerator pedals, seat condition, all gear secured)
- cab mounts
- damage to equipment
- engine oil to be checked before starting engine
- fire suppression unit (pins in position in triggers)
- grease lines
### RIVEH201B Operate light vehicle

- isolation and lock-out
- light positioning and cleanliness
- no combustible material around exhaust
- oil leaks (engine, hydraulic hoses, ground) fuel leaks (engine, on ground), water leaks (radiator, hoses)
- personal proximity
- portable fire extinguisher (bracket, gauge, hose, ease of access)
- radiator top up tank
- tyres and rim condition
- vehicle number
- wheel nuts and studs
- windows (clean, emergency exit tag in place)

### Routine operational servicing

**may include:**
- checking fluid levels
- filter changing
- greasing
- keeping cab clean
- tightening loose fittings
- cleaning
- degreasing
- forced air
- steam cleaning
- vacuum

### Unit Sector(s)

Vehicle Operations

### Competency field

Refer to Unit Sector(s).

### Co-requisite units

Not applicable.
RIIVEH202A Operate a medium vehicle

Modification History
Not applicable.

Unit Descriptor
This unit covers the operation of medium vehicles in the resources and infrastructure industries. It includes planning for operations, operating a medium vehicle and carrying out operator maintenance. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan for operations | 1.1. Access, interpret and apply *compliance documentation* relevant to operating *medium vehicles*  
1.2. Obtain, interpret and confirm *work requirements* from shift briefings, handover details or work orders before proceeding with operations  
1.3. Assess and apply *safety information and procedures* throughout the operations  
1.4. Identify, address and report potential *hazards and risks*  
1.5. Prepare medium *vehicle records* and carry out log-on procedures  
1.6. Conduct *pre-start checks* and *start-up checks* on medium vehicle and ancillary equipment |
| 2. Operate medium vehicle | 2.1. Steer, manoeuvre and position vehicle in accordance with traffic regulations and site manager's rules  
2.2. Carry out movements within limits of vehicle and road dimensions  
2.3. Operate ancillary attachments to the medium vehicle in accordance with *manufacturer's instructions* and site procedures  
2.4. Ensure that all movements are smooth and controlled  
2.5. *Manage engine power* to ensure efficiency of vehicle movement and to minimise damage to the engine and drive line  
2.6. Avoid contact with obstacles  
2.7. Ensure no injury to personnel or damage to property, equipment or facilities, and load |
| 3. Carry out operator | 3.1. Carry out equipment inspections and *fault finding* in accordance with manufacturer's instructions and site requirements  
3.2. Carry out routine operational servicing, lubrication and housekeeping tasks  
3.3. Carry out minor maintenance to manufacturer's instructions and site |
<table>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to operate a medium vehicle:

- apply legislative, organisation and site requirements and procedures for operating a medium vehicle
- access, read and interpret technical information, including manufacturer's manuals
- operate medium rigid vehicles within specifications and limitations
- steer, manoeuvre and position vehicles
- identify and report faults in vehicles and ancillary equipment
- complete appropriate vehicle records and documentation
- use efficient driving techniques
- read instructions, procedures and signage relevant to driving a medium rigid vehicle
- map reading and road navigation techniques
- monitor and anticipate traffic hazards and take appropriate action

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to operate a medium vehicle:

- site requirements related to medium rigid vehicle operations
- OHS requirements related to medium rigid vehicle operations
- methods of securing loads
- site transport operations
- operations, characteristics and limitations of medium rigid vehicles and ancillary equipment
- site vehicle related records and documentation system
- relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- medium rigid vehicle controls, instruments and indicators and their use
- procedures to be followed in the event of a driving emergency
- efficient driving techniques
- differences between transmission types
- principles of operation of air brakes and procedures for their use
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to operate light vehicle underground:

- apply legislative, organisation and site requirements and procedures
- apply diagnostic techniques
- use driving techniques in dark and enclosed conditions
- operate, maintain and clean equipment
- maintain records
- read plans and documents
- report defects
- follow safe work practices
- select and use personal protective equipment
- trouble shoot
- use communications equipment

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to operate light vehicle underground:

- emergency procedures
- equipment processes, technical capability and limitations
- equipment safety requirements
- geological and technical data
- hazardous goods procedures and consequences of spills
- isolation procedures
- mine operational system
- operational procedures and checks
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| materials                                |
| over-hanging rocks                       |
| personnel                                |
| pot holes                                |
| unsafe ground                            |
| unstable faces                           |
| vehicles                                 |

### Pre-start checks may include:

| Air filter restriction indicator          |
| cab (horn, lights, air conditioner)       |
| computer systems                         |
| **Environmental issues** may include: | • drainage  
• dust  
• emissions  
• flora and fauna  
• hazardous chemicals  
• heritage legislation  
• noise  
• runoff  
• spills  
• water quality |
| **Start-up procedures** may include: | • correct location of equipment  
• safety mechanisms operational (horn, operating lights) |
| **Capacity of equipment** may include: | • duration of operation  
• efficient and safe operating speed  
• operating limitations  
• type of activities performed  
• weight and/or load limitations |
| **Indicators** may include: | • brake air pressure  
• brake oil temperature  
• computer indicators  
• engine oil pressure  
• fuel filter  
• oil temperature  
• parking brake  
• retarder  
• service meter  
• speedometer/odometer  
• steering filters  
• tachometer  
• torque converter  
• transmission filter  
• voltmeter  
• water temperature |
| **Shut down and parking** | • vehicle is left in designated parking areas |
**procedures** may include:
- vehicle is left secured
- vehicle engine is not left running

**Visual inspection and fault finding** may include:
- cab condition
- cab mounts
- damage to equipment
- danger/out of service tags
- engine oil
- fire suppression unit
- grease lines
- light positioning and cleanliness
- no combustible material around exhaust
- oil leaks (engine, hydraulic hoses, ground) fuel leaks (engine, on ground), water leaks (radiator, hoses)
- personal proximity
- portable fire extinguisher
- radiator top up tank
- tyres and rim condition
- vehicle number
- wheel nuts and studs
- windows (clean, emergency exit tag in place)

**Routine operational servicing** may include:
- checking fluid levels
- filter changing
- greasing
- keeping cab clean
- tightening loose fittings

**Cleaning methods** may include:
- degreasing
- forced air
- steam cleaning
- vacuum
- water

**Unit Sector(s)**
Vehicle Operations

**Competency field**
Refer to Unit Sector(s).
Co-requisite units

Not applicable.
RIIVEH301A Conduct rail haulage operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of rail haulage operations in the resources and infrastructure industries. It includes planning and preparing for rail haulage operations, hauling material, loading and unloading rake of trucks, and carrying out operator maintenance. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:

- Coal mining
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

---
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for rail haulage operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, interpret and clarify/confirm *work requirements*  
1.3. Access, interpret and apply mine environmental *data* required to complete the allocated work  
1.4. Carry out *pre-start vehicle and equipment checks* |
| 2. Haul material | 2.1. Coordinate activities with others at the site prior to commencement of, and during, the work activity  
2.2. Carry out pre-start, start-up, park-up, shutdown procedures  
2.3. Use vehicle controls and systems to ensure smooth and effective operations  
2.4. Operate *rail vehicle* within equipment limitations, and monitor and respond to gauges and systems  
2.5. Safely load/unload personnel or materials  
2.6. Safely carry out towing and pushing of equipment and plant in accordance with the manufacturer’s specifications and/or site procedures and *safety requirements*  
2.7. Recognise and respond to *hazards* and emergency situations  
2.8. Perform work in accordance with the agreed plan and outcomes and within the operating capacities of the equipment |
| 3. Load and unload rake of trucks | 3.1. Accurately position rake underneath material loading chute/loading point  
3.2. Load and unload rake using approved equipment minimising spillage and/or damage to equipment |
| 4. Carry out operator maintenance | 4.1. Carry out rail vehicle and rolling stock inspections and fault-finding  
4.2. Carry out routine operational servicing, lubrication and housekeeping tasks using appropriate *cleaning methods*  
4.3. Carry out minor *operational maintenance* |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to conduct rail haulage operations:

- apply legislative, organisation and site requirements and procedures for the conduct of rail haulage operations
- access, interpret and apply technical and environmental information
- start, operate and shutdown haulage equipment
- apply diagnostic techniques to identify problems arising in rail haulage operations
- conduct relevant maintenance on locomotives and related equipment
- conduct emergency shutdowns
- maintain appropriate records
- apply environmental constraints and procedures
- dispose of environmentally sensitive oils, fluids and materials
- interpret ground conditions
- operate, maintain and clean rail haulage equipment
- apply safe work practices
- use hand and power tools

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to conduct rail haulage operations:

- site and operational safety requirements
- rail vehicle equipment characteristics, technical capabilities and limitations
- rail vehicle operational procedures and checks
- location of equipment relative to working environment
- ventilation system and conditions
- rail vehicle maintenance requirements and procedures
- recording, reporting and handover procedures
- site environmental requirements and constraints related to rail vehicles
- bucket loading procedures
- environmental management procedures
- basic geological and technical data
- isolation procedures
- locomotive parking techniques
- operational procedures and checks
- primary and secondary ventilation sources
- types of rail operations
- rail signalling system characteristics
- reporting procedures
- start up and shutdown procedures
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the conduct of rail haulage operations</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient conduct of rail haulage operations</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete rail haulage operations that meet all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of rail haulage operations that safely, effectively and efficiently meet the required outcomes</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery
environment should sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
|                      | • written and/or oral assessment of the candidate's required knowledge
|                      | • observed, documented and/or first hand testimonial evidence of the candidate's:
|                      | • implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
|                      | • consistent achievement of required outcomes
|                      | • first hand testimonial evidence of the candidate's:
|                      | • working with others to undertake and complete rail haulage operations

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit Sector(s)
Vehicle Operations

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIVEH302A Operate multi-combination vehicle

Modification History
Not applicable.

Unit Descriptor
This unit covers the operation of multi-combination vehicles in the resources and infrastructure industries. It includes preparing for operations, coupling and uncoupling trailers, conducting vehicle checks, supervising the loading and unloading of goods and materials, steering, manoeuvring and positioning a vehicle, managing engine power, monitoring and anticipating traffic and road conditions, monitoring vehicle efficiency, parking and securing the vehicle, and carrying out post-operational activities. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at a worksite within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

<table>

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, interpret and clarify/confirm work requirements in the form of shift briefings, handover details or work orders before proceeding with operation  
1.3. Prepare *vehicle records* and carry out log-on procedures to site requirements |
| 2. Couple and uncouple trailers | 2.1. *Couple or uncouple* and check prime mover and trailer |
| 3. Conduct vehicle checks | 3.1. Conduct *pre-start checks* on vehicle, trailers and ancillary equipment  
3.2. Test vehicle and trailer operations and report faults which affect the safety of the operation  
3.3. Start engine in accordance with manufacturer's guidelines and *start-up procedures*, and check systems against operational criteria |
| 4. Supervise loading and unloading of goods and materials | 4.1. Identify and take into account *load characteristics* when determining appropriate loading and unloading procedures  
4.2. Segregate dangerous or hazardous goods  
4.3. Ensure that goods/materials are loaded in accordance with relevant mass and loading regulations and workplace procedures  
4.4. Select and supervise the use of lifting aids and appliances used to aid loading  
4.5. Conduct unloading activities in a safe and efficient manner taking into account suitable locations, stowage, safe use of equipment and the balance of remaining load  
4.6. Identify goods requiring special handling and/or documentation and follow appropriate procedures |
| 5. Steer, manoeuvre and position vehicle | 5.1. Steer, manoeuvre and position vehicle in accordance with traffic regulations and site rules |
| 5.2. Ensure vehicle movements are within limits of vehicle and road dimensions and in line with manufacturer’s specifications |
| 5.3. Confine centrifugal forces to load configuration and driving environment |
| 5.4. Perform smooth and controlled movements |
| 5.5. Avoid contact with obstacles |
| 5.6. Carry out movements ensuring no injury to personnel or damage to property, equipment or facilities, and load |
| 5.7. Utilise available road area to increase radius of turn and swept path |

| 6. Manage engine power |
| 6.1. Manage *engine power* to ensure efficiency of vehicle movement and to minimise damage to the engine and drive line |
| 6.2. Operate vehicle within manufacturer’s specified torque range and temperature |
| 6.3. Coordinate engine power with gear selection to maintain torque range |
| 6.4. Effect smooth transition in gear changes necessary to maintain engine power and torque range |

| 7. Monitor and anticipate traffic and road conditions |
| 7.1. Constantly monitor and anticipate traffic and road condition to allow a safe operation and ensure no injury to people or damage to property, equipment, loads and facilities |
| 7.2. Achieve vehicle speed and safety using the accelerator, gears, brakes and speed retarding devices |
| 7.3. Anticipate traffic flows to ensure the most efficient route of travel is taken to destinations without backtracking |
| 7.4. Take account of *road and traffic conditions*, road standards, distance and load |

<p>| 8. Monitor vehicle efficiency |
| 8.1. Constantly monitor the vehicle’s performance to ensure maximum efficiency of operation and fuel consumption |
| 8.2. Take account of <em>warning devices</em> that indicate engine or vehicle performance is hindered |
| 8.3. Constantly monitor vehicle for any <em>engine malfunctions</em> or factors which may affect vehicle performance |</p>
<table>
<thead>
<tr>
<th>8.4. Report any <strong>faults</strong> or damage to vehicle to the appropriate authority</th>
</tr>
</thead>
<tbody>
<tr>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to operate a multi-combination vehicle:

- apply legislative, organisation and site requirements and procedures for operating a multi-combination vehicle
- apply relevant occupational health and safety requirements
- operate within relevant statutory requirements
- access, read and interpret technical information, including manufacturer's manuals related to multi-combination vehicles/trailers, and their operations
- operate vehicles within specifications and limitations
- identify and report faults in vehicles and ancillary equipment
- change wheels
- complete appropriate vehicle records and documentation

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to operate a multi-combination vehicle:

- site requirements related to multi-combination vehicle operations
- occupational health and safety requirements related to multi-combination vehicle operations
- methods of securing loads
- procedures for loading and unloading goods/materials
- risks and precautions when loading and unloading goods/materials
- vehicle road codes and regulations
- site transport operations
- operations, characteristics and limitations of multi-combination vehicles, trailers and ancillary equipment
- operator level mechanical principles
## Evidence Guide

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Compliance documentation** may include:

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- traffic regulations
- company procedures
- enterprise procedures
- organisational procedures
- safety information and procedures including:
  - vehicle height
  - condition of brakes and braking system (air pressure)
  - load characteristics
  - vehicle speed
  - prime mover/trailer load weight ratio
  - use of authorised cargo restraining equipment
  - fluid levels
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Vehicle records** may include:

- manual or electronic data collection systems
- log-on/off, activity recording
- trip records
- refuelling information

**Coupling or uncoupling procedures** may include:

- selection of an appropriately firm and level parking area
- applying parking brakes
- ensuring turn-table jaw release is locked/unlocked
- turn-table lock and trailer wheel chocks
- compatibility of turn-table and trailer ring pin
- alignment of prime-mover, turn-table and trailer skid-pad

RIIVEH303A Drive heavy combination vehicle

Modification History
Not applicable.

Unit Descriptor
This unit covers driving a heavy combination vehicle in the resources and infrastructure industries. It includes planning and preparing for operations, operating a heavy combination vehicle, coupling and uncoupling trailers, and carrying out operator maintenance. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for operations           | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, interpret and clarify/confirm *work requirements and details* in the form of shift briefings, handover details or work orders before proceeding  
1.3. Access, interpret and apply geological and survey data required to complete the allocated work in accordance with site procedures  
1.4. Access and apply *safety information and procedures* throughout the work                                                                                      |
| 2. Operate articulated vehicle                | 2.1. Resolve coordination activities with others at the site prior to commencement of, and during, the work activity  
2.2. Carry out *pre-start, start-up*, park-up and shutdown procedures  
2.3. Operate ancillary attachments to the articulated vehicle  
2.4. Operate articulated vehicle with or without ancillary attachments in accordance with *manufacturer's specifications* and site procedures  
2.5. Manage *engine power* to ensure efficiency of vehicle movement and to minimise damage to the engine and drive line  
2.6. Recognise and respond to hazardous and emergency situations  
2.7. Complete work in accordance with the agreed plan and outcomes and within the operating capacity of the articulated vehicle                                                                 |
| 3. Couple and uncouple trailers              | 3.1. Carry out *coupling or uncoupling* and check prime mover and trailer                                                                                                                                               |
| 4. Carry out operator maintenance            | 4.1. Carry out equipment inspections and fault finding  
4.2. Carry out routine operational servicing, lubrication and housekeeping tasks  
4.3. Carry out minor maintenance  
4.4. Provide operator support during preparation for, and conduct of, major... |
4.5. Process **records** in accordance with site requirements

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to drive a heavy combination vehicle:

- apply legislative, organisation and site requirements and procedures for driving a heavy combination vehicle
- apply operational safety requirements
- access, interpret and apply technical information
- maintain equipment records
- use relevant hand tools
- apply diagnostic techniques
- communicate effectively
- apply environmental constraints related to specified operations

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to drive a heavy combination vehicle:

- site and equipment safety requirements
- articulated vehicle operational procedures
- basic site geological and survey data
- site operational procedures
- equipment and trailer characteristics, technical capabilities and limitations
- articulated vehicle maintenance requirements/procedures
- vehicle record systems
- communication systems
- site environmental requirements and constraints related to the articulated vehicle

# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Critical aspects for assessment and evidence required to demonstrate competency in this unit</strong></td>
</tr>
<tr>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td>• knowledge of the requirements, procedures and instructions to drive a heavy combination vehicle</td>
</tr>
<tr>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient driving of a heavy combination vehicle</td>
</tr>
<tr>
<td>• working with others to undertake and drive a heavy combination vehicle that meets all of the required outcomes</td>
</tr>
<tr>
<td>• consistent, timely driving of a heavy combination vehicle that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
</tr>
<tr>
<td>• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
</tr>
<tr>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
</tr>
</tbody>
</table>
- Customisation of assessment and delivery environment should sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate’s required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate’s:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate’s:
    - working with others to undertake and drive heavy combination vehicles

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Compliance documentation may include: | legislative, organisation and site requirements and procedures  
| | manufacturer's guidelines and specifications  
| | Australian standards  
| | Employment and workplace relations legislation  
| | Equal Employment Opportunity and Disability Discrimination legislation |

| Work requirements and details may include: | articulated vehicle identification/allocation  
| | nature and scope of work  
| | route  
| | working conditions  
| | achievement targets  
| | site lighting arrangements  
| | equipment defects  
| | hazards and potential hazards  
| | coordination requirements/issues  
| | shift briefings  
| | handover details  
| | work orders |

| Safety information and procedures may include: | use of seat belts  
| | security of door  
| | conditions of brakes and braking system (air pressure)  
| | load characteristics  
| | vehicle speed  
| | fluid levels  
| | safety requirements, including:  
| | use of authorised cargo restraining equipment  
| | observing authorised parking areas  
| | correct distances between vehicles  
| | observing site traffic rules  
| | passenger safety and control |
| **Pre-start procedures** may include: | • fluid levels, including fuel, engine oil, brake fluid, coolant, clutch / transmission fluid and windscreen, washer fluid  
• windows and mirrors for clear visibility  
• tyres and wheels (air pressure, tyre damage, illegal tread depth and condition, abnormal wear pattern and tyre compatibility)  
• fan belts  
• seat belts  
• door hatches and latches  
• battery and connections  
• visible and current registration and licences  
• spare wheel  
• wheel nuts  
• rear guards  
• warning horn |
| **Start-up procedures** may include: | • articulates (head heavy mediums, clearances, indicators, hazards, reversing  
• brakes  
• heating and ventilation  
• instruments and gauges  
• windscreen washers and wipers |
| **Manufacturer's specifications** may include: | • engine crank/start  
• idling  
• engine rpm  
• operating temperatures  
• torque range |
| **Engine power** may include: | • selecting gear ratio to achieve smooth take-off  
• changing gears to maintain specified torque range at all speeds  
• utilising engine retarder |
| **Trailer coupling, uncoupling procedures** may include: | • selection of an appropriately firm and level parking area  
• applying parking brakes  
• ensuring turn-table jaw release is locked/unlocked  
• turn-table lock and trailer wheel chocks  
• compatibility of turn-table and trailer ring pin  
• alignment of prime-mover, turn-table and |
<table>
<thead>
<tr>
<th>trailer skid-pad</th>
<th>connecting brake service, emergency lines, auxiliary air and electrical lines</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>inspecting and testing air brakes, trailer brakes, lock status of turn-table jaw release</td>
</tr>
<tr>
<td></td>
<td>securing and testing trailer landing legs</td>
</tr>
</tbody>
</table>

**Records** may include:

- log-on/off
- activity recording
- trip records
- refuelling information

## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare           | 1.1. Access, interpret and apply *compliance documentation and procedures* relevant to the work activity  
|                               | 1.2. Work instructions, including plans, specifications, *quality requirements* and operational details are obtained, confirmed and applied to the allocated task  
|                               | 1.3. Signage requirements are identified and obtained from the project traffic management plan and implemented  
|                               | 1.4. Vehicle, *tools and equipment* selected to carry out *tip truck tasks* are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported  
|                               | 1.5. Environmental protection requirements are identified from the project environmental management plan, confirmed and applied to the allocated task  |
| 2. Conduct machine pre-operational checks | 2.1. Pre-start, start-up, park and shutdown procedures are carried out  
|                               | 2.2. Tip truck controls and functions, including tray, steering, brakes and manoeuvrability are checked for serviceability and any faults are rectified or reported  |
| 3. Operate truck              | 3.1. Site hazards associated with tip truck operations are identified and safe operating techniques are used to minimise risk  
|                               | 3.2. Engine power is managed to ensure efficiency of truck movements and to minimise damage to the engine and gears  
|                               | 3.3. Engine power is coordinated with gear selection ensuring smooth transition and operation within torque range  
|                               | 3.4. *Tip truck* is operated to work instructions  
|                               | 3.5. Road/traffic conditions are constantly monitored taking into account of road standards, traffic flow, distance and load, ensuring no injury to people or damage to property, equipment, loads and facilities  
|                               | 3.6. Vehicle is brought to a halt smoothly,
| 4. Load, transport and tip materials | 4.1. Vehicle is positioned at load and discharge points with a minimum of manoeuvre  
4.2. Tip truck movements including the raising and lowering of the tray are smooth and controlled  
4.3. Weight and distribution of load is assessed for type of *material* and size of vehicle to ensure it is within vehicle capacity  
4.4. Safety and security of load, including load cover requirements, are maintained from loading site to discharge site  
4.5. Load is discharged on slope and/or over face at fill site  
4.6. Material is dumped/spread evenly to work instructions  
4.7. Tray is cleared, lowered and secured before resuming travel |
|---|---|
| 5. Carry out operator maintenance | 5.1. Tip truck is safely parked, prepared for *operator maintenance* and shutdown  
5.2. Inspection and fault finding are conducted  
5.3. Defective parts are removed and replaced safely and effectively  
5.4. Regular programmed maintenance tasks are carried out |
| 6. Clean up | 6.1. Work area is cleared and materials disposed of or recycled  
6.2. Vehicle, tools and equipment are cleaned, checked, maintained and stored |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to conduct tip truck operations:

- apply legislative, organisation and site requirements and procedures for conducting tip truck operations

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to conduct tip truck operations:

- tip truck types, characteristics, technical capabilities and limitations
- basic principles of soil technology for civil works
- site and equipment safety requirements
- tip truck operational techniques related to essential tasks
- processes for interpreting drawings and sketches
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheet and materials handling methods
- safe operating techniques in all terrain
- basic earthworks calculations
- civil construction activity sequences of road construction, earthworks and drainage
- load quantity calculations
- JSA's/safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete tip truck operations |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

### Compliance documentation and procedures may include:
- legislative, organisation and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- OHS requirements including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe operating procedures including (but not limited to) recognising and preventing hazards associated with fill-site traffic movement, overhead services, other machines, personnel, restricted access barriers, traffic control, working at heights, working in proximity to others, worksite visitors and the public
- safe parking practices including (but not limited to) ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement
- hazards and risks including (but not limited to) uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to this unit including (but not limited to) emergency shutdown and stopping, extinguishing fires, organisational First Aid requirements and evacuation
- environmental requirements including (but not limited to) organisational/project environmental management plan, waste management, water quality protection, noise, vibration, dust and clean-up management
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Quality requirements may include:
- dimensions, tolerances, standards of work and material standards as detailed in the project drawings, specifications and project documentation to meet client satisfaction

### Tools and equipment includes:
- the hand tools and maintenance equipment associated with the particular tip truck
**Tip truck tasks** should include:

- the transporting and tipping of soils, sand, rocks and construction gravels on public roads and worksites
- static tipping and mobile tipping and spreading, discharging/tipping on slopes and discharging/tipping over edges
- discharging into bins and hoppers and spreading aggregate

**Tip trucks** may include:

- self-propelled vehicle designed for on road use to transport a variety of construction materials to and from construction sites
- vehicles that are rigid (with or without a dog trailer) or articulated
- various configurations of tip trucks, the number of vehicle axles, the weight of each vehicle and load capacities are dependent on the vehicle class
- loads that are normally discharged by tipping from the rear of the vehicle or trailer but, methods of material discharge may also include side and belly dumping
- National Licence Classes for trucks
  - MR (Medium rigid) – a vehicle (2 axle only) which is greater than 8t GVM, plus a trailer of not more than 9t GVM
  - HR (Heavy Rigid) – a vehicle (no axle limit) which is greater than 8t GVM, plus a trailer of not more than 9t GVM
  - HC (Heavy combination) – a heavy rigid vehicle with a trailer greater than 9t GVM or a prime mover and semi trailer
  - MC (Multi combination) - multi-combination vehicles like Road Trains and B-Double Vehicles. Also includes vehicles in class 'HC'.

**Materials** may include:

- materials may include but are not limited to clays, silts, stone, gravel, mud, rock, sand, topsoil, bituminous mixes, timber, blended materials, organic materials, typical construction site materials/waste and aggregates
- rock types may include metamorphic, igneous and sedimentary

**Operator maintenance** may include:

- cleaning, authorised servicing and the monitoring, recording and reporting of faults
- the conduct of authorised minor replacements
- the provision of assistance to maintenance personnel during maintenance and repair activities

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify four-wheel drive specific terms, terminology and techniques | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Identify the structural and handling differences between a conventional two wheel drive and a four-wheel drive vehicle  
1.3. Identify and demonstrate the purpose and use of front wheel hubs  
1.4. Identify factors affecting tyre size, fitment, rating, and pressure  
1.5. Correctly identify, recovery hooks and mounting features  
1.6. Identify hazards associated with incorrect use of vehicle features or equipment |
| 2. Plan for minimal environmental impact | 2.1. Determine types of impact likely to occur during four-wheel driving and associated activities  
2.2. Demonstrate compliance with land management principles and policies when planning exploration activities  
2.3. Comply with policies and management plans relevant to the activity area  
2.4. Plan and conduct activities in a manner which minimises environmental impact  
2.5. Adopt and implement procedures to ensure minimisation of harm to the environment from four-wheel drive activities  
2.6. Demonstrate cooperation and consideration towards other land users |
| 3. Perform pre-departure checks | 3.1. Perform routine pre-departure checks under the bonnet, under the body, and on external and internal items and accessories  
3.2. Take action to correct any deficiency  
3.3. Determine food and water requirements for journey  
3.4. Select suitable navigation equipment where necessary  
3.5. Interpret weather conditions to determine suitability for driving  
3.6. Apply safe vehicle loading practices  
3.7. Secure items of personal luggage safely |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to operate and maintain a four-wheel drive vehicle:

- apply legislative, organisation and site requirements and procedures for operating and maintaining a four-wheel drive vehicle
- apply four-wheel driving techniques in different terrain
- reduce environmental impact
- research and evaluation of impact through observation and questioning
- solve problems and apply solution focused strategies
- apply communication and recording skills
- perform basic manual and mechanical maintenance skills
- acquire required licences and permits
- apply diagnostic and troubleshooting procedures

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to operate and maintain a four-wheel drive vehicle:

- features driving techniques and handling characteristics of four-wheel drives in different terrain
- terms used to describe four-wheel drive capabilities including:
  - approach departure angles
  - ramp over angle
  - ground clearance
  - suspension travel
- differences between optional four-wheel drive and constant four-wheel drive vehicles and their impacts on vehicle operation and capability
- tyre management principles
- environmental impact of four-wheel driving
- OHS legislation relevant to the use of four-wheel drive vehicles
- use of single snatch straps to recover vehicles and hazards associated with vehicle recovery
- techniques for travelling in convoy
- minimum impact codes
- legal and statutory requirements (of land management agencies)
- specific problems of fragile environments or threatened species
- area restrictions
- natural processes and interrelationships occurring within natural environments and the manner in which interrelationships between natural processes can be affected
- cultural protocols for making contact and communicating with indigenous people and organisations
- practices which may be implemented to minimise impact (e.g. avoidance of sensitive areas, appropriate site and route selection, limited party size, keeping to marked tracks or routes, campfire management and rehabilitation)
- practices and procedures used by land management authorities to reduce impact including:
  - restricting access/limiting group size
  - seasonal restrictions
  - use of permits
  - enforcing code of ethics and conduct
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for operating and maintenance of a four-wheel drive vehicle</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient operation and maintenance of a four-wheel drive vehicle</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the operating and maintenance of a four-wheel drive vehicle that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely maintenance and operation of a four-wheel drive vehicle that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of
| **assessments should not be greater than those required on the job.** |
| • Customisation of assessment and delivery environment should sensitively accommodate cultural diversity. |
| • Aboriginal people and other people from a non English speaking background may have second language issues. |
| • Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required. |

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the maintenance of a four-wheel drive vehicle

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Types of impact may include:
- pollution with foreign matter (human waste, rubbish, soap, detergent)
- vegetation tramping and breakage
- breakage and dislodgment of rock and other formations
- compaction of soil and other deposits
- disturbance of fauna
- introduction of new flora and fauna
- chemical alteration of environments
- damage to, or inappropriate behaviour in, cultural sites
- graffiti
- reduction in decomposing timber
- campfire scars
- noise
- intrusion into private lives and culture
- development of facilities and signs

### Range of terrain types may include:
- moderate inclines (up and down)
- sloping terrain
- very soft ground
- rocky areas
- sand
- axle deep water crossings
- mud/black soil/snow/ice

### Contextual issues may include:
- duration of trip
- type of terrain to be covered
- remoteness of area to be visited
Routine maintenance may include:

- changing wheels in uneven terrain
- fluid top-up

Unit Sector(s)
Vehicle Operations

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIVEH306A Operate mine service vehicle

Modification History
Not applicable.

Unit Descriptor
This unit covers the operation of mine services vehicles in the resources and infrastructure industries. It includes planning and preparing for mine services vehicle operations, conducting mine service vehicle activities, carrying out operator maintenance, conducting housekeeping activities. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:

- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

2.4. Manoeuvre equipment to maximise efficiency and ensure safety of other equipment and personnel  
2.5. Complete work according to agreed work plan and outcomes |
| 3. Carry out operator maintenance | 3.1. Conduct *visual inspection and fault finding*  
3.2. Conduct *routine operational servicing* to ensure peak performance of equipment |
| 4. Conduct housekeeping activities | 4.1. Clean equipment  
4.2. Clean and store attachments and other ancillary equipment  
4.3. Complete all required records and |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to operate a mine services vehicle:

- apply legislative, organisation and site requirements and procedures for operating a mine service vehicle
- apply diagnostic techniques
- evaluate ground conditions
- interpret plans, reports, maps, specifications
- maintain records
- follow safe work practices
- select and use protective equipment
- use communication equipment
- use hand and power tools

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to operate a mine services vehicle:

- emergency procedures
- equipment processes, technical capability and limitations
- hauling procedures and operating conditions in the work environment
- hazardous goods procedures
- isolation procedures
- operational procedures and checks
- personnel transport procedures
- site safety requirements
- towing procedures
# Evidence Guide

Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Compliance documentation may include: | • legislative, organisation and site requirements and procedures, including (but not limited to):  
• mining safety and health  
• mine inspection  
• OHS  
• explosives  
• manufacturer's guidelines and specifications  
• Australian standards  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
| Mine service vehicles may include: | • backhoe  
• skid steer  
• tractor |
| Potential risks and hazards may include: | • abandoned equipment  
• adjoining pit walls  
• adverse weather conditions (electrical storms, floods, fires)  
• chemicals  
• equipment  
• fences  
• holes  
• materials  
• over-hanging rocks  
• personnel  
• pot holes  
• unsafe ground  
• unstable faces  
• vehicles  
• contaminants including:  
• animal carcasses (sheep, cows, kangaroos)  
• cigarette butts  
• consumables |
| Capacity of equipment and/or attachments may include: | • duration of operation  
• efficient and safe operating speed  
• operating limitations  
• type of activities performed  
• weight and/or load limitations |
| --- | --- |
| Equipment pre-start checks may include: | • air filter restriction indicator  
• cab (horn, lights, air conditioner)  
• computer systems  
• display instrumentation and gauges (indicators, gauges, laser levels)  
• engine and stop engine lights (orange and red)  
• fluid levels (windscreen washer tank, hydraulic oil, coolant, grease, water, engine oil, fuel)  
• visual and audio warning devices and lights |
| Environmental issues may include: | • culturally-sensitive sites and artefacts  
• drainage  
• dust  
• emissions  
• flora and fauna  
• hazardous chemicals  
• heritage legislation  
• noise  
• runoff  
• spills  
• water quality |
| Start-up, park and shutdown procedures may include: | • correct location of equipment  
• safety mechanisms operational (horn, operating lights)  
• vehicle is left secured |
| Indicators may include: | • brake oil temperature  
• engine oil pressure  
• brake air pressure  
• water temperature  
• service meter |

- ear plugs  
- metal bucket teeth  
- metal or steel rods  
- old fencing  
- old piping  
- plastic  
- timber
- voltmeter
- torque converter oil temperature
- tachometer
- speedometer/odometer
- parking brake
- steering filters
- transmission filter
- fuel filter
- retarder
- computer indicators

**Visual inspection and fault** may include:

- cab condition (no rags in air conditioner vent, dirt around brake and accelerator pedals, seat condition, all gear secured)
- cab mounts
- damage to equipment
- danger tags
- engine oil to be checked before starting engine
- fire suppression unit (pins in position in triggers)
- grease lines
- light positioning and cleanliness
- no combustible material around exhaust
- oil leaks (engine, hydraulic hoses, ground) fuel leaks (engine, on ground), water
- leaks (radiator, hoses)
- personal proximity
- portable fire extinguisher (bracket, gauge, hose, ease of access)
- radiator top up tank
- tyres and rim condition
- vehicle number
- wheel nuts and studs
- windows (clean, emergency exit tag in place)

**Routine operational servicing** may include:

- checking fluid levels
- filter changing
- greasing
- keeping cab clean
- tightening loose fittings
- cleaning including:
  - degreasing
  - forced air
  - steam cleaning
• vacuum
• water

Unit Sector(s)
Vehicle Operations

Co-requisite units
Not applicable.
RIIVEH307A Operate heavy rigid vehicle

Modification History
Not applicable.

Unit Descriptor
This unit covers the operation of heavy rigid vehicles (with more than 2 axles) including the starting, driving and stopping; and the conduct of operator checks and actions.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>

</table>
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to operate heavy rigid vehicles:

- apply operational safety requirements
- access, interpret and apply technical information
- match appropriate equipment with tasks
- maintain equipment records
- use relevant hand tools
- apply diagnostic techniques
- communicate effectively
- apply environmental constraints relate to specified operations
- dispose of environmentally sensitive fluids and materials

### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to operate heavy rigid vehicles:

- site and equipment safety requirements
- heavy rigid vehicle operational procedures
- basic mine geological and survey data
- mine operational procedures
- equipment characteristics, technical capabilities and limitations
- heavy rigid vehicle maintenance requirements/procedures
- vehicle record systems
- communication systems
- mine environmental conditions
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment.
skills

- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge.
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes.
  - consistently achieving the required outcomes.
  - first hand testimonial evidence of the candidate's:
    - working with others to operate heavy rigid vehicles.

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
</table>
| Critical aspects for assessment and evidence required to demonstrate competency in this unit | - knowledge of the requirements, procedures and instructions for the treatment and disposal of rejects and tailings  
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of the treatment and disposal of rejects and tailings  
- working with others to undertake and complete the treatment and disposal of rejects and tailings that meet all of the required outcomes  
- consistent timely completion of the treatment and disposal of rejects and tailings that safely, effectively and efficiently meets the required outcomes |

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.  
• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.  
• Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.  
• Aboriginal people and other people from a non |
English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**
This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the treatment and disposal of rejects and tailings

**Guidance information for assessment**
Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

may include:

- legislative, organisation and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- code of practice
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Mineralogical data

may include relevant site-specific information in relation to:

- settling characteristics
- reactivity with additives, settling and clarifying agents

### Work requirements may come from briefings, handovers, and work orders

and may include:

- nature and scope of tasks
- achievement targets
- operational conditions
- site layout and out of bounds areas
- worksite inspection requirements
- lighting conditions
- plant or equipment defects
- hazards and potential hazards
- coordination requirements or issues

### Inspect and prepare work area

may include:

- identification of hazards
- selection and implementation of control measures for the hazards identified
- safeguarding site and non-site personnel by:
  - erection of barricades and posting of signs
  - selection of appropriate equipment to ensure personnel safety and protection

### Coordination with others

may include with:

- yard persons
- laboratory personnel
- mobile plant operators
- maintenance personnel

### Materials

may include:

- flocculants
- gypsum
### Equipment may include:
- thickeners
- centrifuges
- band press filters
- spirals
- screens
- pumps
- blowers
- agitators
- flow and density meters
- conveyors
- radiation gauges
- pipeline
- sumps
- bucket elevators
- reject bins
- mobile plant

### Pre-start and start-up procedures may include:
- walk around check of the plant
- checking and toping up fluid and chemical levels
- lubrication
- inspection of attachments to ensure security and no defects
- instrument and control lever checks
- reporting defects and damage
- follow prescribed start-up sequence
- confirm plant is operational

### Shutdown procedures may include:
- following prescribed shutdown sequence
- securing equipment

### Hazardous and emergency situations may include:
- confined spaces
- working alone
- spillages
- unplanned shutdown
- fire
- electrical
- dust
- noise

### Operator service, maintenance and housekeeping tasks are those established and authorised for the site and may include:
- scheduled servicing
- recharging additive, settling and clarifying storage units
- greasing
- equipment adjustments
Unit Sector(s)
Waste and By-products

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIWBP202A Distribute tailings

Modification History
Not applicable.

Unit Descriptor
This unit covers distribution of tailings in coal and metalliferous mining and extractive industries. It includes: planning and preparing; starting up equipment; monitoring and dispersing tailings; conducting housekeeping activities; and shutting down and/or isolating equipment.

Application of the Unit
This unit applies in all contexts to the distribution of tailings as part of the processing cycle. This unit is appropriate for those working in operational roles, at worksites within:

- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>

<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply *compliance documentation* relevant to distribution of tailings  
1.2. Receive, interpret and clarify shift changeover details  
1.3. Communicate with other personnel using approved communication methods  
1.4. Select personal protective equipment appropriate for work activities  
1.5. Select appropriate type of *auxiliary equipment* for work activities  
1.6. Perform equipment *pre-start checks*  
1.7. Identify, address and report potential risks and hazards  
1.8. Identify, address and report *environmental issues*  
1.9. Adhere to emergency procedures  
1.10. Use approved dust suppression and extraction methods  
1.11. Prepare site for positioning of equipment  
1.12. Position and stabilise equipment according to work plan |
| 2. Start-up equipment in sequence | 2.1. Carry out *start-up* procedures and complete start-up checks according to *plant* configurations and system requirements  
2.2. Confirm plant is operational |
| 3. Monitor and disperse tailings | 3.1. Read and interpret data from equipment *indicators* to determine deposition parameters  
3.2. Continuously inspect plant and identify defects and potential problems  
3.3. Adjust equipment to approved operating parameters to *optimise* performance, maintain efficiency and to meet tailings quality targets  
3.4. Control feed to equipment  
3.5. *Monitor* bunded areas and manage *overflows* |

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to distribute tailings:

- apply legislative, organisation and site requirements and procedures
- maintain, clean and operate, equipment
- apply hazard identification procedures
- apply hazardous goods handling requirements and procedures
- interpret reports
- apply lifting techniques (manual, cranes and loads)
- apply records maintenance requirements
- apply safe work practices
- use hand and power tools

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to distribute tailings:

- breakdown procedures
- emergency procedures
- environmental procedures
- equipment processes, technical capability and limitations
- equipment safety requirements
- flushing lines
- hazard identification and management
- identifying repair requirements
- isolation procedures
- metallurgical and technical data (basic)
- occupational health and safety procedures
- operational procedures and checks
- pumping system
- reclaim ponds/dams
- safety requirements
- securing pipes
- security procedures (e.g. shutting of gates)
- site procedures
- spillage procedures
- tailings
• wet and dry working procedures
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisation and site requirements and procedures  
• manufacturer’s guidelines and specifications  
• Australian standards  
• code of practice  
• Employment and Workplace Relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
|---|---|
| Waste and by-products management plan may cover: | • maintenance materials  
• used oils and lubricants  
• cleaning materials  
• out of specification "product"  
• contaminated product  
• tailings  
• segregation requirements for waste and by-products  
• treatment requirements  
• license requirements  
• surface water control requirements  
• engineering detail for construction of containment structures  
• recording of the quantity, nature and disposal method of waste and by-products |
| Geological data may include relevant site-specific information in relation to: | • rock type and characteristics  
• faults and joints  
• water tables or other water sources |
| Survey data may include relevant site-specific information in relation to: | • floor heights  
• bench widths  
• grades |
| Resources may include: | • labour  
• materials  
• services and equipment |
| Instructions may issued in | • nature and scope of tasks |
briefings, handovers, and work orders and may include:

- achievement targets
- refuelling arrangements
- operational conditions
- obtaining permits required
- site layout
- out of bounds areas
- worksite inspection requirements
- plant or equipment defects
- hazards and potential hazards
- coordination requirements or issues

RIIWBP501A Implement site waste and by-product management plan

Modification History
Not applicable.

Unit Descriptor
This unit covers the implementation of site waste and by-product management plan in the mining and extractive industries. It includes: researching the waste and by-product requirements; maintaining tailings, waste and by-products disposal and water recycling operations; and constructing and maintaining dam systems.

Application of the Unit
This unit is appropriate for those working in a management and technical specialist roles, within:
- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. <tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Research waste and by-product requirements | 1.1. Access, interpret and apply *compliance documentation* relevant to the implementation of site waste and by-product management plans  
1.2. Identify and document needs, quantity, quality, source and means of treatment of waste and by-product for production needs of the site  
1.3. Obtain and maintain all appropriate licences for site waste and by-product management  
1.4. Ensure the water quality and water-course and ground water contamination are monitored and recorded to meet *legislative, site and organisation's requirements*, community objectives and safe responsible work practices  
1.5. Ensure site treatment works for contaminated drainage or development/processing waters are designed and located to satisfy relevant requirements  
1.6. Establish management systems with appropriate inlet/outlet works and means of improving the natural settlement process  
1.7. Plan and organise work schedules for operational best practice associated with managements systems and water quality specifications |
| 2. Maintain tailing, waste and by-products disposal and water recycling operations | 2.1. Ensure site water is treated for reuse in operations to meet environmental and quality standards efficiently  
2.2. Undertake and record regular inspections of the water recycling system  
2.3. Arrange audits of the water recycling system by internal/external auditors  
2.4. Plan, organise and supervise the reuse or management of tailings, waste and by-products in a manner that satisfies relevant requirements |
<p>| 3. Construct and maintain dam | 3.1. Plan and incorporate short and long term |</p>
<table>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to implement site waste and by-product management plans:

- apply legislative, organisation and site requirements and procedures
- apply people and processes management techniques
- apply capital equipment proposal preparation requirements and procedures
- apply operating budget preparation requirements and procedures
- apply techniques to analyse and review systems
- apply projects and tasks management techniques
- apply procedures for coordinating resources - human, financial and physical
- apply equipment and maintenance systems management requirements and procedures
- apply techniques for evaluating new and used equipment
- apply operating cost control requirements and procedures
- apply performance audit procedures
- apply requirements and procedures for gaining statutory/legal approvals
- apply tender specifications preparation requirements and procedures
- apply negotiation techniques and contract finalisation requirements and procedures
- apply techniques for implementing change
- access and use appropriate technologies
- apply management report preparation and presentation requirements and procedures
- apply conflict resolution techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to implement site waste and by-product management plans:

- occupational health and safety requirements and management
- environmental requirements and management
- statutory requirements and control
- quality system requirements
- legislative and organisation waste and by-product management requirements
- mine site operations
- mine site products and services
- mine site plant and equipment
- team management
- resource monitoring
- negotiation techniques
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| **1. Plan recyclable material processing** | 1.1. Access, interpret and apply *compliance documentation* relevant to the planning and monitoring of recycling material operations  
1.2. Identify and explore market opportunities to assist the organisation to forecast trends and options  
1.3. Undertake feasibility study to confirm market research and determine viability of project  
1.4. Plan recyclable materials processing using on-site mobile equipment and fixed depots  
1.5. Plan storage of raw feed and products  
1.6. Test products to support ongoing quality assurance  
1.7. Investigate the blending of secondary aggregates with A-grade materials to produce road base replacements  
1.8. Design compatible equipment for the recycling process, storage and transport of reclaimable materials  
1.9. Design process in accord with environmental and *statutory/legal requirements* |
| **2. Monitor operations** | 2.1. Monitor growth potential of the recycling industry  
2.2. Monitor, appraise and introduce new techniques and new systems and adopt products  
2.3. Monitor production rates and associated environmental impact results  
2.4. Organise stockpiling and removal of separated saleable materials having a high level of cleanliness from ones that need disposal/tipping  
2.5. Undertake ongoing testing of product to comply with quality assurance requirements  
2.6. Produce cost analysis reports in line with organisation requirements  
2.7. Prepare and circulate records and reports to appropriate personnel, in line with organisation requirements |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to plan and monitor recycled material operations:

- apply legislative, organisation and site requirements and procedures
- apply people and processes management techniques
- apply capital equipment proposal preparation requirements and procedures
- apply business and resource plan development requirements and procedures
- apply operating budget preparation requirements and procedures
- analyse and review operations/costs
- apply project and task management techniques
- apply procedures for coordinating resources - human, financial and physical
- apply procedures for delivering and maintaining services to required specifications
- apply equipment and maintenance systems management requirements and procedures
- apply techniques for evaluate new and used equipment
- apply operating costs control requirements and procedures
- apply procedures to audit recycled material operations performance - finance, safety, environment, quality assurance, legislative compliance, resource utilisation
- prepare tender specifications
- apply negotiating and contract finalisation techniques
- apply procedures for implementing change
- access and use appropriate technologies
- prepare and present management reports
- apply techniques for negotiations with internal/external customers, community and statutory/legal authorities
- apply conflict resolution techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to plan and monitor recycled material operations:

- metalliferous mining recycled material operations
- metalliferous mining products and services
- metalliferous mining plant and equipment
- team management
• quality system
• statutory control
• organisational objectives
• resource monitoring
• risk management: principles, strategies and applications
• customer/client relations
• organisational change and development
• environmental management
• OHS
• computer applications
• negotiation techniques
• statistics

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to establish and maintain waste and by-product management system:

- apply legislative, organisation and site requirements and procedures
- access and use appropriate information management technologies
- apply techniques for analysing and reviewing waste management systems
- apply techniques for auditing waste management performance - energy, safety, environment, quality assurance, legislative compliance
- apply operating budget preparation requirements and procedures
- apply operating cost control requirements and procedures
- apply techniques for the coordination of resources - human, financial and physical
- apply business and resource plan development requirements and procedures
- apply techniques for the evaluation of new and used equipment
- apply the requirements and procedures for gaining statutory/legal approvals
- apply techniques for implementing change
- apply people and process management techniques
- apply conflict resolution techniques
- apply project and task management requirements and procedures
- apply procedures for monitoring and maintaining waste management systems
- apply tender specifications preparation requirements and procedures
- apply negotiation techniques and requirements and procedures for finalising contracts
- apply management report preparation and presentation requirements and procedures

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to establish and maintain waste and by-product management system:

- dam design and construction
- emergency response and disaster planning
- environmental management
- financial management
- mine plans
- mine products and services
• mining operations
• negotiation techniques
• organisational objectives
• quality system
• risk management, principles, strategies and applications
• safety and health requirements
• statutory control requirements
• team management
• training and assessment systems
• water recycling
• training systems
• emergency response and evacuation planning processes and techniques
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>

</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the establishing and maintenance of waste and by-product management systems</td>
</tr>
<tr>
<td></td>
<td>• implementation of procedures and techniques for the safe, effective and efficient establishing and maintenance of waste and by-product management systems</td>
</tr>
<tr>
<td></td>
<td>• the identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• the identification of viable program options and the selection of programs that best meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the establishing and maintenance of waste and by-product management systems</td>
</tr>
<tr>
<td></td>
<td>• consistent and timely establishing and maintenance of waste and by-product management systems</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of
assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

<table>
<thead>
<tr>
<th>Method of assessment</th>
</tr>

<tbody>
<tr>
<td>This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:</td>
</tr>
</tbody>
</table>

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required
  - identification of viable options and the selection of options that best meet the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial and documentary evidence of the candidate’s:
  - working with others to establishing and maintenance of waste and by-product management systems |
| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. | • consistent and timely gaining of approval of waste and by-product management systems  
• provision of clear, timely required support and advice on the implementation of waste and by-product management systems |
### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| 1. Plan and prepare for operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the conducting of dewatering activities in surface operations  
1.2. Obtain, interpret and clarify *work instructions* for satisfactory completion of operations  
1.3. Develop *dewatering plan*  
1.4. Prepare *resources* and *equipment* for the task  
1.5. Prepare *sumps and pads* to work requirements  
1.6. Transport *pump, lines*, fittings, associated equipment and required tools to and from the site |
| 2. Install, operate and recover dewatering equipment | 2.1. Resolve *coordination* requirements with others at the site prior to commencing and during work activities  
2.2. Install and dismantle dewatering equipment  
2.3. Carry out pre-start, start-up and shutdown procedures  
2.4. Start, test and adjust dewatering equipment  
2.5. Monitor and adjust dewatering equipment performance to satisfy pumping requirements and to appropriately meet *changing work conditions*  
2.6. Recognise and respond to hazardous and emergency situations  
2.7. Complete work in accordance with the agreed plan and outcomes and within the operating capacity of the allocated equipment |
| 3. Carry out operator maintenance | 3.1. Carry out dewatering equipment and systems inspections and fault finding  
3.2. Carry out operational maintenance, servicing, lubricating and housekeeping tasks  
3.3. Process records and reports |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct dewatering activities in surface operations:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- access, interpret and apply technical information
- apply techniques for communicating with and coordinating activities with others
- apply requirements and procedures for selecting dewatering methods
- interpret ground conditions
- apply pumping equipment operating requirements and procedures
- apply procedures for identifying potential hazards
- apply procedures for responding to changing circumstances
- use small hand tools
- apply procedures for complying with environmental requirement
- work wearing personal protective equipment
- apply procedures for working in confined spaces
- apply equipment records maintenance requirements

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct dewatering activities in surface operations:

- site hazard identification and response procedures
- site risk control procedures
- site and equipment health and safety procedures
- site environmental requirements and constraints
- site quality requirements
- site communication procedures
- site geological and survey data
- site operational procedures
- dewatering equipment pre-start, start-up, operating and shutdown procedures and techniques
- dewatering equipment characteristics, technical capability and limitations
- drainage principles and processes
- site record keeping requirements
- site personal protective equipment requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>

RIIWMG203A Drain and dewater civil construction site

Modification History
Not applicable.

Unit Descriptor
This unit covers draining and/or dewatering of civil construction project sites. It includes: planning and preparing; positioning sedimentation control; remove surface water; constructing sump and wells; removing water from sumps or wells, trenches and pits; and cleaning up.

Application of the Unit
This unit specifies the competency required to drain and/or dewater civil construction project sites for environmental protection purposes and the control of water, which may affect construction. It is appropriate for those working in a operational roles, at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare                      | 1.1. Access, interpret and apply *compliance documentation* relevant to *draining and/or dewatering project sites*  
1.2. Obtain, confirm and apply *work instructions* relevant to the tasks to the allotted task  
1.3. Obtain, confirm and apply safety requirements from the site safety plan and organisational policies and procedures, to the allotted task  
1.4. Identify, obtain and implement *signage requirements* from the project traffic management plan  
1.5. Select plant, tools and equipment to carry out tasks that are consistent with the requirements of the job, check them for serviceability and rectify or report any faults  
1.6. Identify, confirm and apply *environmental protection requirements* from the project environmental management plan to the allotted task  |
| 2. Position sedimentation control        | 2.1. Position sedimentation controls according to project environmental management plan  
2.2. Construct sedimentation control barriers in accordance with the environmental management plan  
2.3. Position geo-fabrics and/or woven wire according to specification and to the environmental management plan  |
| 3. Remove surface water                  | 3.1. Establish temporary drainage systems to drain or divert surface and sub-surface water to the storm water drainage system  
3.2. Remove slab and site surface water and/or directed to the temporary drainage system  
3.3. Fill surface holes and depressions  
3.4. Drain surface water to drainage system using adequate fall  |
| 4. Construct sump/wells                  | 4.1. Locate sump and/or well at the lowest point to be drained to maximise pump efficiency  
4.2. Construct sumps and/or wells to work  |
| 5. Remove water from sumps/wells, trenches and pits | 5.1. Install surface or submersible pumps  
5.2. Locate surface pump as close as practicable to the sump or well  
5.3. Pump water to temporary drainage system according to the project environmental management plan  
5.4. Disperse discharged water using approved procedures |
|---|---|
| 6. Clean up | 6.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan  
6.2. Clean, check, maintain and store plant, tools and equipment in accordance with manufacturer's recommendations and standard work practices |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to drain and dewater civil construction site:

- apply legislative, organisation and site requirements and procedures
- apply operational, maintenance and basic diagnostic procedures
- apply pump operating requirements and procedures

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to drain and dewater civil construction site:

- site and equipment safety requirements
- drainage and dewatering
- sedimentation controls
- grading and levelling
- free water
- pumps
- environmental considerations
- construction principles
- processes for interpreting engineering drawings
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSA's/Safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

May include:

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Areas to be drained and/or dewatered are to include:

- control of surface water, bores, coffer dam, springs, creeks, wetland water, seepage water in trenches and pits and low lying natural ground where water may not escape

### Drainage is to include:

- graded surface level gutters and ditches excavated manually or by machine and various types of plastic piping

### Dewatering techniques are to include:

- sumps, wells, submersible pumps, vacuum pumps, surface pumps and sludge pumps

### Project sites include:

- road construction sites, excavation projects and construction sites in close proximity of wetlands or active water

### Work instructions may include:

- plans, specifications, quality requirements and operational details
- quality requirements may include: dimensions, tolerances, standards of work and material standards as detailed in the project drawings, specifications and project documentation to meet client satisfaction

### Safety requirements may be from the site safety plan and organisational policies and procedures and may include:

- protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of first aid equipment, hazard control and hazardous materials and substances
- safe operating procedures, which are to include: recognising and preventing hazards
associated with underground services, other machines, personnel, traffic control, working in proximity to others, worksite visitors and the public

- hazards and risks, which may include: uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures, which are to include: emergency shutdown and stopping, extinguishing equipment fires, organisational first aid requirements and evacuation

| Traffic signage and devices are to include: | • temporary warning signs, regulatory and traffic cones |
| Traffic signage and devices may include: | • highway traffic signs, site safety signage, guide signs, warning signs, barriers, hazard markers, portable traffic signals, bollards, arrow boards, vehicle mounted signs, flashing lights, barricades, and traffic conditions signage |
| Environmental Requirements are to include: | • organisational/project environmental management plan, waste management, water quality protection, noise, vibration, dust and clean-up management |
| Materials are to include: | • various types of plastic piping, silt fences, rocks or straw bales |
| Tools and equipment are to include: | • hoses, shovels and pumps |

</tr>
</tbody>
</table>

4. Operate and maintain drainage and dewatering system

|        | 4.1. Activate pumps to lower water table level to designed requirement |
|        | 4.2. Maintain pumps |
|        | 4.3. Maintain site drainage and dewatering system to maximise water flow to project requirements |

5. Remove and make good

|        | 5.1. Disconnect and remove pumping system |
|        | 5.2. Withdraw and remove well points and spears |
|        | 5.3. Restore area to environmental management plan |

6. Clean up

|        | 6.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan |
|        | 6.2. Clean, check, maintain and store plant, tools and equipment |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to control construction site water table:

- apply legislative, organisation and site requirements and procedures
- apply procedures for dewatering process
- interpret engineering drawings and sketches
- apply project quality requirements

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to control construction site water table:

- application of principles relating to site dewatering
- terminology, definitions and installation methods
- hazardous materials and hazardous situations
- environmental statements, erosion, sedimentation and waste disposal
- site and equipment safety requirements including appropriate state or territory legislation regulations and codes
- dewatering system equipment characteristics, technical capabilities and limitations
- procedures for dewatering process
- processes for interpreting engineering drawings and sketches
- dewatering system operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSA's/Safe work method statement
### Evidence Guide

RIIWMG302A Reclaim and treat water

Modification History
Not applicable.

Unit Descriptor
This unit covers reclaiming and treating of water in the metalliferous mining industry. It includes: planning and preparing, treating water, extracting water, operating and monitoring equipment, and conducting housekeeping activities.

Application of the Unit
This unit applies in all contexts to the reclaiming and treating of water during processing and also applies to the treatment of raw water to make it potable. It is appropriate for those working in technician roles, at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

5.5. Pass on shift changeover details to |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to reclaim and treat water systems:

- apply legislative, organisation and site requirements and procedures
- identify hazards
- apply hazardous goods handling requirements and procedures
- interpret reports
- apply lifting techniques (manual, cranes and loads)
- apply records maintenance requirements
- apply safe work practices
- use hand and power tools

### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to reclaim and treat water systems:

- breakdown procedures
- contaminants
- emergency procedures
- environmental procedures
- equipment processes, technical capability and limitations
- equipment safety requirements
- hazardous goods procedures and consequences of spills
- OHS procedures
- operational procedures and checks
- reagents
- site procedures
- site safety requirements
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Context of and specific resources for assessment

|  | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
|  | • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. |
|  | • Customisation of assessment and delivery environment to sensitively accommodate cultural diversity. |
|  | • Aboriginal people and other people from a non English speaking background may have second
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the reclaiming and treating of water

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Pre-start checks may include:
- availability of equipment
- detection of conditions that are unusual
- job requirements
- personnel availability
- walk through the plant/around settling pond/drive along pipe line

Environmental issues may include:
- drainage
- emissions
- flora and fauna
- hazardous chemicals
- recycling
- run-off
- spills
- waste management and disposal
- water quality

Monitoring may include the checking of:
- blockages and spillages
- concentration levels
- fumes and other toxins (e.g. hydrogen cyanide)
- wear and tear

Indicator readings may measure:
- current
- flow
- level
- pressure
- unusual noises (e.g. cavitation)

| 1. Plan, prepare for and initiate tasks | 1.1. Access, interpret and apply *compliance documentation* relevant to the application and monitoring of the site water management plan  
1.2. Access and share with team members the *geological, hydrological and survey data* required to complete the site water management tasks  
1.3. Prepare an action plan, in consultation with team members, which makes best use of the available resource and takes into account the requirements of the *site water management plan*  
1.4. Acquire and make available the necessary *resources* for the safe, effective and efficient conduct of the tasks  
1.5. Issue clear and timely *instructions* to team members and others involved for the safe, effective and efficient conduct in the tasks |
| 2. Monitor, adjust and report on execution of the plan | 2.1. Ensure safe, effective and efficient execution of tasks in accordance with the management plan and other relevant requirements and procedure  
2.2. Monitor management plan performance to ensure achievement of planned outcomes  
2.3. Initiate adjustments to work programs to take into account non achievement of planned outcomes  
2.4. Complete and submit reports as required  
2.5. Recommend changes to improve the safety, efficiency and effectiveness of the management plan |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to apply and monitor the site water management plan:

- apply legislative, organisation and site requirements and procedures
- interpret legislative requirements and procedures
- interpret site requirements and procedures
- provide team leadership
- apply procedures for selecting construction and operational techniques
- apply procedures for selecting and assigning plant and equipment
- apply procedures for developing and administering work plans

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to apply and monitor the site water management plan:

- legislative, manufacturer's and site requirements and procedures
- site risk, legislative compliance, health, safety, environmental, quality and communication requirements and procedures
- site water management plan
- team leadership techniques
- operational techniques required for execution of the plan
- plant and equipment capabilities
- work planning techniques
- work monitoring methods
- training systems
- emergency response and evacuation planning processes and techniques
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</table>
| 1. Monitor treatment plant performance | 1.1. Access, interpret and apply *compliance documentation* relevant to the monitoring and coordinating of waste and process water treatment  
1.2. Carry out routine plant *inspections*  
1.3. Collect samples and conduct and analyse *process tests* to determine performance against plant *operational requirements*  
1.4. Collect, interpret, record and report *process data*  
1.5. Conduct calculations to determine *process performance* |
| 2. Control chemical use | 2.1. Use, handle and store chemicals in accordance with *organisational and statutory requirements*  
2.2. Determine, prepare and conduct chemical dosing in accordance with plant processes  
2.3. Maintain information related to chemical supply and usage |
| 3. Monitor and control processes | 3.1. Monitor processes to maintain parameters of operation  
3.2. Identify and report process faults and operational condition of plant  
3.3. Adjust integrated processes to optimise system performance |
| 4. Compile process records | 4.1. Compile *records* and reports from plant and system data |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to monitor and coordinate waste and process water treatment:

- apply legislative, organisation and site requirements and procedures
- use electronic monitoring and metering systems
- use manual chart recording systems
- use laboratory testing and sampling equipment
- use computerised equipment
- apply techniques for operating on-road and off-road vehicles
- operate communication equipment
- interpret reports
- apply procedures for identifying and managing hazards
- apply hazardous goods handling techniques and management
- apply lifting techniques (manual, cranes and loads)
- apply records maintenance requirements
- apply safe work practices
- use hand and power tools
- apply defects reporting requirements

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to monitor and coordinate waste and process water treatment:

- water system hydraulics
- system layout
- lock out procedures for mechanical and electrical installations
- policies and procedures and legislation
- relevant utilities and service bodies
- communication systems
- materials handling
- environmental, landscape, ground structure of work area
- risk factors and potential hazards
- equipment operation, capacity and limitations
- effect of weather and conditions on operation of site or plant
- mathematical calculations
- pipes and fittings/pumping and valve systems
- mechanical and electrical control systems
- shutdown and recharging requirements
- chemical usage
Evidence Guide

#### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those

</tr>
<tr>
<td>• Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.</td>
</tr>
<tr>
<td>• Where applicable, physical resources should include equipment modified for people with disabilities.</td>
</tr>
<tr>
<td>• Access must be provided to appropriate learning and/or assessment support when required.</td>
</tr>
</tbody>
</table>

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the implementing of the site water management plans
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of options that best meet the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial and documentary evidence of the candidate's:
  - working with others to undertake and

</tr>
</tbody>
</table>

**Geological data** may include:

- coal, rock and overburden properties
- faults and joints
- groundwater
- springs
Hydrological data may include:
- rainfall
- surface water, existing streams and dams
- catchment areas and runoff characteristics
- groundwater and bores
- flood predictions

Survey data may include:
- site and neighbouring land form
- site and neighbouring boundaries and structures
- predicted flood levels
- water pumping levels
- locations of pipes, pumps

Internal and external stakeholders may include:
- site and offsite employees
- contractors
- equipment suppliers
- geologists, surveyors and/or draughtspersons
- regulatory authorities representatives
- community representatives
- site neighbours

Resources may include:
- financial
- labour
- materials
- services
- plant and
- equipment

Unit Sector(s)
Water Management

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIWMG601A Establish and maintain water management system

Modification History
Not applicable.

Unit Descriptor
This unit covers the establishment and maintaining of water management systems in the coal and metalliferous mining and extractive industries. It includes: identifying and researching the organisation needs; facilitating site environmental investigation; developing, implementing and maintaining procedures for the system; and evaluating the system.

Application of the Unit
This unit is appropriate for those working in management or technical specialist roles, within or serving:
- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

---
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Identify and research organisation needs</td>
<td>1.1. Access, interpret and apply <em>compliance documentation</em> relevant to the establishment and maintenance of <em>water management systems</em>&lt;br&gt;1.2. Analyse organisation's goals, objectives and strategies to gain direction as to the type of <em>research</em> to be undertaken&lt;br&gt;1.3. Investigate and analyse licence, worksite environmental conditions and legislation to develop options, strategies and anticipated outcomes&lt;br&gt;1.4. Evaluate existing system and equipment suitability, taking into account operational requirements, safety and health issues and environmental legislation/regulations&lt;br&gt;1.5. Research, evaluate, select and purchase new systems in line with operational and budget requirements, safety and health and environmental legislation/regulations&lt;br&gt;1.6. Analyse and interpret research information to establish options and opportunities</td>
</tr>
<tr>
<td>2. Facilitate site environmental investigation</td>
<td>2.1. Ensure internal and external <em>stakeholders</em> are involved in the planning process in a way that uses their contribution effectively and gains their support for the outcomes.&lt;br&gt;2.2. Establish strategies and systems to support analysis of the worksite environments&lt;br&gt;2.3. Ensure worksite environments are investigated to identify and assess the factors, which impact on work development&lt;br&gt;2.4. Ensure market opportunities are identified and explored to assist the organisation to forecast trends and options&lt;br&gt;2.5. Ensure water <em>quantity</em> and quality requirements and excesses are determined&lt;br&gt;2.6. Ensure threats and opportunities are identified, analysed and used to optimise project outcomes&lt;br&gt;2.7. Ensure titles searches are undertaken&lt;br&gt;2.8. Ensure legal obligations are identified and documented</td>
</tr>
</tbody>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to establish and maintain water management system:

- apply legislative, organisation and site requirements and procedures
- access and use appropriate information management technologies
- read and interpret survey plans
- interpret geological and hydrological data
- apply procedures to analyse and review water management systems
- apply auditing procedures
- apply resource plan develop procedures
- apply techniques to evaluate new and used equipment
- apply processes required to gain statutory/legal approvals
- apply procedures to implement change
- apply people and processes management techniques
- apply projects and tasks management procedures
- apply techniques for negotiation with internal/external customers, community and statutory/legal authorities
- prepare and present management reports
- prepare operating budgets
- prepare tender specifications
- apply conflict resolve techniques

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to establish and maintain water management system:

- drainage systems
- emergency response and disaster planning procedures
- environmental requirements and management
- financial management
- mine design relating to mine water management systems
- mine operating procedures, including those applying to mine water management
- mine plant and equipment
- mine water management systems
- organisational objectives
- resource monitoring
- risk management: principles, strategies and applications
- safety and health requirements and management
- safety features for water management systems
- statutory control requirements
- team management
- training and assessment systems
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• knowledge of the requirements, procedures and instructions for the establishing and maintenance of water management systems</td>
<td></td>
</tr>
<tr>
<td>• implementation of procedures and techniques for the safe, effective and efficient establishing and maintenance of water management systems</td>
<td></td>
</tr>
<tr>
<td>• the identification of the relevant information and scope of the work required to meet the required outcomes</td>
<td></td>
</tr>
<tr>
<td>• the identification of viable program options and the selection of options that best meet the required outcomes</td>
<td></td>
</tr>
<tr>
<td>• working with others to undertake and complete the establishing and maintenance of water management systems</td>
<td></td>
</tr>
<tr>
<td>• consistent and timely establishing and maintenance of water management systems</td>
<td></td>
</tr>
</tbody>
</table>

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
</tr>
</tbody>
</table>
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required
  - identification of viable options and the selection of options that best meet the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial and documentary evidence of the candidate's:
  - working with others to undertake and complete the establishing and maintenance of water management systems
  - consistent and timely gaining of approval of water management systems
<table>

Co-requisite units

Not applicable.
AHCNAR201A Carry out natural area restoration works

Modification History

Not Applicable

Unit Descriptor

| Unit descriptor | This unit covers the process of carrying out natural area restoration work and defines the standard required to: establish the task and site with supervisor by referring to a revegetation plan; carry out weed removal and ground preparation as part of a team; transport tools, plants and planting materials to the site; carry out planting and regeneration techniques and protect the restored area; remove any waste. |

Application of the Unit

| Application of the unit | This unit applies to supervised workers in land management programs who carry out natural area restoration work as part of a team and work under routine supervision with intermittent checking. The work is usually within established routines, methods and procedures. |

Licensing/Regulatory Information

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>
**ELEMENT** | **PERFORMANCE CRITERIA**
--- | ---
1. Prepare for natural area restoration works | 1.1. Services are located using site and natural area restoration plans and in consultation with the supervisor.  
1.2. Occupational Health and Safety (OHS) hazards are identified and safety concerns reported to the supervisor.  
1.3. The environmental implications of natural area restoration works are identified and the likely outcomes assessed and reported to the supervisor.  
1.4. Natural area restoration tools, equipment and machinery are selected and prepared for use according to enterprise work procedures and native plant species to be established.  
1.5. Pre-operational and safety checks are carried out on tools, equipment and machinery according to manufacturers specifications and enterprise work procedures.  
1.6. Personal Protective Equipment (PPE) is used and maintained according to procedures.
2. Apply weed control measures | 2.1. Species and quantities of weeds requiring control are identified according to enterprise work procedures.  
2.2. Herbicides are prepared, where necessary, according to manufacturer's specifications and enterprise work procedures.  
2.3. Weed control measures are undertaken according to the weed and non-target species physiological characteristics, and enterprise work procedures.  
2.4. Work practices and control measures employed cause damage only to the target weed species.
3. Prepare the soil for natural area restoration | 3.1. Soil treatments are selected according to the soil condition, species requirements and enterprise work procedures.  
3.2. Intact natural soil profiles are protected from damage.  
3.3. Soil treatments are applied either broadly or at specific restoration sites according to enterprise work procedures.
4. Replace native vegetation on the natural area restoration site | 4.1. Vegetation replacement methods are determined and assisted natural regeneration, planting, seeding or transplanting treatments are prepared according to the restoration plan and enterprise work procedures.  
4.2. Assisted regeneration treatments are applied to
### PERFORMANCE CRITERIA

remnant vegetation and intact soil profiles where required according to enterprise work procedures.

4.3. Seed (and fertiliser if required) is sown either by hand in discrete areas or broadly using sowing and/or ripping trailed machinery.

4.4. Containerised plants or transplants are positioned according to the restoration plan and planted firmly ensuring good contact between roots and surrounding soil according to enterprise work procedures.

4.5. Hand watering or irrigation, where specified, is undertaken to establish newly sown or planted vegetation.

4.6. The natural area restoration works are undertaken according to OHS requirements.

<table>
<thead>

### Required Skills and Knowledge

#### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills
REQUIRED SKILLS AND KNOWLEDGE

- participate in teams and contribute to team objectives
- read written instructions, understand and interpret work procedures
- calibrate tools, equipment and machinery, measure distance, calculate area, planting and seeding rates, volumes and treatment application rates
- minimise noise, dust, high activity vehicle traffic and water run-off to prevent nuisance-level environmental disturbance
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

Required knowledge

- common names of native plants
- common names of native animals
- common names of weeds and pest animals
- the importance and value of the local provenance species
- natural area restoration techniques
- basic plant and animal ecology
- map and plan reading
- OHS and environmental legislative and enterprise requirements.
Evidence Guide

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| 1. Prepare equipment and materials | 1.1. Tools and materials are selected for the task to be undertaken according to manufacturer guidelines and Occupational Health and Safety (OHS) regulations.  
1.2. Plant materials are identified, obtained and stored according to enterprise guidelines.  
1.3. Labour and machinery requirements are estimated and organised.  
1.4. Schedule of works is prepared and provided to management/client. |
| 2. Prepare the revegetation site | 2.1. Site hazards are identified, risks assessed and suitable risk controls implemented.  
2.2. Site preparation is undertaken according to planting plan and/or supervisor's instructions.  
2.3. Soil ameliorants are used, if necessary, according to plan specifications.  
2.4. Revegetation site is marked out according to supervisor's directions and/or plans.  
2.5. All competing plants, debris and pollutants are treated according to the plan specifications and risk controls implemented.  
2.6. Treatments are selected according to the risk controls selected and applied according to documented guidelines and manufacturer instructions.  
2.7. Protective structures are installed where indicated by the risk controls implemented. |
| 3. Effect revegetation works    | 3.1. Revegetation works are implemented according to enterprise guidelines.  
3.2. All plants materials are inspected prior to revegetation works and defective materials are discarded.  
3.3. Plant materials to be installed are treated according to documented guidelines.  
3.4. Plant materials are installed according to planting program.  
3.5. Remedial action is undertaken to ensure all of the revegetation program requirements have been implemented.  
3.6. Potential threats to revegetation works are identified and reported. |
| 4. Maintain revegetated site   | 4.1. Site is maintained according to the planting program requirements. |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
 | 4.2. Remedial action and plant protection is undertaken according to the needs of the species.
 | 4.3. Tools and equipment are cleaned, maintained and stored consistent with manufacturer specifications.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- prepare equipment and materials
- prepare a planting site
- effect revegetation works
- maintain revegetated site
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record information collected accurately and legibly, and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- revegetation techniques
- ecosystems, provenance and habitat requirements
- factors affecting the timing and method of planting
- identification of pests and diseases of trees
- principles and methods relating to the prevention and control of pests and diseases
- safety requirements when handling and using hazardous goods
- nutrient requirements of a range of plant species and cultivars
- physiology of plant growth
- techniques for protecting and securing/anchoring trees and shrubs
- plant selection and culture
- soils and nutrients
- calculations for materials.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- prepare the site for revegetation works
- conduct a site hazard identification and risk control assessment
- recognise and treat plant diseases on a revegetation site
- treat weeds and competing plants
- carry out revegetation works
- clean and maintain the revegetated site.

Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole.

The types of establishment methods may include:

- a range of establishment methods covering:
  - hand planting
  - mechanical planting
  - direct seeding
  - encouragement of natural regeneration
  - mechanical sowing
  - fire.
### RANGE STATEMENT

AHCSAW201A Conduct erosion and sediment control activities

Modification History
Not Applicable

Unit Descriptor

| Unit descriptor | This unit covers the process of carrying out erosion and sediment control activities in both urban and rural environments and defines the standard required to: assess risks from erosion and sediment at a site; assemble structures to prevent erosion and control sediment at a site; carry out sediment control activities in accordance with legislation and stakeholder requirements; confirm that erosion and sediment control meets enterprise requirements. |

Application of the Unit

| Application of the unit | This unit applies to workers at an operational level involved in earthworks construction and other land forming activities working under routine supervision with intermittent checking by supervisors. |

Licensing/Regulatory Information
Not Applicable

| 1. Align work site practices with erosion and sediment control principles | 1.1. Erosion and sedimentation legislation is adhered to at the work site as a part of contract works.  
1.2. Procedures relating to erosion and sediment control are applied on the work site to align with industry standards. |
| 2. Implement erosion and sediment control principles in the workplace | 2.1. Breaches of erosion and sediment control legislation are noted and reported.  
2.2. Industry practices for erosion and sediment control are applied in the work place. |

### Required Skills and Knowledge

#### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

**Required skills**

- identify hazards and follow safe operating procedures
- identify erosion and sediment control structures/measures/practices
- carry out routine work with control measures and structures
- identify areas at risk of erosion
- undertake activities in accordance with legislation/community expectation and project specifications
- use literacy skills to follow sequenced written instructions and record information accurately and legibly
- use oral communication skills/language competence to fulfil the job role as specified by the organisation including questioning, active listening, asking for clarification and seeking advice from supervisor
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities.

**Required knowledge**

- cost to the community of erosion and sedimentation
- loss of habitat
- water quality
- loss of production/asset/amenity
- re-occurring maintenance/repair/monitoring
- agents/processes of erosion and sedimentation
**REQUIRED SKILLS AND KNOWLEDGE**

- types of erosion and sediment control structures and techniques for constructing them
- basic catchments issues
- role of vegetation
- characteristics of soils with an emphasis on erodible soils.
- OHS and environmental legislative and enterprise procedures.

AHCSAW301A Construct conservation earthworks

Modification History
Not Applicable

Unit Descriptor

| Unit descriptor | This unit covers the construction of conservation earthworks and defines the standard required to: determine job requirements from plans and specifications; assess machinery and equipment requirements; construct planned earthworks; apply final finishing techniques. |

Application of the Unit

| Application of the unit | This unit applies to workers who use specialised earthmoving techniques completed to fine tolerances. Construction is often carried out using a single earthmoving machine in varied conditions and terrains that requires the plant operator to develop skills that are unique to this sector. The use and operation of machinery and equipment used to construct these works is covered by separate units. |

</table>
| 1. Prepare for construction | 1.1. Confirm construction details and sequence.  
1.2. Identify and locate worksite, site indicators and survey pegs.  
1.3. Confirm work readiness of machinery and equipment.  
1.4. Assess and minimise risks to others and the environment.  
1.5. Select and use appropriate personal protective equipment.  
1.6. Verify that equipment and attachments match terrain and program tasks. |
| 2. Carry out work | 2.1. Follow industry endorsed earthwork methods and patterns for specific machines.  
2.2. Monitor and maintain optimum machinery loads in accordance with prevailing conditions.  
2.3. Ensure that safe machinery operating techniques are deployed to match terrain, site conditions other operators and workers.  
2.4. Ensure that excavation, transport, dumping and compaction of material is conducted in accordance with industry practice. |
| 3. Apply finish techniques | 3.1. Finish batters and surfaces in accordance with job requirements and industry practice.  
3.2. Retain site features and vegetation in accordance with work plan/schedule.  
3.3. Clear site and remove debris in accordance with work plan/schedule.  
3.4. Complete topsoiling of disturbed areas and surfaces in accordance with industry standards and plan/schedule. |
4.2. Clean and store Personal Protective Equipment (PPE) and application equipment in accordance with manufacturer's specification and Occupational Health and Safety (OHS) requirements. |

**Required Skills and Knowledge**
### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- identify hazards and implement safe operating procedures
- prepare for construction
- carry out planned earthworks and minimise damage to natural areas
- apply finishing techniques
- use literacy skills to read, interpret and follow organisational policies and procedures, follow sequenced written instructions, record accurately and legible information collected and select and apply procedures for a range of tasks
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning techniques, active listening, clarifying information and consulting with supervisors as required
- use numeracy skills to estimate, calculate and record routine workplace measures
- use interpersonal skills to work with and relate to people from a range of cultural, social and religious backgrounds and with a range of physical and mental abilities.

#### Required knowledge

- erosion and sediment control standards and principles
- erosion control and design principles
- natural area protection (particularly topsoil) and rehabilitation principles
- soils and soil formation
- principles of conservation earthwork construction including catchment management and soils
- earthmoving principles
- levels and levelling
- natural area protection (including topsoil) and rehabilitation
- types and application of personal protective equipment
- legislation and regulations including Occupational Health and Safety (OHS) in relation to conservation earthwork construction
- risk factors including human health, environmental damage
- erosion and sedimentation control principles and practices
- environmental impacts and controls for constructing conservation earthworks
- OHS and environmental legislative and enterprise requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to workplace operations and satisfy holistically all of the requirements of the performance criteria and required skills and knowledge and include achievement of the following:

- determine job requirements from plans and specifications
- assess machinery and equipment requirements
- construct planned earthworks
- apply final finishing techniques.

Context of and specific resources for assessment

Competency requires the application of work practices under work conditions. Selection and use of resources for some worksites may differ due to the regional or enterprise circumstances.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole.

Earthworks may include:

- the range of conservation earthworks on rural lands including:
  - contour banks
  - waterways
  - dams
  - drainage structures
- This unit does not include construction of access tracks or seismic lines, maintenance of fire breaks or land clearing.

BSBCMN311B Maintain workplace safety

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit is concerned with OHS responsibilities of employees with supervisory responsibilities to implement and monitor the organisation's Occupational Health and Safety policies, procedures and programs in a small team to meet legislative requirements. This unit has been adapted from Generic Competency B in the National Guidelines for Integrating Occupational Health and Safety Competencies into National Industry Competency Standards [NOHSC:7025 (1998) 2nd edition]. |

Application of the Unit

| Application of the unit | Frontline managers have a key role in maintaining workplace safety within the context of the organisation. In their role, they closely monitor aspects of work associated with the safe delivery of products and services, meaning that they have an important responsibility in influencing the ongoing safety within the workplace. At this level, work will normally be carried out within known routines, methods and procedures, and may also involve a number of complex or non routine activities that require some discretion and judgement. |

Licensing/Regulatory Information
Not applicable.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Assist incorporation of Occupational Health and Safety policy and procedures into the work team | 1.1. Demonstrate basic requirements of *Occupational Health and Safety legislation* in area of responsibility appropriate for health and safety needs of a small work team  
1.2. Provide information and clearly explain to the work group the *organisation's Occupational Health and Safety policies, procedures and programs*  
1.3. Regularly provide information and clearly explain to the work group information about identifying hazards and the outcomes of risk assessment |
| 2. Support participative arrangements for the management of Occupational Health and Safety | 2.1. Implement and monitor *organisational consultative procedures* to facilitate participation of work group in management of work area hazards  
2.2. Promptly dealt with issues raised through consultation in accordance with organisational procedures for issue resolution  
2.3. Encourage and assist team members to contribute to the management of Occupational Health and Safety at the workplace  
2.4. Engage with individuals and teams to identify and implement improvements in the management of Occupational Health and Safety |
| 3. Support the organisation's procedures for providing Occupational Health and Safety training | 3.1. Provide advice on Occupational Health and Safety training needs of individuals and workgroup  
3.2. Provide advice on strategies and opportunities for development of workgroup's competencies in relation to Occupational Health and Safety  
3.3. Provide coaching and mentoring assistance to team members to support the effective development of individual and group competencies in Occupational Health and Safety |
| 4. Participate in identifying hazards and assessing and controlling risks for the work area | 4.1. Provide advice on hazards in work area in line with organisation's Occupational Health and Safety policies and procedures  
4.2. Support the implementation of procedures to control risks using the hierarchy of controls and in accordance with organisational procedures  
4.3. Identify and reported inadequacies in existing risk control measures are in accordance with the hierarchy of controls  
4.4. Accurately complete and maintain Occupational |
ELEMENT | PERFORMANCE CRITERIA
---|---
| Health and Safety records of incidents in the work area are in accordance with Occupational Health and Safety legal requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

**Required skills**

- literacy skills to understand workplace procedures and work instructions for identifying and reporting hazards and interpreting Occupational Health and Safety signs and symbols
- analytical skills to identify hazards and assess risks in the work area
- data analysis skills including:
  - incident (accident) monitoring
  - environmental monitoring
  - evaluation of effectiveness of risk control measures
- assessment skills to assess resources required to apply risk control measures
- technology skills including the ability to operate and shut down equipment
- coaching and mentoring skills to provide support to colleagues
- Ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities.

**Required knowledge**

- relevant legislation from all levels of government that affects business operation, especially in regard to Occupational Health and Safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- hazards and associated risks which exist in the workplace
- organisation policies and procedures relating to hazard management, fire, emergency, evacuation, incident (accident) investigating and reporting
- Occupational Health and Safety management to other organisational systems and procedures
- characteristics and composition of the workgroup.
### Evidence Guide

#### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>

<tr>
<td><strong>Hazards in work area</strong> may include:</td>
<td>• blocked exits</td>
</tr>
<tr>
<td></td>
<td>• slippery and uneven floors</td>
</tr>
<tr>
<td></td>
<td>• untidy and or noisy work areas</td>
</tr>
<tr>
<td></td>
<td>• lack of adequate storage</td>
</tr>
<tr>
<td></td>
<td>• reliance on low order control measure (eg PPE) to reduce worker risk exposure instead of controlling the hazard itself</td>
</tr>
<tr>
<td></td>
<td>• unguarded /poorly maintained machinery and equipment</td>
</tr>
</tbody>
</table>
### RANGE STATEMENT

- unlabelled chemicals and substances
- ergonomically unsuitable work stations and task design, eg. repetitive work, poor lighting/glarey surfaces, non-adjustable work surfaces & seating
- internal/external threat of occupational violence and bullying

**Procedures to control risks** may include actions such as:

- application of the hierarch of control, namely:
  - eliminate the risk
  - reduce/minimise the risk through:
    - engineering controls
    - administrative controls
    - personal protective equipment
    - regular consultation with workers

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to identify customer needs and monitor service provided to customers. Operators may exercise discretion and judgement using appropriate theoretical knowledge of customer service to provide technical advice and support to customers over either a short or long term interaction.

Application of the Unit

This unit applies to individuals who are skilled operators and apply a broad range of competencies in various work contexts.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes of a unit of competency.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. </tr>
</tbody>
</table>
## Elements and Performance Criteria

| 1. Identify customer needs | 1.1 Use *appropriate interpersonal skills* to accurately identify and clarify *customer needs and expectations*
| | 1.2 Assess customer needs for urgency to determine priorities for service delivery according to *organisational requirements*
| | 1.3 Use *effective communication* to inform customers about available choices for meeting their needs and assist in the selection of preferred options
| | 1.4 Identify limitations in addressing customer needs and seek appropriate assistance from *designated individuals*
| 2. Deliver a service to customers | 2.1 Provide prompt service to customers to meet identified needs in accordance with organisational requirements
| | 2.2 Establish and maintain appropriate rapport with customers to ensure completion of quality service delivery
| | 2.3 Sensitively and courteously handle *customer complaints* in accordance with organisational requirements
| | 2.4 Provide assistance or respond to customers with *specific needs* according to organisational requirements
| | 2.5 Identify and use available *opportunities* to promote and enhance services and products to customers
| 3. Monitor and report on service delivery | 3.1 Regularly review customer satisfaction with service delivery using *verifiable evidence* according to organisational requirements
| | 3.2 Identify opportunities to enhance the quality of service and products, and pursue within organisational requirements
| | 3.3 Monitor procedural aspects of service delivery for effectiveness and suitability to customer requirements
| | 3.4 Regularly seek customer feedback and use to improve the provision of products and services
| | 3.5 Ensure reports are clear, detailed and contain recommendations focused on critical aspects of service delivery
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to identify trends and positions of products and services
- communication skills to monitor and advise on customer service strategies
- literacy skills to:
  - edit and proofread texts to ensure clarity of meaning and accuracy of grammar and punctuation
  - prepare general information and papers according to target audience
  - read and understand a variety of texts
- problem-solving skills to deal with customer enquiries or complaints
- technology skills to select and use technology appropriate to a task
- self-management skills to:
  - comply with policies and procedures
  - consistently evaluate and monitor own performance
  - seek learning opportunities.

Required knowledge

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
  - anti-discrimination legislation
  - ethical principles
  - codes of practice
  - privacy laws
  - financial legislation
  - occupational health and safety (OHS)
- organisational policy and procedures for customer service including handling customer complaints
- service standards and best practice models
- public relations and product promotion
- techniques for dealing with customers, including customers with specific needs.
## Evidence Guide

_Evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package._

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Evidence of the following is essential:</th>
</tr>
</thead>
</table>
| Critical aspects for assessment and evidence required to demonstrate competency in this unit | • identifying needs and priorities of customers  
• distinguishing between different levels of customer satisfaction  
• treating customers with courtesy and respect  
• responding to and reporting on, customer feedback  
• knowledge of organisational policy and procedures for customer service. |

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th>Assessment must ensure:</th>
</tr>
</thead>
</table>
|                                                  | • access to an actual workplace or simulated environment  
• access to office equipment and resources  
• examples of customer complaints  
• examples of documents relating to customer service standards and policies. |

<table>

</tr>
</thead>
</table>
|                      | • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate  
• review of reports on customer service delivery  
• analysis of responses to case studies and scenarios  
• demonstration of techniques  
• oral or written questioning to assess knowledge of customer service strategies. |

| Guidance information for assessment | Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Appropriate interpersonal skills** may include:
- listening actively to what the customer is communicating
- providing an opportunity for the customer to confirm their request
- questioning to clarify and confirm customer needs
- seeking feedback from the customer to confirm understanding of needs
- summarising and paraphrasing to check understanding of customer message
- using appropriate body language.

**Customers** may include:
- corporate customers
- individual members of the organisation
- individual members of the public
- internal or external
- other agencies.

**Customer needs and expectations** may include:
- accuracy of information
- advice or general information
- complaints
- fairness/politeness
- further information
- making an appointment
- prices/value
- purchasing organisation’s products and services
- returning organisation’s products and services
- specific information.

**Organisational requirements** may include:
- access and equity principles and practice
- anti-discrimination and related policy
- defined resource parameters
- goals, objectives, plans, systems and processes
- legal and organisational policies, guidelines and requirements
- OHS policies, procedures and programs
- payment and delivery options
- pricing and discount policies
- quality and continuous improvement processes and

</thead>
</table>
| Release 1 | This version first released with *BSB07 Business Training Package version 6.0.*  
Revised unit. Performance criteria amended so that the learner is not required to ‘incorporate evidence of customer satisfaction in decision to modify products or services’.  
Required skills updated to focus on learning and development practices and compliance with policy and procedures.  
Replaces BSBCUS401A Coordinate implementation of customer service strategies |

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to advise on, carry out and evaluate customer service strategies, including the design of improvement strategies based on feedback. Operators may have responsibility to provide guidance or to delegate aspects of these tasks to others.

Application of the Unit

This unit applies to individuals with a broad knowledge of customer service strategies who contribute well developed skills in addressing customer needs and problems.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.
Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

</table>
## Elements and Performance Criteria

| 1. Advise on customer service needs | 1.1 Clarify and accurately assess *customer needs* using appropriate *communication techniques*
| | 1.2 Diagnose problems matching service delivery to *customers* and develop options for improved service within *organisational requirements*
| | 1.3 Provide relevant and constructive advice to promote the improvement of customer service delivery
| | 1.4 Use *business technology* and/or *online services* to structure and present information on customer service needs
| 2. Support implementation of customer service strategies | 2.1 Ensure customer service strategies and opportunities are promoted to *designated individuals and groups*
| | 2.2 Identify and allocate available budget resources to fulfil customer service objectives
| | 2.3 Promptly action *procedures to resolve customer difficulties* and *complaints* within organisational requirements
| | 2.4 Ensure that decisions to implement *strategies* are taken in consultation with designated individuals and groups
| 3. Evaluate and report on customer service | 3.1 Review client satisfaction with service delivery using verifiable data in accordance with organisational requirements
| | 3.2 Identify and report changes necessary to maintain service standards to designated individuals and groups
| | 3.3 Prepare conclusions and recommendations from verifiable evidence and provide constructive advice on future directions of client service strategies
| | 3.4 Maintain systems, records and reporting procedures to compare changes in customer satisfaction
Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

**Required skills**

- communication skills to
  - communicate effectively with personnel and clients at all levels
  - articulate customer service strategies
- interpersonal skills to:
  - build relationships with customers
  - establish rapport
- literacy skills to:
  - prepare general information and papers
  - read a variety of texts
  - write formal and informal letters according to target audience
- planning skills to develop implementation schedules
- problem-solving skills to diagnose organisational problems relating to customer services
- self-management skills to:
  - comply with policies and procedures
  - consistently evaluate and monitor own performance
  - seek learning opportunities.

**Required knowledge**

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
  - anti-discrimination legislation
  - ethical principles
  - codes of practice
  - privacy laws
  - environmental issues
  - occupational health and safety (OHS)
- principles of customer service
- organisational business structure, products and services
- product and service standards and best practice models.
# Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Evidence of the following is essential:</th>
</tr>
</thead>
</table>
| **Critical aspects for assessment and evidence required to demonstrate competency in this unit** | • identifying needs and priorities of the organisation in delivering services to customers  
• responding to and reporting on customer feedback  
• designing strategies to improve delivery of products and services  
• knowledge of the principles of customer service. |

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th>Assessment must ensure:</th>
</tr>
</thead>
</table>
| **Method of assessment** | • access to an actual workplace or simulated environment  
• access to office equipment and resources  
• examples of customer complaints, feedback and strategies. |

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- review of documentation reporting changes necessary to maintain service standards
- analysis of responses to case studies and scenarios
- demonstration of techniques
- observation of presentations
- oral or written questioning to assess knowledge of customer service techniques and strategies
- review of systems, records and reporting procedures to compare changes in customer satisfaction.

| Guidance information for assessment | Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended. |
Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. BSBCUS501A Manage quality customer service

Modification History
Not Applicable

Unit Descriptor
This unit describes the performance outcomes, skills and knowledge required to develop strategies to manage organisational systems that ensure products and services are delivered and maintained to standards agreed by the organisation.
No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Application of the Unit
Many managers are involved in ensuring that products and services are delivered and maintained to standards agreed by the organisation. Typically these managers have staff involved in delivering customer service and are responsible for the quality of their work. In many instances the work will occur within the organisation's policies and procedures framework
At this level, the exercise of considerable discretion and judgement, using a range of problem solving and decision making strategies, will be required.

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to report financial activity for business both in response to client requests and to meet statutory requirements such as the completion of statutory requirement reports. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to individuals with a broad knowledge of financial activities who contribute financial skills and knowledge to address reporting requirements of clients and legal authorities. They may have responsibility to provide guidance or to delegate aspects of these tasks to others. |

Licensing/Regulatory Information
Not applicable.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to identify financial information and the organisation's accounting procedures, and to create financial reports
- problem-solving skills to deal with a defined range of predictable problems
- decision making skills to make routine decisions
- numeracy skills to calculate data and to reconcile figures.

Required knowledge

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
  - anti-discrimination legislation
  - ethical principles
  - codes of practice
  - privacy laws
  - financial legislation
  - occupational health and safety (OHS)
- principles of double entry bookkeeping and accrual accounting
- techniques for forecasting and analysis
- Federal government taxes and charges
- options, methods and practices for deductions, benefits and depreciations.
Evidence Guide

</tbody>
</table>

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:
- organising financial data to highlight relevant features
- presenting financial data in comprehensive format
- completing Business Activity Statements
- knowledge of relevant legislation.

#### Context of and specific resources for assessment

Assessment must ensure:
- access to an actual workplace or simulated environment
- access to office equipment and resources
- examples of financial data, reports and documents.

#### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- review of income and expenditure records
- analysis of responses to case studies and scenarios
- demonstration of techniques
- review of tax liabilities calculations
- oral or written questioning to assess knowledge of principles of double entry bookkeeping and accrual accounting
- assessment of recommendations provided proposing constructive actions to enhance the effectiveness and efficacy of functions and services.

#### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:
- general administration units
- other financial administration units.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Financial data may include: | • Australian Bureau of Statistics (ABS) economic data  
|                           | • budget variances  
|                           | • budgets and forecasts  
|                           | • cash flow/profit reports  
|                           | • financial markets monitoring services (e.g. Reuters)  
|                           | • financial/operational statements and reports (e.g. expenditures and receipts, profit and loss statements)  
|                           | • market valuations |

| Organisational requirements may include: | • financial analysis assessments  
|                                        | • financial management manuals  
|                                        | • legal and organisational policies, guidelines and requirements  
|                                        | • OHS policies, procedures and programs  
|                                        | • price and exchange parameters  
|                                        | • quality assurance and/or procedures manuals  
|                                        | • recording and filing systems  
|                                        | • reporting requirements  
|                                        | • standard financial analysis techniques |

| Conversion and consolidation procedures may include: | • moving averages  
|                                                     | • spreadsheets  
|                                                     | • standardised variables  
|                                                     | • trend analysis  
|                                                     | • unit costs |

| Discrepancies may include: | • absence of auditable trail  
|                          | • expenditure report mismatches  
|                          | • inappropriate authorisations  
|                          | • incorrect payments  
|                          | • incorrect report formats  
<p>|                          | • unreconciled cash flows and operating statements |</p>

BSBFIM501A Manage budgets and financial plans

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to undertake financial management within a work team in an organisation. This includes planning and implementing financial management approaches, supporting team members whose role involves aspects of financial operations, monitoring and controlling finances, and reviewing and evaluating effectiveness of financial management processes in line with the financial objectives of the work team and the organisation. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit addresses the requirement for managers to ensure that financial resources are used effectively. This is done by ensuring access to budget/s and ongoing monitoring expenditure against the budget/s. The unit applies to managers working in small and large business environments and not for profit organisations. |

Licensing/Regulatory Information

Not applicable.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- numeracy skills to read and understand a budget and to update a budget
- technology skills to use software associated with financial record keeping.

Required knowledge

- basic accounting principles
- organisational requirements related to financial management
- relevant legislation and current requirements of the Australian Taxation Office, including GST
- requirements for organisational record keeping and auditing
- principles and techniques involved in:
  - budgeting
  - cash flows
  - electronic spreadsheets
  - GST
  - ledgers and financial statements
  - profit and loss statements.

BSBFLM303C Contribute to effective workplace relationships

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to gather information and maintain effective working relationships and networks, with particular regard to communication and representation. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | Frontline managers have a key role in contributing to efficient and effective work teams within the context of the organisation. They play a prominent part in motivating, mentoring, coaching and developing team cohesion through providing leadership for the team and forming the bridge between the management of the organisation and the team members. At this level, work will normally be carried out within known routines, methods and procedures which require the exercise of some discretion and judgement. This unit is related to BSBWOR401A Establish effective workplace relationships. |

Licensing/Regulatory Information

Employability Skills Information

| Employability skills | This unit contains employability skills. |

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Seek, receive and communicate information and ideas | 1.1. Collect *information* associated with the achievement of work responsibilities from appropriate *sources*
| | 1.2. Communicate ideas and information to *diverse audiences* in an appropriate and sensitive manner
| | 1.3. Seek contributions from internal and external sources to develop and refine new ideas and approaches in accordance with organisational processes
| | 1.4. Facilitate *consultation processes* to allow employees to contribute to issues related to their work, and promptly communicate outcomes of consultation to the work team
| | 1.5. Promptly deal with and resolve issues raised, or refer them to *relevant personnel*
| 2. Encourage trust and confidence | 2.1. Treat people with integrity, respect and empathy
| | 2.2. Encourage effective relationships within the framework of *the organisation's social, ethical and business standards*
| | 2.3. Gain and maintain the trust and confidence of *colleagues, customers and suppliers* through competent performance
| | 2.4. Adjust interpersonal styles and methods in relation to the organisation's social and cultural environment
| 3. Identify and use networks and relationships | 3.1. Identify and utilise *workplace networks* to help build relationships
| | 3.2. Identify and describe the value and benefits of networks and other work relationships for the team and the organisation
| 4. Contribute to positive outcomes | 4.1. Identify difficulties and take action to rectify the situation within own level of responsibility according to organisational and legal requirements
| | 4.2. Support colleagues in resolving work difficulties
| | 4.3. Regularly review *workplace outcomes* and implement improvements in consultation with relevant personnel
| | 4.4. Identify and resolve *poor work performance* within own level of responsibility and according to organisational policies
| | 4.5. Deal constructively with conflict, within the organisation's established processes
### Required Skills and Knowledge

<table>
<thead>
<tr>
<th>REQUIRED SKILLS AND KNOWLEDGE</th>
</tr>
</thead>
<tbody>
<tr>
<td>This section describes the skills and knowledge required for this unit.</td>
</tr>
</tbody>
</table>

#### Required skills

- ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities
- coaching and mentoring skills to provide support to colleagues
- functional literacy skills to access and use workplace information
- relationship management and communication skills to:
  - interpret information from a variety of people
  - respond to unexpected demands from a range of people
  - gain the trust and confidence of colleagues
  - deal with people openly and fairly
  - forge effective relationships with internal and/or external people.

#### Required knowledge

- principles and techniques associated with relationship management, including:
  - developing trust and confidence
  - behaving consistently in work relationships
  - identifying the cultural and social environment
  - identifying and assessing interpersonal styles
  - establishing networks
  - identifying and resolving problems
  - handling conflict
  - managing poor work performance
  - monitoring and improving work relationships
  - using anti-discrimination/bias strategies and making contributions
- relevant legislation from all levels of government that may affect business operation, especially in regard to:
  - occupational health and safety and environmental issues
  - equal opportunity
  - industrial relations
  - anti-discrimination.
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:
- using culturally appropriate communication techniques to share work-based information with teams and individuals in accordance with organisation policies
- developing networks and building team relationships
- regularly reviewing workplace outcomes to identify and resolve issues and implement improvements within own level of responsibility and according to organisational policies.

#### Context of and specific resources for assessment

Assessment must ensure:
- access to appropriate documentation and resources normally used in the workplace.

#### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- oral or written questioning to assess knowledge and understanding of principles of relationship management and organisation's social, ethical and business standards
- presentation of examples of actions taken by the candidate to build networks and contribute to positive workplace relationships and outcomes.

#### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:
- other management or frontline management units.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Information may include: | • archived, filed and historical background data  
| | • electronic or manual transmission  
| | • individual and team performance data  
| | • marketing and customer-related data  
| | • organisation policies and procedures  
| | • planning and organisational documents including the outcomes of continuous improvement and quality assurance  
| | • written or verbal communications |

| Sources of information may be: | • external, such as:  
| | • external customers  
| | • web based resources  
| | • reports  
| | • internal, such as:  
| | • supervisors, managers and peers  
| | • organisation policies and procedures  
| | • workplace documents |

| Diverse audiences may include: | • persons with specific social, cultural and other needs that require a range of strategies and approaches including adjusting communication |

| Consultation processes may include: | • feedback to the work team and relevant personnel in relation to outcomes of the consultation process  
| | • opportunity for employees to contribute ideas and information |

| Relevant personnel may include: | • OHS committees and OHS representatives  
| | • people with specialist responsibilities  
| | • supervisors, managers and other employees  
| | • union representatives/groups |

| The organisation's social, ethical and business standards may refer to: | • implied standards such as honesty and respect relative to the organisation culture and generally accepted within the wider community |
### RANGE STATEMENT

- rewards and recognition for high performing staff
- standards expressed in legislation and regulations such as anti-discrimination legislation
- written standards such as those expressed in:
  - vision and mission statements
  - policies
  - code of workplace conduct/behaviour
  - dress code
  - statement of workplace values

**Colleagues, customers and suppliers** may include:

- employees at the same level and more senior managers
- internal and external contacts
- people from a wide variety of social, cultural and ethnic backgrounds
- team members

**Workplace networks** may be:

- formal or informal
- individuals or groups
- internal or external
- structured or unstructured

**Workplace outcomes** may include:

- OHS processes and procedures
- performance of the work team

**Poor work performance** may relate to:

- self or work team; or it may extend to the organisation as a whole

BSBFLM305C Support operational plan

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to provide support for operational practices and procedures within the organisation's productivity and profitability plans. This includes contributing to the operational plan, assisting in recruiting employees and acquiring resources, and monitoring and adjusting operational performance. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | Frontline managers are actively engaged in planning activities to achieve the measurable, stated objectives of the team and the organisation. This key role is carried out to provide safe, efficient and effective products and services to customer satisfaction within the organisation's productivity and profitability plans. At this level, work will normally be carried out within known routines, methods and procedures, and may also involve a number of complex or non routine activities that require some discretion and judgement. This unit is related to BSBMGT402A Implement operational plan. |

</thead>
</table>
| 1. Contribute to implementation of operational plan | 1.1. Collect and record details of resource requirements and report to relevant personnel  
1.2. Ensure the operational plan contributes to the achievement of the organisation's performance and business plan  
1.3. Identify key performance indicators to measure own and work team's performance  
1.4. Undertake contingency planning as required  
1.5. Support the development and presentation of proposals for resource requirements as required |
| 2. Assist in recruiting employees and acquiring resources | 2.1. Assist with employee recruitment and/or induction as required, within the organisation's policies, practices and procedures  
2.2. Acquire physical resources and services according to the organisation's policies, practices and procedures and in consultation with relevant personnel |
| 3. Support operations | 3.1. Identify and utilise performance systems and processes to assess team progress in achieving plans and targets  
3.2. Compare actual productivity and performance with identified short-term budgets, targets and performance results  
3.3. Identify and report unsatisfactory performance to relevant personnel, to enable action to be taken to rectify the situation  
3.4. Provide coaching to support individuals and teams to use resources effectively, economically and safely  
3.5. Support consultation processes for the development and/or variation of the operational plan as required  
3.6. Present recommendations for variation to operational plans to relevant personnel  
3.7. Follow performance systems, procedures and recording processes in accordance with organisation requirements |
## Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

### Required skills

- ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities
- coaching and mentoring skills to provide support to colleagues
- functional literacy skills to access and use workplace information
- skills to:
  - maintain a safe workplace and environment
  - access and use feedback to improve operational performance
  - prepare recommendations to improve operations
  - access and use established systems and processes.

### Required knowledge

- principles and techniques of:
  - short-term operational scheduling
  - physical resources and services acquisition procedures and/or systems
  - budget and performance figures interpretation
  - performance monitoring within defined job role
  - performance reporting
  - problem identification and resolution
  - alternative approaches to improving resource usage and eliminating resource inefficiencies and waste within defined job role
- relevant legislation from all levels of government that may affect business operations, especially in regard to occupational health and safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- support for individuals and teams who have difficulty in performing to the required standard.
# Evidence Guide

## Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

</thead>
</table>
| 1. Contribute to team outcomes | 1.1. Consult team members to identify *team purpose, roles, responsibilities, goals, plans and objectives*  
1.2. Support team members to meet expected outcomes |
| 2. Support team cohesion | 2.1. Encourage team members to participate in the planning, decision making and operational aspects of the work team to their level of responsibility  
2.2. Encourage team members to take responsibility for their own work and to assist each other in undertaking required roles and responsibilities  
2.3. Provide *feedback* to team members to encourage, value and reward team members' efforts and contributions  
2.4. Identify and address issues, concerns and problems identified by team members to *relevant persons* as required |
| 3. Participate in work team | 3.1. Actively encourage and support team members to participate in team activities and communication processes and to take *responsibility for their actions*  
3.2. Support the team to identify and resolve problems which impede its performance  
3.3. Utilise own contribution to work team to serve as a role model for others and enhance the organisation's image within the work team, the organisation and with clients/customers |
| 4. Communicate with management | 4.1. Maintain open *communication* with line manager/management at all times  
4.2. Communicate information from line manager/management to the team  
4.3. Communicate *unresolved issues* to line manager/management and follow-up to ensure action is taken in response to these matters |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

- ability to relate to people from a range of social, cultural and ethnic backgrounds and physical and mental abilities
- communication skills, including listening
- basic training skills, including mentoring and coaching
- planning and organising skills
- problem solving skills
- attributes:
  - empathic
  - communicative
  - self aware
  - supportive
  - trusting
  - open
  - flexible
  - accommodating
  - initiating
  - loyal
  - fair
  - adaptable

#### Required knowledge

- relevant legislation from all levels of government that affects business operation, especially in regard to occupational health and safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- organisational policies and procedures
- organisational goals, objectives and plans at both tactical and strategic levels
- organisational structure including organisational chart
- learning and development options available within and through organisation
- a general understanding of the principles and techniques of:
  - group dynamics and processes
  - motivation
  - planning
  - negotiation
- individual behaviour and difference
Evidence Guide

Employability Skills Information

| Employability skills | This unit contains employability skills. |

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1. Determine strategies for delivery of human resources services** | 1. Analyse strategic and operational plans to determine human resources requirements  
  1.2. Consult line and senior managers to identify human resources needs within their area  
  1.3. Develop options for delivery of human resources services  
  1.4. Ensure options for human resources services comply with legislative requirements and organisational policies  
  1.5. Develop and agree on strategies and action plans for delivery of human resources services  
  1.6. Agree and document roles and responsibilities of human resources team, line managers, and external contractors |
| **2. Manage the delivery of human resources services** | 2.1. Develop and negotiate service agreements between the human resources team, service providers and client groups  
  2.2. Document and communicate service specifications, performance standards and timeframes  
  2.3. Identify and arrange training support if required  
  2.4. Agree and arrange monitoring of quality assurance processes  
  2.5. Ensure that services are delivered by appropriate providers in accordance with service agreements and operational plans  
  2.6. Identify and rectify underperformance of human resources team or service providers |
| **3. Evaluate human resources service delivery** | 3.1. Survey clients to determine level of satisfaction  
  3.2. Capture on-going client feedback for the review processes  
  3.3. Analyse feedback and surveys and recommend changes to service delivery  
  3.4. Obtain approvals to variations in service delivery from appropriate managers |
| **4. Manage integration of business ethics in human resources practices** | 4.1. Ensure that personal behaviour is consistently ethical and reflects values of the organisation  
  4.2. Ensure that Code of Conduct is observed across the organisation and that its expectations are incorporated in human resources policies and practices |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical and problem-solving skills to review business and operational plans and to develop and evaluate human resources strategies to support these plans
- communication and negotiation skills to consult with key stakeholders across the organisation and to ensure their support for human resources strategies
- communication skills to manage service delivery
- learning skills to see that performance is managed and skills are developed in a range of contexts.

Required knowledge

- human resources strategy and planning processes as they relate to business and operational plans
- performance and contract management
- relevant legislation which applies to human resources.
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Human resources requirements** may include:
- assessment and development centres
- career management
- competency development processes
- counselling
- discrimination, vilification and harassment advice
- education and training programs
- feedback
- flexible work arrangements
- induction and orientation programs
- industrial relations advice
- occupational health and safety (OHS)
- personal and career development planning
- rehabilitation and return to work
- remuneration/benefits advice
- self-analysis and self-assessment
- staff selection
- succession planning
- tele-working procedures
- workers compensation

**Options** will include:
- cost benefit analysis
- risk analyses
- recommendations to relevant groups and individuals - all those who have a role in the implementation of policies, procedures or decisions and/or are affected by their implementation

**Legislative requirements and organisational policies** may include:
- award and enterprise agreements, and relevant industrial instruments
- relevant industry codes of practice
- relevant legislation from all levels of government that affects business operation, especially in regard to OHS and environmental issues, equal opportunity, industrial relations

BSBHRM506A Manage recruitment selection and induction processes

Modification History

Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to manage all aspects of the recruitment selection and induction processes in accordance with organisational policies and procedures. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to human resources managers or human resources personnel who take responsibility for managing all aspects of selecting new staff and orientating those staff to their new positions. It is not assumed that the manager will be directly involved in the selection processes themselves, although this may well be the case. In small organisations this role may belong to someone who is not a dedicated human resources professional; the unit however will still be applicable. |

Licensing/Regulatory Information

Not applicable.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Develop recruitment, selection and induction policies and procedures | 1.1. Analyse strategic and operational plans and policies to identify relevant policies and objectives  
1.2. Develop *recruitment, selection and induction policies and procedures* and supporting documents  
1.3. Review options for technology to improve the efficiency and effectiveness of the recruitment and selection process  
1.4. Obtain support for policies and procedures from senior managers  
1.5. Trial forms and documents that support policies and procedures and make necessary adjustments  
1.6. Communicate policies and procedures to relevant staff and provide training if required |
| 2. Recruit and select staff | 2.1. Determine future human resources needs in collaboration with *relevant managers and sections*  
2.2. Ensure current position descriptors and person specifications for vacancies are used by managers and others involved in the recruitment, selection and induction processes  
2.3. Provide access to training and other forms of support to all persons involved in the recruitment and selection process  
2.4. Ensure that *advertising* of vacant positions complies with organisational policy and legal requirements  
2.5. Utilise *specialists* where necessary  
2.6. Ensure that *selection procedures* are in accordance with organisational policy and legal requirements  
2.7. Ensure that processes for advising applicants of selection outcome are followed  
2.8. Ensure that job offers and contracts of employment are executed promptly and that new appointments are provided with advice about salary, terms and conditions |
| 3. Manage staff induction | 3.1. Provide access to training and ongoing support for all persons engaged in staff induction  
3.2. Check that induction processes are followed across the organisation  
3.3. Oversee the management of probationary employees and provide them with feedback until their employment is confirmed or terminated |
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>3.4. Obtain feedback from participants and relevant managers on the extent to which the induction process is meeting its objectives</td>
</tr>
<tr>
<td></td>
<td>3.5. Make refinements to induction policies and procedures</td>
</tr>
</tbody>
</table>

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to liaise across the organisation and to ensure that policies and procedures are well supported
- leadership skills to engage others and to ensure that good processes are followed and supported
- literacy skills to document clear policies and procedures and to develop proformas to support recruitment, selection and induction.

**Required knowledge**

- concept of outsourcing
- diversity, equal employment opportunity and anti-discrimination principles and associated legislation
- employee contracts
- industrial relations
- recruitment and selection methods, including assessment centres
- relevant legislation on equal opportunity, industrial relations and anti-discrimination
- relevant terms and conditions of employment
- understanding of psychometric and skills testing programs
- workplace relations regulations, workplace relations legislation and other relevant legislation.
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>

BSBINM401A IMPLEMENT WORKPLACE INFORMATION SYSTEM

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to implement the workplace information system. It involves the identification, acquisition, initial analysis and use of appropriate information, which plays a significant part in the organisation's effectiveness. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | Frontline managers play a significant role in contributing to the organisation's effectiveness in identifying, acquiring, analysing and using appropriate information. At this level, work will normally be carried out within routine and non routine methods and procedures, which require planning and evaluation, leadership and guidance of others, and some discretion and judgement. |

Licensing/Regulatory Information
Not applicable.

</tbody>
</table>

**Required skills**

- literacy skills to work with information, and to research and present information in ways that are appropriate to the work team
- technology skills to work with a range of information systems.

**Required knowledge**

- information management systems and technology that would be associated with the workplace such as:
  - budgets and financial management systems
  - customer information software or records
  - databases
  - personal digital assistant (PDA)
  - product and service information
  - project management software
  - record management systems
  - spreadsheets.
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:
- analysis of the information that is required for the effective functioning of the team's work together
- knowledge of the range of information systems that are, or should be, available in the workplace
- ability to recognise what information system changes and improvements will be required in the future.

#### Context of and specific resources for assessment

Assessment must ensure:
- access to appropriate documentation and resources normally used in the workplace.

### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:
- demonstration of techniques in working with information management systems
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- oral or written questioning to assess knowledge of relevant technology
- review of documentation analysing information trends and developments
- written reports on future information system needs
- review of preparation undertaken for team members to work with new technology and information system changes.

### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:
- other units from the Certificate IV in Frontline Management.
# Range Statement

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| **Information** may include: | • archived, filed and historical background data  
• continuous improvement and quality assurance data  
• data available internally or externally  
• data shared and retrieved in various forms such as in writing or verbally, electronically or manually  
• financial and contractual data  
• marketing and customer-related data  
• organisational performance data  
• planning and organisational documents  
• policies and procedures |
|---|---|
| **Organisational policies** may include: | • guidelines for decision making throughout the organisation that link the formulation of strategy with its implementation  
• sets of accepted actions approved by the organisation  
• Standard Operating Procedures |
| **Technology** may include: | • computerised systems and software such as databases, project management and word processing  
• telecommunications devices  
• any other technology used to carry out work roles and responsibilities |
| **Designated persons and/or groups** may include: | • groups designated in workplace policies and procedures  
• managers or supervisors with management roles and responsibilities concerning information systems  
• other stakeholders accessing the information system such as customers and service providers  
• other work groups or teams whose work will be affected by the system |
**RANGE STATEMENT**

*Colleagues* may include:
- employees at the same level or more senior managers
- occupational health and safety committee members and other specialists
- people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities
- team members

*Business plans* may include:
- cash flow projections
- long-term budgets/plans
- operational plans
- short-term budgets/plans
- spreadsheet-based financial projections
- targets or key performance indicators for production, productivity, wastage, sales, income and expenditure

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

**Required skills**

- analytical and problem-solving skills to ensure the system is working in accordance with organisational expectations and to deal with contingencies
- technology skills to work with and manage the use of the information or knowledge management system.

**Required knowledge**

- legislation, codes of practice and national standards, for example:
  - privacy and confidentiality legislation
  - freedom of information legislation
  - AS 5037:2005 Knowledge management - A guide
- organisational policies and procedures, for example:
  - records management
  - information management
  - customer service
  - commercial confidentiality
- organisational operations, and existing data and information systems.
# Evidence Guide

## EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:
- analysis of the strengths and weaknesses of information or knowledge management system/s and evaluation of suitability for a particular work or organisational context
- knowledge of relevant legislation, codes of practice and national standards.

#### Context of and specific resources for assessment

Assessment must ensure:
- access to system
- access to system user feedback.

### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:
- assessment of written reports reviewing and evaluating information or knowledge management systems
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- observation of presentations
- oral or written questioning to assess knowledge of relevant organisational policies and procedures
- review of identified learning needs personnel and stakeholders regarding the information or knowledge management system
- evaluation of monitoring and documentation about the effectiveness of learning activities
- analysis documentation reporting on the strengths and limitations of the system
- review of recommendations made for improvements to the system, policy or work practices.

### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended,
<table>
<thead>
<tr>
<th>EVIDENCE GUIDE</th>
<th>for example:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• other units from the Diploma of Management.</td>
</tr>

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant personnel include:
- managers, leaders, supervisors and coordinators
- owners
- staff, team members and colleagues

### Stakeholders include:
- clients and customers
- employee representatives
- funding bodies
- industry, professional and trade associations
- regulatory bodies and authorities
- sponsors
- tenderers, suppliers and contractors

### Information or knowledge management is defined as:
- equipment, strategies, methods, activities and techniques used formally and informally by individuals and the organisation to identify, collect, organise, store, retrieve, analyse, share and draw on information and knowledge valuable to the work of the organisation

### An information or knowledge management system:
- comprises policies, protocols, procedures and practices to manage information or knowledge within the organisation and among relevant stakeholders

### Learning activities include:
- coaching and mentoring programs
- help desks
- information sessions, briefings, workshops and training programs
- paper-based or electronic (including intranet) learning opportunities
- use of expert workers such as coaches and mentors to help other personnel use the system

### Policies and procedures for the information or knowledge management system cover:
- complying with legislative requirements (such as privacy, confidentiality and defamation requirements) and other policies and procedures
- content guidelines
**RANGE STATEMENT**

- ensuring accuracy and relevance of knowledge input into the system
- mechanisms, formats and styles of input to system, including appropriate alternative formats for people with a disability
- permissions for input
- removing out-of-date, inaccurate and content that is no longer relevant
- selecting, maintaining and disposing of knowledge in the system
- sharing knowledge in the system

*Performance measures* include:

- key performance indicators
- other systems and measures to enable assessment of how, when, where and why outcomes are being achieved
- performance objectives
- performance standards (including codes of conduct)
- qualitative or quantitative mechanisms to measure individual performance

**Unit Sector(s)**

BSBINM601A Manage knowledge and information

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to develop and maintain information processing systems to support decision making, and to optimise the use of knowledge and learning throughout the organisation. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to people working in management roles who have responsibility for ensuring that critical knowledge and information are readily available to review the organisation's performance and to ensure its effective functioning. Knowledge and information can include business performance data, customer feedback, statistical data and financial data. |

Licensing/Regulatory Information
Not applicable.

</table>
Employability Skills Information

| Employability skills | This unit contains employability skills. |

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Obtain information relevant to business issues | 1.1. Review staff and customer feedback and business performance data  
1.2. Identify, define and analyse business problems and issues  
1.3. Identify information required to reach a decision on problems/issues  
1.4. Source and gather reliable information  
1.5. Test information for reliability and validity, and reject where contradictory or ambiguous  
1.6. Utilise formal and informal networks to access corporate knowledge/memory not held in formal systems and review appropriately |
| 2. Analyse information and knowledge | 2.1. Ensure objectives for analyses are clear, relevant and consistent with the decisions required  
2.2. Identify patterns and emerging trends correctly and interpret as to cause and effect  
2.3. Utilise statistical analyses and interpretation where appropriate  
2.4. Undertake sensitivity analysis on any proposed options  
2.5. Ensure documentation reflects a logical approach to the evaluation of the evidence and conclusions drawn  
2.6. Adjust management information systems/decision support systems to meet information processing objectives |
| 3. Take decisions on business issues identified | 3.1. Ensure sufficient valid and reliable information/evidence is available to support a decision  
3.2. Utilise risk management plans to determine acceptable courses of action  
3.3. Utilise appropriate quantitative methods to assist decision making  
3.4. Consult specialists and other relevant groups and individuals  
3.5. Ensure decisions taken are within the delegation/accountability of the group/individual responsible  
3.6. Make decisions in accordance with organisational guidelines and procedures |
<table>

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- analytical skills to identify improvement opportunities in relation to the services/products delivered internally or concepts/ideas in area of expertise
- communication and consultation skills to ensure all relevant groups and individuals are advised of what is occurring and are provided with an opportunity for input
- quantitative and qualitative research skills to locate and review relevant data and information
- technology skills to consider various software and hardware options for storing and accessing data and information.

### Required knowledge

- new technologies and their suitability to knowledge and information management
- risk management.
## Evidence Guide

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the following is essential:

- documentation which tracks a particular problem/issue through information gathering and analysis, decision making and taking, and dissemination to relevant groups and individuals
- development and utilisation of relevant information storage and retrieval systems, as well as accessing informal knowledge and information from informal networks within the organisation
- knowledge of new technologies and their suitability to knowledge and information management.

### Context of and specific resources for assessment

Assessment must ensure:

- access to appropriate documentation and resources normally used in the workplace.

### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- assessment of written reports on knowledge management and information management
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- oral or written questioning to assess knowledge of information management systems
- review of documentation identifying, defining and analysing business problems and issues
- evaluation of communication plans
- evaluation of the transmission/release of information/advice in terms of adhering to confidentiality/privacy policies.

### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units from the Advanced Diploma of

BSBINN301A Promote innovation in a team environment

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to be an effective and pro active member of an innovative team. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies individuals who play a pro active role in demonstrating, encouraging or supporting innovation in a team environment. The individual may be a team participant or a team leader. The team may 'make itself' or be constructed by others. It may have core members and members who participate at certain times or for particular purposes. It may be permanent or temporary, or come together at different times to work on specific projects. The team could consist of a team of contractors/freelancers, permanent staff, clients and service providers, or any combination of these groups. It may operate within an organisation or across several organisations - or simply across a group of individuals. The key focus of the unit is on what makes for an innovative team, what keeps it working well, how the structure of work can make a difference and what skills and knowledge are needed to maximise opportunities for innovation. Where a greater focus on team leadership is required this unit should be combined with units such as BSBLED401A Develop teams and individuals. |
Licensing/Regulatory Information

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Create opportunities to maximise innovation within the team | 1.1. Evaluate and reflect on **what the team needs and wants to achieve**  
1.2. Check out **information about current or potential team members' work** in the context of developing a more innovative team  
1.3. Bring people into the team or make suggestions for team members based on what needs to be achieved and the potential for cross-fertilising ideas  
1.4. Acknowledge, respect and discuss the **different ways that different people may contribute** to building or enhancing the team |
| 2. Organise and agree effective ways of working     | 2.1. Jointly establish **ground rules** for how the team will operate  
2.2. Agree and communicate responsibilities in ways that encourage and reinforce **team-based innovation**  
2.3. Agree and share tasks and activities to ensure the best use of skills and abilities within the team  
2.4. Plan and schedule activities to allow time for thinking, challenging and collaboration  
2.5. Establish personal reward and stimulation as an integral part of the team's way of working |
| 3. Support and guide colleagues                    | 3.1. Model **behaviour that supports innovation**  
3.2. Seek **external stimuli and ideas** to feed into team activities  
3.3. Pro-actively share information, knowledge and experiences with other team members  
3.4. Challenge and test ideas within the team in a positive and collaborative way  
3.5. Pro-actively discuss and explore ideas with other team members on an ongoing basis |
| 4. Reflect on how the team is working              | 4.1. De-brief and reflect on activities and on opportunities for improvement and innovation  
4.2. Gather and use feedback from within and outside the team to generate discussion and debate  
4.3. Discuss the **challenges of being innovative** in a constructive and open way  
4.4. Take ideas for improvement, build them into future activities and communicate key issues to relevant colleagues  
4.5. Identify, promote and celebrate successes and |
ELEMENT | PERFORMANCE CRITERIA
---|---
examples of successful innovation

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to work collaboratively as part of a team, to provide guidance and support to others, and to participate in open and constructive discussions
- creative thinking skills to generate, explore, test and challenge ideas
- learning skills to stretch boundaries of own knowledge and skills
- literacy skills to analyse a wide range of information from varied sources
- planning and organisational skills to participate in the effective allocation of work in a team context
- problem-solving skills to work constructively to overcome issues and challenges of both a practical and conceptual nature and to make ideas become realities
- self-management skills to take a pro-active team role and to reflect on own performance in modelling and encouraging behaviour that supports innovation.

**Required knowledge**

- barriers to innovation that can occur within a team and broader barriers that sometimes hinder innovation
- broad concepts of innovation including what innovation is, different types of innovation and the benefits of innovation
- characteristics of teams that are more likely to be innovative and characteristics of broader environments that support and encourage innovation
- different roles that people may play within a team, how this impacts on the way a team works and what it might achieve
- group dynamics in a team.
### Evidence Guide

#### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>

<tr>
<th>Method of assessment</th>
<th>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</th>
</tr>
</thead>
</table>
|                      | • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate  
• direct observation of team interactions  
• evaluation of reports by the candidate or the team (could be oral or written) discussing the ideas, challenges and opportunities associated with teams, and how they can be more innovative  
• evaluation of feedback from other people in the team about the candidate's communication approaches and abilities  
• oral or written questioning to assess knowledge of the characteristics of innovative teams, innovation concepts more broadly and they ways in which innovation can be encouraged  
• review of jointly established 'groundrules' for how the team will operate. |

| Guidance information for assessment | Innovation does not occur in isolation. Holistic assessment with other units relevant to the industry sector, workplace and job role is highly recommended. |
### Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential italicised conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| **What the team needs and wants to achieve** may relate to: | • addressing particular customer feedback  
• conceiving and implementing a particular project  
• developing new services or products  
• generating ongoing ideas within the work unit  
• improving budgetary performance  
• improving or changing work conditions  
• new ideas that impact beyond the workplace (e.g. that have a broader social or community impact) |
| --- | --- |
| **Information about current or potential team members' work** may relate to: | • interests  
• lifestyle preferences  
• past jobs  
• technical strengths  
• work preferences  
• working styles |
| **Different ways that different people may contribute** may relate to individual strengths around: | • creating positive energy within the team  
• fundamental literacy strengths (e.g. particularly strong in visual literacy, written or spoken communication)  
• generating ideas  
• networks or spheres of influence  
• particular ways of thinking  
• powers of persuasion  
• problem-solving capacities  
• specific technical skills or knowledge |
| **Ground rules** may relate to: | • boundaries or lack of boundaries for team activities and ideas  
• confidentiality  
• copyright, moral rights or intellectual property  
• regularity of communication  
• key roles and responsibilities  
• time lines |

BSBINN502A Build and sustain an innovative work environment

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to create an environment that enables and supports the application of innovative practice. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to individuals working in leadership or management roles in any industry or community context. The individual could be employed by the organisation, but may also be an external contractor, the leader of a cross organisation team or of a self formed team of individuals. The work group could be permanent or temporary in nature.

The unit focuses on the skills and knowledge required to develop and implement a holistic approach to the integration of innovation across all areas of work practice. It also acknowledges the importance of wider contextual evaluation for potential innovations to ensure their value and benefit. |

Licensing/Regulatory Information
Not applicable.

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Lead innovation by example | 1.1. Make innovation an integral part of leadership and management activities  
1.2. Demonstrate positive reception of ideas from others and provide constructive advice  
1.3. Establish and maintain relationships based on mutual respect and trust  
1.4. Take considered risks to open up opportunities for innovation  
1.5. Regularly evaluate own approaches for consistency with the wider organisational or project context |
| 2. Establish work practices that support innovation | 2.1. Consult on and establish working conditions that reflect and encourage innovative practice  
2.2. Introduce and maintain workplace procedures that foster innovation and allow for rigorous evaluation of innovative ideas  
2.3. Facilitate and participate in collaborative work arrangements to foster innovation  
2.4. Build and lead teams to work in ways that maximise opportunities for innovation |
| 3. Promote innovation | 3.1. Acknowledge suggestions, improvements and innovations from all colleagues  
3.2. Find appropriate ways of celebrating and promoting innovation  
3.3. Promote and reinforce the value of innovation according to the vision and objectives of the organisation or project  
3.4. Promote and support the evaluation of innovative ideas within the wider organisational or project context |
| 4. Create a physical environment which supports innovation | 4.1. Evaluate the impact of the physical environment in relation to innovation  
4.2. Collaborate with colleagues about ideas for enhancing the physical work environment before taking action  
4.3. Consider potential for supporting innovation when selecting physical resources and equipment  
4.4. Design, fit-out and decorate workspaces to encourage creative mindsets, collaborative working and the development of positive workplace relationships |
### ELEMENT | PERFORMANCE CRITERIA
--- | ---
5. Provide learning opportunities | 5.1. Pro-actively share relevant information, knowledge and skills with colleagues  
5.2. Provide or encourage *formal and informal learning opportunities* to help develop the skills needed for innovation  
5.3. Create opportunities in which individuals can learn from the experience of others
## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- communication, consultation and negotiation skills to model and lead, open and collaborative relationships
- comprehension skills to interpret and develop information that may deal with complex ideas and relate to issues both within and outside a given workplace context
- planning and organisational skills to implement wide-ranging practical processes and procedures that support innovation
- problem-solving skills to assess and respond to challenges and risks around innovation at an operational management level
- self-management and learning skills to evaluate and enhance personal effectiveness, and to promote a culture of ongoing learning and development.

### Required knowledge

- benefits of providing coaching and learning opportunities in relation to innovation
- concept of innovation, what it is and what it means for different people either working independently or within an organisation
- context for innovation in the relevant workplace context including core business values, overall objectives, broader environmental context and the need to ensure the value and benefit of innovative ideas and projects
- different ways of rewarding performance
- factors and tools that can motivate individuals to use creative thinking and apply innovative work practices
- legislative framework that impacts on operations in the relevant workplace context
- management principles and leadership styles, including the impact of different approaches on innovation
- typical challenges and barriers to innovation within teams and organisations, and ways of overcoming these
- ways in which workplace climate can affect individual attitudes and performance.
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Start computer, system information and features | 1.1. Adjust workspace, furniture and equipment to suit user **ergonomic requirements**  
1.2. Ensure **work organisation** meets organisational and **occupational health and safety (OHS) requirements** for computer operation  
1.3. Start computer or log on according to user procedures  
1.4. Identify basic functions and features using system information  
1.5. Customise desktop configuration, if necessary, with assistance from appropriate persons  
1.6. Use help functions as required |
| 2. Navigate and manipulate desktop environment | 2.1. Open, close and access features by selecting correct **desktop icons**  
2.2. Open, resize and close desktop windows by using correct window functions and roles  
2.3. Create shortcuts from the desktop, if necessary, with assistance from appropriate persons |
| 3. Organise files using basic directory and folder structures | 3.1. Create folders/subfolders with suitable names  
3.2. Save files with suitable names in appropriate folders  
3.3. Rename and move folders/subfolders and files as required  
3.4. Identify folder/subfolder and **file attributes**  
3.5. Move folders/subfolders and files using cut and paste, and drag and drop techniques  
3.6. Save folders/subfolders and files to **appropriate media** where necessary  
3.7. Search for folders/subfolders and files using appropriate software tools  
3.8. Restore deleted folder/subfolders and files as necessary |
| 4. Print information | 4.1. Print information from installed printer  
4.2. View progress of print jobs and delete as required  
4.3. Change default printer if installed and required |
| 5. Shut down computer | 5.1. Close all open applications  
5.2. Shut-down computer according to user procedures |
Required Skills and Knowledge

REQUAII SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to identify work requirements, to comprehend basic workplace documents, to interpret basic user manuals and to proofread simple documents
- communication skills to identify lines of communication, to request advice, to effectively question, to follow instructions and to receive feedback
- problem-solving skills to solve routine problems in the workplace, while under direct supervision
- technology skills to use equipment safely while under direction, basic keyboard and mouse skills and procedures relating to logging on and accessing a computer
- basic typing techniques and strategies.

Required knowledge

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
  - OHS
  - basic ergonomics of computer use
  - main types and parts of computers, and basic features of different operating systems
  - suitable file naming conventions.
# Evidence Guide

## EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>Evidence of the following is essential:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• navigation and manipulation of the desktop environment within the range of assigned workplace tasks</td>
</tr>
<tr>
<td></td>
<td>• knowledge of organisational requirements for simple documents and filing conventions</td>
</tr>
<tr>
<td></td>
<td>• application of simple keyboard functions to produce documents with a degree of speed and accuracy relevant to the level of responsibility required.</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

Assessment must ensure:

- access to an actual workplace or simulated environment
- access to office equipment and resources
- examples of workplace documentation.

### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- demonstration of techniques
- oral or written questioning to assess knowledge of computer operations and functions
- review of shortcuts created
- review of folders/subfolders created.

### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- BSBITU102A Develop keyboard skills
- other general administration units.
## Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential italicised conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| **Ergonomic requirements** may include: | • avoiding radiation from computer screens  
| | • chair height, seat and back adjustment  
| | • document holder  
| | • footrest  
| | • keyboard and mouse position  
| | • lighting  
| | • noise minimisation  
| | • posture  
| | • screen position  
| | • workstation height and layout  

| **Work organisation** may include: | • exercise breaks  
| | • mix of repetitive and other activities  
| | • rest periods  
| | • visual display unit (VDU) eye testing  

| **Occupational health and safety requirements** may include: | • OHS guidelines related to the use of the screen equipment, computing equipment and peripherals, ergonomic work stations, security procedures, customisation requirements  
| | • statutory requirements  

| **Desktop icons** include: | • directories/folders  
| | • files  
| | • network devices  
| | • recycle bin and waste basket  

| **File attributes** include: | • dates  
| | • size  

| **Appropriate media** may include: | • CDs  
| | • diskettes  
| | • local hard drive  
| | • other locations on a network  
| | • USB/ Flash/Thumb drives  
| | • zip disks

| 1. Determine development needs               | 1.1. Systematically identify and implement learning and development needs in line with organisational requirements  
1.2. Ensure that a learning plan to meet individual and group training and development needs is collaboratively developed, agreed to and implemented  
1.3. Encourage individuals to self-evaluate performance and identify areas for improvement  
1.4. Collect feedback on performance of team members from relevant sources and compare with established team learning needs |
| 2. Develop individuals and teams             | 2.1. Identify learning and development program goals and objectives, ensuring a match to the specific knowledge and skill requirements of competency standards relevant to the industry  
2.2. Ensure that learning delivery methods are appropriate to the learning goals, the learning style of participants, and availability of equipment and resources  
2.3. Provide workplace learning opportunities, and coaching and mentoring assistance to facilitate individual and team achievement of competencies  
2.4. Create development opportunities that incorporates a range of activities and support materials appropriate to the achievement of identified competencies  
2.5. Identify and approve resources and time lines required for learning activities in accordance with organisational requirements |
| 3. Monitor and evaluate workplace learning    | 3.1. Use feedback from individuals or teams to identify and implement improvements in future learning arrangements  
3.2. Assess and record outcomes and performance of individuals/teams to determine the effectiveness of development programs and the extent of additional development support  
3.3. Negotiate modifications to learning plans to improve the efficiency and effectiveness of learning  
3.4. Document and maintain records and reports of competency according to organisational requirements |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to receive and report on feedback, to maintain effective relationships and to manage conflict
- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities
- leadership skills to gain trust and confidence of clients and colleagues
- literacy skills to read, write and understand a variety of texts; and to edit and proofread documents to ensure clarity of meaning, accuracy and consistency of information
- negotiation skills to achieve mutually acceptable outcomes
- technology skills to support effective communication and presentation.

Required knowledge

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
  - anti-discrimination legislation
  - ethical principles
  - codes of practice
  - privacy laws
  - occupational health and safety (OHS)
- facilitation techniques to encourage team development and improvement
- organisational policies, plans and procedures
- career paths and competency standards relevant to the industry.

# Range Statement

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Learning and development needs may include:
- career planning/development
- coaching, mentoring and/or supervision
- formal/informal learning programs
- internal/external training provision
- performance appraisals
- personal study
- recognition of current competence/skills recognition
- work experience/exchange/opportunities
- workplace skills assessment

### Organisational requirements may include:
- access and equity principles and practices
- anti-discrimination and related policy
- business and performance plans
- confidentiality and security requirements
- defined resource parameters
- ethical standards
- goals, objectives, plans, systems and processes
- legal and organisational policies, guidelines and requirements
- OHS policies, procedures and programs
- quality and continuous improvement processes and standards
- quality assurance and/or procedures manuals

### Feedback on performance may include:
- formal/informal performance appraisals
- obtaining feedback from clients
- obtaining feedback from supervisors and colleagues
- personal, reflective behaviour strategies
- routine organisational methods for monitoring service delivery

### Learning delivery methods may include:
- conference and seminar attendance
- formal course participation
- induction
### RANGE STATEMENT

- involvement in professional networks
- on-the-job coaching or mentoring
- presentations/demonstrations
- problem-solving
- work experience

### Equipment and resources may include:

- facilities
- funding
- guest speakers
- technological tools and equipment
- time
- training equipment such as whiteboards and audio-visual equipment

### Coaching and mentoring assistance may include:

- fair and ethical practice
- non-discriminatory processes and activities
- presenting and promoting a positive image of the collective group
- problem-solving
- providing encouragement
- providing feedback to another team member
- respecting the contribution of all participants and giving credit for achievements

BSBLED501A Develop a workplace learning environment

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to encourage and support the development of a learning environment in which work and learning come together. Particular emphasis is on the development of strategies to facilitate and promote learning, and to monitor and improve learning performance.
No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to managers. All managers have a prominent role in encouraging, supporting and facilitating the development of a learning environment in which work and learning come together.
At this level work will normally be carried out within complex and diverse methods and procedures, which require the exercise of considerable discretion and judgement, using a range of problem solving and decision making strategies. |

</table>
| 1. Create learning opportunities | 1.1. Identify potential formal and informal **learning opportunities**  
1.2. Identify **learning needs** of individuals in relation to the needs of the team and/or enterprise, and available learning opportunities  
1.3. Develop and implement **learning plans** as an integral part of individual and team performance plans  
1.4. Develop strategies to ensure that learning plans reflect the **diversity of needs**  
1.5. Ensure organisational procedures maximise individual and team access to, and participation in, learning opportunities  
1.6. Ensure effective liaison occurs with **training and development specialists** and contributes to learning opportunities which enhance individual, team and organisational performance |
| 2. Facilitate and promote learning | 2.1. Develop strategies to ensure that workplace learning opportunities are used and that team members are encouraged to share their skills and knowledge to **encourage a learning culture** within the team  
2.2. Implement organisational procedures to ensure workplace learning opportunities contribute to the development of appropriate workplace knowledge, skills and attitudes  
2.3. Implement policies and procedures to encourage team members to assess their own competencies, and to identify their own learning and development needs  
2.4. Share the benefits of learning with others in the team and organisation  
2.5. Recognise workplace achievement by timely and appropriate recognition, feedback and rewards |
| 3. Monitor and improve learning effectiveness | 3.1. Use strategies to ensure that team and individual learning performance is monitored to determine the type and extent of any additional work-based support required, and any occupational health and safety (OHS) issues  
3.2. Use feedback from individuals and teams to identify and introduce improvements in future learning arrangements  
3.3. Make adjustments, negotiated with training and development specialists |

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- communication skills to:
  - deal with people openly and fairly
  - encourage colleagues to share their knowledge and skills
  - gain the trust and confidence of colleagues
  - use consultation skills effectively
- literacy skills to access and use workplace information
- planning and organisational skills to facilitate, promote and monitor learning by:
  - developing learning plans
  - establishing a workplace which is conducive to learning
  - evaluating the effectiveness of learning
  - identifying learning needs
  - negotiating learning arrangements with training and development specialists
  - selecting and using work activities to create learning opportunities
  - using coaching and mentoring to support learning.

### Required knowledge

- management of relationships to achieve a learning environment
- principles and techniques involved in the management and organisation of:
  - adult learning
  - coaching and mentoring
  - consultation and communication
  - improvement strategies
  - leadership
  - learning environment and learning culture
  - monitoring and reviewing workplace learning
  - problem identification and resolution
  - record keeping and management methods
  - structured learning
  - work-based learning.
### Evidence Guide

#### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the following is essential:

- methods for reviewing performance development needs and techniques for providing feedback on those needs
- models for planning professional development
- options available for professional development
- knowledge of relationship management required to achieve a learning environment.

**Context of and specific resources for assessment**

Assessment must ensure:

- access to appropriate documentation and resources normally used in the workplace.

**Method of assessment**

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies and scenarios
- assessment of written reports
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- observation of performance in role plays
- observation of presentations
- oral or written questioning to assess knowledge of the principles and techniques involved in the management and organisation of adult learning
- review of the development and implementation of learning plans
- evaluation of how workplace achievement is recognised
- review of processes used to record and report competency.

**Guidance information for assessment**

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:
**EVIDENCE GUIDE**

Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Learning opportunities** may include:

- structured learning activities conducted outside and within the workplace such as:
  - accredited training through an independent organisation such as a state/territory OHS authority
  - action learning
  - short courses
  - training through a Registered Training Organisation (RTO) leading to a nationally recognised Australian Qualifications Framework (AQF) qualification or Statement of Attainment
  - workshops
  - workplace learning activities, that may also contribute to a recognised credential, such as:
    - coaching
    - exchange/rotation
    - induction
    - mentoring
    - shadowing

**Learning needs** may include:

- developmental learning, for example the learning required to progress through an organisation and take on new tasks and roles
- gaps between the competencies held by the employee, and the skills and knowledge required to effectively undertake workplace tasks

**Learning plans** may include:

- codes of conduct
- key performance indicators
- negotiated agreement with individual/s
- OHS requirements
- performance standards
- team competencies

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to work with teams and individuals, their standard of conduct and the initiative they take in influencing others. At this level, work will normally be carried out within routine and non routine methods and procedures which require the exercise of some discretion and judgement. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | Frontline management provides the first level of leadership within the organisation. This unit applies to people who are making the transition from being a team member, to taking responsibility for the work and performance of others. Frontline managers have a strong influence on the work culture, values and ethics of the teams they supervise. As such it is important that frontline managers model good practice, professionalism and confidently represent their organisation. |

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the following is essential:
- Articulation of organisational values and expectations of behaviour
- Instances where leadership and decision making have been demonstrated and which have led to positive changes in the workplace
- Knowledge of leadership styles and concepts.

### Context of and specific resources for assessment

Assessment must ensure:
- Access to workplace documents.

### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:
- Analysis of responses to case studies and scenarios
- Direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- Observation of performance in role plays
- Observation of presentations
- Review of performance plans
- Oral or written questioning to assess knowledge of leadership styles
- Evaluation of communication of expectations, roles and responsibilities
- Review of documentation examining options and assessing associated risks to determine preferred course/s of action.

### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:
- Other units from the Certificate IV in Frontline Management.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Organisation's standards and values will be: | stated or implied by the way the organisation conducts its business |
| Feedback processes may be: | formal or informal |
| | from internal or external sources |

BSBMGT402A Implement operational plan

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to implement the operational plan by monitoring and adjusting operational performance, producing short term plans for the department/section, planning and acquiring resources and providing reports on performance as required. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | Frontline managers are actively engaged in planning activities to achieve the measurable, stated objectives of the team and the organisation. This key role is carried out to provide safe, efficient and effective products and services to customer satisfaction within the organisation's productivity and profitability plans. At this level, work will normally be carried out within routine and non routine methods and procedures, which require planning, evaluation, leadership and guidance of others. |

Licensing/Regulatory Information
Not applicable.

<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Implement operational plan | 1.1. Collate, analyse and organise details of *resource requirements* in consultation with *relevant personnel, colleagues and specialist resource managers*  
1.2. Implement *operational plans* to contribute to the achievement of organisation's performance/business plan  
1.3. Identify and use *key performance indicators* (KPIs) to monitor operational performance  
1.4. Undertake *contingency planning* and *consultation processes*  
1.5. Provide assistance in the development and presentation of proposals for resource requirements in line with operational planning processes |
| 2. Implement resource acquisition | 2.1. Recruit and induct employees within *organisation's policies, practices and procedures*  
2.2. Implement plans for acquisition of physical resources and services within organisation's policies, practices and procedures and in consultation with relevant personnel |
| 3. Monitor operational performance | 3.1. Monitor *performance systems and processes* to assess progress in achieving profit/productivity plans and targets  
3.2. Analyse and use budget and actual financial information to monitor profit/productivity performance  
3.3. Identify unsatisfactory performance and take prompt action to rectify the situation according to organisational policies  
3.4. Provide mentoring, coaching and supervision to support individuals and teams to use resources effectively, economically and safely  
3.5. Present recommendations for variation to operational plans to the *designated persons/groups* and gain approval  
3.6. Implement *systems, procedures and records* associated with performance in accordance with organisation's requirements |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.

Required skills
- coaching and mentoring skills to provide support to colleagues
- literacy skills to access and use workplace information, and to prepare reports
- planning and organising skills to monitor performance and to sequence work of self and others to achieve planned outcomes.

Required knowledge
- principles and techniques associated with:
  - contingency planning
  - methods for monitoring and reporting on performance
  - monitoring and implementing operations and procedures
  - problem identification and methods of resolution
  - relevant budgeting and financial analysis, interpretation and reporting requirements
  - resource management systems at the tactical implementation level
  - resource planning and acquisition
  - tactical risk analysis including identification and reporting requirements.
## Evidence Guide

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Resource requirements may refer to: | • goods and services to be purchased and ordered  
• human, physical and financial resources - both current and projected  
• stock requirements and requisitions |
| Relevant personnel, colleagues and specialist resource managers may include: | • colleagues and specialist resource managers  
• managers  
• occupational health and safety committees and other people with specialist responsibilities  
• other employees  
• people from a wide range of social, cultural and ethnic backgrounds, and people with a range of physical and mental abilities  
• supervisors |
| Operational plans may refer to: | • organisational plans  
• tactical plans developed by the department or section to detail product and service performance |
| Key performance indicators may refer to: | • measures for monitoring or evaluating the efficiency or effectiveness of a system, and which may be used to demonstrate accountability and to identify areas for improvements |
| Contingency planning may refer to: | • contracting out or outsourcing human resources and other functions or tasks  
• diversification of outcomes  
• finding cheaper or lower quality raw materials and consumables  
• increasing sales or production  
• recycling and re-use  
• rental, hire purchase or alternative means of procurement of required materials, equipment and stock  
• restructuring of organisation to reduce labour |
### RANGE STATEMENT

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- taking active steps to implement, monitor and adjust plans, processes and procedures to improve performance
- supporting others to implement the continuous improvement system/processes, and to identify and report opportunities for further improvement
- knowledge of principles and techniques associated with continuous improvement systems and processes.

#### Context of and specific resources for assessment

Assessment must ensure:

- access to appropriate documentation and resources normally used in the workplace.

#### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- assessment of written reports
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- observation of presentations
- oral or written questioning to assess knowledge of principles and techniques associated with change management
- review of how the organisation's continuous improvement processes were communicated to individuals and teams
- review of documentation of work performance.

#### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units from the Certificate IV in Frontline Management.

BSBMGT502B Manage people performance

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to manage the performance of staff who report to them directly. Development of key result areas and key performance indicators and standards, coupled with regular and timely coaching and feedback, provide the basis for performance management.
| | No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to all managers and team leaders who manage people. It covers work allocation and the methods to review performance, reward excellence and provide feedback where there is a need for improvement.
| | The unit makes the link between performance management and performance development, and reinforces both functions as a key requirement for effective managers.
| | This is a unit that all managers/prospective managers who have responsibility for other employees should strongly consider undertaking. |

BSBMGT515A Manage operational plan

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to develop and monitor implementation of the operational plan to provide efficient and effective workplace practices within the organisation's productivity and profitability plans. Management at a strategic level requires systems and procedures to be developed and implemented to facilitate the organisation's operational plan. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to people who manage the work of others and operate within the parameters of a broader strategic and/or business plan. The task of the manager at this level is to develop and implement an operational plan to ensure that the objectives and strategies outlined in the strategic and/or business plan are met by work teams. However in some larger organisations operational plans may be developed by a strategic planning unit. At this level work will normally be carried out within complex and diverse methods and procedures, which require the exercise of considerable discretion and judgement, using a range of problem solving and decision making strategies. |

Licensing/Regulatory Information

</table>
| 1. Develop operational plan | 1.1. Research, analyse and document *resource requirements* and develop an operational plan in consultation with *relevant personnel, colleagues and specialist resource managers*  
1.2. Develop and/or implement *consultation processes* as an integral part of the operational planning process  
1.3. Ensure details of the operational plan include the development of *key performance indicators* to measure organisational performance  
1.4. Develop and implement *contingency plans* at appropriate stages of operational planning  
1.5. Ensure the development and presentation of proposals for resource requirements is supported by a variety of information sources and seek specialist advice as required  
1.6. Obtain approval for plan from relevant parties and ensure understanding among work teams involved |
| 2. Plan and manage resource acquisition | 2.1. Develop and implement strategies to ensure that employees are recruited and/or inducted within the organisation’s human resources management policies and practices  
2.2. Develop and implement strategies to ensure that physical resources and services are acquired in accordance with the organisation's policies, *practices and procedures* |
| 3. Monitor and review operational performance | 3.1. Develop, monitor and review performance systems and processes to assess progress in achieving profit and productivity plans and targets  
3.2. Analyse and interpret budget and actual financial information to monitor and review profit and productivity performance  
3.3. Identify areas of under performance, recommend solutions, and take prompt action to rectify the situation  
3.4. Plan and implement systems to ensure that mentoring and coaching are provided to support individuals and teams to effectively, economically and safely use resources  
3.5. Negotiate recommendations for variations to operational plans and gain approval from *designated persons/groups* |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
| 3.6. Develop and implement systems to ensure that procedures and records associated with documenting performance are managed in accordance with organisational requirements |

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- literacy skills to access and use workplace information and to write a succinct and practical plan
- technology skills to use software to produce and monitor the plan against performance indicators
- planning and organisational skills
- coaching skills to work with people with poor performance
- numeracy skills to allocate and manage financial resources.

**Required knowledge**

- models and methods for operational plans
- budgeting processes
- alternative approaches to improving resource usage and eliminating resource inefficiencies and waste.
Evidence Guide

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Resource requirements** may include:
- goods and services to be purchased and ordered
- human, physical and financial resources - both current and projected
- stock requirements and requisitions

**Relevant personnel, colleagues and specialist resource managers** may include:
- employees at the same level or more senior managers
- managers
- occupational health and safety committee/s and other people with specialist responsibilities
- supervisors
- union or employee representatives

**Consultation processes** may refer to:
- email/intranet communications, newsletters or other processes and devices which ensure that all employees have the opportunity to contribute to team and individual operational plans
- mechanisms used to provide feedback to the work team in relation to outcomes of consultation
- meetings, interviews, brainstorming sessions

**Operational plans** may also be termed:
- action plans
- annual plans
- management plans
- tactical plans

**Key performance indicators** may refer to:
- measures for monitoring or evaluating the efficiency or effectiveness of a system which may be used to demonstrate accountability and to identify areas for improvements

**Contingency plans** may include:
- contracting out or outsourcing human resources and other functions or tasks
- diversification of outcomes
- finding cheaper or lower quality raw materials
RANGE STATEMENT

| and consumables  
|---|---|
| increasing sales or production  
| recycling and re-using  
| rental, hire purchase or alternative means of procurement of required materials, equipment and stock  
| restructuring of organisation to reduce labour costs  
| risk identification, assessment and management processes  
| seeking further funding  
| strategies for reducing costs, wastage, stock or consumables  
| succession planning  

Organisation's policies, practices and procedures may include:

| organisational culture  
| organisational guidelines which govern and prescribe operational functions, such as the acquisition and management of human and physical resources  
| Standard Operating Procedures  
| undocumented practices in line with organisational operations  

Designated persons/groups may include:

| groups designated in workplace policies and procedures  
| managers or supervisors whose roles and responsibilities include decision making on operations  
| other stakeholders such as Board members  
| other work groups or teams whose work will be affected by recommendations for variations

BSBMGT516A Facilitate continuous improvement

Modification History
Not Applicable

Unit Descriptor
This unit describes the performance outcomes, skills and knowledge required to lead and manage continuous improvement systems and processes. Particular emphasis is on the development of systems and the analysis of information to monitor and adjust performance strategies, and to manage opportunities for further improvements. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Application of the Unit
This unit applies to managers who take an active role in managing the continuous improvement process in order to achieve the organisation's objectives. Particularly where managers are closely associated with the creation and delivery of products and services, they play an important part in influencing the ongoing development and betterment of the organisation.
At this level, work will normally be carried out within complex and diverse methods and procedures which require the exercise of considerable discretion and judgement, using a range of problem solving and decision making strategies.

</table>
| 1. Lead continuous improvement systems and processes | 1.1. Develop *strategies* to ensure that team members are actively encouraged and supported to participate in decision making processes, and to assume responsibility and exercise initiative as appropriate  
1.2. Establish *systems* to ensure that the organisation's *continuous improvement processes* are communicated to all *stakeholders*  
1.3. Develop effective mentoring and coaching processes to ensure that individuals and teams are able to implement and support the organisation's continuous improvement processes |
| 2. Monitor and adjust performance strategies   | 2.1. Develop strategies to ensure that systems and processes are used to monitor *operational progress* and to identify ways in which planning and operations could be improved  
2.2. Adjust and communicate strategies to all stakeholders according to organisational procedures |
| 3. Manage opportunities for further improvement | 3.1. Establish processes to ensure that team members are informed of outcomes of continuous improvement efforts  
3.2. Ensure processes include *documentation of work team performance* to aid the identification of further opportunities for improvement  
3.3. Consider areas identified for further improvement when undertaking future planning |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

- innovation and lateral thinking skills to design better ways for achieving work outcomes
- leadership skills to gain the confidence and trust of others
- communication skills to communicate opportunities for improvement, and to coach and mentor staff.

### Required knowledge

- continuous improvement models
- quality systems.
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Guidance information for assessment | Holistic assessment with other units relevant to the industry sector, workplace and job role is |
recommended, for example:

- other units from the Diploma of Management.
### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Strategies may refer to: | • clarification of roles and expectations  
| | • communication devices and processes, such as intranet and email communication systems, to facilitate input into workplace decisions  
| | • long-term or short-term plans factoring in opportunities for team input  
| | • mentoring and 'buddy' systems to support team members to participate in decision making  
| | • performance plans  
| | • reward/recognition programs for high performing staff  
| | • training and development activities |

| Systems may refer to: | • forums, meetings  
| | • newsletters and reports  
| | • policies and procedures  
| | • web-based communication devices |

| Continuous improvement processes may include: | • cyclical audits and reviews of workplace, team and individual performance  
| | • evaluations and monitoring of effectiveness  
| | • modifications and improvements to systems, processes, services and products  
| | • policies and procedures which allow an organisation to systematically review and improve the quality of its products, services and procedures  
| | • seeking and considering feedback from a range of stakeholders |

| Stakeholders may include: | • business or government contacts  
| | • funding bodies  
| | • individuals within the work team  
| | • internal and external contacts  
| | • organisation’s clients and customers  
| | • professional associations  
| | • senior management and board members  
| | • unions/employee groups |
**Operational progress** may refer to:

- customer service indicators
- occupational health and safety indicators
- productivity gains
- success in meeting agreed goals and performance indicators

**Documentation of work team performance** may include:

- annotated performance plans
- quantitative data such as production figures
- recommendations for improvement
- records and reports

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- interpersonal skills to communicate and inspire trust and confidence of others and to ensure their cooperation and support
- networking skills to ensure support from key groups and individuals for concepts/ideas/products/services
- risk management skills to analyse, identify and develop mitigation strategies for identified risks.

Required knowledge

- business ethics and their application
- leadership styles and their application
- legislation, codes and by-laws relevant to the organisation's operations
- organisation mission, purpose and values
- organisation objectives, plans and strategies
- organisational change processes.
Evidence Guide

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th><strong>Overview of assessment</strong></th>
<th>Evidence of the following is essential:</th>
</tr>
</thead>
</table>
| Critical aspects for assessment and evidence required to demonstrate competency in this unit | • input from a wide range of sources providing evidence in respect to a broad range of activities and application of business ethics  
• demonstration of personal competence that links to the organisation's requirements for managers  
• effective communication skills and an ability to win commitment to the organisation and its activities  
• knowledge of leadership styles and their application  
• knowledge of legislation, codes and by-laws relevant to the organisation's operations. |

**Context of and specific resources for assessment**

Assessment must ensure:

- access to appropriate documentation and resources normally used in the workplace.

**Method of assessment**

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies and scenarios  
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate  
- observation of demonstrated leadership techniques  
- observation of presentations  
- review of media and language used when communicating with individuals and groups  
- evaluation of accountabilities and responsibilities assigned to teams  
- review of documentation outlining personal objectives and work program outcomes  
- review of professional development activities undertaken to improve self performance and professional competence.

**Guidance information for**

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended,

### Range Statement

#### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential italicised conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Expectations of the organisation include: | environmental management  
|                                          | occupational health and safety  
|                                          | product safety  
|                                          | service  
|                                          | values and ethics  
|                                          | other relevant factors |

**Incidents** may include:

- emergency response
- environmental event (emissions, noise, etc.)
- product failure
- workplace accident

**Risk management** means:

- process of identification of potential negative events and the development of plans to mitigate or minimise the likelihood of the negative event occurring and/or the consequences in the event it does occur

**Accountabilities and responsibilities** means:

- clarification of who is to be accountable for a decision or action prior to its execution, and identification of groups, individuals and activities for which a person is responsible for managing

**Positive work environment** means:

- environment where employees identify with the organisation and its purpose and where communication is free-flowing, decisions are transparent and conflict is positive and constructive

BSBMGT608B Manage innovation and continuous improvement

Modification History
Not Applicable

Unit Descriptor
This unit describes the performance outcomes, skills and knowledge required to sustain and develop an environment in which continuous improvement, innovation and learning are promoted and rewarded. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Application of the Unit
This unit applies to people who have managerial responsibilities which include building a better and more effective work environment. Continuous improvement and innovation have links with the model of the learning organisation and people working at this level play an important role in building the culture, values and attitudes of the organisation. Links may be made between continuous improvement and formal quality systems such as International Standardization for Organization (ISO) or quality software. However it is not assumed that formal quality systems or software are in the workplace. Innovation is seen as an important attitude and set of practices which should be fostered by people working at this level in teams and across the organisation.

</table>
| 1. Review programs, systems and processes | 1.1. Establish strategies to monitor and evaluate performance of key systems and processes  
1.2. Undertake detailed analyses of supply chains, operational and product/service delivery systems  
1.3. Identify performance measures, and assessment tools and techniques, and evaluate their effectiveness  
1.4. Analyse performance reports and variance from plans for all key result areas of the organisation  
1.5. Identify and analyse changing trends and opportunities relevant to the organisation  
1.6. Seek advice from specialists, where appropriate, to identify technology and electronic commerce opportunities |
| 2. Develop options for continuous improvement | 2.1. Brief groups on performance improvement strategies and innovation as an essential element of competition  
2.2. Foster creative climate and organisational learning through the promotion of interaction within and between work groups  
2.3. Encourage, test and recognise new ideas and entrepreneurial behaviour where successful  
2.4. Accept failure of an idea during trialling, and recognise, celebrate and embed success into systems  
2.5. Undertake risk management and cost benefit analyses for each option/idea approved for trial  
2.6. Approve innovations through agreed organisational processes |
| 3. Implement innovative processes | 3.1. Promote continuous improvement as an essential part of doing business  
3.2. Address impact of change and consequences for people, and implement transition plans  
3.3. Ensure objectives, timeframes, measures and communication plans are in place to manage implementation |
3.4. Implement *contingency plans* in the event of non-performance  
3.5. Follow-up failure by prompt investigation and analysis of causes  
3.6. Manage emerging challenges and opportunities effectively  
3.7. Evaluate continuous improvement systems and processes regularly  
3.8. Communicate costs and benefits of innovations and improvements to all relevant groups and individuals

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- analytical skills to identify improvement opportunities in relation to the services/products delivered or concepts/ideas developed  
- flexibility and creativity skills to think laterally  
- leadership skills to foster a commitment to quality and an openness to innovation.

**Required knowledge**

- quality management and continuous improvement theories  
- creativity/innovation theories/concepts  
- risk management.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Supply chains includes:
- network of facilities that procures raw materials, transforms them into intermediate products (or services) and then finished goods (or services), and delivers them through a distribution system
- procurement, production and distribution, which are viewed as being interlinked not as discrete elements

### Performance reports may include:
- budget/cost variance
- customer service
- environmental
- financial
- occupational health and safety
- quality
- other operating parameters

### Specialists refers to:
- those people inside and outside the organisation who are expert in the application of technology to process systems and procedures, relevant to the organisation's business

### Creative climate means:
- climate of high motivation with extensive expertise, and deliberative and lateral thinking time to think through and test out ideas

### Organisational learning refers to:
- extent to which groups and individuals within an organisation are given the opportunity to learn from each other and encouraged to share their learning

### Risk management means:
- process of identification of potential negative events and the development of plans to mitigate or minimise the likelihood of the negative event occurring and/or the consequences in the event it does occur

### Cost benefit analyses means:
- calculation to determine whether the results/outcomes of a particular course of action are sufficient to justify the costs and risks in taking that action
| **Continuous improvement** means: | • consistently reviewing what we do in search of a better way and improving the organisation in every aspect of its activities |
| **Transition plan** means: | • process of communication and education to help people through major change programs which impact on the way they do their work or them personally |
| **Contingency plan** means: | • plan which will deal with the uncertainty of a proposal and will come into operation in the event of a failure or non-conformance |

**Unit Sector(s)**
Management and Leadership - Management
BSBMGT616A Develop and implement strategic plans

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to establish the strategic direction of the organisation, and to sustain competitive advantage and enhance competitiveness. It requires analysis and interpretation of relevant markets, capability assessment of the organisation, and its existing and potential competitors and allies. It also covers implementation of the strategic plan. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to individuals working in senior roles in the organisation, who have responsibility for ensuring that the organisation is positioned to ensure its long term viability and success. The unit covers the requirements for analysing the organisation's present position, and for developing specific actions and initiatives that will be undertaken by people working in various roles. |

</table>
| 1. Confirm organisational vision and mission | 1.1. Check with stakeholders that organisational vision and mission are still held to be current and are supported  
1.2. Make any changes or refinements to vision or mission statement as required  
1.3. Review or develop organisational values to support the vision and mission statement  
1.4. Gain support for strategic planning process from all relevant stakeholders |
| 2. Analyse the internal and external environment | 2.1. Determine information requirements and undertake or commission research to deliver relevant information  
2.2. Analyse political, economic, social, and technological developments in a global context  
2.3. Seek advice from appropriate experts wherever necessary  
2.4. Identify and consider strengths and weaknesses of existing and potential competitors and allies  
2.5. Analyse organisation's strengths, weaknesses, opportunities and threats  
2.6. Consider co-operative ventures that are supported by risk and cost-benefit analyses, are consistent with the organisational vision, mission and values, and provide for due diligence  
2.7. Check that analysis of internal and external environment is consistent with the perspectives of other informed people |
| 3. Write strategic plan | 3.1. Document relevant research and background for inclusion in the strategic plan  
3.2. Formulate strategic objectives and strategies needed for the future  
3.3. Detail each strategy with an assigned priority, a timeframe, responsible parties and measurable performance indicators  
3.4. Circulate strategic plan for comment, support and endorsement |
| 4. Implement strategic plan | 4.1. Communicate strategic plan to all relevant parties  
4.2. Brief people with a specific role in relation to strategies  
4.3. Use performance indicators to monitor progress in |

implementing plan
4.4. Make necessary refinements to plan
4.5. Evaluate achievement of objectives at agreed milestones
4.6. Review effectiveness of plan and consider methods for improving strategic planning processes

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.

Required skills
- analytical skills to undertake value chain analysis, to review strengths and weaknesses, and to collate and interpret statistical data including trend analysis
- financial skills to consider resource implications of proposed strategies
- research skills to ensure accurate, up-to-date information is available for the environmental analysis
- risk management skills to plan and undertake appropriate due diligence.

Required knowledge
- relevant legislation from all levels of government that affects business operation, especially in regard to occupational health and safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- strategic planning methodologies including political, economic, social and technological (PEST) analysis and strengths, weaknesses, opportunities and threats analysis (SWOT)
- competitor knowledge
- codes and by-laws relevant to the organisation's operations.
# Evidence Guide

## EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Evidence of the following is essential:</th>
</tr>
</thead>
</table>
| **Critical aspects for assessment and evidence required to demonstrate competency in this unit** | • thorough analysis of the organisation's own capabilities, those of their existing potential competitors and allies, and the external environment  
• strategic plan which includes objectives, strategies, timeframes, performance indicators and methods for monitoring the implementation of the plan  
• knowledge of relevant legislation. |

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th>Assessment must ensure:</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Method of assessment</strong></td>
<td>• access to appropriate documentation and resources normally used in the workplace.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>Method of assessment</strong></th>
<th>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</th>
</tr>
</thead>
</table>
|                          | • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate  
• observation of presentations  
• oral or written questioning to assess knowledge of strategic planning methodologies  
• review of documentation outlining strengths and weaknesses of existing and potential competitors and allies  
• review of strategies and their assigned priority, timeframe, responsible parties and performance indicators. |

<table>
<thead>
<tr>

</tr>
</tbody>
</table>
Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential italicised conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| **Stakeholders** may include: | • Board  
• customers  
• employees  
• government agencies  
• owners  
• shareholders  
• technical advisers |
| **Research** may include: | • commissioned research  
• demographics  
• economics  
• internal research  
• market segmentation  
• political  
• product  
• social  
• technological |
| **Global context** means: | • examination on a world-wide basis of factors which may impact on the long-term strategic direction of the business |
| **Due diligence** means: | • process by which an investor, lawyer, auditor, or other qualified person, verifies the accuracy of data provided by another organisation |

**Unit Sector(s)**

BSBMGT617A Develop and implement a business plan

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to run a business operation and covers the steps required to develop and implement a business plan. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to individuals who are running an organisation or who take a senior role in determining the effective functioning and success of the organisation. As such, they may oversee the work of a number of teams and other managers. Business plans are critical tools for business growth and development. They will vary depending on the needs of the organisation. This unit covers the typical elements of a business plan and the standard approaches to be used in implementing a business plan. The business plan should be supported by a strategic plan, and may also be supported by a marketing plan and cash flow forecasts. |

Licensing/Regulatory Information
Not applicable.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Strategic, business and operational plan may include: | • previously formulated: |
| | • action plan |
| | • business goals |
| | • competitor analysis |
| | • financing arrangements or financial targets |
| | • management arrangements and/or personnel requirements |
| | • marketing approaches |
| | • product or service research or analysis |

| Key stakeholders may include: | • business partners or financiers |
| | • customers |
| | • shareholders |
| | • staff |
| | • technical experts or advisers |

| Performance objectives and measures may relate to: | • efficiency measures |
| | • input measures such as staff time or dollars allocated |
| | • outcomes measures |
| | • qualitative indicators such as feedback from customers, effect on the wider market or competitors, staff reports |
| | • quantitative indicators, such as numbers produced and sold, turnover, customer satisfaction ranking, lower staff turnover |

| Business plan includes: | • description of the business |
| | • business products and services |
| | • marketing activity |
| | • financial indicators |
| | • productivity and performance targets for key result areas such as: |
| | • community awareness or branding |
| | • environmental impact |
### RANGE STATEMENT

|                  | • governance or management  
|------------------|---------------------------|
|                  | • quality                 
|                  | • sales                   
|                  | • triple bottom line      
|                  | • workforce               

**Coaching** refers to:

|                  | • informal on-the-job and off-the-job advice and training to improve performance |

BSBOHS402B Contribute to the implementation of the OHS consultation process

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to contribute to the promotion of consultative arrangements in the workplace by communicating, influencing and consulting as part of a systematic approach to managing occupational health and safety (OHS).

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to individuals with supervisory responsibilities for implementing and monitoring the organisation's OHS policies, procedures and programs in a work area. It addresses the formal and informal processes of ensuring people in the organisation are informed about OHS and have opportunities to effectively participate in OHS processes.

This unit will involve working with individuals and working with groups. |

Licensing/Regulatory Information
Not applicable.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- conflict management skills to address small disputes relating to OHS implementation issues
- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities across all levels of an organisation
- interpersonal skills to establish and build relationships with internal and external stakeholders
- literacy skills to prepare reports for a range of target groups
- organisational and time management skills to sequence tasks, meet timelines and run efficient formal and informal meetings
- technology skills to use a range of communication media.

### Required knowledge

- internal and external sources of OHS information and data
- organisational policies and procedures for OHS
- legislative requirements for:
  - consultation and communication
  - information and data collection
  - notification of incidents
  - record keeping
  - reporting of incidents
- organisational policies and procedures for managing OHS in the workplace
- principles and practices of systematic approaches to managing OHS
- principles relating to:
  - hazard identification
  - hierarchy of control
  - risk management
  - systematic approaches to OHS
- range of communication strategies to communicate effectively with people at all levels of the organisation
- relevant state/territory and commonwealth OHS legislation, codes of practice and standards
- roles and responsibilities of personnel as specified in relevant OHS legislation
- sources of OHS data.
### Evidence Guide

#### EVIDENCE GUIDE

BSBOHS407A Monitor a safe workplace

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to implement and monitor the organisation's occupational health and safety (OHS) policies, procedures and programs in the relevant work area to meet legislative requirements.
|                | No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to employees with supervisory responsibilities for implementing and monitoring the organisation's OHS policies, procedures and programs in a work area.
|                         | This unit applies to individuals with a broad knowledge of OHS policies who contribute well developed skills in creating solutions to unpredictable problems through analysis and evaluation of information from a variety of sources. They provide supervision and guidance to others and have limited responsibility for the output of others. |

Licensing/Regulatory Information
Not applicable.

Employability Skills Information

| Employability skills | This unit contains employability skills. |

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Provide information to the workgroup about OHS policies and procedures | 1.1. Accurately explain relevant provisions of *OHS legislation and codes of practice* to the workgroup  
1.2. Provide information to the workgroup on the *organisation's OHS policies, procedures and programs*, ensuring it is readily accessible by the workgroup  
1.3. Regularly provide and clearly explain information about *identified hazards and the outcomes of risk assessment* and control to the workgroup |
| 2. Implement and monitor participative arrangements for the management of OHS | 2.1. Explain the importance of effective consultative mechanisms in managing health and safety risks  
2.2. Implement and monitor consultative procedures to facilitate participation of workgroup in management of work area hazards  
2.3. Promptly deal with issues raised through consultation, in accordance with *organisational consultation procedures*  
2.4. Promptly record and communicate to the workgroup the outcomes of consultation over OHS issues |
| 3. Implement and monitor the organisation's procedures for providing OHS training | 3.1. Systematically identify OHS training needs in line with organisational requirements  
3.2. Make arrangements to meet OHS training needs of team members in consultation with relevant individuals  
3.3. Provide workplace learning opportunities, and coaching and mentoring assistance to facilitate team and individual achievement of identified training needs  
3.4. Identify and report to management the costs associated with providing training for work team, for inclusion in financial plans |
| 4. Implement and monitor procedures for identifying hazards and assessing risks | 4.1. Identify and report on hazards in work area in accordance with OHS policies and procedures  
4.2. Promptly action team member hazard reports in accordance with organisational procedures |
| 5. Implement and monitor the organisation's procedures for | 5.1. Implement *procedures to control risks* using the hierarchy of controls and organisational requirements  
5.2. Identify and report inadequacies in existing risk control measures in accordance with the hierarchy of |

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- analytical skills to identify hazards, to assess risks in the work area and to review data relating to monitoring and evaluating incidents (accidents), environmental issues and the effectiveness of risk control measures
- literacy skills to comprehend documentation and to interpret OHS requirements
- coaching and mentoring skills to provide support to colleagues.

**Required knowledge**

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
  - anti-discrimination legislation
  - ethical principles
  - codes of practice
  - privacy laws
  - environmental issues
  - OHS
- legal responsibilities of employers, supervisors and employees in the workplace
- hazards and associated risks which exist in the workplace
- organisational policies and procedures relating to hazard management, fire, emergency, evacuation, incident (accident) investigating and reporting
- relevance of consultation as a key mechanism for improving workplace culture.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- management units
- other OHS units.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| OHS legislation and codes of practice may include: | • common law duties to meet the general duty of care requirements  
• health and safety representatives and health and safety committees  
• prompt resolution of health and safety issues  
• provision of information, induction and training  
• regulations and approved codes of practice relating to hazards present in work area  
• relevant state/territory legislation  
• requirements for the maintenance and confidentiality of records of occupational injury and disease |
| --- | --- |
| Organisation's OHS policies, procedures and programs may include: | • consultative arrangements for employees in work area  
• dangerous goods transport and storage  
• emergency and evacuation procedures  
• first aid provision/medical practitioner contact and attention  
• hazard reporting procedures  
• hazardous substances use and storage  
• incident (accident) investigation  
• OHS arrangements for on site contractors, visitors and members of public  
• OHS audits and safety inspections  
• plant and equipment maintenance and use  
• procedures for hazard identification  
• procedures for risk assessment, selection and implementation of risk control measures  
• purchasing policy and procedures  
• safe operating procedures/instructions  
• site access  
• use and care of personal protective equipment |
## RANGE STATEMENT

| Identified hazards and the outcomes of risk assessment may include: | • checking equipment before and during work  
|                                                                  | • consulting work team members  
|                                                                  | • daily informal employee consultation and regular formal employee meetings  
|                                                                  | • housekeeping  
|                                                                  | • OHS audits and review of audit reports  
|                                                                  | • review of health and safety records including hazard reports, hazardous substances and dangerous goods registers, injury records  
|                                                                  | • workplace inspections in area of responsibility |

| Organisational consultation procedures may include: | • attendance of health and safety representatives at management and OHS planning meetings  
|                                                      | • counselling/disciplinary processes  
|                                                      | • early response to employee suggestions, requests, reports and concerns put forward to management  
|                                                      | • election of health and safety representatives in accordance with legislative requirements  
|                                                      | • formal and informal meetings  
|                                                      | • health and safety committees  
|                                                      | • other committees, for example, planning and purchasing |

| Procedures to control risks may include: | • consultation with employees and their representatives  
|                                         | • job/process/workplace re-design e.g. introduce mechanical handling equipment, re-arrange material flow/timing/scheduling, raise/lower work platforms  
|                                         | • removing the cause of a risk at its source (eliminating the hazard) e.g. removing stored goods permanently from emergency exit passageways  
|                                         | • selecting control measures in accordance with the hierarchy i.e. work through hierarchy from most effective to least effective control |

| OHS records may include: | • audit and inspection reports  
|                         | • consultation e.g. meetings of health & safety committees, workgroup meeting agendas including OHS items and actions  
|                         | • first aid/medical post records  
|                         | • hazardous substances registers  
|                         | • induction, instruction and training |
### RANGE STATEMENT

- manufacturer's and supplier's information including dangerous goods storage lists
- plant and equipment maintenance and testing reports
- workers compensation and rehabilitation records
- workplace environmental monitoring records

BSBOHS509A Ensure a safe workplace

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to establish, maintain and evaluate the organisation's occupational health and safety (OHS) policies, procedures and programs in the relevant work area in accordance with OHS legal requirements. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | Managers play an important role in ensuring the safety of the workplace and the wellbeing of their staff. This unit applies to managers working in a range of contexts. It takes a systems approach and ensures compliance with relevant legislative requirements. All those who have, or are likely to have, a management responsibility for OHS should undertake this unit. It is relevant for those with managerial responsibilities, either as an owner or employee-manager of a business. |

Licensing/Regulatory Information
Not applicable.

Pre-Requisites

Employability Skills Information

| Employability skills | This unit contains employability skills. |

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Establish and maintain an OHS system | 1.1. Locate and communicate OHS policies which clearly express the organisation's commitment to implement relevant **OHS legislation** in the enterprise  
1.2. Define OHS responsibilities for all workplace personnel in accordance with OHS policies, procedures and programs  
1.3. Identify and approve financial and human resources for the effective operation of the OHS system |
| 2. Establish and maintain participative arrangements for the management of OHS | 2.1. Establish and maintain participative arrangements with employees and their representatives in accordance with relevant OHS legislation  
2.2. Appropriately resolve issues raised through participative arrangements and consultation  
2.3. Promptly provide information about the outcomes of participation and consultation in a manner accessible to employees |
| 3. Establish and maintain procedures for identifying hazards, and assessing and controlling risks | 3.1. Develop procedures for ongoing hazard identification, and assessment and control of associated risks  
3.2. Include hazard identification at the planning, design and evaluation stages of any change in the workplace to ensure that new hazards are not created by the proposed changes  
3.3. Develop and maintain procedures for selection and implementation of risk control measures in accordance with the hierarchy of control  
3.4. Identify inadequacies in existing risk control measures in accordance with the hierarchy of control and promptly provide resources to enable implementation of new measures  
3.5. Identify intervention points for expert OHS advice |
| 4. Establish and maintain a quality OHS management system | 4.1. Develop and provide an OHS induction and training program for all employees as part of the organisation's training program  
4.2. Utilise system for **OHS record keeping** to allow identification of patterns of occupational injury and disease in the organisation  
4.3. Measure and evaluate the OHS system in line with the organisation's quality systems framework  
4.4. Develop and implement improvements to the OHS system |
### ELEMENT | PERFORMANCE CRITERIA
--- | ---
 | system to achieve organisational OHS objectives
 | 4.5. Ensure compliance with the OHS legislative framework so that legal OHS standards are maintained as a minimum

---

### Required Skills and Knowledge

#### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

**Required skills**

- analytic skills to analyse relevant workplace data in order to identify hazards, and to assess and control risks
- communication skills to consult with staff and to promote a safe workplace
- problem-solving skills to deal with complex and non-routine difficulties
- technology skills to store and retrieve relevant workplace data.

**Required knowledge**

- application of the hierarchy of control (the preferred order of risk control measures from most to least preferred, that is, elimination, engineering controls, administrative controls, personal protective equipment)
- hazard identification and risk management
- relevant legislation from all levels of government that affects business operation, especially in regard to OHS and environmental issues, equal opportunity, industrial relations and anti-discrimination
- reporting requirements.
**Evidence Guide**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:
- detailed knowledge and application of all relevant OHS legislative frameworks
- establishment and maintenance of arrangements for managing OHS within the organisations' business systems and practices
- identification of intervention points for expert OHS advice
- principles and practice of effective OHS management in a small, medium or large business.

### Context of and specific resources for assessment

Assessment must ensure:
- access to appropriate documentation and resources normally used in the workplace.

### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:
- analysis of responses to case studies and scenarios
- assessment of written reports
- demonstration of techniques
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- review of OHS policies, information provided on the OHS system, information about the outcomes of participation and consultation provided to employees
- oral or written questioning to assess knowledge of OHS and OHS legislation
- evaluation of OHS induction and training
- review of OHS record keeping system.

### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:
- other OHS units
EVIDENCE GUIDE

- units from the Diploma of Management.
# Range Statement

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### OHS legislation

will depend on state/territory legislation and requirements, and will include:
- common law duties to meet general duty of care requirements
- regulations and approved codes of practice relating to hazards in the work area
- requirements for establishment of consultative arrangements including those for health and safety representatives, and health and safety committees
- requirements for effective management of hazards
- requirements for provision of information and training including training in safe operating procedures, procedures for workplace hazards, hazard identification, risk assessment and risk control, and emergency and evacuation procedures
- requirements for the maintenance and confidentiality of records of occupational injury and disease

### Control of associated risks

may include:
- administrative
- counselling/disciplinary processes
- elimination
- engineering
- housekeeping and storage
- issue resolution
- OHS records maintenance and analysis
- personal protective equipment
- purchasing of supplies and equipment
- workplace inspections including plant and equipment

### Organisational health and safety record keeping

may relate to:
- audit and inspection reports
- workplace environmental monitoring records
- consultation e.g. meetings of health & safety committees, work group meeting agendas
### RANGE STATEMENT

| | including OHS items and actions  
| | • induction, instruction and training  
| | • manufacturers’ and suppliers’ information  
| | including dangerous goods storage lists  
| | • hazardous substances registers  
| | • plant and equipment maintenance and testing reports  
| | • workers compensation and rehabilitation records  
| | • first aid/medical post records |

BSBOHS607B Advise on application of safe design principles to control OHS risk

Modification History

Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to advise on applying safe design principles to control occupational health and safety (OHS) risk during a product's life cycle. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | The central feature of safe design is the application of relevant information and data about human capabilities and behaviour to the design of objects, facilities, procedures and environments that people use. BSBOHS504B Apply principles of OHS risk management, and BSBOHS505C Manage hazards in the work environment, provide underpinning knowledge and skills for this unit. Knowledge of systematic approaches to managing OHS also underpins this unit. |

Licensing/Regulatory Information

Not applicable.

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Advise on the OHS requirements of the design process | 1.1. Inform *decision makers* about their responsibility for the safety of downstream users and beneficiaries  
1.2. Advise decision makers of their obligation under law to design and supply a safe designed product by eliminating OHS *hazards* and controlling for residual OHS risk  
1.3. Promote OHS within the design requirements and include an overall risk evaluation of the designed product's life cycle  
1.4. Source and make available to decision makers the most current information of OHS principles, materials, technology and systems for application in the design of the product  
1.5. Identify and make available required education and training to enable decision makers to have the necessary skills and knowledge to identify and eliminate OHS hazards, and to control OHS risk in the design phase  
1.6. Identify and access relevant *sources of information and data*, for equipment users in particular  
1.7. Consult potential users of the equipment during the design phase  
1.8. Identify situations where *specialist advisors* may be required |
| 2. Develop a systematic hazard identification and OHS risk evaluation system for safe design | 2.1. Identify OHS hazards and conduct a *risk analysis* of associated risks across the *life cycle* of the designed product  
2.2. Guide the selection and implementation of the most appropriate OHS risk controls for the designed product from a systematic analysis of the likelihood and consequences of injury or illness arising from exposure to identified OHS hazards  
2.3. Ensure hazard identification and risk analysis includes potential alterations to the designed product during its life  
2.4. *Document decision making* during the *OHS risk evaluation* process and make accessible to all parties  
2.5. Establish a residual *risk register*, recording OHS hazards not eliminated in the design together with possible control strategies, and distribute this information to those involved in the downstream or... |

<td>Monitor the design as it evolves to identify potential new OHS hazards and to manage risks if they become evident</td>
</tr>
</tbody>
</table>
| 3. Advise on principles of OHS risk control | 3.1. Base design to minimise risk on the *hierarchy of control*  
3.2. Minimise the impact of possible failure or defect, by ensuring the designed product includes fail-to-safe action |
| 4. Advise on consultation processes between people involved in the life cycle of the designed product | 4.1. Advise decision makers to consider the needs of the range of people who will use or interact with the designed product  
4.2. Arrange consultation between all *parties* during the concept and detailed design phases to identify and eliminate OHS hazards and minimise risk  
4.3. Appropriately communicate residual OHS risk in the designed product to those who will use or interact with the designed product throughout its life cycle |
| 5. Advise on contractual arrangements and procurement systems to minimise 'purchased' OHS risk | 5.1. Advise decision makers involved in *purchasing and contractual arrangements* to include a requirement to eliminate OHS hazards, minimise OHS risks, and provide information and data on residual OHS risks  
5.2. Include an agreement to carry out a safe design approach in the *design brief or draft specifications* |
### Required Skills and Knowledge

#### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- analytical skills to analyse relevant workplace information and data and to make observations of workplace tasks and interactions between people, their activities, equipment, environment and systems
- research skills to:
  - access relevant OHS information and data
  - use information and data gathering techniques such as brainstorming, polling, interviewing
- communication skills to:
  - conduct effective formal and informal meetings and to communicate effectively with personnel at all levels of the organisation, OHS specialists and, as required, emergency services personnel
  - use language and literacy skills appropriate to the workgroup and the task
  - prepare reports for a range of target groups including OHS committee, OHS representatives, managers, supervisors and other stakeholders
- project management skills to achieve continuous improvement and change
- organisational skills to manage own tasks within a timeframe
- information technology skills to access and enter internal and external information on OHS and to use a range of media
- attention to detail when making observations and recording outcomes

#### Required knowledge

- basic human cognitive and perceptual capabilities relevant to the design of human-machine interfaces
- basics of anthropometry and biomechanics
- difference between hazard and risk
- direct and indirect influences that impact on OHS and the environment in the design of product/s
- ethics related to professional practice
- formal and informal communication and consultation processes, and key personnel related to communication
- hierarchy of control and considerations for choosing between different control measures, such as possible inadequacies of particular control measures
- human error and implications for design of equipment, work practices and controlling ergonomic hazards
- how the characteristics and composition of the workforce impact on risk and the systematic approach to managing OHS, for example:
  - labour market changes
**REQUIRED SKILLS AND KNOWLEDGE**

- Structure and organisation of workforce e.g. part-time, casual and contract workers, shift rosters, geographical location
- Language, literacy and numeracy
- Communication skills
- Cultural background/workplace diversity
- Gender
- Workers with specific needs
- Interdependent relationships between ergonomics and workplace stressors such as psychosocial factors, occupational violence, shift work, repetitive work, awkward postures, lighting, thermal environment and work layout
- Internal and external sources of OHS information and data
- Key personnel, including identifying 'change agents', within workplace management structure
- Legislative requirements for OHS information and data, and consultation
- Organisational behaviour and culture as it impacts on OHS and on change
- Principles and practices of a systematic approach to managing OHS
### Evidence Guide

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>

</table>

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- BSBOHS504B Apply principles of OHS risk management
- BSBOHS505C Manage hazards in the work environment.
## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Decision makers** may include:
- any party with influence over the specifications of the designed product including:
  - designer
  - client or commissioning agent
  - financier
  - manufacturer
  - supplier
  - purchaser
  - installer
  - user
  - insurer
  - importer
  - erector
  - maintainer
  - regulator
  - employees of these agents.

**Hazards** may include:
- source or situation with a potential for harm in terms of:
  - human injury or ill health
  - damage to property
  - damage to the environment
  - a combination of the above.

**Sources of information and data** may include:
- Australian and international anthropometric databases
- commonwealth, state and territory OHS and other regulatory bodies
- employer groups and unions
- government and other advisory bodies such as Commonwealth Scientific and Industrial Research Organisation (CSIRO), National Health and Medical Research Council (NHMRC), Australian Consumers Association,
## RANGE STATEMENT

| Specialist advisors may include: | Australian Safety and Compensation Council  
industry advisory bodies  
international and Australian Standards, codes of practice and guidance material  
professional associations such as Ergonomics Society of Australia, Engineers Australia, Safety Institute of Australia  
research literature. |
|---|---|
| Risk analysis may include: | architects, interior designers and builders  
building surveyors and certifiers  
design professionals  
drafts people, quantity surveyors and surveyors  
enGINEERS (such as design, acoustic, safety, mechanical, chemical, civil)  
health professionals  
insurers  
legal practitioners  
maintenance and trades personnel  
manufacturers  
occupational hygienists  
specialist ergonomists  
suppliers and distributors  
technical professionals  
workplace trainers and assessors. |
| Life cycle may include: | defining the range of consequences  
assessing the effectiveness of existing controls  
deciding the likelihood of each consequence  
combining these is some way to obtain a level of risk. |
| Documenting decision making may include: | assumptions  
description of consequences and their likelihood  
effectiveness of existing controls |
## RANGE STATEMENT

### OHS risk evaluation involves:
- comparison of risk with pre-established criteria for tolerance (or as low as reasonably achievable) and the subsequent ranking of risks requiring control

### Risk register may include:
- list of the risks including:
  - an indication of the likelihood of the consequence/s occurring
  - possible consequence/s or outcome/s in terms of injury or damage
  - scenarios or circumstances under which damage or injury may occur.

### Hierarchy of control may include:
- eliminating the hazard
- and where this is not practicable, minimising risk by:
  - substitution
  - isolating the hazard from personnel
  - using engineering controls
  - using administrative controls (e.g. procedures, training)
  - using personal protective equipment (PPE).

### Parties may include:
- builder
- commissioning agent
- contractors
- designer
- disposer
- importer
- installer
- maintenance agencies
- manufacturer
- supplier and/or distributor
- user.

### Purchasing and contractual arrangements may include:
- purchase order
- specifications
### RANGE STATEMENT

- statement of work
- supplier pre-qualification
- tender documentation.

**Design brief or draft specifications** may include:

- form or outline of document for design brief
- instructions
- technical requirements or specifications for a designed product, structure, item, system or process.

BSBPMG405A Apply human resources management approaches

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to assist with aspects of human resources management of a project. This involves establishing human resource requirements, identifying the learning and development needs of people working on the project, facilitating these needs being met and resolving conflict within the team.
No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to a project team member working under the direction of a project manager with other project team members. The individual may be operating within an organisation or as a consultant. The skills should be applied in the context of multiple complex projects, with the individual operating as part of a specialist project management team.
In the context of this unit a complex project is defined as a project which involves:
• the need for a comprehensive and multi faceted project plan
• the need for a formal internal or external communications strategy
• a dedicated and diverse project budget
• multiple administrative components
• multiple operational components
• a wide range of stakeholders
• a project operations team. |
Licensing/Regulatory Information

| 1. Assist with determining human resource requirements | 1.1. Analyse *work breakdown structure* to determine human resource requirements  
1.2. Assess skill levels of project personnel against project task requirements  
1.3. Assign responsibilities for achieving project deliverables |
| 2. Assist with human resource monitoring and stakeholder liaison | 2.1. Monitor the work of project personnel against assigned roles and responsibilities  
2.2. Track, monitor and control actual effort against plan, review skill levels against allocated tasks and recommend remedial action, where required, to others  
2.3. Contribute to tracking, monitoring and controlling stakeholder participation and communication with the project  
2.4. Advise others when assigned responsibilities are not met by project personnel, or stakeholder expectations are at variance  
2.5. Undertake work in a multi-disciplinary environment in accordance with established human resource management *practices, plans, guidelines and procedures* to achieve designated project objectives  
2.6. Resolve potential and actual conflicts in accordance with agreed dispute resolution processes or report to others for resolution  
2.7. Offer *human resource development opportunities* to individuals with skill gaps |
| 3. Contribute to evaluating human resource and stakeholder management practices | 3.1. Contribute to assessing the overall effectiveness of project human resource management and document lessons learned  
3.2. Report human resource issues to others to aid the continuous improvement process  
3.3. Contribute to stakeholder satisfaction analysis and assist with post-project operational review |
## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- literacy skills to read and interpret project plans and schedules
- planning and monitoring skills to track performance in relation to assigned tasks
- teamwork and communication skills to resolve conflict, advise others of performance issues and deal with stakeholders.

### Required knowledge

- job design principles and work breakdown structures
- learning and development options
- project roles, responsibilities and reporting requirements in relation to human resources.
Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work breakdown structure is:**

- a planning tool or process which divides and sub-divides the work of a project into smaller, more manageable work packages

**Others may include:**

- project manager
- project specialists or other personnel
- relevant project authority
- team members

**Practices, plans guidelines and procedures may include:**

- industrial relations agreements and guidelines
- organisation project management procedures
- professional operating standards
- project human resources management plan
- skills framework nominating skill levels required for specific types of project activities
- staffing plan/job description

**Human resource development opportunities may include:**

- action learning sets
- coaching and mentoring
- performance feedback
- team building and group activities
- training

## Overview of assessment

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- application of procurement and contract management techniques in relation to multiple complex projects
- knowledge of the place and role of procurement in the project life cycle.

### Context of and specific resources for assessment

Assessment must ensure:

- access to examples of project contract and procurement documentation
- access to records of project team participation in procurement tasks and activities.

## Method of assessment

A range of assessment methods should be used to assess practical skill and knowledge. The following assessment methods are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- analysis of responses addressing different case studies and scenarios which present issues and problems in procurement
- oral or written questioning to assess knowledge of strategies for project procurement and contracting and their application to different situations
- review of procurement and contract management plans and other documentation associated with procurement processes
- evaluation of information gathered on potential suppliers
- assessment of recommendations made to assist in selecting preferred contractors
- assessment of reports produced about contracting and procurement management issues.

## Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:
<table>
<thead>
<tr>
<th>EVIDENCE GUIDE</th>

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Delegated authority

- subject to frequent change in a multi-disciplinary environment
- under limited guidance and supervision
- within agreed authorisation and limits
- within established organisational framework, procedures and routines

#### Procurement activities

- conducting transfer and disposal actions
- confirming details and obtaining additional information about quotes etc.
- formally receipting goods and services or providing formal notice of delivery of goods and services
- identifying occupational health and safety (OHS) issues
- liaising with client, contractors, sub-contractors and other stakeholders
- maintaining registers and lists
- obtaining approvals from higher project authorities
- obtaining quotes from potential suppliers, providing quotes to potential clients or collaborating agencies and alliances
- planning, specifying and/or conducting test and acceptance procedures
- processing payment documentation

#### Reviews

- agreed major milestones, for example phases and sub-contracts
- changes of key personnel
- delivery of major deliverables
- finalisation of project and other agreed milestones

#### Records

- assets and disposal actions
- lists of suppliers
- procurement logs, registers
 Range Statement

- procurement reports
- records of contract planning, formation, negotiation or administration
- quotes, invoices and receipts
- test and acceptance results

Others may include:
- higher project authorities
- project manager
- project specialists or personnel
- team members

# Evidence Guide

## EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the following is essential:
- development of project plans for multiple complex projects
- details of how plans were monitored and outcomes were reported
- knowledge of project life cycle.

**Context of and specific resources for assessment**

Assessment must ensure:
- access to project documentation relevant to project integration
- access to feedback from project stakeholders.

## Method of assessment

A range of assessment methods should be used to assess practical skill and knowledge. The following examples are appropriate for this unit:
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- oral or written questioning to assess knowledge of strategies for managing project integration and their application to different situations
- analysis of responses addressing case studies and scenarios which present project integration management issues and problems
- assessment of project reports and examples of project plans.

## Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:
- other units from the Diploma of Project Management.
## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| The nine **project management functions** are: | • communications  
• cost  
• human resources  
• procurement and contracting  
• project integration  
• quality  
• risk  
• scope  
• time |
| --- | --- |
| **Project plan** may include: | • covering document which integrates the requirements of the nine functions of project management using appropriate formats and procedures  
• single document  
• multiple documents |
| **Internal working environment** may include: | • arrangement of project personnel and equipment  
• identity and differentiation of the project within the larger environment  
• personal working conditions  
• physical location of project  
• team dynamics |
| **Finalisation plans, procedures and activities** may include: | • final audit/reconciliation  
• finalisation of account codes and other financial documentation  
• forwarding finalisation report to senior personnel  
• project evaluation  
• settling of financial liabilities  
• transferring of assets to client or originating owner  
• transition of responsibility/ownership of project deliverables/products |

| 3. Manage application of scope controls | 3.1. Implement agreed *scope management* procedures and processes  
3.2. Manage the impact of scope changes within established time, cost and quality constraints according to *change control procedures* and to meet project objectives  
3.3. Review progress and record results to assess the effectiveness of scope management procedures  
3.4. Identify and document scope management issues and recommended improvements, and pass on to higher authority for application to future projects |
## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- literacy skills sufficient to interpret and analyse complex project plans and documentation
- planning and organising skills to monitor scope and to respond to potential and actual changes
- problem-solving and analytical skills to address project scope management issues and challenges
- negotiation skills to address changes to scope with a range of stakeholders.

### Required knowledge

- role and responsibilities of the project manager in relation to project planning
- project life cycle and the significance of scope management
- problem areas likely to be encountered in scope management
- project management tools used for managing scope.
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</tbody>
</table>
## Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| **Project authorisation** may: | • already have been decided before involvement of the project manager  
| | • be in the form of a scope statement which briefly explains why the project has been formed, what it hopes to achieve and how success will be measured  
| | • be required at a number of critical review points during the project |

| **Appropriate authority** may include: | • client, owner, sponsor, senior executive or other individual or group vested with the authority to make decisions regarding the project |

| **Project deliverables** may include: | • all products and services defined within the project scope |

| **Relevant stakeholders** may include: | • team members  
| | • clients  
| | • sponsors  
| | • internal and external parties  
| | • decision makers |

| **Scope management** may include: | • determining that a scope change has occurred or is about to occur  
| | • identifying and reporting scope creep, that is, incremental increases to scope that were not part of the original project requirements  
| | • identifying factors which influence changes to scope  
| | • implementing agreed scope changes  
| | • monitoring and reporting the effect of scope changes on other areas and on achievement of project objectives  
| | • refining scope progressively throughout the project life cycle  
| | • seeking authorisation for changes to project scope |
RANGE STATEMENT

Change control procedures may include:

- formal agreements, for example contracts, sub-contracts, memoranda of understanding
- major elements of the project liable to change, for example design, engineering, finance
- project documentation, including plans, schedules, statements, directives, guidelines and instructions

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Determine project schedule</td>
<td>1.1. Determine the duration, effort, sequence and dependencies of tasks from the scope definition as the basis for the project schedule &lt;br&gt; 1.2. Obtain input and approval for the project schedule from stakeholders &lt;br&gt; 1.3. Select and use <em>methods, techniques and tools</em>, within delegated authority, to determine preferred schedule, <em>time management plan(s)</em>, resource allocation and financial requirements &lt;br&gt; 1.4. Obtain agreement to the schedule from relevant project authority and communicate this agreement to stakeholders to provide the basis for measurement of progress</td>
</tr>
<tr>
<td>2. Implement project schedule</td>
<td>2.1. Implement mechanisms to measure, record and report progress of activities in relation to the agreed schedule and plans &lt;br&gt; 2.2. Conduct ongoing analysis of options to identify variances and to forecast the impact of changes to the schedule &lt;br&gt; 2.3. Review progress throughout the project life cycle and implement agreed schedule changes to ensure consistency with changing scope, objectives and constraints related to time and resource availability &lt;br&gt; 2.4. Develop responses to perceived, potential or actual schedule changes, ensure agreement by a higher project authority, and implement to maintain project objectives</td>
</tr>
<tr>
<td>3. Assess time management outcomes</td>
<td>3.1. Review project outcomes from available <em>records</em> and information to determine the effectiveness of time management activities &lt;br&gt; 3.2. Identify and document time management issues and recommended improvements, and pass on to relevant project authority for application in future projects</td>
</tr>
</tbody>
</table>
Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- literacy skills to read, develop and interpret project schedules
- self management skills to ensure vision and priorities are clear
- organisational skills to sequence tasks and see that objectives are met
- communication skills to convey expectations and to advise others of progress
- technology skills to use appropriate software to develop project schedules
- analytical skills to review and evaluate process.

#### Required knowledge

- techniques and tools for project schedules
- project life cycle
- time management methodologies, their capabilities, limitations, application and outcomes.

|                                        | • other units from the Diploma of Project Management. |
Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Others** may include:

- relevant project authority
- program manager
- project specialists or other personnel
- team members

**Project costs** are estimated to a level of accuracy available considering:

- availability of information at the time
- contingencies to allow for identified risks and uncertainty
- organisational requirements, for example overhead and profit margin
- stage of the project life cycle

**Delegated authority** means that activities will:

- be conducted routinely or as changing circumstances dictate
- be done independently within broad guidance or by taking the lead of a team
- involve consultation with other project members, teams and internal stakeholders
- involve the selection, use and supervision of appropriate time management methods, tools and techniques
- take into account internal organisational change and external environmental change

**Financial management processes and procedures** may include:

- approval processes
- communication and reporting processes
- financial authorisations/delegations
- invoice procedures

**Reviewing** may include evaluations of:

- agreed major milestones, for example phases and sub-contracts
- change of key personnel
- delivery of major deliverables
- finalisation of project and other agreed milestones

**Records** may include:

- budgets, commitment and expenditure
- cost management lessons learned
### RANGE STATEMENT

- cost management plans
- invoice and payment summaries
- lists of potential costs
- project and/or organisation files and records
- recommended and approved courses of action
- reports to relevant stakeholders

BSBPMG505A Manage project quality

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to manage quality within projects. It covers determining quality requirements, implementing quality assurance processes, and using review and evaluation to make quality improvements in current and future projects. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to an individual who is clearly and solely responsible for the management and leadership of a complex project, either as an employee of an organisation or an external consultant. In the context of this unit a complex project is defined as a project which involves:

|   | the need for a comprehensive and multi faceted project plan
|   | the need for a formal internal or external communications strategy
|   | a dedicated and diverse project budget
|   | multiple administrative components
|   | multiple operational components
|   | a wide range of stakeholders
|   | a project operations team. The functions performed by a program manager to manage quality within multiple projects are addressed in BSBPMG605A Direct quality management of a project program. |
Licensing/Regulatory Information
Not applicable.

Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Determine quality requirements | 1.1. Determine *quality objectives*, standards and levels, with input from stakeholders and guidance of a higher project authority, to establish the basis for quality outcomes and a *quality management plan*
| | 1.2. Select and use established *quality management methods, techniques and tools* to determine preferred mix of quality, capability, cost and time
| | 1.3. Identify quality criteria, obtain agreement from a higher project authority and communicate to stakeholders, to ensure clarity of understanding and achievement of quality and overall project objectives
| | 1.4. Include agreed quality requirements in the project plan and implement as basis for performance measurement
| 2. Implement quality assurance processes | 2.1. Measure and document results of project activities and product performance throughout the project life cycle to determine compliance with agreed quality standards
| | 2.2. Identify causes of unsatisfactory results, in consultation with client, and recommend appropriate actions to a higher project authority to enable continuous improvement in quality outcomes
| | 2.3. Conduct inspections of quality processes and *quality control* results to determine compliance of quality standards to overall quality objectives
| | 2.4. Maintain a quality management system to enable effective recording and communication of quality issues and outcomes to a higher project authority and stakeholders
| 3. Implement project quality improvements | 3.1. Review processes and implement agreed changes continually throughout the project life cycle to ensure continuous quality improvement
| | 3.2. Review project outcomes against performance criteria to determine the effectiveness of quality management processes and procedures
| | 3.3. Identify and document lessons learned and recommended *improvements*, and pass on to higher project authority for application in future projects
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to develop quality objectives and criteria
- communication and leadership skills to motivate staff, convey expectations and ensure outcomes are met
- analytical skills to monitor achievement of project outcomes against quality criteria
- coaching and mentoring skills to boost performance.

Required knowledge

- quality management theory, techniques, tools and methodologies
- roles and responsibilities in project management
- methods for managing and improving performance
- relevant legislation codes and national standards:
  - award and enterprise agreements and industrial instruments
  - industry codes of practice
  - legislation from all levels of government that affects business operation, especially in regard to occupational health and safety and environmental issues, equal opportunity, industrial relations and anti-discrimination.
# Evidence Guide

## EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>Evidence of the following is essential:</th>
</tr>

</table>
## Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Quality objectives may include:
- negotiated trade-offs between cost, schedule and performance
- requirements from a higher project authority
- requirements from the client and other stakeholders
- those quality aspects which may impact on customer satisfaction

### Quality management plan may include:
- authorisations and responsibilities for quality control
- continuous improvement
- established processes
- quality assurance

### Quality management methods, techniques and tools may include:
- benchmarking
- brainstorming
- charting processes
- control charts
- defining control
- flowcharts
- group work activities
- histograms
- pareto charts
- processes that limit and/or indicate variation
- ranking candidates
- run charts
- scattergrams
- undertaking benefit/cost analysis

### Quality control may include:
- monitoring conformance with specifications
- monitoring of regular inspections by internal or external agents
- recommending ways to eliminate causes of unsatisfactory performance of products or processes
### RANGE STATEMENT

**Improvements** may include:

- formal practices, such as total quality management or continuous improvement
- improvement by less formal processes that enhance both the product quality and processes of the project, for example client surveys to determine client satisfaction with project team performance

BSBPMG506A Manage project human resources

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to undertake human resource management (HRM) within projects. It involves planning for human resources, implementing staff training and development, and managing the project team and stakeholders.
|                | No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to an individual who is clearly and solely responsible for the management and leadership of a complex project, either as an employee of an organisation or an external consultant.
|                         | In the context of this unit a complex project is defined as a project which involves:
|                         | • the need for a comprehensive and multi faceted project plan
|                         | • the need for a formal internal or external communications strategy
|                         | • a dedicated and diverse project budget
|                         | • multiple administrative components
|                         | • multiple operational components
|                         | • a wide range of stakeholders
|                         | • a project operations team.
|                         | The functions performed by a program manager to manage human resources within multiple projects are addressed in BSBPMG606A Direct human resources management of a project program. |

Employability Skills Information

| Employability skills | This unit contains employability skills. |

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Implement human resource and stakeholder planning activities | 1.1. Identify project stakeholders and verify their expectations in order to quantify project outcomes  
1.2. Determine resource requirements for individual tasks, with input from stakeholders and guidance from a higher project authority, to determine project staffing levels and required competencies  
1.3. Establish *project organisation and structure* to align individual and group competencies with project tasks  
1.4. Allocate *staff* to the project with the approval of a higher project authority, to meet work requirements throughout the project life cycle  
1.5. Develop and use *HRM methods, techniques and tools* to implement procedures and plans to ensure clarity of understanding and ongoing HRM |
| 2. Implement staff training and development | 2.1. Communicate designated staff responsibilities, authority and individual performance measurement criteria to the project team and other relevant stakeholders, to ensure clarity of understanding of the work and to provide a basis for ongoing assessment  
2.2. Identify, plan and implement ongoing development and training of project team members to achieve HRM and overall project objectives, with agreement of a higher project authority  
2.3. Measure individuals' performance against agreed criteria and initiate actions to overcome shortfalls in performance and to encourage career progression |
| 3. Manage the project team and stakeholders | 3.1. Implement processes to promote continuous improvement of staff, and take actions to improve staff and overall project effectiveness  
3.2. Monitor and report internal and external influences on individual and project team member performance and morale to a higher project authority, if necessary, for remedial action  
3.3. Implement established procedures for interpersonal communication, counselling and conflict resolution to maintain a positive working environment  
3.4. Continually review stakeholder expectations to resolve expectation variance and to ensure project is on track to deliver expected outcomes  
3.5. Identify and manage inter-project and intra-project |
<table>

</thead>
<tbody>
<tr>
<td></td>
<td>conflict to minimise impact on achievement of project objectives</td>
</tr>
<tr>
<td></td>
<td>3.6. Identify and document human resource and stakeholder management issues, and recommended improvements, and pass on to higher project authority for application in future projects</td>
</tr>
</tbody>
</table>

Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- planning skills to identify skills required and to allocate project responsibilities to staff
- communication and leadership skills to motivate staff, convey expectations and ensure outcomes are met
- interpersonal skills to resolve conflict
- coaching and mentoring skills to boost performance
- analytical skills to review project and to identify improvements.

**Required knowledge**

- roles and responsibilities in project management
- methods for managing and improving performance
- HRM legislation, methods, techniques and tools.
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th><strong>Overview of assessment</strong></th>
<th><strong>Critical aspects for assessment and evidence required to demonstrate competency in this unit</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Evidence of the following is essential:</td>
</tr>
<tr>
<td></td>
<td>- demonstrated evidence of successfully managing project staff so that outcomes were achieved on multiple complex projects</td>
</tr>
<tr>
<td></td>
<td>- knowledge of HRM legislation, methods, techniques and tools.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>Context of and specific resources for assessment</strong></th>

</table>
Range Statement

<table>
<thead>
<tr>
<th>RANGE STATEMENT</th>
</tr>
</thead>
<tbody>
<tr>
<td>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</td>
</tr>
</tbody>
</table>

- **Project organisation and structure** may be affected by established organisational responses to external influences such as:
  - accepted work practices
  - relevant legislation, such as anti-discrimination, equal employment opportunity, affirmative action and occupational health and safety
  - workplace bargaining

- **Staff** may be:
  - external to the organisation, such as consultants, auditors and quality assurance specialists
  - from within the organisation, such as staff on loan from other projects

- **HRM methods, techniques and tools** may include established organisational responses to:
  - conflict resolution
  - HRM forecasts, staffing plans and job descriptions
  - individual and group competency identification and development
  - performance monitoring, assessment and reporting
  - staff recruitment and reallocation

### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan communications processes | 1.1. Identify, document and analyse information requirements, with input from stakeholders and guidance from a higher project authority, as the basis for communications planning  
1.2. Develop, within delegated authority, an agreed communications management plan to ensure clarity of understanding and achievement of project objectives throughout the project life cycle  
1.3. Establish and maintain designated project management information system (PMIS) to ensure the quality, validity, timeliness and integrity of information and communication |
| 2. Manage project information | 2.1. Manage the generation, gathering, storage, retrieval, analysis and dissemination of information by project staff and stakeholders within established systems and procedures to aid decision making processes throughout the project life cycle  
2.2. Implement, modify, monitor and control designated information validation processes to optimise quality and accuracy of data  
2.3. Implement and maintain agreed communication networks between project staff, client and other stakeholders to ensure effective communications at appropriate levels throughout the project life cycle  
2.4. Identify communication and information management system problems and report them to a higher project authority |
| 3. Assess communications management outcomes | 3.1. Conduct finalisation activities to ensure agreed ownership of, and responsibility for, information collected  
3.2. Review project outcomes to determine the effectiveness of management information and communications processes and procedures  
3.3. Identify and document lessons learned and recommended improvements, and pass on to higher project authority for application in future projects |
### Required Skills and Knowledge

#### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- literacy skills to write reports and communicate key issues
- technology skills to facilitate effective communication
- organisational skills to manage information
- analytical skills to review project outcomes.

#### Required knowledge

- project life cycle and the place of communications within it
- project management information systems and their various applications.
Evidence Guide

# Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Delegated authority means that activities may: | • be conducted routinely or as changing circumstances dictate  
• be done independently within broad guidance or by taking the lead of a team  
• involve consultation with other project members, teams and internal stakeholders  
• involve the selection, use and supervision of appropriate communications management methods and tools  
• take into account internal organisational change and external environmental change |
| --- | --- |
| *Project management information system* is a means for communicating knowledge about the project and provides a systematic approach to the storing, searching and retrieval of information relevant to the project and may include: | • complex computer-based systems  
• modified systems to cater for unique project requirements  
• simple manual systems |
| *Communication networks* may include: | • client organisation and end users  
• formal networks  
• informal networks  
• organisation's communication networks  
• specific networks |
