RIIMCU501A Implement the spontaneous combustion management plan

Modification History
Not applicable.

Unit Descriptor
This unit covers the implementation of spontaneous combustion management plans in the coal industry. It includes identifying and applying resources to the spontaneous combustion management plan, implementing mine atmosphere monitoring measures, monitoring and responding to spontaneous combustion indicators, implementing spontaneous combustion control measures, and auditing spontaneous combustion control measures. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a management or supervisory role at worksites within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>- knowledge of the requirements, procedures and instructions for the implementation of the spontaneous combustion management plan</td>
</tr>
<tr>
<td></td>
<td>- implementation of procedures and techniques for the safe, effective and efficient implementation of the spontaneous combustion management plan</td>
</tr>
<tr>
<td></td>
<td>- the identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>- the identification of viable options and the selection of spontaneous combustion management plan elements that best meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>- working with other to undertake and complete the implementation of the spontaneous combustion management plan</td>
</tr>
<tr>
<td></td>
<td>- consistent successful implementation of the spontaneous combustion management plan</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites
may differ due to the site circumstances.

- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

<table>
<thead>
<tr>
<th>Method of assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:</td>
</tr>
<tr>
<td>- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the implementation of the spontaneous combustion management plan</td>
</tr>
<tr>
<td>- observed, documented and/or first hand testimonial evidence of the candidate's:</td>
</tr>
<tr>
<td>- implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes</td>
</tr>
<tr>
<td>- identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td>- identification of viable options and the selection of spontaneous combustion management plan elements that best meet the required outcomes</td>
</tr>
<tr>
<td>- consistent achievement of required outcomes</td>
</tr>

<tr>
<td>• response plans</td>
</tr>
<tr>
<td>• emergency procedures</td>
</tr>
<tr>
<td>• individual group responsibilities</td>
</tr>
<tr>
<td>• training and education procedures</td>
</tr>
</tbody>
</table>

### Mine atmosphere

Mine atmosphere refers to all areas in the general mine ventilation district and beyond into waste working and goafs / gobs in the mine.

### Sensory spontaneous combustion indicators

Sensory spontaneous combustion indicators may include:

<table>
<thead>
<tr>
<th>Sensory spontaneous combustion indicators may include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• smoke</td>
</tr>
<tr>
<td>• haze</td>
</tr>
<tr>
<td>• sweating</td>
</tr>
<tr>
<td>• smell</td>
</tr>
<tr>
<td>• heat</td>
</tr>
</tbody>
</table>

### Gaseous spontaneous combustion indicators

Gaseous spontaneous combustion indicators may include:

<table>
<thead>
<tr>
<th>Gaseous spontaneous combustion indicators may</th>
</tr>
</thead>
<tbody>
<tr>
<td>• carbon monoxide</td>
</tr>
<tr>
<td>• hydrogen</td>
</tr>
</tbody>
</table>
include reduced oxygen levels and/or increased production of:

- methane
- higher hydrocarbons
- Or the use of indicator ratios such as:
  - CO make
  - Graham’s ratio
  - Tricketts
  - Morris’ Oxides of Carbon ratio
- other ratios included in the site safety management system

<table>
<thead>
<tr>
<th>Control measures may include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• coal stowage and transport procedures</td>
</tr>
<tr>
<td>• procedures for responding to changes in atmosphere</td>
</tr>
<tr>
<td>• mine atmosphere monitoring systems</td>
</tr>
<tr>
<td>• procedures relating to the status of the ventilation system</td>
</tr>
<tr>
<td>• sealing procedures</td>
</tr>
<tr>
<td>• goaf monitoring systems</td>
</tr>
<tr>
<td>• goaf sampling systems</td>
</tr>
<tr>
<td>• spontaneous combustion inspection system</td>
</tr>
</tbody>
</table>

Inertisation may be defined as the displacing or reducing of oxygen to a level that will not support combustion. It may be either a natural process using seam gases or a process of introducing incombustible gases.

Audit is defined as: a systematic examination against defined criteria to determine whether activities and related results conform to planned arrangement, and whether these arrangements are implemented effectively and are suitable to achieve the organisation’s policy and objectives (AS/NZS 4804: 2001).

Action (alarm or trigger) level is a generic term used to describe a level determined at the mine site at which action is initiated or a response made.

<table>
<thead>
<tr>
<th>Principles of mine design</th>
</tr>
</thead>
<tbody>
<tr>
<td>• recovery</td>

include inherent factors such as:
- petrology
- moisture content
- particle size
- seam gas
- pyrites

Or depositional factors such as:
- seam thickness
- multi seams
- seam dip
- depth of cover

**Mine atmosphere monitoring**
may include:
- continuous monitoring
- portable (hand held) monitoring
- collection of bag samples
- gas chromatography
- ventilation measurements, including differential pressure across stoppings
- seals and solid coal (intake to return) from all areas of the mine, including sealed areas
- waste workings monitoring

**Defects to ventilation structures**
may include:
- deterioration of materials
- quality of construction
- effects of surrounding strata
- physical damage
- water damage

**Response actions**
for mitigation of spontaneous combustion may include:
- quenching
- grouting
- smothering
- excavating
- ventilation control by pressure balancing
- sealing
- inertisation

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to implement the gas management plan:

- apply legislative, organisation and site requirements and procedures for implementing the gas management plan
- access, interpret and apply technical information
- access and analyse gas information related to the mine including archival and historical information
- interpret and apply mathematical and scientific theorems / laws related to gas
- collect, collate and evaluate gas management data
- conduct investigation and prepare reports
- communicate effectively in the workplace
- access, evaluate and apply data from monitoring systems and equipment
- operate hand held monitoring equipment
- implement gas management training requirements, programs, systems and procedures
- apply risk management processes and techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to implement the gas management plan:

- legislative and site requirements for gas management including air quality and quantity, maximum and minimum values, control and distribution, flammable gas limits, ventilation fans, gas monitoring, inspections and recording / reporting
- the methods of mine ventilation and their applications / limitations including exhaust / force, antitropal, homotropal, flank returns, ascensional / decensional, bleeder, Z/U/Y systems and other combinations
- the methods of panel gas management and their applications / limitations including homotropal and antitropal (and in conjunction with these, the use of goaf bleed or back return), auxiliary fans, coursed ventilation (narrow side / wide side), machine mounted scrubber systems, compressed air venturis and bleeders
- the impact of mining techniques
- the impact of mine and panel design on gas management
- the impact of differing geological features and conditions on gas management including faults, dykes, intrusions and strata deformities
- the impact of coal characteristics and coal seam gradients on mine gas management systems
- mine gases; the types and their characteristics, sources, physiological effects and methods of detection
- mine fires; the types and possible impacts on gas management
- mine explosions; the types, ignition sources and possible impacts on gas management
- pressure changes; causes and the impacts on gas management
- heat / humidity; the sources and factors which may impact on mine gas management
- mine fans; fan types, applications and limitations
- gas control devices; the types, purposes, design criteria and specifications, distribution / placement criteria and limitations
- de-gassing; methods of control - including brattice, auxiliary fans, compressed air venturis, sails, hurdles and bleeders
- fixed gas monitoring systems types, uses and limitations
- portable monitoring equipment, types, characteristics, uses and limitations
- computer-based systems for mine gas analysis
- Gas Management Plan development requirements and processes
- techniques for determining alarms and trigger points / levels
- audit and review processes and techniques
- site document control requirements
- emergency response and evacuation procedures
- the general use and application of ventilation theory including
  - gas laws including Charles and Boyle
  - natural ventilation
  - Coward's Triangle
  - Graham's Ratio
  - Ellicott Diagram
  - gas make
  - Trickett's Ratio
  - leakage
  - psychrometry and heat
  - CO/CO2
  - Kirchoff's laws
- geological data
- the impact of differing geological features and conditions on outburst including faults, dykes, intrusions and strata deformities
- methods of control of outburst
- the methods of gas drainage and their applications / limitations against the mine design, mine and panel ventilation systems, systems of mining and current and future mine development
• the impacts of gas drainage on dust generation during mining
• impacts of intersecting and intersected holes and hole design
• principles of ventilation management
• mine and goaf ventilation systems
• underground water management techniques
• site environmental monitoring requirements
• risk management procedures
• inertisation techniques
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</tbody>
</table>
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the implementation of the gas management plan
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of gas management plan elements that best meet the required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate:
    - working with others to undertake and complete the implementation of the gas management plan
- provision of clear and timely required support and advice on the implementation of the gas management plan

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

<table>
<thead>
<tr>
<th>May include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>legislative, organisational and site requirements and procedures</td>
</tr>
<tr>
<td>manufacturer’s guidelines and specifications</td>
</tr>
<tr>
<td>Australian standards</td>
</tr>
<tr>
<td>Employment and workplace relations legislation</td>
</tr>
<tr>
<td>Equal Employment Opportunity and Disability Discrimination legislation</td>
</tr>
</tbody>
</table>

### Interpret

*Interpret* is defined as: the understanding needed by the person within their job role.

<table>
<thead>
<tr>
<th>May include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>hazard identification and quantification</td>
</tr>
<tr>
<td>risk assessment</td>
</tr>
<tr>
<td>authority and responsibility</td>
</tr>
<tr>
<td>controls established to manage identified risks</td>
</tr>
<tr>
<td>reporting and communication</td>
</tr>
<tr>
<td>document control</td>
</tr>
<tr>
<td>audit and review</td>
</tr>
</tbody>
</table>

*And may include procedures for:*

<table>
<thead>
<tr>
<th>May include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>mine atmosphere monitoring</td>
</tr>
<tr>
<td>ventilation systems and usage</td>
</tr>
<tr>
<td>inertisation techniques</td>
</tr>
<tr>
<td>mine plan</td>
</tr>
<tr>
<td>trigger action response plans</td>
</tr>
<tr>
<td>emergency procedures</td>
</tr>
<tr>
<td>training and education</td>
</tr>
</tbody>
</table>

### Gas Management Plans

Gas Management Plans establish procedures for maintaining a safe environment may include:

<table>
<thead>
<tr>
<th>May include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>construction</td>
</tr>
<tr>
<td>action response</td>
</tr>
</tbody>
</table>

### Gas management training

Gas management training applies to:

<table>
<thead>
<tr>
<th>May include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>mine workers</td>
</tr>
<tr>
<td>tradespeople</td>
</tr>
<tr>
<td>permanent employees</td>
</tr>
<tr>
<td>contractors</td>
</tr>
<tr>
<td>mine officials</td>
</tr>
<tr>
<td>other special requirements</td>
</tr>
<tr>
<td>Hazard is defined as: <strong>a source of potential harm or a situation with a potential to cause loss</strong> (definition from AS/NZS 4360:1999 Risk Management).</td>
</tr>
<tr>
<td>Hazards may include:</td>
</tr>
<tr>
<td><strong>Mine Atmosphere</strong> refers to the atmosphere in all areas in the general mine ventilation district and beyond into waste working and goafs / gobs in the mine.</td>
</tr>
<tr>
<td><strong>Audit</strong> is defined as: <strong>a systematic examination against defined criteria to determine whether activities and related results conform to planned arrangement, and whether these arrangements are implemented effectively and are suitable to achieve the organisation’s policy and objectives</strong> (AS/NZS 4804: 2001).</td>
</tr>
</tbody>
</table>
**Risk** is defined as: *the chance of something happening that will have an impact upon objectives. It is measured in terms of consequences and likelihood* (definition from AS/NZS 4360:1999 Risk Management).

<table>
<thead>
<tr>
<th>Principles of mine design may include:</th>

**Or depositional factors such as:**

- seam thickness
- multiple and rider seams
- seam dip
|                  | • depth of cover  
|                  | • cleats  
|                  | • friability  
| Geological and physical conditions of the seam and surrounding strata which may contribute to outburst potential may include: | • cutters  
|                  | • changing cleat  
|                  | • coal colour  
| Mine atmosphere monitoring may include: | • continuous monitoring  
|                  | • portable (hand held) monitoring  
|                  | • collection of bag samples  
|                  | • gas chromatography  
|                  | • ventilation measurements from all area of the mine including sealed areas  
|                  | • waste workings  
| Infrastructure may include: | • pipes  
|                  | • valves  
|                  | • hoses  
|                  | • pumps  
|                  | • drainage plant  
|                  | • flame arresters  
|                  | • power supply to bore holes  
|                  | • cleaning equipment  
| Types of fires may include: | • solid  
|                  | • liquid  
|                  | • gas  
| Ignition sources may include: | • electrical  
|                  | • static discharge  
|                  | • friction  
|                  | • contraband  
|                  | • spontaneous combustion  
|                  | • naked flame  
|                  | • chemical  
|                  | • explosives  
| Disruptions / ventilation pressure changes may include those resulting from: | • planned disruptions  
|                  | • changes in barometric pressure  
|                  | • fall of ground causing blockage and/or overpressure causing damage  
|                  | • fan changes/failure  
|                  | • ventilation control device changes/failure  
|                  | • outburst  

| **Effect of re-circulation** may include: | • build up of contaminant concentration (gas, fumes, dust, heat)  
• decrease in oxygen |
| **Criteria for safe mine ventilation** may include: | • statutory and regulatory requirements  
• mine ventilation management plan  
• measures to reduce and/or control seam gas  
• introduced gas  
• fumes and dust  
• temperature/humidity and maximum/minimum velocity specification  
• ventilation efficiency |
| **Monitoring devices** may include: | • barograph  
• tube bundle  
• real time telemetry  
• portable (hand held) monitoring  
• bag samples  
• gas chromatography |
| **Monitoring** includes that related to: | • atmospheric pressures  
• ventilation pressures and quantities  
• gas quality and quantity  
• gas composition  
• temperature  
• fire  
• the condition monitoring of ventilation devices |
| **Methods of ventilation** may include: | • exhaust/forcing  
• anistropal (antitropal)  
• homotropal  
• flank returns  
• ascensional/descensional  
• bleeder  
• Z/U/Y systems |
**Alarm systems and action plans** may include those for:

- gas concentration/make/ratios
- spontaneous combustion (physical and gaseous)
- combustion indicators
- condition monitoring for fans (vibration/temperature/current/failures)
- ventilation devices
- monitoring hardware
- gas content of the coal seam

**Maintenance of the ventilation system** may include:

- inspection
- servicing
- repair

**Unit Sector(s)**
Coal Mining (Underground)

**Competency field**
Refer to Unit Sector(s).

**Co-requisite units**
Not applicable.
RIIMCU503A Implement the gas drainage management plan

Modification History
Not applicable.

Unit Descriptor
This unit covers the implementation of gas drainage management plans in the coal industry. It includes planning and preparing for the implementation of the gas management plan, implementing the gas drainage management procedures, and implementing systems for the audit and review of gas drainage systems and equipment. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a management or supervisory role at worksites within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. ### gas drainage management plan

3.5. Implement procedures for response to instances of non-compliance or other discrepancies/deficiencies revealed by **audit**
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to implement the gas drainage management plan:

- apply legislative, organisation and site requirements and procedures for the implementation of the gas drainage management plan
- access, interpret and apply:
  - technical information
  - site/legislative requirements
  - geological information
  - records and reports
  - briefings and handover details
- apply the principles of mine design
- perform gas drainage planning mathematical calculations
- access, evaluate and apply design criteria for gas drainage systems and devices
- collect, collate and evaluate gas drainage data
- establish technical procedures relating to gas drainage
- conduct enquiries/investigations and prepare reports
- assess the risks and consequences of gas drainage
- develop procedures appropriate to mine operations for management of gas drainage
- plan and coordinate work
- identify training needs related to the gas drainage
- operate hand held monitoring equipment

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to implement the gas drainage management plan:

- legislative and site requirements which may include those for gas drainage drilling, gas drainage installation and recovery, ventilation requirements, return airways gas levels, intake airway gas accumulated levels, gas control and distribution, environmental management, local government requirements, inspections and reporting
- the methods of gas drainage and their applications/limitations against the mine design, mine and panel ventilation systems, systems of mining and current and future mine development
- the impact of gas drainage on mining techniques, mine and panel design and
production output

- the impact of the strata geology and coal seam characteristics on the gas drainage management plan, including coal seam gradient, moisture content, friability, the porous features of the coal seam, stresses and intrusions
- outburst mining monitoring procedures
- drilling options and related equipment and techniques
- hazard management processes and techniques
- the effects of the type and quantity of gas in the coal seam
- impacts of accumulation of coal dust after gas drainage has been completed
- pressure changes; causes, the impacts on the ventilation system, and the effects on gas drainage
- heat/humidity; the sources and factors which may impact on gas drainage and personnel
- mine fans; fan laws, fan types, performance characteristics, configurations, applications and limitations in association with the gas drainage management plan,
- ventilation control devices; the types, purposes, design criteria and specifications, distribution/placement criteria and limitations in association with the gas drainage management plan,
- ventilation control devices; the types, purposes, design criteria and specifications, distribution/placement criteria and limitations
- de-gassing; methods of control - including brattice, auxiliary fans, compressed air venturis, sails, hurdles, bleeders and purging
- fixed gas drainage monitoring systems types, characteristics, uses and limitations
- use of computer-based systems for mine environment and gas drainage systems analysis
- Gas Drainage Management Plan development requirements and processes
- gas drainage surveys; the types, frequency and method for conducting including pressure/quantity/temperature and gas
- processes and techniques for determining alarms and trigger points/levels
- audit and review processes and techniques
- site document control requirements
- emergency response and evacuation procedures
- general uses and applications of ventilation theory, including:
  - Atkinson's equation
  - methods of determining frictional resistance
  - gas laws, including Charles and Boyle
  - natural ventilation pressures
  - gas make
  - leakage
  - determination of mine resistance curves
  - regulator and equivalent orifice calculation
  - determination of fan operating/duty points
  - Kirkoff's laws
- mine operational procedures
- strata control systems and their effects on gas drainage
- mine and goaf ventilation systems
- underground water management principles and systems
- impacts of intersecting and intersected holes and hole design
- site environmental monitoring requirements
- legislative and mine reporting procedures
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>

</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for implementing the gas drainage management plan</td>
</tr>
<tr>
<td></td>
<td>• implementation of procedures and techniques for the safe, effective and efficient implementation of the gas drainage management plan</td>
</tr>
<tr>
<td></td>
<td>• the identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• the identification of viable options and the selection of gas drainage management plan elements that best meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the implementation of the gas drainage management plan</td>
</tr>
<tr>
<td></td>
<td>• consistent successful implementation of the gas drainage management plan</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site.
The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.

Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.

Aboriginal people and other people from a non English speaking background may have second language issues.

Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the implementation of the gas drainage management plan
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of gas drainage management plan elements that best meet the required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and

<td>complete the implementation of the gas drainage management plan</td>
<td>• provision of clear and timely required support and advice on the implementation of the gas drainage management plan</td>
</tr>
</tbody>
</table>

**RIIMCU503A Implement the gas drainage management plan**

Date this document was generated: 26 July 2014
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Interpret** is defined as:
- the understanding needed by the person within their job role

**Hazard** is defined as: *a source of potential harm or a situation with a potential to cause loss* (definition from AS/NZS 4360:1999 Risk Management).

**Hazards** may include:
- irrespirable atmosphere
- noxious atmosphere
- flammable or explosive mixtures
- outbursts
- induced outburst
- gas under pressure
- location of drainage pipes
- static electricity
- damage to pipelines and other infrastructure
- spontaneous combustion

**Gas drainage system maintenance procedures** may include those for:
- construction
- action response
- permit to work
- condition monitoring
- auditing
- maintenance
- document control
- atmosphere monitoring
- ventilation system control
| **Action** (alarm or trigger) level is a generic term used to describe a level determined at the mine site at which action is initiated or a response is made. |
| **Audit** is defined as: *a systematic examination against defined criteria to determine whether activities and related results conform to planned arrangement, and whether these arrangements are implemented effectively and are suitable to achieve the organisation’s policy and objectives* (AS/NZS 4804: 2001). |
| **Gas drainage management plans** establish procedures for maintaining a safe environment including: |
| **Gas drainage management plan** may include procedures for: |

- communication systems
- survey procedures
- standard operating procedures
- changes
- training
- recording/reporting

- hazard identification and qualification
- risk assessment
- authority and responsibility
- controls established to manage identified risks
- reporting and communication
- document control
- audit and review

- gas drainage drilling program
- gas or geological anomaly detection
- mine atmosphere monitoring
- stimulation techniques
- goaf seals
- reporting requirements
- auditing
- ventilation systems and usage
- mine plan
- action plans
- systems of mining
- response plans
- emergency procedures
- individual and group responsibilities
### Gas drainage management training applies to:

- mine workers
- tradespeople
- permanent employees
- contractors
- mine officials
- other special requirements

### Risk

Risk is defined as: the chance of something happening that will have an impact upon objectives. It is measured in terms of consequences and likelihood (definition from AS/NZS 4360:1999 Risk Management).

### Principles of mine design include:

- recovery
- reserve optimisation
- mining direction
- geological structures
- ventilation
- strata control
- mining method
- productivity
- environmental considerations
- access

### Standard operating procedures (SOP) are also known as safe working procedures, safe operating procedures and standard working procedures.

### Mine atmosphere

Mine atmosphere refers to the atmosphere in all areas in the general mine ventilation district and beyond into waste working and goafs in the mine.

### Mine gases

Mine gases may be seam gases or gases from introduced sources and may include but not be limited to:

- methane
- carbon dioxide
- carbon monoxide
- oxides of nitrogen
- hydrogen
- sulphur dioxide
- hydrogen sulphide
### Ventilation systems
- main mine fan
- auxiliary fans
- brattice
- regulators
- seals
- stoppings
- overcasts
- ventilation doors
- surface drainage boreholes
- pressure chambers

### Geological conditions
- faults
- dykes
- intrusions
- strata deformities
- induced stresses
- depth of overlying strata
- strength of immediate strata
- under and over the coal seam
- mining lease gas make

### Coal seam characteristics
- rank
- petrology
- moisture
- particle size
- seam gas make
- pyrites

Or depositional factors such as:
- seam thickness
- multi seams
- seam dip
- depth of cover
- cleats
- friability
- interaction of other coal seams and gas makes
- clay bands within the coal seam and molorite zones

### Gas make characteristics
- gas content
- gas pressure
- absorption
- desorption
<table>

- power supply to bore holes  
- cleaning equipment  
- air compressors  
- electricity and water services  
- pressure gauges  
- hydration plans |
| **Alarm systems and action plans** may include those for: | - gas concentration/make  
- combustion indicators  
- condition monitoring for fans (vibration/temperature/current failures)  
- ventilation devices  
- monitoring hardware  
- temperature alarms |
| **Maintenance** of the gas drainage system may include: | - inspection  
- servicing  
- repair |
Unit Sector(s)
Coal Mining (Underground)

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIMCU504A Implement the outburst management plan

Modification History
Not applicable.

Unit Descriptor
This unit covers the implementation of outburst management plans in the coal industry. It includes planning and preparing the implementation of the outburst mining management plan, implementing the outburst mining management plan, and auditing and reviewing the effectiveness of the outburst mining management systems. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a management or supervisory role at worksites within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare the implementation of the outburst mining management plan | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Identify, clarify and communicate roles and responsibilities, as specified in the outburst mining management plan  
1.3. Identify, forecast, obtain and allocate/schedule resources required for the implementation of the outburst mining management plan  
1.4. Implement the program to satisfy identified outburst mining management training requirements  
1.5. Encourage, receive, review and, where appropriate, implement suggestions and recommendations for changes to outburst mining management procedures |
| 2. Implement the outburst mining management plan | 2.1. Implement outburst drilling and sample collection operational procedures  
2.2. Implement core sample analysis and reporting procedures  
2.3. Implement geological and geotechnical hazard identification and response procedures  
2.4. Implement actions and procedures required in response to gas threshold levels  
2.5. Implement permit to mine procedures in accordance with the outburst mining management plan  
2.6. Implement procedures to minimise potential damage caused by outburst  
2.7. Implement outburst information recording and reporting procedures  
2.8. Implement emergency and evacuation plans and procedures  
2.9. Implement procedures for the recovery of services following outburst |
| 3. Audit and review the effectiveness of the outburst mining management systems | 3.1. Audit outburst drilling and analytical operational procedures for compliance with statutory and outburst mining management plan requirements  
3.2. Audit monitoring systems operations for |
compliance with the outburst mining management plan

3.3. Audit geological and geotechnical identification, monitoring and response procedures for compliance with the outburst mining management plan

3.4. Audit recording systems for compliance with the outburst mining management plan

3.5. Audit procedures developed for the recovery of services following outburst for compliance with current statutory and outburst mining management plan requirements

3.6. Trial and audit emergency and evacuation plans and procedures for compliance with the management plan

3.7. Audit outburst training program for currency, relevance and compliance with the requirements of the outburst management plan

3.8. Respond promptly to instances of non-compliance and other discrepancies/deficiencies revealed by audit and modify the management plan as necessary

3.9. Identify evaluate and incorporate future outburst management requirements into the outburst mining management planning procedures as stipulated by the outburst mining management plan
Required Skills and Knowledge

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Overview of assessment |  |
|------------------------|  |
| **Critical aspects for assessment and evidence required to demonstrate competency in this unit** | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following: |
|  | • knowledge of the requirements, procedures and instructions for implementing the outburst management plan |
|  | • implementation of procedures and techniques for the safe, effective and efficient implementation of the outburst management plan |
|  | • the identification of the relevant information and scope of the work required to meet the required outcomes |
|  | • the identification of viable options and the selection of outburst management plan elements that best meet the required outcomes |
|  | • working with others to undertake and complete the implementation of the outburst management plan |
|  | • consistent successful implementation of the outburst management plan |

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
|  | • Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites |
may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

<table>
<thead>
<tr>
<th>Method of assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:</td>
</tr>
<tr>
<td>- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the implementation of the outburst management plan</td>
</tr>
<tr>
<td>- observed, documented and/or first hand testimonial evidence of the candidate's:</td>
</tr>
<tr>
<td>- implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes</td>
</tr>
<tr>
<td>- identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>

</tbody>
</table>
**Hazard** is defined as: *a source of potential harm or a situation with a potential to cause loss* (definition from AS/NZS 4360:1999 Risk Management).

**Hazards** may include:
- irrespirable atmosphere
- noxious atmospheres
- flammable or explosive mixtures
- induced outburst

**Actions** (alarm or trigger) level is a generic term used to describe a level determined at the mine site at which action is initiated or a response made.

**Audit** is defined as: a systematic examination against defined criteria to determine whether activities and related results conform to planned arrangement, and whether these arrangements are implemented effectively and are suitable to achieve the organisation's policy and objectives (AS/NZS 4804: 2001).

**Risk** is defined as: *the chance of something happening that will have an impact upon objectives*. *It is measured in terms of consequences and likelihood* (definition from AS/NZS 4360:1999 Risk Management).

**Principles of mine design** include:
- recovery
- reserve optimisation
- mining direction
- geological structures
- ventilation
- strata control
- mining method
- productivity
- environmental considerations
- access

**Standard operating procedures (SOP)** are also known as safe working procedures, safe operating procedures and standard working procedures.

**Geological and physical conditions of**
- cutters
the seam and surrounding strata which may contribute to outburst potential may include:

- changing cleat
- coal colour
- free gas into atmosphere
- mylonite

Mine site historical information may include:

- sedimentology aspects of the mine site relating to subsidence
- outburst
- gas content and composition
- roof and floor technical data
- over and underlying strata
- water bearing strata
- permeability of seam and strata
- hydrology
- physical property testing results
- caving characteristics
- ground stress behaviour

Mine atmosphere refers to all areas in the general mine ventilation district and beyond into waste working and goafs in the mine.

Mine gases may include CO or methane in addition to normal atmosphere gases.

Ventilation structures may include:

- stoppings
- overcasts
- regulators
- preparation seals
- fire doors
- bulk heads
- goaf seals
- final seals
- pressure chambers

Geological conditions may include:

- faults
- dykes
- intrusions and strata deformities
- existing or induced stress or strain

Coal seam characteristics may include inherent factors such as:

- rank
- petrology
- moisture
- particle size
- seam gas
<table>
<thead>
<tr>
<th>pyrites</th>
<th>Or depositional factors such as:</th>
</tr>
</thead>
<tbody>

<td>seam thickness</td>
<td>multi seams</td>
</tr>
<tr>
<td>seam dip</td>
<td>depth of cover</td>
</tr>
<tr>
<td>cleat</td>
<td>friability</td>
</tr>
<tr>
<td>intrusions</td>
<td></td>
</tr>
</tbody>
</table>

**Mine atmosphere monitoring** may include:
- continuous monitoring
- portable (hand held) monitoring
- collection of bag samples
- gas chromatography
- ventilation measurements from all areas of the mine, including sealed areas and waste workings

**Defects to mine structures** may include:
- deterioration of materials
- quality of construction
- effects of surrounding strata
- physical damage
- water damage

**Infrastructure** includes:
- pipes
- valves
- hoses
- pumps
- drainage plant
- flame arresters
- power supply to bore holes
- cleaning equipment
- all other plant and equipment

**Unit Sector(s)**
Coal Mining (Underground)

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Interpret

Interpret is defined as: the understanding needed by the person within their job role.

### Risk

Risk is defined as: the chance of something happening that will have an impact upon objectives. It is measured in terms of consequences and likelihood (definition from AS/NZS 4360:1999 Risk Management).

### Hazard

Hazard is defined as: a source of potential harm or a situation with a potential to cause loss (definition from AS/NZS 4360:1999 Risk Management).

### Mine site historical information may include:
- sedimentology aspects of the mine site relating to subsidence
- previous inrushes
- gas content and composition
- roof and floor technical data
- over and underlying strata
- water bearing strata
- permeability of seam and strata
- hydrology
- physical property testing results
- caving characteristics
Inrush may be defined as:

- water or other fluid material, or any material that flows when wet
- flammable or noxious gas
- which may put the mine or persons at the mine at risk

Inrush control zones are those areas of heightened awareness, necessitating specialised mining, monitoring and assessment techniques e.g. protective drilling.

Inrush controls may include, but are not limited to:

- controls that eliminate the hazard by removing the damaging energy, e.g. drainage including pumping and ventilation
- controls that reduce the magnitude of the hazard (less water, less pressure etc), e.g. drainage, including pumping and ventilation
- controls that reduce the likelihood of the event through engineering or hard barriers, e.g. seals
- controls that reduce the likelihood of the event through procedural or soft barriers, e.g. establishment of inrush control zones, protective drilling
- controls that reduce the likelihood of the event through warnings, e.g. action levels associated with increased water make

Systems of work may include:

- drilling operations
- bord and pillar
- place changing
- long wall
- high wall
- auger mining
- pillar extraction
- partial extraction
- punch mining
- shaft sinking and drifting

Geological and physical conditions may include:

- rank
- petrology
- moisture
- particle size
- seam gas
- pyrites
- seam thickness
- multi seams
- seam dip
- depth of cover
- cleat
- friability
- intrusions

**Monitoring** may include, but is not limited to:
- continuous and/or periodic monitoring
- portable (hand held) monitoring
- core samples
- visual observation
- geological mapping
- borehole pressure readings

**Inrush hazards and potential sources** may include, but are not limited to:
- subsidence or failure of barriers and dam walls
- strata failure
- gas content and composition
- abnormal rainfall events
- over and underlying strata
- water bearing strata
- any peat, moss, sand, gravel, silt, or other material that flows when wet which may exist on or near a mine
- any coal peat, moss, sand, gravel, silt, or other material that may flow from a bin or storage facility/structure
- permeability of seam and strata
- physical properties
- caving characteristics
- faults
- intrusions
- surface sources
- tidal waters
- oceans
- surface creeks, rivers, ponds, lakes
- surface impoundments or reservoirs
- abandoned mines
- workings of adjacent current mines
- existing workings of the mine
- other non-mining underground openings
- shafts
- wells
- pipelines
| **Personnel safety measures** may include, but are not limited to: | • tunnels  
• remote control mining  
• limitation of numbers  
• training  
• physical barriers, e.g. drilling through stuffing box  
• emergency equipment, e.g. oxygen self rescuers  
• personal protective equipment (PPE) |
| **Legislative, and site requirements** may include: | • legislation and regulations  
• relevant Australian standards  
• management plans  
• manager's rules  
• OHS policy  
• code of practice  
• dams safety committee publications  
• manufacturer's instructions  
• safe working or job procedures (or equivalent) |
| **Inrush management system** establish criteria and procedures for maintaining a safe environment including: | • hazard identification and quantification  
• risk assessment  
• authority and responsibility

RIIMCU506A Implement strata management plan

Modification History
Not applicable.

Unit Descriptor
This unit covers the implementation of strata management plans in the coal industry. It includes planning and preparing for the implementation of the strata management plan, implementing the strata management plan, and auditing and reviewing the effectiveness of the strata management plan. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a management or supervisory role at worksites within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to implement the strata management plan:

- apply legislative, organisation and site requirements and procedures for implementing the strata management plan
- access, interpret and apply technical information relating to strata management
- access and analyse historical strata management information related to mine and failure mode of mine structures
- interpret and apply design criteria for strata management
- communicate effectively in the workplace
- prepare operating procedures relating to strata management
- conduct and report on audits
- identify and evaluate geological and geotechnical information

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to implement the strata management plan:

- legislative and site requirements for mining structures, including mine plans, ventilation, gas monitoring, strata support and safety management plans
- the systems of mining, including tunnels, drifts, stone drivage, shaft sinking, pillar extraction, partial extraction, punch mining, longwall mining (including installation and recovery), the use of breaker line support and fault drivage
- stress including mining induced stress, vertical and horizontal stress, tectonics, and topographical features
- sedimentology, including subsidence, water bearing strata, permeability of seam and strata, hydrology, rock property testing, caving characteristics, windblast, outburst, gas content and over and underlying strata
- systems of work, including bord and pillar, place changing, longwall, highwall, auger mining, pillar extraction, partial extraction, the use of breaker line support and punch mining
- mining structure failure modes
- exploration techniques
- geology and strata gas characteristics
- mining engineering principles
- lithology
- strata support and monitoring systems
- audit methodologies
- site document control requirements
- mine site historical information
- limitations and controls
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Critical aspects for assessment and evidence required to demonstrate competency in this unit</td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
<tr>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
</tr>
<tr>
<td>• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
</tr>
</tbody>
</table>
The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.

Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.

Aboriginal people and other people from a non English speaking background may have second language issues.

Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the implementation of the strata management plan
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of strata management plan elements that best meet the required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the implementation of the strata
<table>

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>
<thead>
<tr>
<th>Relevant compliance documentation may include:</th>
<th>legislative, organisational and site requirements and procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>manufacturer’s guidelines and specifications</td>
</tr>
<tr>
<td></td>
<td>Australian standards</td>
</tr>
<tr>
<td></td>
<td>Employment and workplace relations legislation</td>
</tr>
<tr>
<td></td>
<td>Equal Employment Opportunity and Disability Discrimination legislation</td>
</tr>
</tbody>
</table>

**Interpret** is defined as: the understanding needed by the person within their job role.

<table>
<thead>
<tr>
<th>Resources may include, but are not limited to:</th>
<th>skilled personnel</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>roof and rib supports</td>
</tr>
<tr>
<td></td>
<td>face equipment</td>
</tr>
<tr>
<td></td>
<td>power water / gas drainage systems</td>
</tr>
<tr>
<td></td>
<td>strata monitoring devices</td>
</tr>
<tr>
<td></td>
<td>Standard Operating Procedures (SOP)</td>
</tr>
<tr>
<td></td>
<td>training materials</td>
</tr>
</tbody>
</table>

**Risk** is defined as: *the chance of something happening that will have an impact upon objectives. It is measured in terms of consequences and likelihood* (definition from AS/NZS 4360:1999 Risk Management).

<table>
<thead>
<tr>
<th>Mining structure can be defined as:</th>
<th>excavation</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>pillars</td>
</tr>
<tr>
<td></td>
<td>roadways</td>
</tr>
<tr>
<td></td>
<td>workings</td>
</tr>
<tr>

<td>roof, rib and floor</td>
</tr>
</tbody>
</table>

**Strata monitoring devices may include:**

| | convergence indicators |
| | telltales |
| | extensometer |
| | load cells |
### Factors effecting stability of mining structures

- stress cells
- roadway size
- pillar sizes
- depth of cover
- strength of coal and underlying / overlying strata
- stress regimes
- strata characteristics
- longwall chocks
- presence of water
- systems of mining
- breaker line supports
- direction of mining
- primary and secondary support
- geological structures
- speed and continuity of extraction

### Controls

- restriction of access
- setting of temporary and remedial supports
- monitoring and reporting
- procedures under the strata management plan

### Audit

Audit is defined as: a systematic examination against defined criteria to determine whether activities and related results conform to planned arrangement, and whether these arrangements are implemented effectively and are suitable to achieve the organisation's policy and objectives (AS/NZS 4804: 2001).

### Mine design

Mine design is the process of engineering analysis applied to the systems and sequences involved in mining.

### Hazard

Hazard is defined as: a source of potential harm or a situation with a potential to cause loss (definition from AS/NZS 4360:1999 Risk Management).

### Standard operating procedures (SOP)

Standard operating procedures (SOP) are also known as safe working procedures, safe operating
procedures and standard working procedures.

| 5. Plan and prepare for the implementation of the spontaneous combustion management plan |
| 5.1. Identify and interpret the legislative and site requirements related to the spontaneous combustion management plan |
| 5.2. Access, interpret and clarify the spontaneous combustion management plan |
| 5.3. Identify, clarify and communicate to all personnel roles and responsibilities, as specified in the spontaneous combustion management plan |
| 5.4. Identify, forecast, obtain and allocate/schedule resources required for the implementation of the spontaneous combustion management plan |
| 5.5. Implement the spontaneous combustion training program |
| 5.6. Encourage, receive, review and, where appropriate, implement suggestions and recommendations for changes to the spontaneous combustion management implementation procedures |

| 6. Audit and review the spontaneous combustion management plan |
| 6.1. Audit the operation of spontaneous combustion monitoring systems for compliance with legislative and gas management plan standards |
| 6.2. Audit mine ventilation control devices for compliance with Audit legislative and mine site requirements |
| 6.3. recording systems for compliance with the gas management plan |
| 6.4. Audit the maintenance program and procedures for compliance with the spontaneous combustion management plan |
6.5. **Audit** spontaneous combustion training program for currency, relevance and compliance with the requirements of the *spontaneous combustion management plan*.

6.6. Identify and correct non-compliance or other discrepancies/deficiencies revealed by **audit**.
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to establish and maintain the spontaneous combustion management plan:

- apply legislative, organisation and site requirements and procedures for establishing and maintaining the spontaneous combustion management plan
- access, interpret and apply:
  - technical information
  - site/legislative requirements
  - records and reports
  - briefings and handover details
- apply the principles of mine design
- assess the risks and consequences of spontaneous combustion
- develop procedures appropriate to mine operations for management of spontaneous combustion
- plan and coordinate work
- identify training needs related to spontaneous combustion

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to establish and maintain the spontaneous combustion management plan:

- causes and effects of spontaneous combustion
- the effects of coal seam characteristics on spontaneous combustion
- legislative and site requirements and instructions
- mine operation procedures
- geological data
- strata control
- mine design relating to spontaneous combustion
- spontaneous combustion management requirements
- methods of control of spontaneous combustion
- principles of ventilation management
- gas management
- mine and goaf ventilation systems
- mine gases
- inertisation principles and techniques
• underground water management
• seal design and sealing procedures
• spontaneous combustion indicators and ratios
• site environmental monitoring requirements
• risk management procedures
• site legislative inspection requirements
• mine reporting procedures
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for establishing and maintaining the spontaneous combustion management plan
- implementation of procedures and techniques for the safe, effective and efficient establishment and maintenance of the spontaneous combustion management plan
- the identification of the relevant information and scope of the work required to meet the required outcomes
- the identification of viable options and the selection of spontaneous combustion management techniques that best meet the required outcomes
- working with others to undertake and complete the establishment and maintenance of the spontaneous combustion management plan
- consistent successful establishment and maintenance of the spontaneous combustion management plan

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment.
Selection and use of resources for particular worksites may differ due to the site circumstances.

- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the establishment and maintenance of the spontaneous combustion management plan
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of spontaneous combustion management techniques that best meet the required outcomes
  - consistent achievement of required outcomes
<table>
<thead>
<tr>
<th>Guidance information for assessment</th>
<th>Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.</th>
</tr>
</thead>
</table>

- first hand testimonial evidence of the candidate's:
- working with others to undertake and complete the establishment and maintenance of the spontaneous combustion management plan
- provision of clear and timely required support and advice on the establishment and maintenance of the spontaneous combustion management plan
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Coal seam characteristics may include inherent factors such as:

- rank
- petrology
- moisture
- particle size
- seam gas
- Pyrites
- depositional factors such as:
  - seam thickness
  - multi seams
  - seam dip
  - depth of cover

### Mine atmosphere refers to all areas in the general mine ventilation district and beyond into waste working and goafs/gobs in the mine.

### Inertisation may be defined as the displacing or reducing of oxygen to a level that will not support combustion. It may be either a natural process using seam gases or a process of introducing incombustible gases.

### Trigger level is a generic term used to describe a level determined at the mine site at which action is
initiated or a response made.

| Principles of mine design may include: | recovery  
|                                  | reserve optimisation  
|                                  | mining direction  
|                                  | geological structures  
|                                  | ventilation  
|                                  | strata control  
|                                  | mining method  
|                                  | productivity  
|                                  | environmental considerations and access  
|                                  | depth of cover  
|                                  | location of adjacent seams  
|                                  | location of adjacent workings  

| Control methods are processes for the mitigation of spontaneous combustion and may include: | quenching  
|                                                                                     | grouting  
|                                                                                     | smothering  
|                                                                                     | excavating  
|                                                                                     | ventilation control by pressure balancing  
|                                                                                     | sealing  
|                                                                                     | water injection  

| Hazards may include: | irrespirable atmosphere  
|                      | noxious atmosphere  
|                      | flammable or explosive mixtures  

| Spontaneous combustion management plan may include procedures for: | mine atmosphere monitoring  
|                                                                    | reporting requirements  
|                                                                    | auditing  
|                                                                    | ventilation systems and usage  
|                                                                    | inertisation techniques  
|                                                                    | mine plan  
|                                                                    | action plans  
|                                                                    | response plans  
|                                                                    | emergency procedures  
|                                                                    | individual/group responsibilities  
|                                                                    | training and education  

| Audit is defined as: a systematic examination against defined criteria to determine whether activities and related results conform to planned arrangement, and whether these arrangements are implemented effectively and are suitable to achieve the |  

| Mine gases may include gases such as:                           | • methane  
|                                                               | • carbon dioxide  
|                                                               | • hydrogen sulphide  
|                                                               | • normal atmosphere gases  
|                                                               | • other gases produced from the processes of heating coal  

| Ventilation control devices may include:                      | • stoppings  
|                                                               | • overcasts  
|                                                               | • regulators  
|                                                               | • preparation seals  
|                                                               | • fire doors  
|                                                               | • bulk heads  
|                                                               | • goaf seals  
|                                                               | • final seals  
|                                                               | • pressure chambers  

| Geological conditions may include:                           | • faults  
|                                                               | • dykes  
|                                                               | • intrusions  
|                                                               | • strata deformities  

| Mine atmosphere monitoring may include:                      | • continuous monitoring  
|                                                               | • portable (hand held) monitoring  
|                                                               | • collection of bag samples  
|                                                               | • gas chromatography  
|                                                               | • differential pressure measurements across stoppings, seals, solid coal (intake to return)  
|                                                               | • ventilation measurements from all areas of the mine including sealed areas, waste workings  
|                                                               | • thermographic monitoring  

| Sensory spontaneous combustion indicators may include:        | • smoke  
|                                                               | • haze  
|                                                               | • sweating  
|                                                               | • smell  
|                                                               | • heat  

| Gaseous spontaneous combustion indicators may include increased production of: | • carbon monoxide  
|                                                                             | • carbon dioxide  
|                                                                             | • methane  
|                                                                             | • hydrogen  
|                                                                             | • hydrocarbons  
| or the use of indicator ratios such as:   

© Commonwealth of Australia, 2014
- CO make
- Graham's ratio
- Tricketts
- Morris' Oxides of Carbon ratio
- other ratios as determined suitable

| Defects to ventilation structures may include: | • deterioration of materials
• quality of construction
• effects of surrounding strata
• physical damage
• water damage |

| Control measures may include: | • removal of coal accumulation
• modification of transport procedures
• procedures for responding to changes in atmosphere
• mine atmosphere monitoring systems
• procedures relating to the status of the ventilation system
• sealing procedures
• goaf monitoring systems
• goaf sampling systems
• spontaneous combustion inspection system |

**Unit Sector(s)**
Coal Mining (Underground)

**Competency field**
Refer to Unit Sector(s).

**Co-requisite units**
Not applicable.
RIIMCU602A Establish and maintain the gas management system

Modification History
Not applicable.

Unit Descriptor
This unit covers the establishment and maintenance of gas management systems in the coal industry. It includes identifying, analysing and evaluating gas and outburst hazards and risks, identifying, analysing and evaluating gas control options and measures, designing and developing gas management systems, establishing the gas management system, planning and preparing for the implementation of the gas management system, and auditing and reviewing the gas management system. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a management or supervisory role at worksites within:

- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>
</thead>
</table>

### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. **Identify, analyse and evaluate gas and outburst hazards and risks** | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Identify, evaluate and clarify *coal seam characteristics* and mine conditions, which contribute to flammable or irrespirable atmospheres or outbursts  
1.3. Identify, analyse and evaluate *hazards and risks* relating to gas emissions and outbursts  
1.4. Identify, analyse and evaluate the requirements for *ventilation* in relation to the types and amounts of gas emissions  
1.5. Identify, analyse and evaluate *gas hazards* caused by disruption to the *ventilation* system and the impact on the mine atmosphere  
1.6. Identify, analyse and evaluate the impacts of fire, *ignition*, outburst and explosion on the gas *hazards*  
1.7. Identify, analyse and evaluate the impacts of water accumulations on gas management |
| 2. **Identify, analyse and evaluate gas control options and measures** | 2.1. Identify, analyse and evaluate the types and advantages/disadvantages of gas control options and management methods including gas drainage  
2.2. Identify, analyse and evaluate the method, purpose and uses of gas *monitoring* systems  
2.3. Identify, analyse and evaluate methods to maximise the effectiveness of a *gas management program* |
| 3. **Design and develop gas management systems** | 3.1. Access, interpret and clarify the legislative, and site requirements related to gas management systems  
3.2. Establish gas management systems to satisfy the operational conditions of the mine  
3.3. Establish surface *infrastructure*, which eliminates the *risk* of induced hazards in relation to potential gas emissions  
3.4. Incorporate gas monitoring systems to minimise the potential *hazards* of gas |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to establish and maintain the gas management system:

- apply legislative, organisation and site requirements and procedures for establishing and maintaining the gas management system
- access, interpret and apply technical information
- access and analyse archival and historical gas information related to the mine
- interpret and apply mathematical and scientific theorems / laws related to gas management
- perform gas planning mathematical calculations
- access, evaluate and apply design criteria for gas management
- interpret computer spreadsheets and gas modelling / simulations
- collect, collate and evaluate gas data
- establish technical procedures relating to gas management
- conduct enquiries / investigations and prepare reports
- communicate effectively in the workplace
- access, evaluate and apply data from monitoring systems and equipment
- establish gas training requirements, programs, systems and procedures
- apply risk management processes and techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to establish and maintain the gas management system:

- legislative requirements for including air quality, maximum values, control and distribution, flammable gas limits, ventilation fans, gas monitoring and inspections and recording/reporting
- the methods of mine ventilation and their applications/limitations including exhaust/force, antitropal, homotropal, flank returns, ascensional/descensional, bleeder, Z/U/Y systems and other combinations
- the methods of panel gas management and their applications/limitations including homotropal and antitropal (and in conjunction with these, the use of goaf bleed or back return), auxiliary fans, coursed ventilation (narrow side/wide side), machine mounted scrubber systems, compressed air venturis and bleeders
- the impact of mining techniques and mine and panel design on gas management
- the impact of coal characteristics and coal seam gradients on mine gas systems
• mine gases; the types and their characteristics, sources, physiological effects and methods of detection
• the use and calculation of specific gas emissions
• mine fires; the types, sources of ignition and possible impacts of gas management
• pressure changes; causes and the impacts on gas management
• heat / humidity; the sources and factors which may impact on gas management
• mine fans; fan laws, fan types, performance characteristics, configurations, application and limitations
• gas control devices; the types, purposes, design criteria and specifications, distribution / placement criteria, hazards and limitations including gas drainage
• de-gassing; methods of control - including brattice, auxiliary fans, compressed air venturis, sails, hurdles and bleeders
• fixed gas monitoring systems, types, characteristics, uses and limitations
• portable monitoring equipment, types, characteristics, uses and limitations
• functions, capabilities, advantages, limitations and uses of computer modelling and simulation techniques for gas management
• a basic knowledge of computer-based systems for mine gas analysis
• Gas Management System development requirements and processes
• gas surveys; the types, frequency and methods for conducting
• processes and techniques for determining alarms and trigger points / levels
• audit and review processes and techniques
• emergency response and disaster planning processes and techniques
• general uses and application of gas management theory, including:
  • gas laws including Charles and Boyle
  • natural ventilation
  • Coward's Triangle
  • Graham's Ratio
  • Ellicott Diagram
  • gas make
  • Morris' Ratio
  • Trickett's Ratio
  • leakage
  • psychrometry and heat
  • Hughe's and Raybould triangle
  • oxides of carbon ratio
  • Kirkoff's laws
• geological data
• principles of ventilation management
• mine and goaf ventilation systems
• underground water management principles
• gas management drilling techniques
• site environmental monitoring requirements
• risk management procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for establishing and maintaining the gas management system</td>
</tr>
<tr>
<td></td>
<td>• implementation of procedures and techniques for the safe, effective and efficient establishment and maintenance of the gas management system</td>
</tr>
<tr>
<td></td>
<td>• the identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• the identification of viable options and the selection of gas management system elements that best meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• working with other to undertake and complete the establishment and maintenance of the gas management system</td>
</tr>
<tr>
<td></td>
<td>• consistent successful establishment and maintenance of the gas management system</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
<td></td>
</tr>
<tr>
<td>• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites</td>
<td></td>
</tr>
<tr>
<td>Method of assessment</td>
<td></td>
</tr>
<tr>
<td>----------------------</td>
<td></td>
</tr>
<tr>
<td>This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:</td>
<td></td>
</tr>
<tr>
<td>- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the establishment and maintenance of the gas management system</td>
<td></td>
</tr>
<tr>
<td>- observed, documented and/or first hand testimonial evidence of the candidate's:</td>
<td></td>
</tr>
<tr>
<td>- implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes</td>
<td></td>
</tr>
<tr>
<td>- identification of the relevant information and scope of the work required to meet the required outcomes</td>
<td></td>
</tr>
<tr>
<td>- identification of viable options and the selection of gas management system elements that best meet the required outcomes</td>
<td></td>
</tr>
<tr>
<td>- consistent achievement of required outcomes</td>
<td></td>
</tr>
<tr>
<td>- first hand testimonial evidence of the candidate's:</td>
<td></td>
</tr>
<tr>
<td>- working with others to undertake and may differ due to the site circumstances.</td>
<td></td>
</tr>
<tr>
<td>- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
<td></td>
</tr>
<tr>
<td>- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.</td>
<td></td>
</tr>
<tr>
<td>- Aboriginal people and other people from a non English speaking background may have second language issues. Access must be provided to appropriate learning and/or assessment support when required.</td>
<td></td>
</tr>
<tr>
<td><strong>Guidance information for assessment</strong></td>
<td>Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.</td>
</tr>
<tr>
<td>----------------------------------------</td>
<td>----------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>complete the establishment and maintenance of the gas management system</td>
<td>- provision of clear and timely required support and advice on the establishment and maintenance of the gas management system</td>

**RIIMCU602A Establish and maintain the gas management system**

Date this document was generated: 26 July 2014
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Coal Seam** characteristics may include inherent factors such as:
- rank
- petrology
- moisture
- particle size
- seam gas
- pyrites
- permeability

**Geological conditions** may include:
- faults
- dykes
- intrusions
- strata deformities
- existing or induced stress or strain

*Or depositional factors such as:*
- seam thickness
- multiple and rider seams
- seam dip
- depth of cover
- cleats

**Hazard** is defined as: *a source of potential harm or a situation with a potential to cause loss* (definition from AS/NZS 4360:1999 Risk Management).

**Hazards** may include:
- irrespirable atmosphere
- noxious atmospheres
- flammable or explosive mixtures
<table>

**Audit** is defined as: *a systematic examination against defined criteria to determine whether activities and related results conform to planned arrangement, and whether these arrangements are implemented effectively and are suitable to achieve the organisation's policy and objectives (AS/NZS 4804: 2001).*

**Principles of mine design** include:

- recovery
- reserve optimisation
- mining direction
- geological structures
- ventilation
- strata control
- mining method
- productivity
- environmental considerations
- access

**Standard operating procedures (SOP)** are also known as safe working procedures, safe operating procedures and standard working procedures.
**Mine atmosphere** refers to all areas in the general mine ventilation district and beyond into waste working and goafs/gobs in the mine.

**Mine gases** may include seam gases or gases from introduced sources and may include but not be limited to:

- methane
- carbon dioxide
- oxides of nitrogen
- hydrogen
- carbon monoxide
- sulphur dioxide
- hydrogen sulphide
- hydrocarbons
- combinations

**Ventilation** devices may include:

- stoppings
- overcasts
- regulators
- preparation seals
- ventilation doors
- bulk heads
- goaf seals
- final seals
- pressure chambers
- air locks

**Explosive control** devices may include:

- water barriers
- stone dust barriers
- trickle dusters
- calcium chloride
- stone dust
- triggered barriers

**Gas management** devices and options may include:

- gas drainage
- infusion
- scrubbers
- automatic gas detectors
- tube bundle systems
- gassing device on auxiliary fans and gas monitoring systems
- inertisation techniques - high, medium and low

**Mine atmosphere monitoring** may include:

- continuous monitoring
- portable (hand held) monitoring
- collection of bag samples

**Monitoring devices may include:**
- barograph
- tube bundle
- real time telemetry
- portable (hand held) monitoring
- bag samples
- gas chromatography

**Monitoring includes that related to:**
- atmospheric pressures
- temperature
- fire
- condition monitoring of ventilation devices

**Alarm systems and action plans may include those for:**
- gas concentration/make
- spontaneous combustion (physical and gaseous)
- combustion indicators
- condition monitoring for fans (vibration/temperature/current/failures)
- ventilation devices
- monitoring hardware

**Procedures required to support the gas management plan may include those for:**
- construction
- action response
- permit to work
- condition monitoring
- auditing
- maintenance
- document control
- atmosphere monitoring
- ventilation system control
- communication systems
- survey procedures
- sealing procedures
- changes
- training and recording/reporting

**Unit Sector(s)**
Coal Mining (Underground)

**Competency field**
Refer to Unit Sector(s).
Co-requisite units

Not applicable.
RIIMCU603A Establish and maintain the gas drainage management plan

Modification History
Not applicable.

Unit Descriptor
This unit covers the establishment and maintenance of the gas drainage management plan in the coal industry. It includes: identifying, analysing and evaluating gas drainage hazards, risks and needs, identifying, analysing and evaluating gas drainage control options and measures, designing and developing gas drainage management systems, establishing the gas drainage management plan, planning and preparing for the implementation of the gas drainage management plan, and establishing the process to audit the effectiveness of the gas drainage management system. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a management or supervisory role at worksites within:

- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify, analyse and evaluate gas drainage hazards, risks and needs | 1.1. Identify, evaluate and clarify *coal seam characteristics* and conditions which could lead to a requirement for gas drainage  
1.2. Identify and clarify the effects of gas drainage on *mine atmosphere*  
1.3. Identify the requirements for ventilation in relation to gas drainage  
1.4. Identify and clarify the impacts of water accumulation on gas drainage |
| 2. Identify, analyse and evaluate gas drainage control options and measures | 2.1. Identify and evaluate the types and advantages/disadvantages of gas drainage methods  
2.2. Identify and evaluate *hazards* relating to gas drainage  
2.3. Identify and evaluate the method, purpose and procedures for installation and use of mine monitoring systems with regards to gas drainage  
2.4. Identify methods to maximise the effectiveness of a gas drainage program |
| 3. Design and develop gas drainage management systems | 3.1. Access, interpret and clarify the legislative, and site requirements related to gas drainage systems  
3.2. Design and develop gas drainage systems to satisfy the operational conditions of the mine  
3.3. Design and develop the surface and underground infrastructure to minimise the *risk of hazards* in relation to gas drainage  
3.4. Design and develop monitoring and controls systems for the gas drainage management system |
| 4. Establish the gas drainage management plan | 4.1. Develop and establish *hazard* control procedures associated with gas drainage  
4.2. Establish *action* levels to minimise the *hazards* of gas drainage  
4.3. Develop and establish gas monitoring system installation, operation and maintenance procedures  
4.4. Develop and establish gas drainage system |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to establish and maintain the gas drainage management plan:

- apply legislative, organisation and site requirements and procedures for establishing and maintaining the gas drainage management plan
- access, interpret and apply technical information
- access and analyse archival and historical gas information related to the mine
- interpret and apply mathematical and scientific theorems / laws related to gas drainage
- access, interpret and apply geological reports
- perform gas drainage planning mathematical calculations
- access, evaluate and apply design criteria for gas drainage systems and devices
- interpret computer spreadsheets and modelling / simulations
- collect, collate and evaluate gas drainage data
- establish technical procedures relating to gas drainage
- conduct enquiries/investigations and prepare reports
- access, evaluate and apply data from monitoring systems and equipment
- operate hand held monitoring equipment
- apply risk management processes and techniques

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to establish and maintain the gas drainage management system:

- legislative and site requirements which may include those for gas drainage drilling, gas drainage installation and recovery, ventilation requirements, return airways gas levels, intake airway gas accumulated levels, gas control and distribution, environmental management, local government requirements, inspections and reporting
- the methods of gas drainage and their applications / limitations against the mine design, mine and panel ventilation systems, systems of mining and current and future mine development
- the impact of gas drainage on mining techniques, mine and panel design and production output
- the impact of the strata geology and coal seam characteristics on the gas drainage management plan, including coal seam gradient, moisture content, friability,
permeability, gas content, gas composition, the porous features of the coal seam, stresses and intrusions
- outburst mining monitoring procedures
- drilling options and related equipment and techniques, including directional drilling techniques
- hazard management processes and techniques
- content, composition and pressure
- the effects of the gas in the coal seam
- the effects of gas characteristics from roof
- the impacts of accumulation of coal dust after gas drainage has been completed
- pressure changes; causes, the impacts on the ventilation system, and the effects on gas drainage
- heat/humidity; the sources and factors which may impact on gas drainage and personnel
- mine fans; fan laws, fan types, performance characteristics, configurations, applications and limitations in association with the gas drainage management plan
- ventilation control devices; the types, purposes, design criteria and specifications, distribution / placement criteria and limitations in association with the gas drainage management plan
- ventilation control devices; the types, purposes, design criteria and specifications, distribution/placement criteria and limitations
- de-gassing; methods of control - including brattice, auxiliary fans, compressed air venturis, sales, hurdles, bleeders and purging
- fixed gas drainage monitoring systems types, characteristics, uses and limitations
- portable monitoring equipment for gas drainage purposes, types, characteristics, uses and limitations
- functions, capabilities, advantages, limitations and uses of gas drainage computer modelling and simulation techniques
- use of computer-based systems for mine environment and gas drainage analysis
- gas drainage management plan development requirements and processes
- gas drainage surveys; the types, frequency and method for conducting including pressure/quantity/temperature and gas
- processes and techniques for determining alarms and trigger points / levels
- audit and review processes and techniques
- site control documentation requirements
- emergency response and evacuation procedures
- general uses and applications of ventilation theory, including:
  - Atkinson's equation
  - methods of determining frictional resistance
  - gas laws, including Charles and Boyle
  - natural ventilation pressures
  - gas make
  - leakage
- determination of mine resistance curves
- regulator and equivalent orifice calculation
- determination of fan operating / duty points
- Kirchoff's laws
- mine operational procedures
- strata control systems and their effects on gas drainage
- mine and goaf ventilation systems
- underground water management principles and systems
- impacts of intersecting and intersected holes and hole design
- site environmental monitoring requirements
- legislative and mine reporting procedures
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>- knowledge of the requirements, procedures and instructions for establishing and maintaining the gas drainage management plan</td>
</tr>
<tr>
<td></td>
<td>- implementation of procedures and techniques for the safe, effective and efficient establishment and maintenance of the gas drainage management plan</td>
</tr>
<tr>
<td></td>
<td>- the identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>- the identification of viable options and the selection of gas drainage techniques that best meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>- working with others to undertake and complete the establishment and maintenance of the gas drainage management plan</td>
</tr>
<tr>
<td></td>
<td>- consistent successful establishment and maintenance of the gas drainage management plan</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
<td></td>
</tr>
<tr>
<td>Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites</td>
<td></td>
</tr>
</tbody>
</table>
may differ due to the site circumstances.

- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the establishment and maintenance of the gas drainage management plan
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of gas drainage techniques that best meet the required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and
<table>

</thead>
<tbody>
<tr>
<td>• provision of clear and timely required support and advice on the establishment and maintenance of the gas drainage management plan</td>
</tr>
</tbody>
</table>

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisational and site requirements and procedures |
|                                             | manufacturer's guidelines and specifications |
|                                             | Australian standards |
|                                             | Employment and workplace relations legislation |
|                                             | Equal Employment Opportunity and Disability Discrimination legislation |

| Coal seam characteristics may include: | inherent factors such as rank |
|                                         | petrology |
|                                         | moisture |
|                                         | particle size |
|                                         | seam gas make |
|                                         | pyrites |

*Or depositional factors such as:*

- seam thickness
- multi seams
- seam dip
- depth of cover
- cleats friability
- interaction of other coal seams and gas makes
- clay bands within the coal seam and molorite zones

| Mine atmosphere refers to the atmosphere in all areas in the general mine ventilation district and beyond into waste working and goafs in the mine. |

| Hazard is defined as: "a source of potential harm or a situation with a potential to cause loss" (definition from AS/NZS 4360:1999 Risk Management). |
| Hazards may include:                                                                 | • irrespirable atmosphere  
|                                                                                 | • noxious atmosphere  
|                                                                                 | • flammable or explosive mixtures  
|                                                                                 | • outbursts  
|                                                                                 | • induced outburst  
|                                                                                 | • gas under burst  
|                                                                                 | • location of drainage pipes  
|                                                                                 | • static electricity  
|                                                                                 | • gas leakage from and into gas pipelines |

| Risk is defined as: *the chance of something happening that will have an impact upon objectives. It is measured in terms of consequences and likelihood* (definition from AS/NZS 4360:1999 Risk Management). |

| Action (alarm or trigger) level is a generic term used to describe a level determined at the mine site at which action is initiated or a response made. |

| Audit is defined as: *a systematic examination against defined criteria to determine whether activities and related results conform to planned arrangement, and whether these arrangements are implemented effectively and are suitable to achieve the organisation's policy and objectives* (AS/NZS 4804: 2001). |

| Gas drainage management plans establish procedures for maintaining a safe environment including: | • hazard identification and quantification  
|                                                                                                   | • risk assessment  
|                                                                                                   | • authority and responsibility  
|                                                                                                   | • controls established to manage identified risks  
|                                                                                                   | • reporting and communication  
|                                                                                                   | • document control |

| Gas drainage management plan may include: | • procedures for gas drainage drilling program  
|                                           | • gas or geological anomaly detection  
|                                           | • mine atmosphere monitoring  
|                                           | • stimulation techniques  
|                                           | • goaf seals |
- reporting requirements
- auditing
- ventilation systems and usage
- mine plan
- action plan
- systems of mining
- response plans
- emergency procedures
- individual and group responsibilities
- training and education procedures

**Principles of mine design** may include:
- recovery
- reserve optimisation
- mining direction
- geological structures
- ventilation
- strata control
- mining method
- productivity
- environmental considerations and access

**Standard operating procedures** (SOP) are also known as safe working procedures, safe operating procedures and standard working procedures.

**Mine gases** may be seam gases or gases from introduced sources and may include but not be limited to:
- methane
- carbon dioxide
- carbon monoxide
- oxides of nitrogen
- hydrogen
- sulphur dioxide
- hydrogen sulphide
- hydrocarbons

**Ventilation systems** may include the use of:
- main mine fan
- auxiliary fans
- brattice
- regulators
- seals
- stoppings
- overcasts
- ventilation doors
- surface drainage boreholes
### Geological conditions may include:
- faults
- dykes
- intrusions
- strata deformities
- induced stresses
- depth of overlaying strata
- strength of immediate strata
- under and over the coal seam
- mining lease gas make

### Gas make characteristics may include:
- gas content
- gas pressure
- absorption
- desorption
- hydrostatic pressure
- strata moisture content
- permeability and porosity
- tectonic stress

### Gas drainage monitoring may include:
- continuous monitoring
- leakage monitoring (laser beam technology)
- portable (hand held) monitoring
- collection of bag samples
- pipeflow and pressure measurements
- gas chromatography
- ventilation measurements from relevant areas

### Gas drainage infrastructure may include:
- vacuum pumps
- pipes
- boreholes and stand pipes
- gas separators and casing
- surface installations
- gas drainage plant, including building
- valves
- hoses
- water pumps
- flame and lighting arresters
- power supply to bore holes
- cleaning equipment
- air compressors
- electricity and water services
- pressure gauges and hydration plants

### Gas management training
- mine workers
**RIIMCU603A Establish and maintain the gas drainage management plan**

**Date this document was generated:** 26 July 2014

| applies to: | • tradespeople  
| | • permanent employees  
| | • contractor  
| | • mine officials  
| | • other special requirements |

| **Alarm systems and action plans** | • gas concentration/make  
| | • combustion indicators  
| | • condition monitoring for fans (vibration/temperature/current failures)  
| | • ventilation devices  
| | • monitoring hardware  
| | • temperature alarms |

| **Procedures** required to support the gas drainage management plan may include those for: | • construction  
| | • action response  
| | • permit to work  
| | • condition monitoring  
| | • auditing  
| | • maintenance  
| | • document control  
| | • atmosphere monitoring  
| | • ventilation system control  
| | • communication systems  
| | • survey procedures  
| | • standard operating procedures  
| | • changes  
| | • training and recording/reporting |

| **Maintenance** of the gas drainage system may include inspection, servicing and repair. |

**Unit Sector(s)**
Coal Mining (Underground)

**Competency field**
Refer to Unit Sector(s).
Co-requisite units
Not applicable.
RIIMCU604A Establish and maintain the outburst management plan

Modification History
Not applicable.

Unit Descriptor
This unit covers the establishment and maintenance of outburst management plans in the coal industry. It includes identifying, analysing and evaluating hazards associated with mining in outburst prone areas, identifying, analysing and evaluating outburst potential and control options and measures, designing and developing outburst management systems, establishing the outburst management plan, planning and preparing for the implementation of the outburst management plan, and establishing the process to audit the effectiveness of the outburst management plan. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a management or supervisory role at worksites within:

- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify, analyse and evaluate hazards associated with mining in outburst prone areas | 1.1. Identify, evaluate and clarify **coal seam characteristics** and conditions which could lead to outburst conditions  
1.2. Identify, analyse and evaluate **hazards** and **risks** relating to outburst  
1.3. Identify, analyse and evaluate **geological and geotechnical** conditions which may contribute to outburst prone conditions  
1.4. Identify, analyse and evaluate the effects of outburst on **mine atmosphere**, personnel, **services and infrastructure**  
1.5. Identify the requirements for personnel, **services and infrastructure** protection in relation to outburst |
| 2. Identify, analyse and evaluate outburst potential and control options and measures | 2.1. Identify, analyse and evaluate the types and advantages/disadvantages of outburst sampling and analytical process options  
2.2. Identify, analyse and evaluate **geological and physical conditions** of the seam and surrounding strata  
2.3. Identify, analyse and evaluate the types and advantages/disadvantages of outburst control methods  
2.4. Identify, analyse and evaluate the methods, purposes and capabilities of **monitoring** systems with regard to outburst  
2.5. Identify, analyse and evaluate control options to address outburst **hazards**  
2.6. Identify and clarify the scope and impact of gas drainage on outburst prone areas  
2.7. Identify training needs |
| 3. Design and develop outburst management systems | 3.1. Incorporate drilling systems, including equipment, processes and techniques into the development of the outburst management system  
3.2. Incorporate core sampling and related analysis systems, processes and techniques into the development of the outburst management system  
3.3. Identify, select and measure the criteria for addressing **geological and geotechnical** |
| 3.4. Incorporate personnel safety measures and techniques into the outburst management system |
| 3.5. Incorporate services and infrastructure protection measures into the outburst management system |
| 3.6. Develop monitoring systems, including those for real-time information to minimise the risk of an outburst |
| 3.7. Design and develop controls systems for the outburst management system |

| 4. Establish the outburst management plan |
| 4.1. Develop and establish outburst drilling, sampling, collection, analysis and reporting procedures |
| 4.2. Establish actions and procedures required in response to gas threshold levels |
| 4.3. Establish geological and geotechnical hazard identification and response procedures |
| 4.4. Develop permit to mine procedures in accordance with legislative and site requirements |
| 4.5. Establish personnel safety measures and techniques |
| 4.6. Establish services and infrastructure protection measures to minimise damage caused by outburst |
| 4.7. Establish outburst information recording and reporting procedures |
| 4.8. Establish emergency response and evacuation plans |
| 4.9. Establish training requirements for the outburst management plan |

<p>| 5. Plan and prepare for the implementation of the outburst management plan |
| 5.1. Access, interpret and apply compliance documentation relevant to the work activity |
| 5.2. Identify, clarify and communicate to all personnel roles and responsibilities, as specified in the outburst management plan |
| 5.3. Identify, forecast, obtain and allocate/schedule resources required for the implementation of the outburst management plan |</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to establish and maintain the outburst management plan:

- apply legislative, organisation and site requirements and procedures for establishing and maintaining the outburst management plan
- access, interpret and apply technical information
- access and analyse archival and historical outburst information related to the mine
- interpret and apply mathematical and scientific theorems / laws related to outburst
- perform outburst planning mathematical calculations
- assess the risks and consequences of outburst
- develop procedures appropriate to mine operations for management of outburst
- access and apply design criteria for outburst management systems
- interpret computer spreadsheets and outburst modelling / simulations
- interpret outburst data
- conduct enquiries / investigations and prepare reports
- communicate effectively in the workplace
- access data from monitoring equipment
- operate hand held monitoring equipment
- establish outburst training requirement

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to establish and maintain the outburst management plan:

- legislative and site requirements for mining structures, including mine plans, ventilation, gas monitoring, strata support and safety management plans
- mine planning and design
- the systems of mining, including tunnels, drifts, stone drivage, shaft sinking, pillar extraction, partial extraction, punch mining and fault drivage
- stress analysis, including mining induced stress and topography
- sedimentology subsistence, water bearing strata, permeability of seam and strata, hydrology, physical property testing, caving characteristics, outburst, gas content and over and underlying strata
- systems of work, including bord and pillar, place changing, longwall, highwall, auger mining, pillar extraction, partial extraction and punch mining
- initiation techniques
- mining structure failure modes
- mining and general engineering principles relevant to the behaviour of excavations in rock and coal
- audit methodologies
- site document control requirements
- mine mapping of outburst zones, related geology and features
- the impact of differing geological features and conditions on outburst zones, including faults, dykes, intrusions and strata deformities
- mine gases; the types and their characteristics, sources, physiological effects and methods of detection
- de-gassing; methods of control, including brattice, auxiliary fans, compressed air venturis, sails, hurdles and bleeders
- fixed monitoring systems types, uses / limitations, design criteria, specifications and design processes
- portable monitoring equipment, types, uses / limitations
- the use of simulation techniques and applications relevant to outburst
- use of computer-based systems for real time gas monitoring
- mine outburst management plan development requirements and processes
- processes and techniques for determining alarms and trigger points / levels
- audit and review processes and techniques
- emergency response and evacuation procedures
- the effects of coal seam characteristics on outburst
- methods of control of outburst
- outburst indicators and ratios, including temperature changes, mylonite, coal colour changes, strata sound, crushed coal bands, stretch marks, difficulty of constructing ribs, seam gas pressure, changed cutting conditions
- risk management procedures
- applicable mine rescue procedures
- roles and responsibilities in accordance with outburst management plan
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>- knowledge of the requirements, procedures and instructions for establishing and maintaining the outburst management plan</td>
</tr>
<tr>
<td></td>
<td>- implementation of procedures and techniques for the safe, effective and efficient establishment and maintenance of the outburst management plan</td>
</tr>
<tr>
<td></td>
<td>- the identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>- the identification of viable options and the selection of outburst management techniques that best meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>- working with others to undertake and complete the establishment and maintenance of the outburst management plan</td>
</tr>
<tr>
<td></td>
<td>- consistent successful establishment and maintenance of the outburst management plan</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
<td></td>
</tr>
<tr>
<td>- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site</td>
<td></td>
</tr>
</tbody>
</table>
circumstances.

- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the establishment and maintenance of the outburst management plan
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of outburst management techniques that best meet the required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and
- complete the establishment and maintenance of the outburst management plan
  - provision of clear and timely required support and advice on the establishment and maintenance of the outburst management plan

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:
- legislative, organisational and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Hazard** is defined as: *a source of potential harm or a situation with a potential to cause loss* (definition from AS/NZS 4360:1999 Risk Management).

**Hazards** may include:
- irrespirable atmosphere
- noxious atmospheres
- flammable or explosive mixtures
- outburst
- geological structures

**Risk** is defined as: *the chance of something happening that will have an impact upon objectives. It is measured in terms of consequences and likelihood* (definition from AS/NZS 4360:1999 Risk Management).

**Coal seam characteristics** may include inherent factors such as:
- rank
- petrology
- moisture
- particle size
- seam gas
- pyrites

*Or depositional factors such as:*
- seam thickness
- multi seams
<table>
<thead>
<tr>
<th><strong>Geological and geotechnical information</strong> includes that related to, but not limited to:</th>
<th><strong>Geological and physical conditions</strong> of the seam and surrounding strata which may contribute to outburst potential may include:</th>

### Principles of Mine Design

**Include:**

- recovery
- reserve optimisation
- mining direction
- geological structures
- ventilation
- strata control
- mining method
- productivity
- environmental considerations
- access

### Standard Operating Procedures

(SOP) are also known as safe working procedures, safe operating procedures and standard working procedures.

### Mine site historical information

**May include:**

- sedimentology aspects of the mine-site relating to subsidence
- outburst
- gas content and composition
| **Mine gases** may be seam gases or gases from introduced sources and may include but not be limited to: | • roof and floor technical data  
• over and underlying strata  
• water bearing strata  
• permeability of seam and strata  
• hydrology  
• physical property testing results  
• caving characteristics  
• ground stress behaviour  
• mine plans |
| --- | --- |
| **Mine gases** may be seam gases or gases from introduced sources and may include but not be limited to: | • methane  
• carbon dioxide  
• carbon monoxide  
• oxides of nitrogen  
• hydrogen  
• sulphur dioxide  
• hydrogen sulphide  
• hydrocarbons  
• combinations |
| **Ventilation structures** may include: | • stoppings  
• overcasts  
• regulators  
• preparation seals  
• fire doors  
• bulk heads  
• goaf seals  
• final seals  
• pressure chambers |
| **Geological conditions** may include: | • faults  
• dykes  
• intrusions  
• strata deformities  
• existing or induced stress or strain |
| **Mine atmosphere monitoring** may include: | • continuous monitoring  
• portable (hand held) monitoring  
• collection of bag samples  
• gas chromatography  
• ventilation measurements from all areas of the mine, including sealed areas and waste workings |
| **Monitoring** may include, but is not limited to: | • continuous monitoring  
• portable (hand held) monitoring
- core samples
- visual observation
- geological mapping
- audiometry
- borehole pressure readings

**Defects to mine structures** may include:
- deterioration of materials
- quality of construction
- effects of surrounding strata
- physical damage
- water damage

**Services and infrastructure** includes:
- pipes
- valves
- hoses
- pumps
- drainage plant
- flame arresters
- power supply to bore holes
- cleaning equipment
- all other plant and equipment
- ventilation

**Personnel safety measures** may include, but are not limited to:
- remote control mining
- alternative air supply
- limitation of numbers
- training
- physical barriers
- emergency equipment
- personal protective equipment (PPE)

**Unit Sector(s)**
Coal Mining (Underground)

**Competency field**
Refer to Unit Sector(s).

**Co-requisite units**
Not applicable.
RIIMCU605A Establish and maintain the inrush management plan

Modification History
Not applicable.

Unit Descriptor
This unit covers the establishment and maintenance of the inrush management plan in the coal industry. It includes identifying, analysing and evaluating potential sources, causes, hazards and effect associated with mine inrush, identifying, analysing and evaluating potential inrush controls, designing and developing inrush management systems, establishing the inrush management plan, planning and preparing for the implementation of the inrush management plan, and establishing the process to audit and review the effectiveness of the inrush management plan. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a management or supervisory role at worksites within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify, analyse and evaluate potential sources, causes, hazards and effects associated with mine inrush | 1.1. Identify the potential sources and effects of inrushes  
1.2. Analyse and evaluate mine site historical information for indications of inrush potential  
1.3. Identify, analyse and evaluate geological and physical conditions that contribute to inrush potential  
1.4. Identify, analyse and evaluate inrush hazards and risks  
1.5. Identify, analyse and evaluate the effects of inrush on mine operations and personnel |
| 2. Identify, analyse and evaluate potential inrush controls | 2.1. Identify, analyse and evaluate potential inrush controls  
2.2. Identify, analyse and evaluate inrush controls to deal with matters identified from the review of historical information  
2.3. Identify, analyse and evaluate inrush controls to deal with geological and physical conditions which may contribute to inrush  
2.4. Identify, analyse, evaluate and confirm the validity of mine plans and associated records  
2.5. Identify, analyse and evaluate the methods, purposes and capabilities of mine monitoring systems with regard to inrush |
| 3. Design and develop inrush management systems | 3.1. Access, interpret and apply compliance documentation relevant to the work activity  
3.2. Design and develop inrush controls for addressing inrush hazards for the inrush management system  
3.3. Determine personnel safety measures and techniques into the inrush management system  
3.4. Design and/or incorporate services and infrastructure protection measures into the inrush management system  
3.5. Design and develop mine monitoring requirements relating to inrush  
3.6. Integrate the system elements to complete |
| 4. Establish the inrush management plan | 4.1. Develop and establish **inrush hazard** identification, analysis and reporting procedures  
4.2. Establish **actions** and procedures required in response to inrush indicators  
4.3. Develop permit-to-mine procedures in accordance with legislative and site requirements  
4.4. Establish **personnel safety measures** and techniques  
4.5. Establish **services and infrastructure** protection measures to minimise damage caused by inrush  
4.6. Establish the monitoring, recording and reporting procedures  
4.7. Establish emergency response and evacuation plans  
4.8. Establish training requirements for the inrush management plan |
| --- | --- |
| 5. Plan and prepare for the implementation of the inrush management plan | 5.1. Identify and interpret the legislative and site requirements related to the inrush management plan  
5.2. Access, interpret and clarify the inrush management plan  
5.3. Identify, clarify and communicate to all personnel roles and responsibilities, as specified in the inrush management plan  
5.4. Identify, forecast, obtain and allocate/schedule resources required for the implementation of the inrush management plan  
5.5. Implement the inrush management plan training program  
5.6. Encourage, receive, review and, where appropriate, implement suggestions and recommendations for changes to inrush management plan implementation procedures |
| 6. Establish the process to audit and review the effectiveness of the inrush management plan | 6.1. **Audit** the inrush management system in accordance with legislative and site requirements  
6.2. **Audit** mine monitoring systems in accordance with legislative and site requirements |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to establish and maintain the inrush management plan:

- apply legislative, organisation and site requirements and procedures for establishing and maintaining the inrush management plan
- access, interpret and apply technical information
- access and analyse archival and historical water storage and inrush information related to the mine
- interpret and apply mathematical and scientific theorems/laws related to inrush
- perform inrush planning mathematical calculations
- assess the risks and consequences of inrush
- develop procedures appropriate to mine operations for prevention of inrush
- access and apply design criteria for inrush management systems
- interpret computer spreadsheets and inrush modelling/simulations
- conduct enquiries / investigations and prepare reports
- communicate effectively in the workplace
- access data from monitoring equipment
- operate hand held monitoring equipment
- establish inrush training requirement

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to establish and maintain the inrush management plan:

- legislative and site requirements for mining structures, including mine plans, ventilation, gas monitoring, strata support and safety management plans
- mine planning and design
- the systems of mining including tunnels, drifts, stone drivage, shaft sinking, pillar extraction, partial extraction, punch mining and fault drivage
- stress analysis, including mining induced stress and topography
- sedimentology subsistence, water bearing strata, permeability of seam and strata, hydrology, hydrogeology, physical property testing, caving characteristics, outburst, over and underlying strata
- systems of work, including bord and pillar, place changing, longwall, highwall, auger mining, pillar extraction, partial extraction and punch mining
- mining structure failure modes
- mining and general engineering principles relevant to the behaviour of excavations in rock and coal
- audit methodologies
- site document control requirements
- mine mapping of inrush zones, related geology and features
- the impact of differing geological features and conditions on inrush zones, including faults, dykes, intrusions and strata deformities
- fixed monitoring systems types, uses/limitations, design criteria, specifications and design processes
- portable monitoring equipment, types, uses/limitations
- the use of simulation techniques and applications relevant to inrush
- use of computer-based systems for real time monitoring
- mine inrush management plan development requirements and processes
- processes and techniques for determining alarms and trigger points/levels
- audit and review processes and techniques
- emergency response and evacuation procedures
- the effects of coal seam characteristics on inrush
- methods of control of inrush
- types of inrush control zones
- risk management procedures
- applicable mine rescue procedures
- roles and responsibilities in accordance with inrush management plan
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for establishing and maintaining the inrush management plan
- implementation of procedures and techniques for the safe, effective and efficient establishment and maintenance of the inrush management plan
- the identification of the relevant information and scope of the work required to meet the required outcomes
- the identification of viable options and the selection of inrush management techniques that best meet the required outcomes
- working with others to undertake and complete the establishment and maintenance of the inrush management plan
- consistent successful establishment and maintenance of the inrush management plan

**Context of and specific resources for assessment**

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites.
may differ due to the site circumstances.

- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the establishment and maintenance of the inrush management plan
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of inrush management techniques that best meet the required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the establishment and

**Legislative, and Site Requirements** may include:

- Legislation and regulations
- Relevant Australian standards
- Management plans
- Manager's rules
- OHS policy
- Code of practice
- Dams safety committee publications
- Manufacturer's instructions
- Safe working or job procedures (or equivalent)

**Inrush management system** establish criteria and procedures for maintaining a safe environment including:

- Hazard identification and quantification
- Risk assessment
- Authority and responsibility
- Controls established to manage identified risks
- Reporting and communication requirements
- Document control
- Audit and review
- Procedures for mine inrush monitoring
- Mine plan
- Action plans
- Response plans
- Emergency procedures
- Individual group responsibilities
- Training and education procedures

**Inrush prevention system** must be established in accordance with the NSW Coal Mines (Underground) Regulation 1999 - Division 8, Clause 40

Implementation of an inrush prevention system.

**Audit** is defined as: a systematic examination against defined criteria to determine whether activities and related results conform to planned arrangement, and whether these arrangements
are implemented effectively and are suitable to achieve the organisation's policy and objectives (AS/NZS 4804: 2001).

Unit Sector(s)
Coal Mining (Underground)

Competency field

Co-requisite units
Not applicable.
RIIMCU606A Establish and maintain the mining method and strata management systems

Modification History
Not applicable.

Unit Descriptor
This unit covers the establishment and maintenance of the mining method and strata management systems in the coal industry. It includes: identifying and evaluating the criteria to create and maintain a stable mining structure, identifying and evaluating geological and geotechnical information to establish a stable mining structure, identifying and evaluating mining engineering principles and practices, identifying, evaluating and determining the strata control systems, establishing the strata management plan, planning and preparing for the implementation of the mining method and strata management systems, and establishing the process to audit the effectiveness of the strata management system. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a management or supervisory role at worksites within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

| 1. Identify and evaluate the criteria to create and maintain a stable mining structure | 1.1. Access, interpret and apply **compliance documentation** relevant to the work activity  
1.2. Identify and record the necessary **resources** required to create and maintain a stable mining structure  
1.3. Identify and evaluate **historical** information relating to the mine site  
1.4. Identify, assess and record possible mining structure failure modes relevant to the mine site  
1.5. Determine the criteria for establishing the stability of mining structures  
1.6. Identify the hazards and analyse the **risks** associated with failures of mining structures  
1.7. Identify and assess the limitations and controls applying to design of stable mining structures |
| 2. Identify and evaluate geological and geotechnical information to establish a stable mining structure | 2.1. Identify and determine exploration techniques to gain information about **geological, hydrological and geotechnical** conditions  
2.2. Identify and evaluate geological, geotechnical and hydrological information  
2.3. Identify and evaluate strata gas information  
2.4. Identify and evaluate roof, seam and floor lithological and physical properties information  
2.5. Identify and evaluate **stress** regimes information |
| 3. Identify and evaluate mining engineering principles and practices | 3.1. Identify and evaluate mining system types and methods  
3.2. Identify potential layouts for stable mining structures from engineering analysis  
3.3. Identify and evaluate **mining constraints** impacting on the development of a stable mining structure  
3.4. Identify and evaluate equipment requirements, appropriate for the development and maintenance of a stable mining structure |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to establish and maintain the mining method and strata management systems:

- apply legislative, organisation and site requirements and procedures for establishing and maintaining the mining method and strata management systems
- access, interpret and apply technical information
- access, interpret and apply mine survey information
- access and analyse historical strata information related to the mine and failure mode of mine structures
- interpret and apply mathematical and scientific theorems/laws related to mining structures
- perform mathematical calculations
- interpret and apply design criteria for mining structures systems and devices
- collect, collate and interpret mining structures data
- prepare technical procedures relating to mining structures
- conduct enquiries/investigations and prepare reports
- communicate effectively in the workplace
- access data from monitoring systems and equipment
- operate hand held monitoring equipment
- analyse and report on training needs
- apply risk management processes and techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to establish and maintain the mining method and strata management systems:

- legislative and legislative requirements for mining structures, including mine plans, ventilation, gas monitoring, strata support and safety management plans
- mine planning and design
- the systems of mining, including tunnels, drifts, stone drivage, shift sinking, pillar extraction, partial extraction, punch mining, longwall mining (including installation and recovery), the use of breaker line supports and faults drivage
- stress analysis, including mining induced stress, vertical and horizontal stress tectonics
- sedimentology, including subsidence, water bearing strata, permeability of seam and strata, hydrology, physical property testing, caving characteristics, windblast,
outblast, gas content and over and underlying strata
• systems of work, including bord and pillar, place changing, longwall, highwall, auger mining, pillar extraction, partial extraction, the use of breaker line supports and punch mining
• mining structure failure modes
• exploration techniques
• geology, lithology and strata gas characteristics
• mining and general engineering principles relevant to the behaviour of excavations in rock
• ground support systems
• audit methodologies
• pillar design criteria
• pillar stress/strain/strength/ratios
• width/height ratios
• roof support design criteria
• Mohr's Circle
• Young's Modules
• Poisson's Ratio
• stress distribution diagrams
• factors of safety
• mine surveying
• mining of coal deposits
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
</table>
| Critical aspects for assessment and evidence required to demonstrate competency in this unit | • knowledge of the requirements, procedures and instructions for establishing and maintaining the mining method and strata management systems  
• implementation of procedures and techniques for the safe, effective and efficient establishment and maintenance of the mining method and strata management systems  
• the identification of the relevant information and scope of the work required to meet the required outcomes  
• the identification of viable options and the selection of mining method and strata management techniques that best meet the required outcomes  
• working with others to undertake and complete the establishment and maintenance of the mining method and strata management systems  
• consistent successful establishment and maintenance of the mining method and strata management system |

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.  
• Assessment of this competency requires typical resources normally used in a resources |

© Commonwealth of Australia, 2014
Establish and maintain the mining method and strata management systems.

Selection and use of resources for particular worksites may differ due to the site circumstances.

- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non-English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the establishment and maintenance of the mining method and strata management systems
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of mining method and strata management techniques that best meet the required outcomes
  - consistent achievement of required

Audit is defined as: a systematic examination against defined criteria to determine whether activities and related results conform to planned arrangement, and whether these arrangements are implemented effectively and are suitable to achieve the organisation's policy and objectives (AS/NZS 4804: 2001)

Mine design is the process of engineering analysis applied to the mining systems and sequences involved in mining.
| **Mine design** may include in whole or in part requirements relating to: | • mine plan  
• mining induced stress  
• ventilation  
• tunnels  
• sequencing  
• drifts  
• stone drivage  
• shaft sinking  
• pillar extraction  
• partial extraction  
• punch mining  
• modelling  
• seam grades  
• windblast  
• outburst  
• geology  
• gas drainage  
• fault management  
• multi-seams  
• fault drivage  
• spontaneous combustion  
• roof and floor technical data  
• overlying strata  
• subsidence and legislative  
• legislative requirements |

| **Hazard** is defined as: *a source of potential harm or a situation with a potential to cause loss* (definition from AS/NZS 4360:1999 Risk Management) | |

| **Standard operating procedures** (SOP) are also known as safe working procedures, safe operating procedures and standard working procedures. | |

| **Geological, hydrological and geotechnical** information may be related, but is not limited, to: | • subsidence  
• roof and floor technical data  
• gas composition and content  
• over and underlying strata  
• water bearing strata  
• permeability of seam and strata |
### Physical Properties
- Physical properties
- Caving characteristics
- Outburst and windblast
- Faults
- Intrusions
- Deformities

### Mine Gases
**Mine gases** may be seam gases or gases from other introduced sources and may include:
- Methane
- Carbon dioxide
- Carbon monoxide
- Oxides of nitrogen
- Hydrogen
- Sulphur dioxide
- Hydrogen sulphide
- Hydrocarbons
- Combinations

### Mining Constraints
**Mining constraints** may include, but are not limited to:
- Lease boundaries
- Stress regimes
- Seam thickness
- Seam gas characteristics
- Surface infrastructure and features
- Geological features
- Abandoned workings
- Adjacent mines

### Coal Seam Characteristics
**Coal seam characteristics** may include, but are not limited to:
- Rank
- Petrology
- Moisture
- Cleat
- Coal hardness
- Seam gas
- Friability
- Pyrites

*Or depositional factors such as:*
- Seam thickness
- Multiple and rider seams
- Seam dip
- Depth of cover

### Monitoring
**Monitoring** may include:
- Survey checks and measurements
- Instruments for measuring strata movement
- Observation of safe work procedures
- Instruments for measuring stress
- Visual observation
• instruments for measuring surface subsidence
• instruments for measuring water levels

Unit Sector(s)
Coal Mining (Underground)

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIMEX201A Suppress dust in open-cut environment

Modification History
Not applicable.

Unit Descriptor
This unit covers suppressing of dust in an open cut environment in the coal and metalliferous mining and extractive industries. It includes applying dust suppressant and minimising dust creation.

Application of the Unit
This unit is appropriate for those working in operational roles, at surface operations within:
- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to suppress dust in open cut environment:

- apply legislative, organisation and site requirements and procedures
- apply decision making techniques
- apply vehicle directions and signals
- apply equipment cleaning requirements and procedures
- apply equipment maintenance requirements and procedures
- apply equipment operating requirements and procedures
- apply instructions
- apply hazard identification procedures
- interpret plans, reports, maps, specifications
- apply records maintenance requirements
- apply safe work practices
- apply troubleshooting techniques
- wear protective equipment

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to suppress dust in open cut environment:

- emergency procedures
- environmental aspects
- equipment processes, technical capability and limitations
- equipment safety requirements
- geological and technical data (rock formation)
- maintenance procedures
- mine operation system
- OHS procedures
- plan terminology
- site procedures (operational and maintenance)
- site safety requirements
- sprinkler operation
- water truck operation
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Language issues.

- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to suppress dust in open cut environment

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisation and site requirements and procedures  
| | manufacturer's guidelines and specifications  
| | Australian standards  
| | codes of practice  
| | Employment and Workplace Relations legislation  
| | Equal Employment Opportunity and Disability Discrimination legislation  

| Dust suppression methods may include: | chemical  
| | equipment operating techniques  
| | vegetation  
| | sprinklers  
| | water truck sprays (staggered, continuous)  

| Environmental issues may include: | culturally-sensitive sites and artefacts  
| | drainage  
| | dust/emissions  
| | flora and fauna  
| | hazardous chemicals  
| | heritage legislation  
| | noise  
| | runoff  
| | spills  
| | water quality  

| Rehabilitation may include: | company environmental guidelines and processes  
| | dimension of site  
| | fertiliser  
| | flora and/or seeding requirements  
| | personnel requirements  
| | re-contouring plans  
| | survey information  
| | types of reticulation systems  
| | types of vehicles

RIIMEX202A Install open-cut mine ground support

Modification History
Not applicable.

Unit Descriptor
This unit covers installing open cut mine ground support in the metalliferous mining industry. It includes: organising for ground support installation; setting up and preparing for installation; assembling and installing ground support; and conducting housekeeping activities.

Application of the Unit
This unit covers the installation of ground support mechanisms to provide structural support to rock surface in the extractive process. It is appropriate for those working in operational roles, at open cut operations within:

- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Organise for ground support installation | 1.1. Access, interpret and apply *compliance documentation* relevant to installing open cut mine ground support  
1.2. Receive, interpret and clarify shift changeover details  
1.3. Conduct equipment *pre-operational checks* to ensure equipment is ready for operation  
1.4. Identify, manage and report *potential hazards and risks* according to work plan  
1.5. Select personal protective equipment appropriate for work activities  
1.6. Select appropriate type of *equipment* and ground support materials according to job type, *work plan* specifications and *site conditions*  
1.7. Identify, address and report environmental issues  
1.8. Communicate with other personnel using approved communication methods  
1.9. Adhere to *safe operating procedures* to ensure safety of personnel, plant and equipment |
| 2. Set up and prepare for installation | 2.1. Conduct work according to site procedures, and current relevant legislation, codes, regulations and standards  
2.2. Remove any surface soils and vegetations and expose bedrock  
2.3. Scale down loose material and make site safe  
2.4. Position drill at designated angle and according to *capacity of equipment*  
2.5. Position drill holes according to ground support design and ground support plan to maximise lamination of rock layers |
| 3. Assemble and install ground support | 3.1. Assemble anchors to full depth according to *ground support plan*  
3.2. Drill holes to specified diameter and depth in accordance with type of ground support and work plan specifications  
3.3. Install and *tension* anchors and bolts to |
3. Install **water suppression devices** minimizing water infiltration to ground supports

3.5. Check ground support periodically and adjust stressing where required to monitor creepage

| 4. Conduct housekeeping activities | 4.1. Clear area to conform to job requirements  
4.2. Clean equipment  
4.3. Clean and store attachments and other ancillary equipment  
4.4. Complete all required records and documentation accurately and promptly |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to install open cut mine ground support:

- apply legislative, organisation and site requirements and procedures
- diagnose problems/make decision
- apply drilling techniques
- use hand and power tools
- apply hazard identification procedures
- apply records maintenance requirements
- apply operation monitor techniques
- organise work tasks
- read plans and documents
- apply defect reporting requirements
- apply safe work practices
- work in a team
- apply troubleshooting techniques
- use communications equipment
- use computer systems

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to install open cut mine ground support:

- de-watering procedures and characteristics
- drilling procedures
- emergency procedures
- environmental and heritage procedures
- equipment safety requirements
- geological and technical data
- ground support characteristics and applications
- hazardous goods procedures and consequences of spills
- inspection procedures
- isolation procedures
- mine operational system
- night and day working procedures
- OHS procedures
- open cut procedures
- operational procedures and checks
- shutdown procedures
- site procedures
- site safety requirements
- start-up procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

|             | unsafe ground |
|             | unstable faces |
|             | vehicles |
### Equipment may include:
- ancillary equipment (generators, pumps, lights, compressors, cleaning equipment, power tools, hand tools)
- cutting implements
- drill rigs
- flags
- lifting and handling equipment (winch, crane, block and tackles)
- mesh
- pegs
- rope measuring tape
- signs
- support vehicles
- tapes
- witches hats

### Ground support and work plan may be verbal or written, and may include:
- access road plan
- equipment and resource allocations/requirements
- geological details
- mine site/site drawings

### Site conditions may include:
- amount of scale
- broken ground
- day and night
- location of water table
- slope of working surface
- stability of ground
- stable ground (compaction)
- wet and dry
- working over old underground workings and voids

### Safe operating procedures may include:
- adhering to all site procedures
- observing site speed limits
- working safely around other machines and personnel
- observing right of way in incline and decline
- wearing of seat belts
- using respiratory devices where appropriate
- hazard identification and recognition procedures
- awareness and access to escape ways
- emergency procedures
- observation of electrical and mechanical

RIIMEX203B Break oversize rock

Modification History
Not applicable.

Unit Descriptor
This unit covers the breaking of oversize rock in resources and infrastructure industries. It includes: planning and preparing, breaking rocks, and cleaning up the site.

Application of the Unit
This unit applies in all contexts to the breaking of oversize rock in extractive and processing environments without the use of explosives. It is appropriate for those working in operational roles, at worksites within:

- Civil construction
- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

3.2. Carry out operational maintenance, servicing, lubricating and housekeeping tasks  
3.3. Process records and reports |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct workboat/barge operations:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- access, interpret and apply technical information
- apply equipment records maintenance requirements
- apply diagnostic techniques
- use relevant hand tools
- apply procedures for the disposal of environmentally sensitive fluids and materials
- apply chemical and fuel safety measures
- work wearing personal protective equipment

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct workboat/barge operations:

- site hazard identification and response procedures
- site risk control procedures
- site and equipment health and safety procedures
- site environmental requirements and constraints
- site quality requirements
- site communication procedures
- site survey data
- site operational procedures
- workboat/barge pre-start, start-up, operating, mooring and shutdown procedures and techniques
- workboat/barge characteristics, technical capability and limitations
- site record keeping requirements
- site personal protective equipment requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second
language issues.

- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete workboat or barge operations

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>
<thead>
<tr>
<th>Relevant compliance documentation may include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• legislative, organisation and site requirements and procedures</td>
</tr>
<tr>
<td>• manufacturer's guidelines and specifications</td>
</tr>
<tr>
<td>• Australian standards</td>
</tr>
<tr>
<td>• codes of practice</td>
</tr>
<tr>
<td>• Employment and Workplace Relations legislation</td>
</tr>
<tr>
<td>• Equal Employment Opportunity and Disability Discrimination legislation</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Workboat and barges can be:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• in-board or out-board motor powered</td>
</tr>
<tr>
<td>• diesel or petrol powered</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Survey data may include relevant site-specific information in relation to:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• water depths</td>
</tr>
<tr>
<td>• location of underwater obstacles</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Work requirements may come from briefings, handovers, and work orders and may include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• nature and scope of tasks</td>
</tr>
<tr>
<td>• achievement targets</td>
</tr>
<tr>
<td>• operational conditions</td>
</tr>
<tr>
<td>• obtaining permits required</td>
</tr>
<tr>
<td>• site layout and out of bounds areas</td>
</tr>
<tr>
<td>• worksite inspection requirements</td>
</tr>
<tr>
<td>• lighting conditions</td>
</tr>
<tr>
<td>• plant or equipment defects</td>
</tr>
<tr>
<td>• hazards and potential hazards</td>
</tr>
<tr>
<td>• coordination requirements or issues</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Inspect and prepare work area may include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• identification of hazards</td>
</tr>
<tr>
<td>• selection and implementation of control measures for the hazards identified</td>
</tr>
<tr>
<td>• safeguarding site and non-site personnel by:</td>
</tr>
<tr>
<td>• erection of barricades and posting of signs</td>
</tr>
<tr>
<td>• selection of appropriate equipment to ensure personnel safety and protection</td>
</tr>
<tr>
<td>• determination of appropriate path of movement of the workboat/barge</td>
</tr>
<tr>
<td>• select and apply appropriate workboat/barge</td>
</tr>
<tr>
<td><strong>securing system</strong></td>
</tr>
<tr>
<td>---------------------</td>
</tr>
</tbody>
</table>
| **Coordination with others** may include with: | • other workboat/barge personnel  
• other vessel operators  
• fuel truck operators  
• mobile plant operators  
• processing plant operators  
• maintenance personnel |
| **Pre-start and start-up procedures** include: | • internal and external check of the workboat/barge  
• check and top up fluid levels (including fuel)  
• lubrication  
• inspection of attachments to ensure security and no defects  
• instrument and control lever checks  
• reporting defects and damage |
| **Mooring and shutdown procedures** include ensuring that: | • workboat/barge is secured as required by site procedures  
• attachments are rendered safe |
| **Operating techniques** may include: | • operating winches  
• loading and transferring fuel  
• observing site speed limits  
• working safely around:  
• overhead powerlines  
• other vessels and personnel |
| **Changing work conditions** may include variations in: | • changes in river or pond water level  
• weather conditions  
• day and night |
| **Hazardous and emergency situations** may include: | • powerlines  
• overhead services  
• broken anchor or mooring lines  
• collisions with other vessels  
• major leaks  
• flooding  
• storms and lightning  
• underwater obstacles  
• fuel spillages |
Unit Sector(s)
Materials Extraction

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIMEX301A Conduct Dredging Operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conducting of dredging operations in the metalliferous mining and extractive industries. It includes: the planning and preparation for operations; and carrying out the operation and post operational procedures for dredges.

Application of the Unit
Dredges can be: suction, cutter-suction, diesel or diesel-electric. This unit is appropriate for those working in a operational roles, at worksites within:
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>
</thead>
</table>

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the conducting of dredging operations  
1.2. Access, interpret and clarify *geological and survey data* required to complete the allocated work  
1.3. Obtain, interpret and clarify *work requirements* for the satisfactory completion of operations.  
1.4. *Inspect and prepare work area* in *coordination with others* to work requirements  
1.5. Prepare a work plan that effectively, efficiently and safely meets the work requirements |
| 2. Operate dredge | 2.1. Communicate with others at the site using approved communications methods and resolve coordination requirements prior to commencing and during work activities  
2.2. Carry out *pre-start, start-up, mooring and shutdown procedures*  
2.3. Relocate position and secure dredge for operation  
2.4. Select and modify the *operating technique* to appropriately meet *changing work conditions*.  
2.5. Conduct, control and monitor operations within the equipment limitations  
2.6. Act on or report monitoring systems and alarms  
2.7. Recognise and respond to *hazardous and emergency situations*  
2.8. Complete work in accordance with the agreed plan and outcomes and within the operating capacity of the allocated equipment |
| 3. Carry out post-operational procedures | 3.1. Inspect, fault find and report faults  
3.2. Carry out *operational maintenance*, servicing, lubricating and housekeeping tasks |
| 3.3. Process records and reports |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct dredging operations:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- access, interpret and apply technical information
- apply equipment records maintenance requirements
- apply diagnostic techniques
- use hand tools
- apply procedures for disposal of environmentally sensitive fluids and materials
- apply chemical and fuel safety measures
- work wearing personal protective equipment
- apply operations directing techniques
- apply hazard identification procedures
- apply hazardous goods handling requirements and procedures
- interpret ground conditions
- interpret documents, plans, reports, maps, specifications
- apply operations monitoring techniques
- organise work tasks
- apply defect reporting requirements
- apply safe work practices
- select and fit personal protective equipment
- work in a team
- apply troubleshooting techniques
- use communications equipment
- use computer systems

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct dredging operations:

- site hazard identification and response procedures
- site risk control procedures
- site and equipment health and safety procedures
- site environmental requirements and constraints
- site quality requirements
- site communication procedures
- site product characteristics
- site geological and survey data
- site operational procedures
- dredge pre-start, start-up, operating and shutdown procedures and techniques
- dredge characteristics, technical capability and limitations
- site record keeping requirements
- site personal protective equipment requirements
- anchoring procedures
- anchor move procedures
- dredge preparation procedures
- dredging clean-up procedures
- emergency procedures
- environmental and heritage procedures
- equipment processes, technical capability and limitations
- equipment safety requirements
- hazardous goods procedures and consequences of spills
- indicator readings
- isolation procedures
- ladder swing capability and limitations
- mine operational system
- monitoring procedures
- night and day working procedures
- OHS procedures
- open cut procedures - dredging
- operational procedures and checks
- shutdown procedures/start up procedures
- site procedures
- site safety requirements
- sounding procedures
- centre-line procedures
- dredge manoeuvring procedures
- plant move procedures
- retreat procedures
- side-line cable replacement procedures
- working face dangers
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for conducting dredging operations</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient conduct of dredging operations</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete dredging operations that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of dredging operations that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
</tr>
<tr>
<td></td>
<td>• Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.</td>
</tr>
<tr>
<td></td>
<td>• Aboriginal people and other people from a non English speaking background may have second language issues.</td>
</tr>
</tbody>
</table>
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete dredging operations

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>

</tbody>
</table>
| Changing work conditions may include variations in: | • overhead powerlines  
• other vessels and personnel |
| --- | --- |
| Hazardous and emergency situations may include: | • powerlines  
• overhead services  
• broken anchor or mooring lines  
• collisions with other vessels  
• major leaks  
• flooding  
• storms and lightning  
• electrical  
• noise |
| Operational maintenance may include: | • replacing cables |

**Unit Sector(s)**

Materials Extraction

**Competency field**

Refer to Unit Sector(s).

**Co-requisite units**

Not applicable.
RIIMEX302B Assess ground conditions

Modification History
Not applicable.

Unit Descriptor
This unit covers the assessing of ground conditions in the resources and infrastructure industries. It includes: preparing for entry to area to be assessed; inspecting and assessing ground conditions; and recording and reporting on ground conditions.

Application of the Unit
This unit applies to the assessment of underground and surface ground conditions for safe working before entry. It is appropriate for those working in operational roles, at worksites within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for entry to area to be assessed | 1.1. Access, interpret and apply *compliance documentation* relevant to the assessing of ground conditions  
1.2. Determine and confirm *ground* areas to be inspected and assessed  
1.3. Obtain *information* on ground condition of each area to provide an initial assessment  
1.4. Arrange *communications* methods with other workers  
1.5. Select *personal protective equipment* appropriate for work activities  
1.6. Select and obtain appropriate *support equipment* for ground assessment  
1.7. Identify, address and report *potential hazards*  
1.8. Ensure that adequate ventilation is flowing into the work area,  
1.9. Safely secure working area with barricades or advice to others working in or near the working site  
1.10. Ensure that area to be assessed is adequately illuminated |
| 2. Inspect and assess ground conditions | 2.1. Conduct visual inspection of work area to identify adverse conditions which could affect ground stability and safety. Where area is assessed as being stable, use *appropriate equipment/techniques* to confirm ground stability and remove loose material before continuing to next area, or commencing work  
2.2. Where area cannot be made safe or ground is assessed as unstable, barricade and install warning signs  
2.3. Continuously assess ground conditions during work activities |
| 3. Record and report ground conditions | 3.1. Record ground condition assessment results and action taken  
3.2. Report ground conditions and action taken to relevant personnel for follow-up action |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to assess ground conditions:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply technical and safety information
- communicate with and coordinate activities with others
- apply plant and equipment records keeping requirements
- apply environmental compliance requirements
- apply isolation procedures
- apply scale/bar down procedures

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to assess ground conditions:

- basic geology
- types of ground which are assessed
- unsafe ground conditions
- site preparation procedures
- washing down procedures and equipment
- ground inspection and assessment procedures
- communication procedures and methods
- worksite security methods and equipment
- site recording and reporting systems
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</tr>
<tr>
<td>industry-based electronic information such as stability monitoring systems</td>
</tr>
<tr>
<td>site-based geotechnical experts</td>
</tr>
</tbody>
</table>
**Communications** may include:

- hand signals
- direct communication
- verbal
- mine level plans
- notice boards

**Personal protective equipment** may include:

- gloves to be worn when barring
- sleeves to be rolled down
- safety lanyard if working near edge or in a man-platform

**Support equipment** for ground assessment may include:

- danger barricades and signage
- serviceable, effective spot light for high headings
- jumbo lights
- lights on loader with platform
- hoses with tails
- water services and manifolds
- torch or stope light for additional lighting
- in high headings or openings, a loader with man-platform and lights on
- ancillary equipment

**Potential hazards** may be from crushing by rock falls, and may be caused by:

- commencing scaling work from unsafe or unsupported ground
- other people approaching the work area and being allowed to enter un-scaled area
- rock as it falls or slides down a scaling bar
- barring down directly above self
- large spans of unsupported laminated material that falls
- having insecure footing and a 'bad' retreat
- not reading shears/ block joints and faults correctly to identify rock that can move
- not sounding and testing ground where different mineralisation and rock types meet
- non-bonding of rock types
- advancing into un-scaled areas without scaling the area first (having a quick look)
- failing to recognize that dust falling indicates large rocks moving that may fall
- shattering rock as it falls from the roof or face

**Adverse conditions** may include:

- fresh rock falls
- bellies and undercuts
- cracks and fissures
- discontinuities
- floor heave
- three or more discontinuities or cracks with opposite dips (crack angle running into rock) which may form a wedge, block or slab, which is not bolted or otherwise supported
- water seeping out of discontinuities that were previously dry
- stope pillars that are higher than they are wide
- signs of stress such as material that has flaked off walls and pillars
- rock bolt plates that have been flattened or are 'doming' in, instead of out (plates that are beginning to turn 'inside out')
- where the plate is split or the nut has pulled through the plate
- straps that are under tension bowing out under obvious load
- evidence that the rock bolt is taking load
- rock bolts, plates and straps, which have corroded
- timbers which are splitting, bending or have failing headboards
- concrete reinforcement that is cracking, flaking or fallen

**Appropriate equipment/techniques**

to confirm ground stability may include:

- varying length scaling bars fitted with centre rubber for rock deflection
- manual scaling
- hydro scaling
- mechanical scaling, for example using an excavator or similar fit-for-purpose machine

**Unit Sector(s)**

Materials Extraction

**Competency field**

Refer to Unit Sector(s).
Co-requisite units

</table>
| 1. Plan, prepare for and initiate pit operations tasks | 1.1. Access, interpret and apply *compliance documentation* relevant to the undertaking of pit operations  
1.2. Access and share with team members the *geological and survey data* required to complete the pit operations task.  
1.3. Access and share with team members the overall and the short term objectives of the site *pit plan*  
1.4. Identify, investigate and evaluate likely *hazards* involved in the extraction operation and activities that require appropriate controls to maintain safety whilst achieving production targets  
1.5. Prepare an *action plan*, in consultation with team members, which makes best use of the available resource and takes into account the requirements of the pit plan  
1.6. Acquire and make available the necessary *resources* for the safe, effective and efficient conduct of pit operations task  
1.7. Issue clear and timely *instructions* to team members and others involved for the safe, effective and efficient conduct in the pit operations tasks |
| 2. Monitor, adjust and report on execution of the pit plan | 2.1. Ensure safe, effective and efficient execution of pit operations tasks  
2.2. Monitor *pit plan performance* to ensure achievement of planned outcomes  
2.3. Initiate adjustments to work programs to take into account non-achievement of planned outcomes.  
2.4. Complete and submit reports as required by the pit plan and other relevant requirements and procedures  
2.5. Recommend changes to improve the safety, efficiency and effectiveness of the pit plan |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to apply pit plans:

- apply legislative, organisation and site requirements and procedures
- provide team leadership
- apply communication skills
- choose extraction and associated techniques
- choose and assign plant and equipment
- apply procedures to develop and administer work plans
- write reports

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to apply pit plans:

- site risk, statutory compliance, health, safety, environmental, quality and communication requirements and procedures
- pit plan
- team leadership techniques
- operational techniques required for execution of the plan
- relevant plant and equipment operations appreciation
- work planning techniques
- work monitoring methods
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to plan, prepare and apply the pit plan
    - provision of clear and timely instruction and supervision by the individual of those involved in the application of the pit plan

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation | legislative, organisation and site requirements and procedures |
| | manufacturer's guidelines and specifications |
| | Australian standards |
| | codes of practice |
| | Employment and Workplace Relations legislation |
| | Equal Employment Opportunity and Disability Discrimination legislation |

Geological data may include relevant site-specific information in relation to:

- rock type and characteristics
- faults and joints
- water tables or other water sources

Survey data may include relevant site-specific information in relation to:

- floor heights
- bench widths
- grades

Pit plan may include:

- limits of extraction area
- land clearing and overburden stripping and stockpiling
- raw feed extraction requirements (such as sequencing, face heights, bench widths)
- bank stability criteria and supervision requirements
- raw feed blending requirements
- access and in-pit road requirements (such as grades, widths, turning and passing areas)
- dewatering and water management requirements and procedures
- finished pit shape and face requirements
- rehabilitation and environmental works requirements (progressive and final)
- tailings deposition/treatment requirements and procedures
- roads maintenance requirements and procedures
- reporting and record requirements and
<table>

</thead>
</table>
| **Action plan** may include: | • extraction method  
• sequencing of activities  
• targets for the work group  
• materials transport  
• stockpiling  
• support services  
• waste dumping  
• measures to meet quality requirements |
| **Resources** may include: | • labour  
• materials  
• services  
• equipment |
| **Instructions may issued in briefings, handovers, and work orders** and may include: | • nature and scope of tasks  
• achievement targets  
• operational conditions  
• obtaining permits required  
• site layout  
• out of bounds areas  
• worksite inspection requirements  
• lighting conditions  
• plant or equipment defects  
• hazards and potential hazards  
• coordination requirements or issues |
| **Pit plan performance** critical aspects greatly depend on the type of mining and the activities being carried out by each work group. Some examples include: | • sequence of operations  
• interdependence of extraction and transport units  
• haul road, crusher and potential limiters  
• reliability of plant and recovery options  
• blasting timing size and interaction with other mining activities  
• in pit, waste dump and stockpile reserves, available storage space  
• potential bottlenecks in the production system  
• weather dependent activities  
• timing of maintenance activities and other stop events  
• time to completion of current step in site development  
• road maintenance |

| 1. Plan, prepare for and initiate operations | 1.1. Access, interpret, apply and share with team members *compliance documentation* relevant to conducting dredging operations  
1.2. Access and share with team members the *geological and survey data* required to complete the dredging operations  
1.3. Prepare an action plan, in consultation with team members, which makes best use of the available resource and takes into account the requirements of the *dredging plan*  
1.4. Acquire and make available the necessary *resources* for the safe, effective and efficient conduct of dredging operations  
1.5. Issue clear and timely *instructions* to team members and others involved for the safe, effective and efficient conduct in the dredging operations |
| 2. Monitor, adjust and report on execution of the operations | 2.1. Ensure safe, effective and efficient execution of tasks in accordance with the dredging plan  
2.2. Monitor dredging operations performance to ensure achievement of planned outcomes  
2.3. Initiate adjustments to work programs to take into account non-achievement of planned outcomes  
2.4. Complete and submit reports as required  
2.5. Recommend changes to improve the safety, efficiency and effectiveness of the dredging operations |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to supervise dredging operations:

- apply legislative, organisation and site requirements and procedures
- provide team leadership
- chose appropriate operational techniques
- chose and assign appropriate plant and equipment
- apply procedures for develop and administer work plans

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to supervise dredging operations:

- site risk, statutory compliance, health, safety, environmental, quality and communication requirements and procedures
- dredging operations plan
- team leadership techniques
- operational techniques required for execution of the plan
- plant and equipment capabilities
- work planning techniques
- work monitoring methods
Evidence Guide

RIIMEX403A Apply the principles of canal construction

Modification History
Not applicable.

Unit Descriptor
This unit covers applying the principles of canal construction in the civil construction industry. It includes: ensuring that the planning, preparing, initiating, monitoring, adjusting and reporting of canal construction tasks are carried out.

Application of the Unit
This unit is appropriate for those working in supervisory or technical specialist roles, within:

- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. |
| Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>

| 1. Ensure appropriate planning and preparation is carried out | 1.1. Access, interpret and apply **compliance documentation** relevant to undertaking **canal construction** tasks  
1.2. Access, interpret and clarify the **specific task information and requirements**  
1.3. Ensure a **job plan** is available which makes best use of the available resources and meets the task requirements |
| 2. Ensure appropriate initiation of tasks is carried out | 2.1. Confirm that the necessary **resources** are available for the safe, effective and efficient conduct of the task  
2.2. Ensure clear and timely **instructions** are communicated to **team members** and others involved, for the safe, effective and efficient conduct of the task  
2.3. **Set out** tasks as required for the effective completion of the task |
| 3. Oversee the execution of tasks | 3.1. **Monitor** task performance to ensure it achieves the **required outcomes**  
3.2. **Initiate** adjustments to work practice or job plan to ensure safe execution of work and achievement of required outcomes  
3.3. Ensure plant equipment and tools maintenance requirements are carried out and recorded |
| 4. Report on the execution of tasks | 4.1. Complete and submit reports as required  
4.2. Recommend changes to improve the safety, efficiency and effectiveness of the execution of canal construction tasks |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to apply the principles of canal construction:

- apply legislative, organisation and site requirements and procedures
- interpret project contract and specification requirements and procedures
- interpret project site soil and geological data
- identify soil and rock types
- interpret meteorological data
- identify drainage issues
- interpret material properties and test results
- interpret project site geotechnical data
- interpret project site hydrological data
- interpret project engineering survey information
- interpret project plans and drawings
- interpret project specifications
- prepare for and conduct briefings, toolbox and site meeting
- prepare short messages
- prepare and presenting of job reports
- prepare and maintaining of log books and diaries
- provide leadership
- apply performance monitoring skills
- apply set out requirements and procedures
- set up and use levelling devices
- establish construction offsets
- apply supervisory skills
- develop workplace relationships
- develop individuals and the team
- apply inspection requirements and procedures
- calculate quantities for the execution of canal construction tasks, including:
  - volumes
  - grades
  - percentages
  - areas
  - resource consumption figures
- provide recommendations for the improvement of the safe, effective and efficient execution of canal construction tasks
**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to apply the principles of canal construction:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- work zone traffic management requirements and procedures
- contract management requirements and procedures
- communication requirements and procedures
- administrative requirements and procedures
- plant and equipment capabilities and application
- plant, equipment and tools maintenance requirements and procedures
- operational techniques
- resource requirements and procedures
- activities scheduling requirements and procedures
- job plan drafting of and administration requirements and procedures
- reporting requirements and procedures
- workplace relationship requirements and procedures
- organisational, client and site operational requirements
- relationship between various areas of civil works
- team leadership techniques
- materials quality and delivery requirements and procedures
- mentoring techniques
- estimating principles
- canal construction sequencing
- canal construction and related activities' terminology
- set out requirements and procedures
- drainage requirements
- works planning techniques
- monitoring methods
- engineering survey principles
- slope management requirements and procedures

Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for the application of the design system | 1.1. Access, interpret and apply compliance documentation relevant to the stable mining  
1.2. Communicate and clarify work group and individual responsibilities and tasks  
1.3. Identify, obtain and allocate resources required for the application of the design system  
1.4. Identify and satisfy individual training needs through accessing the established design systems, programs and plans  
1.5. Access and interpret safe operating procedures  
1.6. Identify and interpret the risks associated with unstable mining structures |
| 2. Apply the design system | 2.1. Communicate, apply and monitor approved design system  
2.2. Communicate and apply primary, secondary and other support systems  
2.3. Identify and assess mining constraints impacting on the maintenance of a stable mining structure in accordance with the design system  
2.4. Install, monitor and assess ground support systems  
2.5. Identify and assess system failures  
2.6. Apply and monitor mining sequences in accordance with the design system  
2.7. Identify and assess virgin and induced stress control methods  
2.8. Apply emergency response and evacuation plans and procedures throughout the work and report, where appropriate  
2.9. Apply and monitor safe operating procedures throughout the work and report, where appropriate  
2.10. Contribute to systems audit and review requirements |
| 3. Apply monitoring and maintenance procedures | 3.1. Schedule and carry out inspection, repair and maintenance activities in accordance |
3.2. Record, report and review maintenance and monitoring requirements and activities with design systems
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to apply and monitor systems for stable mining:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply technical information
- access and analyse archival and historical mine management information related to the mine and failure mode of mine structures
- interpret and apply design criteria for mine management
- communicate effectively in the workplace
- apply operational procedures relating to mine management
- conduct and report on audits
- identify and evaluate geological and geotechnical information
- propose practical recommendations for identified key issues

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to apply and monitor systems for stable mining:

- legislative and statutory requirements for mining structures including mine plans, ventilation, gas monitoring, strata support and safety management plans
- the systems of mining including tunnels, drives, shaft sinking, pillar extraction, partial extraction, punch mining and fault drivage
- stress including mining induced stress, vertical and horizontal stress tectonics
- sedimentology including subsidence, water bearing strata, permeability of seam and strata, hydrology, physical property testing, caving characteristics, gas content, and over and underlying and adjacent rock formations
- systems of work including bord and pillar, place changing, rock casing, auger mining, pillar extraction, partial extension and punch mining
- mining structure failure modes
- exploration techniques
- geology and gas characteristics
- mining engineering principles
- ground support systems
- audit methodologies
- historical information
- identifying and clearly communicating key issues
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Aboriginal people and other people from a non English speaking background may have second language issues.

Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.

Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to plan, prepare, apply and monitor systems for stable mining
  - provision of clear and timely instruction and supervision by the individual of those involved in applying and monitoring systems for stable mining

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisation and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• codes of practice  
• Employment and Workplace Relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
| Resources may include: | • skilled personnel  
• rock mechanics underground supports and equipment  
• power water/gas drainage systems  
• budgetary requirements |
| Mine design is the process of engineering analysis applied to the systems and sequences involved in mining and may include: | • requirements relating to footwall and hanging wall competency  
• mine plant  
• mining induced stress  
• ventilation, tunnels  
• sequencing  
• drives  
• shaft sinking  
• pillar extraction  
• partial extraction  
• punch mining  
• modelling  
• ore grades  
• geology  
• fault management  
• multi-seams  
• fault drivage  
• roof and floor technical data  
• over and underlying strata  
• footwall and longwall subsidence  
• legislative and statutory requirements |
<table>
<thead>
<tr>
<th><strong>Risk is defined as:</strong></th>
<th>• the chance of something happening that will have an impact upon objectives. It is measured in terms of consequences and likelihood</th>
</tr>
</thead>
</table>
| **Mining systems may include:** | • bord and pillar  
• rock casing  
• outfill  
• overhand  
• underhand  
• place changing  
• auger mining  
• pillar extraction and extraction  
• partial extraction  
• punch mining  
• systems of entry |
| **Stable mining structure controls may include:** | • drive size  
• pillar sizes  
• depth of cover  
• underlying/overlying and adjacent rock formations  
• stress regimes  
• strata characteristics  
• water ingressions  
• systems of mining  
• direction |
| **Stress includes:** | • horizontal and vertical tectonic induced stress and mining induced stress |
| **Standard operating procedures (SOP) are also known as:** | • safe working procedures, safe operating procedures and standard working procedures |
| **Audit is:** | • the validation process to ensure the system, procedures and processes meet the established objectives and are implemented |

RIIMEX405A Apply and monitor systems and methods of surface coal mining

Modification History
Not applicable.

Unit Descriptor
This unit covers applying and monitoring the systems and methods of surface mining in coal mining operations. It includes: planning and preparing for monitoring the application of the mining system; monitoring and reporting mine development operation; monitoring waste management procedures; monitoring stockpile formation and reclaiming systems; and identifying and communicating hazards related to engineering maintenance procedures.

Application of the Unit
This unit is appropriate for those working in supervisory or technical specialist roles at surface operations, within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

| 5. Identify and communicate hazards related to engineering maintenance procedures | 5.1. Identify and control *hazards* relating to the inspection, repair and engineering maintenance activities |
|                                                                                       | 5.2. Monitor, report and review engineering maintenance activities |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to apply and monitor systems and methods of surface mining in coal mining operations:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply technical information
- apply operations planning procedures
- access and analyse archival and historical strata management information related to the mine and failure mode of mine structures
- interpret and monitor the application of design criteria for strata management
- communicate effectively in the work place
- apply operational procedures relating to strata management
- conduct and report on audits and inspections
- identify and evaluate geological and geotechnical information

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to apply and monitor systems and methods of surface mining in coal mining operations:

- legislative and statutory requirements for mining structures, including mine plans, mining methods and safety management plans
- the systems of mining
- interpret visual signs of stress, including mining induced stress, adverse joining, fault orientation, spoil characteristics
- sedimentology, including subsidence, water bearing strata, permeability of seam and strata, hydrology, physical property testing, over and underlying strata
- mining systems of work
- stable structure control and maintenance of excavation
- geology, hydrogeological, strata and strata gas characteristics
- coal seam characteristics which may include rank, petrology, moisture, cleat, coal hardness, seam gas, friability, pyrites, depositional factors such as seam formation, seam thickness, multiple and rider seams, fault folding, seam dip and depth of cover
- basic mechanical, electrical and pressurised fluid safety
- mining engineering principles
- audit inspection, communication and reporting methodologies
- job safety analysis
- mine site historical information
- people management

1.3. Identify and confirm the purpose of *transport systems* and *production equipment*  
1.4. Identify *hazards* associated with the installation and operation of transport systems and production equipment, evaluate *risks* and apply controls  
1.5. Identify individual *training* needs |
| 2. Apply and monitor the systems for the operation and maintenance of transport systems and production equipment | 2.1. Apply site and manufacturer's requirements to the installation of equipment and systems at the work site  
2.2. Apply commissioning procedures and report outcomes as per site requirements  
2.3. Assess the impacts of equipment and systems on work processes and record and report processes to meet equipment and site requirements  
2.4. Apply operational and maintenance programs and procedures  
2.5. Apply and monitor procedures for reviewing and modifying work processes  
2.6. Apply and monitor emergency response and evacuation plans and procedures  
2.7. Apply and monitor safe operating procedures throughout the work and report, where appropriate  
2.8. Participate in systems *audit* and review requirements |
| 3. Apply monitoring and maintenance procedures | 3.1. Schedule and carry out inspection, modification, repair and *maintenance* activities  
3.2. Record, report and review maintenance and monitoring requirements and activities |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to apply and monitor mine transport systems and production equipment:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply technical information
- access, interpret and apply briefings and handover details
- assess the risks and consequences attached to production and transport systems and equipment
- apply procedures appropriate to mine operations for management of production and transport systems and equipment
- plan and coordinate work
- apply procedures to identify training needs related to production and transport systems
- interpret and apply manufacturer's instructions
- apply maintenance and modification systems
- propose practical recommendations for identified key issues

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to apply and monitor mine transport systems and production equipment:

- legislative and site requirements and instructions including transport rules, no go zones for mobile equipment, maintenance schemes, SOP's, training, legislative testing on diesel vehicles, battery charging, underground fuel depots, conveyor belts
- mine operation procedures
- assessment of geological structures
- mine plans
- mine design relating to production and transport systems and equipment
- production and transport systems and equipment management requirements
- environmental monitoring requirements
- risk management procedures
- production and transport systems and equipment statutory inspection requirements
- lifting, towing and tying down procedures
- mine reporting procedures
- emergency response and evacuation planning processes and techniques
• maintenance and modification systems
• audit review processes and techniques
• production and transport equipment and systems; the types, uses, characteristics and limitations appropriate for safe operation at the mine site including braking systems
• isolation and safe control of energy sources including electrical, hydraulic, pneumatic, diesel
• safety design features of production and transport systems including traffic control devices
• standard operating procedures relating to production and transport equipment
• identifying operational hazards including noise, dust, lighting, ergonomics, remote control, physical clearance, confined space, visibility, seating, vibration and machine equipment and personal protection
• training systems
• computer based systems
• fire prevention techniques and fire fighting systems in relation of production and transport equipment
• identifying and clearly communicating key issues

</thead>
</table>
| 1. Prepare for development of the pit plan | 1.1. Access, interpret and apply *compliance documentation* relevant to the implementation of the pit plan  
1.2. Confirm the *geological*, *geotechnical*, *hydrogeotechnical*, *hydrological* and *survey data* relevant to the implementation of the pit plan  
1.3. Access, interpret and clarify the *pit development parameters and strategies* relevant to the implementation of the pit plan |
| 2. Prepare the pit plan | 2.1. Involve *internal and external stakeholders* in the planning process in a way that uses their contribution effectively and gains their support for the outcomes  
2.2. Develop and document the pit plan in accordance with the pit development parameters and strategies, the confirmed geological, geotechnical, hydrogeotechnical, hydrological and survey data  
2.3. Identify and acquire the *resource* required for the implementation of the pit plan  
2.4. Identify and arrange any training required for personnel involved in the pit operations  
2.5. Prepare and present the pit operations budget |
| 3. Initiate, monitor and adjust the implementation of the pit plan | 3.1. Issue and explain the pit plan to team members and others involved, for the safe, effective and efficient implementation of the pit development  
3.2. Provide timely ongoing support and advice to those implementing the pit plan  
3.3. Ensure records and reports are maintained and issued  
3.4. Monitor the pit implementation of the pit plan against pit development parameters, strategies, the budget  
3.5. Resolve anomalies in consultation with relevant stakeholders and issue appropriate instructions for adjustments to the plan |
and/or its implementation
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to implement pit plans:

- apply legislative, organisation and site requirements and procedures
- interpret and apply legislative and organisational requirements
- interpret and apply geological, hydrological and survey data
- provide team leadership
- apply procedures for selecting construction techniques
- apply procedures for selecting and assigning plant and equipment
- apply procedures for selecting development strategies
- apply procedures for selecting plant and equipment
- apply procedures to develop, initiate and administer work plans
- interpret and apply operational performance data

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to implement pit plans:

- site risk, statutory compliance, health, safety, environmental, quality and communication requirements and procedures
- geological data
- geotechnical
- hydrogeological data
- hydrological data
- survey data
- pit development strategic plan and its parameters and strategies
- pit development options and procedures
- operational techniques required for execution of the plan
- plant and equipment capabilities
- team leadership techniques
- work planning techniques/team leadership techniques
- consultative and coaching techniques
- work monitoring methods
- recording and reporting systems
- training systems
- emergency response and evacuation planning processes and techniques
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the implementation of pit plans
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of options that best meet the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial and documentary evidence of the candidate's:
  - working with others to undertake and complete the implementation of pit plans
  - provision of clear and timely required support and advice on the implementation of pit plans
| **Guidance information for assessment** | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and Workplace Relations;
- Equal Employment Opportunity, Disability Discrimination

**The pit plan is:**

- the operational plan for the execution of part of the pit development in accordance with the sites pit development requirements parameters and strategies. It may cover a single stage in a multi-staged development or a specific period of time, such as a budget period

**Pit plan** may include site procedures and/or work instructions regarding:

- risk management requirements
- occupational health, safety and environmental requirements
- marking out of extraction area and ensuring extraction is within these limits
- land clearing and overburden stripping and stockpiling requirements
- raw feed extraction requirements (such as sequencing, face heights, bench widths)
- raw feed blending requirements
- bank, face and slope stability criteria, risk management and supervision requirements
- access and in-pit road requirements (such as grades, widths, turning and passing areas)
- dewatering and water management requirements and procedures
- extraction area finished shape and face requirements
- rehabilitation and environmental works requirements (progressive and final)
- tailings deposition/treatment requirements and procedures

RIIMEX502A Implement systems and methods of mining

Modification History
Not applicable.

Unit Descriptor
This unit covers the implementing of systems and methods of mining in the metalliferous mining industry. It includes: planning and preparing for, implementing, auditing and reviewing the effectiveness of the design system.

Application of the Unit
This unit is appropriate for those working in a management or technical specialist role, within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. | 1. Plan and prepare for design systems | 1.1. Access, interpret and apply *compliance documentation* relevant to the implementing of systems and methods of mining  
1.2. Access, interpret and clarify the *design* system documentation  
1.3. Identify, clarify and communicate the roles and responsibilities, as specified in the design system  
1.4. Communicate and clarify work group, individual responsibilities and tasks  
1.5. Identify, forecast and record *resources* required for the implementation of the design system  
1.6. Implement the program to satisfy identified design system training requirements  
1.7. Identify and interpret the risks associated with unstable mining structures  
1.8. Access and interpret safe operating procedures |
| 2. Implement the design system | 2.1. Communicate primary, secondary and other support *systems* in accordance with the design system  
2.2. Implement and communicate mining sequences in accordance with the design system  
2.3. Obtain and allocate resources in accordance with the design system  
2.4. Implement the design system training requirement  
2.5. Implement a maintenance program in accordance with the design system  
2.6. Implement a monitoring system in accordance with the design system  
2.7. Implement reporting and recording systems in accordance with the design system  
2.8. Monitor implementation procedures to ensure compliance with the approved plan  
2.9. Implement emergency and evacuation plan and procedures |
| 3. Audit and review the effectiveness of the design system | 3.1. Audit *stable structure* controls for compliance with statutory and *design* system specifications  
3.2. Audit stable structure standards for compliance with statutory and site requirements  
3.3. Audit monitoring systems for compliance with statutory and design plan standards  
3.4. Audit recording and reporting systems for compliance with statutory and site requirements  
3.5. Audit system maintenance program and procedures for compliance with statutory and site requirements  
3.6. Audit the design training program for currency, relevance and compliance with the design plan  
3.7. Audit emergency and evacuation plan and procedures for compliance with site requirements |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to implement systems and methods of mining:

- apply legislative, organisation and site requirements and procedures
- apply exploration techniques
- apply mining constraints
- access, interpret and apply technical information relating to mine management
- access and analyse archival and historical mine management information related to the mine and failure mode of mine structures
- interpret and apply design criteria for mine management
- communicate effectively in the workplace
- apply procedures for preparing operating procedures relating to mine management
- conduct and report on audits
- identify and evaluate geological and geotechnical information

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to implement systems and methods of mining:

- legislative and statutory requirements for mining structures including mine plans, ventilation, gas monitoring, strata support and safety management plans
- the systems of mining including tunnels, drifts, stone drivage, shaft sinking, pillar extraction, partial extraction, punch mining and fault drivage
- stress including mining induced stress, vertical and horizontal stress tectonics
- sedimentology including subsidence, water bearing strata, permeability of seam and strata, hydrology, physical property testing, caving characteristics, windblast, gas content and over and underlying strata
- systems of work including bord and pillar, place changing, rock casing, open stopping, outfill, auger mining, pillar extraction, partial extraction and punch mining
- mining structure failure modes
- development, administration and review of procedures that apply to the system
- exploration techniques
- geology and mine gas characteristics
- stable mining systems design and functionality
- mining engineering principles
- lithology
- ground support systems
- audit methodologies
- mine site historical information
- limitations and controls
## Evidence Guide

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to manage dredging operations:

- apply legislative, organisation and site requirements and procedures
- interpret and apply legislative and organisational requirements
- interpret and apply geological and survey data
- provide team leadership
- apply procedures for selection of operational techniques
- apply procedures for selection and assignment of plant and equipment
- develop, initiate and administer work plans
- interpret and apply operational performance data

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to manage dredging operations:

- site risk, statutory compliance, health, safety, environmental, quality and communication requirements and procedures
- geological and survey data
- dredging parameters
- pit development options and procedures
- operational techniques required for execution of the plan
- plant and equipment capabilities
- work planning techniques
- team leadership techniques
- consultative and coaching techniques
- work monitoring methods
- recording and reporting systems
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for the management of dredging operations
- implementation of procedures and techniques for the safe, effective and efficient management of dredging operations
- the identification of the relevant information and scope of the work required to meet the required outcomes
- the identification of viable options and the selection of options that best meet the required outcomes
- working with others to undertake and complete dredging operations
- consistent successful management of dredging operations |

Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.

- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.

- Customisation of assessment and delivery
environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

RIIMEX601A Plan pit development

Modification History
Not applicable.

Unit Descriptor
This unit covers the planning of pit development in the coal and metalliferous mining and extractive industries. It includes: determining the design parameters and strategies; preparing pit development strategic plan; and initiating, monitoring and adjusting the implementation of the pit development.

Application of the Unit
This unit is appropriate for those working in a management or technical specialist roles, within:
- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

<table>

| 1. Determine pit design parameters and strategies | 1.1. Access, interpret and apply compliance documentation relevant to planning pit development  
1.2. Identify, interpret and clarify relevant site geological, geotechnical, hydrogeological, hydrological, and survey data and use it to development and document the pit design and development parameters and strategies  
1.3. Identify, interpret and clarify relevant site marketing information and use it to development and document pit design and development parameters and strategies |
| 2. Prepare pit development strategic plan | 2.1. Involve internal and external stakeholders in the planning process in a way that uses their contribution effectively and gains their support for the outcomes  
2.2. Design the final pit profile based on the production requirements, costs, geological and survey data and relevant compliance documentation  
2.3. Design staged development of the pit based taking into account all the relevant pit design and development parameters and strategies  
2.4. Prepare contingency plans that provide optional strategies in the event changed circumstances  
2.5. Select and document the extracting method or methods to be applied based on the resource characteristics, pit development parameters and economic considerations  
2.6. Determine and document resource implications of the plan and strategies for their acquisition and use  
2.7. Identify and arrange any training required for personnel involved in the pit development and operations  
2.8. Develop and document record and reporting requirements and procedures for the monitoring of the pit development and operations  
2.9. Prepare and present the pit development |
<table>
<thead>

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to plan pit development:

- apply legislative, organisation and site requirements and procedures
- interpret and apply:
  - legislative requirements
  - organisational requirements
  - geological, geotechnical, hydrogeological data
  - hydrological data
  - survey data
  - marketing data
- interpret approvals licence conditions
- apply processes to set targets
- apply procedures for incorporating extraction methods, material transportation and storage systems into pit plan
- provide team leadership
- apply procedures for selecting development strategies
- apply procedures for selecting plant and equipment
- apply procedures for developing and initiating development plans
- interpret and apply operational performance data

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to plan pit development:

- legislative and organisation risk, statutory compliance, health, safety, environmental, quality and communication requirements and procedures
- geological, geotechnical, hydrogeological data
- hydrological data
- survey data
- marketing information
- mining and transportation methods
- pit development parameters
- pit development options and procedures
- consultative and coaching techniques
- team leadership techniques
- operational techniques required for execution of the plan
- plant and equipment capabilities
- work planning techniques
- recording and reporting systems
- work monitoring methods
- training systems
- emergency response and evacuation planning processes and techniques
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>

</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the planning of pit development</td>
</tr>
<tr>
<td></td>
<td>• implementation of procedures and techniques for the safe, effective and efficient completion of pit development plans</td>
</tr>
<tr>
<td></td>
<td>• the identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• the identification of viable options and the selection of pit development options that best meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the planning and implementation of pit development</td>
</tr>
<tr>
<td></td>
<td>• consistent and timely completion of pit development plans and their implementation</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery
environment to sensitively accommodate cultural diversity.

- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required
  - identification of viable options and the selection of pit development options that best meet the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial and documentary evidence of the candidate's:
  - working with others to undertake and complete pit development plans
  - consistent and timely gaining of approval of pit development plans
  - provision of clear, timely required support and advice on the implementation of pit development plans
| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

- legislative, organisation and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- codes of practice
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Geological data

- limits of the deposit
- coal quality variations
- rock (or other resource) types and characteristics
- ore, coal, overburden, inter seam thickness/properties
- faults and joints
- water tables or other water sources
- partings or inter seams

### Geotechnical data

- material strengths
- weak planes
- stresses
- rock mass strength
- failure mode analysis

### Hydrogeological data

- groundwater
- artesian water

### Hydrological data

- rainfall
- surface water
- catchment areas
- runoff characteristics
- springs
- existing streams, bores and dams

### Survey data

- site and neighbouring land form
- site and neighbouring boundaries and structures

RIIMEX602A Establish and maintain surface mining ground control and slope stability systems

Modification History
Not applicable.

Unit Descriptor
This unit covers the establishment and maintenance of surface mining ground control and slope stability systems in the coal and metalliferous mining and extractive industries. It includes identifying and evaluating: the criteria to create and maintain ground control and slope stability, geological and geotechnical information to establish ground control and slope stability, mining engineering methods, and control options; establishing the ground control and slope stability system; and auditing and review the effectiveness of the ground control and slope stability system.

Application of the Unit
This unit is appropriate for those working in a management or technical specialist roles, within:

- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify and evaluate the criteria | 1.1. Access, interpret and apply *compliance documentation* relevant to surface mining ground control and slope stability  
1.2. Identify, access and interpret mine survey data and *historical information* relating to the mine site  
1.3. If required identify the necessary *resources* required to assess ground control and slope stability issues  
1.4. Review actual and predicted ground control and slope stability performance in the mine  
1.5. Establish the criteria for establishing ground control and slope stability to acceptable performance levels  
1.6. Assess *risks*, determine acceptable levels of risk and identify critical issues related to ground control and stability systems in the mine |
| 2. Identify and evaluate geological and geotechnical information | 2.1. Identify all relevant geological, *geotechnical, hydrogeological data*  
2.2. Arrange further exploration, monitoring, sampling or testing to assist assessment of ground control and slope stability issues  
2.3. Assess potential ground movement and slope instability situations  
2.4. Identify and evaluate overburden and inter-seam characteristics and physical properties  
2.5. Where appropriate identify and evaluate *stress regimes*, blast vibration, seismic activity etc |
| 3. Identify and evaluate mining engineering methods | 3.1. Evaluate mining system types and methods impact on ground control and slope stability  
3.2. Identify potential layouts to improve ground control and slope stability from engineering analysis  
3.3. Identify and evaluate mining constraints impacting on the development of ground control and slope stability options  
3.4. Identify and evaluate equipment requirements, appropriate for the |
| 4. Identify and evaluate control options | 4.1. Identify water control methods to improve ground control or slope stability  
4.2. Identify and evaluate ground support systems or methods of mining to provide appropriate ground control and slope stability  
4.3. Identify and evaluate ground support installation, monitoring and assessment systems  
4.4. Identify and evaluate management controls should unacceptable ground movement or slope instability occur |
|------------------------------------------|----------------------------------------------------------------------------------|
| 5. Establish the ground control and slope stability system | 5.1. Establish exploration programs identifying geological features and characteristics impacting on ground control and slope stability  
5.2. Establish methods of safe access and egress.  
5.3. Establish systems and sequences of safe mining  
5.4. Establish monitoring systems of ground movement and slope instability to warn, control operations and record events.  
5.5. Establish a program, including systems and procedures to satisfy identified training requirements  
5.6. Establish emergency response and evacuation plans and procedures in accordance with site requirements  
5.7. Establish safe operating procedures and ensure incorporation into site documentation |
| 6. Audit and review the effectiveness of the system | 6.1. Monitor ground movement and slope stability measurements against defined acceptable standards for compliance with statutory and site requirements  
6.2. Audit emergency response and evacuation plans and procedures for compliance with site requirements  
6.3. Identify, assess and incorporate future site mining requirements into the planning procedures to maintain appropriate standard |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to establish and maintain surface mining ground control and slope stability systems:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply technical information
- access, interpret and apply mine survey information
- access and analyse archival and historical failure information related to the mine
- interpret and apply mathematical and scientific theorems/laws related to ground control and slope stability
- perform mathematical calculations
- interpret and apply design criteria for ground control and slope stability systems
- interpret computer spreadsheets and mining systems modelling/simulations
- collect, collate and interpret mining data
- apply procedures for preparing technical procedures
- apply procedures for conducting enquiries/investigations and preparing reports
- apply effective communications
- access and interpret data from monitoring systems and equipment
- analyse and report on ground control and slope stability system training needs
- apply risk management processes and techniques

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to establish and maintain surface mining ground control and slope stability systems:

- audit methodologies
- exploration techniques
- factors of safety
- ground support methods and systems
- legislative and statutory requirements for mining structures including mine plans, ground support and safety management systems
- mine planning and design
- mine surveying
- mining and general engineering principles
- mining structure failure modes
- rock types and characteristics
- slope stability criteria
- stress analysis including mining induced stress, vertical and horizontal stress tectonics
- systems of work
- the systems of mining including ore body development
- training systems
- emergency response and evacuation planning processes and techniques
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- codes of practice
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Mine site historical information

- existence of previous workings within the mine
- hydrology
- over and underlying rock types
- permeability of rocks and faults
- physical property testing results of rock, overburden, underburden materials
- seismic activity
- sedimentology aspects of the mine site relating to subsidence
- fissures and water sources
- water pumped from mine

### Resources

- skilled personnel
- bolts, cable and grout
- face drilling equipment
- power systems
- mine services
- special application equipment
- budgetary requirements
- geologists, hydrogeologists, geotechnicians, mine planners

### Risk

- the chance of something happening that will have an impact upon objectives. It is measured in terms of consequences and likelihood

### Geological and hydrogeological information

- direction and competency of faults
- joints, cleats or other fractures
| to: | • induced collapse  
• intrusions and deformities  
• over and underlying rock types, inter-seams  
• permeability of rocks and faults  
• physical properties of all materials in ground, dump or slope  
• subsidence  
• fissures and water sources  
• weak zones within operating faces, permanent batters, dumping slopes |
|---|---|
| Stress includes: | • horizontal and vertical tectonic induced stress  
• mining induced stress  
• primary and secondary stress fields |
| Safe operating procedures are also known as: | • safe working procedures, standard operating procedures (SOP) and standard working procedures |
| Audit is defined as: | • a systematic examination against defined criteria to determine whether activities and related results conform to planned arrangement, and whether these arrangements are implemented effectively and are suitable to achieve the organisation's policy and objectives |

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply technical information
- access, interpret and apply mine survey information
- access and analyse archival and historical failure information related to the mine
- interpret and apply mathematical and scientific theorems/laws related to stable mining systems
- perform mathematical calculations
- interpret and apply design criteria for stable mining systems
- interpret computer spreadsheets and stable mining systems modelling/simulations
- collect, collate and interpret mining data
- apply procedures for preparing technical procedures
- apply procedures for conducting enquiries/investigations and preparing reports
- apply effective communications
- access data from monitoring systems and equipment
- analyse and report on stable mining systems training needs
- apply risk management processes and techniques

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to establish and maintain ground control and stable mining systems in underground metalliferous mines:

- legislative and statutory requirements for mining structures including mine plans, ground support and safety management systems
- mine planning and design
- the systems of mining including drives, cross-cuts, rises, winzes, declines, inclines, shafts and ore body development
- stress analysis including mining induced stress, vertical and horizontal stress tectonics
- rock types and characteristics including subsidence, faults and fissures, permeability of rock types, hydrology, physical property testing, caving characteristics, windblast and hanging wall and foot wall conditions
- systems of work including mining and extraction such as pillar recovery and the use of various types of fill material
- mining structure failure modes
- exploration techniques
- mining and general engineering principles relevant to the behaviour of excavations in rock
- ground support methods and systems
- audit methodologies
- pillar design criteria:
  - pillar stress/strain/strength/ratios
  - width/height ratios
  - roof support design criteria
  - Mohr's Circle
  - Young's Modulus
  - Poisson's Ratio
- stress distribution diagrams
- factors of safety
- mine surveying
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the establishing and maintaining of ground control and stable mining systems in underground metalliferous mines</td>
</tr>
<tr>
<td></td>
<td>• implementation of procedures and techniques for the safe, effective and efficient establishing and maintenance of ground control and stable mining systems in underground metalliferous mines</td>
</tr>
<tr>
<td></td>
<td>• the identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• the identification of viable program options and the selection of systems that best meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• working with others to establish and maintain ground control and stable mining systems in underground metalliferous mines</td>
</tr>
<tr>
<td></td>
<td>• consistent and timely establishing and maintenance of ground control and stable mining systems in underground metalliferous mines</td>
</tr>
</tbody>
</table>

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
<table>
<thead>
<tr>
<th>Method of assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:</td>
</tr>
<tr>
<td>• written and/or oral assessment of the candidate's required knowledge</td>
</tr>
<tr>
<td>• observed, documented and/or first hand testimonial evidence of the candidate's:</td>
</tr>
<tr>
<td>• implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes</td>
</tr>
<tr>
<td>• identification of the relevant information and scope of the work required</td>
</tr>
<tr>
<td>• identification of viable options and the selection of systems that best meet the required outcomes</td>
</tr>
<tr>
<td>• consistently achieving the required outcomes</td>
</tr>
<tr>
<td>• first hand testimonial and documentary evidence of the candidate's:</td>
</tr>
</tbody>
</table>

- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.
<table>
<thead>
<tr>
<th><strong>Guidance information for assessment</strong></th>
<th>Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.</th>
</tr>
</thead>
</table>

- working with others to establish and maintain ground control and stable mining systems in underground metalliferous mines
- consistent and timely gaining of approval of ground control and stable mining systems in underground metalliferous mines
- provision of clear, timely required support and advice on the implementation of ground control and stable mining systems in underground metalliferous mines
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation | legislative, organisation and site requirements and procedures  
|                                 | manufacturer's guidelines and specifications  
|                                 | Australian standards  
|                                 | codes of practice  
|                                 | Employment and Workplace Relations legislation  
|                                 | Equal Employment Opportunity and Disability Discrimination legislation  
| Resources may include:          | skilled personnel  
|                                 | bolts, cable and grout  
|                                 | face drilling equipment  
|                                 | power systems  
|                                 | mine services  
|                                 | special application equipment  
|                                 | budgetary requirements  
| Stable mining structure controls include: | mine opening dimensions  
|                                 | pillar sizes  
|                                 | influences of stresses and depth  
|                                 | strength of rock types  
|                                 | stress regimes and base characteristics  
|                                 | rock characteristics  
|                                 | competency of fill  
|                                 | system of mining  
|                                 | sequence of mining  
|                                 | competency of ground support  
|                                 | direction of mining  
|                                 | stress shadow area  
|                                 | faults and fissures  
| Mine site historical information may include: | caving characteristics  
|                                 | existence of previous workings within the mine  
|                                 | hanging wall and footwall data  
|                                 | hydrology

Co-requisite units
Not applicable.
RIIMEX604A Establish and maintain surface product haulage and transport systems

Modification History
Not applicable.

Unit Descriptor
This unit covers establishing and maintaining surface product haulage and transport systems in coal and metalliferous mining and extractive industries surface. It includes: developing the systems and selecting equipment; establishing installation and commissioning procedures, systems for the operation and maintenance of the systems and equipment, and establishing systems for audit and review of the systems and equipment.

Application of the Unit
This unit is appropriate for those working in a management or technical specialist roles, within:
- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

</table>
| **1. Develop the systems** | 1.1. Access, interpret and apply *compliance documentation* relevant to product haulage and transport systems  
1.2. Identify the requirements for, and purpose of product haulage and transport systems in accordance with the system of mining or extraction  
1.3. Identify systems options from an analysis of all relevant technical, operational and financial information  
1.4. Develop a *specification* for the system from a comprehensive analysis of site needs  
1.5. Select preferred systems options on the basis of performance against criteria |
| **2. Select equipment for the systems** | 2.1. Identify the requirements for and purpose of product haulage and transport equipment against systems requirements  
2.2. Conduct a detailed scoping of the work requirement and develop key selection criteria, including *hazard* identification and *risk* analysis  
2.3. Develop a specification for the required product haulage and/or transport equipment  
2.4. Select the preferred equipment solutions on the basis of performance against criteria |
| **3. Establish installation and commissioning procedures** | 3.1. Establish procedures to identify hazards and analyse and evaluate risks associated with the installation of product haulage and transport systems and equipment  
3.2. Develop and establish procedures for integrating new and existing site product haulage and transport systems and processes  
3.3. Develop safe operating procedures and rules from a detailed analysis of legislative and work site requirements  
3.4. Develop and establish product haulage and transport systems and equipment installation and commissioning procedures  
3.5. Establish a program, including systems and procedures, to satisfy identified product |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to establish surface product haulage and transport systems:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply:
  - technical information
- provide briefings and handover details
- assess the risks and consequences attached to product haulage and transport systems and equipment
- apply procedures for developing systems and equipment management procedures
- apply procedures for planning and coordinating work
- identify training needs related to product haulage and transport systems
- interpret and apply manufacturer’s instructions
- apply procedures for conducting maintenance surveys

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to establish surface product haulage and transport systems:

- audit review processes and techniques
- computer based systems
- emergency response and evacuation planning processes and techniques
- fire fighting systems and precaution rules
- geological structures
- legislative and statutory requirements and instructions including transport rules, maintenance schemes, standard operating procedures, training, battery charging, positioning of fuel depots, conveyor belts
- maintenance surveys
- mine design relating to product haulage and transport systems and equipment
- site operation procedures
- site plans
- site reporting procedures
- power sources including electrical, hydraulic, pneumatic, diesel
- product haulage and transport systems and equipment statutory inspection requirements
• product haulage and transport systems equipment management requirements
• product haulage and transport equipment and systems; the types, uses, characteristics and limitations appropriate for safe operation at the site
• risk management procedures
• safety design features of product haulage and transport systems
• site environmental monitoring requirements
• specification design criteria including noise, dust, lighting, ergonomics, remote control, physical clearance, confined space, visibility, seating vibration and machine equipment and personal protection
• stores system
• training and assessment systems
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those...
required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular work sites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate’s required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate’s:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required
  - identification of viable options and the selection of options that best meet the required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial and documentary evidence of the candidate’s:
    - working with others to establish and maintain surface product haulage and transport systems
    - consistent and timely gaining of approval of

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- codes of practice
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Transport systems** include capacities for personnel, equipment/materials and product and may include:

- wheeled, including:
  - rubber tyred man transport
  - multipurpose vehicles
  - forklifts
  - front end loader
  - skid steer loader
- railed, including:
  - locomotives (electric/diesel)
  - rolling stock
  - skidded
- water borne
- pipeline, including:
  - batching stations
  - dewatering systems
  - water reticulation pumping station
- conveyor system, including:
  - conveyor belts
  - drive heads
  - tail ends transfer points
  - surge bins
  - fabricated bins

**Specifications** may include:

- performance requirements
- costs
- dimensions
| **Hazards** are: | • a source of potential harm or a situation with a potential to cause loss |
| **Risk** is: | • the chance of something happening that will have an impact upon objectives. It is measured in terms of consequences and likelihood. |
| **Maintenance** may be divided into: | • predictive  
• preventive  
• breakdown |
| **Planning** may include: | • interpreting and communicating information  
• business/performance plans  
• location  
• tender specifications  
• resources  
• statutory/legal/organisational requirements and control  
• resource parameters  
• best practice  
• technical standards established by industry and/or enterprise  
• planning approvals  
• surveying  
• infrastructure/technology requirements and would typically incorporate the following specifications:  
• products  
• production rate  
• recyclable materials  
• hours per week of operation  
• waste and stockpiles  
• water management  
• transportation systems  
• safety and health/environmental  
• all weather dust and noise levels/controls  
• access/haul roads |
| **Site documentation** and training policy may include: | • statutory and legislative requirements  
• management plans and procedures |
| **Safety standards** may be | • legislation and regulations  
• relevant international/Australian standards |
| contained in: | management plans  
|             | health and safety policy  
|             | code of practice  
|             | industry guidelines  
|             | approved standards  
|             | manufacturer's instructions  
|             | standard operational procedures  
|             | job instructions (or equivalent) |

| Audit mine is defined as: | a systematic examination against defined criteria to determine whether activities and related results conform to planned arrangement, and whether these arrangements are implemented effectively and are suitable to achieve the organisation's policy and objectives |

**Unit Sector(s)**

Unit Descriptor
This unit covers establishing, implementing and maintaining operational management plans in resources and infrastructure industries. It includes: identifying and measuring satisfaction levels of internal/external customers; measuring current operational processes for quality and efficiency; interpreting strategic goals to determine operational implications; developing operational plans to enable the achievement and improvement of strategic goals.

Application of the Unit
This unit is appropriate for those working in a management or technical specialist role, within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
**Elements and Performance Criteria Pre-Content**

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to establish, implement and maintain operational management plans:

- apply legislative, organisation and site requirements and procedures
- identify the aspects of the site and their relationship to the environment
- identify possible reasons for failure in site performance
- relate goals and actions to the strategic aims of the site
- identify the vision of the future of the site
- identify the relationship between proposed goals and actions and the strategic aims of the site
- apply opportunities to achieving longer-term aims or needs of site
- apply ethical principles to proposed objectives and the create an ethical cultures
- identify the interests of stakeholders and their implications for the site and individuals
- identify and raise ethical concerns relevant to the site
- work towards the resolution of ethical dilemmas based on reasoned approaches
- communicate a vision which generates excitement, enthusiasm and commitment
- listen actively, ask questions, clarify points and rephrase others' statements to check mutual understanding
- adopt communication styles appropriate to listeners and situations, including selecting an appropriate time and place
- present yourself positively to others
- create and prepare strategies for influencing others
- demonstrate an understanding of the culture of the site and act to work within it or influence it
- establish information networks to search for and gather relevant information
- make use of existing sources of information
- seek information from multiple sources
- break processes down into tasks and activities
- identify patterns or meaning from events and data which are not obviously related
- produce a variety of solutions before taking a decision
- take decisions which are realistic for the situation

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to establish, implement and
maintain operational management plans:

- strategic planning
- statutory and site rules, policies, procedures and regulations
- critical path analysis and planning methods and techniques
- corporate planning model and techniques
- risk management processes and techniques
- industrial awards/enterprise agreements
- OHS
- advanced negotiation techniques
- organisational change and development
- assertive techniques
- action planning methods
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for establishing, implementing and maintaining operational management plans</td>
</tr>
<tr>
<td></td>
<td>• implementation of procedures and techniques for the safe, effective and efficient establishing, implementing and maintaining of operational management plans</td>
</tr>
<tr>
<td></td>
<td>• the identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• the identification of viable options and the selection of options that best meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• working with others to establish, implement and maintain operational management plans</td>
</tr>
<tr>

<td></td>
</tr>
<tr>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those</td>
<td></td>
</tr>
</tbody>
</table>
required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required
  - identification of viable options and the selection of options that best meet the required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial and documentary evidence of the candidate's:
    - working with others to establish, implement and maintain operational management plans
    - consistent and timely gaining of approval of
operational management plans
  • provision of clear, timely required support and advice on the implementation of operational management plans

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisation and site requirements and procedures  
| | • manufacturer's guidelines and specifications  
| | • Australian standards  
| | • codes of practice  
| | • Employment and Workplace Relations legislation  
| | • Equal Employment Opportunity and Disability Discrimination legislation  
| Management operates within: | • work schedules may include shift work and varying hours of duty  
| | • environments ranging from simple to complex and diverse  
| | • appropriate policies, guidelines and processes  
| | • a level of autonomy which may range from limited to substantial  
| | • quality and continuous improvement processes and standards  
| | • business and performance plans  
| | • ethical standards established by the organisation  
| | • productivity and profitability objectives and targets  
| | • best practice and benchmarking principles and practices  
| | • legislation, code and practices  
| | • resource parameters which may be defined or negotiated  
| | • training and development principles and practices  
| | • human resource policies and practices including interviewing, counselling, dispute settling and discipline  
| | • financial accountability including profit and loss statements  
| | • enterprise/industrial agreements/awards  

**Management** may assume varying roles including:
- leader
- coach/facilitator
- mentor
- participant
- director
- trainer
- assessor

**Management** will typically make decisions to:
- maintain statutory/legal compliance
- influence operational performance
- plan production schedules
- maximise production and minimise operating costs/risks and non-conformances
- analyse and review market/production predictions and costs
- manage projects and tasks

**Strategies** are:
- plans which will guide the site in achieving its objectives

**Analysis** is:
- the process of organising and interpreting information so that conclusions can be drawn; methods may be formal and planned, or informal and *ad hoc*

**Consultation** is:
- asking others for their views and involving them openly in decision making

**Consultation** may typically include:
- regulatory authorities
- tenderers/project managers
- contractors/employees
- community
- customers
- suppliers

**Resources** may include:
- people
- finance
- equipment
- environment
- buildings/facilities
- technology/information

**Unit Sector(s)**
Materials Extraction
Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIMPG201A Connect and disconnect refer units

Modification History
Not applicable.

Unit Descriptor
This unit covers the connection and disconnection of reefer units in the metalliferous mining industry. It includes plugging/unplugging reefer units to power sources, and attaching/detaching clips on units. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plug/unplug reefer units to power source | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Plug/unplug reefer units safely according to *workplace procedures*  
1.3. Identify problems with the operation of reefer units and report to appropriate personnel  
1.4. Check that reefer unit is running after being plugged in  
1.5. Identify and report faulty units  
1.6. Unplug reefer unit and clear cable from unit |
| 2. Attach/detach clip on units | 2.1. Attach/detach clip on units safely in accordance with relevant code of practice  
2.2. Select personal protective equipment appropriate for work activities  
2.3. Confirm connection to container or crib  
2.4. Identify problems with the operations of clip on units and report to appropriate personnel |
**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to connect and disconnect reefer units:

- apply legislative, organisation and site requirements and procedures for connecting and disconnecting reefer units
- establish plans
- describe consequences
- complete tasks
- identify improvements
- apply safety precautions relevant to the task
- assess operational capability of equipment used and work processes selected

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to connect and disconnect reefer units:

- site layout and location of reefer units
- identifying problems in the operations of reefer units
- focus of operation of work systems, equipment, management and site operating systems
- relationships and requirements of work and operating systems in respect of related systems
- impact of job on enterprise and individual performance
- application of relevant industrial requirements and legislative requirements
- identification and correct use of equipment, processes and procedures
- identify reefer units requiring clip on units
- identifying problems in the operation of reefer units
- identifying cargo using marking and number systems

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the connection and disconnection of reefer units

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
| --- | --- |
| Workplace procedures may include: | • hazard policies and procedures including code of practice  
• issue resolution procedures  
• job procedures and work instructions  
• relevant guidelines relating to the use of machinery and equipment capability and limitations, tagging of unserviceable or damaged items  
• quality procedures (where required)  
• security procedures  
• following enterprise housekeeping processes  
• waste, pollution and recycling management processes  
• action taken promptly, accidents and incidents reports in accordance with statutory requirements and enterprise procedures  
• recognise and adapts appropriately to cultural differences in the workplace, including modes of behaviour and interaction among staff and others  
• work completed systematically with attention to detail without damage to goods, equipment or personnel |
| Worksite environment may include: | • operations conducted by day or night  
• work conducted in restricted spaces or exposed conditions or controlled or open environments |
- exposure to chemicals, dangerous or hazardous substances and movements of equipment, goods and vehicles
- personnel in work area may include personnel, site visitors, contractors, official representation

**Sources of information/documents may include:**

- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- manufacturer's specifications
- enterprise operating procedures and policies
- supplier and/or client instructions
- materials safety data sheet
- phone, electronic data interchange, fax, e-mail, internet, radio, oral, aural or signed communication
- code of practice including the national standards for material handling and the industry safety code
- legislation, regulations and related documentation
- awards, enterprise bargaining agreements and other industrial agreements
- standards and certification requirements
- quality assurance procedures

**Workplace context may include:**

- work organisation procedures and practices

**Conditions of service, legislation and industrial agreements including:**

- workplace agreements and awards/OHS
- state, federal or territory legislation

**Applicable State/Territory/Commonwealth regulations and legislation may include:**

- OHS
- workplace relations
- workers compensation
- water and road use and license arrangements
- dangerous goods and air freight regulations
- export/import/quarantine/bond requirements
- marine orders
- environmental protection legislation
- emergency procedures

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to control and monitor plant/machinery:

- apply legislative, organisation and site requirements and procedures for controlling and monitoring automated plant/machinery
- initiate work clearance
- use PPE and safeguards
- work to industry, community and environmental standards
- apply knowledge of mine emergency procedures and alarms
- apply standards to work operations
- plan work sequence for a given job
- employ prescribed safe work practices
- monitor ore transfer systems
- participate in team activities
- undertake hygiene/house keeping tasks
- solve problems in electrical circuits
- solve problems and adjust controls
- access and use engineering drawings
- operate automatic ore handling equipment
- operate manual ore handling equipment
- prepare documentation
- work in a team
- write technical reports
- maintain equipment records
- diagnose problems
- apply environmental constraints and procedures

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to control and monitor automated plant/machinery:

- OHS
- hazardous standards
- plant/machinery operating principles and practices
- site agreements
- legislative regulations
- DC circuit principles
- storage
- equipment protection (mechanical, electrical)
- power supplies
- electrical circuit control principles
- material handling control principles
- programmable controllers
- electrical distribution
- electrical accessories
- measurement concepts
- detection sensors
- cables and wiring systems
- circuit protection
- final control elements
- transmitters and converters
- distributive control
- solving problems associated with material
- interpretation of engineering drawings
- material handling control networks and associated accessories
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>

### Guidance information for assessment
Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisational and site requirements and procedures |
| | manufacturer's guidelines and specifications |
| | Australian standards |
| | Employment and workplace relations legislation |
| | Equal Employment Opportunity and Disability Discrimination legislation |

| Control room **control and data acquisition system** and associated equipment may include: | conveyor controls (motor control centre) |
| | over head magnet |
| | winder control |
| | electrical distribution switch gear control |
| | crusher control |
| | loading station feeders |
| | air conditioning control |
| | ventilation system control |
| | mine dewatering control |
| | lighting control |
| | fire/dust suppression control |
| | sirens and alarms |
| | ore car dumping |

| Control and data acquisition system hardware may include: | monitors |
| | reports |
| | bay boards |
| | mouse |
| | 2-way radio |
| | battery charging racks |
| | telephone |
| | First Aid kit |
| | fire extinguisher |

| Closed circuit television equipment may include | video monitors |
| | CCTV control panel |
| | video cameras |
Environmental requirements may include:
- drainage
- dust
- emissions
- flora and fauna
- hazardous chemicals
- noise
- recycling e.g. water
- run off
- spills
- waste management and disposal
- water quality

Documentation may include:
- work orders
- end of shift reports
- logs
- registers
- team leader's daily report
- information sheet
- computers and computer software

Legislation may include:
- Australian standards
- environmental agencies regulations
- Environmental Protection Act
- isolation procedures
- manufacturer's specifications/recommendations
- Mine Regulations Act
- OHS legislation
- site regulations and procedures

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to operate rollers and/or compactors in underground metalliferous mines:

- apply legislative, organisation and site requirements and procedures
- interpret ground conditions
- apply safe work practices
- apply procedures for operating, maintaining and cleaning equipment
- use hand and power tools
- apply safe and effective driving techniques
- apply towing requirements and procedures
- apply vehicle refuelling requirements and procedures

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to operate rollers and/or compactor in underground metalliferous mines:

- compacting procedures
- environmental procedures
- equipment parking
- equipment processes, technical capability and limitations
- equipment safety requirements
- geological and technical data (basic)
- hazardous goods procedures (handling and transport)
- isolation procedures
- manufacturer's specifications
- mining regulations
- operational procedures and checks
- primary and secondary ventilation
- site procedures
- start-up and shutdown procedures
- surface maintenance techniques
- underground procedures
- driving regulations, rules and conventions
- towing methods
- vehicle refuelling procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for operating rollers and/or compactor in underground metalliferous mines
- implementation of requirements, procedures and techniques for the safe, effective and efficient operating of rollers and/or compactor in underground metalliferous mines
- working with others to operate rollers and/or compactor in underground metalliferous mines that meets all of the required outcomes
- consistent timely operating of rollers and/or compactor in underground metalliferous mines that safely, effectively and efficiently meets the required outcomes

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non
English speaking background may have second language issues.

- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to operate rollers and/or compactor in underground metalliferous mines

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisation and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• codes of practice  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
|---|---|
| Rollers and compactors may include: | • rollers  
• tractors  
• dozer  
• front end loader with roller  
• smooth drum  
• vibrating  
• multi tyred  
• grid  
• sheep foot |
| Start-up procedures may include: | • correct location of equipment  
• safety mechanisms operational (horn, operating lights)  
• vehicle is left secured |
| Environmental issues may include: | • dust  
• fumes  
• noise  
• water |
| Dust suppression and extraction methods may include: | • mobile/fixed sprays  
• screens (vent doors, vent blinds)  
• use of water trucks  
• ventilation bags operational  
• watering down site |
| Materials may include: | • geo textiles materials  
• gravel  
• ore |
| **Contaminants** may include: | • cigarette butts  
• consumables  
• ear plugs  
• explosives  
• metal bucket teeth  
• metal or steel rods  
• old piping  
• old workings  
• plastic  
• timber  
• wet fill |
|---|---|
| **Indicators** may include: | • brake air pressure  
• brake oil temperature  
• computer indicators  
• engine oil pressure  
• fuel filter  
• parking brake  
• retarder |
| **Safe driving conventions** may include: | • speed limits  
• mine lighting  
• site vehicle identification lights  
• right of way  
• parking in stockpiles  
• parking on incline/decline  
• refuelling procedures  
• rules at intersections  
• driving regulations, rules and conventions  
• towing methods |
| **Equipment performance** may be affected by: | • duration of operation  
• efficient and safe operating speed  
• operating limitations  
• type of activities performed  
• weight and/or load limitations |
- service meter
- speedometer/odometer
- steering filters
- tachometer
- torque converter oil temperature
- transmission filter
- voltmeter/ammeter
- water temperature

**Operational servicing** may include:
- checking fluid levels
- filter changing
- greasing
- keeping cab clean
- tightening loose fittings

**Cleaning** methods may include:
- degreasing
- forced air
- steam cleaning
- vacuum
- water

**Unit Sector(s)**
Mobile Plant Operations

**Competency field**
Refer to Unit Sector(s).

**Co-requisite units**
Not applicable.
RIIMPO202A Undertake towing underground

Modification History
Not applicable.

Unit Descriptor
This unit covers undertaking towing in underground metalliferous mines.

Application of the Unit
This unit is appropriate for those working in mobile plant operator roles, underground operations within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1. Prepare for towing** | 1.1. Access, interpret and apply *compliance documentation* relevant to towing in underground metalliferous mines  
1.2. Receive, interpret and clarify shift changeover details  
1.3. Select personal protective equipment appropriate for work activities  
1.4. Select appropriate type of *towing equipment* according to job type and specifications to maximise efficiency and effectiveness of work activities  
1.5. Perform equipment *pre-start checks*  
1.6. Carry out start-up procedures  
1.7. Identify, address and report *potential hazards and risks*  
1.8. Communicate with other equipment operators and personnel using approved communication methods  
1.9. Identify, address and report *environmental issues*  
1.10. Adhere to *emergency procedures* in case of fire and/or accident  
1.11. Use approved *dust suppression and extraction methods*  
1.12. Ensure area is well ventilated before entry into work area |
| **2. Shackle and hitch vehicle/equipment** | 2.1. Identify towing/lifting points on vehicle/equipment  
2.2. Select suitable towing equipment for type and size of vehicle/equipment  
2.3. Hitch towing equipment to vehicle/equipment using approved method  
2.4. Confirm security and balance of hitch prior to commencing tow |
| **3. Tow and unhitch vehicle/equipment** | 3.1. Follow vehicle and site procedures for towing observing *safe driving conventions*  
3.2. Monitor condition of ground and hitch and adjust towing accordingly  
3.3. Proceed to destination by most direct route  
3.4. Unhitch vehicle/equipment in authorised |
| | area using approved methods  
| | 3.5. Complete all required documentation clearly, concisely and on time  
| | 3.6. *Clean towing vehicle* and associated equipment |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to Undertake towing underground:

- apply legislative, organisation and site requirements and procedures
- apply procedures for assessing towing options for vehicle/equipment
- apply hazard identification procedures
- apply procedures for operating and maintaining equipment
- use hand tools and equipment
- apply vehicle driving techniques
- apply vehicle refuelling requirements and procedures

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to Undertake towing underground:

- mine operational system
- hitching systems
- towing procedures
- underground procedures
- geological and technical data
- equipment parking
- environmental procedures
- equipment safety requirements
- start-up and shutdown procedures
- operational procedures and checks
- equipment processes, technical capability and limitations
- manufacturer's specifications
- emergency procedures
- driving regulations, rules and conventions
- vehicle refuelling procedures
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

RIIMPO203A Support bucket wheel system operations

Modification History
Not applicable.

Unit Descriptor
This unit covers supporting bucket-wheel system operations in the coal mining industry. It includes: planning and preparing for support; operating the hopper and conveyor system; and maintaining the bucket-wheel support system.

Application of the Unit
These support operations include the positioning of the hopper to receive and discharge materials. This unit is appropriate for those working in a operational support roles, at surface mining operations within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

</tr>
</thead>
</table>
| 1. Plan and prepare for support | 1.1. Access, interpret and apply *compliance documentation* relevant to the supporting bucket-wheel system operations  
1.2. Obtain, interpret and clarify/confirm *work requirements* and *shift details* before proceeding  
1.3. Access, interpret and apply *geological and survey data* required to complete the allocated work  
1.4. Access and apply *safety information and procedures* throughout the work  
1.5. Prioritise tasks in accordance with immediate system requirements |
| 2. Operate hopper and conveyor system | 2.1. *Coordinate* activities are resolved with others at the site prior to commencement of, and during, the work activity  
2.2. Carry out pre-start, start-up, park-up and shutdown procedures  
2.3. Operate controls  
2.4. Relocate walking head in accordance with system requirements  
2.5. Act on or report monitoring systems and alarms  
2.6. Recognise and respond to *hazardous and emergency situations*  
2.7. Complete work in accordance with the agreed plan and outcomes and within the operating capacities of the allocated equipment |
| 3. Maintain the bucket-wheel support system | 3.1. Carry out equipment inspections and fault-finding  
3.2. Carry out authorised routine operational servicing, lubrication and housekeeping tasks  
3.3. Carry out authorised minor maintenance  
3.4. Provide authorised operator support during preparation for, and conduct of, major maintenance tasks  
3.5. Process records |
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to support bucket-wheel system operations:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- access interpret and apply technical information
- apply hand-eye coordination
- apply procedures for working at heights
- apply diagnostic techniques
- use relevant hand tools
- apply environmental constraints in support operations
- apply equipment records maintenance requirements
- apply procedures for disposing of environmentally sensitive fluids and materials
- apply chemical and fuel safety measures

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to support bucket-wheel system operations:

- site and equipment safety procedures
- site bucket-wheel operational procedures
- bucket-wheel system equipment characteristics, technical capabilities and limitations
- bucket-wheel support operational procedures
- bucket-wheel maintenance systems and procedures
- hazard identification and response procedures
- site environmental requirements and constraints related to bucket-wheel support operations
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Co-requisite units**
Not applicable.
RIIMPO204A Conduct conveyor shifting dozer operations

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting conveyor shifting dozer operations in the coal mining industry. It includes: planning and preparing for conveyor shift; operating dozer to shift conveyor; and parking and shutting down the dozer.

Application of the Unit
This unit is appropriate for those working in a mobile plant operator roles, within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for conveyor shift | 1.1. Access, interpret and apply compliance documentation relevant to conveyor shifting dozer operations  
1.2. Receive, interpret and clarify briefings or handover details  
1.3. Select and inspect equipment in accordance with job and safety requirements  
1.4. Interpret and apply geological conditions and survey data required to complete the shift  
1.5. Inspect conveyor system for condition and report potential issues  
1.6. Observe safety rules and regulations |
| 2. Operate dozer to shift conveyor | 2.1. Carry out machine pre-start checks, start-up, park and shutdown procedures  
2.2. Fit relevant attachments to dozer, including roller heads, ropes and shackles  
2.3. Attach dozer rollers to conveyor rails, carry out rail warm ups  
2.4. Shift conveyor singularly and/or with other machines in small passes  
2.5. Operate dozer controls and manoeuvres smoothly to avoid damage to rail, fish plates, conveyor frames and pipelines  
2.6. Conduct towing, winching and pushing  
2.7. Conduct final alignment in accordance with survey markers and within site tolerances  
2.8. Adjust operating techniques in extreme conditions to ensure safety of plant and personnel, and take necessary hazard control measures  
2.9. Use and interpret hand signals and radio communications  
2.10. Disconnect dozer attachments from conveyor  
2.11. Complete work and report any damage |
3. Park and shutdown dozer

3.1. Park, shutdown, inspect and clean dozer
3.2. Remove and inspect for serviceability and damage and store attachments
3.3. Complete logs and reporting requirements

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct conveyor shifting dozer operations:

- apply legislative, organisation and site requirements and procedures
- apply dozer operating skills
- apply operational safety requirements
- access, interpret and apply technical information
- apply equipment records maintenance requirements
- apply hand-eye coordination
- use relevant hand tools
- apply diagnostic techniques
- apply environmental requirements

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct conveyor shifting dozer operations:

- legislative and regulatory requirements related to this competency
- site and equipment safety requirements and procedures
- scope and limitations of operations related to this competency
- site conveyor systems and relocation coordination requirements
- relevant conveyor system and equipment characteristics, technical capabilities and limitations
- mine site geological conditions and survey data
- fire suppression, fire alert and disaster plan procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for conducting conveyor shifting dozer operations
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of conveyor shifting dozer operations
- working with others to undertake and complete conveyor shifting dozer operations that meets all of the required outcomes
- consistent timely completion of conveyor shifting dozer operations that safely, effectively and efficiently meets the required outcomes

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second
language issues.

- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the conveyor shifting dozer operations

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisation and site requirements and procedures  
|                                             | manufacturer's guidelines and specifications  
|                                             | Australian standards  
|                                             | codes of practice  
|                                             | Employment and workplace relations legislation  
|                                             | Equal Employment Opportunity and Disability Discrimination legislation |

### Shift conveyor includes:

- constant monitoring for damage to rail and fish plates
- maintaining communication with other machines and conveyor shift supervisor

### Conveyor systems may vary in:

- distance
- number of sections
- transfer stations
- shuttles

### Operations may be conducted in all weather conditions, including extreme conditions by day or night and may include:

- hot and dusty
- heavy rain/flood
- fog and high wind

### Briefings or handover details may include:

- conveyor shifting plan and program
- work coordination requirements
- worksite and formation inspection
- location of potential hazards
- permit and access requirements

### Equipment may include:

- roller head attachments
- slings and shackles
- winch rope
- towbar pin
- track dozers
- rigging equipment
- specialist roller heads
- hand and power tools

1.3. Select appropriate type of *equipment and/or attachments* according to job specifications and to maximise efficiency and effectiveness of work activities  
1.4. Identify, address and report *potential hazards and risks*  
1.5. Select personal protective equipment appropriate for work activities  
1.6. Conduct equipment *pre-start checks* to ensure equipment is ready for operation  
1.7. Identify, address and report *environmental issues*  
1.8. Communicate with other personnel using approved communication methods  
1.9. Adhere to emergency procedures to ensure safety of personnel, plant and equipment |
| 2. Carry out compacting | 2.1. Carry out *start-up, park and shutdown procedures*  
2.2. Operate equipment within recommended speed, engine capability and limitations  
2.3. Manoeuvre equipment to maximise efficiency and ensure safety of other equipment and personnel  
2.4. Assess *materials* and *site conditions* to determine appropriate operation technique  
2.5. Remove or manage *contaminants* upon identification  
2.6. Compact to required degree of compaction  
2.7. Monitor equipment performance utilising appropriate indicators to aid efficient operations |
| 3. Conduct housekeeping activities | 3.1. *Clean* equipment  
3.2. Clean and store attachments and other ancillary equipment  
3.3. Complete all required records and |
documentation accurately and promptly
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to operate roller/compactors:

- apply legislative, organisation and site requirements and procedures
- engage and disengage compacting device
- operate under variable ground conditions and grades
- apply diagnostic techniques
- apply hazardous goods handling techniques
- interpret plans, reports, maps, specifications
- apply appropriate lifting techniques to remove items from path of plant
- apply work task organising procedures
- apply defect reporting requirements and procedures
- apply safe work practices
- apply troubleshooting techniques
- use communications equipment/use computer systems
- use hand and power tools

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to operate roller/compactors:

- compacting procedures
- emergency procedures
- fatigue management
- environmental and heritage procedures
- equipment processes, technical capability and limitations
- equipment safety requirements
- geological and technical data
- hazardous goods procedures and consequences of spills
- isolation procedures
- mine operational system
- night and day working procedures
- OHS procedures
- open cut procedures
- operational procedures and checks
- road rules
- shutdown procedures
• site procedures
• site safety requirements
• start-up procedures
• surface maintenance techniques
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>

</table>
### Pre-start checks may include:
- air filter restriction indicator
- cab (horn, lights, air conditioner)
- computer systems
- display instrumentation and gauges (indicators, gauges, laser levels)
- engine and stop engine lights (orange and red)
- fluid levels (windscreen washer tank, hydraulic oil, coolant, grease, water, engine oil, fuel)
- visual and audio warning devices and lights

### Environmental issues may include:
- culturally-sensitive sites and artefacts
- drainage
- dust
- emissions
- flora and fauna
- hazardous chemicals
- heritage legislation
- noise
- runoff
- spills
- water quality

### Start-up, park and shutdown procedures may include:
- correct location of equipment
- safety mechanisms operational (horn, operating lights)
- vehicle is left secured

### Materials may include:
- gravel
- ore
- overburden
- oxidised waste
- rejects
- road base
- rubbish
- sand
- sulphide rock fill
- tailings
- topsoil
- water

### Site conditions may include:
- broken ground
- day and night
- degree of compaction
- location of water table
- slope of working surface
### Contaminants
- animal carcasses (sheep, cows, kangaroos)
- cigarette butts
- consumables
- ear plugs
- metal bucket teeth
- metal or steel rods
- old fencing
- old piping
- plastic
- timber

### Indicators
- brake air pressure
- brake oil temperature
- computer indicators
- engine oil pressure
- fuel filter
- parking brake
- retarder
- service meter
- speedometer/odometer
- steering filters
- tachometer
- torque converter oil temperature
- transmission filter
- voltmeter
- water temperature

### Cleaning methods
- water
- steam cleaning
- degreasing
- vacuum
- forced air

RIIMPO206B Conduct bulk water truck operations

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting bulk water truck operations in mining and extractive industries. It includes planning and preparing for operations; operating the truck; loading, hauling and distributing water; and carrying out post-operational procedures.

Application of the Unit
Bulk water trucks are purpose built vehicles for the transport and distribution of water on worksites and may include: diesel-mechanical, diesel-electric, rigid or articulated vehicles. This unit is appropriate for those working in mobile plant operator roles, at worksites within:

- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

</thead>
</table>
| 1. Plan and prepare for operations | 1.1. Access, interpret and apply *compliance documentation* relevant to conducting bulk water truck operations  
1.2. Obtain, interpret and clarify *work requirements and procedures* for the satisfactory completion of the allocated job  
1.3. Access, interpret and apply *geological* and *survey data* required to complete the allocated job  
1.4. Resolve *coordination* requirements with others at the site prior to commencing and during work activities |
| 2. Operate truck | 2.1. Carry out *pre-start, start-up, park-up and shutdown procedures*  
2.2. Select and modify the *operating technique* to appropriately meet *changing work conditions*  
2.3. Conduct, control and monitor operations within the equipment limitations  
2.4. Act on or report *monitoring systems and alarms*  
2.5. Recognise and respond to *hazardous and emergency situations* |
| 3. Load, haul and distribute water | 3.1. Load water at the water point  
3.2. Carry out water haulage operations efficiently in accordance with requirements and procedures  
3.3. Distribute water efficiently in accordance with requirements and procedures  
3.4. Complete work in accordance with agreed work requirements and within the operating capacity of the allocated equipment |
| 4. Carry out post-operational procedures | 4.1. Inspect, fault find and report faults  
4.2. Carry out routine *operator servicing, maintenance and housekeeping tasks*  
4.3. Maintain and process *records and reports* |
Required Skills and Knowledge

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct bulk water truck operations:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- access, interpret and apply technical information
- apply equipment records maintenance procedures
- apply diagnostic techniques
- apply procedures for dispose of environmentally sensitive fluids and materials
- apply chemical and fuel safety measures
- work wearing personal protective equipment

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct bulk water truck operations:

**site risk control procedures:**
- site and equipment health and safety requirements
- site environmental requirements and constraints
- site quality requirements
- site communication procedures
- site geological and survey data
- site operational procedures
- truck operational procedures
- truck maintenance systems and procedures
- bulk water truck characteristics, technical capability and limitations
- hazard identification and response procedures
- site record keeping requirements
- site personal protective equipment requirements

| 1. Plan and prepare for operations | 1.1. Access, interpret and apply *compliance documentation* relevant to operating support equipment  
1.2. Obtain, interpret and clarify *work requirements* before proceeding  
1.3. Access, interpret and apply geological and survey data required to complete the allocated work  
1.4. Access and apply *safety information and procedures* throughout the work |
| 2. Operate support equipment | 2.1. Coordinate activities with others at the site prior to commencement of, and during, the work activity  
2.2. Carry out pre-start, start-up, park-up and shutdown procedures  
2.3. Change and operate *ancillary attachments* to the support equipment  
2.4. Operate support equipment with or without ancillary attachments  
2.5. Recognise and respond to hazardous and emergency situations  
2.6. Complete work in accordance with the agreed plan and outcomes and within the operating capacity of the equipment |
| 3. Carry out operator maintenance | 3.1. Carry out equipment inspections and fault finding  
3.2. Carry out authorised routine operational servicing, lubrication and housekeeping tasks  
3.3. Carry out authorised minor maintenance  
3.4. Provide authorised operator support during preparation for, and conduct of, major maintenance tasks  
3.5. Process records |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to operate support equipment:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- access, interpret and apply technical information
- apply procedures to match appropriate equipment with tasks
- apply equipment records maintenance requirements
- use relevant hand tools
- apply hand-eye coordination
- apply diagnostic techniques
- apply environmental constraints related to the specified operations
- apply procedures for disposal of environmentally sensitive fluids and materials

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to operate support equipment:

- site and equipment safety requirements
- equipment and ancillary attachment characteristics, technical capabilities and limitations
- specified support equipment operational procedures
- specified support equipment maintenance systems and procedures
- basic geological and survey data related to the specified operation
- site environmental requirements and constraints related to the support equipment
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Critical aspects for assessment and evidence required to demonstrate competency in this unit</strong></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for operating support equipment</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient operation of support equipment</td>
</tr>
<tr>
<td></td>
<td>• working with others to operate support equipment and meet all of the required outcomes</td>
</tr>
<tr>

</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
<td></td>
</tr>
<tr>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
<td></td>
</tr>
<tr>
<td>• Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.</td>
<td></td>
</tr>
<tr>
<td>• Aboriginal people and other people from a non English speaking background may have second language issues.</td>
<td></td>
</tr>
</tbody>
</table>
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the operation of support equipment

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct underground truck operations:

- apply legislative, organisation and site requirements and procedures
- interpret ground conditions
- apply procedures for directing operations
- apply equipment operating, maintenance and cleaning requirements and procedures
- use hand and power tools
- apply tipping procedures
- apply vehicle refuelling procedures

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct underground truck operations:

- mine operational system
- underground procedures
- geological and technical data
- equipment parking
- primary and secondary ventilation
- environmental procedures
- equipment safety requirements
- start-up and shutdown procedures
- operational procedures and checks
- equipment processes, technical capability and limitations
- road rules
- hauling procedures
- loading procedures
- manufacturer's specifications
- towing methods
- refuelling vehicle

### Materials may include:
- gravel/ore
- overburden
- oxidised waste
- rejects
- road base
- rubbish
- sand
- sulphide rock fill
- tailings

### Indicators may include:
- brake air pressure
- brake oil temperature
- computer indicators
- engine oil pressure
- fuel filter
- parking brake
- retarder
- service meter
- speedometer/odometer
- steering filters
- tachometer
- torque converter oil temperature
- transmission filter
- voltmeter
- water temperature

### Contaminants may include:
- cigarette butts
- consumables
- ear plugs
- explosives
- metal bucket teeth
- metal or steel rods
- old piping
- old workings
- plastic
- timber
- wet fill

### Servicing may include:
- checking fluid levels
- filter changing
- greasing
- keeping cab clean
- tightening loose fittings

### Equipment cleaning methods
- degreasing
may include:

- forced air
- steam cleaning
- vacuum
- water

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct hydraulic excavator operations:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- access, interpret and apply technical information
- apply equipment records maintenance requirements
- apply diagnostic techniques
- use relevant hand tools
- apply procedures for disposal of environmentally sensitive fluids and materials
- apply chemical and fuel safety measures
- work wearing personal protective equipment

## Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to conduct hydraulic excavator operations:

- site hazard identification and response procedures
- site risk control procedures
- site and equipment health and safety procedures
- site environmental requirements and constraints
- site quality requirements
- site communication procedures
- site product characteristics
- site geological and survey data
- site operational procedures
- excavator pre-start, start-up, operating and shutdown procedures and techniques
- excavator characteristics, technical capability and limitations
- site record keeping requirements
- site personal protective equipment requirements
Evidence Guide

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete hydraulic excavator operations

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

### Pre-start and start-up procedures
**include:**
- external check of the machine
- checking and topping up fluid levels (including fuel)
- lubrication
- inspection of attachments to ensure security and defects
- instrument and control lever checks
- machine function checks, including:
  - implements
  - attachments
  - other attachments
  - brakes
  - manoeuvrability
  - reporting defects and damage

### Park-up and shutdown procedures
**include ensuring that:**
- vehicle/equipment is secured as required by site procedures
- attachments are rendered safe
- access ways are clear

### Operating techniques
**may include:**
- bucket loading
- equipment positioning
- load discharge
- observing site speed limits
- working safely around:
  - overhead power lines
  - other machines and personnel
  - live stockpiles

### Changing work conditions
**may include variations in:**
- grades
- height of faces
- materials
- haulage units
- materials handling facilities
- weather conditions
- day and night

### Equipment limitations
**may include:**
- duration of operation
- efficient and safe operating speed
- operating limitations
- type of activities performed
- weight and/or load limitations

### Monitoring systems and alarms
**may include:**
- brake air pressure
- brake oil temperature
- computer indicators
- engine oil pressure
| **Materials** may include: | • fuel filter  
• parking brake  
• retarder  
• service meter  
• speedometer/odometer  
• steering filters  
• tachometer  
• torque converter  
• oil temperature  
• transmission filter  
• voltmeter  
• water temperature |
|---|---|
| **Materials** may include: | • gravel  
• ore  
• overburden  
• oxidised waste  
• rejects  
• road base  
• rubbish  
• sand  
• sulphide rock fill  
• tailings  
• topsoil  
• water |
| **Materials handling equipment** may include: | • feed hoppers  
• feeders and crushers  
• off-highway and on-highway vehicles  
• barges |
| **Hazardous and emergency situations** may include: | • power lines  
• dust  
• noise  
• conveyors  
• overhead services |
| **Emergency responses** may include: | • clean up  
• equipment shutdown procedures  
• evacuation procedures  
• First Aid  
• isolation procedures  
• notification of authorities  
• use of personal protective equipment |
Operator service, maintenance and housekeeping tasks are those established and authorised for the site and may include:

- lubrication
- refuelling
- cleaning
- authorised servicing
- monitoring, recording and reporting of faults
- it may also include:
  - the conduct of authorised minor replacements and
  - the provision of assistance to maintenance personnel during maintenance and repair activities

Records and reports may include:

- fuel usage
- computer readings
- end of shift documentation
- supplies logs
- work logs stockpile information
- quality information
- despatch details

Unit Sector(s)
Mobile Plant Operations

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIMPO302B Conduct hydraulic shovel operations

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting hydraulic shovel operations in the mining and extractive industries. It includes planning and preparing for operations, operating the shovel, digging and loading trucks, and cleaning equipment to site requirements.

Application of the Unit
This unit is appropriate for those working in mobile plant operator roles, at worksites within:
- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>

# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for operations | 1.1. Access, interpret and apply *compliance documentation* relevant to conducting hydraulic shovel operations  
1.2. Receive, interpret and clarify shift changeover details  
1.3. Evaluate equipment and/or attachments supplied for suitability for the work to be undertaken, according to job specifications and to maximise efficiency and effectiveness of work activities  
1.4. Identify, address and report *potential hazards and risks*  
1.5. Select personal protective equipment appropriate for work activities  
1.6. Carry out equipment *pre-start check* to ensure equipment is ready for operation  
1.7. Comply with *environmental requirements*  
1.8. Establish and maintain communication with other personnel using approved communication methods  
1.9. Follow *emergency procedures* to ensure safety of personnel and plant |
| 2. Operate shovel | 2.1. Start shovel to manufacturer's operational requirements  
2.2. Warm up and exercise shovel and associated equipment, and check controls and instruments for correct functioning  
2.3. Monitor and respond to equipment performance utilising appropriate indicators and alarms to aid efficient and effective operation  
2.4. Operate shovel smoothly, with correct reach angle to allow optimum efficiency and bucket load, and minimise overload or strain on shovel  
2.5. Position shovel for safe, efficient extraction |
| 3. Dig and load trucks | 3.1. Position and set up shovel for safe, efficient digging  
3.2. Determine and maintain depth of bench to allow optimum use of bucket *capacity* |
<p>| | |</p>

4. **Clean equipment to site requirements**
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct hydraulic shovel operations:

- apply legislative, organisation and site requirements and procedures
- apply diagnostic techniques
- apply hazardous goods handling techniques
- apply loading techniques
- interpret plans, reports, maps, specifications
- apply lifting techniques
- organise work tasks
- work in a team

**Required knowledge**

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to conduct hydraulic shovel operations:

- operating principles and practices
- breakdown procedures
- emergency procedures
- environmental and heritage procedures
- equipment processes, technical capability and limitations
- equipment safety requirements
- geological and technical data
- hauling procedures
- fatigue management
- hazardous goods procedures and consequences of spills
- isolation procedures
- mine operational system
- night and day working procedures
- OHS procedures
- operational procedures and checks
- road rules
- startup procedures
- site safety requirements
- start-up procedures
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for conducting hydraulic shovel operations
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of hydraulic shovel operations
- working with others to undertake and complete hydraulic shovel operations that meet all of the required outcomes
- consistent timely completion of hydraulic shovel operations that safely, effectively and efficiently meets the required outcomes

#### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second
### Language Issues

- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of Assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete hydraulic shovel operations

### Guidance Information for Assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisation and site requirements and procedures |
|                                              | manufacturer's guidelines and specifications |
|                                              | Australian standards |
|                                              | codes of practice |
|                                              | Employment and Workplace Relations legislation |
|                                              | Equal Employment Opportunity and Disability Discrimination legislation |

| Potential risks and hazards may include: | abandoned equipment |
|                                          | adjoining pit walls |
|                                          | adverse weather conditions (electrical storms, floods, fires) |
|                                          | chemicals |
|                                          | contaminants |
|                                          | equipment |
|                                          | fences |
|                                          | holes |
|                                          | materials |
|                                          | over-hanging rocks |
|                                          | personnel |
|                                          | pot holes |
|                                          | unsafe ground |
|                                          | unstable faces |
|                                          | vehicles |

| Pre-start checks may include: | cab condition (no rags in air conditioner vent, dirt around brake and accelerator pedals, seat condition, all gear secured) |
|                             | cab mounts |
|                             | damage to equipment |
|                             | danger tags |
|                             | engine oil to be checked before starting engine |
|                             | fire suppression unit (pins in position in triggers) |
|                             | grease lines |
- light positioning and cleanliness
- no combustible material around exhaust
- oil leaks (engine, hydraulic hoses, ground); fuel leaks (engine, on ground); water leaks (radiator, hoses)
- personal proximity
- portable fire extinguisher (bracket, gauge, hose, ease of access)
- radiator top up tank
- vehicle number
- windows (clean, emergency exit tag in place)

**Environmental requirements** may include:
- culturally-sensitive sites and artefacts
- drainage
- dust
- emissions
- flora and fauna
- hazardous chemicals
- heritage legislation
- noise
- runoff
- spills
- water quality

**Emergency procedures** may include:
- clean up
- equipment shutdown procedures
- evacuation procedures
- First Aid
- isolation procedures
- notification of authorities
- use of personal protective equipment

**Capacity** of equipment and/or attachments may include:
- duration of operation
- efficient and safe operating speed
- operating limitations
- type of activities performed
- weight and/or load limitations

**Loading** face characteristics may include:
- stable
- unstable

**Material** may include:
- gravel
- ore
- overburden
- oxidised waste
- rejects
• road base
• rubbish
• sand
• sulphide rock fill
• tailings
• topsoil
• water

**Cleaning methods may include:**

- degreasing
- forced air
- steam cleaning
- vacuum
- water

**Unit Sector(s)**

Mobile Plant Operations

**Competency field**

Refer to Unit Sector(s).

**Co-requisite units**

Not applicable.
RIIMPO303A Conduct rope shovel operations

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting rope shovel operations in the mining industries. It includes:
planning and preparing for operations;
Operating the shovel; digging and loading trucks; and conducting housekeeping activities.

Application of the Unit
Rope shovels can be either diesel or electric powered. This unit is appropriate for those
working in mobile plant operator roles, at worksites within:

- Coal mining
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- codes of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Potential hazards and risks may include:
- abandoned equipment
- adjoining pit walls
- adverse weather conditions (electrical storms, floods, fires)
- chemicals
- contaminants
- equipment
- fences
- holes
- materials
- over-hanging rocks
- personnel
- pot holes
- unsafe ground
- unstable faces
- vehicles
- stored energy which may include:
  - engine components
  - radiators and cooling systems
  - hydraulic tanks and reservoirs
  - air tanks and reservoirs
  - hydraulic hoses
  - air hoses
  - tires
  - air conditioning components
### Pre-start checks

- air filter restriction indicator
- cab (horn, lights, air conditioner)
- computer systems
- display instrumentation and gauges (indicators, gauges, laser levels)
- electric motor run lights
- fluid levels (windscreen washer tank, hydraulic oil, grease, gearbox oil)
- visual and audio warning devices and lights

### Environmental requirements

- culturally-sensitive sites and artefacts
- drainage
- dust
- emissions
- flora and fauna
- hazardous chemicals
- heritage legislation
- noise
- runoff
- spills
- water quality

### Emergency procedures

- clean up
- equipment shutdown procedures
- evacuation procedures
- First Aid
- isolation procedures
- notification of authorities
- use of personal protective equipment

### Capacity

- duration of operation
- efficient and safe operating speed
- operating limitations
- type of activities performed
- weight and/or load limitations

### Loading

- stable
- unstable

### Material

- gravel
- ore
- overburden
- oxidised waste
**Cleaning methods may include:**
- degreasing
- forced air
- steam cleaning
- vacuum
- water

---

**Unit Sector(s)**
Mobile Plant Operations

Refer to Unit Sector(s).

**Co-requisite units**
Not applicable.
RIIMPO304B Conduct wheel loader operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conducting of wheel loader operations in mining and extractive industries. It includes planning and preparing for operations, operating the loader, and carrying out post-operational procedures.

Application of the Unit
Wheel loaders are self-propelled wheeled machines with an integral front-mounted bucket-supporting structure and linkage. It loads or excavates through forward motion of the machine, and lifts, transports and discharges material. This unit is appropriate for those working in mobile plant operator roles, at worksites within:

- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

</thead>
</table>
| 1. Plan and prepare for operations | 1.1. Access, interpret and apply *compliance documentation* relevant to conducting wheel loader operations  
1.2. Obtain, interpret and apply *work requirements and procedures* for the satisfactory completion of the allocated job  
1.3. Access, interpret and apply *geological* and *survey data* required to complete the allocated job  
1.4. *Inspect and prepare work area* in coordination with others  
1.5. Identify, manage and report *potential hazards and risks*  
1.6. Resolve *coordination requirements* with others at the site prior to commencing and during work activities  
1.7. Select and wear *personal protective equipment* appropriate for work activities |
| 2. Operate the loader | 2.1. Carry out *pre-start, start-up, park-up and shutdown procedures*  
2.2. Select and modify the *operating technique* to appropriately meet *changing work conditions*  
2.3. Conduct, control and monitor operations within the equipment limitations  
2.4. Act on or report *monitoring systems and alarms*  
2.5. Recognise and respond to *hazardous and emergency situations*  
2.6. Complete work in accordance with the agreed work requirements and within the operating capacity of the allocated equipment |
| 3. Carry out post-operational procedures | 3.1. Inspect, fault find and report faults  
3.2. Carry out routine *operator servicing, maintenance and housekeeping tasks*  
3.3. Maintain and process *records and reports* |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct wheel loader operations:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- apply environmental requirements
- apply environmentally sensitive fluids and materials disposal requirements and procedures
- apply chemical and fuel safety measures
- apply hazardous goods handling techniques
- apply manual lifting techniques
- work wearing personal protective equipment
- access, interpret and apply technical information
- interpret plans, reports, maps, specifications
- apply hand-eye coordination
- apply equipment operating techniques
- apply work tasks organising techniques
- work in a team
- apply equipment records maintenance requirements
- apply diagnostic techniques
- use relevant hand tools

Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to conduct wheel loader operations:

- site risk control procedures
- hazard identification and response procedures
- hazardous substances handling techniques
- site personal protective equipment requirements
- site and equipment health and safety procedures
- site environmental and heritage requirements and constraints
- site quality requirements
- site communication procedures
- site product characteristics
- site geological and survey data
- site operational procedures
- pre-start, start-up, operating and shutdown procedures and techniques
- machine characteristics, technical capability and limitations
- machine operational procedures
- isolation procedures
- maintenance systems and procedures
- site record keeping requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment
This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete wheel loader operations

### Guidance information for assessment
Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- codes of practice
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Work requirements and procedures** may come from briefings, handovers, and work orders and may be written or verbal, formal or informal, depending on the complexity of the process and may include:

- product identification
- nature and scope of tasks
- achievement targets
- operational conditions
- obtaining permits required
- site layout
- out of bounds areas
- worksite inspection requirements
- lighting conditions
- plant or equipment defects
- hazards and potential hazards
- coordination requirements or issues
- contamination control requirements
- environmental control requirements
- barricade and signage requirements

**Geological data** may include relevant site-specific information in relation to:

- rock type and characteristics
- faults and joints
- broken ground
- water tables or other water sources
- wet and dry areas
- degree of compaction

**Survey data** may include relevant site-specific information in relation to:

- floor heights
- bench heights and widths
- ramp and floor grades
- underground workings and voids
**Inspect and prepare work area**

- identification of hazards
- selection and implementation of control measures for the hazards identified
- safeguarding site and non-site personnel by:
  - erection of barricades and posting of signs
  - selection of appropriate equipment to ensure personnel safety and protection
- determination of appropriate path of movement for loads and equipment/vehicles
- floor clean up to specified levels and grade requirements
- selection and implementation of environmental control measures

**Potential hazards and risks**

- installed services
- damaged or defective pressurise hoses and fastenings
- abandoned equipment
- adjoining pit walls or structures
- adverse weather conditions (electrical storms, floods, fires)
- chemicals
- contaminants
- ancillary equipment
- fences
- holes and pot holes
- over-hanging rocks
- personnel
- unsafe ground
- unstable faces
- vehicles
- powerlines
- dust and noise
- conveyors
- overhead services
- stored energy which may include:
  - engine components
  - radiators and cooling systems
  - hydraulic tanks and reservoirs
  - air tanks and reservoirs
  - hydraulic hoses
  - air hoses
  - tyres
<table>

| • external check of the machine  
  • inspection of attachments to ensure security and identify defects  
  • selection, removing and fitting of attachments  
  • checking of fluid levels (windscreen washer tank, hydraulic oil, coolant, grease, water, engine oil, fuel)  
  • carry out lubrication  
  • checking of display instrumentation and gauges (indicators, gauges, laser levels), computer systems  
  • inspection of air filter restriction indicator  
  • inspection and checking of cab (horn, lights, air conditioner)  
  • testing of engine and stop engine lights  
  • testing visual and audio warning devices and lights  
  • checking instruments and control lever  
  • reporting of defects and damage | • secure equipment as required by site procedures  
  • render attachments safe  
  • clear access ways |
### Operating techniques

Operating techniques may include:

- manoeuvring
- braking
- bucket loading
- single sided loading
- double sided loading
- drive by loading
- load carrying
- haulage vehicle positioning
- load discharge
- building and maintaining stockpiles
- blending materials
- attaching, securing, lifting, carrying and placing materials
- driving machines on to floats
- towing
- observing site speed limits
- working safely around:
  - overhead powerlines
  - other machines and personnel
  - live stockpiles

### Changing work conditions

Changing work conditions may include variations in:

- bulk material grades
- height of stockpiles
- materials
- contamination
- haulage units
- materials handling facilities
- weather conditions
- light conditions (including day and night)

### Monitoring systems and alarms

Monitoring systems and alarms may include:

- brake air pressure
- brake oil temperature
- computer indicators
- engine oil pressure
- fuel filter
- parking brake
- retarder
- service meter
- speedometer/odometer
- steering filters
- tachometer
- torque converter
- oil temperature

RIIMPO305B Conduct coal stockpile dozer operations

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting stockpile dozer operations in the coal mining industry. It includes: planning and preparing for operations, operating the dozer, performing stockpile operations, and carrying out operator maintenance.

Application of the Unit
This unit covers all tracked dozers; and those tasks and performance criteria which are within the legal and technical limitations of rubber-wheeled dozers. It is appropriate for those working in mobile plant operator roles, at worksites within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

2.4. Carry out *towing and pushing* of equipment and plant safely and in accordance with the authorised equipment and/or connection capabilities  
2.5. Act on or report monitoring systems and alarms  
2.6. Recognise and respond to hazardous and emergency situations |
| **3. Perform stockpile operations** | 3.1. Place coal in and remove from predetermined stockpile location to work specifications  
3.2. Form slope and height to work specifications  
3.3. Pack coal to prevent air ingress, fires and weather channelling  
3.4. Level stockpiles to tolerances  
3.5. Monitor and respond to spontaneous combustion indicators  
3.6. Monitor and respond to contamination indicators |
| **4. Carry out operator maintenance** | 4.1. Carry out dozer inspections and fault-finding  
4.2. Carry out authorised routine operational servicing, lubrication and housekeeping |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct coal stockpile dozer operations:

- apply legislative, organisation and site requirements and procedures
- apply operation safety
- access, interpret and apply technical information
- apply hand-eye coordination
- use relevant hand tools
- apply diagnostic techniques
- apply chemical and fuel safety measures
- apply procedures for disposal of environmentally sensitive fluids and materials
- maintain equipment records

Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to conduct coal stockpile dozer operations:

- site and equipment safety requirements
- stockpile management procedures
- equipment characteristics, technical capabilities and limitations
- dozer operational procedures
- dozer maintenance systems and procedures
- site environmental requirements and constraints related to dozer operations
- basic geological and survey data
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

1.3. Access, interpret and clarify *geological and survey data* required to complete the allocated work  
1.4. Inspect and assess state of stockpile *slope stability*  
1.5. Select Personal Protective Equipment appropriate for work activities  
1.6. Arrange *communications* with other relevant *site personnel*  
1.7. Identify, address and report *potential hazards*  
1.8. Identify, address and report *environmental issues* |
| 2. Push and place materials on the stockpile | 2.1. Resolve *coordination* requirements with others at the site prior to commencing and during work activities  
2.2. Carry out plant/equipment *pre-start checks*  
2.3. Identify location, and build and maintain windrows to ensure safe operating distance from edges of stockpile  
2.4. Continuously assess location of stockpile edge in relation to operating plant/equipment and stability of stockpile slope  
2.5. Push materials perpendicular to and facing the slope edge and avoiding operation parallel to the stockpile edge  
2.6. Continuously monitor and assess changes in *ground conditions* and moderate activities to maintain safe operation  
2.7. Operate at a speed consistent with the type of work being performed and the current ground conditions |
| 3. Push and place materials | 3.1. Inspect stockpile to identify the location of |
around draw points and bridged materials | draw points/holes and suspected bridged materials and ensure that draw points/holes are clearly indicated
3.2. Continuously assess location of draw points/holes and bridged materials in relation to operating plant/equipment to maintain safe operation
3.3. Operate plant/machinery perpendicular to the edge of the draw hole or bridged material maintaining a safe distance from draw hole/bridge
3.4. Remain on machine and keep a safe distance away from draw holes and identified bridges
3.5. Communicate with relevant site personnel to determine the feeders being used and the amount of material being drawn from the stockpile

4. Finalise stockpile operations | 4.1. Carry out plant/equipment shut-down procedures
4.2. Clean, inspect and store attachments and equipment
4.3. Clean and leave plant/equipment parked on stable, flat ground for use by next operator
4.4. Report location and state/condition of plant/equipment before going off shift
4.5. Complete all required records and documents
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to operate plant or machinery on live stockpiles:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply technical and safety information
- apply diagnostic/faultfinding techniques
- apply environmental requirements
- apply procedures for working at heights

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to operate plant or machinery on live stockpiles:

- operational safety procedures when working on top of stockpiles
- worksite inspections
- plant/machine operation and controls
- communication procedures
- types of personnel involved in stockpile operations and their roles
- hazards associated with working on a stockpile
- monitoring stockpile conditions and slope stability
- working at heights
- siting and building windrows
- identifying draw holes and bridged materials
- start-up checks and procedures
- isolation and lock-out procedures
- shut-down procedures
- site recording and reporting systems
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• knowledge of the requirements, procedures and instructions for operating plant/machinery on live stockpiles</td>
<td></td>
</tr>
<tr>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient operation of plant/machinery on live stockpiles</td>
<td></td>
</tr>
<tr>
<td>• working with others to operate plant/machinery on live stockpiles and meet all of the required outcomes</td>
<td></td>
</tr>
<tr>
<td>• consistent timely operating of plant/machinery on live stockpiles that safely, effectively and efficiently meets the required outcomes</td>
<td></td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second

• checking and topping up fluid levels (including fuel)  
• lubrication  
• inspection of attachments to ensure security and defects  
• instrument and control lever checks  
• reporting defects and damage |
| Ground conditions may be affected by weather condition including: | • rain  
• sleet  
• snow  
• freezing  
• thawing |
Unit Sector(s)
Mobile Plant Operations

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIMPO307B Conduct wheel grader operations in underground mines

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting wheel grader operations in underground mine. It includes: plan and prepare for operations; operate the grader; and carry out post-operational procedures.

Application of the Unit
This unit is appropriate for those working in mobile plant operator roles, in underground mines within:
- Coal mining
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for operations | 1.1. Access, interpret and apply *compliance documentation* relevant to conducting wheel grader operations in underground mine  
1.2. Obtain, interpret and clarify *work requirements and procedures* for the satisfactory completion of the allocated job  
1.3. Access, interpret and apply *geological* and *survey data* required to complete the allocated job  
1.4. *Inspect* and *prepare work area* in coordination with others  
1.5. Identify, manage and report *potential hazards and risks*  
1.6. Resolve *coordination requirements* with others at the site prior to commencing and during work activities  
1.7. Select personal protective equipment appropriate for work activities |
| 2. Operate grader | 2.1. Carry out *pre-start, start-up, park-up and shutdown procedures*  
2.2. Select and modify the *operating technique* to appropriately meet *changing work conditions*  
2.3. Conduct, control and monitor operations within the equipment limitations  
2.4. Act on or report *monitoring systems and alarms*  
2.5. Recognise and respond to *hazardous and emergency situations*  
2.6. Complete work in accordance with the agreed *work requirements* and within the operating capacity of the allocated equipment |
| 3. Carry out post-operational procedures | 3.1. Inspect, fault find and report faults  
3.2. Carry out routine *operator servicing, maintenance and housekeeping tasks*  
3.3. Maintain and process *records and reports* |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct grader operations in underground mine:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- access, interpret and apply technical and environmental information
- apply equipment records maintenance procedures
- apply diagnostic techniques
- apply environmental requirements
- apply procedures for disposal of environmentally sensitive fluids and materials
- apply techniques to batter, box out, construct drains, interpret ground conditions, layer, level and mark out
- use hand and power tools
- apply vehicle refuel procedures

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct grader operations in underground mine:

- site and equipment safety requirements, including: isolation procedures, underground procedures, driving regulations, rules and conventions
- grader equipment characteristics, technical capabilities, limitations
- grader operational procedures and checks, including: equipment parking, start-up and shutdown procedures
- grader maintenance systems and procedures
- basic geological and survey data
- site environmental requirements and constraints related to grader operations
- primary and secondary ventilation
- road construction sequence
- road maintenance procedures
- refuelling vehicle
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct tracked dozer operations:

- apply legislative, organisation and site requirements and procedures
- apply site safety requirements
- access, interpret and apply technical information
- apply equipment records maintenance procedures
- apply diagnostic techniques
- use relevant hand tools
- apply environmental requirements
- apply procedures for disposal of environmentally sensitive fluids and materials
- apply chemical and fuel safety measures
- work wearing personal protective equipment
- interpret plans, reports, maps, specifications
- apply manual lifting techniques
- organise work tasks
- work in a team

### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to conduct tracked dozer operations:

- site risk control procedures
- site and equipment health and safety procedures
- site environmental requirements and constraints
- site quality requirements
- site communication procedures
- site product characteristics
- basic site geological and survey data
- site operational procedures
- dozer operational procedures and techniques (including towing and pushing)
- dozer maintenance systems and procedures
- dozer characteristics, technical capability and limitations
- hazard identification and response procedures
- site record keeping requirements
- site personal protective equipment requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- codes of practice
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Work requirements and procedures may come from briefings, handovers, and work orders and may be written or verbal, formal or informal, depending on the complexity of the process and may include:
- material identification
- nature and scope of tasks
- achievement targets
- operational conditions
- obtaining permits required
- site layout
- out of bounds areas
- worksite inspection requirements
- lighting conditions
- plant or equipment defects
- hazards and potential hazards
- coordination requirements or issues
- contamination control requirements
- environmental control requirements
- barricade and signage requirements

### Geological data may include relevant site-specific information in relation to:
- rock type and characteristics
- faults and joints
- broken ground
- water tables or other water sources
- wet and dry areas
- degree of compaction

### Survey data may include relevant site-specific information in relation to:
- floor heights
- bench heights and widths
- ramp and floor grades
- road profile requirements
<table>
<thead>
<tr>
<th><strong>Inspect and prepare work area</strong> may include:</th>
<th><strong>Potential hazards and risks</strong> may include:</th>
</tr>
</thead>
</table>
| • finished work tolerances  
• underground workings and voids  | • identification of hazards  
• selection and implementation of control measures for the hazards identified  
• safeguarding site and non-site personnel by:  
  • erection of barricades and posting of signs  
  • selection of appropriate equipment to ensure personnel safety and protection  
  • determination of appropriate path of movement for loads and equipment/vehicles  
  • floor clean up to specified levels and grade requirements  
  • selection and implementation of environmental control measures  | • installed services  
• damaged or defective pressurised hoses and fastenings  
• abandoned equipment  
• adjoining pit walls or structures  
• adverse weather conditions (electrical storms, floods, fires)  
• chemicals  
• contaminants  
• ancillary equipment  
• fences  
• holes and pot holes  
• over-hanging rocks  
• personnel  
• unsafe ground  
• unstable faces  
• vehicles  
• powerlines  
• dust and noise  
• conveyors  
• overhead services  
• stored energy which may include:  
  • engine components  
  • radiators and cooling systems  
  • hydraulic tanks and reservoirs  
  • air tanks and reservoirs  
  • hydraulic hoses  |
| **Coordination requirements** may include with: | • other mobile plant operators  
• processing plant operators  
• maintenance personnel  
• water truck operators  
• service vehicle operators  
• crane and float operators  
• contractors  
• inspectors  
• supervisors  
• visitors  
• use of 2-way radios |
|---|---|
| **Pre-start and start-up procedure** may include: | • external check of the machine  
• inspection of attachments to ensure security and identify defects  
• selection, removing and fitting of attachments  
• checking of fluid levels (windscreen washer tank, hydraulic oil, coolant, grease, water, engine oil, fuel)  
• carry out lubrication  
• checking of display instrumentation and gauges (indicators, gauges, laser levels), computer systems  
• inspection of air filter restriction indicator  
• inspection and checking of cab (horn, lights, air conditioner)  
• testing of engine and stop engine lights  
• testing visual and audio warning devices and lights  
• checking instruments and control lever  
• reporting of defects and damage |
| **Park-up and shutdown procedure** may include: | • secure equipment as required by site procedures  
• render attachments safe  
• clear access ways |
| **Operating techniques** may include: | • manoeuvring  
• blade control and application  
• ripper control and application |
### RIIMPO308B Conduct tracked dozer operations

**Date this document was generated:** 26 July 2014

| **towing** | **changing work conditions** may include variations in: |
| **pushing** | **bulk material grades** |
| **building and maintaining stockpiles** | **height of stockpiles** |
| **attaching, securing, lifting, carrying and placing materials** | **height of walls** |
| **driving machines on to floats** | **materials** |
| **observing site speed limits** | **contamination** |
| **working safely around:** | **materials handling facilities** |
| | **weather conditions** |
| | **light conditions (including day and night)** |
| | **broken ground** |
| | **degree of compaction** |
| | **location of water table** |
| | **slope of working surface** |
| | **stable ground (compaction) amount of scale** |
| | **wet and dry** |
| | **working over old underground workings and voids** |

| **driving machines on to floats** | **monitoring systems and alarms** may include: |
| **observing site speed limits** | **brake air pressure** |
| **working safely around:** | **oil temperature** |
| | **computer indicators** |
| | **engine oil pressure** |
| | **fuel filter** |
| | **parking brake** |
| | **braking** |
| | **service meter** |
| | **speedometer/odometer** |
| | **steering filters** |
| | **tachometer** |
| | **torque converter** |
| | **transmission filter** |
| | **voltmeter** |
Hazardous and emergency situations may include:

- powerlines and other overhead services
- dust and noise
- face overhangs
- live stockpile

Operator service, maintenance and housekeeping tasks are those established and authorised for the site and may include:

- cleaning
- authorised servicing
- monitoring, recording and reporting of faults
- conduct of authorised minor replacements
- provision of assistance to maintenance personnel during maintenance and repair activities

Records and reports may include:

- fuel usage
- computer readings
- end of shift documentation
- supplies logs
- work logs stockpile information
- quality information
- despatch details

Unit Sector(s)

Mobile Plant Operations

Competency field

Refer to Unit Sector(s).

Co-requisite units

Not applicable.
RIIMPO309A Conduct wheeled dozer operations

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting wheeled dozer operations in resources and infrastructure industries. It includes: planning and preparing for operations; operating wheeled dozers; and carrying out operator maintenance.

Application of the Unit
This unit is appropriate for those working in mobile plant operator roles, at worksites within:

- Civil construction
- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>
</thead>
</table>
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for operations | 1.1. Access, interpret and apply compliance documentation relevant to wheeled dozer operations  
1.2. Obtain, interpret and clarify/confirm work requirements in the form of shift briefings, handover details or work orders before proceeding  
1.3. Access, interpret and apply geological and survey data required to complete the allocated work  
1.4. Access and apply safety information and requirements throughout the work |
| 2. Operate wheeled dozer | 2.1. Resolve coordination activities with others at the site prior to commencement of, and during the work activity  
2.2. Carry out pre-start, start-up, park-up and shutdown procedures  
2.3. Control speed and articulated steering of the wheeled dozer during tramming operations  
2.4. Use dozer controls and functions effectively, including manoeuvre, blade and ripper to complete specified tasks  
2.5. Carry out towing of equipment and plant safely and in accordance with authorised equipment and/or connection capabilities  
2.6. Maintain safe grip, traction and productivity in varied operating conditions  
2.7. Act on or report monitoring systems and alarms  
2.8. Recognise and respond to hazardous and emergency situations  
2.9. Complete work in accordance with the agreed plan and outcomes and within the operating capabilities of the allocated equipment |
| 3. Carry out operator maintenance | 3.1. Carry out dozer inspections and fault-finding  
3.2. Carry out authorised routine operational servicing, lubrication and housekeeping tasks |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct wheeled dozer operations:

- apply legislative, manufacturer's, organisation and site requirements and procedures
- access, interpret and apply technical information
- maintain equipment records
- use relevant hand tools
- apply problem solving techniques
- apply basic diagnostic techniques
- apply equipment operating procedure
- apply effective communication techniques

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct wheeled dozer operations:

- site and equipment safety requirements
- site operational procedures
- wheeled dozer characteristics, technical capabilities and limitations
- wheeled dozer operational procedures
- wheeled dozer instrumentation and controls
- wheeled dozer maintenance systems and procedures
- basic geological and survey data
- hazard identification and response procedures
- site environmental requirements and constraints related to dozer operations
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for conducting wheeled dozer operations</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of wheeled dozer operations</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete wheeled dozer operations that meet all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of wheeled dozer operations that safely, effectively and efficiently meet the required outcomes</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
<td></td>
</tr>
<tr>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
<td></td>
</tr>
<tr>

language issues.

- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete wheeled dozer operations

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

May include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- codes of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Dozer operations/tasks may include:

- ripping
- pushing and preparing overburden
- ripping and pushing may include:
  - working under high walls
  - working in cable areas
  - highwall chaining
  - supporting other equipment
  - trimming or cutting
  - inter burden and coal handling
  - bench and pad preparation
  - maintenance and civil works
- working in dumps which may include:
  - creation of windrows
  - dump establishment
- civil works which may include:
  - road works
  - contours
  - batters
  - rehabilitation and drainage
  - final landform and the interpretation of associated survey pegs
  - sealing tailing dams
- towing and pushing which may include:
  - lighting plants
  - pumps

### Coordination with others may include:
- other earthmoving equipment
- water carts or trucks
- materials handling equipment
- light vehicles
- lighting plant
- use of 2-way radios
- reporting defects either verbally or in writing
- hand signal

### Operating conditions may include:
- visibility day and night
- prevailing winds
- wet and slippery conditions
- loose materials
- fog
- dust

### Unit Sector(s)
Mobile Plant Operations

### Competency field
Refer to Unit Sector(s).

### Co-requisite units
Not applicable.
RIIMPO310B Conduct grader operations

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting grader operations in the mining and extractive industries. It includes planning and preparing for operations, operating graders, carrying out post-operational procedures.

Application of the Unit
This unit is appropriate for those working in mobile plant operator roles, at worksites within:
- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

| 1. Plan and prepare for operations | 1.1. Access, interpret and apply *compliance documentation* relevant to conducting grader operations  
1.2. Obtain, interpret and clarify *work requirements and procedures* for the satisfactory completion of the allocated job  
1.3. Access, interpret and apply *geological* and *survey data* required to complete the allocated job  
1.4. *Inspect and prepare work area* in coordination with others  
1.5. Identify, manage and report *potential hazards and risks*  
1.6. Resolve *coordination requirements* with others at the site prior to commencing and during work activities  
1.7. Select personal protective equipment appropriate for work activities |
| 2. Operate grader | 2.1. Carry out *pre-start, start-up, park-up and shutdown procedures*  
2.2. Select and modify the *operating technique* to appropriately meet *changing work conditions*  
2.3. Conduct, control and monitor operations within the equipment limitations  
2.4. Act on or report *monitoring systems and alarms*  
2.5. Recognise and respond to *hazardous and emergency situations*  
2.6. Complete work in accordance with the agreed work requirements and within the operating capacity of the allocated equipment |
| 3. Carry out post-operational procedures | 3.1. Inspect, fault find and report faults  
3.2. Carry out routine *operator servicing, maintenance and housekeeping tasks*  
3.3. Maintain and process *records and reports* |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct grader operations:

- apply legislative, organisation and site requirements and procedures
- apply levelling techniques
- apply drain construction techniques
- apply windrow form and carry techniques
- apply equipment and plant towing procedures
- apply diagnostic techniques
- apply driving techniques
- apply hazardous goods handling techniques
- interpret plans, reports, maps, specifications
- apply lifting techniques
- organise work tasks
- apply defect reporting requirements
- apply safe work practices
- apply communications equipment procedures
- apply computer systems procedures
- use hand and power tools

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct grader operations:

- emergency procedures
- environmental and heritage procedures
- equipment processes, technical capability and limitations
- equipment safety requirements
- towing techniques
- geological and technical data
- grading procedures
- hazardous goods procedures and consequences of spills
- isolation procedures
- mine operational system
- night and day working procedures
- OHS procedures
- open cut procedures
- operational procedures and checks
- road rules
- shutdown procedures
- site procedures
- site safety requirements
- start-up procedures
- surface maintenance techniques

### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

SkillsDMC
- attaching, securing, lifting, carrying and placing materials
- driving machines on to floats
- towing
- observing site speed limits
- working safely around:
  - overhead powerlines
  - other machines and personnel
  - live stockpiles

### Changing work conditions

Changing work conditions may include variations in:

- materials,
- contamination
- traffic conditions
- weather conditions
- light conditions (including day and night)

### Monitoring systems and alarms

Monitoring systems and alarms may include:

- brake air pressure
- brake oil temperature
- computer indicators
- engine oil pressure
- fuel filter
- parking brake
- retarder
- service meter
- speedometer/odometer
- steering filters
- tachometer
- torque converter
- oil temperature
- transmission filter
- voltmeter
- water temperature

### Hazardous and emergency situations

Hazardous and emergency situations may include:

- motor vehicle accidents
- powerlines and other overhead services
- dust and noise
- face overhangs
- lighting strikes (potential tyre explosion)
- tyre fires (isolation procedures)

### Operator service, maintenance and housekeeping

Operator service, maintenance and housekeeping tasks are those established and authorised for the site and may include:

- cleaning,
- authorised servicing and the monitoring,
- recording and reporting of faults
- conduct of authorised minor replacements
- provision of assistance to maintenance
<table>
<thead>
<tr>
<th>Personnel during maintenance and repair activities</th>

**Unit Sector(s)**
Mobile Plant Operations

**Competency field**
Refer to Unit Sector(s).

**Co-requisite units**
Not applicable.
RIIMPO311A Conduct haul truck operations

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting haul truck operations in the resources and infrastructure industries. It includes: planning and preparing for operations; operating the haul truck; loading, hauling and dumping materials; and carrying out post-operational procedures.

Application of the Unit
Haul trucks covered by this unit are off-highway trucks and may include: diesel-mechanical, diesel-electric, rigid body, articulated and belly dump. This unit is appropriate for those working in mobile plant operator roles, at worksites within:

- Civil construction
- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for operations | 1.1. Access, interpret and apply **compliance documentation** relevant to conducting haul truck operations  
1.2. Obtain, interpret and clarify **work requirements and procedures** for the satisfactory completion of the allocated job  
1.3. Access, interpret and apply **geological** and **survey data** required to complete the allocated job  
1.4. **Inspect and prepare work area** in coordination with others  
1.5. Identify, manage and report **potential hazards and risks**  
1.6. Resolve **coordination requirements** with others at the site prior to commencing and during work activities  
1.7. Select personal protective equipment appropriate for work activities |
| 2. Operate haul truck | 2.1. Carry out **pre-start, start-up, park-up and shutdown procedures**  
2.2. Select and modify the **operating technique** to appropriately meet **changing work conditions**  
2.3. Conduct, control and monitor operations within the equipment limitations  
2.4. Act on or report **monitoring systems and alarms**  
2.5. Recognise and respond to **hazardous and emergency situations** |
| 3. Load, haul and dump materials | 3.1. Position truck under all types of **loading equipment**  
3.2. Carry out haulage operations  
3.3. Carry out **dumping operations**  
3.4. Complete work in accordance with the agreed plan and within the operating capacity of the allocated equipment |
| 4. Carry out post-operational procedures | 4.1. Inspect, fault find and report faults  
4.2. Carry out routine **operator servicing, maintenance and housekeeping tasks** |
| 4.3. Maintain and process records and reports |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct haul truck operations:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- access, interpret and apply technical information
- apply equipment records maintenance procedures
- apply diagnostic techniques
- use hand tools
- apply procedures for disposal of environmentally sensitive fluids and materials
- apply chemical and fuel safety measures
- work wearing personal protective equipment

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct haul truck operations:

- emergency procedures
- environmental, cultural and heritage guidelines
- equipment processes, technical capability and limitations
- equipment safety requirements
- geological and technical data
- hauling procedures
- hazardous goods procedures and consequences of spills
- isolation procedures
- loading procedures
- night and day working procedures
- OHS requirements
- fatigue management
- operational procedures and checks
- site road rules
- shutdown procedures
- site safety requirements
- start-up procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Overview of assessment |  |
|------------------------|  |
| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following: |
|  | • knowledge of the requirements, procedures and instructions for conducting haul truck operations |
|  | • implementation of requirements, procedures and techniques for the safe, effective and efficient completion of haul truck operations |
|  | • working with others to undertake and complete haul truck operations that meet all of the required outcomes |
|  | • consistent timely completion haul truck operations that safely, effectively and efficiently meets the required outcomes |
| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
|  | • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. |
|  | • Customisation of assessment and delivery environment to sensitively accommodate cultural diversity. |
|  | • Aboriginal people and other people from a non English speaking background may have second |
language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete haul truck operations |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisation and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• codes of practice  
• Employment and Workplace Relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
| Work requirements and procedures may come from briefings, handovers, and work orders and may be written or verbal, formal or informal, depending on the complexity of the process and may include: | • product identification  
• nature and scope of tasks  
• achievement targets  
• operational conditions  
• obtaining permits required  
• site layout  
• out of bounds areas  
• worksite inspection requirements  
• lighting conditions  
• plant or equipment defects  
• hazards and potential hazards  
• coordination requirements or issues  
• contamination control requirements  
• environmental control requirements  
• barricade and signage requirements |
| Geological data may include relevant site-specific information in relation to: | • rock and soil type and characteristics  
• faults and joints  
• broken ground  
• water tables or other water sources  
• wet and dry areas  
• degree of compaction |
| Survey data may include relevant site-specific information in relation to: | • floor heights  
• bench heights and widths  
• ramp and floor grades  
• underground workings and voids |
### Inspect and prepare work area

- identification of hazards
- selection and implementation of control measures for the hazards identified
- safeguarding site and non-site personnel by:
  - erection of barricades and posting of signs
  - selection of appropriate equipment to ensure personnel safety and protection
- determination of appropriate path of movement for loads and equipment/vehicles
- floor clean up to specified levels and grade requirements
- selection and implementation of environmental control measures

### Potential hazards and risks

- installed services
- damaged or defective pressurised hoses and fastenings
- abandoned equipment
- adjoining pit walls or structures
- adverse weather conditions (electrical storms, floods, fires)
- chemicals
- contaminants
- ancillary equipment
- fences
- holes and pot holes
- over-hanging rocks
- personnel
- unsafe ground
- unstable faces
- other vehicles
- powerlines
- dust and noise
- conveyors and other fixed plant
- overhead structures and services
- stored energy which may include:
  - engine components
  - radiators and cooling systems
  - hydraulic tanks and reservoirs
  - air tanks and reservoirs
  - hydraulic hoses
  - air hoses
  - tyres
### Coordination requirements may include with:

- other mobile plant operators
- processing plant operators
- maintenance personnel
- water truck operators
- service vehicle operators
- crane and float operators
- contractors
- inspectors
- supervisors
- visitors

### Pre-start and start-up procedure may include:

- external check of the machine
- inspection of attachments to ensure security and identify defects
- selection, removing and fitting of attachments
- checking of fluid levels (windscreen washer tank, hydraulic oil, coolant, grease, water, engine oil, fuel)
- carry out lubrication
- checking of display instrumentation and gauges (indicators, gauges, laser levels), computer systems
- inspection of air filter restriction indicator
- inspection and checking of cab (horn, lights, air conditioner)
- testing of engine and stop engine lights
- testing visual and audio warning devices and lights
- checking instruments and control lever
- reporting of defects and damage

### Park-up and shutdown procedure may include:

- secure equipment as required by site procedures
- render attachments safe
- clear access ways

### Operating techniques may include:

- manoeuvring
- braking
- bucket loading
- single sided loading
- double sided loading

Hazardous and emergency situations may include:

- powerlines and other overhead services
- dust and noise
- face overhangs
- lighting strikes (potential tyre explosion)
- tyre fires (isolation procedures)

**Loading equipment** may include:
- shovels
- wheel loaders
- excavators
- bins
- conveyor belts
- draglines

**Dumping operations** may be into:
- burden dumps
- reject dumps
- rehabilitation dumps
- stockpiles
- hoppers
- bunkers
- feeders
- crushers

**Operator servicing, maintenance and housekeeping**
Tasks are those established and authorised for the site and may include:
- cleaning
- authorised servicing and the monitoring
- recording and reporting of faults
- conduct of authorised minor replacements
- provision of assistance to maintenance personnel during maintenance and repair activities

**Records and reports** may include:
- fuel usage
- computer readings
- end of shift documentation
- supplies logs
- work logs stockpile information
- quality information
- despatch details

Mobile Plant Operations

**Competency field**
Refer to Unit Sector(s).
Co-requisite units

Not applicable.
RIIMPO312A Conduct scraper operations

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting scraper operations in the mining and extractive industries. It includes: planning and preparing for operations; operating the scraper; loading, hauling and dumping materials; and carrying out post-operational procedures.

Application of the Unit
Scrapers are wheeled tractor-scrapers and may be standard models, twin powered scrapers, elevated or auger scrapers, push-pull scrapers. This unit is appropriate for those working in mobile plant operator roles, at worksites within:

- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct scraper operations:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- access, interpret and apply technical information
- apply equipment records maintenance procedures
- apply diagnostic techniques
- use relevant hand tools
- apply procedures for disposal of environmentally sensitive fluids and materials
- apply chemical and fuel safety measures
- work wearing personal protective equipment

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct scraper operations:

- site risk control procedures
- site and equipment health and safety procedures
- site environmental requirements and constraints
- site quality requirements
- site communication procedures
- site product characteristics
- towing and pushing requirements and techniques
- site geological and survey data
- site operational procedures
- scraper pre-start, start-up, operating and shutdown procedures and techniques
- scraper characteristics, technical capability and limitations
- hazard identification and response procedures
- site record keeping requirements
- site personal protective equipment requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisation and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• codes of practice  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
|---|---|
| Work requirements and procedures may come from briefings, handovers, and work orders and may be written or verbal, formal or informal, depending on the complexity of the process and may include: | • product identification  
• nature and scope of tasks  
• achievement targets  
• operational conditions  
• obtaining permits required  
• site layout  
• out of bounds areas  
• worksite inspection requirements  
• lighting conditions  
• plant or equipment defects  
• hazards and potential hazards  
• coordination requirements or issues |
| Geological data may include relevant site-specific information in relation to: | • material type and characteristics  
• faults and joints  
• broken ground  
• water tables or other water sources  
• wet and dry areas  
• degree of compaction |
| Survey data may include relevant site-specific information in relation to: | • floor heights  
• bench heights and widths  
• ramp and floor grades  
• underground workings, voids or services  
• work circuit, which may include:  
  • pick-up areas  
  • dump areas |
**Inspect and prepare work area** may include:

- haul routes
- identification of hazards
- selection and implementation of control measures for the hazards identified
- safeguarding site and non-site personnel by:
  - erection of barricades and posting of signs
  - selection of appropriate equipment to ensure personnel safety and protection
- determination of appropriate path of movement for loads and equipment/vehicles
- floor clean up to specified levels and grade requirements
- selection and implementation of environmental control measures

**Potential hazards and risks** may include:

- installed services
- damaged or defective pressurise hoses and fastenings
- abandoned equipment
- adjoining pit walls or structures
- adverse weather conditions (electrical storms, floods, fires)
- chemicals
- contaminants
- ancillary equipment
- fences
- holes and pot holes
- over-hanging rocks
- personnel
- unsafe ground
- unstable faces
- other vehicles
- powerlines
- dust and noise
- conveyors and other fixed plant
- overhead structures and services
- stored energy which may include:
  - engine components
  - radiators and cooling systems
  - hydraulic tanks and reservoirs
  - air tanks and reservoirs
  - hydraulic hoses
  - air hoses
| Coordination requirements may include with: | Coordination requirements may include with:

• coal
• oxidised waste
• rejects
• road base
• rubbish sulphide rock fill
• tailings

Operator service, maintenance and housekeeping tasks are those established and authorised for the site and may include:

• cleaning,
• authorised servicing and the monitoring,
• recording and reporting of faults
• conduct of authorised minor replacements
• provision of assistance to maintenance personnel during maintenance and repair activities

Records and reports may include:

• fuel usage
• computer readings
• end of shift documentation
• supplies logs
• work logs stockpile information
• quality information
• despatch details

Unit Sector(s)
Mobile Plant Operations

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIMPO313B Conduct face loader operations

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting face loader operations in the extractive and metalliferous mining industries. It includes: planning and preparing for operations; operating wheel loaders; and carrying out post-operational procedures.

Application of the Unit
Front end loaders are either articulated or rear wheel steer wheel loaders and may include diesel-electric or diesel-mechanical, and do not include integrated tool carriers. This unit is appropriate for those working in mobile plant operator roles, at worksites within:

- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct face loader operations:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- access, interpret and apply technical information
- apply equipment records maintenance requirements
- apply diagnostic techniques
- use relevant hand tools
- apply procedures for disposal of environmentally sensitive fluids and materials
- apply chemical and fuel safety measures
- work wearing personal protective equipment

### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to conduct face loader operations:

- site risk control procedures
- site and equipment health and safety procedures
- site environmental requirements and constraints
- site quality requirements
- site communication procedures
- site product characteristics
- towing requirements and techniques
- site geological and survey data
- site operational procedures
- front end loader pre-start, start-up, operating and shutdown procedures and techniques
- front end loader characteristics, technical capability and limitations
- hazard identification and response procedures
- site record keeping requirements
- site personal protective equipment requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for conducting face loader operations
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of face loader operations
- working with others to undertake and complete the face loader operations that meet all of the required outcomes
- consistent timely completion of face loader operations that safely, effectively and efficiently meet the required outcomes

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second

# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- codes of practice
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Face loading operations may include from:
- blast muck piles
- sedimentary deposit faces

### Geological data may include relevant site-specific information in relation to:
- rock type and characteristics
- faults and joints
- water tables or other water sources

### Survey data may include relevant site-specific information in relation to:
- floor heights
- bench widths
- grades

### Work requirements may come from briefings, handovers, and work orders and may include:
- nature and scope of tasks
- achievement targets
- operational conditions
- obtaining permits required
- site layout
- out of bounds areas
- worksite inspection requirements
- lighting conditions
- plant or equipment defects
- hazards and potential hazards
- coordination requirements or issues

### Inspect and prepare work area may include:
- identification of hazards
- selection and implementation of control measures for the hazards identified
- safeguarding site and non-site personnel by:
  - erection of barricades and posting of signs
| **Coordination with others** may include with: | • yard persons  
• laboratory personnel  
• weighbridge personnel  
• mobile plant operators  
• processing plant operators  
• haulage unit operators  
• maintenance personnel |
|---|---|
| **Pre-start and start-up procedures** are to include: | • external check of the machine  
• checking and topping up fluid levels (including fuel)  
• lubrication  
• inspection of attachments to ensure security and defects  
• instrument and control lever checks  
• reporting defects and damage |
| **Park-up and shutdown procedures** are to include ensuring that: | • vehicle/equipment is secured as required by site procedures  
• attachments are rendered safe  
• access ways are clear |
| **Operating techniques** may include: | • bucket loading  
• load carrying  
• equipment positioning  
• load discharge  
• towing  
• observing site speed limits  
• working safely around:  
  • overhead powerlines  
  • other machines and personnel  
  • live stockpiles |
| **Changing work conditions** may include variations in: | • grades  
• height of faces  
• bench widths  
• materials  
• haulage units  
• materials handling facilities |
• weather conditions
• day and night

**Haulage units** may include:
• rigid dump trucks
• articulated dump trucks
• highway trucks

**Materials handling equipment** may include:
• feed hoppers
• feeders
• crushers

**Dumping and stockpiling operations** may include:
• oversized material
• contaminated materials
• material to be used for special purposes or products

**Hazardous and emergency situations** may include:
• powerlines and other overhead services
• dust
• noise
• face overhangs
• lighting strikes (potential tyre explosion)
• tyre fires (isolation procedures)

3.5. Process records |
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to operate small open-cut mine equipment:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- access, interpret and apply technical information
- apply procedures for matching equipment with tasks
- apply equipment records maintenance requirements
- use relevant hand tools
- apply eye-hand coordination
- apply diagnostic techniques
- apply environmental constraints related to the specified operations
- apply procedures for disposal of environmentally sensitive fluids and materials

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to operate small open-cut mine equipment:

- site and equipment safety requirements
- equipment and ancillary attachment characteristics, technical capabilities and limitations
- specified equipment operational procedures
- specified equipment maintenance systems and procedures
- basic geological and survey data related to the specified operation
- site environmental requirements and constraints related to the support equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

RIIMPO315A Conduct tractor operations

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting tractor operations in the civil construction industry. It includes: planning and preparing; conducting machine pre-operational checks; operating the tractor; selecting, removing and fitting attachments; relocating the tractor; and carrying out machine operator maintenance and cleaning up.

Application of the Unit
This unit is appropriate for those working in mobile plant operator roles, at worksites within:
- Civil construction

Tractors must be registered to drive and operate on public roads.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Plan and prepare for operations</td>
<td>1.1. Access, interpret and apply <em>compliance documentation</em> relevant to conducting tractor operations</td>
</tr>
<tr>
<td></td>
<td>1.2. Obtain, confirm and apply <em>work instructions</em> to the allotted task</td>
</tr>
<tr>
<td></td>
<td>1.3. Obtain, confirm and apply <em>safety requirements</em> to the allotted task</td>
</tr>
<tr>
<td></td>
<td>1.4. Identify, obtain and implement signage requirements from the project traffic management plan</td>
</tr>
<tr>
<td></td>
<td>1.5. Select plant, tools and equipment to carry out tasks that are consistent with the requirements of the job and check them for serviceability and rectify or report any faults</td>
</tr>
<tr>
<td></td>
<td>1.6. Identify, confirm and apply <em>environmental protection</em> requirements from the project environmental management plan to the allotted task</td>
</tr>
<tr>
<td>2. Conduct machine pre-operational checks</td>
<td>2.1. Carry out pre-start, start-up, park and shutdown procedures</td>
</tr>
<tr>
<td></td>
<td>2.2. Check <em>tractor controls and functions</em> for serviceability and rectify or report any faults</td>
</tr>
<tr>
<td>3. Operate tractor</td>
<td>3.1. Identify site hazards associated with tractor operations and use safe operating techniques to minimise risk</td>
</tr>
<tr>
<td></td>
<td>3.2. Identify and apply operating techniques for tractor to achieve optimum output while achieving specified tolerances</td>
</tr>
<tr>

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery.
environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - the conducting of a minimum of three of the tasks listed in the Range Statement
  - fitting and removal of at least one attachment
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the tractor operations

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- codes of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

A tractor:
- is a self propelled, wheeled or tracked, commercial or agricultural machine
- it may be a rigid or articulated, two wheel or all wheel drive
- they are normally used for towing and/or providing a power take off (PTO) for specified attachments
- are to include wheeled and may include tracked types

Tractor operations may include:
- post hole digging, spraying of herbicides/fertilisers, mowing/slashing, lifting, sweeping and blade based functions

Work instructions may include:
- plans, specifications, quality requirements and operational details
- quality requirements may include: dimensions, tolerances, standards of work and material standards as detailed in the project drawings, specifications and project documentation to meet client satisfaction

Safety requirements may be from the site safety plan and organisational policies and procedures and include:
- protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe operating procedures to recognise hazards and prevent risks associated with underground and overhead services, other machines,
personnel, restricted access barriers, traffic control, working at heights, working in proximity to others, worksite visitors and the public
- emergency procedures, including: emergency shutdown and stopping, extinguishing fires, organisational First Aid requirements and evacuation
- hazards and risks, which may include: uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials

| **Environmental requirements** are to include: | • organisational/project environmental management plan, waste management, water quality protection, noise, vibration, dust and clean-up management |
| **Tractor controls and functions** include: | • implements or other attachments, brakes and manoeuvrability |
| **Attachments may include:** | • a front blade, forklift, slasher, mower, auger, drag broom, power broom, loading platform, rotary hoe, concrete mixer, spraying equipment and disc plough |
| **Safe parking practices is to include:** | • ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement |
| **Programmed maintenance** is to include: | • cleaning, authorised servicing and the monitoring, recording and reporting of faults |
| **Programmed maintenance may include:** | • authorised minor replacements and the provision of assistance to maintenance personnel during maintenance and repair activities |
| **Materials may include:** | • clays, silts, stone, gravel, mud, rock, sand, topsoil, timber, blended materials, organic materials, light scrub, grasses and bituminous mixes |
| **Tools and equipment are to include:** | • hand tools and maintenance equipment relevant to the particular tractor |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct self-propelled compactor operations:

- apply legislative, organisation and site requirements and procedures
- apply site and equipment safety requirements
- apply compactor operating techniques
- interpret drawings and sketches

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct self-propelled compactor operations:

- self-propelled compactor types, characteristics, technical capabilities and limitations
- basic principles of soil technology for civil works
- basic principles of soil compaction
- site and equipment safety requirements
- self-propelled compactor techniques related to essential tasks
- processes for interpreting engineering drawings and sketches
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheet (MSDS) and materials handling methods
- project quality requirements
- civil construction terminology
- methods of changing machine attachments
- safe operating techniques in all terrain
- basic earthworks calculations
- civil construction activity sequences of road construction, earthworks and drainage
- JSA’s/Safe work method statement
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- Knowledge of the requirements, procedures and instructions for conducting self-propelled compactor operations
- Implementation of requirements, procedures and techniques for the safe, effective and efficient completion of self-propelled compactor operations: which are to include:
  - Towing
  - Levelling and compacting to construction specification and/or
  - Spreading, covering, levelling and compacting landfill materials (tip)
- Communicating and working with others to undertake and complete self-propelled compactor operations that meet all of the required outcomes
- Consistent timely completion of self-propelled compactor operations that safely, effectively and efficiently meet the required outcomes

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of...
assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- codes of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**A compactor:**
- is a self-propelled, tamping foot drum, wheeled machine, used to compact a variety of types of construction materials
- it can operate at relatively high speeds and may have a dozer blade mounted on the front-end of the machine allowing for dozing, filling and compacting versatility
- the tamping feet on the wheels of the machine may vary in size, shape and depth

**Self-propelled compactor operations** are to include:
- towing and levelling and compacting to specification (construction) or to spread, level, cover and compact (tip) materials

**Work instructions** may include:
- plans, specifications, quality requirements and operational details
- quality requirements may include: dimensions, tolerances, standards of work and material standards as detailed in the project drawings, specifications and project documentation to meet client satisfaction

**Safety requirements** may be from the site safety plan and organisational policies and procedures and include:
- protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe operating procedures to recognise hazards and prevent risks associated with underground and overhead services, other machines,
| Personnel, restricted access barriers, traffic control, working at heights, working in proximity to others, worksite visitors and the public  |
|Emergency procedures, including: emergency shutdown and stopping, extinguishing fires, organisational First Aid requirements and evacuation  |
|Hazards and risks, which may include: uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials  |

| Environmental protection requirements are obtained from project environmental management plan and may include: |
|Organisational/project environmental management plan, waste management, water quality protection, noise, vibration, dust and clean-up management  |

| Compactor controls and functions include: |
|Implements or other attachments, brakes and manoeuvrability  |

| Safe parking practices is to include: |
|Ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement  |

| Programmed maintenance is to include: |
|Cleaning, authorised servicing and the monitoring, recording and reporting of faults  |

| Programmed maintenance may include: |
|Authorised minor replacements and the provision of assistance to maintenance personnel during maintenance and repair activities  |

| Materials may include: |
|Clays, silts, stone, gravel, mud, rock, sand, topsoil, timber, blended materials, organic materials, light scrub, grasses and bituminous mixes  |
|Rock types may include metamorphic, igneous and sedimentary  |
|Landfill may include household and commercial waste and soil  |

| Tools and equipment are to include: |
|Hand tools and maintenance equipment relevant to the particular compactor  |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct roller operations:

- apply legislative, organisation and site requirements and procedures
- apply site and equipment safety requirements
- apply attachment and roller operating techniques
- interpret drawings and sketches

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct roller operations:

- roller types, characteristics, technical capabilities and limitations
- basic principles of soil technology for civil works
- basic principles of soil compaction
- site and equipment safety requirements
- rolling/compacting techniques related to essential tasks
- processes for interpreting drawings and sketches
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheet and materials handling methods
- project quality requirements
- civil construction terminology
- methods of changing machine attachments
- safe operating techniques in all terrain
- basic earthworks calculations
- civil construction activity sequences of road construction, earthworks and drainage
- levelling techniques
- JSA's/Safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.

Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.

Aboriginal people and other people from a non English speaking background may have second language issues.

Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.

Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.

Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes, which are to include operations performed in a minimum of three different soil types and include the mandatory tasks of:
    - compacting materials to pattern and density
    - sealing and finishing
    - the removal and fitting of at least one attachment
    - consistently achieving the required outcomes
### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

| May include: | \- legislative, organisation and site requirements and procedures  
|             | \- manufacturer's guidelines and specifications  
|             | \- Australian standards  
|             | \- codes of practice  
|             | \- Employment and workplace relations legislation  
|             | \- Equal Employment Opportunity and Disability Discrimination legislation |

### A roller:

| May include: | \- is a self propelled or towed machine used for the primary purpose of compacting a variety of types of construction materials  
|             | \- it may be rubber tyred, smooth drum, padded drum or grid/open face type and achieves compaction by one or a combination of the following compactive methods: static weight, kneading, vibration and impact  
|             | \- a grid roller is utilised to breakdown oversized construction materials  
|             | \- padded drums may include sheepsfoot, padfoot, tamping foot or wedge foot |

### Types of rollers may include:

| May include: | \- self propelled pneumatic tyred; self propelled smooth drum vibratory roller; self propelled padded drum vibratory roller; self propelled smooth drum roller (including 3 pointers); self propelled double drum vibratory roller; towed pneumatic multi-tyred roller; towed grid roller; towed smooth drum vibratory roller; towed padded drum vibratory roller. |

### Roller operations are to include:

| May include: | \- compacting materials to pattern and density, sealing and finishing  
|             | \- earthworks, pavement, bitumen and asphalt works |

### Work instructions may include:

| May include: | \- plans, specifications, quality requirements and operational details  
|             | \- quality requirements may include: dimensions, tolerances, standards of work and material |
| **Safety requirements** may be from the site safety plan and organisational policies and procedures and include: | • protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances  
• safe operating procedures to recognise hazards and prevent risks associated with underground and overhead services, other machines, personnel, restricted access barriers, traffic control, working at heights, working in proximity to others, worksite visitors and the public  
• emergency procedures, including: emergency shutdown and stopping, extinguishing fires, organisational First Aid requirements and evacuation  
• hazards and risks, which may include: uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials |
| Environmental protection requirements are obtained from project environmental management plan and may include: | • organisational/project environmental management plan, waste management, water quality protection, noise, vibration, dust and clean-up management |
| Attachments are to include: | • scraper bars and may include interchangeable drums, spray bars, wheel/drum brooms, drag brooms, padded drum attachments and blades |
| Roller controls and functions include: | • implements or other attachments, brakes and manoeuvrability |
| Safe parking practices is to include: | • ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement |
| Programmed maintenance is to include: | • cleaning, authorised servicing and the monitoring, recording and reporting of faults |
| Programmed maintenance may | • authorised minor replacements and the |
include: provision of assistance to maintenance personnel during maintenance and repair activities

| Materials may include: | • materials may include but are not limited to clays, silts, stone, gravel, mud, rock, sand, topsoil, blended materials and bituminous mixes  
• rock types may include metamorphic, igneous and sedimentary |

| Tools and equipment are to include: | • hand tools and maintenance equipment relevant to the particular roller |

RIIMPO318B Conduct civil construction skid steer loader operations

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting skid steer loader operations in the civil construction industry. It includes: planning and preparing; conducting machine pre-operational checks; operating skid steer loaders; lifting, carrying and placing materials; selecting, removing and fitting attachments; relocating the skid steer loaders; carrying out machine operator maintenance; and cleaning up.

Application of the Unit
This unit is appropriate for those working in operational roles, at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply *compliance documentation* relevant to *skid steer loader tasks*
| | 1.2. Obtain, confirm and apply *work instructions* to the allotted task
| | 1.3. Obtain, confirm and apply *safety requirements* to the allotted task
| | 1.4. Obtain, identify and implement signage requirements from the project traffic management plan
| | 1.5. Select plant, *tools and equipment* to carry out tasks that are consistent with the requirements of the job, check them for serviceability and rectify or report any faults
| | 1.6. Identify, confirm and apply *environmental protection requirements* from the project environmental management plan, to the allotted task |
| 2. Conduct machine pre-operational checks | 2.1. Carry out pre-start, start-up, park and shutdown procedures
| | 2.2. Check loader controls and functions, including implements or other attachments, brakes and manoeuvrability for serviceability and rectify or report any faults |
| 3. Operate skid steer loader | 3.1. Identify site hazards associated with skid steer loader operations and use safe operating techniques to minimise risk
| | 3.2. Identify and apply operating techniques for skid steer loader to achieve optimum output in accordance with manufacturer's design specifications while achieving specified tolerances
| | 3.3. Operate loader to work instructions |
| 4. Lift, carry and place materials | 4.1. Conduct *communication practices* associated with transportation and lifting of *materials* in accordance with site specific practices and procedures, and confirm between parties
| | 4.2. Select, attach and apply slings and lifting
<p>| | |</p>

# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

## Relevant compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- codes of practice
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

## A skid steer loader is:
- a self-propelled wheeled machine in which steering is accomplished by skidding or reversing the wheels or tracks on one side of the machine. It has an integral front-mounted bucket-supporting structure and linkage, which loads or excavates through forward motion of the machine, and lifts, transports and discharges material

## Skid steer loader may include:
- compacting, truck excavation, lifting and carrying materials, cutting batters and benches, rock breaking and any activities associated with attachments listed

## Skid steer loader tasks are to include:
- stripping/spreading topsoil and materials, backfilling, lifting, loading vehicles, excavations, mixing materials and site clean-up

## Work instructions may include:
- plans, specifications, quality requirements and operational details
- quality requirements may include but not be limited to dimensions, tolerances, standards of work and material standards as detailed in the project drawings, specifications and project documentation to meet client satisfaction

## Safety requirements are to be:
- in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan

## Safety requirements may
- protective clothing and equipment, use of tools and equipment, workplace environment and
include:

- safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- personal protective equipment is to include that prescribed under legislation, regulation and workplace policies and practices
- safe operating procedures which are to include but not be limited to recognising and preventing hazards associated with underground and overhead services, other machines, personnel, restricted access barriers, traffic control, working at heights, working in proximity to others, worksite visitors and the public
- safe parking practices which is to include but not be limited to ensuring access ways are clear, equipment/ machinery is away from overhangs and refuelling sites, a safe distance from excavations, and secured from unauthorised access or movement
- hazards and risks may include but not be limited to uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping, extinguishing fires, organisational First Aid requirements and evacuation

<table>
<thead>
<tr>
<th>Tools and equipment are to include:</th>
<th>• hand tools and maintenance equipment relevant to the particular loader</th>
</tr>
</thead>
<tbody>
<tr>

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct backhoe/loader operations:

- apply legislative, organisation and site requirements and procedures
- apply site and equipment safety requirements
- apply techniques for calculating safe working loads
- apply backhoe/loader techniques related to essential tasks
- interpret drawings and sketches
- apply operational, maintenance and basic diagnostic procedures
- apply site isolation and traffic control responsibilities and authorities
- interpret materials safety data sheet and materials handling methods
- apply project quality requirements
- use civil construction terminology
- apply methods of changing machine attachments
- apply safe operating techniques in all terrain
- carry out basic earthworks calculations
- apply levelling techniques
- interpret JSA’s/Safe work method statement

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct backhoe/loader operations:

- backhoe/loader types, characteristics, technical capabilities and limitations
- basic principles of soil technology for civil works
- site and equipment safety requirements
- techniques for calculating safe working loads
- backhoe/loader techniques related to essential tasks
- processes for interpreting drawings and sketches
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheet and materials handling methods
- project quality requirements
- civil construction terminology
- methods of changing machine attachments
• safe operating techniques in all terrain
• basic earthworks calculations
• civil construction activity sequences of road construction, earthworks and drainage
• levelling techniques
• JSA's/Safe work method statement

  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes, including:
  - in a minimum of two different soil types and
  - the mandatory tasks: mixing materials, stripping/spreading topsoils and materials, trench excavation, backfilling, lifting and carrying materials, loading dump trucks, wagons, hoppers, chutes, and cutting/boxing
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. | • working with others to undertake and complete the backhoe/loader operations |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

<table>
<thead>
<tr>
<th>may include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• legislative, organisation and site requirements and procedures</td>
</tr>
<tr>
<td>• manufacturer's guidelines and specifications</td>
</tr>
<tr>
<td>• Australian standards</td>
</tr>
<tr>
<td>• codes of practice</td>
</tr>
<tr>
<td>• Employment and workplace relations legislation</td>
</tr>
<tr>
<td>• Equal Employment Opportunity and Disability Discrimination legislation</td>
</tr>
</tbody>
</table>

### A backhoe/loader is:

| • a self-propelled wheeled machine with a main structural support designed to carry both a front-mounted bucket loading mechanism and a rear-mounted backhoe |

### Backhoe/loader tasks are to include:

| • mixing materials, stripping/spreading topsoils and materials, trench excavation, backfilling, lifting and carrying materials, loading dump trucks, wagons, hoppers, chutes and cutting/boxing |

### Backhoe/loader tasks may include:

| • scrub clearing, ripping, compacting, cutting, batters and benches, rock breaking, demolition and any activities associated with the attachments listed |

### A skid steer loader is:

| • a self-propelled wheeled machine in which steering is accomplished by skidding or reversing the wheels or tracks on one side of the machine. It has an integral front-mounted bucket-supporting structure and linkage, which loads or excavates through forward motion of the machine, and lifts, transports and discharges material |

### Skid steer loader may include:

| • compacting, truck excavation, lifting and carrying materials, cutting batters and benches, rock breaking and any activities associated with attachments listed |

### Skid steer loader tasks are to include:

<p>| • stripping/spreading topsoil and materials, backfilling, lifting, loading vehicles, excavations, mixing materials and site clean |</p>

</table>
include: relevant to the particular loader and may include lifting equipment

| Environmental requirements are to include: | • organisational/project environmental management plan, waste management, water quality protection, noise, vibration, dust and clean-up management |
| Communications practices are to include: | • verbal instructions and fault reporting and may include two way radio, hand signals, mobile phone, site specific instructions, written instructions or instructions related to job/task
• on site meeting processes may include notification/scheduling (time, place, purpose), task discussions and local coordination of procedural and operational issues |
| Materials may include: | • clays, silts, stone, gravel, mud, rock, sand, topsoil, blended materials, organic materials, typical construction site materials/waste and bituminous mixes
• rock types may include metamorphic, igneous and sedimentary |
| Attachments may include: | • extending devices, tilt bucket, buckets, compaction wheel, ripper, plate compactor, rock breaker, auger, broom, mower/slasher, forklift, 4 in 1 bucket and free/rock grab |
| Operator maintenance is to include: | • cleaning, authorised servicing and the monitoring, recording and reporting of faults. It may also include the conduct of authorised minor replacements and the provision of assistance to maintenance personnel during maintenance and repair activities |

**Unit Sector(s)**
Mobile Plant Operations

**Competency field**
Refer to Unit Sector(s).
Co-requisite units

Not applicable.
RIIMPO320B Conduct civil construction excavator operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct excavator operations in the civil construction industry. It includes: planning and preparing; conducting machine pre-operational checks; operating the machine; lifting, carrying and placing materials; selecting, removing and fitting attachments; relocating the machine; carrying out machine operator maintenance; and cleaning up.

Application of the Unit
This unit is appropriate for those working in mobile plant operator roles, at worksites within:

- Civil construction

Operator license issued by OHS authority may be required in some states or territories and some excavators must be registered to drive and operate on public roads.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct excavator operations:

- apply legislative, organisation and site requirements and procedures
- apply basic principles of soil technology for civil works
- apply site and equipment safety requirements
- apply techniques for calculating safe working loads
- apply excavator and attachment operating techniques related to essential tasks
- interpret drawings and sketches
- apply operational, maintenance and basic diagnostic procedures
- apply site isolation and traffic control responsibilities and authorities
- interpret materials safety data sheets and apply materials handling methods
- apply project quality requirements
- use civil construction terminology
- apply methods of changing machine attachments
- apply safe operating techniques in all terrain
- carry out basic earthworks calculations
- apply levelling techniques
- apply JSA’s/Safe work method statement

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct excavator operations:

- excavator types, characteristics, technical capabilities and limitations
- basic principles of soil technology for civil works
- site and equipment safety requirements
- techniques for calculating safe working loads
- excavator and attachment operating techniques related to essential tasks
- processes for interpreting drawings and sketches
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- methods of changing machine attachments
- safe operating techniques in all terrain
- basic earthworks calculations
- civil construction activity sequences of road construction, earthworks and drainage
- levelling techniques
- JSA's/Safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for conducting excavator operations</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of excavator operations, including:</td>
</tr>
<tr>
<td></td>
<td>• in a minimum of two different soil types; and</td>
</tr>
<tr>
<td></td>
<td>• to include the mandatory tasks of loading, bulk excavation, backfilling, trench excavation, stockpiling, battering and benching</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete excavator operations that meet all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of excavator operations that safely, effectively and efficiently meet the required outcomes</td>
</tr>
<tr>

<td>• laser guidance or ATS are not to be used to assist in control of the machine during assessment</td>
</tr>
</tbody>
</table>

| Context of and specific resources for assessment | |
| • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.

Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.

Aboriginal people and other people from a non English speaking background may have second language issues.

Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.

Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes, including:
  - in a minimum of two different soil types; and
  - to include the mandatory tasks of loading, bulk excavation, backfilling, trench excavation, stockpiling, battering and benching
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and
| **Guidance information for assessment** | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>

</tr>
</tbody>
</table>

An excavator is:

- a self-propelled crawler or wheeled machine with an upper structure capable of a minimum of 360 degree rotation which excavates, elevates, swings and discharges material by the action of a bucket fitted to the boom and arm or telescoping boom, without moving the chassis or undercarriage during any part of the working cycle of the machine
- are to include tracked and may include wheeled excavators

**Excavator operations tasks** are to include:

- loading, bulk excavation, backfilling, trench excavation, stockpiling, battering and benching

**Excavator operations tasks** may include:

- compacting materials, demolition, rock breaking, removal of trees and ripping, lifting materials, cutting/boxing, laying pipes, cut and fill, mixing materials, stripping/spreading topsoil and materials

**Work instructions** may include:

- plans, specifications, quality requirements and operational details
- quality requirements may include but not be limited to dimensions, tolerances, standards of work and material standards as detailed in the project drawings, specifications and project documentation to meet client satisfaction

**Safety requirements** are to be:

- in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan
### Safety requirements

- protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- personal protective equipment is to include that prescribed under legislation, regulation and workplace policies and practices
- safe operating procedures which are to include but not be limited to recognising and preventing hazards associated with underground and overhead services, other machines, personnel, restricted access barriers, traffic control, working at heights, working in proximity to others, worksite visitors and the public
- safe parking practices which is to include but not be limited to ensuring access ways are clear, equipment/ machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement
- hazards and risks may include but not be limited to uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping, extinguishing fires, organisational First Aid requirements and evacuation

### Tools and equipment

- hand tools and maintenance equipment relevant to the particular loader

### Environmental requirements

- organisational/project environmental management plan, waste management, water quality protection, noise, vibration, dust and clean-up management

### Communications practices

- verbal instructions and fault reporting and may include 2-way radio, hand signals, mobile phone, site specific instructions, written instructions or instructions related to job/task
- on site meeting processes may include notification/ scheduling (time, place, purpose),
| Materials may include: | • clays, silts, stone, gravel, mud, rock, sand, topsoil, blended materials, organic materials, typical construction site materials/waste and bituminous mixes  
• rock types may include metamorphic, igneous and sedimentary |
| Attachments may include: | • ripper/tyne, auger, tilt bucket, rock breaker, buckets, lifting device, vibrating compaction plate and compaction wheel |
| Operator maintenance is to include: | • cleaning, authorised servicing and the monitoring, recording and reporting of faults. It may also include the conduct of authorised minor replacements and the provision of assistance to maintenance personnel during maintenance and repair activities |

**Unit Sector(s)**

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct civil construction wheeled front end loader operations:

- apply legislative, organisation and site requirements and procedures
- apply site and equipment safety requirements
- apply techniques for calculating safe working loads
- apply front end loader and attachment operating techniques related to essential tasks
- interpret drawings and sketches
- apply operational, maintenance and basic diagnostic procedures
- apply site isolation and traffic control responsibilities and authorities
- interpret materials safety data sheets and apply materials handling methods
- apply project quality requirements
- use civil construction terminology
- apply methods of changing machine attachments
- apply safe operating techniques in all terrain
- carry out basic earthworks calculations
- apply levelling techniques
- apply JSAs/Safe work method statement

### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to conduct civil construction wheeled front end loader operations:

- front end loader types, characteristics, technical capabilities and limitations
- basic principles of soil technology for civil works
- site and equipment safety requirements
- techniques for calculating safe working loads
- front end loader and attachment operating techniques related to essential tasks
- processes for interpreting drawings and sketches

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- codes of practice
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### A wheeled front end loader is:

- a self-propelled wheeled machine with an integral front-mounted bucket-supporting structure and linkage with integral quick coupler
- it loads or excavates through forward motion of the machine, and lifts, transports and discharges material

### Front end loader tasks are to include:

- mixing materials, stripping/spreading topsoil and materials, loading, cutting/boxing, backfilling, lifting and carrying materials

### Work instructions may include:

- plans, specifications, quality requirements and operational details
- quality requirements may include but not be limited to dimensions, tolerances, standards of work and material standards as detailed in the project drawings, specifications and project documentation to meet client satisfaction

### Safety requirements are to be:

- in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan

### Safety requirements may include:

- protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- personal protective equipment is to include that prescribed under legislation, regulation
and workplace policies and practices
- safe operating procedures which are to include but not be limited to recognising and preventing hazards associated with underground and overhead services, other machines, personnel, restricted access barriers, traffic control, working at heights, working in proximity to others, worksite visitors and the public
- safe parking practices which is to include but not be limited to ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement
- hazards and risks may include but not be limited to uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping, extinguishing fires, organisational First Aid requirements and evacuation

**Attachments** are to include:

- a bucket (general purpose or multipurpose)

**Attachments** may include:

- rippers/scarifiers
- and/or other attachments approved by the manufacturer

**Operator maintenance** is to include:

- cleaning, authorised servicing and the monitoring, recording and reporting of faults

*It may also include* the conduct of authorised minor replacements and the provision of assistance to maintenance personnel during maintenance and repair activities

**Unit Sector(s)**

Mobile Plant Operations

**Competency field**

Refer to Unit Sector(s).

**Co-requisite units**

Not applicable.
RIIMPO322A Conduct civil construction tracked front end loader operations

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting tracked front end loader operations in the civil construction industry. It includes: planning and preparing; conducting machine pre-operational checks; operating the machine; lifting, carrying and placing materials; relocating the machine; carrying out machine operator maintenance; and cleaning up.

Application of the Unit
This unit is appropriate for those working in mobile plant operator roles, at worksites within:
- Civil construction

Operator license issued by OHS authority may be required in some states or territories and tracked loaders must be registered to drive and operate on public roads.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
**Elements and Performance Criteria Pre-Content**

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

---
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply compliance documentation relevant to tracked front end loader tasks  
1.2. Obtain, confirm and apply work instructions to the allotted task  
1.3. Obtain, confirm and apply safety requirements to the allotted task  
1.4. Identify, obtain and implement signage requirements from the project traffic management plan  
1.5. Select plant, tools and equipment to carry out tasks that are consistent with the requirements of the job, check them for serviceability and rectify or report any faults  
1.6. Identify, confirm and apply environmental protection requirements from the project environmental management plan, to the allotted task |
| 2. Conduct machine pre-operational checks | 2.1. Carry out pre-start, start-up, park and shutdown procedures  
2.2. Check front end loader controls and functions, including implements or other attachments, brakes and manoeuvrability for serviceability and rectify or report any faults |
| 3. Operate front end loader | 3.1. Identify site hazards associated with front end loader operations and safe operating techniques are used to minimise risk  
3.2. Identify and apply operating techniques for front end loader to achieve optimum output in accordance with design specifications while achieving specified tolerances  
3.3. Operate front end loader to work instructions |
| 4. Attach, secure, lift, carry and place | 4.1. Conduct communication practices associated with transportation and lifting of materials  
4.2. Establish weight of load  
4.3. Select, attach and use slings and lifting gear in accordance with safe working load |
| **4.** Requirements |  
|---------------------|--- |
| 4.4. Position machinery to ensure stability and locate to effectively shift materials according to job specifications |
| 4.5. Shift load safely and effectively |
| 4.6. Move load in accordance with conventional hand and audible signals |

| **5.** Relocate the front end loader |  
|-------------------------------|--- |
| 5.1. Move front end loader safely between work sites, observing relevant codes and traffic management requirements |
| 5.2. Prepare front end loader for relocation |

| **6.** Carry out machine operator maintenance |  
|--------------------------------------------|--- |
| 6.1. Safely park front, shutdown and prepared machine for *maintenance* |
| 6.2. Conduct inspection and fault finding |
| 6.3. Remove and replace defective parts safely and effectively |
| 6.4. Carry out regular programmed maintenance tasks |

| **7.** Clean up |  
|----------------|--- |
| 7.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan |
| 7.2. Clean, check, maintain and store plant, tools and equipment |
**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct tracked front end loader operations:

- apply legislative, organisation and site requirements and procedures
- apply site and equipment safety requirements
- apply techniques for calculating safe working loads
- apply front end loader and attachment operating techniques related to essential tasks
- interpret drawings and sketches
- apply operational, maintenance and basic diagnostic procedures
- apply site isolation and traffic control responsibilities and authorities
- interpret materials safety data sheets and apply materials handling methods
- apply project quality requirements
- use civil construction terminology
- apply methods of changing machine attachments
- apply safe operating techniques in all terrain
- carry out basic earthworks calculations
- apply levelling techniques
- apply JSA's/Safe work method statement requirements

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct tracked front end loader operations:

- tracked front end loader types, characteristics, technical capabilities and limitations
- basic principles of soil technology for civil works
- site and equipment safety requirements
- techniques for calculating safe working loads
- front end loader and attachment operating techniques related to essential tasks
- processes for interpreting drawings and sketches
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- methods of changing machine attachments
- safe operating techniques in all terrain
- basic earthworks calculations
- civil construction activity sequences of road construction, earthworks and drainage
- levelling techniques
- JSA's/Safe work method statement
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
<td></td>
</tr>
<tr>
<td>• The assessment environment should not disadvantage the participant. For example,</td>
<td></td>
</tr>
</tbody>
</table>
language, literacy and numeracy demands of assessment should not be greater than those required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular work sites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes, including:
    - in a minimum of two different soil types; and
    - are to include the mandatory tasks of mixing materials, stripping/spreading topsoil and materials, loading, cutting/boxing, backfilling, lifting and carrying materials
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the tracked front end loader
| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- codes of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

A **tracked front end loader** is:
- a self-propelled tracked machine with an integral front-mounted bucket-supporting structure and linkage, which loads or excavates through forward motion of the machine, and lifts, transports and discharges material

**Tracked front end loader tasks** are to include:
- mixing materials, stripping/spreading topsoil and materials, loading, cutting/boxing, backfilling, lifting and carrying materials

**Tracked front end loader tasks** may include:
- scrub clearing and ripping

**Work instructions** may include:
- plans, specifications, quality requirements and operational details
- quality requirements may include but not be limited to dimensions, tolerances, standards of work and material standards as detailed in the project drawings, specifications and project documentation to meet client satisfaction

**Safety requirements** are to be:
- in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan

**Safety requirements** may include:
- protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- personal protective equipment is to include that prescribed under legislation, regulation and workplace policies and practices
- safe operating procedures which are to include but not be limited to recognising and preventing hazards associated with underground and overhead services, other machines, personnel, restricted access barriers, traffic control, working at heights, working in proximity to others, worksite visitors and the public
- safe parking practices which is to include but not be limited to ensuring access ways are clear, equipment/ machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement
- hazards and risks may include but not be limited to uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping, extinguishing fires, organisational First Aid requirements and evacuation

<table>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct dozer operations:

- apply legislative, organisation and site requirements and procedures
- apply site and equipment safety requirements
- apply techniques for calculating safe working loads
- apply dozer and attachment operating techniques related to essential tasks
- interpret drawings and sketches
- apply operational, maintenance and basic diagnostic procedures
- apply site isolation and traffic control responsibilities and authorities
- interpret materials safety data sheets and apply materials handling methods
- apply project quality requirements
- use civil construction terminology
- apply methods of changing machine attachments
- apply safe operating techniques in all terrain
- carry out basic earthworks calculations
- apply levelling techniques
- apply JSA's/Safe work method statement requirements

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct dozer operations:

- dozer types, characteristics, technical capabilities and limitations
- basic principles of soil technology for civil works
- site and equipment safety requirements
- techniques for calculating safe working loads
- dozer and attachment operating techniques related to essential tasks
- processes for interpreting drawings and sketches
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- methods of changing machine attachments
- safe operating techniques in all terrain
- basic earthworks calculations
- civil construction activity sequences of road construction, earthworks and drainage
- levelling techniques
- JSA's/Safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
</table>

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for conduct dozer operations
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of conduct dozer operations, including:
  - in a minimum of two different soil types, and
  - to include the mandatory tasks of stripping/spreading topsoil and materials, cut and fill, battering, stockpiling, bulk excavation, cutting drains, benching and backfilling
- working with others to undertake and complete the conduct dozer operations that meet all of the required outcomes
- consistent timely completion of conduct dozer operations that safely, effectively and efficiently meet the required outcomes
- laser guidance or ATS are not to be used to assist in control of the machine during assessment

Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes, including:
  - in a minimum of two different soil types, and
  - to include the mandatory tasks of stripping/spreading topsoil and materials, cut and fill, battering, stockpiling, bulk excavation, cutting drains, benching and backfilling
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct grader operations:

- apply legislative, organisation and site requirements and procedures
- apply site and equipment safety requirements
- apply grader operating techniques related to essential tasks, including:
  - apply cut and fill techniques
  - apply levelling techniques
  - construct drains
  - form and carry a windrow
  - tow equipment/plant
- apply processes for interpreting drawings and sketches
- apply operational, maintenance and basic diagnostic procedures
- apply site isolation and traffic control responsibilities and authorities
- interpret materials safety data sheets and apply materials handling methods
- apply project quality requirements
- use civil construction terminology
- apply methods of changing machine attachments
- apply safe operating techniques in all terrain
- carry out basic earthworks calculations
- apply JSA’s/Safe work method statement procedures
- apply diagnostic techniques
- apply operations directing techniques
- apply driving techniques
- apply hazardous goods handling techniques
- interpret plans, reports, maps, specifications
- apply lifting techniques
- organise work tasks
- apply defect reporting requirements
- apply safe work practices
- use communications equipment
- use computer systems
- use hand and power tools

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used.
This includes knowledge of the following, as required to conduct grader operations:

- site risk control procedures
- site and equipment health and safety procedures, including:
  - site isolation and traffic control responsibilities and authorities
  - materials safety data sheets (MSDS) and materials handling methods
  - JSA's/Safe work method statement
  - hazard identification and response procedures
  - site and project personal protective equipment requirements
- site and project environmental requirements and constraints
- site and project quality requirements
- site and project communication procedures
- site operational procedures
- civil construction activity sequences of road construction, earthworks and drainage
- civil construction terminology
- processes for interpreting drawings and sketches
- site soil and survey data
- basic principles of soil technology for civil works
- grader types, characteristics, technical capability and limitations
- grader pre-start, start-up, operating and shut-down procedures and techniques
- grader and attachment operating techniques related to essential tasks, including:
  - safe operating techniques in all terrain
  - levelling techniques
- operational, maintenance and basic diagnostic procedures
- methods of changing machine attachments
- site record keeping requirements
- basic earthworks calculations
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>

</table>

| Context of and specific resources for assessment | This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
|                                                 | The assessment environment should not |
disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non-English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes, including:
  - in a minimum of two different soil types, and
  - to include the mandatory tasks of cutting and maintaining drains, forming/upgrading/maintaining roads, mixing/spreading materials, scarifying and ripping, cutting and trimming of batters and trimming of road sub-grades and pavements
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:

</tbody>
</table>
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- codes of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### A grader:

- is a self-propelled articulating or rigid framed wheeled machine, designed to cut, move and place construction materials using a centrally mounted blade and may include forward and/or rear mounted rippers/scarifiers
- the blade and attachment controls are normally hydraulic; however, they may be mechanical

### Grader tasks are to include:

- cutting and maintaining drains, forming/upgrading/maintaining roads, mixing/spreading materials, scarifying and ripping, cutting and trimming of batters and trimming of road sub-grades and pavements

### Grader tasks may include:

- stripping/spreading topsoil and materials, cutting/boxing, cut and fill

### Work instructions may include:

- plans, specifications, quality requirements and operational details
- quality requirements may include but not be limited to dimensions, tolerances, standards of work and material standards as detailed in the project drawings, specifications and project documentation to meet client satisfaction
- soil types and information
- survey data, including: cut and fill levels, layer thicknesses, finished levels, finished grades and cross-falls

### Safety requirements are to be:

- in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan
**Safety requirements** may include:

- the site safety plan and organisational policies and procedures
- protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- personal protective equipment is to include that prescribed under legislation, regulation and workplace policies and practices
- safe operating procedures which are to include but not be limited to recognising and preventing hazards associated with underground and overhead services, other machines, personnel, restricted access barriers, traffic control, working at heights, working in proximity to others, worksite visitors and the public
- safe parking practices which is to include but not be limited to ensuring access ways are clear, equipment/ machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement
- hazards and risks may include but not be limited to installed services, damaged or defective pressurise hoses and fastenings, abandoned equipment, adverse weather conditions (electrical storms, floods, fires), chemicals, contaminants, ancillary equipment, fences, holes and pot holes, over-hanging rocks, personnel, unsafe ground, unstable faces, vehicles, powerlines, dust and noise, conveyors, overhead services and stored energy which may include: engine components, radiators and cooling systems, hydraulic tanks and reservoirs, air tanks and reservoirs, hydraulic hoses, air hoses, tyres, air conditioning components, electrical components, braking systems, centrifugal forces
- hazardous and emergency situations, which may include: motor vehicle accidents, lighting strikes (potential tyre explosion) and tyre fires (isolation procedures)
- emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping, extinguishing fires, organisational First Aid requirements and
**Evacuation**

### Tools and equipment are to include:
- hand tools and maintenance equipment relevant to the particular grader

### Environmental requirements are to include:
- organisational/project environmental management plan, waste management, water quality protection, noise, vibration, dust and clean-up management

### Pre-start, start-up, park and shutdown procedures may include:
- external check of the machine
- inspection of attachments to ensure security and identify defects
- checking of fluid levels (windscreen washer tank, hydraulic oil, coolant, grease, water, engine oil, fuel)
- carry out lubrication
- checking of display instrumentation and gauges (indicators, gauges, laser levels), computer systems, including:
  - brake air pressure
  - brake oil temperature
  - computer indicators
  - engine oil pressure
  - fuel filter
  - parking brake
  - retarder
  - service meter
  - speedometer/odometer
  - steering filters
  - tachometer
  - torque converter
  - oil temperature
  - transmission filter
  - voltmeter
  - water temperature
- inspection of air filter restriction indicator
- inspection and checking of cab (horn, lights, air conditioner)
- testing of engine and stop engine lights
- testing visual and audio warning devices and lights
- checking instruments and control lever
- reporting of defects and damage
- secure equipment as required by site procedures
- render attachments safe
- clear access ways

**Materials** may include:
- clays, silts, stone, gravel, mud, rock, sand, topsoil, blended materials, organic materials, typical construction site materials/waste and bituminous mixes
- rock types may include metamorphic, igneous and sedimentary

**Attachments** are to include:
- tynes/scarifiers

**Attachments** may include:
- dozer blade, machine guidance system, laser levelling equipment, ripper, slash

**Operator maintenance** is to include:
- cleaning, authorised servicing and the monitoring, recording and reporting of faults. It may also include the conduct of authorised minor replacements and the provision of assistance to maintenance personnel during maintenance and repair activities

---

**Unit Sector(s)**
Mobile Plant Operations

**Competency field**
Refer to Unit Sector(s).

**Co-requisite units**
Not applicable.
RIIMPO325A Conduct civil construction scraper operations

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting scraper operations in the civil construction industry. It includes: planning and preparing; conducting machine pre-operational checks; operating the machine; couple machines; relocating the machine; carrying out machine operator maintenance; and cleaning up.

Application of the Unit
This unit is appropriate for those working in mobile plant operator roles, at worksites within:

• Civil construction

Operator license issued by OHS authority may be required in some states or territories and scrapers must be registered to drive and operate on public roads.

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
**Elements and Performance Criteria Pre-Content**

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply *compliance documentation* relevant to *scraper operations tasks*  
1.2. Obtain, confirm and apply *work instructions* to the allotted task  
1.3. Obtain, confirm and apply *safety requirements* to the allotted task  
1.4. Identify, obtain and implement signage requirements from the project traffic management plan  
1.5. Select plant, *tools and equipment* to carry out tasks that are consistent with the requirements of the job, check them for serviceability and rectify or report any faults  
1.6. Identify, confirm and apply *environmental protection requirements* from the project environmental management plan, to the allotted task |
| 2. Conduct machine pre operational checks | 2.1. Carry out pre-start, start-up, park and shutdown procedures  
2.2. Check scraper controls and functions, including implements or other attachments, brakes and manoeuvrability for serviceability and rectify or report any faults |
| 3. Operate scraper | 3.1. Identify site hazards associated with scraper operations and safe operating techniques are used to minimise risk  
3.2. Identify and apply operating techniques for scrapers to achieve optimum output in accordance with design specifications  
3.3. Operate scraper to work instructions  
3.4. Carry out levelling, cutting, spreading, land filling/landscaping to job specifications and tolerances  
3.5. Load and transport material to discharge point efficiently with minimum loss of load  
3.6. Discharge material safely and efficiently |
<p>| 4. Couple machines | 4.1. Establish and maintain coordination with |</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct scraper operations:

- apply legislative, organisation and site requirements and procedures
- apply site and equipment safety requirements
- apply scraper operating techniques related to essential tasks
- apply processes for interpreting drawings and sketches
- apply operational, maintenance and basic diagnostic procedures
- apply site isolation and traffic control responsibilities and authorities
- interpret materials safety data sheets and apply materials handling methods
- apply project quality requirements
- use civil construction terminology
- apply methods of changing machine attachments
- apply safe operating techniques in all terrain
- carry out basic earthworks calculations
- apply levelling techniques
- apply JSA's/Safe work method statement procedures

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct scraper operations:

- scraper types, characteristics, technical capabilities and limitations
- basic principles of soil technology for civil works
- site and equipment safety requirements
- scraper operating techniques related to essential tasks
- processes for interpreting drawings and sketches
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- methods of changing machine attachments
- safe operating techniques in all terrain
- basic earthworks calculations
- civil construction activity sequences of road construction, earthworks and drainage
- levelling techniques
- JSA's/Safe work method statement

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- codes of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination

### Scrapers may include:
- elevating scrapers, which are self-propelled articulating wheeled machine with a prime mover and sliding floor bowl configuration
- the bowl houses an elevator system designed to assist in loading and unloading the bowl
- the elevator system is normally hydraulically driven from the main engine; however, the elevator system may be driven by a separate power source
- open bowl scrapers, which are self propelled articulating wheeled machine with a prime mover and sliding floor bowl configuration
- these may be of a standard open bowl, tandem powered or push-pull configuration
- the standard open bowl scraper normally requires the assistance of a push dozer when loading
- standard open bowl and tandem powered scrapers may be fitted with an auger attachment in the bowl, to provide self-loading capability

### Scraper tasks are to include:
- the stripping of materials to specified depth, the cutting and filling of materials to line and level, stockpiling and spreading
- where push pull scrapers are used, tasks are to include coupling, operating in tandem and disengagement
**Scraper tasks** may include:

- stripping/spreading topsoil, granular materials, cutting drains, cutting battens, cutting/boxing, backfilling and rough grading

**Work instructions** may including:

- plans, specifications, quality requirements and operational details
- quality requirements may include but not be limited to dimensions, tolerances, standards of work and material standards as detailed in the project drawings, specifications and project documentation to meet client satisfaction

**Safety requirements** are to be:

- in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan

**Safety requirements** may include:

- protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- personal protective equipment is to include that prescribed under legislation, regulation and workplace policies and practices
- safe operating procedures which are to include but not be limited to recognising and preventing hazards associated with underground and overhead services, other machines, personnel, restricted access barriers, traffic control, working at heights, working in proximity to others, worksite visitors and the public
- safe parking practices which is to include but not be limited to ensuring access ways are clear, equipment/ machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement
- hazards and risks may include but not be limited to uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping, extinguishing fires, organisational First Aid requirements and evacuation
Tools and equipment are to include:

- hand tools and maintenance equipment relevant to the particular scraper

Environmental requirements are to include:

- organisational/project environmental management plan, waste management, water quality protection, noise, vibration, dust and clean-up management

Communications practices are to include:

- verbal instructions and fault reporting and may include 2-way radio, hand signals, mobile phone, site specific instructions, written instructions or instructions related to job/task
- on site meeting processes may include notification/scheduling (time, place, purpose), task discussions and local coordination of procedural and operational issues

Materials may include:

- clays, silts, stone, gravel, mud, rock, sand, topsoil, blended materials and organic materials
- rock types may include metamorphic, igneous and sedimentary

Attachments may include:

- an auger, machine guidance system and laser levelling equipment

Operator maintenance is to include:

- cleaning, authorised servicing and the monitoring, recording and reporting of faults. It may also include the conduct of authorised minor replacements and the provision of assistance to maintenance personnel during maintenance and repair activities

1.3. Obtain, confirm and apply **safety requirements** to the allotted task  
1.4. Obtain, identify and implement signage requirements from the project traffic management plan  
1.5. Select plant, **tools and equipment** to carry out tasks that are consistent with the requirements of the job, check them for serviceability and rectify or report any faults  
1.6. Identity, confirm and apply **environmental protection requirements** from the project environmental management plan, to the allotted task |
| 2. Conduct machine pre-operational checks | 2.1. Carry out pre-start, start-up, park and shutdown procedures  
2.2. Check water cart controls and functions, including implements or other attachments, brakes and manoeuvrability for serviceability and report or rectify any faults |
| 3. Operate water cart | 3.1. Identity site hazards associated with water cart operations and use safe operating techniques to minimise risk  
3.2. Manage engine power to ensure efficiency of water cart platform movements and to minimise damage to the engine and gears  
3.3. Coordinate engine power with gear selection to ensure smooth transition and operation within torque range  
3.4. Operate water cart platform to work instructions  
3.5. Constantly monitor **road/traffic conditions** and ensure no injury to people or damage to property, equipment, loads and facilities  
3.6. Bring vehicle to a halt smoothly,
| 4. Load, transport and distribute water | 4.1. Position water cart at load and discharge/distribution points with a minimum of manoeuvre  
4.2. **Load** water cart to within the authorised carrying capacity and to suit the site and task conditions  
4.3. Move water cart from loading to the discharge/distribution point safely and smoothly avoiding surge and sway  
4.4. **Discharge or distribute water** in accordance with the task specifications  
4.5. Monitor and maintain **discharge and distribution systems** throughout the operations |
|---|---|
| 5. Carry out driver maintenance | 5.1. Safely park, shutdown and prepare the water cart for **maintenance**  
5.2. Conduct inspection and fault finding  
5.3. Remove and replace defective parts safely and effectively  
5.4. Carry out regular programmed maintenance tasks |
| 6. Clean up | 6.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan  
6.2. Clean, check, maintain and store vehicle, tools and equipment |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct water cart operations:

- apply legislative, organisation and site requirements and procedures
- apply site and equipment safety requirements
- apply safe operating techniques in all terrain
- apply practical field tests for moisture content
- apply levelling techniques
- apply processes for interpreting engineering drawings and sketches
- apply operational, maintenance and basic diagnostic procedures
- apply site isolation and traffic control responsibilities and authorities
- interpret materials safety data sheets and apply materials handling methods
- apply project quality requirements
- use civil construction terminology
- apply JSA's/Safe work method statement requirements

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct water cart operations:

- water cart types, characteristics, technical capabilities and limitations
- pumps and pumping system operations
- water distribution systems types, characteristics, technical capabilities and limitations
- basic dust suppression theory
- the causes and effects of surge and sway in bulk fluid loads
- site and equipment safety requirements
- safe operating techniques in all terrain
- civil construction activity sequences of road construction, earthworks and drainage
- practical field tests for moisture content
- levelling techniques
- basic soil types and characteristics
- basic soil compaction theory including the effects of moisture content and mechanical interlock
- processes for interpreting engineering drawings and sketches
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSA's/Safe work method statement
Evidence Guide

- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.
- dust suppression operations
- consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
- working with others to undertake and complete water cart operations

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisation and site requirements and procedures  
| manufacturer's guidelines and specifications  
| Australian standards  
| codes of practice  
| Employment and workplace relations legislation  
| Equal Employment Opportunity and Disability Discrimination legislation |

| Water carts may be: | purpose built vehicles or other vehicle/plant platforms being used for the purpose |

| Water cart functions are to include: | loading, transporting, discharging and distribution of water |

| Work instructions may include: | plans, specifications, quality requirements and operational details  
| quality requirements may include but not be limited to dimensions, tolerances, standards of work and material standards as detailed in the project drawings, specifications and project documentation to meet client satisfaction |

| Safety requirements are to be: | in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan |

| Safety requirements may include: | protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances  
| personal protective equipment is to include that prescribed under legislation, regulation and workplace policies and practices  
| safe operating procedures which are to include but not be limited to recognising and preventing hazards associated with underground and overhead services, other |
machines, personnel, restricted access barriers, traffic control, working at heights, working in proximity to others, worksite visitors and the public

- safe parking practices which is to include but not be limited to ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement

- hazards and risks may include but not be limited to uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials

- emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping, extinguishing fires, organisational First Aid requirements and evacuation

<table>
<thead>
<tr>
<th>Distribution of water means:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• the movement of water from the water cart into another form of water storage area/receptacle</td>
</tr>
</tbody>
</table>
**Distribution** tasks are to include:
- pressure and gravity discharge into another storage facility which may include the filling of water tanks, water points and/or fire points

**Discharge and distribution systems** includes:
- pumps, lines and nozzles

**Communications practices** are to include:
- verbal instructions and fault reporting and may include 2-way radio, hand signals, mobile phone, site specific instructions, written instructions or instructions related to job/task
- on site meeting processes may include notification/scheduling (time, place, purpose), task discussions and local coordination of procedural and operational issues

**Materials** may include:
- clays, silts, stone, gravel, mud, rock, sand, topsoil, blended materials, organic materials, typical construction site materials/waste and bituminous mixes
- rock types may include metamorphic, igneous and sedimentary

**Attachments** may include:
- ripper/tyne, auger, tilt bucket, rock breaker, buckets, lifting device, vibrating compaction plate and compaction wheel

**Operator maintenance** is to include:
- cleaning, authorised servicing and the monitoring, recording and reporting of faults

**It may also include**
- the conduct of authorised minor replacements and the provision of assistance to maintenance personnel during maintenance and repair activities

Co-requisite units

Not applicable.
RIIMPO327A Conduct pipe layer operations

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting pipe-layer operations in the civil construction industry. It includes: planning and preparing; conducting machine pre-operational checks; operating the machine; attaching, securing, lifting, carrying and placing materials; transporting the machine; carrying out machine operator maintenance; and cleaning up.

Application of the Unit
This unit is appropriate for those working in mobile plant operator roles, at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>
<thead>

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct pipe-layer operations:

- apply legislative, organisation and site requirements and procedures
- apply site and equipment safety requirements
- apply techniques for calculating safe working loads
- apply pipe-layer and attachment operating techniques related to essential tasks
- apply processes for interpreting engineering drawings and sketches
- apply operational, maintenance and basic diagnostic procedures
- apply site isolation requirements
- apply traffic management requirements
- interpret materials safety data sheets and apply materials handling methods
- apply project quality requirements
- use civil construction terminology
- apply methods of changing machine attachments
- apply safe operating techniques in all terrain
- carry out basic earthworks calculations
- apply JSA's/Safe work method statement requirements

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct pipe-layer operations:

- pipe-layer types, characteristics, technical capabilities and limitations
- basic principles of soil technology for civil works
- site and equipment safety requirements
- techniques for calculating safe working loads
- pipe-layer and attachment operating techniques related to essential tasks
- processes for interpreting engineering drawings and sketches
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- methods of changing machine attachments
• safe operating techniques in all terrain
• basic earthworks calculations
• civil construction activity sequences of road construction, earthworks and drainage
• JSA’s/Safe work method statement
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>

<td>• laser guidance or ATS are not to be used to assist in control of the machine during assessment</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not
disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes, including:
  - a minimum of nine pipe lengths, where the size of the pipes are to be greater than 50% of the authorised working load of the pipe-layer machine, and
  - the ground conditions are to include level, sloping and broken surface
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:

</tr>
</tbody>
</table>
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- codes of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### A pipe-layer is:

- a self-propelled crawler tractor with a purpose built side boom and winch assembly used for the express purpose of lifting and laying pipes, normally below ground level

### Pipe-layer tasks include:

- the lifting, moving and placement of pipes

### Work instructions may include:

- plans, specifications, quality requirements and operational details
- quality requirements may include but not be limited to dimensions, tolerances, standards of work and material standards as detailed in the project drawings, specifications and project documentation to meet client satisfaction

### Safety requirements are to be:

- in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan

### Safety requirements may include:

- protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- personal protective equipment is to include that prescribed under legislation, regulation and workplace policies and practices
- safe operating procedures which are to include but not be limited to recognising and preventing hazards associated with
underground and overhead services, other machines, personnel, restricted access barriers, traffic control, working at heights, working in proximity to others, worksite visitors and the public

- safe parking practices which is to include but not be limited to ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement
- hazards and risks may include but not be limited to uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping, extinguishing fires, organisational First Aid requirements and evacuation

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to Conduct continuous bucket trencher operations:

- apply legislative, organisation and site requirements and procedures
- apply site and equipment safety requirements
- apply continuous bucket trencher operating techniques related to essential tasks
- apply processes for interpreting engineering drawings and sketches
- apply operational, maintenance and basic diagnostic procedures
- apply site isolation and traffic control responsibilities and authorities
- interpret materials safety data sheets and apply materials handling methods
- apply project quality requirements
- use civil construction terminology
- apply methods of changing machine attachments
- apply safe operating techniques in all terrain
- carry out basic earthworks calculations
- apply JSA's/Safe work method statement requirements

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to Conduct continuous bucket trencher operations:

- continuous bucket trencher types, characteristics, technical capabilities and limitations
- basic principles of soil technology for civil works
- site and equipment safety requirements
- continuous bucket trencher operating techniques related to essential tasks
- processes for interpreting engineering drawings and sketches
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- methods of changing machine attachments
- safe operating techniques in all terrain
- basic earthworks calculations
- civil construction activity sequences of road construction, earthworks and drainage
- JSA's/Safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- codes of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Continuous bucket trenchers are:

- self-propelled purpose designed crawler tractor machine with a continuous bucket assembly mounted on the front of the machine

Continuous bucket trencher tasks are to include:

- trenching and draining

Continuous bucket trencher tasks may include:

- pipe laying

Work instructions may include:

- plans, specifications, quality requirements and operational details
- quality requirements may include but not be limited to dimensions, tolerances, standards of work and material standards as detailed in the project drawings, specifications and project documentation to meet client satisfaction

Safety requirements are to be:

- in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan

Safety requirements may include:

- protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- personal protective equipment is to include that prescribed under legislation, regulation and workplace policies and practices
• safe operating procedures which are to include but not be limited to recognising and preventing hazards associated with underground and overhead services, other machines, personnel, restricted access barriers, traffic control, working at heights, working in proximity to others, worksite visitors and the public
• safe parking practices which is to include but not be limited to ensuring access ways are clear, equipment/ machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement
• hazards and risks may include but not be limited to uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
• emergency procedures related to this unit are to include but may not be limited to emergency shutdown and stopping, extinguishing fires, organisational First Aid requirements and evacuation

<table>
<thead>
<tr>
<th>Tools and equipment are to include:</th>
<th>• hand tools and maintenance equipment relevant to the particular machine</th>
</tr>
</thead>
<tbody>
<tr>
<td>Environmental requirements are to include:</td>
<td>• organisational/project environmental management plan, waste management, water quality protection, noise, vibration, dust and clean-up management</td>
</tr>
<tr>
<td>Attachments are to include:</td>
<td>• buckets</td>
</tr>
<tr>
<td>Attachments may include:</td>
<td>• rock saws</td>
</tr>
<tr>
<td>Operator maintenance is to include:</td>
<td>• cleaning, authorised servicing and the monitoring, recording and reporting of faults. It may also include the conduct of authorised minor replacements and the provision of assistance to maintenance personnel during maintenance and repair activities</td>
</tr>
<tr>
<td>Materials may include:</td>
<td>• clays, silts, stone, gravel, mud, rock, sand, topsoil, blended materials, organic materials, typical construction site materials/waste and bituminous mixes</td>
</tr>
<tr>
<td></td>
<td>• rock types may include metamorphic, igneous and sedimentary</td>
</tr>
</tbody>

Unit Sector(s)
Mobile Plant Operations

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIMPO329A Conduct dragline operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conducting of dragline operations in resources and infrastructure industries. It includes: planning and preparing for operations; relocating burden and materials; relocating the dragline; and carrying out operator maintenance.

Application of the Unit
This unit is appropriate for those working in mobile plant operator roles, at worksites within:
- Civil construction
- Coal mining
- Extractive industries

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. ### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct dragline operations:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- access, interpret and apply technical information
- apply hand-eye coordination
- work wearing noise protection equipment
- apply diagnostic techniques
- use relevant hand tools
- apply equipment records maintenance requirements
- apply procedures required for disposal of environmentally sensitive fluids and materials
- apply chemical and fuel safety measures

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct dragline operations:

- site and equipment safety procedures
- site mining systems and procedures
- dragline and associated equipment characteristics, technical capabilities and limitations
- dragline maintenance systems and procedures
- site geological and survey data
- hazard identification and response procedures
- site environmental requirements and constraints related to dragline operations
- working at heights
- working in confined spaces
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
</table>
| **Critical aspects for assessment and evidence required to demonstrate competency in this unit** |  - knowledge of the requirements, procedures and instructions for conducting dragline operations  
  - implementation of requirements, procedures and techniques for the safe, effective and efficient completion of dragline operations  
  - working with others to undertake and complete dragline operations that meet all of the required outcomes  
  - consistent timely completion of dragline operations that safely, effectively and efficiently meet the required outcomes |

| Context of and specific resources for assessment |  - This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.  
  - The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.  
  - Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.  
  - Aboriginal people and other people from a non English speaking background may have second language issues. |
Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances. Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the dragline operations

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisation and site requirements and procedures |
| | manufacturer's guidelines and specifications |
| | Australian standards |
| | codes of practice |
| | Employment and workplace relations legislation |
| | Equal Employment Opportunity and Disability Discrimination legislation |

| Draglines include: | a broad range of equipment capacities and they may be electric drive, hydraulic or diesel powered |

| Work requirements may include: | information on operations and mining conditions |
| | site lighting conditions |
| | dig sequence |
| | defects on equipment |
| | hazards |
| | output targets |
| | coordination requirements/issues |

| Safety information and procedures may be contained in: | legislation and regulations |
| | relevant Australian standards |
| | management plans |
| | OHS policy |
| | code of practice |
| | manufacturer's instructions |
| | safe working procedures (or equivalent) |

| Specific safety requirements are to include: | boarding and disembarking procedures |
| | limit testing requirements |
| | operational signal procedures |

| Dig sequence may include: | set up requirements |
| | manoeuvre |
| | operational information |
| | soil placement |
Specified tasks may include:

- movement to main
- dump to final spoil

Monitoring systems and alarms are:

- those which indicate vital signs and out of specification activities/operations

Hazardous and emergency situations may include:

- sinking
- bridge failure
- spoil stabilisation
- wet weather operation
- electrical shutdown or site equivalent

Coordination requirements may include those with:

- dozers
- cable reelers
- graders
- bobcats
- winches
- cranes
- tractors
- other vehicles

### Unit Sector(s)
Mobile Plant Operations

### Competency field

3.2. Complete *ground preparation*  
3.3. Carry out cable location and handling  
3.4. Resolve *coordination issues*, including support equipment and personnel  
3.5. Conduct steering and travel to relocate bucket wheel excavator |
| 4. Carry out operator maintenance | 4.1. Carry out bucket-wheel inspections and fault-finding  
4.2. Carry out authorised routine operational servicing, lubrication and housekeeping tasks  
4.3. Carry out authorised minor maintenance  
4.4. Provide authorised operator support during preparation for, and conduct of, major maintenance tasks  
4.5. Inspect and test structures and components for fault conditions, wear and need of repair or replacement  
4.6. Process records |
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct bucket-wheel operations:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- access, interpret and apply technical information
- apply hand-eye coordination
- apply procedures for working at heights
- apply diagnostic techniques
- use relevant hand tools
- apply environmental constraints
- apply equipment records maintenance requirements
- apply required procedures for the dispose of environmentally sensitive fluids and materials
- apply chemical and fuel safety measures

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct bucket-wheel operations:

- site and equipment safety procedures
- site operational procedures
- equipment characteristics, technical capabilities and limitations
- operational procedures
- site environmental requirements and constraints
- hazard identification and response procedures
- maintenance systems and procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete bucket-wheel operations

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation | legislative, organisation and site requirements and procedures  
|                                 | manufacturer's guidelines and specifications  
|                                 | Australian standards  
|                                 | codes of practice  
|                                 | Employment and workplace relations legislation  
|                                 | Equal Employment Opportunity and Disability Discrimination legislation  

### Bucket-wheel operations may include:

- the positioning and digging of burden as part of a terrace dig
- rehandling and responding to changes in depth, grade and crossfall

### Work requirements may be in the form of:

- shift briefings;
- handover details
- work orders

### Shift details may include:

- nature and scope of the work
- working conditions
- achievement targets
- site lighting arrangements
- defects on equipment
- hazards and potential hazards
- coordination requirements/issues

### Geological and survey data may include:

- safety factors relating to natural fall
- grades
- levels
- faults
- slips
- strata
- drainage

### Safety information and procedures may be contained in:

- legislation and regulations
- relevant Australian standards
- management plans
- OHS policy
| Hazardous and emergency situations may include: | • sinking  
• spoil and highwall stabilisation  
• wet weather operation  
• electrical start-up and shutdown  
• belt system fires  
• electrical fires  
• windy and dusty conditions  
• working in close proximity to moving equipment and parts |
| Ground preparation for bucket-wheel relocation may include: | • pads  
• roads  
• rolls  
• cable route  
• ramps |
| Coordination issues may include: | • communication with personnel  
• awareness of other support plant  
• equipment |

RIIMPO331A Conduct operations with stockpile dozer

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting stockpile dozer operations in the metalliferous mining and extractive industries. It includes: planning and preparing for operations; operating the dozer; performing stockpile operations; and carrying out operator maintenance.

Application of the Unit
This unit covers all tracked dozers; and those tasks and performance criteria which are within the legal and technical limitations of rubber-wheeled dozers. It is appropriate for those working in mobile plant operator roles, at worksites within:
- Metalliferous mining
- Extractive industries

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second
language issues.

- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the stockpile dozer operations

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisation and site requirements and procedures |
| | manufacturer's guidelines and specifications |
| | Australian standards |
| | code of practice |
| | Employment and Workplace Relations legislation |
| | Equal Employment Opportunity and Disability Discrimination legislation |

| Stockpile dozer operations may include: | ripping |
| | pushing and levelling |
| | pad preparation |
| | drainage |
| | dump establishment |
| | maintenance |

| Work requirements may be in the form of: | shift briefings |
| | handover details |
| | work orders |

| Work requirements may include: | plant identification/allocation |
| | nature and scope of the task |
| | achievement targets |
| | working conditions |
| | adequacy of site lighting |
| | defects to equipment |
| | hazards and potential hazards |
| | coordination requirements/issues |

| Safety information and procedures may be contained in: | legislation and regulations |
| | relevant Australian standards |
| | management plans |
| | OHS policy |
| | code of practice |
| | manufacturer's instructions |
| | safe working procedures (or equivalent) |

| Specific safety requirements may | boarding and disembarkation procedures |
include:                  | spontaneous combustion awareness  
|                        | slippery conditions               
|                        | uneven surfaces                  
|                        | operational signal procedures    
|                        | equipment lowering and lifting   

**Operator service, maintenance and housekeeping** tasks are those established and authorised for the site and may include:

- cleaning 
- authorised servicing and the monitoring 
- recording and reporting faults 
- conducting authorised minor replacements 
- providing assistance to maintenance personnel during maintenance and repair activities

Records and reports may include:

- fuel usage 
- computer readings 
- end of shift documentation 
- supplies logs 
- work logs stockpile information 
- quality information

**Unit Sector(s)**

Mobile Plant Operations

**Competency field**

Refer to Unit Sector(s).

**Co-requisite units**

Not applicable.
RIIMPO332A Conduct operations with skid steer loader

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting skid steer loader operations in resources and infrastructure industries. It includes: planning and preparing; conducting machine pre-operational checks; operating skid steer loaders; loading, carrying and placing materials; selecting, removing and fitting attachments; relocating the skid steer loader; carrying out machine operator maintenance; and cleaning up.

Application of the Unit
This unit is appropriate for those working in operational roles, at worksites within:
- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply *compliance documentation* relevant to *skid steer loader tasks*  
1.2. Obtain, confirm and apply *work instructions* to the allotted task  
1.3. Obtain, confirm and apply *safety requirements* to the allotted task  
1.4. Access, interpret and apply *traffic management* procedures  
1.5. Select *plant, tools and equipment* to carry out tasks that are consistent with the requirements of the job, check them for serviceability and rectify or report any faults  
1.6. Access, interpret and apply *environmental protection procedures* |
| 2. Conduct machine pre-operational checks | 2.1. Carry out pre-start, start-up, park and shutdown procedures  
2.2. Check *loader controls and functions* for serviceability, and rectify or report any faults |
| 3. Operate skid steer loader | 3.1. Identify site hazards associated with skid steer loader operations and use safe operating techniques to minimise risk  
3.2. Identify and apply operating techniques for skid steer loader to achieve optimum output in accordance with manufacturer's design specifications  
3.3. Operate loader to work instructions |
| 4. Load, carry and place materials | 4.1. Conduct *communication practices* associated with transportation and loading of *materials* in accordance with site specific practices and procedures, and confirm between parties  
4.2. Ensure load or lift is within safe operational limits of the machine  
4.3. Position machinery to ensure stability and effectively shift materials according to job specifications  
4.4. Shift load safely and effectively |

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct skid steer loader operations:

- apply legislative, organisation and site requirements and procedures
- apply site and equipment safety requirements
- perform safe working load calculations
- apply skid steer loader operating techniques
- apply operational, maintenance and basic diagnostic procedures
- apply site isolation and traffic control responsibilities and authorities
- apply site quality requirements
- change machine attachments
- apply safe operating techniques in all terrain
- apply levelling techniques

## Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to conduct skid steer loader operations:

- skid steer loader types, characteristics, technical capabilities and limitations
- site and equipment safety requirements
- techniques for calculating safe working loads
- skid steer loader techniques related to essential tasks
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- methods of changing machine attachments
- safe operating techniques in all terrain
- levelling techniques
- risk assessment tools/safe work methods
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for conducting skid steer loader operations
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of skid steer loader operations
- working with others to undertake and complete skid steer loader operations that meet all of the required outcomes
- consistent timely completion of skid steer loader operations that safely, effectively and efficiently meet the required outcomes

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity
- Aboriginal people and other people from a non English speaking background may have second
### Language Issues
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of Assessment
This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- Written and/or oral assessment of the candidate's required knowledge.
- Observed, documented and/or first hand testimonial evidence of the candidate's:
  - Implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes.
  - Consistently achieving the required outcomes.
  - First hand testimonial evidence of the candidate's:
    - Working with others to conduct skid steer loader operations.

### Guidance Information for Assessment
Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant **compliance documentation** may include: | legislative, organisation and site requirements and procedures |
| | manufacturer's guidelines and specifications |
| | Australian standards |
| | codes of practice |
| | Employment and Workplace Relations legislation |
| | Equal Employment Opportunity and Disability Discrimination legislation |

**A skid steer loader is:**

- a self-propelled wheeled machine in which:
  - steering is accomplished by skidding or reversing the wheels or tracks on one side of the machine
  - there is an integral front-mounted bucket-supporting structure and linkage, which loads or excavates through forward motion of the machine, and lifts, transports and discharges material

**Skid steer loader tasks may include:**

- stripping/spreading topsoil and materials
- backfilling
- loading vehicles
- excavations
- mixing materials
- site clean up
- compacting
- truck excavation
- lifting and carrying materials
- cutting batters and benches
- rock breaking and any activities associated with attachments listed

**Work instructions** may include:

- plans
- specifications
- operational details
- verbal instructions from a supervisor
- quality requirements, which may include but
<table>
<thead>
<tr>
<th>not be limited to:</th>
</tr>
</thead>
<tbody>
<tr>
<td>- dimensions</td>
</tr>
<tr>
<td>- tolerances</td>
</tr>
<tr>
<td>- standards of work and material standards as detailed in the project drawings, specifications and project documentation to meet client satisfaction</td>
</tr>
</tbody>
</table>

**Safety requirements** are to be:

- in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and site safety management plans

**Safety requirements** may include:

- protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- personal protective equipment, including that prescribed under legislation, regulation and workplace policies and practices
- safe operating procedures, which may include recognising and preventing hazards associated with underground and overhead services, other machines, personnel, restricted access barriers, traffic control, working at heights, working in proximity to others, worksite visitors and the public
- safe parking practices which may include ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites and a safe distance from excavations, and securing the loader from unauthorised access or movement
- hazards and risks may include uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, vehicle interactions, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to this unit may include emergency shutdown and stopping, extinguishing fires, organisational First Aid requirements and evacuation

**Traffic management procedures** may include:

- signage
- barricades
| **Plant, tools and equipment** may include: | • hand tools and maintenance equipment relevant to the particular skid steer loader  
• type of plant suited to task |
| **Environmental protection procedures** may include: | • organisational/project environmental management plan  
• waste management procedures  
• water quality protection procedures  
• noise management procedures  
• vibration management procedures  
• dust management procedures  
• clean-up management |
| **Loader controls and functions** may include: | • implements  
• attachments  
• brakes  
• manoeuvrability |
| **Communications practices** may include: | • verbal instructions and fault reporting  
• two-way radio  
• hand signals  
• mobile phone  
• site specific instructions, written instructions or instructions related to job/task  
• on site meeting processes, which may include notification/scheduling (time, place, purpose), task discussions and local coordination of procedural and operational issues |
| **Materials** may include: | • coal, clays, silts, stone, gravel, mud, rock, sand, topsoil, blended materials, organic materials, typical construction site materials/waste and bituminous mixes  
• rock types may include metamorphic, igneous and sedimentary  
• construction materials may include pegs, wire, cordage, safety equipment and other support equipments |
| **Attachments** may include: | • multipurpose bucket  
• forks  
• dozer blade  
• backhoe  
• auger  
• chain digger  
• power broom |
### RIIMPO332A Conduct operations with skid steer loader

| • profiler  
| • tiller/mixer  
| • rotary hoe  
| • hammer  
| • asphalt cutter/saw  
| • concrete cutter/saw  
| • rake  |

Operator maintenance may include:

| • cleaning  
| • authorised servicing  
| • monitoring, recording and reporting faults  
| • authorised minor replacements  
| • the provision of assistance to maintenance personnel during maintenance and repair activities according to site procedures  |

### Unit Sector(s)
Mobile Plant Operations

### Competency field
Refer to Unit Sector(s).

### Co-requisite units
Not applicable.
RIIMPO333 Conduct underground load, haul and dump truck operations

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting of load, haul and dump operations in underground metalliferous mines. It includes: planning and preparing for operations; operating load, haul, dump equipment; loading, hauling and dumping materials; cleaning up the job site; and carrying out operator maintenance and housekeeping.

Application of the Unit
Load, haul, dump equipment may include: bogger, load haul dump equipment (LHD), scoop tram, mucking units. This unit is appropriate for those working in a mobile plant operator roles, at underground mines within:

- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct load, haul, dump operations in underground metalliferous mines:

- apply legislative, organisation and site requirements and procedures
- apply auxiliary equipment operating, maintenance and cleaning procedures
- apply hazard identification procedures
- apply vehicle directing procedures
- apply driving techniques
- interpret ground conditions
- apply operations monitoring procedures
- apply pushing techniques
- apply vehicle refuelling procedures
- use hand and power tools

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct load, haul, dump operations in underground metalliferous mines:

- dumping procedures
- vertical opening procedures
- backfilling procedures
- emergency procedures
- environmental procedures
- inspection procedures
- explosive/misfire awareness
- site isolation procedures
- equipment parking
- equipment processes, technical capability and limitations
- hauling procedures
- levelling
- manufacturer's specifications
- material placement procedures
- operational procedures and checks
- primary and secondary ventilation
- road rules
• start-up and shut down procedures
• towing procedures
• underground procedure

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Potential hazards and risks** may include:

- type of activities performed
- Tyres and rim condition
- Vehicle is left secured
- Vehicle number
- Visual and audio warning devices and lights
- Weight and/or load limitations
- Wheel nuts and studs
- Windows (e.g. clean, emergency exit tag in place)

**Start-up and shutdown procedures** may include:
| **Environmental issues** may include: | • diesel emissions  
• dust  
• noise  
• spills  
• water |
| **Emergency procedures** may include: | • clean up  
• equipment shutdown procedures  
• evacuation procedures  
• First Aid  
• notification of authorities  
• safety equipment  
• use of personal protective equipment |
| **Dust suppression and extraction methods** may include: | • mobile/fixed sprays  
• screens (e.g. vent doors, vent blinds)  
• use of water trucks  
• ventilation bags operational  
• watering down site |
| **Safe equipment operation** may include: | • speed limits  
• mine lighting  
• site vehicle identification lights  
• right of way  
• parking in stockpiles  
• parking on incline/decline  
• refuelling procedures

- water temperature

**Materials** may include:
- gravel
- overburden
- oxidised waste
- rejects
- road base
- rubbish
- sand
- sulphide rock fill
- tailings

**Contaminants** may include:
- cigarette butts
- consumables
- ear plugs
- explosives
- metal bucket teeth
- metal or steel rods
- old piping
- old workings
- plastic
- timber
- wet fill

**Bogging** may:
- be referred to as mucking (loading the bucket of the machine)

**Servicing** may include:
- checking/topping up fluid levels
- clean glass (lights, windows etc)
- filter changing
- head/dash light changing
- degreasing/greasing
- keeping cab clean
- replacing ground engaging tools (bucket teeth)
- tightening loose fittings

**Equipment cleaning** methods may include:
- degreasing
- rags and cloths
- forced air
- steam cleaning
Site conditions may include:

- water
- amount of scale
- backs
- broken ground
- dry
- face
- location of water table
- noise
- slope of working surface
- stability of ground
- stable ground (compaction)
- ventilation characteristics (fumes, dust)
- visibility
- walls
- wet

Unit Sector(s)
Mobile Plant Operations

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIMPO401A Supervise mobile plant operations

Modification History
Not applicable.

Unit Descriptor
This unit covers supervising mobile plant operations in resources and infrastructure industries. It includes: planning, preparing for and initiating, monitoring, adjusting and reporting on execution of the operations.

Application of the Unit
This unit is appropriate for those working in a supervisory or technical specialist role, within:
- Civil construction
- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>

</table>

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan, prepare for and initiate the operations | 1.1. Access, interpret, apply and share with team members *compliance documentation* relevant to *mobile plant operations*
| | 1.2. Access and share with team members the *geological and survey data* required to complete the mobile plant operations
| | 1.3. Prepare an action plan, in consultation with team members, which makes best use of the available resource and meets the site operational requirements
| | 1.4. Acquire and make available the necessary *resources* for the safe, effective and efficient conduct of mobile plant operations
| | 1.5. Issue clear and timely *instructions* to team members and others involved for the safe, effective and efficient conduct in the mobile plant operations to meet site operational requirements |
| 2. Monitor, adjust and report on execution of the operations | 2.1. Ensure safe, effective and efficient execution of plant operational tasks
| | 2.2. Monitor operations performance to ensure achievement of planned outcomes
| | 2.3. Initiate adjustments to work programs to take into account non-achievement of planned outcomes
| | 2.4. Complete and submit reports
| | 2.5. Recommend changes to improve the safety, efficiency and effectiveness of the mobile plant operations |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to supervise mobile plant operations:

- apply legislative, organisation and site requirements and procedures
- provide team leadership
- apply procedures to choose appropriate operational techniques
- apply procedures to choose and assign appropriate plant and equipment
- apply procedures to develop and administer work plans

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to supervise mobile plant operations:

- risk, statutory compliance, health, safety, environmental, quality and communication requirements and procedures
- site operational requirements
- team leadership techniques
- operational techniques required for execution of the mobile plant tasks
- plant and equipment capabilities
- work planning techniques
- work monitoring methods
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</tbody>
</table>

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate’s required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate’s:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate’s:
    - working with others to plan, prepare and conduct mobile plant operations
    - provision of clear and timely instruction and supervision by the individual of those involved in the conduct of the mobile plant operations

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation | • legislative, organisation and site requirements and procedures  
| | • manufacturer’s guidelines and specifications  
| | • Australian standards  
| | • codes of practice  
| | • Employment and workplace relations legislation  
| | • Equal Employment Opportunity and Disability Discrimination legislation  

### Geological data

- rock and soil type and characteristics  
- faults and joints  
- water tables or other water sources

### Survey data

- floor heights  
- bench widths  
- grades

### Mobile plant operations

- land clearing  
- overburden stripping and stockpiling  
- face loading  
- raw feed haul and dumping  
- sales loading  
- raw feed and product stockpiling  
- road, pavement, drainage and dam construction and maintenance  
- rehabilitation and environmental works  
- raw feed and product blending  
- tailings deposition and treatment

### Resources

- labour  
- materials  
- services  
- equipment

### Instructions

- nature and scope of tasks  
- achievement targets  
- refuelling arrangements  
- operational conditions
- obtaining permits required
- site layout
- out of bounds areas
- worksite inspection requirements,
- plant or equipment defects
- hazards and potential hazards
- coordination requirements or issues

**Unit Sector(s)**
Mobile Plant Operations

**Competency field**
Refer to Unit Sector(s).

**Co-requisite units**
Not applicable.
RIIMPO402A Apply the principles of earthworks construction

Modification History
Not applicable.

Unit Descriptor
This unit covers the supervision of earthworks construction tasks in the Civil Construction industry. It includes the requirements for ensuring that the planning, preparing, initiating, monitoring, adjusting and reporting of earthworks construction are carried out in accordance with the accepted industry principles.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Ensure appropriate planning and preparation of tasks is carried out | 1.1. Access, interpret and apply *compliance documentation* relevant to *earthworks construction* tasks  
1.2. Access, interpret and clarify the *specific task information and requirements* relevant to undertaking earthworks construction task  
1.3. Ensure a *job plan* is available which makes best use of the available resources and meets task requirements |
| 2. Ensure appropriate initiation of tasks is carried out | 2.1. Confirm that the necessary *resources* are available for the safe, effective and efficient conduct of tasks  
2.2. Ensure clear and timely *instructions* are communicated to *team members* and others involved, for the safe, effective and efficient conduct of tasks, to meet the specific task requirements  
2.3. Ensure the task *set out* is carried for the effective completion of the task |
| 3. Oversee the execution of tasks | 3.1. *Monitor* earthworks construction task performance to ensure it achieves the *required outcomes*  
3.2. *Initiate* adjustments to *earthworks construction practice* or job plan to ensure safe execution of work and achievement of required outcomes  
3.3. Ensure plant equipment and tools maintenance requirements are carried out and recorded |
| 4. Report on the execution of tasks | 4.1. Complete and submit reports as required  
4.2. Recommend changes to improve the safety, efficiency and effectiveness of the execution of tasks |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to apply the principles for the earthworks construction:

- apply legislative, organisation and site requirements and procedures
- interpret project contract and specification requirements and procedures
- interpret project site soil and geological data
- identify soil and rock types
- interpret meteorological data
- identify drainage issues
- interpret material properties and test results, including compaction test results
- interpret project site geotechnical data
- interpret project site hydrological data
- interpret project engineering survey information
- interpret project plans and drawings
- interpret project specifications
- prepare for and conduct briefings, toolbox and site meeting
- prepare short messages
- prepare and present job reports
- prepare and maintain log books and diaries
- provide leadership
- apply performance monitoring skills
- apply set out requirements and procedures
- set up and use levelling devices
- establish construction offsets
- apply supervisory skills
- develop workplace relationships
- develop individuals and the team
- apply inspection requirements and procedures
- calculate quantities for the execution of tasks, including:
  - volumes
  - grades
  - percentages
  - areas
  - resource consumption figures, including required supply rates
- interpreting earthworks construction materials properties and test results, including:
• soil density/moisture relationship
• plasticity index
• particle size distribution
• provide recommendations for the improvement of the safe, effective and efficient execution of earthworks construction tasks

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to apply the principles for the earthworks construction:

• risk assessment and management requirement and procedures
• statutory compliance requirements and procedures
• OHS requirements and procedures
• environmental management requirements and procedures
• quality management requirements and procedures
• work zone traffic management requirements and procedures
• contract management requirements and procedures
• communication requirements and procedures
• administrative requirements and procedures
• plant and equipment capabilities and application
• plant, equipment and tools maintenance requirements and procedures
• operational techniques
• resource requirements and procedures
• activities scheduling requirements and procedures
• job plan drafting of and administration requirements and procedures
• reporting requirements and procedures
• workplace relationship requirements and procedures
• organisational, client and site operational requirements
• relationship between various areas of civil works
• team leadership techniques
• engineering survey principles
• materials quality and delivery requirements and procedures
• mentoring techniques
• estimating principles
• civil works construction sequencing
• earthworks and related activities' terminology
• set out requirements and procedures
• road geometry
• ground surface treatment requirements and procedures e.g. proof rolling
• drainage requirements
• works planning techniques
- monitoring methods
## Evidence Guide

|                                             | Equal Employment Opportunity and Disability Discrimination legislation |

| Earthworks construction may include: | land clearing |
|                                      | bulk earthwork |
|                                      | surface drainage works |
|                                      | water storage dam construction |
|                                      | tailings dam construction |
|                                      | rehabilitation works |
|                                      | road works preparation, including the sub-grade |

| Specific task information and requirements may include: | site geological and geotechnical data, including: |
|                                                           | rock types and characteristics |
|                                                           | soil types and characteristics |
|                                                           | site hydrological data, including: |
|                                                           | surface water |
|                                                           | ground water |
|                                                           | site meteorological data, including: |
|                                                           | rainfall |
|                                                           | humidity |
|                                                           | temperature |
|                                                           | wind |
|                                                           | site engineering survey data |
|                                                           | known and potential site hazards, constraints and conditions |
|                                                           | site cultural and heritage information |
|                                                           | task specifications |
- task drawings
- sources of materials
- other organisations and contractors involved in the task or related tasks
- coordination, timing and budgeting requirements

**Job plan** is to include:
- human resource requirements
- plant and machinery requirements
- construction materials requirements
- sub-contractor support requirements
- waste disposal requirements
- coordination requirements
- activity scheduling
- materials delivery scheduling
- risk assessment and management requirements
- OHS requirements
- quality management requirements, including testing scheduling requirements
- traffic management requirements
- environmental requirements
- task monitoring requirements
- task performance monitoring requirements
- communication requirements
- reporting requirements

**Resources** are to include:
- labour
- plant, equipment and tools
- material supply vehicles
- construction materials
- sub-contractor services

**Instructions** are to include:
- briefings
- handovers
- work orders
- toolbox meetings
- site meetings

**Team members may include:**
- other members of the organisation's management team
- members of the team directly involved in the task
- suppliers representatives
- sub-contractors representatives
- supervisors or managers of other organisations who are involved in related tasks
### Set out is to include:
- control lines
- cleared width
- batters
- off-sets

### Monitor is to include:
- ongoing risk assessment
- engineering survey
- sampling and testing
- observation and recording
- general supervision

### Required outcomes may include:
- task specifications requirements
- task drawings requirements
- coordination requirements
- activity scheduling requirements
- unit cost requirements
- overall task cost requirements
- waste management requirements

### Initiate is to include:
- written communication
- oral communication

### Earthworks construction practice may include:
- site preparation methods
- extraction methods
- load and haulage methods
- placement methods
- distribution methods
- surface finishing methods
- line, grade and level control methods
- compaction methods
- water application methods
- sedimentation control methods

### Unit Sector(s)
Mobile Plant Operations

### Competency field

RIIMPO403A Monitor interaction of heavy and light vehicles and mining equipment

Modification History
Not applicable.

Unit Descriptor
This unit covers monitoring the interaction of heavy and light vehicles and mining equipment in the coal and metalliferous mining and extractive industries. It includes: planning and preparing; monitoring vehicles and equipment; and monitoring and reviewing operations.

Application of the Unit
This unit is appropriate for those working in a supervisory or technical specialist role, within:
- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

---

RIIMPO403A Monitor interaction of heavy and light vehicles and mining equipment
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for monitoring | 1.1. Access, interpret and apply *compliance documentation* relevant to interaction of *vehicles* and mining *equipment*  
1.2. Identify and record site requirements for the interaction of transport systems and equipment  
1.3. Access and interpret the specifications for the required transport systems and equipment  
1.4. Identify, clarify and communicate roles and responsibilities  
1.5. Access and interpret standard operating procedures |
| 2. Monitor vehicles and equipment | 2.1. Monitor effectiveness of *policies, plans, procedures* and workplace practices against objectives, timelines, key performance indicators and regulations  
2.2. Validate use of vehicles and equipment and record in accordance with the project specifications  
2.3. Identify *hazards* associated with interaction of transport and *equipment* and evaluate and respond to *risks* in accordance with established procedures  
2.4. Monitor interaction of vehicles and mining equipment to ensure optimum efficiency  
2.5. Monitor hazards associated with interaction of vehicles and mining equipment in accordance with workplace procedures |
| 3. Monitor and review operations | 3.1. Monitor the impact of *contingencies*  
3.2. Use available information from monitoring processes to ensure accurate problem identification  
3.3. Obtain specialist advice/assistance where required  
3.4. Manage the impact of contingencies  
3.5. Implement rectification requirements |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to monitor the interaction of heavy and light vehicles and mining equipment:

- apply legislative, organisation and site requirements and procedures
- apply techniques to develop responsibility/motivation
- manage policy
- apply interpersonal skills
- liaise with other parties
- coordinate others
- manage information
- solve problems
- analyse operational problems
- use measuring equipment
- write clear reports
- facilitate meetings

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to monitor the interaction of heavy and light vehicles and mining equipment:

- accuracy and precision requirements
- limitations of transport, mobile plant and equipment systems
- functions of vehicles and mine equipment
- capabilities and limitations of equipment and vehicles
- project reporting guidelines
- risk management principles
- company organisation
- work role definitions
- reporting methods and alternatives
- relevant regulations, licenses and permits
- emergency procedures and obligations
- community expectations
- consultative strategies
- alternative documentation systems for procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to plan, prepare, conduct and monitor the interaction of heavy and light vehicles and mining equipment
  - provision of clear and timely instruction and supervision by the individual of those involved in the conduct of the interaction of heavy and light vehicles and mining equipment |

| Guidance information for | Consult the SkillsDMC User Guide for further |
| assessment | information on assessment including access and equity issues. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- codes of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Vehicles may include:
- all machines involved in production or those that have access to the operational and trafficable areas at the mine site

### Equipment may include:
- mobile plant heavy earth moving equipment
- water and service machines
- 4 wheel drive passenger vehicles, including:
  - cars
  - buses
  - equipment systems, e.g. trailers and floats

### Policies, plans and procedures may include:
- organisational commitment
- community consultation and involvement
- objectives and targets
- surveying program
- documentation and records
- operational and emergency procedures
- responsibility and reporting structure
- work environmental impact, regulatory and legal compliance
- reviews/audits
- significant incident alerts

### Hazard is defined as:
- a source of potential harm or a situation with a potential to cause loss

### Risk is defined as:
- the chance of something happening that will have an impact upon objectives. It is measured in terms of consequences and likelihood
Contingencies may include:

- vehicle and equipment failure
- observation errors
- operator error
- movement of plant or ground
- weather
- obstructions
- changing environment
- visibility
- parking
- overhead power

Unit Sector(s)
Mobile Plant Operations

Competency field

| 1. Implement systems | 1.1. Access, interpret and apply *compliance documentation* relevant to *mobile plant and equipment systems*  
1.2. Document responsibilities of personnel  
1.3. Document reporting structures  
1.4. Document regulations and site requirements that impact upon work operations  
1.5. Document operational and emergency procedures  
1.6. Identify and contact *stakeholders*  
1.7. Implement mobile plant and equipment systems |
| 2. Monitor systems | 2.1. Monitor effectiveness of *policies, plans, procedures* and workplace practices against objectives, timelines, key performance indicators and regulations  
2.2. Validate and record use of mobile plant and equipment systems in accordance with the project specifications  
2.3. Assess operating *constraints*  
2.4. Monitor the impact of *contingencies*  
2.5. Monitor effective use of resources |
| 3. Rectify systems | 3.1. Use available information from monitoring processes to ensure accurate problem identification  
3.2. Obtain specialist advice/assistance where required  
3.3. Manage the impact of contingencies  
3.4. Implement rectification requirements |
| 4. Report on systems | 4.1. Document results in accordance with project specifications  
4.2. Inform relevant parties of the results |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to implement, monitor, rectify and report on mobile plant and equipment systems:

- apply legislative, organisation and site requirements and procedures
- apply techniques to develop responsibility / motivation
- apply policy management skills
- demonstrate interpersonal skills
- liaise with other parties
- coordinate others
- apply information management systems
- apply problem solving techniques
- apply analysis techniques
- use measuring equipment
- apply clear report writing techniques
- facilitate meetings

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to implement, monitor, rectify and report on mobile plant and equipment systems:

- accuracy and precision requirements
- limitations of mobile plant and equipment systems
- project reporting guidelines
- risk management principles
- company organisation
- work role definitions
- reporting methods and alternatives
- relevant regulations, licenses and permits
- emergency procedures and obligations
- community expectations
- consultative strategies
- alternative documentation systems for procedures
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for the implementing, monitoring, rectifying and reporting on mobile plant and equipment systems
- implementation of procedures and techniques for the safe, effective and efficient implementing, monitoring, rectifying and reporting on mobile plant and equipment systems
- the identification of the relevant information and scope of the work required to meet the required outcomes
- the identification of viable options and the selection of options that best meet the required outcomes
- working with others to undertake and complete mobile plant and equipment systems
- consistent successful implementing, monitoring, rectifying and reporting on mobile plant and equipment systems

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of

- provision of clear and timely required support and advice on the implementation of mobile plant and equipment systems

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- codes of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Mobile plant and equipment systems may include:

- crushing and screening plants
- gyratory / jaw crushers
- cone crushers
- double roll crushers
- hammermills
- double roll sledging crushers
- tube feeders
- slot feeders
- apron feeders
- roller and rotary feeders
- vibratory feeders
- reciprocating-plate feeders
- screw feeders
- conveyor belts
- drive arrangements

Stakeholders may include:

- client
- client representatives
- government authorities
- community groups
- engineers
- architects
- contractors

Policies, plans and procedures may include:

- organisational commitment
- corporate and environment policy
- environmental impact assessment
• community consultation and involvement
• objectives and targets
• surveying program
• documentation and records
• operational and emergency procedures
• responsibility and reporting structure
• environmental impact, regulatory and legal compliance
• survey review audits
• emission and performance monitoring and measurement
• land reclamation practices

**Constraints may be related to:**
• roadway size
• pillar sizes
• depth of cover and underlying / overlying strata
• stress regimes
• underground opening characteristics
• water ingresson
• systems of mining
• breaker liner supports
• direction of mining

**Contingencies may include:**
• equipment failure
• observation errors
• movement
• weather
• injury
• obstructions

**Unit Sector(s)**
Mobile Plant Operations

**Competency field**
Refer to Unit Sector(s).
Co-requisite units

Not applicable.
RIIMPO502A Manage the interaction of heavy and light vehicles and mining equipment

Modification History
Not applicable.

Unit Descriptor
This unit covers the management of the interaction of heavy and light vehicles and mining equipment in the coal and metalliferous mining and extractive industries. It includes: planning and preparing; managing the interaction; and monitoring and reviewing operations.

Application of the Unit
This unit is appropriate for those working in management or as a technical specialist roles, within:
- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to manage the interaction of heavy and light vehicles and mining equipment:

- apply legislative, organisation and site requirements and procedures
- apply interpersonal skills
- coordinate of others
- manage information
- apply problem solving techniques
- apply analysis techniques
- use measuring equipment
- write clear reports
- apply communication skills
- apply planning skills

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to manage the interaction of heavy and light vehicles and mining equipment:

- capabilities and limitations of transport, mobile plant and equipment systems
- functions of vehicles and site equipment
- risk management principles
- work role definitions
- reporting methods and alternatives
- relevant regulations, licenses and permits
- emergency procedures and obligations
- community expectations
- consultative strategies

# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Interpret

Interpret is defined as:

- the understanding needed by the person within their job role

### Relevant compliance documentation

Relevant compliance documentation may include:

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- codes of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Vehicles

Vehicles may include all machines involved in production or those that have access to the operational and trafficable areas at the site, such as:

- haul trucks
- scrapers
- maintenance trucks and service vehicles
- cranes
- water trucks or service vehicles
- graders and road construction equipment
- 4 wheel drive passenger vehicles
- buses and personnel carriers
- bull dozers and tractors, trailers and floats
- excavators or mining machinery travelling from site to site

### Equipment

Equipment may include:

- excavators
- shovels
- bucket wheel excavators
- mobile crushers and loaders
- other mobile plant or heavy earth moving equipment
- water and service machines

### Traffic management plan, policies, plans and standard operating procedures

Traffic management plan, policies, plans and standard operating procedures may include:

- organisational commitment
- road layout, permanent and temporary roads
- road design principals and standards for bends, ramps loading, dumping
- separation, overtaking, stopping, speed limits
- signage, barriers, lights, edge marking
### RHIMPO502A Manage the interaction of heavy and light vehicles and mining equipment

- bends, ramps, loading and unloading point
- access to the haul way
- give way rules
- types of vehicles permitted on different roads, haul trucks, mining equipment, personnel carriers, 4 wheel drives, busses
- communication between vehicles
- travelling on or crossing public roads
- public access to site roads
- community consultation and involvement
- objectives and targets
- surveying program
- documentation and records
- operational and emergency procedures
- responsibility and reporting structure
- work environmental impact, regulatory and legal compliance
- reviews/audits
- significant incident alerts

</table>
| 1. Plan for the laser levelling | 1.1. Access, interpret and apply *compliance documentation* relevant to the managing of laser levelling of operating plant  
1.2. Interpret design to identify laser levelling to be implemented  
1.3. Check design for internal inconsistencies  
1.4. Identify and contact *stakeholders* according to organisation guidelines  
1.5. Identify and obtain project resources to meet requirements  
1.6. Assess hazards and determine plan to safely manage identified risks |
| 2. Implement laser levelling | 2.1. Accurately identify alignments, heights or grades to be transferred/established  
2.2. Set up equipment to utilise the laser techniques to provide alignment signals  
2.3. Document operational procedures for the effective utilisation of these signals within the mine plan  
2.4. Document regulation reporting and site requirements to be followed during operations  
2.5. Document emergency procedures  
2.6. Identify and contact stakeholders according to organisation guidelines  
2.7. Manage project resources |
| 3. Monitor laser levelling | 3.1. Monitor effectiveness of *policies, plans, procedures* and workplace practices of laser levelling against objectives, timelines, key performance indicators and regulations  
3.2. Arrange validating laser levelling techniques ensuring correct identification or *spatial components*  
3.3. Compare measurements against specification and against project requirements  
3.4. Identify inconsistencies possible or improvements in levelling program  
3.5. Monitor the impact of *contingencies*  
3.6. Monitor effective use of resources |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to Manage laser levelling of operating plant:

- apply legislative, organisation and site requirements and procedures
- use laser levelling equipment
- develop responsibility/motivation
- demonstrate policy management skills
- demonstrate interpersonal skills
- liaise with other parties
- coordinate others
- manage information
- apply problem solving skills

- architects
- contractors

**Policies, plans and procedures** relating to laser levelling may include:
- organisational commitment
- corporate and environment policy
- environment impact assessment
- community consultation and involvement
- objectives and targets
- surveying program
- documentation and records
- operational and emergency procedures
- responsibility and reporting structure
- environmental impact, regulatory and legal compliance
- emission and performance monitoring and measurement
- land reclamation practices

**Spatial components** may include:
- position
- dimension
- height
- direction
• grade
• depth
• slope
• volume
• flow rates

Contingencies may include:
• equipment failure
• observation errors
• movement
• weather
• injury
• obstructions

Unit Sector(s)
Mobile Plant Operations

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIMSM301A Establish a mining claim

Modification History
Not applicable.

Unit Descriptor
This unit covers the establishment of a mining claim in the metalliferous mining industry. It includes preparing to establish a mineral claim and establishing a mineral claim. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:

- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare to establish a mineral claim | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Determine the application requirements and process, and the legislative requirements for applying for a mineral claim  
1.3. Obtain maps and information associated with the mineral field where the claim is to be made  
1.4. Identify available claim location and reference point/survey post from approved maps of mineral field |
| 2. Establish the mineral claim | 2.1. Locate and confirm the reference point/survey post in the field, closest to the area to be claimed  
2.2. Inspect area and select relevant surveying equipment and take bearings and measurements from survey post to establish and mark the nearest corner of the claim according to legislative requirements  
2.3. Take bearings and measurements to establish and mark the remaining corners of the claim to mandated size and shape and within designated boundaries  
2.4. Establish claim boundaries according to legislative requirements  
2.5. Draw up the description and diagram of the claim according to mining registrar’s requirements for submission of the claim  
2.6. Serve a notice of intention to apply for a claim on the occupier of the land  
2.7. Submit all required documents and information for application for a minerals claim |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to establish a mining claim:

- apply legislative, organisation and site requirements and procedures for establishing a mining claim
- read and interpret maps
- draw survey maps
- identify hazards
- apply environmental constraints
- dispose of environmentally sensitive fluids and materials
- communicate clearly and concisely
- apply operational safety requirements
- maintain records

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to establish a mining claim:

- the requirements, processes and documentation for an application for a minerals claim
- legislative requirements associated with mineral claims
- machinery permits
- mineral field maps and information
- survey map requirements and design
- boundary marking methods
- basic surveying methods and equipment
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for establishing a mining claim</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of establishing a mining claim</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the establishment of a mining claim that meets all of the required outcomes</td>

<tbody>
<tr>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
<td></td>
</tr>
<tr>
<td>• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
<td></td>
</tr>
<tr>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
<td></td>
</tr>
</tbody>
</table>
| **Method of assessment** | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the establishment of a mining claim |

| **Guidance information for assessment** | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisational and site requirements and procedures  
| | manufacturer’s guidelines and specifications  
| | Australian standards  
| | Employment and workplace relations legislation  
| | Equal Employment Opportunity and Disability Discrimination legislation  
| Surveying equipment may include: | magnetic compass  
| | tape measure  
| | lines  
| | plumb bob  
| | theodolite  
| | ‘dummy’ level  
| Markings may include: | timber posts  
| | steel pickets  
| | claim number  
| | details of the person/company who will be applying for the mineral claim  
| Claim boundaries may include: | trenches  
| | pegs  
| | posts  
| | rock/stone structure  
| Description and diagram of the claim may include: | reference points and measured distances and angles to the proposed claim  
| | location of all corners of the proposed claim  
| | length of all sides between the corners  
| | bearings of all sides taken from magnetic north and arrows pointing in the direction in which the bearings were taken  
| | arrow showing direction of magnetic north  
| | information on all neighbouring claims that have a common border  
| | other information required by local legislation  

Serving a notice may be by:

- post
- personally
- through the Mining Registrar or equivalent

Legislation may include Acts and regulation dealing with:

- mining regulation
- mining safety and health
- mine inspection
- OHS
- explosives
- environment
- Native Title
- machinery

Required documents and information may include:

- application forms
- survey map and information
- copy of notice to the landholder
- identification
- lodgement fee
- a description, prepared in the manner prescribed by the regulations, of the land over which the mining lease is sought
- an assessment of the mineral bearing capacity of the land and of the extent of any mineral deposits in that land
- particulars of the financial resources available to the applicant
- particulars of the technical advice available to the applicant
- particulars of the program of work proposed to be carried out by the applicant on the area of land over which the mining lease is sought

| 1. Plan shaft location to meet design criteria | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Plan location of access shaft on a virgin claim to avoid potential ore-bearing ground  
1.3. Design and plan shaft to minimise impact on the environment  
1.4. Plan location of access shaft on a virgin claim to allow effective location, organisation and access to other mine facilities  
1.5. Establish location of a second means of access (secondary shaft) to allow most effective exit from the mine in emergency situations  
1.6. If claim is previously mined, *inspect conditions* of existing shafts to determine the most appropriate access and secondary shafts  
1.7. Ensure that the access shaft is located in the appropriate place in relation to the planned mine ventilation system  
1.8. Plan layout and configuration of *surface facilities* in relation to access and secondary shaft  
1.9. Record shaft location on the mine plan |
| 2. Design and plan location of ventilation shafts or drill holes | 2.1. Plan the mining sequence throughout the life of the mine to determine the location of ventilation shafts or drill holes  
2.2. Design and determine the location of ventilation shafts for any proposed secondary ventilation system to deliver fresh air to all active drives |
| 3. Design and plan mine workings | 3.1. Design mine workings to facilitate minerals discovery  
3.2. Design and plan the drive pattern, opening size and development sequence to best extract minerals and for mine ground stability  
3.3. Design mine layout to maximise production and movement of materials to the surface |
<table>
<thead>
<tr>
<th>3.4. Determine room and pillar configuration and plot on the mine plan</th>

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to plan small mine operations:

- apply legislative, organisation and site requirements and procedures for the planning of small mine operations
- apply design and planning principles and methods
- apply operational safety requirements to mine planning
- maintain records
- design and document procedures
- design systems for environmental constraints
- design disposal systems for environmentally sensitive fluids and materials

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to plan small mine operations:

- geology associated with ore-bearing ground
- shaft design requirements and parameters
- mine layout principles and design parameters
- design criteria for planning mine operation
- materials handling and transport
- principles of ventilation and air flow
- hazardous materials handling
- surface installations and equipment
- pillar configuration/pillar design and layout
- assessment of mine ground conditions
- characteristics and properties of roofs
- hazards affecting pillar design and development
- hoisting systems, equipment and legislative requirements
- pillar extraction methods and safety requirements
- operational safety requirements
- emergency procedures
- environmental requirements
- mine safety management planning
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</thead>
</table>
| 1. Excavate shaft | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Inspect and evaluate site and ground conditions at the planned shaft location to determine the *type of shaft* to be sunk  
1.3. Identify and address potential risks and hazards  
1.4. Conduct or facilitate *shaft excavation* in planned location and type  
1.5. *Stabilise unconsolidated ground* to prevent falls of ground and shaft collar erosion  
1.6. Ensure shaft is supported by shaft *pillar* to ensure the integrity of the bottom section of the shaft  
1.7. Secure area over shaft collar to prevent surface water inflow  
1.8. Ensure that brow area near the bottom of the shaft, and the geology and walls, are visible for *inspection* |
| 2. Fit out shaft | 2.1. Fit access ladders securely in shaft in accordance with shaft conditions and code of practice  
2.2. Install hoisting equipment at the surface of the shaft  
2.3. Ensure that *services* supply devices to the shaft wall are fixed away from shaft conveyance equipment  
2.4. Install *shaft protection* to prevent falls by people and animals, and unauthorised entry into the mine  
2.5. Ensure that access shaft is free of unnecessary equipment and fixtures to allow unrestricted movement of materials |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to install underground shafts:

- apply legislative, organisation and site requirements and procedures for installing underground shafts
- apply operational safety requirements
- install secondary support devices
- assess and address hazards
- maintain records
- identify faults
- apply environmental constraints
- dispose of environmentally sensitive fluids and materials

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to install underground shafts:

- assessment of mine ground conditions
- shaft location and types
- shaft excavation methods and equipment
- safety requirements for shaft excavation
- legislative requirements for shaft excavation and use
- services installed in mine shaft
- fitting and locating services in shaft
- shaft protection methods
- pillar design and configuration
- emergency procedures
- environmental requirements
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</table>
| **1. Prepare for inspection activities** | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain and confirm mine *operational information* from mine records and planning documents  
1.3. Obtain and confirm future planned operations information related to the work area and confirm with appropriate people  
1.4. Access and interpret geological and survey data to assess the effect on mine inspection activities  
1.5. Obtain and interpret *legislative* and site requirements  
1.6. Access *safety information and procedures* which may impact on mine operations  
1.7. Identify and access all recording and reporting documents required by *legislation* and local mine procedures  
1.8. *Coordinate* activities with others at site prior to commencement of, and during inspections |
| **2. Inspect mine operations** | 2.1. Conduct *inspections* as detailed in legislative requirements and local mine procedures  
2.2. Respond immediately to instances of non-compliance to regulatory or other operational practices which endanger personnel  
2.3. Discuss inspection findings with responsible parties and initiate a response to restore operational safety and site compliance  
2.4. Record results of inspections and process records in accordance with legislative requirements and local mine procedures |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to inspect small mine operations:

- apply legislative, organisation and site requirements and procedures for the inspection of small mine operations
- read, explain and apply:
  - technical information
  - site/legislative requirements
  - job priorities
- apply geological and survey information
- recognise potential hazards and apply corrective measures according to site/legislative procedures
- provide feedback
- prepare technical reports
- investigate and report on incidents

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to inspect small mine operations:

- site machinery and equipment safety requirements
- legislative and site requirements and procedures
- site/legislative requirements for inspections
- geological, geographical and survey data
- extractive operations
- equipment characteristics, technical capabilities and limitations
- operational and maintenance procedures
- risk management procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<tr>
<th>Context of and specific resources for assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
</tr>
<tr>
<td>• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
</tr>
<tr>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
</tr>
</tbody>
</table>
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the inspection of small mine operations

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisational and site requirements and procedures  
| | manufacturer's guidelines and specifications  
| | Australian standards  
| | Employment and workplace relations legislation  
| | Equal Employment Opportunity and Disability Discrimination legislation |

| Operational information may include: | mine layout and plan  
| | previous shift inspection reports  
| | personnel and equipment availability  
| | work and equipment locations  
| | production targets and other work requirements  
| | incidents  
| | hazards and potential hazards  
| | coordination requirements/issues |

| Safety information and procedures may be contained in: | legislation and regulations/relevant Australian standards  
| | Safety Management Plan  
| | OHS policy  
| | code of practice  
| | manufacturer's instructions  
| | safe working or job procedures (or equivalent)  
| | emergency response plan  
| | incident investigation models |

| Coordinate may be to: | plan activities  
| | set priorities for activities  
| | establish liaison channels with other personnel, neighbouring mines, and regulatory bodies  
| | ensure work and safety requirements are passed to and reinforced with safety, and operational personnel and contractors |

| Inspections required include all | working on or around excavation areas |
| safety aspects of:          | • machinery and equipment  
|                           | • mines services           
|                           | • working faces            
|                           | • stockpiles               
|                           | • shafts                   
|                           | • installed safety measures |

| Legislation may include Acts and regulation dealing with: | • mining safety and health  
|                                                           | • mine inspection          
|                                                           | • OHS                      
|                                                           | • explosives               
|                                                           | • Dangerous Goods Act      
|                                                           | • environment              |

### Unit Sector(s)
Metalliferous Mining (Small Mines)

### Competency field
Refer to Unit Sector(s).

### Co-requisite units
Not applicable.
RIIMSM305A Conduct materials extraction operations underground

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of underground materials extraction operations in the metalliferous mining industry. It includes planning and preparing for operations, operating machinery and equipments to extract materials, and carrying out machinery and equipment maintenance. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
• Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct materials extraction operations underground:

- apply legislative, organisation and site requirements and procedures for the conduct of underground materials extraction operations
- apply operational safety requirements
- communicate with other personnel
- interpret manufacturer's /supplier's manuals
- access, interpret, apply and communicate technical information
- interpret survey and geological data
- apply diagnostic and fault finding techniques
- use hand and power tools
- maintain equipment records
- comply with environmental requirements

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct materials extraction operations underground:

- operational safety requirements and procedures
- machinery and equipment characteristics, technical capabilities and limitations
- machinery and equipment operational procedures
- mine geology and survey data associated with ore-bearing ground
- ventilation systems
- machinery and equipment maintenance requirements and procedures
- site environmental requirements and constraints relevant to machinery and equipment operations
- pillar configuration, design and layout
- assessment of mine ground conditions
- characteristics and properties of roofs and walls
- emergency procedures
- pillar extraction methods and safety requirements
- maintenance procedures
- hazardous materials handling
- environmental requirements
- hoisting systems, equipment and legislative requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to design and maintain pillar systems and ground control:

- apply legislative, organisation and site requirements and procedures for the design and maintenance of pillar systems and ground control
- apply operational safety requirements
- install secondary support devices
- operate communications systems
- operate extraction plant and machinery
- maintain records
- identify faults
- apply environmental constraints
- dispose of environmentally sensitive fluids and materials

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to design and maintain pillar systems and ground control:

- pillar configuration
- assessment of mine ground conditions
- pillar design and layout
- characteristics and properties of roofs
- dust suppression methods and equipment
- hazards affecting pillar design and development
- secondary support methods and installation techniques
- pillar extraction methods and safety requirements
- operational safety requirements
- communication systems
- emergency procedures
- environmental requirements
## Evidence Guide

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods: |

|                      | written and/or oral assessment of the candidate's required knowledge |
|                      | observed, documented and/or first hand testimonial evidence of the candidate's: |
|                      | implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes |
|                      | consistent achievement of required outcomes |
|                      | first hand testimonial evidence of the candidate's: |
|                      | working with others to undertake and complete the design and maintenance of pillar systems and ground controls |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Pillars are the primary means of roof support required to hold up the mass of ground between the underground mine workings and the surface and may be:
- randomly spaced
- regularly spaced
- square
- rectangular
- round

### Design parameters may include those for:
- single-level mining
- multiple-level mining
- thick-level mining
- decline-access mining

### Secondary support may include:
- rock bolts
- props

### Effects of adjacent mines may include:
- water levels in old or currently unworked claims if a breakthrough occurs
- stresses transferred through the rock due to the excavations made in the adjacent claims
- the requirements for boundary pillars to be left
- any falls which may act as a warning
- the presence of geological discontinuities

### Characteristics and properties may include:
- weight of upper strata
- vertical compressive force
- discontinuities
- faults
- separation cracks
- different-coloured layers
- different textures
- iron oxide stains
### Personal Protective Equipment
May include:
- lamp
- safety helmet
- eye protection
- hearing protection
- protection from atmospheric contaminants (dust/oil mist)
- hand protection
- overalls
- safety footwear

### Work area inspections
May include:
- travel ways
- footings
- access
- retreat
- fumes or dust
- ventilation air flow
- ground conditions
- services

### Dust suppression and/or extraction
May include:
- fans (electric or compressed air)
- ventilation bags
- mobile or fixed sprays
- vent devices
- air movers
- watering down work area

### Communications
May include:
- radio
- telephone
- computer
- lights
- audible signals (bells, whistles, sirens)
- physical signals
- written and verbal means

## Unit Sector(s)
Metalliferous Mining (Small Mines)
Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIMSM307A Install and maintain ventilation systems and equipment

Modification History
Not applicable.

Unit Descriptor
This unit covers the installation and maintenance of ventilation systems and equipment in the metalliferous mining industry. It includes establishing mine ventilation systems, installing/constructing ventilation systems, and monitoring and maintaining mine ventilation systems. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:

- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>

# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Establish mine ventilation system | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
  1.2. Inspect and evaluate mine configuration, or obtain advice from appropriate source, to identify the most effective mine ventilation method  
  1.3. Determine ventilation system configuration and location of ventilation equipment and devices for effective mine ventilation  
  1.4. Identify and obtain ventilation equipment and devices necessary to establish the selected ventilation method |
| 2. Install/construct ventilation system | 2.1. Coordinate activities with others at the site prior to commencement of, and during, the work activity  
  2.2. Prepare work site in accordance with mine requirements to ensure a safe working environment  
  2.3. Install ventilation equipment in designated location in accordance with manufacturer’s/supplier instructions and site safe operating procedures  
  2.4. Construct ventilation device in designated location in accordance with manufacturer’s and/or site specific requirements  
  2.5. Recognise and respond to hazardous and emergency situations in accordance with manufacturer’s instructions and/or site procedures |
| 3. Monitor and maintain mine ventilation system | 3.1. Carry out inspections of ventilation equipment, devices and system to ensure safe efficient operation  
  3.2. Detect and measure airflow and adjust ventilation system to maintain adequate flow of air through the mine  
  3.3. Monitor and maintain mine air quality to identify impurities and contaminants to ensure respirability of mine air  
  3.4. Obtain and prepare necessary replacement materials/equipment required for the work in accordance with work practices |
<p>| | |</p>

</tbody>
</table>
assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the installation and maintenance of ventilation systems and equipment

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
| Mine ventilation methods may include: | • natural ventilation  
• mechanical ventilation  
• auxiliary ventilation |
| Ventilation equipment and devices may include: | • fans  
• pipes  
• compressed air injectors  
• ventilation tubing  
• barriers |
| Materials for devices may include: | • plastic sheeting  
• timber  
• conveyor belt |
| Hazards may include: | • irrespirable atmospheres  
• noxious atmospheres  
• flammable  
• explosive mixtures |
| Materials/equipment may include: | • grout pumps  
• cement mixer  
• compressed air drill  
• borer  
• hoses  
• hand tools  
• scaffolding  
• level  
• water traps  
• sampling lines  
• pressure gauges |
### Coordination

- planning activities
- setting priorities for activities
- establishing liaison channels with other personnel, neighbouring mines, and regulatory bodies
- ensuring work and safety requirements are passed to and reinforced with safety, and operational personnel and contractors

### Impurities

- carbon monoxide
- sulphur dioxide
- oxides of nitrogen
- radon
- methane
- hydrogen sulphide
- diesel exhaust fumes

### Contaminants

- pulmonary dusts
- toxic dusts
- explosive dusts
- silica

| 1. Prepare for loading activities | 1.1. Access, interpret and apply **compliance documentation** relevant to the work activity  
1.2. Obtain, confirm and apply **work instructions** for the allocated task  
1.3. Identify, manage and report all potential **hazards**  
1.4. Resolve **coordination requirements** with others at the site prior to commencing and during work activities  
1.5. Perform equipment **pre-start checks** to ensure equipment is ready for operation  
1.6. Select personal protective equipment appropriate for work activities  
1.7. Select appropriate type of **auxiliary equipment** for work activities  
1.8. Identify, address and report **environmental issues**  
1.9. Adhere to emergency procedures to ensure safety of personnel and plant |
| 2. Load equipment and materials | 2.1. Identify load characteristics and use appropriate loading techniques to safely and efficiently move load  
2.2. Identify hazardous and dangerous goods and adhere to relevant legislation and permit requirements  
2.3. Assess and ensure that load characteristics and transport capacity meet approved parameters  
2.4. Erect physical barricades and signage to prevent unauthorised entry to the area  
2.5. Load **equipment and materials** in accordance with site procedures |
| 3. Secure equipment and materials | 3.1. Check the distribution of the load to ensure it is even, legal and within safe working capacity  
3.2. Secure load at approved anchorage points  
3.3. Adjust load restraint devices to ensure load is secure during **transport**  
3.4. Protect load from weather conditions using approved coverage devices |
| 3.5. Inspect the load for security to travel |
| 3.6. Complete all required documentation |
| 4. Conduct housekeeping activities |
| 4.1. **Clean** loading and securing equipment to maintain condition of equipment and ensure safe and efficient operations |
| 4.2. Clean and store auxiliary service equipment |
| 4.3. Manage and report hazards to maintain a safe working environment |
| 5. Unload equipment and materials |
| 5.1. Assess location, stowage and remaining load before commencement |
| 5.2. Unload in a safe and effective way making use of lifting aids and applications if required |
| 5.3. Identify any equipment and materials requiring special handling |
| 5.4. Relocate material in a manner that considers the heights, weight loading, size and crushability of the equipment and materials |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to load, secure and unload drilling equipment and materials:

- apply legislative, organisation and site requirements and procedures
- apply hazard identification procedures
- apply hazardous goods handling techniques
- apply defects reporting procedures
- apply safe work practices
- use hand and power tools
- read and comprehend simple statements in English
- identify containers and goods coding, ADG and IMDG markings and, where applicable, emergency information panels, and take appropriate action
- apply communication and recording skills
- apply manual and mechanical handling techniques
- apply basic maintenance skills
- apply knots, load securing devices and attachment points for loaded vehicles

### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to load, secure and unload drilling equipment and materials:

- relevant Australian standards/regulations including state/territory mass & loading regulations
- Australian regulations and code of practice for the handling and transport of dangerous goods and hazardous substances
- contaminant identification and management
- emergency procedures
- environmental procedures
- equipment processes, technical capability and limitations
- equipment safety requirements
- hazardous goods procedures and consequences of spills
- identifying repair requirements
- isolation procedures
- site operational system
- operational procedures and checks
- night and day working procedures
- relevant OHS procedures
- signage erection procedures
- wet and dry working procedures
- load positioning requirements
- methods of preventing shifting of loads and their importance
- number and types of lashings to apply, fixing points and basic knots
- safe carrying of loads
- licences and permits requirements
- requirements for the use, transport and storage of LPG and LPG appliances
### Evidence Guide

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:

- legislative, organisational and site requirements and procedures relating to:
  - worksite safety and health
  - mine inspection
  - OHS
  - explosives
  - dangerous goods code
  - Hazchem
  - manufacturer's guidelines and specifications
  - Australian standards
  - code of practice
  - Employment and Workplace Relations legislation
  - Equal Employment Opportunity and Disability Discrimination legislation

Work instructions may come from:

- briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include:
  - nature and scope of tasks
  - achievement targets
  - operational conditions
  - obtaining of required permits
  - out of bounds areas
  - lighting conditions
  - plant or equipment defects
  - hazards and potential hazards
  - coordination requirements or issues
  - contamination control requirements
  - environmental control requirements
  - barricade and signage requirements

Hazards may include:

- terrain conditions
- power lines
- fences, gates
| Natural Disasters (e.g. floods) | Natural Disasters (e.g. floods) |
| Electricity use in caravan parks, caravans | Electricity use in caravan parks, caravans |
| LPG appliances/canisters | LPG appliances/canisters |
| Other transported gas cylinders | Other transported gas cylinders |
| Portable and fixed winches | Portable and fixed winches |
| Road transport hazards, e.g. braking with loads, camber, hills, rough surfaces | Road transport hazards, e.g. braking with loads, camber, hills, rough surfaces |
| Serviceability of slings, tow ropes, shackles, snatch blocks lashings, vehicle restraining structures, decks, steps and jacks | Serviceability of slings, tow ropes, shackles, snatch blocks lashings, vehicle restraining structures, decks, steps and jacks |

**Coordination requirements** may include:
- Other equipment operators
- Maintenance personnel
- Supervisors
- Worksite personnel

**Pre-start checks** may include:
- Availability of equipment
- Detection of conditions that are unusual
- Fluid levels
- Job requirements
- Personnel
- Walk through site

**Auxiliary equipment** may be anything that is portable and mobile that is not part of the fixed infrastructure, and may include:
- Materials handling equipment (e.g. turn tables, conveyors)
- Mobile equipment
- Mobile lifting equipment (e.g. cranes, forklifts)

**Environmental issues** may include:
- Drainage
- Dust
- Emissions
- Flora and fauna
- Hazardous chemicals
- Noise
- Recycling
- Run-off
- Spills
- Waste management and disposal
- Water quality

**Equipment and materials** may include:
- Drill string components
- Drill bits
- Drill rig spares
- Tools
- Drilling mud chemicals
- Cleaning materials and chemicals
<table>
<thead>
<tr>
<th>Clean may include methods such as:</th>

RIINHB202A Set up/pack up drill site

Modification History
Not applicable.

Unit Descriptor
This unit covers the setting up and packing up of drill sites in the drilling industry. It includes: planning and preparing for setting up and packing up of drill sites; assisting the driller to set up drill rig; setting up and dismantling ancillary equipment; and packing up drill site.

Application of the Unit
This unit is appropriate for those working in drillers assistant roles, at worksites within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. 1.3. Identify, manage and report all potential **hazards**  
1.4. Resolve **coordination requirements** with others at the site prior to commencing and during work activities  
1.5. Test working order of required safety equipment  
1.6. Erect and observe warning signs and barriers as directed  
1.7. Store materials as directed to minimise hazards and contamination |
| 2. Assist driller to set up drill rig | 2.1. Carry out a range of instructions on work scheduling in logical sequence  
2.2. Assist unloading rig and equipment using a range of measures to ensure no damage  
2.3. Set out tools and/or equipment needed to complete the hole in the work area  
2.4. Take appropriate weather precautions for equipment and stores |
| 3. Set up and dismantle ancillary equipment | 3.1. Set up and dismantle ancillary equipment in accordance with instructions  
3.2. Provide connecting services to and from equipment in accordance with instructions  
3.3. Carry out a pre-start check in accordance with requirements |
| 4. Pack up drill site | 4.1. Clean area to policies and procedures  
4.2. Load and secure equipment as directed  
4.3. Remove waste and unwanted materials from site  
4.4. Clean, maintain and store tools and equipment |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to set up and pack up drill sites:

- apply legislative, organisation and site requirements and procedures
- apply manual and mechanical handling techniques
- apply communication by hand signals for vehicle positioning and mast raising
- apply decontamination procedures for rig and equipment

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to set up and pack up drill sites:

- occupational health and safety procedures, including site and equipment safety requirement
- importance of drill pad stability and rig alignment
- safe storage requirements and procedures for hazardous substances
- environmental requirements and procedures, including reducing: contamination and pollution; and containing, dispersing and disposing of waste fluids
- equipment characteristics, technical capabilities and limitations
- operational and maintenance procedures
- basic geological and technical data
- extreme weather precautions
- how to clean, dig and protect and mud pits and drains, where required
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| | • plant or equipment defects  
| | • hazards and potential hazards  
| | • coordination requirements or issues  
| | • contamination control requirements  
| | • environmental control requirements  
| | • barricade and signage requirements |

| Hazards may include: | • previous usage (e.g. builders or demolition residue)  
| | • electric wires (overhead or underground)  
| | • telephone lines or fibre optic cables  
| | • gas pipes  
| | • pressurised water pipes |
drains for water and sewer
- overhead branches
- available working space or confined space
- environmental hazards, including:
  - contaminated soil
  - toxic substances
  - in-hole gas
  - wind direction and
  - atmospheric contaminants, including dust and fumes

**Coordination requirements** may include:
- driller
- other equipment operators
- maintenance personnel
- supervisors
- site personnel

**Ancillary equipment** may include:
- compressor
- pumps
- grout pump
- mixing tanks
- sample collection hopper/skip
- support vehicle
- water tank, temporary reservoirs, and pipelines
- HF radio aerial, microwave dish
- cyclones
- sample storage
- down hole test or installation equipment (packers, survey, water pressure test equipment, sampling devises)
- core boxes
- drill string components
- tools

RIINHB203A Support drilling process

Modification History
Not applicable.

Unit Descriptor
This unit covers supporting the drilling process in resources and infrastructure industries. It includes: planning and preparing for supporting the drilling process, operating ancillary equipment, cleaning all equipment at drilling site, maintaining levels of supplies, and performing basic measurement and calculations.

Application of the Unit
This unit is appropriate for those working in drillers assistant roles, at worksites within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for supporting the drilling process | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, confirm and apply *work instructions* for the allocated task  
1.3. Identify, manage and report all potential *hazards*  
1.4. Resolve *coordination requirements* with others at the site prior to commencing and during work activities |
| 2. Operate ancillary equipment | 2.1. Start-up, run, and close down *ancillary equipment* |
| 3. Clean all equipment at drilling site | 3.1. Maintain clean working conditions to minimise any associated safety hazards  
3.2. Clean and store vehicles routinely after use to requirements  
3.3. Maintain machines and equipment in a clean and serviced condition at all times  
3.4. Use cleaning equipment safely and effectively  
3.5. Apply approved instructions and occupational health and safety requirements on the use of hazardous chemicals for cleaning and drilling  
3.6. Ensure that all cleaning equipment is kept in good working condition |
| 4. Maintain levels of supplies | 4.1. Keep driller informed on current stock levels  
4.2. Check on availability of consumable items in the workplace regularly  
4.3. Complete record keeping, stock counts and paper work as required |
| 5. Perform basic measurement and calculations | 5.1. Read tape measure accurately to carry out simple measurements  
5.2. Carry out simple *calculations and measurements*  
5.3. Record legibly on all reports |
| 6. Carry out basic operator maintenance | 6.1. Identify hazards, and methods of minimising hazards, in conducting maintenance, particularly in the field |
6.2. Carry out minor repairs and replacements as required
6.3. Overcome minor breakdowns and bogging using recovery techniques as required
6.4. Carry out vehicle washing and housekeeping regularly

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to support the drilling process:

- apply legislative, organisation and site requirements and procedures
- operate pressure cleaners
- apply basic operator servicing and maintenance of plant and vehicles
- apply communication procedures
- use lifting equipment
- identify weathered and fresh rock

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to support the drilling process:

- site and equipment safety requirements
- equipment characteristics, technical capabilities and limitations
- operational and maintenance procedures
- layout of basic hydraulic circuits
- hydraulic and pneumatic systems
- basic geological and technical data
- environmental requirements and procedures
- team roles and objectives
- interpretation and prediction techniques using graphical representation, e.g. maps and diagrams
- requirements to ensure cost effective operations, including work practices that limit damage to equipment and minimise use of consumables
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for supporting the drilling process</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of support of the drilling process</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the support of the drilling process that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of the support of the drilling process that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the support of the drilling process

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>
<thead>
<tr>
<th>Relevant compliance documentation may include:</th>

Co-requisite units

Not applicable.
RIINHB219A Assist with air drilling

Modification History
Not applicable.

Unit Descriptor
This unit covers assisting with air drilling in resources and infrastructure industries. It includes planning and preparing for assisting with air drilling, supporting the air drilling process, collaring holes and inserting casings, handling samples, using restraining devices, mixing drilling fluids for air/foam drilling and carrying out basic maintenance of tools and equipment.

Application of the Unit
Air drilling is used for environmental, geotechnical, mineral exploration, mineral production, blast hole, seismic and water well drilling. This unit is appropriate for those working in drillers assistants roles, at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
**Elements and Performance Criteria Pre-Content**

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for assisting with air drilling | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, confirm and apply work instructions for the allocated task  
1.3. Identify, manage and report all potential *hazards*  
1.4. Resolve *coordination requirements* with others at the site prior to commencing and during work activities  
1.5. Load, unload, move, handle, use and store rotary air drilling equipment and all associated tools, sampling devices and connecting equipment  
1.6. Select and use appropriate *personal protective equipment* and protective clothing |
| 2. Support the air drilling process | 2.1. Fit and remove and measure correct *bits* and down-hole tools to/from the drill string  
2.2. Prepare drill string in readiness for tripping and drilling  
2.3. Sharpen drill bits in accordance with specifications  
2.4. Add and remove *drill rod* to and from the drill string  
2.5. Inspect and maintain *drill pipe*, *bits*, *threads* and other down-hole equipment  
2.6. Use *pipe and casing handling equipment*  
2.7. Install and seal casing using the correct methods as per company policies/procedures  
2.8. Use, install and maintain stuffing boxes and collar T pieces as per manufacturer's requirements |
| 3. Handle samples | 3.1. Obtain and/or lay out *samples* as required  
3.2. Split, bag, label and store samples for transport according to workplace or site specific requirements  
3.3. Clean and service *sampling equipment* as required  
3.4. Obtain uncontaminated samples using |
| 3.5. Take necessary safety precautions when handling potentially hazardous samples |
| 3.6. Safely clear blockages in sample and delivery system |
| 3.7. Note and report possible changes to sample quality due to blockages |

| 4. Use restraining devices |
| 4.1. Fit **restraining devices** |
| 4.2. Identify **dangers of high velocity samples** in air drilling and take appropriate measures to minimise hazard |

| 5. Mix drilling fluids for air/foam drilling |
| 5.1. Wear appropriate protective clothing |
| 5.2. Check labels and read and interpret safety information/hazard codes |
| 5.3. Mix the **drilling fluid** as required |
| 5.4. Store drilling fluid components and additives safely and according to requirements |

| 6. Carry out basic maintenance of tools and equipment |
| 6.1. Perform inspections and routine checks on ancillary equipment such as air compressor and injection pump |
| 6.2. Perform inspections and basic maintenance of pipe handling equipment |
| 6.3. Observe OHS procedures in carrying out equipment maintenance |
| 6.4. Select and maintain bit sharpening equipment in accordance with site specifications |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to assist with air drilling:

- apply legislative, organisation and site requirements and procedures
- operate ancillary equipment such as air compressors, boosters and cyclones (equipment is to some extent dependent on the type of air drilling being carried out)
- apply basic maintenance and servicing of compressors and auxiliary equipment
- measure and identify hammer bits, shrouds and related components
- identify thread types in use on site
- identify bits in use and how to measure them
- use various rod handling equipment on site
- assist with the removal/adding of drill rods to the line string
- apply refuelling procedures for vehicles, drill rigs and ancillary equipment
- identify correct lubricants
- apply correct handling of samples
- apply good housekeeping principles
- disassemble, inspect and reassemble DTH hammers
- install restraining devices to pressure and delivery hoses
- inspect and replace inner tubes in RC pipe
- inspect and replace sealing devices in RC pipe
- install T piece to collar casing
- identify and mix of drill additives
- identification of bits
- apply basic maintenance of water delivery pumps
- apply vehicles cleaning procedures
- drive vehicles

*Note:* these skills may not be used by ALL air drilling methods

### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to assist with air drilling:

- reasons for identification and care of samples including storage and transport
- OHS and environment requirements and procedures
- use of materials safety data sheets (MSDS)
- basic operation of compressors and the need for cleanliness when carrying out
compressor maintenance
- critical need to match threads with threads on tubular components
- drilling operational requirements and procedures
- theory behind sharpening bits
- monitoring of sample quality to restrict contamination
- importance of correct measurement of bits and other related components
- methods for clearing blockages in air or rotary holes
- methods of clearing blocked sample and delivery hoses
- requirement of restraining devices on all high pressure and delivery hoses
- potential hazards with the operation of rod handling devices
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>

| Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisational and site requirements and procedures |
| | manufacturer's guidelines and specifications |
| | Australian standards |
| | code of practice |
| | Employment and Workplace Relations legislation |
| | Equal Employment Opportunity and Disability Discrimination legislation |

| Hazards may include: | release of gases from formation or samples obtained |
| | spread of contaminants as a result of drilling or cleaning processes |
| | change in the chemistry of contaminants as a result of drilling and recovery of the samples |
| | working in proximity to drilling rig |
| | use of high pressure air for drilling operations |
| | entanglement in rotating pipes |
| | string makeup and breakout hazards |
| | drilling equipment and down-hole tools will depend on the air drilling method being used |

| Coordination requirements may include: | other equipment operators |
| | maintenance personnel |
| | supervisors |
| | mine personnel |

| Personal protective equipment includes: | steel-capped boots and hardhat |
| | gloves |
| | dust mask |
| | eye and hearing protection |
| | general protective and reflective clothing |

| Bits may include: | tri-cone bits |
| | blade bits |
| | tungsten carbide 'core' bits |
| | DTH hammer bits RC and conventional |
| | PCD bits |
| **Rod and pipe** may include: | • air core rods  
• casing  
• conventional drill pipe  
• dual wall reverse circulation drill pipe  
• API and IF threads |
|-----------------------------|--------------------------------------------------|
| **Pipe and casing handling equipment** may include: | • rod clamps (hydraulic or manual)  
• manual handling  
• hoisting plugs  
• C spanner  
• hook and clam shell pipe or rod sling  
• hydraulic pipe/rod/casing spinner  
• mechanised rod handler  
• slips  
• slips basket |
| **Samples** may include: | • chip samples (RAB, Aircore, DTH hammer, RC samples)  
• 'core' samples from air core drilling |
| **Sampling equipment** may include: | • cyclones  
• sample splitters  
• wet samplers  
• rotary samplers |
| **Restraining devices** may include: | • internal cable whip checks  
• double eyelet sock type whip checks  
• full sock whip checks |
| **Dangers of high velocity samples** may be caused by: | • high wear rates on components  
• sample hose blockages  
• sample hose rupture |
| **Drilling fluids and additives** may include: | • air  
• foam  
• polymers  
• water |

1.3. Identify, manage and report all potential *hazards*  
1.4. Resolve *coordination requirements* with others at the site prior to commencing and during work activities  
1.5. Load, unload, move, handle, use and store continuous flight augers and all associated tools, *sampling devices* and connecting equipment  
1.6. Set up and stabilise auger racks  
1.7. Select and use appropriate *personal protective equipment* and protective clothing |
| 2. Assist with augering process | 2.1. Fit and remove bits to and from the lead auger  
2.2. Lay out auger string in readiness for auger process  
2.3. Insert remove augers from the drill string and assist with auger to auger connections  
2.4. Regularly maintain cleanliness around the hole collar by removing spoil only when rotation is stopped  
2.5. Observe housekeeping and site safety measures while conducting auger assistance and sampling duties |
| 3. Obtain samples | 3.1. Obtain and/or lay out disturbed *samples* from flights as required  
3.2. Take necessary safety precautions when handling potentially contaminated samples  
3.3. Bag, properly label and store undisturbed samples for transport in accordance with requirements  
3.4. Obtain soil samples from SPT split spoon, undisturbed sample tube, direct push, coring bit or other down hole mechanical device used in sampling if required |
| 3.5. Package SPT samples and label packages and include the test result if required |
| 3.6. Clean and service undisturbed tubes, remove loose spoil, fit mechanical or wax seals, package, label and store undisturbed samples for transport if required |
| 3.7. Remove and package samples obtained from hollow auger sampling devices or direct push applications when required |

| 4. Clean equipment |
| 4.1. Clean and reassemble sampling devices and associated equipment |
| 4.2. Use high pressure cleaners and/or steam cleaning equipment to clean augers and equipment |
| 4.3. Avoid or confine the spread of contamination from auger and equipment cleaning processes. |
| 4.4. Follow safe work practices for use of cleaning equipment, chemicals and materials. |
| 4.5. Bag, remove and dispose of or neutralise excess spoil from site operations |

| 5. Carry out water sampling |
| 5.1. Bail or pump holes in preparation for collection of water sample |
| 5.2. Prepare, obtain and handle water sample bottles |
| 5.3. Obtain a water sample from a bore hole |
| 5.4. Fill, seal, label, store and transport correct volume water samples relevant for the analytical purpose or tests required using appropriate type containers |
| 5.5. Remove or dispose of or neutralise excess water generated by sampling or cleaning processes that may be contaminated or harmful to the environment, plants, native animals, domestic stock or people |

<p>| 6. Carry out basic maintenance of tools and equipment |
| 6.1. Perform inspection and checks on serviceability of augers including condition of flights, threads, socket connectors, D clips and bits |
| 6.2. Inspect serviceability of pressure cleaning equipment, water sampling pumps, sample tubes, SPT equipment |
| 6.3. Maintain all auger and sampling equipment |</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to assist with continuous flight auger drilling:

- apply legislative, organisation and site requirements and procedures
- operate ancillary equipment such as air compressors, boosters and cyclones (equipment is to some extent dependent on the type of air drilling being carried out)
- apply basic maintenance and servicing of compressors and auxiliary equipment
- measure and identify flight auger components
- identify thread types in use on site
- identify bits in use and how to measure them
- apply safe storage of tools
- use various load handling equipment on site
- assist the driller in the removal and adding of drill rods to the line string
- apply refuelling procedures for vehicles, drill rigs and ancillary equipment
- identify correct lubricants
- apply correct handling of samples
- apply good housekeeping principals
- install restraining devices to pressure and delivery hoses
- identification of bits to suit differing ground conditions
- drive vehicles

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to assisting with continuous flight auger drilling:

- occupational health, safety and environment issues
- reasons for identification and care of samples including storage and transport
- safety measures required when sampling contaminated sites and landfills
- components of the chain of custody, including use of seals, field log book, chain of custody record, sample labels and sample request forms
- requirements and procedures for decontamination of sampling equipment, sample containers, pumps
- requirements for the preparation for sampling of contaminated site
- sampling methods using SPTs, thin walled samplers, continuous sampling system method, hand augers, trowels
- basic soil description methods
- groundwater sampling protocols and types of sampling tools
- requirements and procedures for sampling procedure for volatile organic compound vials
- requirements and procedures for acid base sample preservation of groundwater samples
- procedures for field measurement of temperature, pH, specific conductance
- procedures for test bore and well abandonment
- grouting procedures
- calculation of volume in cylinders, tanks
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete continuous flight auger drilling tasks

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisational and site requirements and procedures |
| | manufacturer's guidelines and specifications |
| | Australian standards |
| | code of practice |
| | Employment and workplace relations legislation |
| | Equal Employment Opportunity and Disability Discrimination legislation |

| Work instructions may come from: | briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include: |
| | nature and scope of tasks |
| | specifications |
| | quality of finished works |
| | achievement targets |
| | operational conditions |
| | obtaining of permits required |
| | site layout |
| | out of bounds areas |
| | worksite inspection requirements |
| | lighting conditions |
| | plant or equipment defects |
| | hazards and potential hazards |
| | coordination requirements or issues |
| | contamination control requirements |
| | environmental control requirements |
| | barricade and signage requirements |

| Hazards may include: | release of gases from formation or samples obtained |
| | exposure to contaminated soil or samples that may be toxic, poisonous, or harmful either through contact with skin or eyes, inhalation of vapours, or ingestion |
- spread of contaminants as a result of drilling or cleaning processes
- change in the chemistry of contaminants as a result of drilling, sampling or bottling
- working in proximity to drilling rig
- entanglement in flights
- string makeup and breakout hazards
- hazards with the use of high pressure/steam cleaners, grout mixers, pumps

**Coordination requirements** may include:
- other equipment operators
- maintenance personnel
- supervisors
- mine personnel

**Personal protective equipment** includes:
- steel-capped boots and hardhat
- gloves
- dust mask
- eye and hearing protection
- general protective and reflective clothing

**Sample types** may include:
- grab samples
- flight samples
- hand auger samples
- SPT samples
- push tube samples
- water samples
- drive core samples taken through hollow stem augers

**Label requirements** may include:
- project number
- bore number
- depth interval
- test result (e.g. SPT result)
- date sampled
- time sampled
- soil description

**Cleaning** is to include decontamination of:
- sampling devices
- tools
- implements
- hosing
Unit Sector(s)
Drilling (General)

Competency field

RIINHB206A Assist large diameter auger drilling

Modification History
Not applicable.

Unit Descriptor
This unit covers assisting with large diameter auger drilling in civil construction and drilling industries. It includes planning and preparing for assisting with drilling, assisting with the augering process, mixing drilling fluids, cleaning equipment and carrying out basic maintenance of tools and equipment.

Application of the Unit
Large flight augers include short-flight and bucket augers and are used for foundation construction drilling. This unit is appropriate for those working in drillers’ assistant roles, at worksites within:
- Civil construction
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

</thead>
</table>
| 1. Plan and prepare for assisting with large diameter auger drilling | 1.1. Access, interpret and apply **compliance documentation** relevant to the work activity  
1.2. Obtain, confirm and apply **work instructions** for the allocated task  
1.3. Identify, manage and report all potential **hazards**  
1.4. Resolve **coordination requirements** with others at the site prior to commencing and during work activities  
1.5. Load, unload, move, handle, use and store large diameter auger equipment and all associated tools and connecting equipment  
1.6. Take necessary safety precautions when handling potentially contaminated spoil  
1.7. Wear all necessary **personal protective equipment** and protective clothing when assisting with auger drilling |
| 2. Assist with augering process | 2.1. Fit and remove bits and cutting teeth to and from the cutting head  
2.2. Insert remove augers and extension pipe to and from the drill string and assist with auger to auger connections  
2.3. Regularly maintain cleanliness around the hole collar by removing spoil only when rotation is stopped  
2.4. Observe housekeeping and site safety measures while conducting auger assistance |
| 3. Mix drilling fluids | 3.1. Wear appropriate protective clothing  
3.2. Check, read and interpret safety information/hazard codes  
3.3. Apply correct mixing procedure for the drilling fluid  
3.4. Carry out storage of drilling mud components and additives safely and according to recommendations |
| 4. Clean equipment | 4.1. Use high pressure cleaners and/or steam cleaning equipment to clean augers and equipment  
4.2. Avoid or confine the spread of contamination from auger and equipment |
| 4.3. Follow safe work practices for use of cleaning equipment, chemicals and materials |
| 4.4. Remove and dispose of or neutralise excess spoil from site operations in accordance with environmental regulations |
| 5. Carry out basic maintenance of tools and equipment |
| 5.1. Perform inspection and checks on serviceability of augers including condition of flights, threads, socket connectors and D clips |
| 5.2. Inspect serviceability of pressure cleaning equipment |
| 5.3. Maintain all auger equipment in serviceable condition |
| 5.4. Observe occupational health and safety procedures in carrying out equipment maintenance |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to assist with large diameter auger drilling:

- apply legislative, organisation and site requirements and procedures
- apply basic maintenance and servicing of auxiliary equipment
- identify thread types in use on site
- identify bits in use and how to measure them
- apply safe storage of tools
- use various load handling equipment on site
- apply refuelling procedures for vehicles, drill rigs and ancillary equipment
- apply good housekeeping principles

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to assist with large diameter auger drilling:

- occupational health, safety and environment requirements and procedures
## Evidence Guide

RIINHB208B Assist diamond core drilling

Modification History
Not applicable.

Unit Descriptor
This unit covers assisting with diamond core drilling in the drilling industry. It includes planning and preparing for assisting with diamond core drilling; supporting the core drilling process; handling core samples; mixing drilling fluids; and carrying out basic maintenance of tools and equipment.

Application of the Unit
Core drilling may also be called wireline core drilling, diamond drilling or coring. It is used for environmental, geotechnical and mineral exploration drilling. This unit is appropriate for those working in as drillers assistants, at worksites within:

- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for assisting with diamond core drilling | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, confirm and apply *work instructions* for the allocated task  
1.3. Identify, manage and report all potential *hazards*  
1.4. Resolve *coordination requirements* with others at the site prior to commencing and during work activities  
1.5. Load, unload, move, handle and store core drilling equipment and all associated tools, sampling devices and connecting equipment  
1.6. Set up and stabilise racks  
1.7. Wear all necessary *personal protective equipment* and protective clothing when assisting with core drilling |
| 2. Support the core drilling process | 2.1. Assemble *core barrel components* under the direction of the driller  
2.2. Prepare drill string in readiness for tripping and drilling  
2.3. Add and remove *drill rods* and core inner tubes  
2.4. Inspect inner tube and core barrel regularly and replace worn or damaged components under the direction of the driller  
2.5. Observe housekeeping and site safety measures while supporting core drilling operations  
2.6. Use *rod and casing handling equipment* according to recommended procedures  
2.7. Store and handle diamond tools according to policy |
| 3. Handle core samples | 3.1. Dismantle inner tube for recovery of core samples  
3.2. Take necessary safety precautions when handling potentially contaminated samples  
3.3. Remove core samples from inner tube and place in core trays in correct sequence  
3.4. *Record* information on core marker blocks |
and core box accurately and legibly
3.5. Take precautions to ensure no surface contamination of cores and delicate cores are preserved
3.6. Follow safe stacking procedures for core boxes during storage and transportation
3.7. Apply appropriate lifting techniques when lifting full core boxes
3.8. Clean and lubricate inner tube components and re-assemble in preparation for the next run

| 4. Mix drilling fluids | 4.1. Wear appropriate protective clothing when mixing *drilling fluids*
| | 4.2. Check labels and read and interpret safety information and hazard codes
| | 4.3. Apply correct mixing procedure for the drilling fluid
| | 4.4. Carry out storage of drilling mud components and additives safely and according to recommendations
| | 4.5. Perform *basic tests on drilling fluids* and record and report the results

| 5. Carry out basic maintenance of tools and equipment | 5.1. Perform inspection and checks on serviceability of *core barrel components*
| | 5.2. Perform inspections and routine checks on ancillary equipment
| | 5.3. Perform inspections and basic maintenance on rod handling equipment
| | 5.4. Observe occupational health and safety procedures in carrying out equipment maintenance and use correct personal protective equipment
| | 5.5. Fit restraining devices to Kelly hoses
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to assist with diamond core drilling:

- apply legislative, organisation and site requirements and procedures
- measure and identify core bits, reamer shells and related components
- identify thread types
- identify bits to suit
- apply safe storage requirements for diamond tools
- use various rod handling equipment and methods
- apply add and removal techniques for drill rods to the line string
- apply refuelling procedures for vehicles, drill rigs and ancillary equipment
- identify correct lubricants
- apply correct handling of samples
- apply good housekeeping principles
- correctly identify and mix drill fluids
- apply basic maintenance of mud and/or water delivery pumps

### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to assist with diamond core drilling:

- occupational health, safety and environment issues
- reasons for identification and care of samples including storage and transport
- information to be placed on core boxes/core marker blocks
- diamond coring equipment, components and nomenclature
- requirements for collaring of bore holes, including equipment, methods, seals and installation
- collection of sludge and chip samples
- procedures and maintenance of stuffing boxes and/or 'T' pieces
- mud pumps and their applications
- basic knowledge of bit types and their applications to different geological conditions
- basic knowledge of fluid circulation system and its effect on hole integrity and sample quality
# Evidence Guide

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to assist guided boring:

- apply legislative, organisation and site requirements and procedures
- operation of ancillary equipment such as:
  - mud pumps
  - water supply pumps and
  - mud hoppers

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to assist guided boring:

- occupational health, safety and environment requirements and procedures
- materials safety data sheets (MSDS)
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td>- knowledge of the requirements, procedures and instructions for assisting with guided boring</td>
<td>- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of assisting with guided boring</td>
</tr>
<tr>
<td>- working with others to undertake and complete the guided boring that meets all of the required outcomes</td>
<td>- consistent timely completion of assisting with guided boring that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second
language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete guided boring |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | - legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation |
| Work instructions may come from briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include: | - nature and scope of tasks
- specifications
- quality of finished works
- achievement targets
- operational conditions
- obtaining of permits required
- site layout
- out of bounds areas
- worksite inspection requirements
- lighting conditions
- plant or equipment defects
- hazards and potential hazards
- coordination requirements or issues
- contamination control requirements
- environmental control requirements
- barricade and signage requirements |
| Hazards may include: | - drilling into underground utilities such as gas or power cables
- release of gases from formation
- spread of contaminants as a result of drilling or cleaning processes
- change in the chemistry of contaminants as a result of drilling
- working in proximity to drilling rig
- working in proximity to traffic
- entanglement in rotating pipes |
string makeup and breakout hazards

**Coordination requirements** may include:
- other equipment operators
- maintenance personnel
- supervisors
- site personnel

**Personal protective equipment** includes:
- steel-capped boots and hardhat
- gloves
- dust mask
- eye and hearing protection
- general protective and reflective clothing

**Pipe/casing handling equipment** may include:
- foot clamps (hydraulic or manual)
- stilsons
- break-out wrench
- lifting plugs

**Drilling fluids** and additives may include:
- polymers
- bentonite
- water

**Unit Sector(s)**
Drilling (General)

**Competency field**

**Co-requisite units**
Not applicable.
RIINHB210B Assist surface directional drilling

Modification History
Not applicable.

Unit Descriptor
This unit covers assisting with surface directional drilling in coal and metalliferous mines. It includes planning and preparing for and supporting surface directional drilling and carry out basic maintenance of tools and equipment.

Application of the Unit
Directional drilling is undertaken for large diameter bores in hard rock or other difficult geology. The directionally drilled hole may subsequently be reamed and have product pipe installed, or it may be for coal seam methane drainage or similar. This unit is appropriate for those working in drillers assistants roles at surface worksites within:

- Coal mining
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for assisting with surface directional drilling | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Identify, manage and report all potential *hazards*  
1.3. Obtain, confirm and apply *work instructions* for the allocated task  
1.4. Resolve *coordination requirements* with others at the site prior to commencing and during work activities  
1.5. Load, unload, move, handle directional drilling equipment and all associated tools and connecting equipment  
1.6. Select and use appropriate *personal protective equipment* and protective clothing |
| 2. Support the surface directional drilling process | 2.1. Position and number drill rods in readiness for drilling  
2.2. Inspect *in-hole drilling components* for damage  
2.3. Fit and remove *in-hole drilling components* to and from the drill string as instructed  
2.4. Apply housekeeping  
2.5. Maintain communication with all *relevant personnel*  
2.6. Identify unplanned gas and water leakage and other environmental hazards |
| 3. Carry out basic maintenance of tools and equipment | 3.1. Monitor the drill rods for wear and damage and dress and grease threads in accordance with standard procedures or replace rods  
3.2. Rotate rods  
3.3. Monitor all drill equipment and hoses and *ancillary equipment* and carry out *remedial action*  
3.4. Apply environmental controls  
3.5. Ensure that drill fluids are appropriately contained and disposed of |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to assist with surface directional drilling:

- apply safe manual handling practices
- apply ancillary equipment operating procedures including:
  - pumps
  - ventilation equipment
  - personal protective equipment
- apply operational communication procedures
- apply inspection and monitoring procedures
- apply maintenance procedures

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to assist with surface directional drilling:

- legislative, organisation’s and site OHS requirements
- potential directional drilling hazards
- potential work environment hazards
- potential environmental hazards
- organisations operational requirements and procedures
- manufacturer’s requirements and procedures
- specific handling requirements for drilling equipment
- housekeeping requirements and procedures

  • hazards and potential hazards  
  • coordination requirements or issues  
  • contamination control requirements  
  • environmental control requirements  
  • barricade and signage requirements |
Coordination requirements may include:
- other equipment operators
- maintenance personnel
- supervisors
- mine personnel

Personal protective equipment includes:
- steel-capped boots and hardhat
- gloves
- dust mask
- eye and hearing protection
- general protective and reflective clothing

In-hole drilling components may include:
- drill rods
- drill bits
- reamers
- survey tools
- down-hole motors

Relevant personnel may include:
- drill crew members
- mine staff and supervisors
- site safety personnel
- statutory persons

Ancillary equipment may include:
- pumps
- water disposal lines
- ventilation equipment

Remedial action may include:
- clearing or remove obstructions
- replacing damaged hoses
- topping-up lubricants

RIINHB211A Assist mud rotary drilling

Modification History
Not applicable.

Unit Descriptor
This unit covers assisting with mud rotary drilling in resources and infrastructure industries. It includes planning, preparing for and assisting with the drilling process, handling samples, mixing drilling fluids, carrying out basic maintenance of tools and equipment.

Application of the Unit
Rotary mud drilling is used for environmental, geotechnical, mineral exploration and waterwell drilling. This unit is appropriate for those working in driller's assistant roles, at worksites within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to assist with cable tool drilling:

- apply legislative, organisation and site requirements and procedures for assisting with cable tool drilling
- identification of thread types in use on site
- identification of bits in use and how to measure them
- use of various rod handling equipment on site
- refuelling operations on vehicles, drill rigs and ancillary equipment
- identification of correct lubricants
- correct handling of samples
- good housekeeping principals
- identification and mixing of drill fluids
- identification of bits to suit differing ground conditions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to assist with cable tool drilling:

- reasons for identification and care of samples including storage and transport
- occupational health, safety and environment issues at AQF level 2 in the non-hydrocarbon drilling industry
- cable tool drilling equipment, components and nomenclature
- basic knowledge of bit types and their applications to different geological conditions
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</thead>
</table>
| • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
• Customisation of assessment and delivery environment to sensitively accommodate |
cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to assist with cable tool drilling |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RIINHB216A Assist underground in-seam directional drilling

Modification History
Not applicable.

Unit Descriptor
This unit covers assisting with underground in-seam directional drilling in underground coal mines. It includes planning and preparing for assisting with drilling, supporting the drilling process and carrying out basic maintenance of tools and equipment.

Application of the Unit
Underground in-seam directional drilling is conducted for gas extraction and water drainage, barrier proving and exploration in underground coal mining operations. This unit is appropriate for those working in drillers assistant roles, at worksites within:
- Coal mining
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for assisting with drilling | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Identify, manage and report all potential *hazards*  
1.3. Obtain, confirm and apply *work instructions* for the allocated task  
1.4. Resolve *coordination requirements* with others at the site prior to commencing and during work activities  
1.5. Load, unload, move, handle directional drilling equipment and all associated tools and connecting |
| 2. Support the drilling process | 2.1. Position and number drill rods in readiness for drilling  
2.2. Inspect *in-hole drilling components* for damage  
2.3. Fit and remove in-hole drilling components to and from the drill string as instructed  
2.4. Apply housekeeping  
2.5. Maintain communication with all *relevant personnel*  
2.6. Identify unplanned gas and water leakage and other environmental hazards |
| 3. Carry out basic maintenance of tools and equipment | 3.1. Monitor the drill rods for wear and damage and dress and grease threads  
3.2. Rotate rods in stack  
3.3. Monitor all drill equipment and hoses and *ancillary equipment* and carry out *remedial action*  
3.4. Apply environmental controls  
3.5. Ensure that drill fluids are appropriately contained and disposed of appropriately |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to assist with underground in-seam directional drilling:

- apply legislative, organisation, site and manufacturer's requirements and procedures
- apply safe manual handling practices
- operate ancillary equipment including:
  - pumps
  - ventilation equipment and
  - personal protective equipment
- apply communication procedures
- apply inspection and monitoring procedures
- apply maintenance procedures

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to assist with underground in-seam directional drilling:

- legislative, organisation's and site OHS requirements
- potential underground drilling, underground work environment hazards and underground environmental hazards
- organisation's and manufacturer's operational requirements and procedures
- equipment handling requirements
- housekeeping requirements and procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate’s required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate’s:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate’s:
  - working with others to undertake and complete underground in-seam directional drilling tasks

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

---

English speaking background may have second language issues.

- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

| may include: | legislative, organisational and site requirements and procedures |
| | manufacturer's guidelines and specifications |
| | Australian standards |
| | code of practice |
| | Employment and workplace relations legislation |
| | Equal Employment Opportunity and Disability Discrimination legislation |

### Hazards

| may include: | handling, loading, moving, using and storing underground directional drilling equipment |
| | working in proximity to drilling rig |
| | inadequate communication with drill crew |
| | entanglement in rotating equipment |
| | inhalation or ignition of noxious or flammable gases |
| | vehicles |
| | mining equipment |
| | roof and rib spalls |
| | the presence of gases and water |

### Work instructions

| may come from: | briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include: |
| | nature and scope of tasks |
| | specifications |
| | quality of finished works |
| | achievement targets |
| | operational conditions |
| | obtaining of permits required |
| | site layout |
| | out of bounds areas |
| | worksite inspection requirements |
| | lighting conditions |
| | plant or equipment defects |
### Coordination requirements
- other equipment operators
- maintenance personnel
- supervisors
- mine personnel

### In hole drilling components
- drill rods
- drill bits
- reamers
- survey tools
- down-hole motors

### Relevant personnel
- drill crew members
- mine staff and supervisors
- site safety personnel
- statutory persons

### Ancillary equipment
- pumps
- water disposal lines and
- ventilation equipment

### Remedial action
- clear or remove obstructions
- replace damaged hoses
- top-up lubricants

RIINHB217A Assist horizontal direction drilling

Modification History
Not applicable.

Unit Descriptor
This unit covers the assist horizontal directional drilling in resources and infrastructure industries. It includes: planning and preparing for operations; support the horizontal directional drilling process; mixing drilling fluids; and carrying out basic maintenance of tools and equipment.

Application of the Unit
This unit covers horizontal directional drilling such as might be undertaken for long holes or holes under rivers, lagoons etc, or large diameter bores in hard rock or other difficult geology. The directionally drilled hole may subsequently be reamed and have product pipe installed. This unit is appropriate for those working in drillers assistant roles, at worksites within:

- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. | 1. Plan and prepare for supporting the grouting or cementing process | 1.1. Access, interpret and apply **compliance documentation** relevant to assist grouting or cementing operations  
1.2. Obtain, confirm and apply **work instructions** for the grouting or cementing operations  
1.3. Identify, manage and report all potential **hazards**  
1.4. Resolve **coordination requirements** with others at the site prior to commencing and during the grouting or cementing process  
1.5. Obtain and use appropriate **personal protective equipment** for grouting or cementing operations as listed in the work instructions or materials safety data sheets (MSDS) |
| 2. Operate ancillary equipment | 2.1. Start-up, run, and close down **ancillary equipment** such as grout pumps and mixers |
| 3. Perform basic measurement and calculations | 3.1. Read tape measure accurately to carry out simple measurements of tank capacities, casing or rod lengths as required  
3.2. Record or complete tally sheets for number of lengths of casing placed in the hole as required  
3.3. Carry out simple **calculations and measurements**  
3.4. Record legibly on all reports |
| 4. Grout and cement hole | 4.1. Mix grout and any additives  
4.2. Follow materials safety data sheets (MSDS) requirements for all materials used  
4.3. Grout or cement hole using appropriate equipment and techniques  
4.4. Place grout using appropriate techniques  
4.5. Construct well head, hole identification and install hole security devices if required  
4.6. Dispose of any excess grout or cement according to site waste management procedures |
| 5. Clean all equipment at completion of grouting or cementing | 5.1. Avoid spillage of grout, cement or additives to minimise any associated safety |
cementing hazards
5.2. Use cleaning equipment for cleaning safely and effectively
5.3. Apply approved instructions and occupational health and safety requirements on the use of hazardous chemicals for cleaning
5.4. Ensure that all cleaning equipment is kept in good working condition

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to assist grouting or cementing operations:

- apply legislative, organisation and site requirements and procedures
- operate cleaning equipment
- apply communication procedures
- use mixing equipment
- measure tank dimensions and calculate volumes
- record casing lengths and quantities accurately

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to assist grouting or cementing operations:

- site and equipment safety requirements
- possible effects of grout, cement or cement additives on health
- environmental requirements and procedures
- team roles and objectives during the grouting or cementing operations
- properties of grout, cement or cement additives
- safe work procedure for the grouting or cementing process
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.

- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.

- Aboriginal people and other people from a non
| English speaking background may have second language issues. |
| Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances. |
| Where applicable, physical resources should include equipment modified for people with disabilities. |
| Access must be provided to appropriate learning and/or assessment support when required. |

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete grouting or cementing operations

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisational and site requirements and procedures |
| | manufacturer's guidelines and specifications |
| | Australian standards |
| | code of practice |
| | Employment and workplace relations legislation |
| | Equal Employment Opportunity and Disability Discrimination legislation |

| Work instructions may come from: | briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include: |
| | nature and scope of tasks |
| | specifications |
| | quality of finished works |
| | achievement targets |
| | operational conditions |
| | obtaining of permits required |
| | site layout |
| | out of bounds areas |
| | lighting conditions |
| | plant or equipment defects |
| | hazards and potential hazards |
| | coordination requirements or issues |
| | contamination control requirements |
| | environmental control requirements |
| | barricade and signage requirements |

| Hazards may include: | spread of contaminants as a result of the grouting or cementing process or cleaning processes |
| | working in proximity to drilling rig |
| | string makeup and breakout hazards |
| | hazardous chemicals |

| Coordination requirements may | driller |
### Include:
- other driller's assistants
- other equipment operators
- supervisors
- mine or client personnel

### Personal protective equipment

**Includes:**
- steel-capped boots and hardhat
- gloves
- dust mask
- eye and hearing protection
- general protective and reflective clothing

### Ancillary equipment

**May include:**
- lighting generators
- pumps
- hand tools
- grout mixing
- drill fluid (mud) mixing equipment

### Calculations and measurements

**May include:**
- diameters casing, hole
- casing volumes
- casing quantities and length
- hole volumes
- tank volumes
- annular volumes
- component volumes for grouting

### Cleaning equipment

**May include:**
- pressure cleaning
- chemical cleaning
- manual cleaning
- abrasive mechanical cleaning

---

### Unit Sector(s)
Drilling (General)

### Competency field
Refer to Unit Sector(s).

### Co-requisite units
Not applicable.
RIINHB301A Set up and prepare for drilling operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the setting up and preparing for drilling operations in resources and infrastructure industries. It includes planning for setting up and preparing for drilling operations; locating the rig at hole position; setting up drill and equipment; and diagnosing problems.

Application of the Unit
This unit is appropriate for those working in a operational roles, at worksites within:

- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan for drilling operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, confirm and apply *work instructions* for the allocated task  
1.3. Identify, manage and report all potential hazards  
1.4. Resolve *coordination requirements* with others at the site prior to commencing and during work activities  
1.5. Determine location and nature of any installed services near or crossing the proposed drill plan  
1.6. Obtain all necessary permits or consents, where required  
1.7. Develop *contingency plans* for changes in geological conditions |
| 2. Prepare to drill | 2.1. Check all required personnel, equipment and supplies are available  
2.2. Select and wear required *personal protective equipment*  
2.3. Check equipment is in good operational condition  
2.4. Walk and inspect the drill site, noting any services, hazards, obstacles or other items relevant to the job  
2.5. Identify any services by inspection and from preliminary investigation and confirm exact location  
2.6. Erect or place safety barriers where needed  
2.7. Check all modes of communication  
2.8. Select suitable lay down areas for separate storage of chemicals and fuels or other incompatible items  
2.9. Select locations for ancillary equipment to provide maximum efficiency and minimal risk to personnel |
| 3. Set up drill and equipment | 3.1. Ensure a solid foundation for the rig  
3.2. Interpret plans and position equipment accurately  
3.3. Stabilise drill |
| 3.4. Align and secure mast at correct angle |
| 3.5. Position ancillary equipment accurately |

<table>

<tbody>
<tr>
<td>4.1. Recognise symptoms of problem</td>
</tr>
<tr>
<td>4.2. Identify and isolate causes and determine solution</td>
</tr>
<tr>
<td>4.3. Implement solution if within scope of authority and competence</td>
</tr>
<tr>
<td>4.4. Seek help if problem is too complex</td>
</tr>
<tr>
<td>4.5. Implement solution as directed</td>
</tr>
</tbody>
</table>
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to set up and prepare for drilling operations:

- apply legislative, organisation and site requirements and procedures
- operate machine
- operate ancillary equipment
- interpret graphical representation, including maps, diagrams
- apply metric and imperial conversions
- apply mathematical skills, including:
  - addition
  - subtraction
  - multiplication
  - division
- apply appropriate instruments to measure:
  - volume
  - quantities
  - mass
  - weight
  - length
- using calculator
- apply estimating skills, e.g. mental arithmetic, visualisation of size and quantity
- apply basic geometry to interpret depth, direction and azimuth of a hole

**Required knowledge**

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to set up and prepare for drilling operations:

- equipment and its characteristics, technical capabilities and limitations
- operational and maintenance procedures, including:
  - controlling flow off site
  - disposing of waste
  - no excess clearing
  - prevention of spread of contaminants
- soil sampling and basic geological knowledge, including classification of rocks,
• drillability and stability
• environmental requirements and procedures
• fault finding and troubleshooting techniques
• team work
• communication systems, processes and procedures, e.g. 2-way radio
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

4.5. Follow through items initiated until final resolution has occurred  
4.6. Report problems outside area of responsibility to designated person |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to install product pipe:

- apply legislative, organisation and site requirements and procedures for installation of product pipe
- operate machine
- operate ancillary equipment such as communications equipment
- attach product
- dress slightly damages drill stem threads

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to install product pipe:

- basic rock/geology types and their impact on HDD operations including hard rock and scree
- minimum radius of curvature for different products and impact on the job
- strengths (compressive, tension) for different products and impact on the job
- principles of HDD (general only)
- relevant state regulations/codes such as NSW WorkCover Code of Practice for Excavation and similar requirements in other states
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Overview of assessment | \[The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following: \]
| Critical aspects for assessment and evidence required to demonstrate competency in this unit | \- knowledge of the requirements, procedures and instructions for installation of product pipe
\- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of installation of product pipe
\- working with others to undertake and complete the installation of product pipe that meets all of the required outcomes
\- consistent timely completion of installation of product pipe that safely, effectively and efficiently meets the required outcomes |

Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery
environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the installation of product pipe

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Hazards
- working in proximity to drilling rig

### Coordination requirements
- other equipment operators
- maintenance personnel
- supervisors
- site personnel

### Problems
- changing geological formations, particularly cobble, rock or unstable/porous formation, faults
- unreliable communications with crew
- problems with selection of best installation method and equipment for the job
- over bending/stressing of the product pipe
- handling of different product types such as:
  - welded steel pipe
  - polythene pipe (low/high density)
  - polypropylene pipe
  - PVC pipe
  - plastic drainage (perforated) pipe

### Unit Sector(s)
Drilling (General)

### Competency field

### Co-requisite units
Not applicable.
RIINHB304B Conduct air drilling

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of air drilling in resources and infrastructure industries. It includes planning and preparing for conduct of air drilling; inspecting and maintaining air drilling equipment; drilling; selecting and using drilling additives; taking samples; maintaining equipment; and responding to problems.

Application of the Unit
Air drilling is used for environmental, geotechnical, mineral exploration, mineral production, blast hole, seismic and water well drilling. Air drilling methods may include: rotary air blast, aircore, down the hole hammer, open hole, reverse circulation or combinations of the above. This unit is appropriate for those working in driller roles, at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct air drilling:

- apply legislative, organisation and site requirements and procedures
- apply prescribed thread form torque parameters during make-up of down hole equipment and consumables
- apply correct internal and external callipers, vernier, rule and or tape measure for identification of drill pipe/rod diameter wear limits, measurement of bits/shrouds and other down hole equipment
- apply correct measurement of drill string length
- apply methods for calculating hole depth

#### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to conduct air drilling:

- the importance to match like threads with like threads on all threaded components and make up torque requirements applicable to thread form in use
- the relationship between pressure, volume, hole diameter, pipe diameter and calculation of up hole velocity
- drill pipe and rod and thread form wear limit parameters
- the need for correct hole collaring, use of casing and collar sealing techniques
- TC bit sharpening procedures
- potential problems related to inaccurate measurement and usage sequence of ground engaging consumables and related down hole components
- hazard control measures to enable safe use of compressed air
- the importance of monitoring sample quantity
- the role that drill cuttings blockages play in affecting sample quality
- safe procedures to clear down and up hole drill cuttings blockages within the outside hole return, down hole equipment and up hole sample system and/or hose
- the critical need for correct fitting inspection and maintenance replacement of restraining devices
- the hazards associated with the collection of high velocity drilling cuttings
- the reason for checking inner tubes and inner tube sealing devices in RC drill pipe
- hazards associated with wire-line operations and applicable control measures
- identification of various thread forms used in air drilling
- identification of various in-hole tools and correct application given ground conditions
• the need for uncontaminated samples
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for conducting air drilling</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of air drilling</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete air drilling tasks that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of air drilling tasks that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
<table>
<thead>
<tr>
<th>Method of assessment</th>
<th>Guidance information for assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances. Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.</td>
<td>Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.</td>
</tr>
<tr>
<td>This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods: written and/or oral assessment of the candidate's required knowledge observed, documented and/or first hand testimonial evidence of the candidate's: implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes consistently achieving the required outcomes first hand testimonial evidence of the candidate's: working with others to undertake and complete air drilling tasks</td>
<td></td>
</tr>
</tbody>
</table>
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Work instructions may come from:
- briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include:
  - nature and scope of tasks
  - specifications
  - quality of finished works
  - achievement targets
  - operational conditions
  - obtaining of permits required
  - site layout
  - out of bounds areas
  - worksite inspection requirements
  - lighting conditions
  - plant or equipment defects
  - hazards and potential hazards
  - coordination requirements or issues
  - contamination control requirements
  - environmental control requirements
  - barricade and signage requirements

### Hazards may include:
- lack of preventative maintenance causing rupture of air delivery and sample delivery hoses
- damaged/worn clean air and sample hoses
- inadequate airborne dust prevention control measures
- incorrect match of hose size to hose tails/clamps and fittings
- incorrect fitting of clean air or sample hoses
- high abrasive wear rates to drill cutting receival equipment
- incorrectly fitted hose restraint devices
- incorrect hose restraints in use
- incorrect or inadequately secured cyclones and cyclone lids
- incorrectly fitted grinding wheels, stones and disks
- inappropriate methods/procedures for clearing sample hose blockages
- insecure sample deflection devices fitted to the drill head
- incorrect fitting of wire to wire-line winch drum
- wireline snags and overruns
- lack of provision of restraint devices to clean air, sample hoses and drill head sample deflection devices
- incorrectly fitted stuffing boxes and T pieces
- excessive drill pipe and drill string component wear
- unguarded or uncontrolled access to pinch points, i.e. hydraulic make-up and break-out devices
- poor triangulation configuration of rod/pipe hoisting equipment for angle of hole
- excessive wear to hook and clamshell assemblies
- lack of provision of handling equipment for movement of sample bags and heavy up and down hole equipment
- poor ergonomic equipment design for tasks such as sample splitting, bagging and movement
- inappropriate storage/racking of drill pipe
- incorrect use of stilsons
- incorrect mixing procedure and application of urethane forms
- inadequate security of outside hole collar devices
- drill cuttings blockages (down and up hole)
### Coordination requirements
May include:
- drill team
- other equipment operators
- maintenance personnel
- supervisors
- worksite personnel

### Restraining devices
Shall include:
- two leg stocking type whipchecks
- correctly rated shackles
- correctly rated and fitted whipcheck anchor points

### Restraining devices
May also include:
- wire rope sling type whipchecks
- internal hose wire type whipchecks
- hose restraint brackets and clamps

### Safe and serviceable condition
Will be:
- free from excessive leaks and excessive wear to internal wear resistant materials
- chimney correctly positioned in the cyclone vortex zone to best eliminate dust emission

### Make up and break out equipment
May include:
- stilsons
- hydraulic pipe tongs
- hydraulic pipe wrenches
- hydraulic pipe/rod spinners
- hydraulic make/break devices
- make up torque requirements
- bit break out plates

### In-hole equipment
May include:
- drill rods and drill pipe including:
  - aircore rods with inner-tubes (may use IF or API threads)
  - conventional drill pipe (API Reg or API IF threads)
  - reverse circulation drill pipe (e.g. Remet, Metzke, Drillstar)
  - drill pipe thread type subs, saver subs, blow up/down subs, dig-out subs and cross-overs (API and IF threads)
  - floating/fixed inner tubes
  - inner-tube sealing devices such as aircore inner tube ferrules or RC inner-tube ‘O’ rings
  - aircore trumpets and trumpet subs

### Drill hole collar casing
May include:
- steel casing
- PVC casing
- poly pipe (to maintain open blast hole collar)
### Outside hole return collar devices may include:
- stuffing boxes and T pieces for conventional open hole drilling, including RAB, hammer or combined RAB hammer
- stuffing boxes and T pieces for reverse circulation drilling
- discharge restraint devices as required
- stuffing boxes and T pieces for discharge directed to sump or cyclone

### Drill rod and pipe handling equipment may include:
- manual handling
- hook and clamshell
- hoist plug
- automated and semi-automated rod handlers
- hydraulic pipe/rod/casing clamps
- hydraulic pipe/rod/casing spinner
- drill rod/pipe clamps
- rod/pipe spanner
- slips
- slips basket

### Drill bits may include:
- blade bits
- PCD bits
- tri-cone bits
- button bits (conventional and RC)
- aircore bits

### Drilling parameters may include:
- rotation speed
- weight on bit
- penetration rate

### Drilling additives may include:
- drilling mud (e.g. polymers)
- foams
- cement and cement additives
- hole collar sealants:
  - 2 part urethane foam, and/or
  - gypsum cement

### Personal protective equipment includes:
- steel-capped boots and hardhat
- gloves
- dust mask
- eye and hearing protection
- general protective and reflective clothing
Unit Sector(s)

## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Plan and prepare for conducting continuous flight auger drilling</td>
<td>1.1. Access, interpret and apply compliance documentation relevant to the work activity</td>
</tr>
<tr>
<td></td>
<td>1.2. Obtain, confirm and apply work instructions for the allocated task</td>
</tr>
<tr>
<td></td>
<td>1.3. Identify, manage and report all potential hazards</td>
</tr>
<tr>
<td></td>
<td>1.4. Resolve coordination requirements with others at the site prior to commencing and during work activities</td>
</tr>
<tr>
<td></td>
<td>1.5. Take steps to protect the environment and record any environmental incidents</td>
</tr>
<tr>
<td>2. Operate continuous flight auger drill</td>
<td>2.1. Collar borehole, start hole, maintain hole alignment, take corrective action for deflections</td>
</tr>
<tr>
<td></td>
<td>2.2. Make up appropriate drill string</td>
</tr>
<tr>
<td></td>
<td>2.3. Handle additional augers, inserting them in the drill string</td>
</tr>
<tr>
<td></td>
<td>2.4. Apply rotation, feed and holdback so that flights are substantially full for the soil being drilled at any given depth</td>
</tr>
<tr>
<td></td>
<td>2.5. Interpret flow from the flights and other factors to determine conditions at the bit</td>
</tr>
<tr>
<td></td>
<td>2.6. Describe and log, or record, description of the soils being excavated</td>
</tr>
<tr>
<td></td>
<td>2.7. Make, break auger string and drive head connections safely</td>
</tr>
<tr>
<td></td>
<td>2.8. Deploy and recover associated sampling equipment, obtain samples, bag, label and record samples</td>
</tr>
<tr>
<td></td>
<td>2.9. Maintain a clear hole and a clear bottom and deploy tools for cleaning hole bottom at completed depth and/or prior to sampling tool deployment</td>
</tr>
<tr>
<td></td>
<td>2.10. Interpret and/or calculate actual depth at any point during drilling, interpret depth of strata changes and identify fill depth in any bore</td>
</tr>
<tr>
<td></td>
<td>2.11. Select appropriate strategies for recovery of dropped augers</td>
</tr>
<tr>
<td></td>
<td>2.12. Recover drill string using winch and/or head/kelly and disassemble drill</td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td>---</td>
<td>---</td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td>2.13.</td>
<td>Select bits for formation being drilled</td>

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct continuous flight auger drilling:

- apply legislative, organisation and site requirements and procedures for conducting of continuous flight auger drilling
- apply occupational health and safety requirement and procedures
- interpret geological maps, bore logs, diagrams, plans and instructions used for recording and prediction
- apply procedure to operate the rig carrier to position and move between holes
- apply rig stabilisation and levelling procedures
- identify components in various auger techniques and sizes
- apply equipment assembly, inspection and servicing procedures
- apply rig operating functions and controls with safety
- apply grout mixing techniques and placement methods
- apply test hole grouting and abandonment requirements and procedures
- apply water levels recording requirements
- use a calculator to calculate hole volume
- apply mechanical and manual handling safety procedures
- apply pressure cleaning devices procedures to decontaminate augers and equipment
- apply 'wireline' deployment and recovery techniques for sampling equipment
- apply, record and report on standard penetration test method
- apply deployment and recovery procedures of drilling and sampling systems using hollow augers as casing and recovery techniques for hollow auger inner rods and plug bits
- use tape measures
- apply conversion between metric and imperial units
- calculate using addition, subtraction, multiplication and division

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct continuous flight auger drilling:

- OHS responsibilities
- site hazards identification, assessment and control measures requirements and procedures
- environmental protection measures and aspects
• equipment and spares identification and characteristics
• equipment technical capabilities, system limitations, gauge readings and their interpretation
• soil sampling techniques, deployment methods and record keeping
• operational maintenance procedures for rig and equipment including pre-start checks
• basic geological formations likely to be encountered and their properties
• use of water, mud and foam injection for jet auger drilling
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

| • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. | |
| • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. | |
| • Customisation of assessment and delivery environment to sensitively accommodate cultural diversity. | |
| • Aboriginal people and other people from a non |
English speaking background may have second language issues.

- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete continuous flight auger drilling tasks

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Work instructions may come from:
- briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include:
  - nature and scope of tasks
  - specifications
  - quality of finished works
  - achievement targets
  - operational conditions
  - obtaining of permits required
  - site layout
  - out of bounds areas
  - worksite inspection requirements
  - lighting conditions
  - plant or equipment defects
  - hazards and potential hazards
  - coordination requirements or issues
  - contamination control requirements
  - environmental control requirements
  - barricade and signage requirements

Coordination requirements may include:
- drill team
- other equipment operators
- maintenance personnel
- supervisors
- worksite personnel
| **Hazards** may include:          | • release of gases from formation or samples obtained  
|                                  | • spread of contaminants as a result of drilling or cleaning processes  
|                                  | • change in the chemistry of contaminants as a result of drilling and recovery of the samples  
|                                  | • working in proximity to drilling rig  
|                                  | • use of high pressure air for drilling operations  
|                                  | • entanglement in rotating pipes  
|                                  | • string makeup and breakout hazards  
|                                  | • drilling equipment and down-hole tools will depend on the air drilling method being used  

| **Personal protective equipment** includes: | • steel-capped boots and hardhat  
|                                           | • gloves  
|                                           | • dust mask  
|                                           | • eye and hearing protection  
|                                           | • general protective and reflective clothing  

| **Equipment** includes: | • solid flight augers including hex coupled augers, hex pins, D clips, screw taper thread (jet augers) and thread lube  
|                       | • hollow flight augers including overshot deployment of sampling tools, various manufacturer's tooling, taper screw threads and dog coupled reversible hollow augers, older hollow auger systems using parallel wall threads and plug bits deployed on inner rods  
|                       | • sampling systems including SPT hammers and split spoons  
|                       | • auger recovery tools, auger retaining plate, lifting sockets and hoisting plugs  
|                       | • O rings and flush hole plug spares for dog couples reversible hollow augers, circlip pliers  

| **Operational problems** may include: | • straighten holes and starting straight holes  
|                                      | • encountering excessive water  
|                                      | • sand blowback with hollow augers in wet unconsolidated formations  
|                                      | • cork screwing effect when hold back not set properly  
|                                      | • rotating too fast so that flights are not properly filled  
|                                      | • cross contamination of samples when using solid flight augers  
|                                      | • balancing bit cutting action with hole clearing action

RIINHB306A Conduct large diameter auger drilling

Modification History
Not applicable.

Unit Descriptor
This unit covers the conducting of large diameter auger drilling in civil construction and drilling industries. It includes planning and preparing for drilling, operating the drill, maintaining equipment, and responding to problems.

Application of the Unit
Large flight augers include short-flight and bucket augers and are used for foundation construction drilling. This unit is appropriate for those working in an operational role at worksites within:
- Civil construction
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</td>

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for conducting of large diameter auger drilling | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Obtain, confirm and apply work instructions for the allocated task  
1.3. Identify, manage and report all potential hazards  
1.4. Resolve coordination requirements with others at the site prior to commencing and during work activities  
1.5. Induct site visitors as required by procedures |
| 2. Operate large diameter auger drill | 2.1. Collar borehole, start hole, maintain hole alignment, take corrective action for deflections  
2.2. Make up appropriate drill string  
2.3. Handle additional drill stems, inserting them in the drill string  
2.4. Use appropriate gears, rotation, feed and holdback so that flights or bucket are substantially full for the soil being drilled at any given depth  
2.5. Interpret drilling factors to determine conditions at the bit  
2.6. Make and break auger string and drive head connections safely  
2.7. Maintain a clear hole and a clear bottom and deploy tools for cleaning hole bottom at completed depth  
2.8. Interpret or calculate actual depth at any point during drilling, interpret depth of strata changes and identify fill depth in any bore  
2.9. Select appropriate strategies for recovery of dropped augers  
2.10. Recover drill string using winch and/or head/kelly  
2.11. Insert surface casing and deepen hole using smaller diameter auger or bucket, if required  
2.12. Disassemble drill string and change |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct large diameter auger drilling:

- apply legislative, organisation and site requirements and procedures for the conducting of large diameter auger drilling
- apply occupational health and safety requirements and procedures
- apply techniques for rig carrier to positioning and movement between holes, and reaching several holes from the one set up position where turntable or boom deployment of rotary head is used
- apply rig stabilisation and levelling techniques
- identify components for various auger techniques and sizes
- apply equipment assembly, inspection and servicing procedures
- apply rig operating functions and controls with safety
- apply water levels recording procedures
- apply grout mixing techniques and placement application methods
- apply mechanical and manual handling safety requirements and procedures
- apply metric and imperial units conversion
- apply mathematical calculations using addition, subtraction, multiplication and division
- use a calculator to calculate hole volume

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct large diameter auger drilling:

- occupational health and safety responsibilities
- environmental protection measures and aspects
- basic geological formations expected and their properties
- equipment and spares identification and characteristics
- technical capabilities, system limitations, gauge readings and their interpretation
- site hazards identification, assessment and control measures requirements and procedures
- operational maintenance procedures for rig and equipment including pre-start checks
- use of diagrams, plans and instructions for positioning, recording work or progress
- use of tape measures and devices for assessing depth drilled
• use of water, mud and foam injection for jet auger drilling and/or screw pipe drilling
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete large diameter auger drilling tasks

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisational and site requirements and procedures |
| | manufacturer's guidelines and specifications |
| | Australian standards |
| | code of practice |
| | Employment and workplace relations legislation |
| | Equal Employment Opportunity and Disability Discrimination legislation |

| Work instructions may come from: | briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include: |
| | nature and scope of tasks |
| | specifications |
| | quality of finished works |
| | achievement targets |
| | operational conditions |
| | obtaining of permits required |
| | site layout |
| | out of bounds areas |
| | worksite inspection requirements |
| | lighting conditions |
| | plant or equipment defects |
| | hazards and potential hazards |
| | coordination requirements or issues |
| | contamination control requirements |
| | environmental control requirements |
| | barricade and signage requirements |

| Hazards include: | underground services and other hazards |
| | overhead utilities (e.g. electricity) |

| Hazard management includes: | appropriate personal protective equipment |
| | following safe working practices |

| Coordination requirements may | drill team |
include

- other equipment operators
- maintenance personnel
- supervisors
- worksite personnel

**Personal protective equipment**
includes:

- steel-capped boots and hardhat
- gloves
- dust mask
- eye and hearing protection
- general protective and reflective clothing

**Fluids** may include:

- water, mud foam used to assist cutting removal in screw pile or jet auger applications

**Equipment** may include:

- short flight augers with a range of spirals
- jet augers and long screw pile augers
- bucket augers
- belling or under-reaming tools (pier hole)
- auger recovery tools

**Operational problems** may include:

- straighten holes and starting straight holes
- encountering excessive water
- cork screwing effect when hold back not set properly
- balancing bit cutting action with hole clearing action
- occupational health and safety issues relating to rotating plant including catching long hair, loose clothing, finger injuries, safety with lifting and carrying
- obstructions in hole
- proximity to embankments

Not applicable.
RIINHB307B Conduct conventional core drilling

Modification History
Not applicable.

Unit Descriptor
This unit covers the conducting of conventional core drilling in resources and infrastructure industries. It includes planning and preparing for drilling, operating the drill and drill fluid system, using core orientation equipment, taking core samples, responding to problems, and maintaining equipment.

Application of the Unit
Core drilling may also be called diamond core drilling, diamond drilling or coring. It is used for environmental, geotechnical and mineral exploration drilling. This unit is appropriate for those working in operational roles, at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1. Plan and prepare for conducting conventional core drilling** | 1.1. Access, interpret and apply **compliance documentation** relevant to the work activity  
1.2. Obtain, confirm and apply **work instructions** for the allocated task  
1.3. Identify, manage and report all potential **hazards**  
1.4. Resolve **coordination requirements** with others at the site prior to commencing and during work activities |
| **2. Operate a core drill** | 2.1. Identify and use different **drill rod** or casing types, thread forms and thread make up parameters  
2.2. Select appropriate **drill bits** and reamer shells  
2.3. Adjust inner tube length to ensure appropriate **fluid flow** around the **core**  
2.4. Use **rod and casing handling equipment** safely  
2.5. Add and break out and remove drill rods and pipes and down hole equipment  
2.6. Apply appropriate rotation speed, weight on the bit, drilling fluid flow rate and penetration rate applicable to the ground conditions  
2.7. Measure drill string components and calculate depth of hole  
2.8. **Collar** holes  
2.9. Install casing and seal at the collar |
| **3. Operate drill fluid system** | 3.1. Identify hole conditions requiring the use of drilling fluid additives  
3.2. Select, prepare, apply, test and monitor suitable fluids and additives  
3.3. Monitor fluid return and solids content and implement control measures  
3.4. Monitor fluid and cuttings specific gravity and up hole velocity to ensure efficient hole clearing  
3.5. Monitor causes of pressure in fluid systems  
3.6. Select the appropriate fluid pumping rate for the hole size |
<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>
| 4. Use survey and core orientation equipment | 4.1. Assemble, maintain and use **survey and core orientation devices**
4.2. Read and record survey data
4.3. Operate core orientation devices |
| 5. Take core samples | 5.1. Implement control measures for minimising core loss
5.2. Identify core blockages affecting sample quality |
| 6. Respond to problems | 6.1. Identify possible problems in equipment or process
6.2. Determine problems needing action
6.3. Determine possible fault causes
6.4. Rectify problem using appropriate solution within area of responsibility
6.5. Follow through items initiated until final resolution has occurred
6.6. Report problems outside area of responsibility to designated person |
| 7. Maintain equipment | 7.1. Use the required **personal protective equipment** and follow safe working procedures
7.2. Strip impregnated bits according to required procedures
7.3. Dismantle and service head assembly
7.4. Maintain drill string
7.5. Maintain bit management, record required information and store bits correctly |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct conventional core drilling:

- apply legislative, organisation and site requirements and procedures
- apply routine checks and basic maintenance procedures for mud and water delivery pumps
- identify, mix and apply of collar sealants
- apply procedures for attachment of required equipment to collar casing
- apply basic drilling fluid tests such as viscosity and specific gravity
- apply procedures to ensure that core is handled correctly and placed in core trays as required
- apply techniques for measuring bits and other related components

### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to conduct conventional core drilling:

- configuration of various thread forms and make up torque requirements
- the function of hole collaring, use of casing and collar sealing techniques
- methods required to produce uncontaminated samples
- impregnated bit stripping procedures
- bit selection for different types of drilling and different ground conditions
- the relationships between penetration rate and bit life
- the role that core blockages play in affecting sample quality
- the functions of drilling fluids and control procedures
- relationship between hole diameter, rod diameter, pump output and the specific gravity of formation cutting
- types of mud and water delivery pumps and their applications
- the purpose of drill hole surveys and the functions of azimuth and dip readings
- purpose and principles of core orientation
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

RIINHB308A Conduct wireline core drilling

Modification History
Not applicable.

Unit Descriptor
This unit covers the conducting of wireline core drilling in resources and infrastructure industries. It includes planning and preparing for conducting of wireline core drilling; operating a core drill, drill fluid system and wireline; maintaining equipment; using hole survey and core orientation equipment; taking core samples; and responding to problems.

Application of the Unit
Core drilling may also be called diamond core drilling, diamond drilling or coring. It is used for environmental, geotechnical and mineral exploration drilling. This unit is appropriate for those working in a driller role, at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for conducting of wireline core drilling | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, confirm and apply *work instructions* for the allocated task  
1.3. Identify, manage and report all potential *hazards*  
1.4. Resolve *coordination requirements* with others at the site prior to commencing and during work activities |
| 2. Operate a core drill efficiently to achieve targets | 2.1. Identify and use different *drill rod* and casing types, thread forms and thread make up parameters  
2.2. Select appropriate *drill bits* and reamer shells  
2.3. Adjust inner tube length to ensure appropriate fluid flow around the core  
2.4. Use *rod and casing handling equipment* safely  
2.5. Add/break out and remove drill rods/pipes and down hole equipment  
2.6. Apply appropriate rotation speed, weight on the bit, drilling fluid flow rate and penetration rate applicable to the ground conditions  
2.7. Measure drill string components and calculate depth of hole  
2.8. *Collar* holes  
2.9. Install casing |
| 3. Operate drill fluid system | 3.1. Identify hole conditions requiring the use of *drilling fluids* and chemicals  
3.2. Select, prepare, apply, test and monitor suitable fluids and additives  
3.3. Monitor fluid return and solids content and implement control measures  
3.4. Monitor fluid and cuttings specific gravity and up hole velocity to ensure efficient hole clearing  
3.5. Monitor causes of pressure in fluid systems  
3.6. Select the appropriate fluid pumping rate for the hole size |
| 4. Operate wireline | 4.1. Control hazards associated with the use of wireline systems  
4.2. Use overshot retrieval and dry release system  
4.3. Assemble and maintain wireline overshot  
4.4. Use pump in and dry hole lowering devices |
|---|---|
| 5. Maintain equipment | 5.1. Use the required *personal protective equipment* and follow safe working procedures when using grinders  
5.2. Strip impregnated bits according to manufacturer/company procedures  
5.3. Dismantle and service backend assembly  
5.4. Dismantle *core barrels*, service and replace worn/damaged components  
5.5. Dismantle wireline retrieval components service and replace worn/damaged components if required  
5.6. Maintain drill string  
5.7. Maintain bit management, record required information and store bits correctly |
| 6. Use hole survey and core orientation equipment | 6.1. Use survey tool, as required  
6.2. Assemble and maintain *survey and core orientation devices*  
6.3. Read and record survey data  
6.4. Operate core orientation devices as required |
| 7. Take core samples | 7.1. Implement control measures for minimising core loss  
7.2. Identify core blockages affecting *sample* quality |
| 8. Respond to problems | 8.1. Identify possible problems in equipment or process  
8.2. Determine problems needing action  
8.3. Determine possible fault causes  
8.4. Rectify problem using appropriate solution within area of responsibility  
8.5. Follow through items initiated until final resolution has occurred  
8.6. Report problems outside area of responsibility to designated person |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct wireline core drilling:

- apply legislative, organisation and site requirements and procedures for conducting of wireline core drilling
- apply routine checks and basic maintenance to mud and water delivery pumps
- identify, mix and apply collar sealants
- apply collar casing equipment attachment techniques
- apply basic drilling fluid tests such as viscosity and specific gravity
- apply core handling and tray placement requirements and procedures

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct wireline core drilling:

- configuration requirements of various thread forms and make-up torque requirements
- function of hole collaring, use of casing and collar sealing techniques
- methods required to produce uncontaminated samples
- impregnated bit stripping procedures
- bit selection for different types of drilling and different ground conditions
- measurement of bits and other related components
- critical dimensions of a core barrel if barrel has to be drilled through to reduce hole size
- relationships between penetration rate and bit life
- role that core blockages play in affecting sample quality
- functions of drilling fluids and control procedures
- relationship between hole diameter, rod diameter, pump output and the specific gravity of formation cutting
- types of mud and water delivery pumps and their applications
- hazards associated with wireline operations and control measures required
- purpose of drill hole surveys and the functions of azimuth and dip readings and where it is applied
- core orientation and where it is applicable
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for conducting guided boring
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of guided boring
- working with others to undertake and complete the conduct of guided bores that meets all of the required outcomes
- consistent timely completion of guided boring that safely, effectively and efficiently meets the required outcomes

Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate...
cultural diversity.

- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the conduct of guided bores

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:

- legislative, organisational and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Work instructions may come from briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include:

- nature and scope of tasks
- specifications
- quality of finished works
- achieved targets
- operational conditions
- obtaining of required permits
- site layout
- out of bounds areas
- worksite inspection requirements
- lighting conditions
- plant of equipment defects
- coordination requirements or issues
- contamination control requirements
- environmental control requirements
- barricade and signage requirements

### Hazards may include:

- working in proximity to drilling rig
- buried utilities in path of bore, including:
  - electrical power lines (overhead or buried)
  - gas pipes
  - water pipes
  - waste pipes (including stormwater, trade waste and sewerage)
- changing geological formations, particularly cobble, rock or unstable/porous formation

### Personal protective equipment may include:

- electrically insulating boots and gloves
may include:
- eye and hearing protection
- equipment for confined space entry
- general protective clothing

**Coordination requirements** may include:
- other equipment operators
- maintenance personnel
- supervisors
- site personnel

**Drill head** may include:
- displacement (e.g. slant nose tool/duck bill - standard or carbide)
- cutting (e.g. mud motor, down hole hammer)

**Fluid** may include:
- bentonite clay
- polymer
- pH adjusting agents such as soda ash

**Back reamer** may include:
- spiral
- flute
- helical

**Product** may include:
- welded steel pipe
- polythene pipe (low/high density)
- polypropylene pipe
- PVC pipe
- plastic drainage (perforated) pipe

**Maintenance tasks** may include:
- checking threads with thread gauge
- dressing threads
- lubricating threads and other components
- cleaning all equipment and checking for wear and damage

---

**Unit Sector(s)**
Drilling (General)

**Competency field**
Refer to Unit Sector(s).

**Co-requisite units**
Not applicable.
RIINHB310A Conduct surface directional drilling

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting surface directional drilling in coal mining and drilling industries. It includes planning and preparing for drilling, boring pilot hole, maintaining equipment and responding to problems.

Application of the Unit
Directional drilling is undertaken for large diameter bores in hard rock or other difficult geology. The directionally drilled hole may subsequently be reamed and have product pipe installed, or it may be for coal seam methane drainage or similar. This unit is appropriate for those working in driller roles, at worksites within:

- Coal mining
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

</table>
| 1. Plan and prepare for conducting surface directional drilling | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, confirm and apply *work instructions* for the allocated task  
1.3. Identify, manage and report all potential *hazards*  
1.4. Resolve *coordination requirements* with others at the site prior to commencing and during work activities |
| 2. Bore pilot hole | 2.1. Select appropriate cutting tool and drilling rig and components  
2.2. Confirm that all preliminary and safety checks have been done  
2.3. Fit locating device to *drill head* and attach drill head to drill stem  
2.4. Align drilling head with survey tool and survey control system  
2.5. Drill pilot hole according to design alignment  
2.6. Monitor drill path ensuring pilot hole meets conformance envelope and dogleg severity is within limits  
2.7. Add drill stem sections as required  
2.8. Steer drill head to achieve required pitch and direction  
2.9. Monitor and interpret all gauge and dial readings  
2.10. Monitor and interpret *drill fluid* return and drill spoil  
2.11. Monitor and interpret drill head position and pitch  
2.12. Maintain communication with all relevant personnel  
2.13. Maintain drill log and reports as required |
| 3. Maintain equipment | 3.1. Monitor wear on drill stem, particularly threads  
3.2. Dress damaged threads or replace drill stem as required |
<p>| | |</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conducting surface directional drilling:

- apply legislative, organisation and site requirements and procedures
- apply machine operating procedures
- apply ancillary equipment operating procedures, including communications equipment, locators and fluid mixers
- attach drill head, back reamer, product
- dress slightly damages drill stem threads

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conducting surface directional drilling:

- basic rock and geology types and their impact on HDD operations
- appropriate drill heads for different geology types
- appropriate back reamers for different geology types
- minimum radius of curvature for drill stem and for different products
- methods of steering drill head
- principles of HDD
- types of drill fluid, their uses and make up and adjustment procedures
- state regulations and codes, including NSW WorkCover *code of practice for excavation* and similar requirements in other states
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete surface directional drilling

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

may include:

- legislative, organisational and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Work instructions

may come from briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include:

- nature and scope of tasks
- specifications
- quality of finished works
- achievement targets
- operational conditions
- obtaining of permits required
- site layout
- out of bounds areas
- worksite inspection requirements
- lighting conditions
- plant or equipment defects
- hazards and potential hazards
- coordination requirements or issues
- contamination control requirements
- environmental control requirements
- barricade and signage requirements

### Hazards

may include:

- handling and moving loads
- moving components on drilling rig
- overhead and underground utilities, including:
  - electrical power lines (overhead or buried)
  - gas pipes
  - water pipes
  - waste pipes (including stormwater, trade waste and sewerage)
- inadequate communication
### Coordination requirements may include:
- drill team
- operators of other equipment
- maintenance personnel
- supervisors
- worksite personnel

### Drill heads include:
- tri-cone rock bits
- other down hole cutting tools

### Drill fluids may include:
- Bentonite clay
- polymer
- pH adjusting agents such as soda ash

### Operational problems may include:
- buried utilities in path of bore
- changing geological formations, particularly cobble, rock or unstable/porous formation
- reliable communications with assistant(s)
- selection of best drill head and back reamer

### Unit Sector(s)
Drilling (General)

### Competency field
Refer to Unit Sector(s).

### Co-requisite units
Not applicable.
RIINHB311A Conduct mud rotary drilling

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of mud rotary drilling in resources and infrastructure industries. It includes planning and preparing for conducting of mud rotary drilling; operating mud rotary drills and fluid systems; maintaining equipment; and responding to problems.

Application of the Unit
Rotary mud drilling is used for environmental, geotechnical, mineral exploration and waterwell drilling. This unit is appropriate for those working in a driller roles, at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for conducting of mud rotary drilling | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, confirm and apply *work instructions* for the allocated task  
1.3. Identify, manage and report all potential *hazards*  
1.4. Resolve *coordination requirements* with others at the site prior to commencing and during work activities |
| 2. Operate mud rotary drill | 2.1. Make up appropriate drill string.  
2.2. Use bits, rods and casings  
2.3. Seal hole collar  
2.4. Feed and rotate drill at right rate for the formation  
2.5. Interpret flow from drill to determine conditions at bit  
2.6. Adjust flow rates to give desired results  
2.7. Check drill bits and string components for wear, gauge, dents and damaged threads  
2.8. Use casing, grout screens to correct zones or levels as required |
| 3. Operate fluid system | 3.1. Determine required up hole velocity and the related fluid properties and feed rate  
3.2. Recognise different types of strata  
3.3. Design and adjust mud system to suit geological conditions and changes to conditions which might be expected during the drilling  
3.4. Ensure there is an adequate supply of water to the site for mud requirements and circulation loss zones  
3.5. Make up appropriate formulation using different types of mud and *chemicals*  
3.6. Construct mud pits and systems to suit hole dimensions and site storage requirements  
3.7. Monitor, check and adjust flow rate and properties  
3.8. Keep fluid clean and chlorinate/sanitise lost circulation if required |
3.9. Check and adjust fluid reticulation systems
3.10. Dispose of *drill fluids* correctly

| 4. Maintain equipment | 4.1. Monitor wear and recognise symptoms of malfunction  
|                       | 4.2. Check all *equipment* and hoses  
|                       | 4.3. Monitor all seals and connections  
|                       | 4.4. Replace, adjust and report items needing attention.  
|                       | 4.5. Service gear and adjust glands where required  
|                       | 4.6. Service rig regularly following service sheets for daily, weekly and monthly lubrication and checking  
|                       | 4.7. Check oil drops for signs of repairs needed  
|                       | 4.8. Maintain inspection and/or service records |

| 5. Respond to problems | 5.1. Identify possible *operational problems* in equipment, process or mud  
|                       | 5.2. Determine problems needing action  
|                       | 5.3. Determine possible fault causes  
|                       | 5.4. Rectify problem using appropriate solution(s) within area of responsibility  
|                       | 5.5. Follow through items initiated until final resolution has occurred  
|                       | 5.6. Report problems outside area of responsibility to designated person |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct mud rotary drilling:

- apply legislative, organisation and site requirements and procedures for conducting of mud rotary drilling
- perform routine checks and basic maintenance of mud and water delivery pumps
- apply mechanical hand skills
- apply mud mixing and conditioning skills
- apply plant operational skills
- respond to changes in ground conditions
- apply sample identification and sampling skills
- apply hazardous substances handling requirements and procedures
- apply people skills for dealing with clients, co-workers and management
- apply recording and reporting skills
- interpret materials safety data sheets (MSDS)
- apply heavy vehicle driving skills in all conditions

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct mud rotary drilling:

- rotary drilling safety requirements and procedures
- personal protection requirements
- First Aid requirements and procedures
- good housekeeping requirements and procedures
- types of mud and water delivery pumps and their applications
- methods for the calculation of lag time for discrete formation samples
- basic geology
- safe work procedures for pump unit repairs, maintenance and servicing
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Overview of assessment | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
| --- | --- |
| Critical aspects for assessment and evidence required to demonstrate competency in this unit | • knowledge of the requirements, procedures and instructions for the conducting of mud rotary drilling  
• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of mud rotary drilling tasks  
• working with others to undertake and complete mud rotary drilling tasks that meet all of the required outcomes  
• consistent timely completion of the conducting of mud rotary drilling that safely, effectively and efficiently meets the required outcomes |
| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.  
• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.  
• Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.  
• Aboriginal people and other people from a non English speaking background may have second |
language issues.

- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete mud rotary drilling tasks

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Work instructions may come from:
- briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include:
  - nature and scope of tasks
  - specifications
  - quality of finished works
  - achievement targets
  - operational conditions
  - obtaining of permits required
  - site layout
  - out of bounds areas
  - worksite inspection requirements
  - lighting conditions
  - plant or equipment defects
  - hazards and potential hazards
  - coordination requirements or issues
  - contamination control requirements
  - environmental control requirements
  - barricade and signage requirements

Hazards may include:
- release of gases from formation or samples obtained
- spread of contaminants as a result of drilling or cleaning processes
- change in the chemistry of contaminants as a result of drilling and recovery of the samples
| **Coordination requirements** may include | • drill team members  
• other equipment operators  
• maintenance personnel  
• supervisors  
• worksite personnel |
| **Chemical includes:** | • fluid loss control agents  
• dispersants  
• surfactants  
• weighing agents (barium sulphate or salts)  
• pH control agents  
• gypsum based setting agents  
• other cement grout additives for quick setting  
• agents for treating cement contamination  
• flocculation products  
• potassium chloride  
• lost circulation materials (granular polymers, cottonseed hulls, mica flakes, shredded organic fibre, micro-cells and short polysynthetic rope fibres)  
• A&B foam (for sealing collars)  
• chlorination products |
| **Drill fluids may include:** | • water  
• viscosifying polymer muds with or without use of sodium bentonite  
• blended polymer muds  
• API bentonite muds  
• high yielding bentonites muds  
• organic polymer muds  
• polyanionic cellulosic polymer muds  
• modified natural polymer muds  
• liquid anionic polymer muds |
| **Equipment includes:** | • rig, water trucks, service trucks, air compressor  
• hand tools such as breakout tongs and stillsons  
• collars  
• stabilisers  
• drill pipe |
### Operational problems may include:

- circulation loss zones
- machine breakdowns
- equipment failure
- drill bit failure/breakage
- deterioration in the mud condition

## Unit Sector(s)

Drilling (General)

## Competency field

Not applicable.
RIINHB312A Conduct raise boring

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting raise boring in the metalliferous mining industry. It includes: planning, preparing and setting up for drilling; locating collar and drill pilot hole; drilling and monitoring progress of pilot hole; reaming raise bore; packing-up drill site; and carrying out operator maintenance and housekeeping activities.

Application of the Unit
This unit is appropriate for those working in a driller roles, in underground mines within:
- Drilling
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct raise boring:

- apply legislative, organisation and site requirements and procedures
- use clinometers
- read and interpret plans
- use hand and power tools
- set up and load rod rack
- set up and align a raise bore in readiness for drilling
- attach and remove drill rods, bits and reamers
- pack up raise drill in readiness for transport

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct raise boring:

- auxiliary services procedures
- cleaning procedures
- down hole problems
- drilling procedures
- calculating and setting drill angles
- environmental procedures
- drilling equipment processes, technical capability and limitations
- equipment safety requirements
- geological and technical data
- inspection procedures
- isolation procedures
- manufacturer's specifications
- mining regulations
- operational procedures and checks
- recovery procedures
- site safety requirements
- start-up and shutdown procedures
- storage procedures
- towing procedures
- underground procedures
- dealing with misfires
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>

</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the raise boring

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RIINHB313A Conduct cable tool drilling

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of cable tool drilling in the drilling industry. It includes planning and preparing for cable tool drilling, operating cable tool drills, operating drill fluid systems, maintaining equipment, recovering formation samples, and responding to problems. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for cable tool drilling | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, confirm and apply *work instructions* for the allocated task  
1.3. Identify, manage and report all potential *hazards*  
1.4. Resolve *coordination requirements* with others at the site prior to commencing and during work activities  
1.5. Raise alarm/report as required according to site procedures |
| 2. Operate cable tool drill | 2.1. Identify and use different *tool/casing types*, *thread forms* and thread make up parameters  
2.2. Select *appropriate bits, shoes, clamps, casing, tools and lifting devices* for the expected formations  
2.3. Use tool *handling equipment* such as spanners and chain tongs safely  
2.4. Assemble tool strings according to organisation or manufacturer's procedures  
2.5. Maintain correct tension on the drill line and correct stroke rate during drilling operations  
2.6. Bail hole of cuttings as required to maintain satisfactory penetration rates  
2.7. Control *hazards associated with the use of wire rope* for drilling and bailing  
2.8. Measure drill string components and calculate depth of hole  
2.9. Select drilling *tools to maintain hole straightness*  
2.10. Drive and jack casing as required  
2.11. Select appropriate *tools to undertake fishing operations* |
| 3. Operate drill fluid system | 3.1. Identify hole conditions requiring the use of *drilling fluids/chemicals*  
3.2. Select, prepare, apply, test and monitor suitable fluids and additives  
3.3. Adjust fluid level in the hole to maintain... |
| 3. | Dispose of drill fluids in an environmentally safe manner |

| 4. | Maintain equipment |
| 4.1. | Sharpen bits or remetal rope swivels in accordance with personal protective equipment and safety requirements |
| 4.2. | Clean and lubricate rope swivels to ensure correct operation |
| 4.3. | Check slings, drill lines and bailing lines for wear and replace as necessary using appropriate wire rope and spooling |
| 4.4. | Grease derrick sheaves regularly |
| 4.5. | Examine critical rig components such as sheaves and shackles regularly for wear or cracks |
| 4.6. | Maintain tool string components |
| 4.7. | Adjust clutch play, drive belt and jockey pulley tension as required |
| 4.8. | Perform routine maintenance to rig engine |

| 5. | Recover formation samples |
| 5.1. | Select appropriate sampling tools/methods depending on the type of formations being drilled |
| 5.2. | Obtain formation water samples as required |

| 6. | Respond to problems |
| 6.1. | Identify possible problems in equipment or processes |
| 6.2. | Determine problems needing action |
| 6.3. | Determine possible fault causes |
| 6.4. | Rectify problem using appropriate solution within area of responsibility |
| 6.5. | Follow through items initiated until final resolution has occurred |
| 6.6. | Report problems outside area of responsibility to designated person |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

</tr>
<tr>
<td>• apply legislative, organisation and site requirements and procedures for conducting cable tool drilling</td>
</tr>
<tr>
<td>• welding</td>
</tr>
<tr>
<td>• oxy-acetylene use</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Required knowledge</th>
</tr>
</thead>
<tbody>
<tr>
<td>Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct cable tool drilling:</td>
</tr>
<tr>
<td>• welding to dress bits, casing shoes</td>
</tr>
<tr>
<td>• remetalling rope sockets</td>
</tr>
</tbody>
</table>
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Critical aspects for assessment and evidence required to demonstrate competency in this unit</td>
<td>• knowledge of the requirements, procedures and instructions for conducting cable tool drilling</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of cable tool drilling</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the conduct of cable tool drilling that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of cable tool drilling that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
<td></td>
</tr>
<tr>
<td>Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
<td></td>
</tr>
<tr>
<td>The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
<td></td>
</tr>
<tr>
<td>Customisation of assessment and delivery environment to sensitively accommodate</td>
<td></td>
</tr>
</tbody>
</table>
cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the conduct of cable tool drilling |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct top-hole hammer drilling:

- apply legislative, organisation and site requirements and procedures for conducting top-hole hammer drilling
- identify various thread types on the equipment at site and the application of prescribed torque
- identify worn drill pipe and damaged threads
- identify and measure various bits in use
- correctly use the various rod/pipe handling equipment on site
- correctly and competently add/remove rods/pipe from the string
- correctly apply rotation speed and weight on the bit to maintain optimum performance
- correctly measure line string components and calculate hole depth
- utilise the correct combination of hydraulic oil flow volume and pressure to maintain productivity
- collar holes
- ensure that samples are correctly collected and handled
- ensure that all string components are correctly maintained
- correctly measure bits and related components to ensure compatibility
- ensure that bit sharpening equipment, used to sharpen TC bits are used correctly and safely and that bits are sharpened to correct tolerances
- correctly select various bit types for differing ground conditions
- monitor sample quality and correctly interpret changes
- use prescribed techniques to safely clear sample delivery hose blockages
- accept responsibility for the correct installation and maintenance of restraining devices to pressure and sample delivery hoses
- communicate the hazards of cuttings in the return air stream to all crew members
- ensure that drill pipe is inspected regularly and wear rates monitored
- ensure that threads are inspected and maintained as required

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct top-hole hammer drilling:

- critical need to match like threads with like threads on all tubular components and
- make up torque requirements
- parameters relating to wear of drill pipe and integrity of threads
- function of hole collaring
- methods required to limit the contamination of samples
- theory behind TC bit sharpening
- bit selection for different types of drilling and different ground conditions
- problems related to inaccurate measurement of bits and other related components
- importance of monitoring sample quantity
- role that blockages play in affecting sample quality
- methods commonly used to clear down hole blockages in air drilled holes and the hazards associated with clearing blockages
- methods used to clear a blockage in a sample delivery hose and the hazards associated with clearing blockages
- critical need for restraining devices to be fitted to all pressure delivery hoses and sample delivery hoses, the devices available and their methods of attachment
- dangers of drilled samples being returned to the surface at high velocity in air drilling operations and the parameters involved
- importance of checking gauges and monitoring pressures, flow rates and temperatures
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

- full 'sock' whip checks
- anchor points
- hose fittings

Fluids may include:
- dust control additives
- water

Sample and sampling tasks may include:
- DTH samples

Maintenance tasks may include:
- sharpening button bits, cross bits
- using grinders, bit sharpening machines
- line string components (e.g. drill rods, subs, stabilisers, couplings, air swivels)
- drill bits

Unit Sector(s)
Drilling (General)

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIINHB316A Conduct underground in-seam directional drilling

Modification History
Not applicable.

Unit Descriptor
This unit covers the conducting of underground in-seam directional drilling in coal mines. It includes planning and preparing for drilling, calibrating and operating survey tool, drilling holes, and completing documents, reports, equipment maintenance and housekeeping.

Application of the Unit
Underground in-seam directional drilling is conducted for gas extraction and water drainage, barrier proving and exploration in underground coal mining operations. This unit is appropriate for those working in driller roles, at worksites within:

- Coal mining
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for conducting of underground in-seam directional drilling | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, confirm and apply *work instructions* for the allocated task  
1.3. Identify, manage and report all potential *hazards*  
1.4. Resolve *coordination requirements* with others at the site prior to commencing and during work activities |
| 2. Calibrate and operate survey tool | 2.1. Calibrate survey tool in accordance with instructions  
2.2. Set up the orientation of the survey tool and the down-hole motor in accordance with instructions  
2.3. Take the first survey reading in accordance with manufacturer's instructions and with regard to the standpipe length and composition and use the result to adjust the orientation of the down-hole motor  
2.4. Conduct on-going surveys at intervals in accordance with the *drill plan* and use the result to adjust the orientation of the down-hole motor  
2.5. Monitor and maintain the survey tool power supply and basic consumable items as per instructions |
| 3. Drill hole | 3.1. Prepare for drilling in accordance with the *drill plan*  
3.2. Choose *drill bits* appropriate to the geology  
3.3. Issue clear and timely *instructions* to drill team members and others involved, for the safe, effective and efficient conduct of the task, to meet the requirements of *drill plan*  
3.4. Carry out the drilling in accordance with the *drill plan*  
3.5. Monitor and adjust *drilling technique* according to *conditions*  
3.6. Identify and remedy *operational problems*  
3.7. Reorientate the down-hole motor when branching is required to achieved required |
3.8. Maintain communication with all **relevant personnel**

4. **Complete documents and report**

4.1. Maintain drill log and plot drilling data

4.2. Download survey instrument data system and upload data to site and/or work computer system

4.3. Report data and drilling plots

5. **Complete equipment maintenance and housekeeping**

5.1. Ensure that the drill rods are inspected for wear and damage and that threads are dressed and greased in accordance with standard procedures or that rods are replaced as required

5.2. Monitor all drill equipment and hoses and ancillary equipment and carryout remedial action

5.3. Monitor wear on drill bit and reamers and take appropriate action

5.4. Apply health, safety and environmental controls

5.5. Maintain safe and tidy site for the duration and at the conclusion of the job

5.6. Ensure all drilling equipment is cleaned and maintained

5.7. Ensure that drill fluids are appropriately contained and disposed of appropriately
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct underground in-seam directional drilling:

- apply legislative, organisation and site requirements and procedures for the conducting of underground in-seam directional drilling
- apply safe manual handling practices
- apply drill rig operating procedures
- apply survey equipment operating procedures
- apply drill bit, down-hole motor, and survey tool attaching procedures
- apply operational communication procedures
- apply inspection and monitoring procedures
- apply maintenance procedures
- interpret drill plans
- apply ancillary equipment operating procedures, including: communications equipment, computer equipment, pumps, ventilation equipment, separator pods and fluid mixers

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct underground in-seam directional drilling:

- legislative, organisation's and site OHS requirements
- potential underground directional drilling hazards
- potential work place hazards
- potential underground environmental hazards
- principles of underground in-seam directional drilling operations
- organisation's operational requirements and procedures
- manufacturer's requirements and procedures
- specific handling requirements for underground drilling equipment
- housekeeping requirements and procedures
- basic geology types and their impact on underground in-seam directional drilling operations
- appropriate drill bits for different geology types
- appropriate reamers for different geology types
- importance and functions of the standpipe
• maximum radius of curvature for drill string
• types of drill fluid and their applications
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to install underground in-seam directional drilling standpipe:

- apply legislative, organisation and site requirements and procedures
- apply safe manual handling practices
- operate hand borers
- operate drill rig
- operate grouting equipment
- apply operational communication procedures
- apply inspection and monitoring procedures
- apply maintenance procedures
- interpret drill plans

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to install underground in-seam directional drilling standpipe:

- legislative, organisation's and site OHS requirements
- potential underground directional drilling hazards
- potential work place hazards
- potential underground environmental hazards
- principles of underground in-seam directional drilling operations
- organisations operational requirements and procedures
- manufacturer's requirements and procedures
- specific handling requirements for underground drilling equipment
- housekeeping requirements and procedures
- basic geology types and their impact on underground in-seam directional drilling operations
- appropriate drill bits for different geology types
- appropriate reamers for different geology types
- importance and functions of the standpipe
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

RIINHB318A Install and operate water and gas control equipment

Modification History
Not applicable.

Unit Descriptor
This unit covers the installation and operating of water and gas control equipment in underground coal mines. It includes planning and preparing for the installation and operation of water and gas control equipment; installing and operating water and gas control equipment; and carrying out maintenance and housekeeping.

Application of the Unit
Water and gas control equipment is part of the in-seam directional drilling process in underground coal mining operations. This unit is appropriate for those working in underground in-seam directional driller roles, at worksites within:

- Coal mining
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

| 4. Operate the water and gas control equipment | 4.1. Monitor the water and gas control equipment and ensure its **correct operation**  
4.2. **Rectify** water and gas control equipment operational problems  
4.3. **Isolate** the water and gas control equipment in the event of line failure  
4.4. Apply site environmental controls |
| 5. Carry out maintenance and housekeeping | 5.1. Inspect and fault-find all water and gas control equipment  
5.2. Remove and replace defective components  
5.3. Maintain and leave the work area in a safe, clean and tidy condition  
5.4. Maintain and complete all reports as required |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to install and operate water and gas control equipment:

- apply legislative, organisation and site requirements and procedures
- interpret project site geological, hydrological, engineering survey information
- interpret project plans, drawings and specifications
- interpret data and test results
- identify water and gas control equipment components
- interpret drill plans
- interpret water and gas control equipment configuration requirements
- operate ancillary equipment, including:
  - communications equipment,
  - ventilation equipment
  - gas drainage conduits and equipment, and
  - separator tanks
- apply gland packing requirements and procedures
- choose appropriate equipment and fasteners for the installation of water and gas control equipment
- choose appropriate operational techniques for the operation of water and gas control equipment
- calculate quantities for the installation and operation of water and gas control equipment, including:
  - volumes
  - grades
  - percentages
  - resource consumption figures
- determine task resource requirements
- schedule activities and materials delivery
- draft and administer job plans
- implement work zone traffic management plans
- prepare for and conduct briefings, toolbox and site meeting
- prepare job reports
- prepare and maintain log books and diaries
- provide team leadership

### Required knowledge
Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to install and operate of water and gas control equipment:

- applicable geology types
- principles of underground in-seam directional drilling operations
- possible variations in water and gas control equipment required in possible situations
- relevant regulations and codes
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>- knowledge of the requirements, procedures and instructions for the installation and operating of water and gas control equipment</td>
</tr>
<tr>
<td></td>
<td>- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of the installation and operating of water and gas control equipment</td>
</tr>
<tr>
<td></td>
<td>- working with others to undertake and complete the installation and operating of water and gas control equipment that meets all of the required outcomes</td>
</tr>
<tr>

<td></td>
</tr>
<tr>
<td>- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
<td></td>
</tr>
<tr>
<td>- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.</td>
<td></td>
</tr>
</tbody>
</table>
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the installation and operating of water and gas control equipment

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisational and site requirements and procedures |
|制造商's guidelines and specifications |
| Australian standards |
| code of practice |
| Employment and workplace relations legislation |
| Equal Employment Opportunity and Disability Discrimination legislation |

| Specific task requirements may include: | configuration of the water and gas control equipment |
| drill plan, which may include: |
| hole location, dip and direction |
| hole sizes |
| site geology |
| standpipe requirements and configuration |

| Workplace hazards may include: | mining equipment |
| roof and rib spalls |
| the presence of gases and water |

| Coordination requirements may include communication with: | mine operational personnel |
| mine supervisory and management staff |
| mine maintenance personnel |
| drill team members |
| regulators representatives |
| visitors |

| Job plan may include: | human resource requirements |
| plant and machinery requirements |
| sub-contractor support requirements |
| waste disposal requirements |
| coordination requirements |
| activity scheduling |
| materials delivery scheduling |
| risk assessment and management requirements |
| occupational health and safety requirements |
| Quality management requirements, including testing scheduling requirements |
| Traffic management requirements |
| Environmental requirements |
| Task monitoring requirements |
| Task performance monitoring requirements |
| Communication requirements |
| Reporting requirements |

**Team members** may include:
- Other members of the organisation's management team
- Suppliers representatives
- Mine site representatives
- Sub-contractors representatives
- Supervisors or managers of other organisations who are involved in related tasks
- Members of the team directly involved in the task

**Configuration** will include:
- Standpipe,
- Gate valve,
- 'T' piece,
- Stuffing box, which may be either:
  - NQ gauge
  - HQ gauge
- Four inch hose and
- Gas and water separator
- And may include:
  - 2 inch, 4 inch, or 6 inch connections

**Securing method** may include:
- Flanged joints, or
- Victaulic joints

**Correct operation** will include:
- Leaks limited to specification
- Water flowing from the 'T' piece
- Water flowing to the fines tank
- Valves are serviceable
- Free movement of drill rods

**Rectifying** operational problems is to include:
- Adjusting equipment
- Tightening fasteners, and
- Replacing non serviceable items

**Isolate** is to include:
- Withdrawing the drill rods and
- Shutting off the control valve

Not applicable.
RIINHB319A Install de-watering conduit and gas drainage equipment

Modification History
Not applicable.

Unit Descriptor
This unit covers the installation of de-watering conduit and gas drainage equipment in the coal mining industry. It includes planning and preparing for installation of de-watering conduit and gas drainage equipment; installing de-watering conduit and monitoring water drainage; connecting gas drainage equipment and monitoring gas drainage; and maintaining equipment and housekeeping.

Application of the Unit
De-water conduits and gas drainage equipment is used in underground coal mining operations to de-water and drain gas from coal seams. This unit is appropriate for those working in underground in-seam directional driller roles, at worksites within:

- Coal mining
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to install de-watering conduit and gas drainage equipment:

- apply legislative, organisation and site requirements and procedures
- apply planning skills
- apply safe manual handling practices
- apply drill rig operating requirements and procedures
- apply operational communication procedures
- apply inspection and monitoring procedures
- apply maintenance procedures
- interpret drill plans
- operate ancillary equipment including communications equipment, computer equipment, pumps, ventilation equipment, separator pods and fluid mixers

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to install de-watering conduit and gas drainage equipment:

- legislative, organisation's and site OHS requirements
- potential underground directional drilling hazards
- potential de-watering and gas drainage operations hazards
- potential work place hazards
- potential underground environmental hazards
- principles of de-watering drill holes and gas drainage
- organisations operational requirements and procedures
- manufacturer's requirements and procedures
- specific handling requirements for dewatering and gas drainage equipment
- housekeeping requirements and procedures
- importance and and functions of the standpipe

RIINHB320A Construct monitoring bores

Modification History
Not applicable.

Unit Descriptor
This unit covers the construction of monitoring bores in the drilling industry. It includes planning and preparing for constructing monitoring bores, constructing monitoring bores, purging bores, disinfecting/decontaminating bores and drilling equipment, decommissioning test holes, and completing and submitting required reports. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for constructing monitoring bores | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Discuss scope of work with client to gain general agreement on drilling plan, including method of drilling, construction detail and materials to be used, and development requirements  
1.3. Apply *work instructions* for the allocated task  
1.4. Identify, manage and report all potential hazards, including any contaminants that may be encountered during drilling  
1.5. Resolve *coordination requirements* with others at the site prior to commencing and during work activities  
1.6. Regularly communicate up to date information on progress, geology and/or problems encountered, to client and/or other relevant parties |
| 2. Construct monitoring bores | 2.1. Use approved procedures to *assemble and insert casing and screens*  
2.2. Use *equipment* for assembly safely and in accordance with approved procedures  
2.3. Place artificial pack material in a manner so as to ensure uniform distribution in the annular space without bridging  
2.4. Construct bore in accordance with applicable regulations and standard bore construction procedures  
2.5. Demonstrate a knowledge of basic geological data  
2.6. Accurately calculate basic numerical tasks  
2.7. Maintain records accurately and legibly  
2.8. Label and secure the well  
2.9. Complete a construction diagram showing all details of the construction  
2.10. Read and interpret a range of documents, including plans, diagrams and logs to determine the appropriate design for the monitoring well  
2.11. Measure and record Standing Water |
| Level | 3. Purge bores | 3.1. Use development techniques with care to prevent collapsing of casing or screens  
3.2. Use a range of development techniques to improve hydraulic transmissivity around the bore |
|-------|----------------|-------------------------------------------------------------------------------------------------|
| Level | 4. Disinfect/decontaminate bore and drilling equipment | 4.1. Ensure disinfection/decontamination complies with relevant standards or regulatory requirements  
4.2. Handle chemicals in accordance with manufacturer's recommendations  
4.3. Use appropriate personal protective equipment |
| Level | 5. Decommission test holes | 5.1. Carry out correct procedures for the decommissioning of test holes in any given type of geological formation and hydrological setting  
5.2. Verify properly sealed hole for future reference  
5.3. Dispose of drill and other fluids safely |
| Level | 6. Complete and submit required reports | 6.1. Submit bore log, signed bore completion report and other written tasks to relevant authorities/client upon completion of the bore  
6.2. Log bore holes in accordance with client/regulatory requirements  
6.3. Locate bores according to instruction and provide sketches to regulatory authorities |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to construct monitoring bores:

- apply legislative, organisation and site requirements and procedures for constructing monitoring bores
- interpret and apply occupational health and safety requirements and procedures
- interpret site requirements and procedures
- interpret work requirements
- interpret geological and survey data
- apply mechanical and manual handling safety requirements and procedures
- cementing and grouting skills
- mixing and placing concrete
- drilling skills using an appropriate method
- operation of pressure cleaning equipment
- calculation and measurement skills

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to construct monitoring bores:

- equipment - characteristics, technical capabilities and limitations
- basic geological formations, i.e. various formations which permit groundwater movement and factors affecting groundwater quality
- characteristics of 'good samples' required for water well construction
- ways in which sampling errors can occur
- types of muds, their use, and development techniques to remove them from bores
- problem solving techniques
- grout placement methods and procedures
- range of numerical calculations
- water sampling techniques and protocols
- legislative, site and manufacturer's requirements and procedures
- worksite coordination requirements and procedures
- site operating techniques and systems
- monitoring systems and alarms requirements and procedures
- ground preparation requirements and procedures
- inspection, fault finding and reporting requirements and procedures
- routine operator servicing, maintenance and housekeeping requirements and procedures
- site environmental and heritage requirements and constraints
- use of diagrams, plans and instructions for positioning, recording work or progress
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• code of practice  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
| Work instructions may come from briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include: | • nature and scope of tasks  
• specifications  
• quality of finished works  
• achieved targets  
• operational conditions  
• obtaining of required permits  
• site layout  
• out of bounds areas  
• worksite inspection requirements  
• lighting conditions  
• plant of equipment defects  
• coordination requirements or issues  
• contamination control requirements  
• environmental control requirements  
• barricade and signage requirements |
| Hazards may include: | • working in proximity to drilling rig |
| Contaminants may include: | • hydrocarbons (MAH's, PAH's)  
• organic compounds (pesticides)  
• chlorinated hydrocarbons (dioxins) (PCB)  
• heavy metals  
• asbestos  
• acids  
• acid sulphate soils |
| Coordination requirements may | • other equipment operators  
• maintenance personnel |
| Knowledge of basic geological data | rock types  
|                                   | aquifer systems  
|                                   | drillability  
|                                   | stability  
| Numerical tasks may include calculations such as: | volume (e.g. mud pits, drums, tanks or bore holes of given dimensions)  
|                                                   | up hole velocity  
|                                                   | cement/water/additives quantities  
|                                                   | conversion from imperial to metric and vice versa  
| Documents to determine design may include: | results of test hole  
|                                                   | hydrogeological data  
|                                                   | environmental data  
|                                                   | site reports  
|                                                   | geological data  
|                                                   | old bore hole logs  
| Written tasks may include: | daily drill operation report  
|                                  | diagrams  
|                                  | brief descriptions  

include:  
- supervisors  
- site personnel  

Assemble and insert casing and screens may involve:  
- solvent cement (PVC)  
- stainless steel screws (PVC)  
- threaded (PVC, FRP, ABS)  

Equipment required for assembly and insertion may include:  
- hand tools  
- power driven (electric, hydraulic or air) hand tools  
- solvent  

Bore construction procedures may include:  
- other regulations and standards  
- ANZECC/NHSMRC Guidelines (for working on contaminated sites)  
- AWRC Guide to sampling contaminated groundwater  
- U.S. OSHA Guidelines  
- organisation’s own internal procedures  
- ARMCANZ "Minimum Construction Requirements for Water Bores in Australia" July 1997  

Documents to determine design may include:  
- results of test hole  
- hydrogeological data  
- environmental data  
- site reports  
- geological data  
- old bore hole logs  

Written tasks may include:  
- daily drill operation report  
- diagrams  
- brief descriptions

Not applicable.
RIINHB325A Construct and complete single aquifer production bores

Modification History
Not applicable.

Unit Descriptor
This unit covers the construction of single aquifer production bores in the drilling industry. It includes planning and preparing for single aquifer production bores, designing production bores for single aquifer systems, constructing production bores in single aquifer systems, developing bores, disinfecting/decontaminating bore and drilling equipment, carrying out bore maintenance and rehabilitation, and decommissioning test/bore holes. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:

- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>
</thead>
</table>
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for single aquifer production bores | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Discuss scope of work with client and give technical advice, cost structure, workmanship warranty, quantity and quality of materials, construction standards and methods to be used and gain general agreement on drilling plan  
1.3. Obtain, confirm and apply *work instructions* for the allocated task  
1.4. Obtain or sight any *licences or permits* required under the relevant state/territory legislation or regulation  
1.5. Identify, manage and report all potential *hazards*  
1.6. Resolve *coordination requirements* with others at the site prior to commencing and during work activities  
1.7. Communicate regular up to date information on progress, and/or problems encountered to client and/or other relevant parties  
1.8. Provide detailed strata logs, pump and development test results conducted during bore development and water and strata samples to the appropriate authorities  
1.9. Complete all requirements for bore completion reports, decommissioning or abandonment and send to regulatory authorities within the time specified on bore licence |
| 2. Design production bores for single aquifer systems | 2.1. Determine most appropriate construction methods from the reading and interpretation of all available *documented information*  
2.2. Design the bore to ensure the exclusion of unsuitable surface waters  
2.3. Select a bore site that will prevent contamination and minimise interference with other bores and adhere to occupational health and safety requirements  
2.4. Determine a drilling fluid program to suit |
the expected down hole conditions

2.5. Select likely water entry mechanisms from the formation to the bore such as open hole, slotted casing, screens or gravel packs

2.6. Calculate appropriate artificial gravel pack design parameters and recommended annular thickness requirements

2.7. Plot and interpret formation sieve analysis results onto graphs

2.8. Undertake calculations to determine appropriate screen/slot design parameters (i.e. diameter, length, aperture size)

2.9. Select appropriate bore/surface casing type, size, strength and wall thickness for the anticipated ground water quality and pressure conditions and any construction requirements

2.10. Ensure all necessary materials anticipated for the job are available and on site prior to commencement of construction phase

3. Construct production bores in single aquifer systems

3.1. Use approved procedures to select, slot, assemble, and insert casing and screens suitable for the formations in which they are deployed

3.2. Use equipment for assembly and slotting safely and in accordance with approved procedures

3.3. Select, mix and place grout or otherwise seal surface casing to whatever depths necessary and with a minimum grout sheath thickness of 20mm to protect bore from surface or shallow subsurface waters that may be contaminated or polluted

3.4. Construct bore in accordance with any applicable regulations, minimum construction requirements and organisational procedures

3.5. Use and maintain drilling fluids and additives within the manufacturer's recommendations and that are non-toxic and capable of being completely removed from the bore upon completion

3.6. Maintain, test and record fluid properties such as viscosity, mid weight, filtration and
<p>| | |</p>

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to construct single aquifer production bores:

- apply legislative, organisation and site requirements and procedures
- interpret and apply occupational health and safety requirements and procedures
- interpret site requirements and procedures
- interpret work requirements
- interpret geological and survey data
- apply aquifer sand sieve analysis tests
- calculate the specific capacity of a bore
- calculate grout component quantities for small grouting jobs (e.g. plugs)
- calculate hole and annular volumes

### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to construct single aquifer production bores:

- equipment characteristics, technical capabilities and limitations
- legal requirements under the relevant state/territory Water Act
- basic geological formations, i.e. basic knowledge of both soil and rock classifications and various formations which permit groundwater movement and factors affecting groundwater quality for aquifer systems, including drillability and stability
- potential safety hazards and sources of contamination when siting a bore
- the necessity of having a signed agreement/contract with the client
- requirements for water sampling for laboratory testing
- tests for alignment and plumbness of bores
- appropriate casing materials for various applications
- applications for wire-wound screens
- casing requirements, slotting techniques, slot location and orientation
- interpretation of sieve analysis results
- applications for natural pack, stabilising fill and artificial pack completion techniques
- objectives of bore development
- test pumping procedures

</tbody>
</table>
### Customisation of assessment and delivery environment
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment
This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the construction of single aquifer production bores

### Guidance information for assessment
Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Work instructions may come from briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include:
- nature and scope of tasks
- specifications
- quality of finished works
- achieved targets
- operational conditions
- obtaining of required permits
- site layout
- out of bounds areas
- worksite inspection requirements
- lighting conditions
- plant of equipment defects
- coordination requirements or issues
- contamination control requirements
- environmental control requirements
- barricade and signage requirements

### Licenses or permits may include:
- water well licence (Class 1)
- licence for particular drilling method:
  - cable tool
  - auger
  - rotary air
  - rotary mud
  - bore construction permit
  - bore development/works approval

### Hazards may include:
- working in proximity to drilling rig
### Coordination requirements

- other equipment operators
- maintenance personnel
- supervisors
- site personnel
- clients and/or landowners

### Documented information

- results of test hole
- hydrogeological data and reports
- geological data
- old bore hole logs
- results from sieve analysis tests
- geophysical logging results
- geophysical logs
- physical samples
- results of mechanical testing of soils
- water test analyses
- interpretation of soft/hard zones
- losses of drilling fluid
- bore log and in hole test results/measurements
- records of nearby bores
- geological maps

### Procedures

- solvent cement (PVC)
- stainless steel screws (PVC)
- welding (steel)
- threaded (PVC, FRP, ABS)
- locking strip or wire rope

### Equipment

- hand tools
- power driven (electric, hydraulic or air) hand tools
- casing cutters, bevellers
- welders
- threaded pipe lifting sockets
- solvents

### Bore development techniques

- mechanical surging
- bailing
- chemical methods
- jetting
- air lift surging and/or pumping
- over pumping

3.11. Ensure fluid distribution in the annular space without bridging

3.13. Comply with relevant workplace occupational health and safety requirements for both the drilling equipment and construction materials

3.14. Maintain tool string inventories

3.15. Identify and protect headworks of the bore

3.16. Construct headworks to seal and cap the bore from surface water pollutants, environmental concerns and damage

3.17. Incorporate methods for measuring static and pumping water levels in headworks and for adequate sealing when not in use

3.18. Dispose of wastewater or hazardous materials from site and complete restoration of the bore site

4. Develop bore

4.1. Use development techniques with care to prevent collapsing of casing or screens

4.2. Use development techniques to improve hydraulic transmissivity around the bore

4.3. Undertake development until a continuous, clean supply of water is obtained, in accordance with site, contractual or regulatory requirements

4.4. Measure/calculate and record standing and drawdown water levels

4.5. Perform tests to estimate the sustainable yield of the bore

5. Disinfect/decontaminate bore and drilling equipment

5.1. Disinfect/decontaminate to comply with relevant standards or regulatory requirements

5.2. Handle hazardous chemicals in accordance with manufacturer's recommendations and any relevant legislative/regulatory requirements

6. Carry out bore maintenance and rehabilitation

6.1. Research all aspects of the bore construction and history

6.2. Undertake a process of diagnosis by testing and measurement to determine likely cause of bore deterioration

6.3. Devise a program of rehabilitation to

</table>
techniques
- objectives of bore development
- test pumping procedures
- appropriate disinfecting chemicals and procedures
- appropriate headworks design for Class 2 bore applications
- characteristics of 'good samples’ required for water well construction
- ways in which sampling errors can occur
- types of drilling fluids
- problem solving techniques
- grout placement methods and procedures
- range of numerical calculations to calculate:
  - volume (e.g. mud pits, drums, tanks or bore holes of given dimensions, annulus)
  - up hole velocity
  - cement/water/additives quantities
  - screen design parameters
  - flow rates (e.g. L/sec, GPM)
  - conversion from imperial to metric and vice versa
  - conducting a sieve analysis
- relevant occupational health and safety requirements including principles of Duty of Care
- appropriate fishing operations for the type(s) of drilling being undertaken
- use of materials safety data sheets (MSDS)
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those
required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the construction of multiple aquifer production bores |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RIINHB323A Conduct horizontal directional drilling

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting horizontal directional drilling in the civil construction and drilling industries. It includes: planning and preparing for drilling; boring pilot holes; maintaining equipment; and responding to problems.

Application of the Unit
This unit covers horizontal directional drilling such as might be undertaken for long holes or holes under rivers, lagoons etc, or large diameter bores in hard rock or other difficult geology. The directionally drilled hole may subsequently be reamed and have product pipe installed. This unit is appropriate for those working in driller's roles, at worksites within:

- Civil Construction
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

<p>| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |</p>
<table>
<thead>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct horizontal directional drilling:

- apply legislative, organisation and site requirements and procedures
- apply machine operating techniques
- apply directional drilling equipment operating techniques
- apply ancillary equipment operating techniques, for equipment such as communications equipment, locators and fluid mixers
- maintain down hole equipment

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct horizontal directional drilling:

- basic rock/geology types and their impact on HDD operations
- appropriate drill heads for different geology types
- appropriate back reamers for different geology types
- minimum radius of curvature for drill stem and for different products
- methods of steering or tracking the drill head
- principles of horizontal directional drilling
- types of drill fluid, their uses and make up/adjustment procedures
- relevant state regulations/codes, such as NSW WorkCover code of practice for excavation and similar requirements in other states
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for conducting horizontal directional drilling
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of conducting horizontal directional drilling
- working with others to undertake and complete the horizontal directional drilling that meets all of the required outcomes
- consistent timely completion of horizontal directional drilling that safely, effectively and efficiently meets the required outcomes |

## Context of and specific resources for assessment

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Work instructions

- nature and scope of tasks
- specifications
- quality of finished works
- achievement targets
- operational conditions
- obtaining of permits required
- site layout
- out of bounds areas
- worksite inspection requirements
- lighting conditions,
- plant or equipment defects
- hazards and potential hazards
- coordination requirements or issues
- contamination control requirements
- environmental control requirements
- barricade and signage requirements

### Hazards

- buried utilities in path of bore
- electrical strike
- spread of contaminants as a result of drilling or cleaning processes
- working in proximity to drilling rig
- use of high pressure air for drilling operations
- entanglement in rotating pipes

### Coordination requirements

- drillers assistant operators
- maintenance personnel
### Personal protective equipment

- steel-capped boots and hardhat
- gloves
- dust mask
- eye and hearing protection
- general protective and reflective clothing

### Fluids

- bentonite clay
- polymer
- combination of clay and polymer mud
- pH adjusting agents such as soda ash

### Maintenance tasks

- checking threads with thread gauge
- dressing threads
- lubricating threads and other components
- cleaning all equipment and checking for wear and damage
- disassembling, cleaning, inspecting and reassembling cutting heads or directional drilling equipment

### Equipment

- dual rod directional boring equipment
- down hole fluid assisted directional boring equipment
- directional down hole hammers
- deflection and jetting bits
- rotating nozzle water jet drilling equipment
- bent sub systems
- other down hole cutting tools

### Problems

- buried utilities in path of bore, which could include:
  - electrical power lines (overhead or buried)
  - gas pipes
  - water pipes
  - waste pipes (including stormwater, trade waste and sewerage)
  - telephone cables
  - electrical strike
  - changing geological formations, particularly cobble, rock or unstable/porous formation
  - drill string sticking
  - drill string breaking
  - fluid breakout (to surface or cavities/services in proximity)
- reliable communications with assistant(s)
- loss of sensor information
- selection of best drill head and back reamer

1.3. Identify, manage and report all potential *hazards*  
1.4. Resolve *coordination requirements* with others at the site prior to commencing and during work during the grouting or cementing process  
1.5. Obtain and use appropriate *personal protective equipment* for grouting or cementing operations as listed in the work instructions or materials safety data sheets (MSDS)  
1.6. Ensure adequate material and equipment is available to complete the task successfully  
1.7. Select the appropriate grouting or cementing procedure to suite the application |
| 2. Perform measurement and calculations | 2.1. Read tape measure accurately to carry out measurements of tank capacities, casing or rod lengths as required  
2.2. Record or complete tally sheets for number of lengths of casing placed in the hole as required  
2.3. Carry out *calculations and measurements*  
2.4. Record legibly on all reports |
| 3. Conduct grouting or cementing of hole | 3.1. Manage mixing grout and any additives as per standard procedures  
3.2. Ensure that materials safety data sheets (MSDS) requirements for all materials used are followed  
3.3. Conduct grouting or cementing of hole using appropriate equipment and techniques  
3.4. Place grout or cement using appropriate techniques  
3.5. Monitor process to ensure consistency and accuracy of placed grout or cement |
| 3.6. Construct well head, hole identification and install hole security devices if required |
| 3.7. Dispose of any excess grout or cement according to site waste management procedures |

4. **Respond to problems**

| 4.1. Identify possible operational problems in equipment or process |
| 4.2. Identify symptoms of problems needing remedial action |
| 4.3. Determine possible fault causes |
| 4.4. Rectify problem using appropriate solution within area of responsibility |
| 4.5. Follow through items initiated until final resolution has occurred |
| 4.6. Report problems outside area of responsibility to designated person |

5. **Manage cleaning of all equipment at completion of grouting or cementing operations**

| 5.1. Ensure there is no spillage of grout, cement or additives to minimise any associated safety hazards |
| 5.2. Ensure cleaning equipment is used safely and effectively |
| 5.3. Give approved instructions and occupational health and safety requirements on the use of hazardous chemicals for cleaning |
| 5.4. Ensure that all cleaning equipment is kept in good working condition |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct grouting or cementing operations in the drilling industry:

- apply legislative, organisation and site requirements and procedures
- apply communication procedures
- use mixing equipment
- measure tank dimensions and calculate volumes
- calculate specific gravity of mixtures and hydrostatic pressures including pressure differences between annulus and inside of casing
- record casing lengths and quantities accurately

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct grouting or cementing operations in the drilling industry:

- site and equipment safety requirements
- possible effects of grout, cement or cement additives on health
- environmental requirements and procedures
- team roles and objectives during the grouting or cementing operations
- properties of grout, cement or cement additives
- safe work procedure for the grouting or cementing process
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisation and site requirements and procedures |
|                                             | manufacturer’s guidelines and specifications |
|                                             | Australian standards |
|                                             | code of practice |
|                                             | Employment and workplace relations legislation |
|                                             | Equal Employment Opportunity, Disability Discrimination legislation |

Grouting or cementing application may include:
- securing casing for a production bore (gas, water or hydrothermal)
- stabilising walls of drill hole
- installing surface casing or standpipe
- hole abandonment procedures
- blocking sections of the hole

Grouting or cementing techniques may include:
- pressure grouting or cementing
- tremie method of placement
- placing gout or cement using in socks or sausages
- pouring grout or cement down hole

Work instructions may come from:
- briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include:
  - nature and scope of tasks
  - specifications
  - quality of finished works
  - achievement targets
  - operational conditions
  - obtaining of permits required
  - site layout
  - out of bounds areas
  - lighting conditions
  - plant or equipment defects
  - hazards and potential hazards
| **Hazards** may include: | • spread of contaminants as a result of the grouting or cementing process or cleaning processes  
• working in proximity to drilling rig  
• string makeup and breakout hazards  
• hazardous chemicals |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| **Coordination requirements** may include: | • driller's assistants  
• other equipment operators  
• supervisors  
• mine or client personnel |
| **Personal protective equipment** includes: | • steel-capped boots and hardhat  
• gloves  
• dust mask  
• eye and hearing protection  
• general protective and reflective clothing |
| **Calculations and measurements** may include: | • diameters casing, hole  
• casing volumes  
• casing quantities and length  
• hole volumes  
• tank volumes  
• annular volumes  
• component volumes for grouting or cementing  
• hydrostatic pressures  
• specific gravity of grout or cement |
| **Operational problems** may include: | • loss of grout or cement through walls of hole  
• casing fracturing or collapsing due to differential hydrostatic pressures  
• air locks or voids in grout or cement  
• grout or cement setting too fast  
• heat damaging casing  
• grout or cement not setting or being washed away |
| **Cleaning equipment** may include: | • pressure cleaning  
• chemical cleaning  
• manual cleaning  
• abrasive mechanical cleaning |
Unit Sector(s)
Drilling (General)

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIINHB401A Plan and supervise the mobilisation of equipment, crew and materials

Modification History
Not applicable.

Unit Descriptor
This unit covers planning and supervision of the mobilisation of equipment, crew and materials in the drilling industry. It includes planning and preparing for mobilisation, planning hazard control procedures, selecting and sourcing equipment, services and supplies needed, initiating the mobilisation of the job, and monitoring mobilisation (including loading) and responding to problems. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, at worksites within:
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. | 1. Plan and prepare for mobilisation | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, confirm and apply *work instructions* for the allocated task  
1.3. Identify, manage and report all potential *hazards*  
1.4. Resolve *coordination requirements* with others at the site prior to commencing and during work activities  
1.5. Confirm *drilling plan* details with appropriate personnel/client  
1.6. Document plan and communicate to relevant people |
| 2. Plan hazard control procedures | 2.1. Identify job and site hazards and risks  
2.2. Assess the nature, location and scope of hazard and/or risk  
2.3. Determine site/job specific procedures for managing hazards and risks  
2.4. Confirm hazard control procedures with relevant people  
2.5. Document hazard control procedures and communicate to relevant people |
| 3. Select and source equipment, services and supplies needed | 3.1. Select appropriate rig(s) and components for the job  
3.2. Select supplies, amenities and other consumables required for the job  
3.3. Select required support plant/equipment/vehicles for the job and confirm serviceability  
3.4. Select crew for the job  
3.5. Develop checklists for all required *equipment, supplies* and personnel  
3.6. Check selections and checklists against agreed plan |
| 4. Initiate the mobilisation of the job | 4.1. Appoint/organise for the appointment of the crew  
4.2. Induct/organise for the induction of the crew to the job  
4.3. Distribute checklists to appropriate people |
<p>| | |</p>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to plan and supervise the mobilisation of equipment, crew and materials:

- apply legislative, organisation and site requirements and procedures for planning and supervision of the mobilisation of equipment, crew and materials
- reading and writing
- verbal communication
- team leadership and organisational skills
- report on checklist preparation
- observation skills

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to plan and supervise the mobilisation of equipment, crew and materials:

- geology and its impact on drill requirements
- relative benefits/limitations of different methods of drilling
- relative benefits/limitations of different rigs
- strengths and weaknesses of crews
- heritage and environmental requirements
- budgeting procedures
- equipment selection criteria
### Overview of assessment

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- Knowledge of the requirements, procedures and instructions for planning and supervision of the mobilisation of equipment, crew and materials
- Implementation of requirements, procedures and techniques for the safe, effective and efficient completion of planning and supervision of the mobilisation of equipment, crew and materials
- Working with others to plan and supervise the mobilisation of equipment, crew and materials
- Evidence of the consistent successful planning and supervision of the mobilisation of equipment, crew and materials

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
| Customisation of assessment and delivery environment to sensitively accommodate cultural diversity. |
| Aboriginal people and other people from a non English speaking background may have second language issues. |
| Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required. |

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the planning and supervision of the mobilisation of equipment, crew and materials
  - provision of clear and timely instruction and supervision by the individual of those involved in the conduct of the planning and supervision of the mobilisation of equipment, crew and materials

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. RIINHB402A Supervise mineral exploration drilling operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the supervision of mineral exploration drilling operations in mining and extractive industries. This includes: planning and preparing for operations; initiating the operations; and monitoring, adjusting, communicating and reporting on the execution of the operations.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, within:
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for mineral exploration drilling operations | 1.1. Access, clarify and ensure the application of the requirements and procedures relevant to undertaking mineral exploration drilling operations.  
1.2. Access, clarify and ensure the application of the specific task information and required outcomes relevant to undertaking mineral exploration drilling operations.  
1.3. Prepare an operational plan for the operations which makes best use of the available resources and for the safe effective and efficient conduct of the operations. |
| 2. Initiate mineral exploration drilling operations | 2.1. Acquire and make available the necessary resources for the safe, effective and efficient conduct of the operations.  
2.2. Issue clear and timely instructions to team members and others involved, for the safe, effective and efficient conduct of the operations. |
| 3. Monitor, adjust, communicate and report on the execution of mineral exploration drilling operations | 3.1. Monitor the execution of mineral exploration drilling operations  
3.2. Initiate adjustments to mineral exploration drilling practice or the operations plan to ensure safe, effective and efficient execution of the operations.  
3.3. Provide advice to team members to overcome operational problems encountered during the execution of mineral exploration drilling operations.  
3.4. Ensure plant equipment and tools maintenance requirements are carried out and recorded.  
3.5. Ensure reports are completed and submitted.  
3.6. Recommend changes to improve the safety, efficiency and effectiveness of the execution of mineral exploration drilling operations. |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria of this unit, particularly for their application in the variety of circumstances in which this unit may be applied. This includes the ability to carry out the following:

- interpreting legislative requirements and procedures
- interpreting organisational requirements and procedures
- interpreting client requirements and procedures
- interpreting manufacturer's requirements and procedures
- interpreting mineral exploration drilling operations project site geological data
- interpreting mineral exploration drilling operations project site geotechnical data
- interpreting mineral exploration drilling operations project site hydrological data
- interpreting mineral exploration drilling operations project engineering survey information
- interpreting mineral exploration drilling operations project plans and drawings
- interpreting mineral exploration drilling operations project specifications
- preparing for and conducting of briefings, toolbox and site meeting
- preparing of short messages
- preparing and presenting of job reports
- preparing and maintaining of log books and diaries
- providing leadership
- applying mineral exploration drilling operations performance monitoring skills
- applying mineral exploration drilling operations troubleshooting skills
- applying mineral exploration drilling operations problem solving skills
- performing calculations for the execution of mineral exploration drilling operations
- providing recommendations for the improvement of the safe, effective and efficient execution of mineral exploration drilling operations

**Required knowledge**

Specific knowledge is required to achieve the performance criteria of this unit, particularly for their application in the variety of circumstances in which this unit may be applied. Assessment requires evidence of the ability to identify and explain the purpose of:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational safety and health requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- work zone traffic management requirements and procedures
- contract management requirements and procedures
- communication requirements and procedures
- administrative requirements and procedures
- mineral exploration drilling operations plant and equipment capabilities and application
- plant, equipment and tools maintenance requirements and procedures
- operational techniques for the execution of mineral exploration drilling operations
- potential operational problems in the execution of mineral exploration drilling operations
- mineral exploration drilling operations resource requirements and procedures
- activities scheduling requirements and procedures
- mineral exploration drilling operations materials delivery requirements and procedures
- job plan drafting of and administration requirements and procedures
- reporting requirements and procedures
- workplace relationship requirements and procedures
- organisational, client and site operational requirements
- relationship between various areas of mining and extractive industry activities and mineral exploration drilling operations
- team leadership techniques
- works planning techniques
- mineral exploration drilling operations monitoring methods
- engineering survey principles
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

1.3. Prepare an *operational plan* which makes best use of the available *resources* and for the safe effective and efficient conduct of the operations |
| 2. Initiate geotechnical drilling operations | 2.1. Acquire and make available the necessary *resources* for the safe, effective and efficient conduct of the operations  
2.2. Issue clear and timely *instructions* to *team members* and others involved, for the safe, effective and efficient conduct of the operations |
| 3. Monitor, adjust, communicate and report on the execution of geotechnical drilling operations | 3.1. *Monitor* the execution of geotechnical drilling operations  
3.2. *Initiate* adjustments to *geotechnical drilling practice* or the operational plan to ensure safe, effective and efficient execution of the operations  
3.3. Provide advice to team members to overcome *operational problems* encountered during the execution of geotechnical drilling operations.  
3.4. Ensure plant equipment and tools maintenance requirements are carried out and recorded  
3.5. Ensure reports are completed and submitted  
3.6. Recommend changes to improve the safety, efficiency and effectiveness of the execution of geotechnical drilling operations. |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria of this unit, particularly for their application in the variety of circumstances in which this unit may be applied. This includes the ability to carry out the following:

- interpreting legislative requirements and procedures
- interpreting organisational requirements and procedures
- interpreting client requirements and procedures
- interpreting manufacturer's requirements and procedures
- interpreting geotechnical drilling operations project site geological data
- interpreting geotechnical drilling operations project site geotechnical data
- interpreting geotechnical drilling operations project site hydrological data
- interpreting geotechnical drilling operations project site metrological data
- interpreting geotechnical drilling operations project engineering survey information
- interpreting geotechnical drilling operations project plans and drawings
- interpreting geotechnical drilling operations project specifications
- preparing for and conducting of briefings, toolbox and site meeting
- preparing of short messages
- preparing and presenting of job reports
- preparing and maintaining of log books and diaries
- providing leadership
- applying geotechnical drilling operations performance monitoring skills
- applying geotechnical drilling operations troubleshooting skills
- applying geotechnical drilling operations problem solving skills
- performing calculations for the execution of geotechnical drilling operations
- providing recommendations for the improvement of the safe, effective and efficient execution of geotechnical drilling operations

Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly for their application in the variety of circumstances in which this unit may be applied. Assessment requires evidence of the ability to identify and explain the purpose of:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational safety and health requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- work zone traffic management requirements and procedures

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment |
The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.

Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.

Aboriginal people and other people from a non English speaking background may have second language issues.

Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.

Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge; and
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes of geotechnical drilling operations;
  - job plans which reflects the requirements of geotechnical drilling operations and are capable of achieving all of their required outcomes;
  - resource plans which have made available adequate resources for the safe, effective and efficient execution of geotechnical skills.
drilling operations; and
- consistent successful completion of geotechnical drilling operations under their supervision; and
- first hand testimonial evidence of the candidate's:
  - working with others to plan, prepare and execute geotechnical drilling operations; and
  - supervising and providing clear and timely instruction and advice to those involved in the undertaking geotechnical drilling operations

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

- identification of and responding to operational problems
- equipment maintenance

**Operational problems** may include:
- equipment failure
- drill string bogging
- drill rods breaking
- controlling drill hole direction
- sample loss
- drilling in difficult ground (caving, porous, fractured, reactive, cavities, running sands)

**Unit Sector(s)**
Drilling (General)
Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIINHB404A Supervise seismic drilling operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the supervision of seismic drilling operations in the resources and infrastructure industries. It includes: planning and preparing for operations; initiating operations; and monitoring, adjusting, communicating and reporting on the execution of the operations.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, within:
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

3.5. Ensure reports are completed and submitted  
3.6. Recommend changes to improve the safety, efficiency and effectiveness of the execution of seismic drilling operations. |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria of this unit, particularly for their application in the variety of circumstances in which this unit may be applied. This includes the ability to carry out the following:

- interpreting legislative requirements and procedures
- interpreting organisational requirements and procedures
- interpreting client requirements and procedures
- interpreting manufacturer's requirements and procedures
- interpreting seismic drilling operations project site geological data
- interpreting seismic drilling operations project site geotechnical data
- interpreting seismic drilling operations project site hydrological data
- interpreting seismic drilling operations project site metrological data
- interpreting seismic drilling operations project engineering survey information
- interpreting seismic drilling operations project plans and drawings
- interpreting seismic drilling operations project specifications
- preparing for and conducting of briefings, toolbox and site meeting
- preparing of short messages
- preparing and presenting of job reports
- preparing and maintaining of log books and diaries
- providing leadership
- applying seismic drilling operations performance monitoring skills
- applying seismic drilling operations troubleshooting skills
- applying seismic drilling operations problem solving skills
- performing calculations for the execution of seismic drilling operations
- providing recommendations for the improvement of the safe, effective and efficient execution of seismic drilling operations

### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly for their application in the variety of circumstances in which this unit may be applied. Assessment requires evidence of the ability to identify and explain the purpose of:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational safety and health requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- work zone traffic management requirements and procedures
- contract management requirements and procedures
- communication requirements and procedures
- administrative requirements and procedures
- seismic drilling operations plant and equipment capabilities and application
- plant, equipment and tools maintenance requirements and procedures
- operational techniques for the execution of seismic drilling operations
- potential operational problems in the execution of seismic drilling operations
- seismic drilling operations  resource requirements and procedures
- activities scheduling requirements and procedures
- seismic drilling operations materials delivery requirements and procedures
- job plan drafting of and administration requirements and procedures
- reporting requirements and procedures
- workplace relationship requirements and procedures
- organisational, client and site operational requirements
- relationship between various areas of resources and infrastructure operations and seismic drilling operations
- team leadership techniques
- works planning techniques
- seismic drilling operations monitoring methods

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Requirements and procedures may include: | legislative  
|                                          | organisational  
|                                          | client  
|                                          | site  
|                                          | manufacturer's  
| And may include:                        | risk assessment and management requirements and procedures  
|                                          | statutory compliance requirements and procedures  
|                                          | occupational safety and health requirements and procedures  
|                                          | environmental management requirements and procedures  
|                                          | cultural and heritage requirements and procedures  
|                                          | traffic management requirements and procedures  
|                                          | quality requirements and procedures  
|                                          | communication requirements and procedures  
|                                          | procurement requirements and procedures  
|                                          | workplace relations requirements and procedures  
|                                          | contract management requirements and procedures  
|                                          | administration requirements and procedures, including records and reporting  
|                                          | maintenance, servicing, and housekeeping requirements and procedures  
|                                          | Employment and workplace relations legislation  
|                                          | Equal Employment Opportunity and Disability Discrimination legislation  

| Water well drilling methods may include: | air drilling  
|                                         | mud rotary drilling  

Water well drilling methods may include: air drilling and mud rotary drilling.
- Cable-tool drilling
- Continuous flight auger drilling

**Task information** may include:
- Site geological data
- Site geotechnical data
- Site hydrological data
- Site meteorological data
- Site engineering survey data
- Known and potential site hazards, constraints and conditions
- Site cultural and heritage information
- Task specifications
- Task drawings
- Sources of materials
- Other organisations and contractors involved in the task or related
- Coordination, timing and budgeting requirements

**Required outcomes** may include:
- Task specifications requirements
- Task drawings requirements
- Coordination requirements
- Activity scheduling requirements
- Unit cost requirements
- Overall operation cost requirements
- Waste management requirements

**Operational plan** may include:
- Human resource requirements
- Plant and machinery requirements
- Construction materials requirements
- Sub-contractor support requirements
- Waste disposal requirements
- Coordination requirements
- Activity scheduling
- Materials delivery scheduling
- Risk assessment and management requirements
- Occupational health and safety requirements
- Quality management requirements, including testing scheduling requirements
- Traffic management requirements
- Environmental requirements
- Operation monitoring requirements
- Operation performance monitoring requirements
- Communication requirements
| Resources may include: | • labour  
• plant, equipment and tools  
• highway haulage vehicles  
• construction materials  
• sub-contractor services |
|---|---|
| Instructions may include: | • briefings  
• handovers  
• work orders  
• toolbox meetings  
• site meetings |
| Teams members may include: | • other members of the organisations management team  
• members of the team directly involved in the operation  
• suppliers representatives  
• sub-contractors representatives  
• supervisors or managers of other organisations who are involved in related operations |
| Monitor may include: | • ongoing risk assessment  
• engineering survey  
• sampling and testing  
• observation and recording  
• general supervision |
| Initiate may include: | • written communication  
• oral communications |
| Water well drilling operations may include: | • single aquifer production bores  
• multiple aquifer production bores  
• geothermal bores  
• monitoring bores  
• spearpoints  
• piezometers  
• artesian bores  
• identification of and responding to operational problems  
• equipment maintenance |
| Operational problems may include: | • keeping hole open to install screens, gravel pack and casing  
• equipment failure  
• drill string bogging including differential sticking |
- drill rods breaking
- keeping bore vertical
- control of hydrostatic pressures
- drilling in difficult ground (caving, porous, fractured, reactive, cavities, clay)
- contamination of aquifer
- developing bore

**Unit Sector(s)**
Drilling (General)

**Competency field**
Refer to Unit Sector(s).

**Co-requisite units**
Not applicable.
RIINHB406A Supervise foundation drilling operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the supervision of foundation drilling operations in civil construction. This includes: planning and preparing for operations; initiating operations; and monitoring, adjusting, communicating and reporting on the execution of the operations.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, within:

- Civil construction
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for foundation drilling operations | 1.1. Access, clarify and ensure the application of the **requirements and procedures** relevant to undertaking **foundation drilling operations**  
1.2. Access, clarify and ensure the application of the specific **task information** and **required outcomes** relevant to undertaking foundation drilling operations  
1.3. Prepare an **operational plan** which makes best use of the available **resources** and for the safe, effective and efficient conduct of the operations |
| 2. Initiate foundation drilling operations | 2.1. Acquire and make available the necessary resources for the safe, effective and efficient conduct of the operations  
2.2. Issue clear and timely **instructions** to **team members** and others involved, for the safe, effective and efficient conduct of the operations |
| 3. Monitor, adjust, communicate and report on the execution of foundation drilling operations | 3.1. **Monitor** the execution of foundation drilling operations  
3.2. **Initiate** adjustments to **foundation drilling operations practice** or the operational plan to ensure safe, effective and efficient execution of the operations  
3.3. Provide advice to **team members** to overcome **operational problems** encountered during the execution of foundation drilling operations.  
3.4. Ensure plant equipment and tools maintenance requirements are carried out and recorded  
3.5. Ensure reports are completed and submitted  
3.6. **Recommend changes** to improve the safety, efficiency and effectiveness of the execution of foundation drilling operations. |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria of this unit, particularly for their application in the variety of circumstances in which this unit may be applied. This includes the ability to carry out the following:

- interpreting legislative requirements and procedures
- interpreting organisational requirements and procedures
- interpreting client requirements and procedures
- interpreting manufacturer's requirements and procedures
- interpreting foundation drilling operations project site geological data
- interpreting foundation drilling operations project site geotechnical data
- interpreting foundation drilling operations project site hydrological data
- interpreting foundation drilling operations project site metrological data
- interpreting foundation drilling operations project site engineering survey information
- interpreting foundation drilling operations project plans and drawings
- interpreting foundation drilling operations project specifications
- preparing for and conducting of briefings, toolbox and site meeting
- preparing of short messages
- preparing and presenting of job reports
- preparing and maintaining of log books and diaries
- providing leadership
- applying foundation drilling operations performance monitoring skills
- applying foundation drilling operations troubleshooting skills
- applying foundation drilling operations problem solving skills
- performing calculations for the execution of foundation drilling operations
- providing recommendations for the improvement of the safe, effective and efficient execution of foundation drilling operations

#### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly for their application in the variety of circumstances in which this unit may be applied. Assessment requires evidence of the ability to identify and explain the purpose of:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational safety and health requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- work zone traffic management requirements and procedures
- contract management requirements and procedures
- communication requirements and procedures
- administrative requirements and procedures
- foundation drilling operations plant and equipment capabilities and application
- plant, equipment and tools maintenance requirements and procedures
- operational techniques for the execution of foundation drilling operations
- potential operational problems in the execution of foundation drilling operations
- foundation drilling operations resource requirements and procedures
- activities scheduling requirements and procedures
- foundation drilling operations materials delivery requirements and procedures
- job plan drafting of and administration requirements and procedures
- reporting requirements and procedures
- workplace relationship requirements and procedures
- organisational, client and site operational requirements
- relationship between various areas of civil construction and foundation drilling operations
- team leadership techniques
- works planning techniques
- foundation drilling operations monitoring methods
- engineering survey principles
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the Performance Criteria, Required Skills and Knowledge and the Range Statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions that are to apply in undertaking foundation drilling operations
- implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes of foundation drilling operations
- working with others to plan, prepare and execute foundation drilling operations
- operational plans which reflect the requirements of these foundation drilling operations and are capable of achieving all of their required outcomes
- resource plans which have made available adequate resources for the safe, effective and efficient execution of foundation drilling operations
- provision of clear and timely instruction, advice and supervision by the individual of those involved in the undertaking of these foundation drilling operations
- evidence of the consistent successful completion of foundation drilling operations under their supervision

Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment.
skills.

- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes of foundation drilling operations
  - operational plans which reflect the requirements of foundation drilling operations and are capable of achieving all of their required outcomes
  - resource plans which have made available adequate resources for the safe, effective and efficient execution of foundation drilling operations
- consistent successful completion of foundation drilling operations under their supervision
- first hand testimonial evidence of the candidate's:
  - working with others to plan, prepare and execute foundation drilling operations
  - supervising and providing clear and timely instruction and advice to those involved in the undertaking foundation drilling operations

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria of this unit, particularly for their application in the variety of circumstances in which this unit may be applied. This includes the ability to carry out the following as required to supervise horizontal directional drilling operations:

- apply legislative, organisation, client and site requirements and procedures
- apply manufacturer's requirements and procedures
- interpret project site geological data
- interpret project site geotechnical data
- interpret project site hydrological data
- interpret project site metrological data
- interpret project engineering survey information
- interpret project plans and drawings
- interpret project specifications
- prepare for and conduct briefings, toolbox and site meeting
- prepare short messages
- prepare and present job reports
- prepare and maintain of log books and diaries
- provide leadership
- apply performance monitoring skills
- apply troubleshooting skills
- apply problem solving skills
- perform calculations for the execution of horizontal directional drilling operations
- provide recommendations for the improvement of the safe, effective and efficient execution of horizontal directional drilling operations

### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly for their application in the variety of circumstances in which this unit may be applied. This includes knowledge of the following, as required to supervise horizontal directional drilling operations:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational safety and health requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- work zone traffic management requirements and procedures
- contract management requirements and procedures
- communication requirements and procedures
- administrative requirements and procedures
- horizontal directional drilling operations plant and equipment capabilities and application
- plant, equipment and tools maintenance requirements and procedures
- operational techniques for the execution of horizontal directional drilling operations
- potential operational problems in the execution of horizontal directional drilling operations
- horizontal directional drilling operations resource requirements and procedures
- activities scheduling requirements and procedures
- horizontal directional drilling operations materials delivery requirements and procedures
- job plan drafting of and administration requirements and procedures
- reporting requirements and procedures
- workplace relationship requirements and procedures
- organisational, client and site operational requirements
- relationship between various areas of civil construction and horizontal directional drilling
- team leadership techniques
- works planning techniques
- horizontal directional drilling operations monitoring methods
- engineering survey principles

                                                                                         • members of the team directly involved in the operation  
                                                                                         • suppliers representatives  
                                                                                         • sub-contractors representatives  
                                                                                         • supervisors or managers of other organisations who are involved in related operations |
| **Monitor** may include:                                                   | • ongoing risk assessment  
                                                                                         • engineering survey  
                                                                                         • sampling and testing  
                                                                                         • observation and recording  
                                                                                         • general supervision |
| **Initiate** may include:                                                  | • written communication  
                                                                                         • oral communications |
| **Horizontal directional drilling operations practice** may include:        | • identification of and responding to operational problems  
                                                                                         • equipment maintenance  
                                                                                         • locating existing services |
| **Operational problems** may include:                                     | • interfering with existing services  
                                                                                         • fluid break out  
                                                                                         • differential sticking of drill string  
                                                                                         • changing geological formations, particularly clay, rock or unstable or porous formations  
                                                                                         • drill string breaking |
Unit Sector(s)
Drilling (General)

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIINHB408A Supervise environmental drilling operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the supervision of environmental drilling operations in resources and infrastructure industries. This includes: planning and preparing for operations; initiating the operations; and monitoring, adjusting, communicating and reporting on the execution of the operations.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for environmental drilling operations              | 1.1. Access, clarify and ensure the application of the *requirements and procedures* relevant to undertaking *environmental drilling operations*  
1.2. Access, clarify and ensure the application of the specific *task information* and *required outcomes* relevant to undertaking environmental drilling operations  
1.3. Prepare an *operational plan* which makes best use of the available *resources* and for the safe effective and efficient conduct of the operations |
| 2. Initiate environmental drilling operations                            | 2.1. Acquire and make available the necessary resources for the safe, effective and efficient conduct of the operations  
2.2. Issue clear and timely *instructions* to team members and others involved, for the safe, effective and efficient conduct of the operations |
| 3. Monitor, adjust, communicate and report on the execution of environmental drilling operations | 3.1. *Monitor* the execution of environmental drilling operations  
3.2. *Initiate* adjustments to *environmental drilling operations practice* or the operational plan to ensure safe, effective and efficient execution of the operations  
3.3. Provide advice to team members to overcome operational problems encountered during the execution of environmental drilling operations.  
3.4. Ensure plant equipment and tools maintenance requirements are carried out and recorded  
3.5. Ensure reports are completed and submitted  
3.6. Recommend changes to improve the safety, efficiency and effectiveness of the execution of environmental drilling operations. |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria of this unit, particularly for their application in the variety of circumstances in which this unit may be applied. This includes the ability to carry out the following:

- interpreting legislative requirements and procedures
- interpreting organisational requirements and procedures
- interpreting client requirements and procedures
- interpreting manufacturer's requirements and procedures
- interpreting environmental drilling operations project site geological data
- interpreting environmental drilling operations project site geotechnical data
- interpreting environmental drilling operations project site hydrological data
- interpreting environmental drilling operations project site metrological data
- interpreting environmental drilling operations project engineering survey information
- interpreting environmental drilling operations project plans and drawings
- preparing for and conducting of briefings, toolbox and site meeting
- preparing of short messages
- preparing and presenting of job reports
- preparing and maintaining of log books and diaries
- providing leadership
- applying environmental drilling operations performance monitoring skills
- applying environmental drilling operations troubleshooting skills
- applying environmental drilling operations problem solving skills
- performing calculations for the execution of environmental drilling operations
- providing recommendations for the improvement of the safe, effective and efficient execution of environmental drilling operations

**Required knowledge**

Specific knowledge is required to achieve the performance criteria of this unit, particularly for their application in the variety of circumstances in which this unit may be applied. Assessment requires evidence of the ability to identify and explain the purpose of:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational safety and health requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- work zone traffic management requirements and procedures
- contract management requirements and procedures
- communication requirements and procedures
- administrative requirements and procedures
- environmental drilling operations plant and equipment capabilities and application
- plant, equipment and tools maintenance requirements and procedures
- operational techniques for the execution of environmental drilling operations
- potential operational problems in the execution of environmental drilling operations
- environmental drilling operations resource requirements and procedures
- activities scheduling requirements and procedures
- environmental drilling operations materials delivery requirements and procedures
- job plan drafting of and administration requirements and procedures
- reporting requirements and procedures
- workplace relationship requirements and procedures
- organisational, client and site operational requirements
- relationship between various areas of resources and infrastructure activities and environmental drilling operations
- team leadership techniques
- works planning techniques
- environmental drilling operations monitoring methods
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the Performance Criteria, Required Skills and Knowledge and the Range Statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions that are to apply in undertaking environmental drilling operations</td>
</tr>
<tr>
<td></td>
<td>• implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes of environmental drilling operations</td>
</tr>
<tr>
<td></td>
<td>• working with others to plan, prepare and execute environmental drilling operations</td>
</tr>
<tr>
<td></td>
<td>• operational plans which reflect the requirements of these environmental drilling operations and are capable of achieving all of their required outcomes</td>
</tr>
<tr>
<td></td>
<td>• resource plans which have made available adequate resources for the safe, effective and efficient execution of environmental drilling operations</td>
</tr>
<tr>
<td></td>
<td>• provision of clear and timely instruction, advice and supervision by the individual of those involved in the undertaking of these environmental drilling operations</td>
</tr>
<tr>
<td></td>
<td>• evidence of the consistent successful completion of environmental drilling operations under their supervision</td>

</tbody>
</table>

| Context of and specific resources for assessment | This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment |
skills.

- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

| Supervise environmental drilling operations | • consistent successful completion of environmental drilling operations under their supervision  
  • first-hand testimonial evidence of the candidate:  
  • working with others to plan, prepare and execute environmental drilling operations  
  • supervising and providing clear and timely instruction and advice to those involved in the undertaking environmental drilling operations |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Requirements and procedures

May include:

- legislative
- organisational
- client
- site
- manufacturer's

**And may include:**

- risk assessment and management requirements and procedures
- statutory compliance requirements and procedures
- occupational safety and health requirements and procedures
- environmental management requirements and procedures
- cultural and heritage requirements and procedures
- traffic management requirements and procedures
- quality requirements and procedures
- communication requirements and procedures
- procurement requirements and procedures
- workplace relations requirements and procedures
- contract management requirements and procedures
- administration requirements and procedures, including records and reporting
- maintenance, servicing, and housekeeping requirements and procedures
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Environmental drilling methods

May include:

- air drilling
- continuous flight auger drilling
<table>

### Resources
- labour
- plant, equipment and tools
- highway haulage vehicles
- construction materials
- sub-contractor services

### Instructions
- briefings
- handovers
- work orders
- toolbox meetings
- site meetings

### Teams members
- other members of the organisations management team
- members of the team directly involved in the operation
- supplier's representatives
- sub-contractor's representatives
- supervisors or managers of other organisations who are involved in related operations

### Monitor
- ongoing risk assessment
- engineering survey
- sampling and testing
- observation and recording
- general supervision

### Initiate
- written communication
- oral communications

### Environmental drilling operations
- hole drilling techniques
- identification of and responding to operational problems
- equipment maintenance

### Operational problems
- handling and disposal of contaminated samples or waste
- drilling without the aid of drilling fluid additives
- keeping hole open to install screens and monitoring equipment
- equipment failure
- drill string bogging or breaking
- drilling in difficult ground (caving, porous,

RIINHB409A Supervise mineral production and development drilling operations

Modification History

Not applicable.

Unit Descriptor

This unit covers the supervision of mineral production and development drilling operations in the mining and extractive industries. This includes: planning and preparing for operations; initiating the operations; and monitoring, adjusting, communicating and reporting on the execution of the operations.

Application of the Unit

This unit is appropriate for those working in a supervisory role or as a technical specialist, within:

- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

</table>
| 1. Plan and prepare for mineral production and development drilling operations | 1.1. Access, clarify and ensure the application of the requirements and procedures relevant to undertaking mineral production and development drilling operations  
1.2. Access, clarify and ensure the application of the specific task information and required outcomes relevant to undertaking mineral production and development drilling operations  
1.3. Prepare an operational plan which makes best use of the available resources and for the safe effective and efficient conduct of the operations |
| 2. Initiate mineral production and development drilling operations | 2.1. Acquire and make available the necessary resources for the safe, effective and efficient conduct of the operations  
2.2. Issue clear and timely instructions to team members and others involved, for the safe, effective and efficient conduct of the operations |
| 3. Monitor, adjust, communicate and report on the execution of mineral production and development drilling operations | 3.1. Monitor the execution of mineral production and development drilling operations  
3.2. Initiate adjustments to mineral production and development drilling operations practice or the operational plan to ensure safe, effective and efficient execution of the operations  
3.3. Provide advice to team members to overcome operational problems encountered during the execution of mineral production and development drilling operations.  
3.4. Ensure plant equipment and tools maintenance requirements are carried out and recorded  
3.5. Ensure reports are completed and submitted  
3.6. Recommend changes to improve the safety, efficiency and effectiveness of the execution of mineral production and |
development drilling operations
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria of this unit, particularly for their application in the variety of circumstances in which this unit may be applied. This includes the ability to carry out the following:

- interpreting legislative requirements and procedures
- interpreting organisational requirements and procedures
- interpreting client requirements and procedures
- interpreting manufacturer's requirements and procedures
- interpreting project site geological data
- interpreting project site geotechnical data
- interpreting site hydrological data
- interpreting site metrological data
- interpreting project engineering survey information
- interpreting project plans and drawings
- interpreting project specifications
- preparing for and conducting of briefings, toolbox and site meeting
- preparing of short messages
- preparing and presenting of job reports
- preparing and maintaining of log books and diaries
- providing leadership
- applying mineral production and development drilling operations performance monitoring skills
- applying mineral production and development drilling operations troubleshooting skills
- applying mineral production and development drilling operations problem solving skills
- performing calculations for the execution of mineral production and development drilling operations
- providing recommendations for the improvement of the safe, effective and efficient execution of mineral production and development drilling operations

#### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly for their application in the variety of circumstances in which this unit may be applied. Assessment requires evidence of the ability to identify and explain the purpose of:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
• occupational safety and health requirements and procedures
• environmental management requirements and procedures
• quality management requirements and procedures
• work zone traffic management requirements and procedures
• contract management requirements and procedures
• communication requirements and procedures
• administrative requirements and procedures
• mineral production and development drilling operations plant and equipment capabilities and application
• plant, equipment and tools maintenance requirements and procedures
• operational techniques for the execution of mineral production and development drilling operations
• potential operational problems in the execution of mineral production and development drilling operations
• mineral production and development drilling operations resource requirements and procedures
• activities scheduling requirements and procedures
• mineral production and development drilling operations materials delivery requirements and procedures
• job plan drafting of and administration requirements and procedures
• reporting requirements and procedures
• workplace relationship requirements and procedures
• organisational, client and site operational requirements
• relationship between various areas of mining and extractive industry activities and mineral production and development drilling operations
• team leadership techniques
• works planning techniques
• mineral production and development drilling operations monitoring methods
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Mineral production and development drilling methods

- air drilling
- mud rotary drilling
**RIINHB409A Supervise mineral production and development drilling operations**

---

### may include:
- raise boring
- down-hole hammer drilling
- top-hole hammer drilling

**Task information** may include:
- site geological data
- site geotechnical data
- site hydrological data
- site meteorological data
- site engineering survey data
- known and potential site hazards, constraints and conditions
- site cultural and heritage information
- task specifications
- task drawings
- sources of materials
- other organisations and contractors involved in the task or related
- coordination, timing and budgeting requirements

**Required outcomes** may include:
- task specifications requirements
- task drawings requirements
- coordination requirements
- activity scheduling requirements
- unit cost requirements
- overall operation cost requirements
- waste management requirements

**Operational plan** may include:
- human resource requirements
- plant and machinery requirements
- construction materials requirements
- sub-contractor support requirements
- waste disposal requirements
- coordination requirements
- activity scheduling
- materials delivery scheduling
- risk assessment and management requirements
- occupational health and safety requirements
- quality management requirements, including testing scheduling requirements
- traffic management requirements
- environmental requirements
- operation monitoring requirements
- operation performance monitoring requirements
| Resources may include: | Communication requirements  
Reporting requirements  
Labor  
Plant, equipment and tools  
Highway haulage vehicles  
Construction materials  
Sub-contractor services |
|---|---|
| Instructions may include: | Briefings  
Handovers  
Work orders  
Toolbox meetings  
Site meetings |
| Teams members may include: | Other members of the organisation's management team  
Members of the team directly involved in the operation  
Suppliers representatives  
Sub-contractors representatives  
Supervisors or managers of other organisations who are involved in related operations |
| Monitor may include: | Ongoing risk assessment  
Engineering survey  
Sampling and testing  
Observation and recording  
General supervision |
| Initiate may include: | Written communication  
Oral communications |

Equipment maintenance |
| Operational problems may include: | Working environment  
Access to sites  
Interference from mining operations  
Controlling effects of operations at different levels of the mine  
Equipment failure  
Drill string bogging or breaking  
Drilling in difficult ground (caving, porous, fractured, reactive, cavities) |
Unit Sector(s)
Drilling (General)

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIINHB410A Supervise surface directional drilling operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the supervision of surface directional drilling operations in the coal and metalliferous mining industries. It includes the requirements for planning, preparing for, initiate, monitor, adjust, communicate and report on the execution of surface directional drilling operations.

Application of the Unit
This unit is applicable for those who perform the duties of:
- acting as a technical specialist in surface directional drilling
- acting as a principal's supervisor of surface directional drilling operations
- acting as a contractor's supervisor of sub-contractors carrying out of surface directional drilling operations
- directly supervising a team or teams carrying out surface directional drilling operations.

Directionally drilled holes may subsequently be reamed and have product pipe installed, or it may be for coal seam methane drainage or similar. This could be at worksites within:
- Coal mining
- Drilling
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Access, clarify and ensure the application of the specific *task information* and *required outcomes*  
1.3. Prepare an *operational plan* which makes best use of the available *resources* and for the safe effective and efficient conduct of the operations |
| 2. Initiate operations | 2.1. Acquire and make available the necessary resources for the safe, effective and efficient conduct of the operations  
2.2. Issue clear and timely *instructions* to *team members* and others involved, for the safe, effective and efficient conduct of the operations |
| 3. Monitor, adjust, communicate and report on the operations | 3.1. *Monitor* the execution of surface directional drilling  
3.2. *Initiate* adjustments to *surface directional drilling practice* or operational plan to ensure safe, effective and efficient execution of the operations  
3.3. Provide advice to team members to *overcome operational problems* encountered during the execution of surface directional drilling operations  
3.4. Ensure plant equipment and tools maintenance requirements are carried out and recorded  
3.5. Ensure reports are completed and submitted  
3.6. Recommend changes to improve the safety, efficiency and effectiveness of the execution of surface directional drilling operations |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to supervise surface directional drilling operations:

- apply legislative, organisation, site and manufacturer's requirements and procedures surface directional drilling
- apply project site geological data, geotechnical data, hydrological data, engineering survey information
- apply project plans, drawings and specifications
- conduct briefings, toolbox and site meeting
- prepare short messages
- prepare and present job reports
- prepare and maintain log books and diaries
- provide leadership
- apply performance monitoring skills, troubleshooting skills and problem solving skills
- calculate the following:
  - volumes
  - grades
  - percentages
  - areas
  - resource consumption figures
- interpret materials properties and test results

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to supervise surface directional drilling operations:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- OHS requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- work zone traffic management requirements and procedures
- contract management requirements and procedures
- communication requirements and procedures
- administrative requirements and procedures
- drilling plant and equipment capabilities and application
- plant, equipment and tools maintenance requirements and procedures
- operational techniques
- potential operational problems
- task resource requirements and procedures
- activities scheduling requirements and procedures
- materials delivery requirements and procedures
- job plan drafting and administration requirements and procedures
- workplace relationship requirements and procedures
- organisational, client and site operational requirements
- relationship between various areas of surface mining and directional drilling
- team leadership techniques
- works planning techniques
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
</table>
| Critical aspects for assessment and evidence required to demonstrate competency in this unit | • knowledge of the requirements, procedures and instructions for the supervision of surface directional drilling operations  
• implementation of appropriate procedures and techniques for the safe, effective and efficient supervision of surface directional drilling operations  
• working with others to plan, prepare and conduct surface directional drilling operations  
• provision of clear and timely instruction and supervision by the individual of those involved in surface directional drilling operations  
• evidence of the consistent successful supervision of surface directional drilling operations |

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.  
• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.  
• Customisation of assessment and delivery environment to sensitively accommodate |

cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to plan, prepare and conduct surface directional drilling operations
    - provision of clear and timely instruction and supervision by the individual of those involved in the conduct of the surface directional drilling operations |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation | • legislative, organisational and site requirements and procedures  
| may include: | • manufacturer’s guidelines and specifications  
| | • Australian standards  
| | • code of practice  
| | • Employment and workplace relations legislation  
| | • Equal Employment Opportunity and Disability Discrimination legislation  

| Specific task information and required outcomes | • site geological data  
| may include: | • site geotechnical data  
| | • site hydrological data  
| | • site engineering survey data  
| | • known and potential site hazards, constraints and conditions

RIINHB411A Construct artesian (flowing) aquifer production bores

Modification History
Not applicable.

Unit Descriptor
This unit covers construction of artesian (flowing) aquifer production bores in the drilling industry. It includes planning and preparing for construction including liaising with client and/or other relevant parties, designing production bores for artesian aquifer systems, constructing production bores in artesian aquifer systems, developing a bore, disinfecting/decontaminating bore and drilling equipment, carrying out bore maintenance and rehabilitation, and decommissioning artesian wells with flowing and/or nonflowing elements. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational or supervisory role or as a technical specialist, at worksites within:

- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for the construction of artesian (flowing) aquifer production bores | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, confirm and apply *work instructions* for the allocated task  
1.3. Identify, manage and report all potential *hazards*  
1.4. Resolve *coordination requirements* with others at the site prior to commencing and during work activities  
1.5. Discuss scope of work with client and give technical advice, cost structure, workmanship warranty, quantity and quality of materials, construction standards and methods to be used and gain general agreement on drilling plan  
1.6. Provide detailed strata logs, pump and development test results conducted during *bore development* and water and strata samples to the appropriate authorities as required by the relevant State/Territory legislation/licensing agency  
1.7. Complete all requirements for bore completion reports, decommissioning or abandonment and send to regulatory authorities within the time specified on bore licence |
| 2. Design production bores for artesian aquifer systems | 2.1. Determine most appropriate construction methods from the reading and interpretation of all available *documented information*  
2.2. *Design the bore* to ensure the exclusion of unsuitable waters and to prevent the inter-mixing of aquifers with different water quality and/or Standing Water Levels  
2.3. Determine a drilling fluid program to suit the expected down-hole conditions and anticipated pressures  
2.4. Select a bore site that will prevent contamination and minimise interference with other bores and that is safe with respect to potential occupational health and safety hazards  
2.5. Select likely water entry mechanism from |
### Construct production bores in artesian aquifer systems

<table>
<thead>
<tr>
<th>2.6. Calculate appropriate artificial pack design parameters, and recommended annular thicknesses required.</th>
</tr>
</thead>
<tbody>
<tr>
<td>2.7. Undertake calculations to determine appropriate screen/slot design parameters (e.g. diameter, length, aperture size).</td>
</tr>
<tr>
<td>2.8. Plot and interpret sieve analysis results onto graphs.</td>
</tr>
<tr>
<td>2.9. Select appropriate bore/surface casing types, size, strength and wall thicknesses for the anticipated ground/water quality and pressure conditions and any construction requirements.</td>
</tr>
<tr>
<td>2.10. Ensure all necessary materials anticipated for the job are available and on site prior to commencement of construction phase.</td>
</tr>
</tbody>
</table>

#### 3. Construct production bores in artesian aquifer systems

3.1. Use approved procedures to select, slot, assemble and insert casing and screens suitable for the formations in which they are deployed.

3.2. Use equipment for assembly and slotting safely and in accordance with approved procedures.

3.3. Select, mix and place grout or otherwise seal surface casing from 10 m into competent impermeable strata and back to the surface with a minimum sheath thickness of 20 mm above maximum shoe of coupling joint diameter size.

3.4. Conduct grouting operations to seal intermediate and/or inner production casing strings with a 15 mm minimum thickness grout sheath or to seal selected zones so that the water from the production bore is drawn from one primary formation only, (unless otherwise allowed by the permit).

3.5. Construct bore in accordance with any applicable regulations, minimum construction requirements and the organisation's internal procedures.

3.6. Use and maintain drilling fluids and additives within the manufacturer's
recommendations and that are non toxic and capable of complete removal from the bore upon completion

3.7. Maintain, test and record fluid properties such as viscosity, mud weight, filtration and sand content so that the potential capacity, efficiency or quality of the bore is not affected

3.8. Maintain plumbness and alignment of the hole within the required limitations and carry out a plumbness test if required

3.9. Prepare for and recognise symptoms of a formation kick and take action to control the bore

3.10. Collect, store, record, label and transport formation samples in accordance with licensing requirements

3.11. Collect, test, store, record, label and transport water samples for chemical analysis in accordance with licensing requirements

3.12. Maintain all records accurately and legibly

3.13. Arrange for geophysical logging tools to be run in bore if required

3.14. Accurately calculate hole, annular fill or pack materials and mud pit volumes in cubic metres or litres

3.15. Determine aquifer formation grain size distribution from sieve analysis and interpret appropriate gravel pack and screen slot aperture dimensions for gravel packed wells

3.16. Select appropriate gravel pack materials

3.17. Place artificial pack material in a manner that will ensure uniform distribution in the annular space without bridging

3.18. Comply with relevant workplace occupational health and safety requirements for both the drilling equipment and construction materials

3.19. Remove drilling fluids from the bore to allow subsequent development

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to construct artesian (flowing) aquifer production bores:

- apply legislative, organisation and site requirements and procedures for supervision of the construction of artesian (flowing) aquifer production bores
- aquifer sand sieve analysis tests
- calculation of the specific capacity of a bore
- calculation of grout component quantities, i.e. cement powder, water and other additives as required
- calculation of hole and annular volumes
- calculation of grout specific gravity
- determination of grain size and selection of appropriate artificial pack material
- calculation of total pressure head for artesian aquifers
- calculation of mud specific gravity to control formation fluid pressure
- use and baryte and or salt to weight drilling fluids
- numerical including calculations such as:
  - volume (e.g. mud pits, drums, tanks or bore holes of given dimensions, annulus)
  - up hole velocity
  - cement/water/additives quantities
  - screen design parameters
  - flow rates (e.g. l/sec, GPM)
  - conversion from imperial to metric and vice versa
  - conducting a sieve analysis
  - required mud weight to control formation fluid pressures
- writing tasks including:
  - state/territory bore completion report
  - daily drill operation report
  - diagrams
  - brief descriptions
  - plotting information on a graph (e.g. plotting results from a sieve analysis)
- reading and interpreting materials including:
  - plans
  - diagrams
  - bore log
<table>
<thead>
<tr>
<th>Required knowledge</th>
</tr>
</thead>
</table>

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to construct artesian (flowing) aquifer production bores:

- legal requirements under the relevant State/Territory Water Act
- equipment - characteristics, technical capabilities and limitations
- basic geological formations, i.e. basic knowledge of both soil and rock classifications and various formations which permit groundwater movement and factors affecting groundwater quality rock/soil types including:
  - aquifer systems
  - drillability
  - stability
- potential safety hazards and sources of contamination when siting a bore
- the necessity of having a signed agreement/contract with the client
- requirements for water sampling for laboratory testing
- tests for alignment and plumbness of bores
- appropriate casing materials for various applications
- hole preparation for cementing (grouting) operations
- effects of various cement (grout) additives
- pressure cementing methods
- casing collapse characteristics
- applications for wire-wound screens
- screen design parameters to ensure appropriate entrance velocities
- interpretation of sieve analysis results
- applications for natural pack, stabilising fill and artificial pack completion techniques
- objectives of bore development
- test pumping procedures
- flow recession test procedures
- appropriate disinfecting chemicals and procedures
- appropriate headworks design for class 3 bore applications
- characteristics of 'good samples' required for water well construction
- ways in which sampling errors can occur
- types of drilling fluids, their selection, use, testing and conditioning
- problem solving techniques
- grout placement methods and procedures including pressure grouting
- range of numerical calculations
- relevant occupational health and safety requirements including principles of Duty
of Care

- appropriate fishing operations for the type(s) of drilling being undertaken
- use of materials safety data sheets (MSDS)
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</tbody>
</table>
Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.

Aboriginal people and other people from a non English speaking background may have second language issues.

Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the construction of artesian (flowing) aquifer production bores
  - provision of clear and timely instruction and supervision by the individual of those involved in the construction of artesian (flowing) aquifer production bores

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation
- licences including:
  - Water Well licence (Class 3)
  - Licence for particular drilling method such as:
    - cable tool
    - auger
    - rotary air
    - rotary mud
    - Bore Construction Permit
    - Bore Development/Works Approval
    - Australian standards (e.g. AS 2368 - Test Pumping Water Bores)
    - ARMCANZ Minimum Construction Requirements for Water Bores in Australia July 1997

### Work instructions may come from briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include:

- nature and scope of tasks
- specifications
- quality of finished works
- achieved targets
- operational conditions
- obtaining of required permits
- site layout
- out of bounds areas
- worksite inspection requirements
- lighting conditions
- plant of equipment defects
- coordination requirements or issues
<table>

**Hazards** may include:
- working in proximity to drilling rig

**Coordination requirements** may include:
- regular up to date information on progress, and/or problems encountered to client and/or other relevant parties.
- other equipment operators
- maintenance personnel
- supervisors
- site personnel

**Bore development** may include:
- chemical
- air lift surging and pumping
- over pumping

**Documented information** may include:
- results of test hole
- hydrogeological data and reports
- geological data
- old bore hole logs
- results from sieve analysis tests
- geophysical logging results

**Design the bore** may include:
- geophysical logs
- physical samples
- results of mechanical testing of soils
- water test analyses
- interpretation of soft/hard zones
- losses of drilling fluid
- bore log and in hole test results/measurements
- results of nearby bores
- geological maps

**Procedures** may include:
- solvent cement (PVC)
- stainless steel screws (PVC)
- welding (steel)
- threaded (PC, FRP, ABS)
- locking strip or wire rope casing joiners

**Equipment for assembly and slotting** may include:
- hand tools
- power driven (electric, hydraulic or air) tools/equipment
- casing lifter sockets
- pipe cutter and beveller
- welder and oxy cutter
- solvent
• centralisers

Unit Sector(s)
Drilling (General)

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIINHB412B Construct geothermal wells

Modification History
Not applicable.

Unit Descriptor
This unit covers the construction of geothermal wells in the drilling industry. It includes planning and preparing for construction of geothermal wells, designing geothermal wells, constructing geothermal wells, developing the bore, carrying out well maintenance and rehabilitation, and decommissioning test/bore holes. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working as a technical specialist, at worksites within:

- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for the construction of geothermal wells | 1.1. Access, interpret and apply **compliance documentation** relevant to the work activity  
1.2. Obtain, confirm and apply **work instructions** for the allocated task  
1.3. Identify, manage and report all potential **hazards**  
1.4. Resolve **coordination requirements** with others at the site prior to commencing and during work activities  
1.5. Discuss scope of work with client to gain general agreement on drilling plan  
1.6. Communicate regular up to date information on progress, and/or problems encountered to client and/or other relevant parties  
1.7. Provide details of the completed well to the appropriate authorities as required by the relevant state/territory legislation |
| 2. Design geothermal wells | 2.1. Determine most appropriate construction methods from the reading and interpretation of all available **documented information and local geographic/geological knowledge**  
2.2. Determine a drilling fluid program to suit the expected down-hole conditions and anticipated pressures/temperatures  
2.3. Select appropriate bore/surface casing for the anticipated ground conditions and construction techniques  
2.4. Ensure all necessary materials anticipated for the job are available and on site prior to commencement of construction phase |
| 3. Construct geothermal wells | 3.1. Use approved **procedures to assemble and insert casing**  
3.2. Use **equipment for assembly** safely and in accordance with approved procedures  
3.3. Grout or otherwise seal surface casing  
3.4. Conduct grouting operations to seal intermediate and/or production casing strings or to seal selected zones  
3.5. Construct well in accordance with any |
<p>| | |</p>
<table>
<thead>
<tr>

<tbody>
<tr>
<td>applicable regulations, minimum construction requirements and the organisation's internal procedures</td>
<td></td>
</tr>
<tr>
<td>3.6. Maintain plumbness and alignment of the hole within the required limitations</td>
<td></td>
</tr>
<tr>
<td>3.7. Recognise symptoms of a formation kick and take action to control the well</td>
<td></td>
</tr>
<tr>
<td>3.8. Maintain adequate supplies of water on site to quench the well if required</td>
<td></td>
</tr>
<tr>
<td>3.9. Collect, record and label formation samples</td>
<td></td>
</tr>
<tr>
<td>3.10. Maintain records accurately and legibly</td>
<td></td>
</tr>
<tr>
<td>3.11. Accurately calculate hole, annular, grout and mud pit volumes in cubic metres or litres</td>
<td></td>
</tr>
<tr>
<td>3.12. Comply with relevant workplace occupational health and safety requirements for both the drilling equipment and construction materials</td>
<td></td>
</tr>
<tr>
<td>3.13. Maintain tool string inventories</td>
<td></td>
</tr>
<tr>
<td>4. Develop bore</td>
<td>4.1. Use development techniques with care to prevent collapsing of casing or blow outs</td>
</tr>
<tr>
<td>5. Carry out well maintenance and rehabilitation</td>
<td>5.1. Undertake a process of diagnosis to determine likely cause of well deterioration</td>
</tr>
<tr>
<td></td>
<td>5.2. Devise a program of rehabilitation to ensure that the well is restored to a reasonable condition</td>
</tr>
<tr>
<td>6. Decommission test/bore holes</td>
<td>6.1. Determine suitable decommissioning procedures and select appropriate materials</td>
</tr>
<tr>
<td></td>
<td>6.2. Carry out the decommissioning (abandonment) of test holes or wells in geothermal systems</td>
</tr>
<tr>
<td></td>
<td>6.3. Verify position/location of hole for future reference</td>
</tr>
<tr>
<td></td>
<td>6.4. Dispose of drill and other fluids safely</td>
</tr>
</tbody>
</table>
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to construct geothermal wells:

- apply legislative, organisation and site requirements and procedures
- calculate grout component quantities, i.e. cement powder, water and other additives as required
- calculate hole and annular volumes
- calculate grout specific gravity
- calculate drilling fluid specific gravity to control formation fluid pressure
- use Blow Out Preventers
- apply writing skills to complete a range of documents including:
  - state/territory bore completion report
  - daily drill operation report
  - diagrams
  - brief descriptions
- apply reading and interpreting of materials including:
  - plans
  - diagrams
  - drill log
  - graphs

Note: licences required may include:

- Water Well licence (Class 3)
- Licence for particular drilling method:
  - rotary mud
  - Bore Construction Permit
  - Bore Development/Works Approval

Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to construct geothermal wells:

- legal requirements under the relevant state/territory Water Act
- equipment - characteristics, technical capabilities and limitations
- basic geological formations, i.e. basic knowledge of both soil and rock classifications and various formations which permit groundwater movement and factors affecting groundwater quality, geothermal systems, drillability and stability
- potential safety hazards when siting a well
- the necessity of having a signed agreement/contract with the client
- Blow Out Prevention procedures and techniques
- appropriate casing materials for various applications
- hole preparation for cementing (grouting) operations
- effects of various cement (grout) additives
- pressure cementing methods
- casing collapse characteristics
- appropriate headworks design for geothermal well applications
- types of drilling fluids
- problem solving techniques
- grout placement methods and procedures
- range of numerical calculations including:
  - volume (e.g. mud pits, drums, tanks or wells of given dimensions)
  - up hole velocity
  - cement/water/additives quantities
  - flow rates (e.g. L/sec, GPM)
  - conversion from imperial to metric and vice versa
  - required mud weight to control formation fluid pressures
- relevant occupational health and safety requirements including principles of duty of care
- appropriate fishing operations for the type(s) of drilling being undertaken
- use of materials safety data sheets (MSDS)
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the construction of geothermal wells</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of the construction of geothermal wells</td>
</tr>
<tr>
<td></td>
<td>• working with others to plan, prepare and conduct the construction of geothermal wells</td>
</tr>
<tr>
<td></td>
<td>• evidence of the consistent successful construction of geothermal wells</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
<td></td>
</tr>
<tr>
<td>• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
<td></td>
</tr>
<tr>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
<td></td>
</tr>
<tr>
<td>• Customisation of assessment and delivery environment to sensitively accommodate</td>
<td></td>
</tr>
</tbody>
</table>
cultural diversity.

- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the construction of geothermal wells

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>

</table>
Documented information may include:
- results of test hole
- geothermal data and reports
- geological data
- old bore hole logs

Local geographic/geological knowledge may include:
- interpretation of soft/hard zones
- losses of drilling fluid

Procedures to assemble and insert casing may include:
- welding (steel)

Equipment for assembly may include:
- hand tools
- power driven (electric, hydraulic or air) hand tools
- welder

Unit Sector(s)
Drilling (General)

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIINHB413A Supervise underground in-seam directional drilling operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the supervision of underground in-seam directional drilling operations in underground coal mines. It includes planning and preparing for and initiating; monitoring, adjusting, communicating and reporting on the execution of underground in-seam directional drilling operations.

Application of the Unit
Underground in-seam directional drilling is undertaken for the purpose of gas extraction and water drainage, barrier proving and exploration. This unit is appropriate for those working in a supervisory role or as a technical specialist at worksites within:

- Coal mining
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for underground in-seam directional drilling operations | 1.1. Access, interpret and apply *compliance documentation* relevant to undertaking underground in-seam directional drilling operations  
1.2. Access, clarify and ensure the application of the specific *task information* and *required outcomes* relevant to undertaking underground in-seam directional drilling operations  
1.3. Prepare an *operational plan* which makes best use of the available *resources* and for the safe effective and efficient conduct of the operations |
| 2. Initiate underground in-seam directional drilling operations | 2.1. Acquire and make available the necessary resources for the safe, effective and efficient conduct of the operations  
2.2. Issue clear and timely *instructions* to *team members* and others involved, for the safe, effective and efficient conduct of the operations |
| 3. Monitor, adjust, communicate and report on the execution of underground in-seam directional drilling operations | 3.1. *Monitor* the execution of underground in-seam directional drilling  
3.2. *Initiate* adjustments to underground in-seam directional drilling practice or operational plan to ensure safe, effective and efficient execution of the operations  
3.3. Provide advice to *team members* to overcome *operational problems* encountered during the execution of underground in-seam directional drilling operations  
3.4. Ensure plant equipment and tools maintenance requirements are carried out and recorded  
3.5. Ensure reports are completed and submitted  
3.6. Recommend changes to improve the safety, efficiency and effectiveness of the execution of underground in-seam directional drilling operations |
