CONTENTS

Introduction to the Industry .................................................................................................................. 97
Preliminary Information .......................................................................................................................... 101
History .................................................................................................................................................... 103
Mapping to Previous Training Package ............................................................................................. 105
Employability Skills .............................................................................................................................. 121
Qualifications Pathways ....................................................................................................................... 124
Skill Sets in this Training Package ..................................................................................................... 124
Summary of AQF Qualifications in this Training Package ................................................................. 125
Overview ................................................................................................................................................ 128
Assessment Guidelines ........................................................................................................................ 137
Pathways ................................................................................................................................................ 170
Competency Standards ......................................................................................................................... 178
RII10109 Certificate I in Resources and Infrastructure Operations ................................................. 185
RII20109 Certificate II in Resources and Infrastructure Work Preparation ..................................... 190
RII20209 Certificate II in Surface Extraction Operations .................................................................. 196
RII20309 Certificate II in Underground Coal Mining ....................................................................... 202
RII20409 Certificate II in Underground Metalliferous Mining ......................................................... 209
RII20509 Certificate II in Resource Processing ................................................................................ 215
RII20609 Certificate II in Mining Field/Exploration Operations ...................................................... 222
RII20712 Certificate II in Civil Construction ..................................................................................... 227
RII20809 Certificate II in Bituminous Surfacing ............................................................................. 233
RII20909 Certificate II in Drilling Operations .................................................................................... 238
RII21009 Certificate II in Drilling Oil/Gas (Off shore) ........................................................................ 243
RII21109 Certificate II in Drilling Oil/Gas (On shore) ....................................................................... 248
RII30112 Certificate III in Surface Extraction Operations ................................................................. 253
RII30212 Certificate III in Underground Coal Operations ................................................................ 260
RII30311 Certificate III in Underground Metalliferous Mining ....................................................... 266
RII30411 Certificate III in Resource Processing ................................................................................ 273
RII30509 Certificate III in Mining Exploration .................................................................................. 282
RII30611 Certificate III in Small Mining Operations ........................................................................ 287
RII30709 Certificate III in Mine Emergency Response and Rescue ................................................. 293
RII30809 Certificate III in Civil Construction Plant Operations ...................................................... 298
RII30912 Certificate III in Civil Construction ..................................................................................... 304
RII31609 Certificate III in Trenchless Technology ........................................................................... 328
RII31209 Certificate III in Civil Foundations ...................................................................................... 334
RII31809 Certificate III in Drilling Operations .................................................................................... 340
RII31909 Certificate III in Drilling Oil/Gas (Off shore) ....................................................................... 346
RII32009 Certificate III in Drilling Oil/Gas (On shore) ........................................................................ 351
RII40109 Certificate IV in Surface Extraction Operations ................................................................. 356
RII40212 Certificate IV in Surface Coal Mining (Open Cut Examiner) ............................................ 363
RII40311 Certificate IV in Metalliferous Mining Operations (Underground) .................................. 369
RII40412 Certificate IV in Underground Coal Operations ................................................................. 375
RII40509 Certificate IV in Resource Processing ................................................................................ 381
RII40609 Certificate IV in Civil Construction Operations ................................................................. 387
RII40712 Certificate IV in Civil Construction Supervision ................................................................. 394
RII40809 Certificate IV in Civil Construction Design ....................................................................... 402
RII40909 Certificate IV in Drilling Operations .................................................................................... 409
RII41009 Certificate IV in Drilling Oil/Gas (Off shore) ....................................................................... 415
RII41109 Certificate IV in Drilling Oil/Gas (On shore) ....................................................................... 420

RIIBLA202B Support underground shotfiring operations.................................737
RIIBLA203B Conduct mobile mixing of explosives...........................................744
RIIBLA204A Store, handle and transport explosives in underground coal mines......754
RIIBLA205A Store, handle and transport explosives ...........................................765
RIIBLA301A Conduct surface shotfiring operations...........................................777
RIIBLA302A Conduct shotfiring operations in underground coal mines.............791
RIIBLA303A Conduct underground development shotfiring..................................807
RIIBLA304A Conduct underground production shotfiring....................................822
RIIBLA305A Conduct secondary blasting..........................................................837
RIIBLA306A Conduct accretion firing...............................................................849
RIIBLA307A Conduct blast survey .....................................................................858
RIIBLA401A Manage blasting operations..........................................................865
RIIBLA402A Monitor and control the effects of blasting on the environment........879
RIIBLA601A Design surface blasts ..................................................................889
RIIBLA602A Establish and maintain a blasting system .......................................900
RIICAR301A Rehabilitate exploration site ............................................................911
RIICAR302A Rehabilitate small mine site .........................................................920
RIICAR401A Supervise rehabilitation operations .................................................927
RIICBM201A Strip pile heads ...........................................................................936
RIICBM301A Maintain concrete bridges .........................................................944
RIICBM302A Install pre-cast girders .................................................................952
RIICBM303A Install pre-cast parapets ...............................................................961
RIICBM304A Operate a bridge inspection unit ...................................................970
RIICBM305A Install pre-cast concrete bridge decks ...........................................979
RIICBM306A Undertake concreting work on concrete bridges .........................988
RIICBM307A Construct formwork and false work on concrete bridges .............997
RIICBS201A Conduct tack coat spraying operations ........................................1008
RIICBS202A Hand spread asphalt .................................................................1017
RIICBS203A Safely handle bituminous materials .............................................1026
RIICBS204A Conduct aggregate spreader box operations ...............................1034
RIICBS205A Roll aggregate in sprayed sealing operations ..............................1043
RIICBS206A Conduct pavement sweeping operations ......................................1052
RIICBS207A Take samples of materials used in road surfacing .......................1062
RIICBS208A Conduct road maintenance operations ........................................1071
RIICBS301A Conduct profile planer operations ...............................................1081
RIICBS302A Conduct paver screeding operations .........................................1092
RIICBS303A Conduct materials transfer vehicle operations .............................1103
RIICBS304A Compact asphalt with rollers .......................................................1112
RIICBS305A Conduct asphalt paver operations ...............................................1121
RIICBS306A Conduct slurry sealing operations ..............................................1131
RIICBS307A Conduct bitumen sprayer operations ...........................................1140
RIICBS308A Load aggregate using a purpose built loader ...............................1152
RIICBS309A Conduct self-propelled aggregate spreader operations ................1162
RIICBS310A Conduct patching operations .....................................................1172
RIICBS311A Produce asphalt products ............................................................1181
RIICBS312A Conduct bitumen tanker operations .............................................1190
RIICBS401B Apply the principles of asphalt paving and compaction ................1200
RIICBS402B Apply the principles for the application of bituminous sprayed treatmen 1209
RIICBS403B Apply the principles for the application of polymer modified binder ....1220
RIICBS404B Apply the principles for the selection and use of bituminous emulsion....1230
RIICBS405A Apply the principles for the application of slurry surfacing ............1241
RIICBS406A Apply the principles of pavement profiling using a profiler ...........1252
RIICBS407A Apply the principles for the manufacture and delivery of hot mix asphalt1262
RIICBS408A Apply the principles for the manufacture of cold mix ..........................................................1273
RIICBS409A Apply the principles for the manufacture of polymer modified binder ... 1282
RIICBS410A Apply the principles for the manufacture of bituminous emulsion ...............1292
RIICBS411A Apply the principles for the manufacture of slurry surfacing .........................1302
RIICCM201A Carry out measurements and calculations .................................................................1312
RIICCM202A Identify, locate and protect underground services .....................................................1319
RIICCM203A Read and interpret plans and specifications ...............................................................1328
RIICCM204A Place and fix reinforcement materials ..........................................................................1335
RIICCM205A Carry out manual excavation ......................................................................................1344
RIICCM206A Support plant operations .............................................................................................1352
RIICCM207A Spread and compact materials manually ....................................................................1360
RIICCM208A Carry out basic levelling .............................................................................................1368
RIICCM209A Carry out concrete work ..............................................................................................1377
RIICCM210A Install trench support ..................................................................................................1387
RIICCM211A Erect and dismantle temporary fencing and gates .....................................................1395
RIICCM301A Construct and dismantle fences and gates ...............................................................1404
RIICCR401A Develop and maintain positive community relationships ...........................................1413
RIICCR501A Conduct sales in construction materials operations ................................................1424
RIICCR601A Manage customer relationships ..................................................................................1435
RIICFW301A Construct underpinning ..............................................................................................1445
RIICFW302A Install temporary and permanent rock anchors .........................................................1454
RIICFW303A Install primary ground support ..................................................................................1463
RIICFW304A Conduct pile driving operations ..................................................................................1473
RIICFW305A Conduct cast in-situ pilings operations .................................................................1483
RIICFW306A Direct pile driving operations .....................................................................................1492
RIICFW307A Direct cast in-situ piling operations ............................................................................1504
RIICOM201A Communicate in the workplace ..................................................................................1516
RIICOM301B Communicate information .........................................................................................1524
RIICOM302A Communicate workplace information .......................................................................1535
RIICPL301A Install water mains pipelines .......................................................................................1545
RIICPL302A Install stormwater systems ..........................................................................................1555
RIICPL303A Install sewer pipelines ..................................................................................................1564
RIICPL304A Install pre-cast gully pits ...............................................................................................1573
RIICPL305A Install pre-cast access chambers ..................................................................................1581
RIICPL401A Apply the principles for the installation of underground service using open excavation ..............................................................................................................................1589
RIICRC201A Repair potholes .............................................................................................................1602
RIICRC202A Install signs ..................................................................................................................1610
RIICRC203A Install sub-soil drainage ...............................................................................................1618
RIICRC204A Install and maintain roadside fixtures .........................................................................1626
RIICRC205A Install utility poles ........................................................................................................1636
RIICRC206A Install pre-cast concrete crash barriers .................................................................1644
RIICRC207A Install noise barriers ....................................................................................................1652
RIICRC208A Lay pipes ....................................................................................................................1660
RIICRC209A Lay reinforced concrete box culverts ........................................................................1670
RIICRC301A Maintain drainage systems ..........................................................................................1679
RIICRC302A Place and form concrete kerb, channel and fixtures ................................................1688
RIICRC303A Lay pavers ....................................................................................................................1698
RIICRC304A Maintain sealed roads ................................................................................................1707
RIICRC305A Conduct road construction paver screeding operations .............................................1716
RIICRC306A Conduct earthworks ......................................................................................................1726
RIICRC307A Conduct road pavement construction ..........................................................................1735
RIICRC308A Conduct paver operations ...........................................................................................1745
RIICRC309A Conduct stabiliser operations ................................................................. 1754
RIICRC310A Construct and maintain roads ................................................................. 1764
RIICRC311 Conduct concrete road paver operations ................................................. 1774
RIICRC312 Setup and maintain concrete paver stringlines ....................................... 1782
RIICRC313 Conduct concrete road curing and texturing operations ......................... 1790
RIICRC314 Handle concrete materials .................................................................. 1798
RIICRC315 Use concreting materials and equipment ............................................... 1807
RIICRC316 Place and compact concrete .................................................................. 1815
RIICRC317 Finish concrete pavements ................................................................... 1825
RIICRC318 Cure Concrete ....................................................................................... 1834
RIICRC319 Saw and cut concrete pavements to initiate planned cracks ................. 1843
RIICRC320 Seal concrete pavements ...................................................................... 1851
RIICRC321 Use automated paving guidance systems .............................................. 1859
RIICRC322 Receive, check and record concrete deliveries ...................................... 1867
RIICRC323 Insert tie bars in fresh concrete .............................................................. 1875
RIICRC401A Apply the principles of flexible pavement construction ...................... 1883
RIICRC402A Apply the principles of rigid pavement construction ......................... 1895
RIICRC403A Apply the principles of the stabilisation of materials ......................... 1907
RIICRC404A Inspect and report on pavement condition ........................................... 1918
RIICRC405A Carry out pavement condition measurement ......................................... 1930
RIICRC406B Apply the principles of pavement maintenance .................................... 1939
RIICRM201A Escort mobile road marking operations .............................................. 1950
RIICRM202A Handle and store road marking materials .......................................... 1959
RIICRM203A Conduct pedestrian road marking operations ..................................... 1967
RIICRM204A Prepare surface for road marking ....................................................... 1977
RIICRM205A Conduct road marking measuring operations ..................................... 1986
RIICRM206A Conduct airless and atomised spraying operations ............................. 1994
RIICRM207A Install raised pavement markers ......................................................... 2003
RIICRM301A Conduct ride on road marking operations .......................................... 2012
RIICRM302A Conduct long line road marking operations ......................................... 2022
RIICRM303A Conduct thermo plastic road marking operations ............................. 2032
RIICSG401A Apply the principles of civil concrete structures construction ............. 2041
RIICSG402A Apply the principles of civil steel structures construction ................. 2053
RIICSG403A Apply the principles of civil timber structures construction ................. 2064
RIICSG404A Apply the principles of civil masonry, crib and gabion structure..... 2075
construction........................................................................................................ 2075
RIICSG405A Carry out inspections of civil structures ............................................... 2086
RIICSG406A Apply principles of maintenance of civil structures ......................... 2099
RIICTB201A Maintain timber bridges ................................................................. 2111
RIICTB202A Apply bridge durability treatment ...................................................... 2120
RIICTB203A Produce drawings and sketches ......................................................... 2131
RIICTB301A Undertake visual inspection ................................................................. 2139
RIICTB302A Install temporary support members .................................................... 2147
RIICTB303A Erect a temporary modular support system (bailey) on an existing bridge 2155
RIICTB304A Install or replace sub-structure members ............................................. 2165
RIICTB305A Install or replace super-structure members .......................................... 2175
RIICTB306A Splice and connect timber members .................................................... 2186
RIICTB307A Assemble a temporary modular bridge ............................................... 2196
RIICTB308A Install or replace truss members .......................................................... 2206
RIICTB309A Construct, maintain and remove coffer dams .................................... 2214
RIICTB310A Construct specialised timber deck systems ........................................ 2223
RIICTC301A Install tunnelling constructions services ............................................. 2232
RIICTC302A Line tunnel ......................................................................................... 2240
RIICTC303A Excavate tunnel by machine .............................................................. 2249
RIICTC304A Muck out tunnel earthworks ............................................................... 2258
RIICTC305A Construct portals ................................................................................. 2266
RIICTC401A Apply the principles of tunnel construction ......................................... 2275
RIICTT301A Conduct fluid assisted directional boring ............................................. 2286
RIICTT302A Conduct impact moling, ramming and augering .............................. 2296
RIICTT303A Control micro tunnelling and pipe-jacking ......................................... 2306
RIICTT304A Undertake on-line replacement for existing pipeline systems ........... 2316
RIICTT305A Undertake localised repair and sealing of existing pipeline systems ..... 2326
RIICTT306A Install cure in-place linings for existing pipeline systems .................. 2336
RIICTT307A Spray linings for existing pipeline systems ......................................... 2346
RIICTT308A Install close-fit linings for existing pipeline systems .......................... 2356
RIICTT309A Install slip lining in existing pipeline systems .................................... 2366
RIICTT310A Renovate large diameter pipes and chambers .................................... 2376
RIICTT401A Apply the principles for the installation of underground services using trenchless technology ................................................................. 2385
RIICTT402A Apply the principles for the repair and rehabilitation of underground services using trenchless technology ................................................................. 2398
RIICWD501A Prepare detailed design of foundations ............................................. 2411
RIICWD502A Prepare detailed design of lighting .................................................... 2423
RIICWD503A Prepare work zone traffic management plan ..................................... 2435
RIICWD504A Prepare detailed design of environmental controls .......................... 2447
RIICWD505A Prepare detailed design of landscaping ............................................. 2459
RIICWD506A Prepare detailed design of canals ..................................................... 2471
RIICWD507A Prepare detailed geotechnical design .............................................. 2483
RIICWD508A Prepare detailed design of rural roads .............................................. 2495
RIICWD509A Prepare detailed design of urban roads ............................................ 2507
RIICWD510A Prepare detailed design of busways ................................................... 2519
RIICWD511A Prepare detailed design of sub-divisions .......................................... 2531
RIICWD512A Prepare detailed design of motorways and interchanges .................. 2543
RIICWD513A Prepare detailed design of rail civil infrastructure ............................ 2555
RIICWD514A Prepare detailed design of dams ....................................................... 2567
RIICWD515A Prepare detailed design of airfield civil works .................................. 2579
RIICWD516A Prepare detailed design of bicycle ways ............................................ 2591
RIICWD517A Prepare detailed design of industrial hardstands .............................. 2603
RIICWD518A Prepare detailed design of open car parks ....................................... 2615
RIICWD519A Prepare detailed design of inter modal facilities civil works .......... 2627
RIICWD520A Prepare detailed design of rigid pavements ..................................... 2639
RIICWD521A Prepare detailed design of flexible pavements ................................ 2651
RIICWD522A Prepare stabilised material mix design ............................................ 2663
RIICWD523A Prepare asphalt mix design ............................................................. 2675
RIICWD524B Prepare design of sprayed seal surfacing ....................................... 2687
RIICWD525B Select pavement surfacing .............................................................. 2699
RIICWD526A Prepare detailed traffic analysis ....................................................... 2711
RIICWD527A Prepare detailed design of traffic signals ......................................... 2723
RIICWD528A Prepare detailed design of traffic management systems .................. 2735
RIICWD529A Prepare detailed design of underground services ............................ 2747
RIICWD530A Prepare detailed design of surface drainage ..................................... 2759
RIICWD531A Prepare detailed design of subsurface drainage ............................... 2771
RIICWD532A Prepare detailed design of tunnels .................................................... 2783
RIICWD533A Prepare detailed design of civil concrete structures .......................... 2795
RIICWD534A Prepare detailed design of civil steel structures ................................ 2807
RIICWD535A Prepare detailed design of civil timber structures ............................ 2819
RIICWD536A Prepare detailed design of civil masonry, crib and gabion structures..................3231
RIICWD537A Prepare detailed design of marine structures civil works.................................3243
RIICWD601A Manage the civil works design process..........................................................3285
RIICWM401B Supervise civil works .....................................................................................2866
RIICWM402A Supervise civil works contractors.................................................................2877
RIICWM501A Implement civil construction plan.................................................................2888
RIICWM502A Implement civil works maintenance program................................................3200
RIICWM503A Prepare civil works cost estimate ..................................................................2912
RIICWM504A Prepare civil works bill of quantities ..............................................................2921
RIICWM505A Prepare civil works schedule of rates ............................................................2931
RIICWM601A Establish civil constructions plans ...............................................................2942
RIICWM602A Establish civil works maintenance programs ...............................................2955
RIIDES301 Inspect, test and maintain diesel engine systems and their ancillary systems........2966
RIIDES302 Inspect, test and maintain joints on diesel engine systems...............................2978
RIIDES303 Inspect, test and maintain cooling systems on diesel engine systems................2989
RIIDES304 Inspect, test and maintain inlet systems on diesel engine systems .................2999
RIIDES305 Inspect, test and maintain exhaust systems on diesel engine systems .............3012
RIIDES306 Inspect, test and maintain safety shutdown systems on diesel engine systems...3025
RIIDES307 Test, determine the cause and rectify excessive emission levels on diesel engine systems .................................................................................................3038

RIINHB211A Assist mud rotary drilling ...................................................................... 5190
RIINHB213A Assist cable tool drilling ....................................................................... 5200
RIINHB216A Assist underground in-seam directional drilling .................................... 5209
RIINHB217A Assist horizontal direction drilling ......................................................... 5216
RIINHB218A Assist grouting or cementing operations .............................................. 5225
RIINHB301A Set up and prepare for drilling operations .............................................. 5232
RIINHB302A Conduct reaming ................................................................................ 5241
RIINHB303A Install product pipe .............................................................................. 5249
RIINHB304B Conduct air drilling ................................................................................ 5257
RIINHB305A Conduct continuous flight auger drilling ............................................... 5271
RIINHB306A Conduct large diameter auger drilling ................................................... 5283
RIINHB307B Conduct conventional core drilling ........................................................ 5293
RIINHB308A Conduct wireline core drilling ............................................................... 5303
RIINHB309A Conduct guided boring ......................................................................... 5313
RIINHB310A Conduct surface directional drilling ...................................................... 5322
RIINHB311A Conduct mud rotary drilling .................................................................. 5331
RIINHB312A Conduct raise boring ............................................................................ 5341
RIINHB313A Conduct cable tool drilling ................................................................... 5354
RIINHB315A Conduct top-hole hammer drilling ....................................................... 5363
RIINHB316A Conduct underground in-seam directional drilling ............................. 5373
RIINHB317A Install underground in-seam directional drilling standpipes ............... 5383
RIINHB318A Install and operate water and gas control equipment..................5393
RIINHB319A Install de-watering conduit and gas drainage equipment..........5404
RIINHB320A Construct monitoring bores.............................................5413
RIINHB325A Construct and complete single aquifer production bores........5423
RIINHB322A Construct multiple aquifer production bores........................5437
RIINHB323A Conduct horizontal directional drilling................................5450
RIINHB324B Carry out grouting or cementing operations..........................5460
RIINHB401A Plan and supervise the mobilisation of equipment, crew and materials...5469
RIINHB402A Supervise mineral exploration drilling operations................5478
RIINHB403A Supervise geotechnical drilling operations..........................5488
RIINHB404A Supervise seismic drilling operations....................................5499
RIINHB405A Supervise water well drilling operations...............................5510
RIINHB406A Supervise foundation drilling operations..............................5521
RIINHB407A Supervise horizontal directional drilling operations...............5532
RIINHB408A Supervise environmental drilling operations..........................5543
RIINHB409A Supervise mineral production and development drilling operations..5555
RIINHB410A Supervise surface directional drilling operations....................5568
RIINHB411A Construct artesian (flowing) aquifer production bores..............5579
RIINHB412B Construct geothermal wells.................................................5594
RIINHB413A Supervise underground in-seam directional drilling operations....5603
RIINHB501A Plan drilling........................................................................5615
RIIOGD201A Assist in maintaining rig safety and emergency procedures........5626
RIIOGD202A Carry out equipment and basic rig maintenance.......................5638
RIIOGD203A Prepare and operate drilling fluid systems............................5649
RIIOGD204A Perform rig floor operations................................................5658
RIIOGD205A Support blow out prevention operations..................................5671
RIIOGD206A Assist with coal seam gas control.........................................5679
RIIOGD209A Operate and maintain ancillary equipment.............................5687
RIIOGD301A Conduct and maintain derrick operations...............................5698
RIIOGD302A Trip casing........................................................................5710
RIIOGD303A Trip pipe.............................................................................5720
RIIOGD304A Apply effective coal seam gas control practices......................5729
RIIOGD305A Apply blow out prevention operational procedures................5740
RIIOGD401A Rig up, conduct pre-spud operations and rig down....................5753
RIIOGD402A Participate in nipping-up and pressure test.............................5765
RIIOGD403A Conduct drilling operations..................................................5773
RIIOGD404A Coordinate air drilling operations.........................................5784
RIIOGD405A Carry out well control and blow out prevention......................5793
RIIOGD406A Shut down rig......................................................................5804
RIIOGD501A Manage rig operations.........................................................5811
RIIOGD502A Plan and evaluate rig operations...........................................5820
RIIOGD503A Oversee drilling operations..................................................5828
RIIOGD504A Manage drilling operations..................................................5839
RIIOGD505A Manage drilling induction and orientation...............................5850
RIIOGD506A Manage rig move and camp move.........................................5859
RIIOGD507A Manage and monitor rig-up and rig-up to spud operations.........5867
RIIOGD508A Manage well completion and abandonment.............................5877
RIIOGD601A Manage multiple drilling operations.....................................5885
RIIOGF201A Carry out deck operations....................................................5895
RIIOGF202A Assist in the transfer of passengers and freight during helicopter operations5905
RIIOGF203A Contribute to the control of offshore emergencies....................5916
RIIOGF301A Monitor, operate and maintain mud pits and equipment..............5925
RIIOGF302A Operate drilling fluids and mud pits......................................5934
RIIOGN201A Carry out rig lease operations.................................................5944
RIIOGN302A Operate mud pumps ..........................................................5952
RIIOGN303A Operate mud systems ..........................................................5959
RIIOHS201A Work safely and follow OHS policies and procedures ..........5968
RIIOHS202A Enter and work in confined spaces ...................................5979
RIIOHS203A Maintain amenities ............................................................5990
RIIOHS204A Work safely at heights .........................................................5997
RIIOHS205A Control traffic with stop-slow bat .....................................6006
RIIOHS301A Conduct safety and health investigations ..............................6016
RIIOHS302A Implement traffic management plan ...................................6026
RIIOHS401A Supervise work in confined spaces ....................................6036
RIIOHS402A Examine and maintain mine safety .....................................6047
RIIOHS403A Apply the mine occupational health and safety management plan 6054
RIIOHS404A Implement and monitor health and hygiene management systems 6067
RIIOHS405A Maintain standard procedures and safe working practices ....6082
RIIOHS601A Establish and maintain the OHS management system ..........6090
RIIOHS602A Incorporate health and hygiene factors into mine management 6104
RIIPBE201A Conduct aeration process ......................................................6120
RIIPBE202A Conduct digestion process ....................................................6129

RIIPBE302A Conduct bacterial oxidation ...............................................6181
RIIPBE303B Conduct filtering process .....................................................6192
RIIPBE304B Conduct heavy media separation ........................................6202
RIIPBE305A Conduct high tension separation .........................................6212
RIIPBE306A Conduct leaching process ...................................................6221
RIIPBE307A Conduct pressure oxidation ...............................................6232
RIIPBE308B Conduct thickening and clarifying process .........................6243
RIIPBE309B Conduct wet gravity separation .........................................6253
RIIPBE310B Conduct flotation process ....................................................6263
RIIPBE311B Conduct magnetic separation ...............................................6273
RIIPBP202A Conduct air cleaning activities .............................................6283
RIIPBP301A Process lime products ..........................................................6294
RIIPBP302A Control operations in acid plant .........................................6306
RIIPEO201B Conduct conveyor operations ..............................................6314
RIIPEO202A Provide deck support for conveyor-car high wall mining operations 6325
RIIPEO203B Conduct stacker operations ................................................6333
RIIPEO204A Conduct shore side mooring operations ...............................6340
RIIPEO205A Conduct ship loading operations ........................................6348
RIIPEO206A Lay and recover cables and hoses .......................................6356
RIIPEO207A Coordinate conveyor system shift .......................................6363
RIIPEO208A Extend, retract and maintain conveyor componentry ............6371
RIIPEO301A Conduct conveyor-car high wall mining operations ...............6379
RIIPEO302 Operate and monitor ore car dumpers ..................................6389
RIIPGP201A Conduct pump operations ....................................................6397
RIIPGP202A Handle reagents .................................................................6405
RIIPGP203A Operate compressors ............................................................6414
RIIPGP204A Carry out bore-field operations ..........................................6422
RIIPGP205A Handle, store and use cyanide ............................................6430
RIIPGP301A Conduct drying activities ......................................................6440
RIIPGP302A Monitor and operate auxiliary plant and equipment ...............6450
RIIPHA201A Operate raw material feed systems .......................................................... 6461
RIIPHA301A Conduct milling/grinding ........................................................................ 6468
RIIPHA302A Operate and monitor filter processes ...................................................... 6477
RIIPHA303A Operate agglomeration circuit ................................................................. 6487
RIIPRE201A Conduct solvent extraction ...................................................................... 6497
RIIPRE202A Prepare and carry out electrolytic cleaning process ................................ 6507
RIIPRE203A Prepare for sintering activities .................................................................. 6515
RIIPRE204A Sinter materials ......................................................................................... 6522
RIIPRE301A Conduct electrowinning/electrorefining operations ............................... 6531
RIIPRE302A Conduct elution processes ....................................................................... 6542
RIIPRE303A Conduct gold room operations ................................................................ 6552
RIIPRE304A Monitor casting quality ............................................................................ 6563
RIIPPM501A Implement, monitor, rectify and report on contracts ............................. 6573
RIIPRO201A Conduct crushing operations .................................................................... 6582
RIIPRO202A Conduct screening and conveying operations ......................................... 6594
RIIPRO203A Operate programmable logic control systems ......................................... 6603
RIIPRO204A Bulk package and store product ................................................................ 6611
RIIPRO205A Conduct blending plant operations .......................................................... 6621
RIIPRO301C Conduct crushing and screening plant operations ............................... 6630
RIIPRO302A Perform process control room operations .............................................. 6640
RIIPRO303A Conduct sand wash plant operations ...................................................... 6651
RIIPRO401A Supervise processing operations ............................................................. 6660
RIIPRO402A Supervise recycled materials operations ............................................... 6667
RIIPRO501A Implement site processing plant operations ............................................. 6674
RIIPRO502A Develop, implement and maintain process control systems .................. 6684
RIIPRO601A Design processing plant ......................................................................... 6696
RIIPSM201A Tap furnaces ......................................................................................... 6706
RIIPSM202A Prepare for pelletising activities ............................................................ 6716
RIIPSM203A Produce pellets ...................................................................................... 6725
RIIPSM301A Cast a blast furnace ............................................................................... 6733
RIIPSM302A Cast ingots ............................................................................................ 6741
RIIPSM303A Operate a blast furnace ......................................................................... 6751
RIIPSM304A Operate furnaces ................................................................................... 6758
RIIPSM305A Operate converters ................................................................................. 6766
RIIPSM306A Supply molten metal and additives to furnaces ..................................... 6775
RIIPSM307A Control molten metal in holding furnace/vessel .................................... 6784
RIIPSM308A Monitor and maintain furnace gas efficiency ......................................... 6794
RIIPSM309A Monitor and maintain flue gas efficiency ............................................... 6805
RIIQUA201A Maintain and monitor site quality standards .......................................... 6814
RIIQUA401A Apply a quality management system on site ........................................ 6821
RIIQUA501A Implement, monitor and develop quality management plans ............... 6829
RIIQUA601A Establish and maintain a quality system ................................................. 6841
RIIRA1401A Apply and monitor mine services and infrastructure systems ............... 6853
RIIRA1402A Apply and monitor site plant and resource management plan ............... 6864
RIIRA1501B Implement mine transport systems and production equipment ............. 6873
RIIRA1502A Implement site plant and resource management plan ............................. 6884
RIIRA1503B Implement site services and infrastructure systems ................................ 6893
RIIRA1504A Select and install surface plant and equipment ........................................ 6905
RIIRA1505A Implement the surface mine mechanical plant management plan ........ 6917
RIIRA1506A Implement, monitor, rectify and report on inventory control system ....... 6928
RIIRA1507A Implement the underground coal mine mechanical plant management plan 6937
RIIRA1508A Implement mine services systems ............................................................ 6949
RIIRA1509A Implement mine fixed plant and infrastructure systems ........................ 6960
RIIRAI510A Implement, monitor, rectify and report on interfaces between electrical and mechanical componentry .................................................................6972
RIIRAI601A Establish and maintain the site infrastructure and fixed plant systems ....6980
RIIRAI602A Establish and maintain mine mechanical plant, services and infrastructure systems ........................................................................6993
RIIRAI603A Establish and maintain mine transport systems and production equipment7006
RIIRAI604A Establish and maintain mine services and infrastructure systems ..........7019
RIIRAI605A Establish and maintain an underground mine mechanical plant management system ...........................................................................7033
RIIRAI606A Establish and maintain mine closure management systems ..................7046
RIIRAI607A Establish quarry operations ................................................................7060
RIIRAI608A Establish quarry development ................................................................7069
RIIRAI609A Establish and maintain electrical installations, reticulation and protection systems .................................................................................7079
RIIRAI610A Establish and maintain mechanical standard and engineering practices for transport and production equipment ................................................................7092
RIIRAI611A Establish and maintain a surface mine mechanical plant management system7104
RIIRAI612A Establish and maintain underground product haulage and transport systems7117
RIIRIS201B Conduct local risk control ..................................................................7130
RIIRIS301B Apply risk management processes ..........................................................7138
RIIRIS401A Apply site risk management system .........................................................7147
RIIRIS402A Carry out the risk management processes ..................................................7159
RIIRIS501A Implement and maintain management system to control risk ..................7171
RIIRIS601A Establish and maintain the risk management system ..............................7183
RIISAM201A Handle resources and infrastructure materials and safely dispose of non toxic materials ..............................................................................7196
RIISAM202A Isolate and access plant .......................................................................7206
RIISAM203B Use hand and power tools ..................................................................7215
RIISAM204B Operate small plant and equipment .......................................................7224
RIISAM205A Cut, weld and bend materials .................................................................7235
RIISAM207A Apply operational maintenance skills ....................................................7245
RIISAM208A Perform plant operational maintenance ..................................................7255
RIISAM209A Carry out operational maintenance ........................................................7262
RIISAM210A Remove and fit wheel assemblies ..........................................................7273
RIISAM211B Remove, repair and refit tyres and tubes ..............................................7283
RIISAM212A Service mine plant and equipment .........................................................7294
RIISAM213A Position and set up mobile lighting .........................................................7302
RIISAM214A Provide support to electrical tradesperson ..............................................7310
RIISAM215A Carry out drilling industry operational maintenance ..............................7317
RIISAM301A Test operational functions of vehicles and equipment ............................7326
RIISAM302A Service and handover plant and machines ............................................7333
RIISAM303A Shut down dredge for operator maintenance ........................................7344
RIISAM304A Install, commission and maintain major conveyor equipment and systems7352
RIISAM305A Repair and splice conveyor belting .........................................................7361
RIISAM306A Service and maintain conveyors, feeders and hoppers ............................7368
RIISAM307A Service and maintain crushers ...............................................................7379
RIISAM308A Service and maintain screens ...............................................................7389
RIISAM309A Service and maintain pumps .................................................................7399
RIISAM310A Install and commission plant, machinery and services ............................7409
RIISAM311A Maintain winder equipment ..................................................................7420
RIISAM312A Inspect and maintain shafts and structures .............................................7429
RIISAM313A Monitor, inspect and service ropes and attachments ..............................7437
RIISAM314A Manage oil and gas drilling equipment maintenance .............................7447
RIISAM401A Apply site plant, equipment and infrastructure maintenance management plan........................................................................................................7455
RIISAM402A Supervise operation of electrical equipment and installations..........................................................7464
RIISAM403A Commission/recommission plant ........................................................................................................7475
RIISAM501A Implement and maintain the site plant, equipment and infrastructure maintenance plan ........................................................................................................7483
RIISAM502B Manage general drilling equipment maintenance ........................................................................7493
RIISAM601A Establish and maintain plant, equipment and infrastructure maintenance system ...........................................7502
RIISAM602A Establish and maintain maintenance management system for mechanical plant and equipment ........................................................................................................7514
RIISDM501A Conduct mine surveying operations .................................................................................................7524
RIISRM501B Blend stockpile materials ........................................................................................................7538
RIISRM502B Conduct stockpile reclaiming operations ......................................................................................7547
RIISRM601A Establish and maintain the stockpile management system ..............................................................7581
RIIISTD201A Read and interpret maps ........................................................................................................7610
RIIISTD202A Collect routine site samples ........................................................................................................7617
RIIISTD301A Take environmental samples and measurements ........................................................................7628
RIIISTD302A Process data and maintain accurate records ..............................................................................7636
RIIUMM201A Install ground support ................................................................................................................7643
RIIUMM202A Install and maintain vent ........................................................................................................7650
RIIUMM203A Prepare and perform manual scaling operations .............................................................................7659
RIIUMM301A Conduct wet filling activities ..........................................................................................................7667
RIIUMM302A Install sets ......................................................................................................................................7674
RIIUMM303A Conduct hand held mining ...........................................................................................................7681
RIIUMM304A Construct and maintain underground roads ................................................................................7690
RIIUMM305A Install and remove a secondary fan ............................................................................................7700
RIIUMM306A Conduct mechanical scaling ........................................................................................................7708
RIIUMM307A Maintain underground stockpiles .................................................................................................7716
RIIUND201A Install, maintain and recover reticulation systems ............................................................................7726
RIIUND202A Operate from elevated work platform underground ....................................................................7735
RIIUND204A Refuel vehicles/machines underground ..........................................................................................7746
RIIUND205A Respond to a workforce incident ................................................................................................7754
RIIUND206A Install hand held underground ground support .............................................................................7762
RIIUND207A Conduct underground lifting operations .........................................................................................7770
RIIUND208A Conduct skip operations ................................................................................................................7777
RIIUND209A Operate automated winder ..............................................................................................................7788
RIIUND301A Operate manual winder ................................................................................................................7800
RIIUND302A Conduct cage operations .................................................................................................................7810
RIIUND303A Operate winder for shaft sinking ....................................................................................................7819
RIIUND304A Recover equipment .........................................................................................................................7829
RIIUND305A Recover underground equipment ................................................................................................7838
RIIUND306A Conduct line of sight remote operations .........................................................................................7846
RIIUND307A Conduct tele-remote operations ....................................................................................................7856
RIIUND308A Conduct control room operations ................................................................................................7865
RIIUND309A Conduct mechanical underground ground support drilling and installation7872
RIIUND310 Apply shot-crete underground .........................................................................................................7881
RIIUND401B Apply and monitor the ventilation management plan ....................................................................7888

<th>Comments</th>
</tr>
</thead>
</table>
| 3.2     | 25 May 2013  | Technical issue with imported units not transferred into each qualification in version 3.1 where corrected.  
ISC updates – no code changes  
RII40412 Certificate IV in Underground Coal Operations. Missing elective RIIMCU501A Implement the spontaneous combustion management plan  
RII40212 Certificate IV in Surface Coal Mining (Open Cut Examiner). Flexibility Policy correction with 1 too many imports identified making achieving packaging rule unattainable  
Imported Units  
Update of High Risk Work Licence units  
Update of PUAFIR and PUASAR units  
Removal of orphan units not identified as elective, prerequisite or corequisite in the Training Package |
| 3.1     | 15 February 2013 | ISC updates – no code changes  
RIINHB211A Assist mud rotary drilling  
**Imported Units**  
30 units replaced with current equivalent units of competency  
UEGNSG202A Construct and lay distribution pipelines to UEGNSG202B Construct and lay distribution pipelines  
FPPSTM440A Troubleshoot and rectify boiler plant systems to FPPSTM440A Troubleshoot and rectify boiler plant systems  
UEPOPS316A Operate and monitor boiler steam/water to UEPOPS316B Operate and monitor boiler steam/water  
MSAPMPER200B Work in accordance with an issued permit to MSAPMPER200C Work in accordance with an issued permit  
PMLOHS301B Work safely with instruments that emit ionising radiation to MSL943001A Work safely with instruments that emit ionizing radiation.  
BSBWOR203A Work effectively with others to BSBWOR203B Work effectively with others

**New Skill Set**

Skill Set Supervision of Indigenous Employees

**Other New Units of Competency**

RIICOM302A Communicate workplace information
RIIENV302A Apply environmentally sustainable work practices
RIIFIA401A Manage financial records
RIILAT401A Provide leadership in the supervision of Indigenous employees
RIIMPO331A Conduct operations with stockpile dozer
RIIMPO332A Conduct operations with skid steer loader
RIIVEH307A Operate heavy rigid vehicle

Additional imported units:
NWP331B Inspect conduit and report on condition and features (for operators)
NWP440A Supervise conduit inspection and reporting (for supervisors and managers)

**ISC Upgrades – Updated Units of Competency – codes changed to Version B**

RIIBEF201B Plan and organise work
RIIBLA202B Support underground shotfiring operations
RIICOM301B Communicate information
RIIEGS202B Conduct field work
RIIERR401B Apply and monitor surface operations emergency preparedness and response procedures
RIIGOV401B Apply, monitor and report on compliance systems
RIIHAN301B Operate elevating work platform
RIIMEX203B Break oversize rock
RIIMEX302B Assess ground conditions
RIIMEX404B Apply and monitor systems for stable mining
RIIMPO301B Conduct hydraulic excavator operations
RIIMPO302B Conduct hydraulic shovel operations
RIIMPO304B Conduct wheel loader operations

Import rule clarified to specify AQF level of units able to be imported:

Amendment to packaging rules to allow for units of competency from accredited courses to be imported:

Imported unit text added: *or accredited course*

*Units of competency chosen must*

- *be relevant to the competency requirements for the job function*

- *reflect the competency profile for the occupation at the enterprise level*

- *in the case of accredited course units of competency, not duplicate in part or in whole any unit from a Training Package.*

Code changed to RII20712

Flexibility in packaging rules policy response:
Successful completion of sixteen (16) units of competency made up of:
- ten (10) core units (not 13), and
- six (6) Group A elective units (not 3) of which:
  - at least two (3) must come from the electives listed below
  - up to three (3) units (not 1) may come from Certificate II or Certificate III level from this, or any other Training Package
- up to two (2) units may come from an accredited course at AQF level I.

</tbody>
</table>

Core and Elective units modified in accordance with packaging rules policy.

Qualifications removed and incorporated in this qualification:

- RII31009 Certificate III in Bituminous Surfacing
- RII31109 Certificate III in Bridge Construction and Maintenance
- RII31309 Certificate III in Pipe Laying
- RII31409 Certificate III in Road Construction and Maintenance
- RII31509 Certificate III in Road Marking

Add RIIMPO322A Conduct operations with skid steer loader.

Introduction to the Industry

The resources and infrastructure industry includes operations in:

- Metalliferous Mining (including Mineral Exploration and Metalliferous Processing)
- Coal Mining (including Coal Handling and Preparation)
- Drilling
- Quarrying (extractive industries)
- Civil Construction

The Resources and Infrastructure Industry contributes 39% of the nation’s exports and 8% of GDP.

The National Resources Sector Employment Taskforce Resourcing the Future Report released in July 2010, reported that the major resources projects underway, or likely to be sanctioned before the end of 2015, will create numerous jobs but have different requirements in the construction and operational phases. Taskforce analysis shows:

- construction jobs on new projects could peak at 45,000 in 2012 and 2013
- employment growth in mining operations is expected to be 4.9 per cent per annum over the next five years, creating around 61,500 new jobs by 2015

A brief overview of each industry sector is provided below. For further information refer to the SkillsDMC Environmental Scan available at www.skillsdmc.com.au.

Metalliferous Mining Industry

The Metalliferous Mining sector includes metals, industrial minerals and semiprecious stones and covers the following activities:

- open cut mining
- underground mining
- mine development
- processing - primary/secondary/tertiary
- haulage and transport on site
- site rehabilitation
- blasting
- production and development drilling.

Metallic minerals include: bauxite, iron ore, lead concentrate, mineral sands, beneficiated ilmenite, ilmenite concentrate, leucoxene concentrate, rutile concentrate, zircon concentrate, zinc concentrate and zinc-lead concentrate.

Australia is the world's leading producer of bauxite and alumina, diamonds (by volume), ilmenite, rutile and zircon. It is the second largest producer of iron ore, the third largest producer of aluminium, iron ore, nickel and gold. Australia's volume of export of these commodities overseas means it has the largest bulk commodity mineral shipping task of any nation in the world.

Significant infrastructure development has occurred in the sector. Since 1967, the industry has built 25 towns, 12 ports, 25 airfields and over 2000 kilometres of rail line as well as additional port bulk handling infrastructure in many existing ports. The industry is often the sole provider of social infrastructure - health, education and welfare - in remote areas of Australia; infrastructure that often endures past the completion of mining activities.
The Australian Mining Industry is heavily regulated at both federal and state/territory level. State/territory Governments are responsible for regulatory issues such as occupational health and safety, and environmental concerns. Activities for such issues are generally administered by the state/territory's Department of Mineral Resources (or its equivalent). The mining industry is also open to native title land claims under the Native Title Act 1994 (commonly known as Mabo legislation). The Act recognises that Indigenous people have rights to the land which they occupied prior to and continuously since European settlement in 1788.

Regulations governing environmental protection (including taxes, levies, fines and licences) have increased in recent years; they will continue to increase and, significantly, do so in the immediate future. The increased emphasis on environmental issues has raised the importance of remediation work for the mining and minerals processing industry.

Despite the high level of expenditure and commitment to training for workers, the industry will experience skill shortages due to rapid advancement of technology and areas requiring specialised and experienced workers. The mining and minerals processing sector relies on a higher proportion of highly skilled workers than that of low skilled workers, and a lesser amount on middle skill level workers but is experiencing an overall decline in the numbers within the workforce and although there is currently a reliance on highly skilled workers, there are changes occurring within the employment structure.

The major factors contributing to skill shortages appear to be:
- insufficient numbers in training; low awareness of the sector at both a secondary and tertiary level
- attrition from the ranks of skilled workers
- ageing workforce
- rapid changes in the breadth of the skills required in what is a rapidly changing technological environment
- low level of industry involvement/support due to competitive pressures
- lack of RTO capacity to provide training to fully meet the needs of the industry
- misperception of the working environment in mining, remote locations
- lack of addressing the skills gap within the sector
- lack of access to global skills supply.

**Coal Mining Industry**

Coal is mined in all Australian States.

In the Eastern States coal is dominant amongst the export industries. Australia's high-quality, low sulphur coals attract overseas buyers who are conscious of the need to minimise environmental impacts.

The Australian Coal Association has reported that Australia's black coal exports were worth almost $A43 billion in 2010, second only to iron ore ($A49 billion) as Australia's biggest export earner for that year. Black coal represented 15% of the total value of Australia's exports of goods and services in 2010. This represents 31% of the world total coal exports. Queensland is the major producer of coal. In NSW the major mining activity is black coal. The upper Hunter Valley supplies 80 per cent of New South Wales's coal. A feature of the NSW mining industry is its downstream minerals processing. Coal meets up with iron ore at Port Kembla where it becomes iron and steel at one of the largest metal producing facilities in the country. NSW's coal also supplies the electricity for one of the nation's largest aluminium smelters at Tomago in the Hunter Valley.
Victoria’s major mineral assets are its reserves of brown coal. The total brown coal economic demonstrated resource is the state's Latrobe Valley is estimated to be 380,000 million tonnes. Power supplies from the Latrobe Valley and Anglesea deposits play a major part in the national mineral industry picture. Although the demand for most commodities is increasing, global consolidation and fluctuating commodity prices and demand have meant the mining industry has focussed on improving efficiency and safety operations and moved towards increasing diversity and integration worldwide. Australia’s mineral industries are dealing with new challenges in environmental protection and land rights issues and mining companies have responded positively.

**Drilling Industry**

Drilling involves the use of heavy machinery to break through the earth’s surface. It is an essential industry. Drilling is carried out in every State and Territory of Australia, including the Antarctic, and in the seas surrounding it. The industry has the following sectors:

- blast hole drilling
- environmental drilling
- foundation/construction drilling (including piling)
- geotechnical drilling
- mineral exploration
- mineral production
- oil, gas and geothermal, off shore
- oil, gas and geothermal, on shore
- raiseboring
- seismic
- trenchless technology (including horizontal directional drilling)
- water well drilling.

The drilling industry has its own identity and supports the activities of a range of other industries. Drilling results define mineral reserves for future mining prospects, and play a key role in the extraction process. Drillers access ground water supply for commercial, domestic, stock, irrigation or town water supply use. Water well drilling provides water supply for most of rural and regional Australia, and significant urban water (for example, 78% of Perth’s water, and 92% of Darwin’s), a particularly vital issue in Australia, the world’s driest continent. Drillers carry out site investigation drilling to allow the design of foundations and to ensure the stability of major civil works such as bridges and buildings. Pile driving and extraction plays an important role in irrigation and environment solutions to water conservation and land erosion. Environmental drilling defines areas of suspected contaminated land, the first stage in the remediation process. Drillers help to locate areas of sub-surface contamination and assist in the remediation process. Drilling defines and accesses vital oil, gas and geothermal power for domestic and commercial uses both nationally and internationally. Trenchless technology/horizontal directional drilling supports the utilities and communications industries, and contributes to the transmission of energy resources.

The majority of drilling contractors work in more than one sector of drilling. The industry has some salient features which impact strongly on its operations:
• a high number of employees who have been employed in the industry for many years, but have rarely been employed in one company for a prolonged period;
• a high turnover of employees at individual company level;
• a largely rural/regional work circumstance;
• a very highly mobile workplace (rigs move all the time);
• high plant costs and high consumables costs;
• heavy work and high insurance costs;
• a very high proportion of people who run micro-businesses;
• only recent access to a means of providing national qualifications to personnel
• limited RTO capacity to meet training needs
• regulatory compliance requirements aligned to the national competency framework

Quarrying Industry
Quarries provide earth materials such as civil grade aggregate, dimensional stone, agricultural limestone, sand, gravel, crushed rock and clay that are processed into raw material inputs for buildings and construction, agriculture and industrial processes. Approximately 90% of the output from quarries in Australia is used in the building and construction industries.
The majority of the approximate 2,600 quarries in Australia are located within 100 km of main cities and town centres which assists in minimising the cost of buildings and infrastructure development.
The industry comprises of quarry operators and equipment and service providers. Quarry operators range from large multi-national companies operating throughout Australia's metropolitan and provincial centres to small family owned quarries and municipal quarries serving provincial and rural markets. Over 7,000 personnel are employed within the industry.
The majority of quarry operations are small with 10 employees or less at each site. Many quarries operate with two to four staff and employ contractors to provide periodic services such as drilling, blasting and maintenance.
Quarrying is a natural resource industry, conducted not in isolation but as part of a chain of inter-connected activities. These extend from the finding and securing of earth resources, to processing and the manufacture and transportation of simple as well as sophisticated construction and building materials, to the interactions and impacts on surrounding communities and ultimately to recycling and post extractive end-uses where old quarries are put to new uses.
Australian companies were amongst the first in the world to identify the inherent value of the integration of quarrying with downstream construction material manufacturing such as pre-mixed concrete and to develop and globally apply business models that could harness such value adding. In the space of several decades Australian quarrying and construction materials companies have forged an international presence and identity to become pre-eminent amongst the world's integrated construction materials companies. This continual development and export of technical expertise acquired through generations of innovation, hard work and with major contributions from migrants to Australia, is a realisation of the clever country vision. This legacy continues. With origins that pre-date the arrival of Europeans by thousands of years, the Australian quarrying industry continues to create rock products that enhance the quality of life for our communities

Civil Construction Industry
The Civil Construction industry plays a large part in Australia's economic life; it is an integral component in the infrastructure essential for our day to day living. Those working in the industry are primarily engaged in civil engineering work on infrastructure-related projects covering such diverse fields as roads, subdivisions,bridgeworks, railways, harbours, sewerage and drainage, electrical infrastructure, pipelines and recreation works. Civil construction is the most significant participant in the built environment active across a range of sectors - the commercial sector, as well as Local and State Government. It is also associated with industries such as mining. Governments are committing substantial funds to building civil infrastructure such as roads, ports, bridges and rail, as well as opening up new sub-divisions and maintaining existing structures. Infrastructure is also a key component of the productivity agenda and will be a critical part of providing for population projections that have Australia as home to 35 million people by 2050. While there are no detailed figures available in relation to the size of the civil construction workforce as a separate and discrete workforce, the data obtained through a workforce analysis conducted by the Civil Contractors Federation, indicates that the size of the workforce is approximately 350,000 with occupations including design and supervisory positions, plant operations and other technical and support roles. On very conservative estimates this suggests that civil construction makes up 30% to 40% or more of the building and construction workforce. Key areas of operation include bridge construction, road construction, pipe laying, tunnel construction and the occupation of plant operators across all areas of activity. Additionally, plant hire and civil engineering project management are significant areas of activity. Buoyant activity and strong investment in the industry drives continued employment growth. A significant factor in this is the fact that approximately 94% of enterprises operating in the Civil Construction sector employ 5 or fewer employees. The CCF occupation review reported that 30% of the industry had major difficulty recruiting labour and sourcing sub-contractors; therefore recruitment of qualified labour (including professional and supervisory staff) remains the dominant supply constraint for the industry. There are significant changes in industry technology contributing to significant enhancement of existing practices and operations, or diversification of work organisation models (for example, via multifunctional plant and equipment requiring new and effective work models). Work demands on this vital industry sector will continue to grow as outsourcing of government activities related to Civil Construction continue to increase.

**Preliminary Information**

**Important Note to Users**

Training Packages are not static documents; they are amended periodically to reflect the latest industry practices and are version controlled. It is essential that the latest version is always used.

**Check the version number before commencing training or assessment**

This Training Package is Version 3.0 - check whether this is the latest version by going to the national training information service (www.training.gov.au) and locating information about the Training Package. Alternatively, contact SkillsDMC (Resources and Infrastructure Industry Skills Council) at http://www.skillsdmc.com.au to confirm the latest version number.

**Explanation of version number conventions**
The primary release Training Package is Version 1. When changes are made to a Training Package, sometimes the version number is changed and sometimes it is not, depending on the extent of the change. When a Training Package is reviewed it is considered to be a new Training Package for the purposes of version control, and is Version 1. Do not confuse the version number with the Training Packages national code (which remains the same during its period of endorsement).

**Explanation of the review date**

The review date (shown on the title page and in the header of each page) indicates when the Training Package is expected to be reviewed in the light of changes such as changing technologies and circumstances. The review date is not an expiry date. Endorsed Training Packages and their components remain current until they are reviewed or replaced.

Employability Skills

Employability skills are detailed in each qualification. Employability skills are to be demonstrated in the context of the conduct of the activities outlined in the units of competency being assessed.

<table>
<thead>
<tr>
<th>Unit component</th>
<th>Example of embedded Employability Skill</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unit Title</td>
<td>RIIMEX201A Suppress dust in open cut environment</td>
</tr>
<tr>
<td>Unit Descriptor</td>
<td>This unit covers suppressing of dust in an open cut environment in the coal and metalliferous mining and extractive industries. It includes applying dust suppressant and minimising dust creation</td>
</tr>
<tr>
<td>Unit component</td>
<td>Example of embedded Employability Skill</td>
</tr>
<tr>
<td>----------------</td>
<td>----------------------------------------</td>
</tr>
<tr>
<td>Element</td>
<td>1) Apply dust suppressant</td>
</tr>
</tbody>
</table>
| Performance Criteria | 1.1 Access, interpret and apply compliance documentation relevant to suppressing of dust in an open cut environment  
1.2 Receive, interpret and clarify shift changeover details  
1.3 Select appropriate dust suppression method according to site conditions  
1.4 Distribute dust suppressant in appropriate pattern according to road type  
1.5 Adjust dust suppression activities according to schedule and weather conditions  
1.6 Identify, address and report environmental issues  
1.7 Communicate with other personnel using approved communication methods  
1.8 Adhere to emergency procedures to ensure safety of personnel, plant and equipment |
| Range Statement | Relevant compliance documentation may include:  
- legislative, organisational and site requirements and procedures  
- manufacturer’s guidelines and specifications  
- Australian standards  
- code of practice  
- Employment and Workplace Relations legislation  
- Equal Employment Opportunity and Disability Discrimination legislation |
| Required Skills and Knowledge | Required Skills  
Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied.  
This includes the ability to carry out the following as required to suppress dust in open cut environment:  
- apply legislative, organisation and site requirements and procedures  
- make decisions  
- direct and signal  
- clean equipment  
- maintain equipment |
<table>
<thead>
<tr>
<th>Unit component</th>
<th>Example of embedded Employability Skill</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• operate equipment</td>
</tr>
<tr>
<td></td>
<td>• follow instructions</td>
</tr>
<tr>
<td></td>
<td>• identify hazards</td>
</tr>
<tr>
<td></td>
<td>• interpret plans, reports, maps, specifications</td>
</tr>
<tr>
<td></td>
<td>• maintain records</td>
</tr>
<tr>
<td></td>
<td>• follow safe work practices</td>
</tr>
<tr>
<td></td>
<td>• troubleshoot</td>
</tr>
<tr>
<td></td>
<td>• wear protective equipment</td>
</tr>
</tbody>
</table>

**Required Knowledge**

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used.

This includes knowledge of the following as required to suppress dust in open cut environment:

- emergency procedures
- environmental aspects
- equipment processes, technical capability and limitations
- equipment safety requirements
- geological and technical data (rock formation)
- maintenance procedures
- mine operation system
- OHS procedures
- plan terminology
- site procedures (operational and maintenance)
- site safety requirements
- sprinkler operation
- water truck operation

**Evidence Guide**

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for suppressing of dust in open cut environment
### Unit component | Example of embedded Employability Skill
---|---
| | • implementation of requirements, procedures and techniques for the safe, effective and efficient completion of the suppressing of dust in open cut environment  
| | • working with others to suppress dust in open cut environment that meets all of the required outcomes  
| | • consistent timely suppressing of dust in open cut environment that safely, effectively and efficiently meets the required outcomes

### Qualifications Pathways

The following pathways charts are provided to show the types of pathways into and from qualifications that are possible with this Training Package.

For more information about qualifications and pathways contact SkillsDMC (Resources and Infrastructure Industry Skills Council) (http://www.skillsdmc.com.au).

### Skill Sets in this Training Package

**Definition**
Skill sets are defined as single units of competency, or combinations of units of competency from an endorsed Training Package, which link to a licence or regulatory requirement, or defined industry need.

**Wording on Statements of Attainment**
Skill sets are a way of publicly identifying logical groupings of units of competency which meet an identified need or industry outcome. Skill sets are not qualifications.

Where skill sets are identified in a Training Package, the Statement of Attainment can set out the competencies a person has achieved in a way that is consistent and clear for employers and others. This is done by including the wording "these competencies meet [insert skill set title or identified industry area] need" on the Statement of Attainment. This wording applies only to skill sets that are formally identified as such in the endorsed Training Package. See the 2010 edition of the AQF Implementation Handbook for advice on wording on Statements of Attainment. [http://www.aqf.edu.au/Portals/0/Documents/Handbook/AQF_Handbook_07.pdf](http://www.aqf.edu.au/Portals/0/Documents/Handbook/AQF_Handbook_07.pdf)

Overview

What is a Training Package?
A Training Package is an integrated set of nationally endorsed competency standards, assessment guidelines and Australian Qualifications Framework (AQF) qualifications for a specific industry, industry sector or enterprise.

Each Training Package:
- provides a consistent and reliable set of components for training, recognising and assessing peoples skills, and may also have optional support materials
- enables nationally recognised qualifications to be awarded through direct assessment of workplace competencies
- encourages the development and delivery of flexible training which suits individual and industry requirements
- encourages learning and assessment in a work-related environment which leads to verifiable workplace outcomes.

How do Training Packages fit within the National Skills Framework?
The National Skills Framework applies nationally, is endorsed by the Ministerial Council for Vocational and Technical Education, and comprises the Australian Quality Training Framework 2010 (AQTF 2010), and Training Packages endorsed by the National Quality Council (NQC).

How are Training Packages developed?
Training Packages are developed by Industry Skills Councils or enterprises to meet the identified training needs of specific industries or industry sectors. To gain national endorsement of Training Packages, developers must provide evidence of extensive research, consultation and support within the industry area or enterprise.

How do Training Packages encourage flexibility?
Training Packages describe the skills and knowledge needed to perform effectively in the workplace without prescribing how people should be trained. Training Packages acknowledge that people can achieve vocational competency in many ways by emphasising what the learner can do, not how or where they learned to do it. For example, some experienced workers might be able to demonstrate competency against the units of competency, and even gain a qualification, without completing a formal training program.

With Training Packages, assessment and training may be conducted at the workplace, off-the-job, at a training organisation, during regular work, or through work experience, work placement, work simulation or any combination of these.
Who can deliver and assess using Training Packages?
Training and assessment using Training Packages must be conducted by a Registered Training Organisation (RTO) that has the qualifications or specific units of competency on its scope of registration, or that works in partnership with another RTO, as specified in the AQTF 2010.

Training Package Components
Training Packages are made up of mandatory components endorsed by the NQC, and optional support materials.

Training Package Endorsed Components
The nationally endorsed components include the Competency Standards, Assessment Guidelines and Qualifications Framework. These form the basis of training and assessment in the Training Package and, as such, they must be used.

Competency Standards
Each unit of competency identifies a discrete workplace requirement and includes the knowledge and skills that underpin competency as well as language, literacy and numeracy; and occupational health and safety requirements. The units of competency must be adhered to in training and assessment to ensure consistency of outcomes.

Assessment Guidelines
The Assessment Guidelines provide an industry framework to ensure all assessments meet industry needs and nationally agreed standards as expressed in the Training Package and the AQTF 2010. The Assessment Guidelines must be followed to ensure the integrity of assessment leading to nationally recognised qualifications.

Qualifications Framework
Each Training Package provides details of those units of competency that must be achieved to award AQF qualifications. The rules around which units of competency can be combined to make up a valid AQF qualification in the Training Package are referred to as the "packaging rules". The packaging rules must be followed to ensure the integrity of nationally recognised qualifications issued.

Training Package Support Materials
The endorsed components of Training Packages are complemented and supported by optional support materials that provide for choice in the design of training and assessment to meet the needs of industry and learners.

Training Package support materials can relate to single or multiple units of competency, an industry sector, a qualification or the whole Training Package. They tend to fall into one or more of the categories illustrated below.

Training Package support materials are produced "by a range of stakeholders such as RTOs, individual trainers and assessors, private and commercial developers and Government agencies.
Where such materials have been quality assured through a process of "noting" by the NQC, they display the following official logo. Noted support materials are listed on the National Training Information Service (NTIS), together with a detailed description and information on the type of product and its availability < www.ntis.gov.au>.

It is not compulsory to submit support materials for noting; any resources that meet the requirements of the Training Package can be used.

**Training Package, Qualification and Unit of Competency Codes**

There are agreed conventions for the national codes used for Training Packages and their components. Always use the correct codes, exactly as they appear in the Training Package, and with the code always before the title.

**Training Package Codes**

Each Training Package has a unique five-character national code assigned when the Training Package is endorsed, for example RII09. The first three characters are letters identifying the Training Package industry coverage and the last two characters are numbers identifying the year of endorsement.

**Qualification Codes**

Within each Training Package, each qualification has a unique eight-character code, for example RII10109. Qualification codes are developed as follows:

- the first three letters identify the Training Package;
- the first number identifies the qualification level (noting that, in the qualification titles themselves, arabic numbers are not used);
- the next two numbers identify the position in the sequence of the qualification at that level; and
- the last two numbers identify the year in which the qualification was endorsed. (Where qualifications are added after the initial Training Package endorsement, the last two numbers may differ from other Training Package qualifications as they identify the year in which those particular qualifications were endorsed.)

**Unit of Competency Codes**

Within each Training Package, each unit of competency has a unique code. Unit of competency codes are assigned when the Training Package is endorsed, or when new units of competency are added to an existing endorsed Training Package. Unit codes are developed as follows:

- a typical code is made up of 12 characters, normally a mixture of uppercase letters and numbers, as in RIIBEF202A;
- the first three characters signify the Training Package - RII09 - in the above example and up to eight characters, relating to an industry sector, function or skill area, follow;
- the last character is always a letter and identifies the unit of competency version. An "A" at the end of the code indicates that this is the original unit of competency. "B", or another incremented version identifier means that minor changes have been made. Typically this would mean that wording has changed in the range statement or evidence guide, providing clearer intent; and
- where changes are made that alter the outcome, a new code is assigned and the title is changed.

**Training Package, Qualification and Unit of Competency Titles**

There are agreed conventions for titling Training Packages and their components. Always use the correct titles, exactly as they appear in the Training Package, and with the code always placed before the title.

**Training Package Titles**

The title of each endorsed Training Package is unique and relates the Training Packages broad industry coverage.

**Qualification Titles**
The title of each endorsed Training Package qualification is unique. Qualification titles use the following sequence:

- first, the qualification is identified as either Certificate I, Certificate II, Certificate III, Certificate IV, Diploma, Advanced Diploma, Vocational Graduate Certificate, or Vocational Graduate Diploma;
- this is followed by the words "in" for Certificates I to IV, and "of" for Diploma, Advanced Diploma, Vocational Graduate Certificate and Vocational Graduate Diploma;
- then, the industry descriptor, for example Telecommunications; and
- then, if applicable, the occupational or functional stream in brackets, for example (Computer Systems).

For example:

- RII10109 Certificate I in Resources and Infrastructure Operations

**Unit of Competency Titles**

Each unit of competency title is unique. Unit of competency titles describe the competency outcome concisely, and are written in sentence case.

For example:

- RIIBEF201B Plan and organise work
Qualifications Framework

The Australian Qualifications Framework

What is the Australian Qualifications Framework?

A brief overview of the Australian Qualifications Framework (AQF) follows. For a full explanation of the AQF, see the AQF Implementation Handbook.

The AQF provides a comprehensive, nationally consistent framework for all qualifications in post-compulsory education and training in Australia. In the vocational education and training (VET) sector it assists national consistency for all trainees, learners, employers and providers by enabling national recognition of qualifications and Statements of Attainment.

Training Package qualifications in the VET sector must comply with the titles and guidelines of the AQF. Endorsed Training Packages provide a unique title for each AQF qualification which must always be reproduced accurately.

Qualifications

Training Packages can incorporate the following eight AQF qualifications.

• Certificate I in ...
• Certificate II in ...
• Certificate III in ...
• Certificate IV in ...
• Diploma of ...
• Advanced Diploma of ...
• Vocational Graduate Certificate of ...
• Vocational Graduate Diploma of ...

Graduate Certificates and Graduate Diplomas can also be awarded in the vocational education and training sector under certain conditions see the AQF Implementation Handbook for details.

On completion of the requirements defined in the Training Package, a Registered Training Organisation (RTO) may issue a nationally recognised AQF qualification. Issuance of AQF qualifications must comply with the advice provided in the AQF Implementation Handbook and the AQTF 2010 Essential Standards for Initial and Continuing Registration.

Statement of Attainment

A Statement of Attainment is issued by a Registered Training Organisation when an individual has completed one or more units of competency from nationally recognised qualification(s)/course(s). Issuance of Statements of Attainment must comply with the advice provided in the current AQF Implementation Handbook and the AQTF 2010 Essential Standards for Initial and Continuing Registration.

Under the AQTF 2010, RTOs must recognise the achievement of competencies as recorded on a qualification testamur or Statement of Attainment issued by other RTOs. Given this, recognised competencies can progressively build towards a full AQF qualification.

AQF Guidelines and Learning Outcomes

The AQF Implementation Handbook provides a comprehensive guideline for each AQF qualification. A summary of the learning outcome characteristics and their distinguishing features for each VET related AQF qualification is provided below.

Certificate I

Characteristics of Learning Outcomes

Breadth, depth and complexity of knowledge and skills would prepare a person to perform a defined range of activities most of which may be routine and predictable.
Applications may include a variety of employment related skills including preparatory access and participation skills, broad-based induction skills and/or specific workplace skills. They may also include participation in a team or work group.

**Distinguishing Features of Learning Outcomes**

Do the competencies enable an individual with this qualification to:

- demonstrate knowledge by recall in a narrow range of areas;
- demonstrate basic practical skills, such as the use of relevant tools;
- perform a sequence of routine tasks given clear direction
- receive and pass on messages/information.

### Certificate II

**Characteristics of Learning Outcomes**

Breadth, depth and complexity of knowledge and skills would prepare a person to perform in a range of varied activities or knowledge application where there is a clearly defined range of contexts in which the choice of actions required is usually clear and there is limited complexity in the range of operations to be applied.

Performance of a prescribed range of functions involving known routines and procedures and some accountability for the quality of outcomes.

Applications may include some complex or non-routine activities involving individual responsibility or autonomy and/or collaboration with others as part of a group or team.

**Distinguishing Features of Learning Outcomes**

Do the competencies enable an individual with this qualification to:

- demonstrate basic operational knowledge in a moderate range of areas;
- apply a defined range of skills;
- apply known solutions to a limited range of predictable problems;
- perform a range of tasks where choice between a limited range of options is required;
- assess and record information from varied sources;
- take limited responsibility for own outputs in work and learning.

### Certificate III

**Characteristics of Learning Outcomes**

Breadth, depth and complexity of knowledge and competencies would cover selecting, adapting and transferring skills and knowledge to new environments and providing technical advice and some leadership in resolution of specified problems. This would be applied across a range of roles in a variety of contexts with some complexity in the extent and choice of options available.

Performance of a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures, where some discretion and judgement is required in the section of equipment, services or contingency measures and within known time constraints.

Applications may involve some responsibility for others. Participation in teams including group or team co-ordination may be involved.

**Distinguishing Features of Learning Outcomes**

Do the competencies enable an individual with this qualification to:

- demonstrate some relevant theoretical knowledge
- apply a range of well-developed skills
- apply known solutions to a variety of predictable problems
- perform processes that require a range of well-developed skills where some discretion and judgement is required
- interpret available information, using discretion and judgement
• take responsibility for own outputs in work and learning
• take limited responsibility for the output of others.

Certificate IV

Characteristics of Learning Outcomes
Breadth, depth and complexity of knowledge and competencies would cover a broad range of varied activities or application in a wider variety of contexts most of which are complex and non-routine. Leadership and guidance are involved when organising activities of self and others as well as contributing to technical solutions of a non-routine or contingency nature. Performance of a broad range of skilled applications including the requirement to evaluate and analyse current practices, develop new criteria and procedures for performing current practices and provision of some leadership and guidance to others in the application and planning of the skills. Applications involve responsibility for, and limited organisation of, others.

Distinguishing Features of Learning Outcomes
Do the competencies enable an individual with this qualification to:
• demonstrate understanding of a broad knowledge base incorporating some theoretical concepts
• apply solutions to a defined range of unpredictable problems
• identify and apply skill and knowledge areas to a wide variety of contexts, with depth in some areas
• identify, analyse and evaluate information from a variety of sources
• take responsibility for own outputs in relation to specified quality standards
• take limited responsibility for the quantity and quality of the output of others.

Diploma

Characteristics of Learning Outcomes
Breadth, depth and complexity covering planning and initiation of alternative approaches to skills or knowledge applications across a broad range of technical and/or management requirements, evaluation and co-ordination.
The self directed application of knowledge and skills, with substantial depth in some areas where judgment is required in planning and selecting appropriate equipment, services and techniques for self and others.
Applications involve participation in development of strategic initiatives as well as personal responsibility and autonomy in performing complex technical operations or organising others. It may include participation in teams including teams concerned with planning and evaluation functions. Group or team co-ordination may be involved.
The degree of emphasis on breadth as against depth of knowledge and skills may vary between qualifications granted at this level.

Distinguishing Features of Learning Outcomes
Do the competencies or learning outcomes enable an individual with this qualification to:
• demonstrate understanding of a broad knowledge base incorporating theoretical concepts, with substantial depth in some areas
• analyse and plan approaches to technical problems or management requirements
• transfer and apply theoretical concepts and/or technical or creative skills to a range of situations
• evaluate information, using it to forecast for planning or research purposes
• take responsibility for own outputs in relation to broad quantity and quality parameters
• take some responsibility for the achievement of group outcomes.
Advanced Diploma

Characteristics of Learning Outcomes
Breadth, depth and complexity involving analysis, design, planning, execution and evaluation across a range of technical and/or management functions including development of new criteria or applications or knowledge or procedures.
The application of a significant range of fundamental principles and complex techniques across a wide and often unpredictable variety of contexts in relation to either varied or highly specific functions. Contribution to the development of a broad plan, budget or strategy is involved and accountability and responsibility for self and others in achieving the outcomes is involved.
Applications involve significant judgement in planning, design, technical or leadership/guidance functions related to products, services, operations or procedures.
The degree of emphasis on breadth as against depth of knowledge and skills may vary between qualifications granted at this level.

Distinguishing Features of Learning Outcomes
Do the competencies or learning outcomes enable an individual with this qualification to:
• demonstrate understanding of specialised knowledge with depth in some areas
• analyse, diagnose, design and execute judgements across a broad range of technical or management functions
• generate ideas through the analysis of information and concepts at an abstract level
• demonstrate a command of wide-ranging, highly specialised technical, creative or conceptual skills
• demonstrate accountability for personal outputs within broad parameters
• demonstrate accountability for personal and group outcomes within broad parameters.

Vocational Graduate Certificate

Characteristics of competencies or learning outcomes
• The self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
• Substantial breadth and complexity involving the initiation, analysis, design, planning, execution and evaluation of technical and management functions in highly varied and highly specialised contexts.
• Applications involve making significant, high-level, independent judgements in major broad or planning, design, operational, technical and management functions in highly varied and specialised contexts. They may include responsibility and broad-ranging accountability for the structure, management and output of the work or functions of others.
• The degree of emphasis on breadth, as opposed to depth, of knowledge and skills may vary between qualifications granted at this level.

Distinguishing features of learning outcomes
• Demonstrate the self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
• Initiate, analyse, design, plan, execute and evaluate major broad or technical and management functions in highly varied and highly specialised contexts.
• Generate and evaluate ideas through the analysis of information and concepts at an abstract level.
• Demonstrate a command of wide-ranging, highly specialised technical, creative or conceptual skills in complex contexts.
• Demonstrate responsibility and broad-ranging accountability for the structure, management and output of the work or functions of others.
Vocational Graduate Diploma

Characteristics of competencies or learning outcomes

- The self-directed development and achievement of broad and specialised areas of knowledge and skills, building on prior knowledge and skills.
- Substantial breadth, depth and complexity involving the initiation, analysis, design, planning, execution and evaluation of major functions, both broad and highly specialised, in highly varied and highly specialised contexts.
- Further specialisation within a systematic and coherent body of knowledge.
- Applications involve making high-level, fully independent, complex judgements in broad planning, design, operational, technical and management functions in highly varied and highly specialised contexts. They may include full responsibility and accountability for all aspects of work and functions of others, including planning, budgeting and strategy development.
- The degree of emphasis on breadth, as opposed to depth, of knowledge and skills may vary between qualifications granted at this level.

Distinguishing features of learning outcomes

- Demonstrate the self-directed development and achievement of broad and highly specialised areas of knowledge and skills, building on prior knowledge and skills.
- Initiate, analyse, design, plan, execute and evaluate major functions, both broad and within highly varied and highly specialised contexts.
- Generate and evaluate complex ideas through the analysis of information and concepts at an abstract level.
- Demonstrate an expert command of wide-ranging, highly specialised, technical, creative or conceptual skills in complex and highly specialised or varied contexts.
- Demonstrate full responsibility and accountability for personal outputs.
- Demonstrate full responsibility and accountability for all aspects of the work or functions of others, including planning, budgeting and strategy.
Assessment Guidelines

Introduction
These Assessment Guidelines provide the endorsed framework for assessment of units of competency in this Training Package. They are designed to ensure that assessment is consistent with the Australian Quality Training Framework (AQTF) Essential Standards for Initial and Continuing Registration. Assessments against the units of competency in this Training Package must be carried out in accordance with these Assessment Guidelines.

Assessment System Overview
This section provides an overview of the requirements for assessment when using this Training Package, including a summary of the AQTF requirements; licensing/registration requirements; and assessment pathways.

Quality assessment underpins the credibility of the vocational education and training sector. The Assessment Guidelines of a Training Package are an important tool in supporting quality assessment.

Assessment within the National Skills Framework is the process of collecting evidence and making judgements about whether competency has been achieved to confirm whether an individual can perform to the standards expected in the workplace, as expressed in the relevant endorsed unit of competency.

Assessment must be carried out in accordance with the:
- benchmarks for assessment
- specific industry requirements
- principles of assessment
- rules of evidence
- assessment requirements set out in the AQTF

Benchmarks for Assessment
The endorsed units of competency in this Training Package are the benchmarks for assessment. As such, they provide the basis for nationally recognised Australian Qualifications Framework (AQF) qualifications and Statements of Attainment issued by Registered Training Organisations (RTOs).

Principles of Assessment
All assessments carried out by RTOs are required to demonstrate compliance with the principles of assessment:
- Validity
- Reliability
- Flexibility
- Fairness
- Sufficiency

These principles must be addressed in the:
Design, establishment and management of the assessment system for this training package
Development of assessment tools,
And the conduct of assessment

Validity
Assessment is valid when the process is sound and assesses what it claims to assess. Validity requires that:
(a) assessment against the units of competency must cover the broad range of skills and knowledge that are essential to competent performance

(b) assessment of knowledge and skills must be integrated with their practical application

(c) judgement of competence must be based on sufficient evidence (that is, evidence gathered on a number of occasions and in a range of contexts using different assessment methods). The specific evidence requirements of each unit of competency provide advice on sufficiency

**Reliability**

Reliability refers to the degree to which evidence presented for assessment is consistently interpreted and results in consistent assessment outcomes. Reliability requires the assessor to have the required competencies in assessment and relevant vocational competencies (or to assess in conjunction with someone who has the vocational competencies). It can only be achieved when assessors share a common interpretation of the assessment requirements of the unit(s) being assessed.

**Flexibility**

To be flexible, assessment should reflect the candidate's needs; provide for recognition of competencies no matter how, where or when they have been acquired; draw on a range of methods appropriate to the context, competency and the candidate; and support continuous competency development.

**Fairness**

Fairness in assessment requires consideration of the individual candidate's needs and characteristics, and any reasonable adjustments that need to be applied to take account of them. It requires clear communication between the assessor and the candidate to ensure that the candidate is fully informed about, understands and is able to participate in, the assessment process, and agrees that the process is appropriate. It also includes an opportunity for the person being assessed to challenge the result of the assessment and to be reassessed if necessary.

**Sufficiency**

Sufficiency relates to the quality and quantity of evidence assessed. It requires collection of enough appropriate evidence to ensure that all aspects of competency have been satisfied and that competency can be demonstrated repeatedly. Supplementary sources of evidence may be necessary. The specific evidence requirements of each unit of competency provide advice on sufficiency. Sufficiency is also one of the rules of evidence.

**Rules of Evidence**

The rules of evidence guide the collection of evidence that address the principles of validity and reliability, guiding the collection of evidence to ensure that it is valid, sufficient, current and authentic.
Valid evidence must relate directly to the requirements of the unit of competency. In ensuring evidence is valid, assessors must ensure that the evidence collected supports demonstration of the outcomes and performance requirements of the unit of competency together with the knowledge and skills necessary for competent performance. Valid evidence must encapsulate the breadth and depth of the unit of competency, which will necessitate using a number of different assessment methods.

**Sufficient**

Sufficiency relates to the quality and quantity of evidence assessed. It requires collection of enough appropriate evidence to ensure that all aspects of competency have been satisfied and that competency can be demonstrated repeatedly. Supplementary sources of evidence may be necessary. The specific evidence requirements of each unit of competency provide advice on sufficiency.

**Current**

In assessment, currency relates to the age of the evidence presented by a candidate to demonstrate that they are still competent. Competency requires demonstration of current performance, so the evidence collected must be from either the present or the very recent past.

**Authentic**

To accept evidence as authentic, an assessor must be assured that the evidence presented for assessment is the candidate’s own work.

**Assessment Requirements of the Australian Quality Training Framework**

Assessment leading to nationally recognised AQF qualifications and Statements of Attainment in the vocational education and training sector must meet the requirements of the AQTF as expressed in the AQTF 2010 Essential Standards for Registration. The AQTF 2010 Essential Standards for Initial and Continuing Registration can be downloaded from <www.training.com.au>.

The following points summarise the assessment requirements.

**Registration of Training Organisations**

Assessment must be conducted by, or on behalf of, an RTO formally registered by a State or Territory Registering Body in accordance with the AQTF. The RTO must have the specific units of competency and/or AQF qualifications on its scope of registration.

**Quality Training and Assessment**

Each RTO must provide quality training and assessment across all its operations. See the AQTF 2010 Essential Standards for Initial and Continuing Registration, Standard 1.

**Assessor Competency Requirements**

Each person involved in training, assessment or client service must be competent for the functions they perform. AQTF 2010 Essential Standards for Initial and Continuing Registration, Standard 1 for assessor (and trainer) competency requirements. See also the AQTF 2010 Users” Guide to the Essential Standards for Registration Appendix 2.

**Assessment Requirements**

The RTOs assessments, including RPL, must meet the requirements of the relevant endorsed Training Package. See the AQTF 2010 Essential Standards for Initial and Continuing Registration.

**Assessment Strategies**

Each RTO must have strategies for training and assessment that meet the requirements of the relevant Training Package or accredited course and are developed in consultation with industry stakeholders. See the AQTF 2010 Essential Standards for Initial and Continuing Registration.

**National Recognition**
Each RTO must recognise the AQF qualifications and Statements of Attainment issued by any other RTO. See the AQTF 2010 Essential Standards for Initial and Continuing Registration.

Access and Equity and Client Outcomes
Each RTO must adhere to the principles of access and equity and maximise outcomes for its clients. See the AQTF 2010 Essential Standards for Initial and Continuing Registration.

Monitoring Assessments
Training and/or assessment provided on behalf of the RTO must be monitored to ensure that it is in accordance with all aspects of the AQTF 2010 Essential Standards for Initial and Continuing Registration.

Recording Assessment Outcomes
Each RTO must manage records to ensure their accuracy and integrity. See the AQTF 2010 Essential Standards for Initial and Continuing Registration.

Issuing AQF Qualifications and Statements of Attainment
Each RTO must issue AQF qualifications and Statements of Attainment that meet the requirements of the current AQF Implementation Handbook and the endorsed Training Packages within the scope of its registration. An AQF qualification is issued once the full requirements for a qualification, as specified in the nationally endorsed Training Package are met. A Statement of Attainment is issued when an individual has completed one or more units of competency from nationally recognised qualification(s)/course(s). See the AQTF and the edition of the AQF Implementation Handbook-available on the AQF Council website <www.aqf.edu.au>.

Advice on occupational and licensing requirements or assessment specific to the units of competency and qualifications being submitted for endorsement
This section provides information on licensing/registration requirements for this training package, with the following important disclaimer.
Licensing and registration requirements that apply to the resources and infrastructure industry and other specific industries, and vocational education and training, vary between each state and territory, and can regularly change. The developers of this training package, and DEEWR, consider that the licensing/registration requirements described in this section apply to RTOs, assessors or candidates with respect to this training package. While reasonable care has been taken in its preparation, the developers of this training package and DEEWR cannot guarantee that the list is definitive or accurate at the time of reading; the information in this section is provided in good faith on that basis.
Contact the relevant state or territory department(s) to check if the licensing/registration requirements described below still apply, and to check if there are any others with which you must comply. For further information contact:

Australian Capital Territory (ACT) WorkCover/WorkSafe ACT

New South Wales (NSW) WorkCover New South Wales
www.workcover.nsw.gov.au

Northern Territory (NT) NT WorkSafe
www.worksafe.nt.gov.au/
Requirements for Assessors

In order to conduct assessment for statutory licensing or other industry registration requirements, assessors must meet the requirements as determined by the regulator for the activity, in addition to the AQTF requirements. The regulator will be the state/territory based SafeWork Australia representative body, unless otherwise indicated. The following chart provides details of:
- the regulator across jurisdictions
- the regulated activity and jurisdiction/s in which regulations apply

</tr>
</tbody>
</table>
The RII09 training package contains industry units of competency that relate to High Risk Work licence units of competency. The industry units are not intended to replace the High Risk units but to provide industry with a competency recognition framework for a) application of the licensed activity in the work environment and / or b) conduct of the activity when the definitions for the application of the National Standard for High Risk Work do not apply. RTOs must establish whether the activity being undertaken requires completion of the High Risk Work licence units and ensure that this requirement is met. This may be achieved through: co-assessment of the unit of competency with/by a registered assessor; gap training for a person already holding the High Risk Work Unit of Competency.

Qualification packaging rules do not include all of the High Risk Work licence units of competency that relate to the RII units of competency. Industry requires that the licence requirement be met through:

- holistic assessment of the RII and High Risk Work unit of competency (ensuring assessor and assessment requirements for both units are met)
- using the import option for the High Risk Work unit of competency
- credit transfer for the High Risk Work unit of competency (if applicable)

The table below details the affected RII units of competency and related High Risk Work Licence units of competency.

The Mining Regulations vary from State to State. While some of the qualifications and units of competency are associated with statutory positions, none of the qualifications result in a Statutory Ticket – this is issued by the State Mining Regulator. All participants/employees are advised to check with their employer and regulator in their State/Territory.

**Further Information on Requirements for Assessors**

In addition to the National Skills Standards Council’s Training and Assessment Competencies to be held by trainers and assessors (as noted in the *AQTF Essential Standards for Registration*) it is industry’s preferred approach that assessors are compliant with the following requirements:

- demonstrate current knowledge and experience of the industry, industry practices, and the job or role against which performance is being assessed. This may be demonstrated through evidence of actual workplace experience within the last two years or one or more of the following:
- attendance at professional development/training and education activities focusing on good practice in the relevant industry competencies
- participation in professional/industry networks
- demonstrate current knowledge and skill in assessing against this training package in a range of contexts. This may be demonstrated through at least one of the following:
- familiarity with the units of competency in this training package to be used by the learner as a basis of assessment
- recent planning, conduct and review of assessment and/or workplace training activities in a relevant industry context
- participation in moderation/validation processes

- attendance at professional development activities focused on assessment and/or workplace training
- demonstrate the necessary interpersonal and communication skills required in the assessment process. This may be demonstrated through evidence of one or more of the following:
- attendance at professional development and/or training activities focused on effective communication in assessment and/or workplace training contexts
- knowledge of language, literacy and numeracy issues in the context of assessment and workplace training
- recent assessment and/or workplace training activities

This training package provides a range of options for meeting the assessor requirements. Assessments in the Resources and Infrastructure industries can be undertaken in a variety of contexts by individual assessors, partnerships involving assessors and technical experts, and teams of assessors. All RTOs must consult with responsible industry personnel to determine the appropriateness of the assessor for on-the-job assessments at a worksite. This is particularly important for mining sites. Specific criteria may exist for assessors who are assessing an employee/candidate for a qualification which is a requirement for the issue of a statutory licence to practice, e.g. shotfirer. In such instances, the RTO must clarify the specific criteria as this requirement may vary between states and/or territories depending on legislative requirements. (Refer to Requirements for Assessors). The case studies provided show how the requirement to use qualified assessors can be met.

**Partnership Arrangements**

Under the AQTF, RTOs may enter into partnerships with non-registered organisations, such as schools, industry organisations and enterprises, for delivery and assessment within the RTOs scope of registration. Where this is done, the RTO must have a formal agreement with the organisation that provides the training and/or assessment under its name. The agreement must specify how all parties will discharge their responsibilities for ensuring the quality of the training and/or assessment conducted on its behalf, including the qualification requirements for delivery and assessment. The RTO has full responsibility for the quality and outcomes of any training or assessment conducted on its behalf, and it must maintain a register of all such agreements. The following case studies provide examples of partnership arrangements Resources and Infrastructure enterprises have formed with RTOs.

**Case study 1 — Partnership to deliver training and assessment**

A mine site developed a partnership arrangement with an RTO where the RTO provides off-the-job training and assessment and the enterprise will provide on-the-job training and workplace evidence that support an employee's achievement of units of competency. In this arrangement the enterprise trainer does not conduct assessment but may provide testimonials documenting first hand observation.
The RTO established that the workplace trainer is suitably qualified and together the roles and responsibilities of each party are established. The RTO ensures that the enterprise understands their requirement to conduct moderation, validation and other checks to ensure quality requirements are met.

The RTO trainer/assessor and the enterprise trainer identify the required units of competency and agree on the assessment tools and processes to be used both on and off-the-job. The RTO provides classroom-based training and assessment that ensures the employee has the required underpinning knowledge for the selected units of competency.

The enterprise provides on-the-job training and the workplace supervisor/coach or trainer assists the employees to gather the required evidence to support their achievement of the units of competency. This evidence includes pre-operational check sheets, inspection checklists, safety device testing and operational production reporting documentation for individual operators. The RTO assessor uses the workplace evidence in conjunction with the off-the-job assessments to determine the operator’s competency and eligibility for a Statement of Attainment or Certificate level qualification. Where necessary, the RTO assessor may require additional evidence or conduct direct assessment to ensure competence has been demonstrated.

**Case study 2 — Partnership for assessment only**
A mine site has entered into a partnership arrangement with an RTO for the RTO to provide an on-the-job assessment only service using qualified assessors. All training is provided on-the-job by the mine.

The mine trainer and the RTO agree on the training outcomes required to achieve the units of competency and the assessment tools to be used. The RTO also provides the mine trainer with the RTO assessors’ CVs and gains agreement as to their suitability for on-the-job assessment. When the employees have completed their on-site training, the RTO is informed and a suitable time arranged for the assessments. The RTO assessor conducts the assessments using the agreed assessment tools as well as ensuring safe workplace and assessment conditions, complying with permit/access and ensuring minimal interruption to mine operations. The RTO awards Statements of Attainment and/or qualifications to the successful employees.

**Case study 3 — Partnership for all on-the-job training and assessment by the mine**
A mine has entered into a partnership agreement with an RTO for the RTO to recognise the mine assessments and issue successful employees with Statements of Attainment or qualifications. The agreement between the mine and the RTO clearly sets out the roles and responsibilities of both parties. In particular the mine will use qualified assessors and the RTO will monitor the assessment process and outcomes, a requirement under the AQTF. The communication arrangements between the parties are also documented.

The RTO works with mine personnel to document the assessment process, the range of evidence to be collected and record keeping requirements and to confirm the assessor qualifications. Joint validation and moderation is carried out with the workplace assessor and a procedure for validating the assessment strategies and tools is agreed and documented. The RTO visits the mine and validates the assessment process, strategies and tools and recommends any action for improvement.

The mine completes all training and assessments using the agreed assessment strategies and tools and informed the RTO of the outcomes. The RTO awards the Statements of Attainment or qualification to successful applicants. Under the AQTF the RTO annually conducts an audit of the assessment process and tools to ensure validity, reliability, fairness and flexibility and recommends any action to improve consistency.
**Case study 4 — An individual assessor conducts the assessment**

A mining company has entered into an agreement with an RTO for the RTO to conduct workplace assessments for employees to gain national qualifications. The mining company has agreed to use the RTO assessor who satisfies the training package requirements and guidelines for the relevant assessor competencies.

The RTO assessor was formally a mine operator with some 15 years experience in the industry. The RTO assessor has been assessed and gained Statements of Attainment in the units of competency that they will be assessing.

The assessor conducts the workplace assessments under the national AQTF principles, training package requirements and RTO policies, procedures and practices. As well, the RTO assessor meets mine site requirements for ensuring a safe workplace and assessment conditions, complying with permit/access and ensuring minimal interruption to mine operations.

**Case study 5 — An assessor works with a technical expert to conduct the assessment**

A mining company has its own internal training systems. For quality reasons the company maintains a small group of highly experienced mine operators who are operator/trainers, who have been nominated by the mine manager, and who have undertaken internal training and on-the-job competency assessment using the company resources for several years.

The company selects an RTO with the appropriate qualification on its scope of registration. The RTO assessor satisfies the training package requirements and guidelines for the relevant assessor competencies. However the assessor does not possess the operational competencies or technical knowledge of mining operations. Together the RTO assessor and the company operator/trainers undertake a review of the company assessments and modify the materials and process to meet the national competency requirements.

They then ‘trial’ the new assessments with operator/trainers. During the trial they provide the company operators/trainers with Statements of Attainment and/or qualifications for the units of competency which they will be assessing as a technical expert with the RTO. After the ‘trial’ the RTO assessor and the mining company technical expert (operator/trainer) facilitate on-the-job assessments to meet the company, individual operator and competency/training package requirements.

Agreed assessment practices include a requirement that the company technical experts only assess operators who are not on their roster and who have been trained by other operator/trainers.

**Case study 6 — An assessor works with the workplace supervisor in collecting evidence for valid assessments**

A mining company has developed a partnership arrangement with an RTO that includes the workplace supervisor assisting in agreed assessment and reporting practices. A workplace supervisor/team leader from the trainee’s roster is required to assist in providing anecdotal and job record evidence of satisfactory performance over a period of time as evidence that will contribute towards the assessment outcomes. In this arrangement the workplace supervisor does not conduct assessment but may provide testimonials documenting first hand observation. The RTO ensures a process is in place to confirm the impartiality of the supervisor.

The workplace supervisors/team leaders do not hold national assessor competencies in operations but are deemed competent by the RTO, which also has scope for the assessor competencies. The RTO is also negotiating with the mining company for the workplace supervisor/team leader to gain the relevant assessment units of competency.
The workplace supervisor/team leader is able to provide recent evidence of competence, including pre-operational checks, inspection checklists, safety device testing and operational production reporting documentation for individual operators. The workplace supervisor/team leader is able to provide oral evidence against the competency requirements of communication and problem solving. The RTO undertakes the review, validation and moderation of evidence and has responsibility for ensuring the evidence provided is satisfactory.

This evidence informs the overall assessment and eliminates, in some instances, the necessity for an operator to repeat, by demonstration, competency assessment tasks.

Case study 7 — A team assessment

The Training Department in a mining enterprise has mapped the enterprise specific work activities and outcomes for team leaders against the national competency standards for the Certificate IV Extractive Industries qualification. An evidence guide was developed directly linked to workplace performance. This evidence guide specified workplace documentation and site-specific activities that could be used as evidence in a portfolio for assessment.

An assessment guide and a mentor (usually a one up manager) are provided to assist a team leader prepare for assessment. Working through the assessment guide the team leader identifies sufficient existing evidence and implements site improvements where required.

When sufficient evidence has been established for one or more workplace activities the team leader requests an assessment.

The assessment is undertaken by a qualified assessor, who satisfies the training package requirements and guidelines for the relevant assessor competencies, and a senior specialist manager.

Evidence for the assessment is drawn from a range of sources, including the portfolio of evidence and the team leader's team members. If the assessment identifies some areas where further training or development activities should occur, an action plan is drawn up which is agreed to by the team leader and their manager.

Subsequent assessments, and re-assessments if necessary, cover the units of competency required for a Certificate IV. A final review of all completed assessments is conducted by a senior management team and the national training adviser before a qualification is issued.

This process requires the candidate for assessment to be actually working on a site and challenges the notion of people learning in a classroom. The assessment process can be resource intensive and some managers are challenged by the need for demonstrated continuous improvement in site performance and providing greater autonomy to supervisors and team leaders.

The enterprise has found advantages in that linking the training and assessment to the worksite drives continuous improvement in site performance. The manager is engaged as a stakeholder and the action plans ensure that required training and mentoring actually happens.

Case study 8 — An RPL process

A mining company, registered as an RTO, wished to use RPL/RCC to recognise employee knowledge and skills against the national competency standards. Many of the employees had been employed at other mines where they had gained licences and participated in training programs and so felt that they need not participate in any further assessment. The mining company put in place a structured process for RPL/RCC, which met the training package requirements. The steps in the process included:

*Step 1: Assisting the employee to gather all existing documentation of skills*
Mining company assessors discussed the process with the employees and identified the units of competency/qualifications they wished to gain. The employees were encouraged to gather all relevant documentation from previous work roles, training and assessment and recognition of current skills that related to the selected units of competency. This included such documents as a CV, any relevant work history, results of previous training, work duties, copies of licences gained, tool boxes etc.

This documentation provided the assessor with an excellent snapshot of the competencies the employee should be able to gain.

**Step 2: Ensuring the desired competencies are current**

The assessor explained to the employees that each mine has different standards and ways of recording training outcomes. Some of the training recognition and licences were more than 5 years old. To ensure their current employer maintained their Duty of Care and the mine standards, there was a need for a formal process to ensure the competencies sought were current, that there was sufficient evidence and that the knowledge and skills met the requirements of the national units of competency and qualifications.

Although there was some negativity towards having to be re-assessed in some circumstances, the employees agreed when their work history was to be used as part of the evidence for the assessment.

It was found that the assessment process although rigorous was very quick as the assessor had the work history, recent in-house training outcomes, supervisor comments and workplace records to form part of the evidence.

**Step 3: Formalising the outcomes**

Many employees were surprised and pleased with the assessment outcomes. Others found that as they had not used the skill for some time they were a little rusty and required some update training. The employer provided the training as part of the agreed arrangement.

Employees were awarded Statements of Attainment or qualifications against the national training package and were proud of their recognition.

**Step 4: Formalising the RPL/RCC process in the work processes**

The RPL/RCC activity opened up communication lines and ensured greater consultation with individuals and groups. When looking to gain RPL/RCC it was easy to look at the occupational health and safety issues as well as technical knowledge and skills. The whole RPL/RCC and assessment process became blended into work processes rather than looking at it as a separate event that disrupted the work routine.

The mining company found that there had been a change in the culture in the workplace and productivity improved.

The assessment design will be required to incorporate features which will ensure adequate evidence is gathered for each of the components identified below:

*Underpinning knowledge*

It will be difficult, and often impossible, to gather sufficient evidence of the required essential knowledge by means of direct observation alone. It will be necessary to include some form of questioning, which may, or may not, be concurrent with direct observation. Questioning should not rely on written communication to any greater degree than is otherwise required by the unit of competency. The use of diagrams and sketching, demonstration and description along with third party evidence should be allowable within the assessment of essential knowledge.

*Routine skills*
Sufficient evidence of competent performance of routine skills may be obtained by direct observation. However, observation on more than one occasion would be required if direct observation is the sole evidence gathering method used as the observation needs to include performance of the skills under a range of all normal and some abnormal conditions. As multiple direct observations are often impractical, other evidence gathering tools (such as supervisor and other third party reports) should be included to gather evidence of consistent performance under a range of conditions. The emphasis is on evidence of competent performance rather than on direct observation, and this may come from drill logs, work colleagues and other sources.

Refer to contacts or skillsdmc@skillsdmc.com.au for detail of industry assessment tools which may be used either directly or as models to develop customised tools. Workplaces or RTOs may also wish to develop their own specific assessment tools to complement the national tools or as an alternative to the national tools.

Non-routine skills

By their nature the non-routine skills are unlikely to be able to be assessed adequately by direct observation. These skills include problem solving and emergency response and it would be inappropriate to set up a situation, or to wait for a situation to occur, which would allow for direct observation.

In most cases, the use of third party evidence, such as from supervisors and other work colleagues will be the most practical form of evidence for non-routine skills. This implies that a person will not be deemed competent in these non-routine skills until they have had a range of experience which will allow them to have accumulated evidence of their ability to handle non-routine situations.

In some situations, such as emergency response, some appropriate form of simulation (e.g. a fire drill) may be the best form of gathering sufficient, appropriate evidence of competence. Case studies may be appropriate in some circumstances to increase the evidence available.

Simulation/case studies may also be used for safety and cost effectiveness reasons.

Where the appropriate choice between these is restricted, this will be stated in the unit of competency. Generally, where:

- physical skills are significant (e.g. emergency procedures), then a simulation may be the preferred method (this may require coordination with a regular ‘safety drill’)
- cognitive skills are significant (e.g. problem solving) then a case study may be the preferred method

It is recommended that at least two different methods of gathering evidence be used in any assessment. Methods of gathering evidence for an assessment may include:

- direct observation
- demonstration on the job
- third party reports e.g. peer/team leader/3600 review
- questioning – written, verbal
- workplace documents – logs, reports etc
- scenarios/case studies
- projects
- simulation, routine drills
- interview

The ability to demonstrate performance at the level of a unit of competency as a whole is the key criteria in any assessment process.
Requirements for Candidates

Individuals being assessed under statutory licensing and industry registration systems must comply with training and experience requirements additional to the minimum requirements identified in this Training Package.

Requirements for RTOs

Resources and Infrastructure industry members have identified their expectations in relation to the roles and responsibilities of RTOs delivering and assessing against the units of competency and the qualifications in this package. The RTOs are expected to:

- ensure the quality of the delivery and assessment
- ensure trainers have relevant industry experience and maintain industry currency
- ensure these assessment guidelines are used as the basis for assessing against the units of competency and qualifications in this training package
- provide comprehensive and accessible advice to employers and learners on their responsibilities and rights
- ensure assessors have the appropriate qualifications and experience as set out in these assessment guidelines
- ensure appropriate processes for industry involvement in consultation and validation of assessment

In addition to requirements specified in the Essential Standards for Registration, units of competency from the Resources and Infrastructure training package should, wherever possible, be assessed in a work environment. Where this is not possible, assessment may occur in a simulated environment. A simulated environment must duplicate the conditions of the work environment and satisfy the assessment requirements as stated in the Evidence guide of the unit of competency.

A simulated work environment may be required for the following reasons:

- the workplace may not use the relevant skill, equipment or process
- conducting assessments may be disruptive or interfere with work requirements, for example, there may be ethical, privacy or confidentiality issues to consider
- it may not be appropriate to apply the skills in the workplace due to potential risks such as those to health and safety or equipment being damaged

In order to be a valid and reliable venue from which to assess a competency, the simulation must duplicate the conditions of a real work environment; the range of activities that occur must reflect real work experience.

When a simulated work environment is being set up, it is crucial that the assessor is thoroughly familiar with the competency standard being assessed, as well as experienced in the current circumstances of the work. The RTO/assessor must ensure that the assessment environment includes:

- use of the full range of plant and/or equipment required to conduct to undertake the task in the workplace
- use of up-to-date equipment and software
• reflects times and deadlines
• shows the complexity of dealing with multiple tasks
• involves prioritising among competing tasks
• work with others in a team
• communication with diverse groups
• finding, discuss and test solutions to problems
• exploring Occupational Health and Safety issues
• answering practically oriented, applied knowledge questions
• showing the level of written and verbal expression sufficient for, but not exceeding, the work requirements
• reflecting the requirement for a range of different conditions to be demonstrated

Assessment of competency requires the collection of evidence and this should be conducted over a period of time (at the workplace and/or a simulated work environment) to ensure that the demonstration of competency is valid and reliable. The individual being assessed should be aware that collection of evidence needs to be ongoing and they, therefore, need to be part of the planning, conduct and review of the assessment process.

The requirements for assessment for all RII units of competency requirements are stated in the Evidence Guide of the unit of competency and the training package assessment guidelines. All RII units of competency state:

Critical aspects for assessment and evidence required to demonstrate competency in the unit includes:

• knowledge of the requirements, procedures and instructions for the task
• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of the task
• working with others to undertake and complete the task
• consistent timely completion of the task

Context of and specific resources for assessment which states:

• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.

Assessment in the work environment means that the candidate is assessed in a context that is a workplace, or that very closely replicates a workplace. The collection of evidence should be conducted over a period of time (at the workplace) to ensure that the demonstration of competency is valid and reliable. The candidate should be aware that collection of evidence needs to be ongoing and they need to be part of the planning, conduct and review of the assessment process.

Method of assessment

The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

• written and/or oral assessment of the candidate’s required knowledge
• observed, documented and/or first hand testimonial evidence of the candidate’s:
• implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
• consistent achievement of required outcomes
• first hand testimonial evidence of the candidate’s working with others to undertake and complete the task

The assessment must ensure that it addresses all areas of the application of Required Skills and Knowledge in the context of the Range Statement, in the work environment to satisfy the performance criteria to the standard of the workplace.

**Supporting integrated training delivery and assessment**

As a general principle, the Resources and Infrastructure industries support the integration of units of competency for assessment, where practical. An integrated approach reflects real work practices in that it brings together a number of units of competency. For example, an employee working on a worksite would complete a number of interrelated functions and occupational, health and safety tasks at the same time, not simply one task at a time. An integrated assessment activity would be designed to collect evidence for a number of units together rather than designing one assessment activity for each individual element of the relevant performance criteria.

Where both training and assessment are required, industry supports an approach which provides for off-the-job training combined with assessment of the application of skills and knowledge in a real work situation.

The Resources and Infrastructure training package defines off-the-job assessment as that which occurs away from the normal operation of the business including, for example, assessment which may occur in the workplace but not under normal industry working conditions. The industry considers it important for candidates to have the opportunity to develop competency in structured learning programs, which includes assessing in the workplace whenever possible.

The Resources and Infrastructure training package defines on-the-job assessment as that assessment which occurs in the workplace as part of the normal operation of the business. Where an integrated competency assessment approach is implemented it is expected that several integrated competency assessments would be necessary to cover the breadth and complexity of the qualification, from Certificate I to Advanced Diploma.

The context of the assessment, the role of the candidate and the complexity of the task will influence how many units of competency are to be integrated.

**Ways of minimising the cost of the assessment process**

RTOs should, where possible, find ways to minimise the cost and inconvenience caused by assessment activities. For example:

• check candidate’s readiness for assessment before proceeding
• use performance of actual work activities as sources of evidence
• arrange for demonstrations of competence in the most appropriate place
• make the assessment only as precise and/or complex as necessary at the candidate’s level of qualification and occupational area
• separate evidence gathering from judgement, and assign evidence gathering to less expensive personnel (including candidates themselves)
• design assessment events so that the candidate can have prior knowledge of the requirements and can be actively involved in evidence gathering
• use holistic assessment scenarios which build on secondary evidence such as a record book, trainer’s report or workplace report
Assessment Guidelines

- limit the number of times a single competency or similar competencies are assessed
- monitor progress as part of normal responsibilities, rather than relying on assessment events
- provide self appraisal tools for candidates
- assess more than one competency at a time
- use of technology to support training and assessment strategies eg teleconferencing, videoconferencing, digital media, Elearning, email

Assessment strategies
Each RTO must have strategies for training and assessment that meet the requirements of the relevant training package or accredited course and are developed in consultation with industry stakeholders.

See the AQTF 2010 Essential Conditions and Standards for Continuing Registration and the AQTF Essential Conditions and Standards for Initial Registration and or/the Standards for NVR Registered Training Organisations for RTOs registered with the Australian Skills Quality Authority (ASQA).

SkillsDMC strongly recommends the implementation of a systems approach in implementing training and assessment. This will incorporate an enterprise and individual training needs analysis, training and assessment (as required), issuance of accreditation as applicable and support to fulfil relevant licensing requirements, evaluation and review.

The Skills Maximiser training needs analysis and workforce planning and development tool has been developed in consultation with industry to support the systems approach to training. Contact skillsdmc@skillsdmc.com.au for further information.

RTOs not utilising the tools available through the industry skills council are advised to ensure that their own planning tools reflect, at the least, an equivalent degree of planning and recognition of the application of competence as it is demonstrated in the workplace.

Assessment of competency will be in accordance with the relevant industry sector and state legislation applying in each state and territory. This will include:

- Duty of care requirements
- Occupational Health and Safety Acts and Regulations
- Environmental Protection Acts and Regulations
- Heritage Protection Acts and Regulations
- Petroleum Acts and Regulations

In certain circumstances other legislation/regulations will also be relevant including:

- Mining Acts and Regulations
- Submerged Lands Acts and Regulations
- Dangerous Goods Regulations
- Water Drilling Licensing requirements

Where units of competency have been imported from another training package (i.e. the unit code does NOT have the ‘RII’ prefix), the RTO responsible for the assessment should check the assessment guidelines covering those units of competency in their source training package.

Assessment considerations
Some sections of the industry operate in remote areas which are not conducive to multiple visits from assessors. The competency however requires a consistent performance which may not be assessable by a single site visit. The assessment design may therefore need to include other evidence such as:
• third party report
• range of documentation completed by the candidate (such as drill logs)
• statement of curricular activities verified by the supervisor
• evidence of training undertaken and course outline details

These can be collected/viewed by the assessor to aid in the judgement of consistent performance to the required standard.

Assessing using a formal assessment team in the one place at the one time is often not practical and so the assessor will frequently need to rely on evidence provided by supervisors, other work colleagues, written records and documentation to assist in making the judgement of competency.

Interviews, questioning of the candidate and formal answers to written or oral tests customised and documented by the assessor or RTO may be gathered as evidence for judging competency subject to audit by the RTO issuing the qualification or statement of attainment. Units of competency have generally been written with a focus on a workplace assessment environment.

**Pathways in this training package**

Qualifications in this training package may be achieved through a range of implementation methodologies. It is a requirement that all units of competency are assessed based on evidence of the demonstration of competency in the work environment.

In addition to enterprise based delivery, pathways may include:

<table>

Pathways

The competencies in this Training Package may be attained in a number of ways including through:

• formal or informal education and training
• experiences in the workplace
• general life experience, and/or
• any combination of the above.

Assessment under this Training Package leading to an AQF qualification or Statement of Attainment may follow a learning and assessment pathway, an assessment-only or recognition pathway, or a combination of the two as illustrated in the following diagram.
Each of these assessment pathways leads to full recognition of competencies held - the critical issue is that the candidate is competent, not how the competency was acquired. Assessment, by any pathway, must comply with the assessment requirements set out in the Assessment Guidelines of the Training Package, and the AQTF, where relevant, the Australian Qualifications Framework.

Learning and Assessment Pathways
Usually, learning and assessment are integrated, with assessment evidence being collected and feedback provided to the candidate at anytime throughout the learning and assessment process.

Learning and assessment pathways may include structured programs in a variety of contexts using a range of strategies to meet different learner needs. Structured learning and assessment programs could be: group-based, work-based, project-based, self-paced, action learning-based; conducted by distance or e-learning; and/or involve practice and experience in the workplace.

Learning and assessment pathways to suit Australian Apprenticeships have a mix of formal structured training and structured workplace experience with formative assessment activities through which candidates can acquire and demonstrate skills and knowledge from the relevant units of competency.

Credit Pathways
Credit is the value assigned for the recognition of equivalence in content between different types of learning and/or qualifications which reduces the volume of learning required to achieve a qualification.

Credit arrangements must be offered by all RTOs that offer Training Package qualifications. Each RTO must have a systematic institutional approach with clear, accessible and transparent policies and procedures.

Recognition of Prior Learning
Recognition of Prior Learning (RPL) is an assessment process which determines the credit outcomes of an individual application for credit.

The availability of Recognition of Prior Learning (RPL) provides all potential learners with access to credit opportunities.

The recognition of prior learning pathway is appropriate for candidates who have previously attained skills and knowledge and who, when enrolling in qualifications, seek to shorten the duration of their training and either continue or commence working. This may include the following groups of people:

- existing workers;
- individuals with overseas qualifications;
- recent migrants with established work histories;
- people returning to the workplace; and
- people with disabilities or injuries requiring a change in career.

As with all assessment, RPL assessment should be undertaken by academic or teaching staff with expertise in the subject, content of skills area, as well as knowledge of and expertise in RPL assessment policies and procedures.
Assessment methods used for RPL should provide a range of ways for individuals to demonstrate that they have met the required outcomes and can be granted credit. These might include:
questioning (oral or written)
consideration of a portfolio and review of contents
consideration of third party reports and/or other documentation such as documentation such as articles, reports, project material, papers, testimonials or other products prepared by the RPL applicant that relate to the learning outcomes of the relevant qualification component
mapping of learning outcomes from prior formal or non-formal learning to the relevant qualification components
observation of performance, and
participation in structured assessment activities the individual would normally be required to undertake if they were enrolled in the qualification component/s.

In a Recognition of Prior Learning (RPL) pathway, the candidate provides current, quality evidence of their competency against the relevant unit of competency. This process may be directed by the candidate and verified by the assessor. Where the outcomes of this process indicate that the candidate is competent, structured training is not required. The RPL requirements of the AQTF must be met.

As with all assessment, the assessor must be confident that the evidence indicates that the candidate is currently competent against the endorsed unit of competency. This evidence may take a variety of forms and might include certification, references from past employers, testimonials from clients, work samples and/or observation of the candidate. The onus is on candidates to provide sufficient evidence to satisfy assessors that they currently hold the relevant competencies. In judging evidence, the assessor must ensure that the evidence of prior learning is:
- authentic (the candidate’s own work);
- valid (directly related to the current version of the relevant endorsed unit of competency);
- reliable (shows that the candidate consistently meets the endorsed unit of competency);
- current (reflects the candidate’s current capacity to perform the aspect of the work covered by the endorsed unit of competency); and
- sufficient (covers the full range of elements in the relevant unit of competency and addresses the four dimensions of competency, namely task skills, task management skills, contingency management skills, and job/role environment skills).

Credit Transfer

Credit transfer is a process which provides learners with agreed and consistent credit outcomes based on equivalences in content between matched qualifications.

This process involves education institutions:
mapping, comparing and evaluating the extent to which the defined learning outcomes and assessment requirements of the individual components of one qualification are equivalent to the learning outcomes and assessment requirements of the individual components of another qualification
making an educational judgment of the credit outcomes to be assigned between the matched components of the two qualifications
setting out the agreed credit outcomes in a documented arrangement or agreement, and
publicising the arrangement/agreement and credit available.

Combination of Pathways
Credit may be awarded on the basis of a combination of credit transfer plus an individual RPL assessment for additional learning. Once credit has been awarded on the basis of RPL, subsequent credit transfer based on these learning outcomes should not include revisiting the RPL assessment but should be based on credit transfer or articulation or other arrangements between providers.

Where candidates for assessment have gained competencies through work and life experience and gaps in their competence are identified, or where they require training in new areas, a combination of pathways may be appropriate.

In such situations, the candidate may undertake an initial assessment to determine their current competency. Once current competency is identified, a structured learning and assessment program ensures that the candidate acquires the required additional competencies identified as gaps.

**Assessor Requirements**

This section identifies the specific requirements on the vocational competence and experience for assessors, to ensure that they meet the needs of industry and their obligations under AQTF, and clarifies how others may contribute to the assessment process where one person alone does not hold all the required competencies.

**Assessor Competencies**

The AQTF specifies mandatory competency requirements for assessors. For information, Element 1.4 from the AQTF 2007 *Essential Standards for Registration* follows:

<table>
<thead>
<tr>
<th>1.4</th>
<th>Training and assessment is delivered by trainers and assessors who:</th>
</tr>
</thead>
<tbody>
<tr>
<td>a)</td>
<td>have the necessary training and assessment competencies as determined by the National Quality Council or its successors, and</td>
</tr>
<tr>
<td>b)</td>
<td>have the relevant vocational competencies at least to the level being delivered or assessed, and</td>
</tr>
<tr>
<td>c)</td>
<td>can demonstrate current industry skills directly relevant to the training/assessment being undertaken, and</td>
</tr>
<tr>
<td>d)</td>
<td>continue developing their Vocational Education and Training (VET) knowledge and skills as well as their industry currency and trainer/assessor competence.</td>
</tr>
</tbody>
</table>

* See AQTF 2010 *Users” Guide to the Essential Standards for Registration* Appendix 2
Designing Assessment Tools
This section provides an overview on the use and development of assessment tools.

Use of Assessment Tools
Assessment tools provide a means of collecting the evidence that assessors use in making judgments about whether candidates have achieved competency.
There is no set format or process for the design, production or development of assessment tools. Assessors may use prepared assessment tools, such as those specifically developed to support this Training Package, or they may develop their own.

Using Prepared Assessment Tools
If using prepared assessment tools, assessors should ensure these relate to the current version of the relevant unit of competency. The current unit of competency can be checked on the National Register <www.ntis.gov.au>.

Developing Assessment Tools
When developing assessment tools, assessors must ensure that they:
• are benchmarked against the relevant unit or units of competency
• are reviewed as part of the continuous improvement of assessment strategies as required under Standard 1 of the AQTF 2007
• meet the assessment requirements expressed in Standard 1 of the AQTF 2010 Essential Standards for Initial and Continuing Registration.
A key reference for assessors developing assessment tools is TAE10 Training and Education Training Package.

Language, Literacy and Numeracy
The design of assessment tools must reflect the language, literacy and numeracy competencies required for the performance of a task in the workplace and not exceed these expectations.

Conducting Assessment
This section details the mandatory assessment requirements and provides information on equity in assessment including reasonable adjustment.

Mandatory Assessment Requirements
Assessments must meet the criteria set out in the 2010 Essential Standards for Initial and Continuing Registration. For information, the mandatory assessment requirements from Standard 1 from the AQTF 2010 Essential Standards for Initial and Continuing Registration are as follows:

<table>
<thead>
<tr>
<th>1.5</th>
<th>Assessment, including Recognition of Prior Learning:</th>
</tr>
</thead>
<tbody>
<tr>
<td>a)</td>
<td>meets the requirements of the relevant Training Package or accredited course,</td>
</tr>
<tr>
<td>b)</td>
<td>is conducted in accordance with the principles of assessment and the rules of evidence, and</td>
</tr>
<tr>
<td>c)</td>
<td>meets workplace and, where relevant, regulatory requirements.</td>
</tr>
<tr>
<td>d)</td>
<td>is systematically validated.</td>
</tr>
</tbody>
</table>
Assessment of Employability Skills

Employability Skills are integral to workplace competency. As such they must be considered in the design, customisation, delivery and assessment of vocational education and training programs in an integrated and holistic way, as represented diagrammatically below.
Employability Skills are embedded and explicit within each unit of competency, and an Employability Skills Summary is available for each qualification. Training providers must use Employability Skills information in order to design valid and reliable training and assessment strategies. This analysis could include:

- reviewing units of competency to locate relevant Employability Skills and determine how they are applied within the unit
- analysing the Employability Skills Summary for the qualification in which the unit or units are packaged to help clarify relevant industry and workplace contexts and the application of Employability Skills at that qualification outcome
- designing training and assessment to address Employability Skills requirements.

Employability Skills are reported on each qualification using the following statement on the qualification testamur: "A summary of the Employability Skills developed through this qualification can be downloaded from [http://employabilityskills.training.com.au](http://employabilityskills.training.com.au)"

**Access and Equity**

An individual’s access to the assessment process should not be adversely affected by restrictions placed on the location or context of assessment beyond the requirements specified in this Training Package: training and assessment must be bias-free.

Under the rules for their development, Training Packages must reflect and cater for the increasing diversity of Australia’s VET clients and Australia’s current and future workforce. The flexibilities offered by Training Packages should enhance opportunities and potential outcomes for all people so that we can all benefit from a wider national skills base and a shared contribution to Australia’s economic development and social and cultural life.

**Reasonable adjustments**

It is important that education providers take meaningful, transparent and reasonable steps to consult, consider and implement reasonable adjustments for students with disability. Under the *Disability Standards for Education 2005*, education providers must make reasonable adjustments for people with disability to the maximum extent that those adjustments do not cause that provider unjustifiable hardship. While "reasonable adjustment" and "unjustifiable hardship" are different concepts and involve different considerations, they both seek to strike a balance between the interests of education providers and the interests of students with and without disability.

An adjustment is any measure or action that a student requires because of their disability, and which has the effect of assisting the student to access and participate in education and training on the same basis as students without a disability. An adjustment is reasonable if it achieves this purpose while taking into account factors such as the nature of the student’s disability, the views of the student, the potential effect of the adjustment on the student and others who might be affected, and the costs and benefits of making the adjustment.
An education provider is also entitled to maintain the academic integrity of a course or program and to consider the requirements or components that are inherent or essential to its nature when assessing whether an adjustment is reasonable. There may be more than one adjustment that is reasonable in a given set of circumstances; education providers are required to make adjustments that are reasonable and that do not cause them unjustifiable hardship. The Training Package Guidelines provides more information on reasonable adjustment, including examples of adjustments. Go to http://www.deewr.gov.au/tpdh/Pages/home.aspx.
Competency Standards

What is competency?
The broad concept of industry competency concerns the ability to perform particular tasks and duties to the standard of performance expected in the workplace. Competency requires the application of specified skills, knowledge and attitudes relevant to effective participation in an industry, industry sector or enterprise.
Competency covers all aspects of workplace performance and involves performing individual tasks; managing a range of different tasks; responding to contingencies or breakdowns; and, dealing with the responsibilities of the workplace, including working with others. Workplace competency requires the ability to apply relevant skills, knowledge and attitudes consistently over time and in the required workplace situations and environments. In line with this concept of competency Training Packages focus on what is expected of a competent individual in the workplace as an outcome of learning, rather than focussing on the learning process itself. Competency standards in Training Packages are determined by industry to meet identified industry skill needs. Competency standards are made up of a number of units of competency each of which describes a key function or role in a particular job function or occupation. Each unit of competency within a Training Package is linked to one or more AQF qualifications.

Contextualisation of Units of Competency by RTOs
Registered Training Organisation (RTOs) may contextualise units of competency to reflect local outcomes required. Contextualisation could involve additions or amendments to the unit of competency to suit particular delivery methods, learner profiles, specific enterprise equipment requirements, or to otherwise meet local needs. However, the integrity of the overall intended outcome of the unit of competency must be maintained.
Any contextualisation of units of competency in this endorsed Training Package must be within the bounds of the following advice. In contextualising units of competency, RTOs:
• must not remove or add to the number and content of elements and performance criteria
• may add specific industry terminology to performance criteria where this does not distort or narrow the competency outcomes
• may make amendments and additions to the range statement as long as such changes do not diminish the breadth of application of the competency and reduce its portability, and/or
• may add detail to the evidence guide in areas such as the critical aspects of evidence or resources and infrastructure required where these expand the breadth of the competency but do not limit its use.

Components of Units of Competency
The components of units of competency are summarised below, in the order in which they appear in each unit of competency.

Unit Title
The unit title is a succinct statement of the outcome of the unit of competency. Each unit of competency title is unique, both within and across Training Packages.

Unit Descriptor
The unit descriptor broadly communicates the content of the unit of competency and the skill area it addresses. Where units of competency have been contextualised from units of competency from other endorsed Training Packages, summary information is provided. There may also be a brief second paragraph that describes its relationship with other units of competency, and any licensing requirements.

Employability Skills statement
A standard Employability Skills statement appears in each unit of competency. This statement directs trainers and assessors to consider the information contained in the Employability Skills Summary in which the unit of competency is packaged.

**Prerequisite Units (optional)**
If there are any units of competency that must be completed before the unit, these will be listed.

**Application of the Unit**
This sub-section fleshes out the unit of competency’s scope, purpose and operation in different contexts, for example, by showing how it applies in the workplace.

**Competency Field (Optional)**
The competency field either reflects the way the units of competency are categorised in the Training Package or denotes the industry sector, specialisation or function. It is an optional component of the unit of competency.

**Sector (optional)**
The industry sector is a further categorisation of the competency field and identifies the next classification, for example an elective or supervision field.

**Elements of Competency**
The elements of competency are the basic building blocks of the unit of competency. They describe in terms of outcomes the significant functions and tasks that make up the competency.

**Performance Criteria**
The performance criteria specify the required performance in relevant tasks, roles, skills and in the applied knowledge that enables competent performance. They are usually written in passive voice. Critical terms or phrases may be written in bold italics and then defined in range statement, in the order of their appearance in the performance criteria.

**Required Skills and Knowledge**
The essential skills and knowledge are either identified separately or combined. Knowledge identifies what a person needs to know to perform the work in an informed and effective manner. Skills describe the application of knowledge to situations where understanding is converted into a workplace outcome.

**Range Statement**
The range statement provides a context for the unit of competency, describing essential operating conditions that may be present with training and assessment, depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts. As applicable, the meanings of key terms used in the performance criteria will also be explained in the range statement.

**Evidence Guide**
The evidence guide is critical in assessment as it provides information to the Registered Training Organisation (RTO) and assessor about how the described competency may be demonstrated. The evidence guide does this by providing a range of evidence for the assessor to make determinations, and by providing the assessment context. The evidence guide describes:
- conditions under which competency must be assessed including variables such as the assessment environment or necessary equipment
- relationships with the assessment of any other units of competency
- suitable methodologies for conducting assessment including the potential for workplace simulation
• resource implications, for example access to particular equipment, infrastructure or situations
• how consistency in performance can be assessed over time, various contexts and with a range of evidence, and expectations at the AQF qualification level involved

**Employability Skills in units of competency**

The detail and application of Employability Skills facets will vary according to the job-role requirements of each industry. In developing Training Packages, industry stakeholders are consulted to identify appropriate facets of Employability Skills which are incorporated into the relevant units of competency and qualifications.

Employability Skills are not a discrete requirement contained in units of competency (as was the case with Key Competencies). Employability Skills are specifically expressed in the context of the work outcomes described in units of competency and will appear in elements, performance criteria, range statements and evidence guides. As a result, users of Training Packages are required to review the entire unit of competency in order to accurately determine Employability Skills requirements.

**How Employability Skills relate to the Key Competencies**

The eight nationally agreed Employability Skills now replace the seven Key Competencies in Training Packages. Trainers and assessors who have used Training Packages prior to the introduction of Employability Skills may find the following comparison useful.

<table>
<thead>
<tr>
<th>Employability Skills</th>
<th>Mayer Key Competencies</th>
</tr>
</thead>
<tbody>
<tr>
<td>Communication</td>
<td>Communicating ideas and information</td>
</tr>
<tr>
<td>Teamwork</td>
<td>Working with others and in teams</td>
</tr>
<tr>
<td>Problem solving</td>
<td>Solving problems</td>
</tr>
<tr>
<td></td>
<td>Using mathematical ideas and techniques</td>
</tr>
<tr>
<td>Initiative and enterprise</td>
<td></td>
</tr>
<tr>
<td>Planning and organising</td>
<td>Collecting, analysing and organising information</td>
</tr>
<tr>
<td></td>
<td>Planning and organising activities</td>
</tr>
<tr>
<td>Self-management</td>
<td></td>
</tr>
<tr>
<td>Learning</td>
<td></td>
</tr>
<tr>
<td>Technology</td>
<td>Using technology</td>
</tr>
</tbody>
</table>

When analysing the above table it is important to consider the relationship and natural overlap of Employability Skills. For example, using technology may involve communication skills and combine the understanding of mathematical concepts.

**Explicitly embedding Employability Skills in units of competency**

This Training Package seeks to ensure that industry-endorsed Employability Skills are explicitly embedded in units of competency. The application of each skill and the level of detail included in each part of the unit will vary according to industry requirements and the nature of the unit of competency.
Employability Skills must be both explicit and embedded within units of competency. This means that Employability Skills will be:

- embedded in units of competency as part of the other performance requirements that make up the competency as a whole
- explicitly described within units of competency to enable Training Packages users to identify accurately the performance requirements of each unit with regards to Employability Skills.

This Training Package also seeks to ensure that Employability Skills are well-defined and written into units of competency so that they are apparent, clear and can be delivered and assessed as an essential component of unit work outcomes.

The following table contains examples of embedded Employability Skills for each component of a unit of competency. Please note that in the examples below the bracketed skills are provided only for clarification and will not be present in units of competency within this Training Package.

### Example Employability Skills unit

<table>
<thead>
<tr>
<th>Unit component</th>
<th>Example of embedded Employability Skill</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Unit Title</strong></td>
<td>RIIMEX201A Suppress dust in open cut environment</td>
</tr>
<tr>
<td><strong>Unit Descriptor</strong></td>
<td>This unit covers suppressing of dust in an open cut environment in the coal and metalliferous mining and extractive industries. It includes applying dust suppressant and minimising dust creation</td>
</tr>
<tr>
<td><strong>Element</strong></td>
<td>1 Apply dust suppressant</td>
</tr>
</tbody>
</table>
| **Performance Criteria** | 1 Access, interpret and apply *compliance documentation* relevant to suppressing of dust in an open cut environment  
2 Receive, interpret and clarify shift changeover details  
3 Select appropriate *dust suppression* method according to site conditions  
4 Distribute dust suppressant in appropriate pattern according to road type  
5 Adjust dust suppression activities according to schedule and weather conditions  
6 Identify, address and report *environmental issues*  
7 Communicate with other personnel using approved communication methods  
8 Adhere to emergency procedures to ensure safety of personnel, plant and equipment |
| **Range Statement** | Relevant compliance documentation |
may include:

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

<table>
<thead>
<tr>
<th>Required Skills and Knowledge</th>
<th>Required Skills</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied.</td>
</tr>
<tr>
<td></td>
<td>This includes the ability to carry out the following as required to suppress dust in open cut environment:</td>
</tr>
<tr>
<td></td>
<td>• apply legislative, organisation and site requirements and procedures</td>
</tr>
<tr>
<td></td>
<td>• make decisions</td>
</tr>
<tr>
<td></td>
<td>• direct and signal</td>
</tr>
<tr>
<td></td>
<td>• clean equipment</td>
</tr>
<tr>
<td></td>
<td>• maintain equipment</td>
</tr>
<tr>
<td></td>
<td>• operate equipment</td>
</tr>
<tr>
<td></td>
<td>• follow instructions</td>
</tr>
<tr>
<td></td>
<td>• identify hazards</td>
</tr>
<tr>
<td></td>
<td>• interpret plans, reports, maps, specifications</td>
</tr>
<tr>
<td></td>
<td>• maintain records</td>
</tr>
<tr>
<td></td>
<td>• follow safe work practices</td>
</tr>
<tr>
<td></td>
<td>• troubleshoot</td>
</tr>
<tr>
<td></td>
<td>• wear protective equipment</td>
</tr>
</tbody>
</table>

**Required Knowledge**
Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used.

This includes knowledge of the following as required to suppress dust in open cut environment:

- emergency procedures
- environmental aspects
- equipment processes, technical capability and limitations
- equipment safety requirements
- geological and technical data (rock formation)
- maintenance procedures
- mine operation system
- OHS procedures
- plan terminology
- site procedures (operational and maintenance)
- site safety requirements
- sprinkler operation
- water truck operation
### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for suppressing of dust in open cut environment
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of the suppressing of dust in open cut environment
- working with others to suppress dust in open cut environment that meets all of the required outcomes
- consistent timely suppressing of dust in open cut environment that safely, effectively and efficiently meets the required outcomes
RII10109 Certificate I in Resources and Infrastructure Operations

Modification History
Not applicable.

Description
The Certificate I in Resources and Infrastructure Operations is an introductory qualification aimed at individuals entering the resources and infrastructure industry. It allows individuals to develop basic skills and knowledge to prepare for work. They may undertake a range of simple tasks under close supervision. The range of technical skills and knowledge is limited.

Pathways Information
Not applicable.

Licensing/Regulatory Information
Not applicable.

Entry Requirements
Not applicable.
## Employability Skills Summary

The following table includes a summary of the employability skills as identified by the resources and infrastructure industry for this qualification. The table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes required here are broad industry requirements that may vary depending on packaging options.

<table>
<thead>
<tr>
<th>Employability Skill</th>
<th>Industry/enterprise requirements for this qualification include:</th>
</tr>
</thead>
</table>
| **Communication**           | • speak clearly and directly  
• listen carefully to instructions and information  
• read and interpret work instructions and safety signs  
• calculate basic weights, distances and volumes  
• complete incident and maintenance reports  
• adjust communication style to meet the needs of people with diverse backgrounds |
| **Teamwork**                | • apply teamwork in a range of situations, particularly in a safety context  
• contribute to the planning and execution of operations  
• work cooperatively with people of different ages, gender, race, religion or political persuasion and people with disability  
• recognise and respond sensitively to people from culturally and linguistically diverse backgrounds |
| **Problem-solving**         | • adjust work methods in response to changing weather and site conditions  
• participate in team solutions to safety issues |
| **Initiative and enterprise** | • independently adapt to changing work conditions or different work areas  
• identify potential improvements to working practice and conditions  
• identify and assess risks in the workplace |
| **Planning and organising** | • manage time and priorities to complete work  
• identify and obtain appropriate equipment and permits  
• identify potential hazards and prepare appropriate responses  
• follow procedures and techniques relevant to the equipment and work being done |
| **Self-management**         | • take responsibility for planning and organising own work priorities and completing assigned tasks  
• monitor own performance to ensure work will be completed well and on time |
<table>
<thead>

Packaging Rules

Requirements for completion of the qualification

The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency.

Successful completion of six (6) units of competency made up of:

- two (2) Core units, and
- four (4) elective units of which:
  - up to four (4) from the Group A electives listed below
  - up to one (1) unit may come from AQF level I, II or III in this, or any other, Training Package or accredited course*

Units of competency chosen must:

- be relevant to the competency requirements for the job function
- reflect the competency profile for the occupation at the enterprise level
- in the case of accredited course units of competency, not duplicate in part or in whole any unit from a Training Package.

Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

### Core units of competency

Packaging Rules

Requirements for completion of the qualification
The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency.
Successful completion of eight (8) units of competency made up of:

- two (2) Core units, and
- six (6) elective units of which:
  - at least three (3) must come from the Group A electives or Group B high risk work electives listed below
  - up to two (2) from the Group C electives listed below
  - up to one (1) unit may come from AQF level I, II or III in this, or any other, Training Package or accredited course.

Units of competency chosen must:

- be relevant to the competency requirements for the job function
- reflect the competency profile for the occupation at the enterprise level
- in the case of accredited course units of competency, not duplicate in part or in whole any unit from a Training Package.

There are both licensed and non-licensed units of competency relating to high risk work in the RII09 Resources and Infrastructure Industry Training Package. To be appointed under any statutory requirements in related roles, units of competency should be demonstrated to meet the state/territory licensing requirements. State/territory licensing requirements need to be confirmed by the Registered Training Organisation delivering and/or assessing the competency.
Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

RII20309 Certificate II in Underground Coal Mining

Modification History
Inclusion of RIIBLA204A Store, handle and transport explosives in underground coal mines which was previously omitted.

Description
This qualification reflects the role of an individual working as an operator in an underground coal mine, who performs a range of mainly routine tasks using limited practical skills and fundamental operational knowledge, in a defined context working under direct supervision.

Pathways Information
Not applicable.

Licensing/Regulatory Information
Not applicable.

Entry Requirements
Not applicable.
### Employability Skills Summary

The following table includes a summary of the employability skills as identified by the resources and infrastructure industry for this qualification. The table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes required here are broad industry requirements that may vary depending on packaging options.

Packaging Rules

Requirements for completion of the qualification
The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency.
Successful completion of ten (10) units of competency made up of:

- five (5) Core units, and
- five (5) elective units of which:
  - at least four (4) must come from the Group A electives listed below
  - up to one (1) from the Group B electives listed below, or from AQF level II or III in this, or any other, Training Package

Units of competency chosen must be relevant to the competency requirements for the job function.
Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

workplace documents like policies, procedures etc
- understand equipment characteristics, technical capabilities, limitations and procedures

Technology
- use technology to monitor and report on work progress
- use communications technology appropriate to the workplace (email, mobile, radio, etc)
- operate equipment safely

Packaging Rules

Requirements for completion of the qualification
The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency.

**Note about regulations:** RIIERR302A is Mandatory in NSW.

Successful completion of ten (10) units of competency made up of:
- five (5) Core units, and
- five (5) elective units of which:
  - at least four (4) must come from the Group A electives listed below
  - up to one (1) from the Group B electives listed below, or from AQF level II or III level in this, or any other Training Package.

Units of competency chosen must be relevant to the competency requirements for the job function.
Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

Packaging Rules

Requirements for completion of the qualification
The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency. Successful completion of fourteen (14) units of competency made up of:

- ten (10) Core units, and
- four (4) elective units of which:
  - at least two (2) must come from the Group A electives listed below
  - up to two (2) from the Group B electives listed below
  - up to one (1) unit may come from AQF level II or III level in this, or any other Training Package or accredited course.

Units of competency chosen must

- be relevant to the competency requirements for the job function
- reflect the competency profile for the occupation at the enterprise level
- in the case of accredited course units of competency, not duplicate in part or in whole any unit from a Training Package.

Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

Packaging Rules

Requirements for completion of the qualification

The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency.

Successful completion of sixteen (16) units of competency made up of:

- ten (10) Core units, and
- six (6) elective units of which:
  - at least three (3) must come from the Group A electives listed below
  - up to three (3) may come from AQF level II or III from this, or any other Training Package
  - up to (2) may come from an accredited course at AQF II or III level

Units of competency chosen must

- be relevant to the competency requirements for the job function
- reflect the competency profile for the occupation at the enterprise level
- in the case of accredited course units of competency, not duplicate in part or in whole any unit from a Training Package

There are both licenced and non-licenced units of competency relating to high risk work in the RII09 Resources and Infrastructure Training Package. To be appointed under any statutory requirements in related roles, units of competency should be demonstrated to meet the state/territory licensing requirements. State/territory licensing requirements need to be confirmed by the Registered Training Organisation delivering and/or assessing the competency.

Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

|                           | • calculate basic weights, distances and volumes  
|                           | • complete incident and maintenance reports  
|                           | • adjust communication style to meet the needs of people with diverse backgrounds                                                                                                                                                                                  |
| Teamwork                  | • apply teamwork in a range of situations, particularly in a safety context  
|                           | • contribute to the planning and execution of operations  
|                           | • work cooperatively with people of different ages, gender, race, religion or political persuasion and people with disability  
|                           | • recognise and respond sensitively to people from culturally and linguistically diverse backgrounds                                                                                                                                                                      |
| Problem-solving           | • adjust work methods in response to changing weather and site conditions  
|                           | • participate in team solutions to safety issues                                                                                                                                                                                                                     |
| Initiative and enterprise | • independently adapt to changing work conditions or different work areas  
|                           | • identify potential improvements to working practice and conditions  
|                           | • identify and assess risks in the workplace                                                                                                                                                                                                                            |
| Planning and organising   | • manage time and priorities to complete work  
|                           | • identify and obtain appropriate equipment and permits  
|                           | • identify potential hazards and prepare appropriate responses  
|                           | • follow procedures and techniques relevant to the equipment and work being done                                                                                                                                                                                      |
| Self-management           | • take responsibility for planning and organising own work priorities and completing assigned tasks  
|                           | • monitor own performance to ensure work will be completed well and on time  
|                           | • understand the standard of work expected at a work site                                                                                                                                                                                                             |
| Learning                  | • be willing to learn new ways of working  
|                           | • seek information to improve performance from people and
| Technology | workplace documents like policies, procedures etc  
|            | understand equipment characteristics, technical capabilities, limitations and procedures  
|            | use technology to monitor and report on work progress  
|            | use communications technology appropriate to the workplace (email, mobile, radio, etc)  
|            | operate equipment safely |
Packaging Rules

Requirements for completion of the qualification
The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency.
Successful completion of sixteen (16) units of competency made up of:

- ten (10) Core units, and
- six (6) elective units of which:
  - at least five (5) must come from the Group A electives listed below
  - up to one (1) unit may come from AQF level II III from this, or any other, Training Package or accredited course.

Units of competency chosen must:

- be relevant to the competency requirements for the job function
- reflect the competency profile for the occupation at the enterprise level
- in the case of accredited course units of competency, not duplicate in part or in whole any unit from a Training Package.

Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

Packaging Rules

Requirements for completion of the qualification
The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency.
Successful completion of twelve (12) units of competency made up of:

- eight (8) Core units, and
- four (4) elective units of which:
  - at least one (1) must come from the Group A electives listed below
  - up to three (3) may come from the Group B electives listed below
  - up to one (1) unit may come from AQF level II or III from this, or any other, Training Package

Units of competency chosen must be relevant to the competency requirements for the job function.
Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

                            • recognise and respond sensitively to people from culturally and linguistically diverse backgrounds                                                                 |
| Problem-solving           | • adjust work methods in response to changing weather and site conditions  
                            • participate in team solutions to safety issues                                                                                                                                           |
| Initiative and enterprise | • independently adapt to changing work conditions or different work areas  
                            • identify potential improvements to working practice and conditions  
                            • identify and assess risks in the workplace                                                                                                                                                |
| Planning and organising   | • manage time and priorities to complete work  
                            • identify and obtain appropriate equipment and permits  
                            • identify potential hazards and prepare appropriate responses  
                            • follow procedures and techniques relevant to the equipment and work being done                                                                                                          |
| Self-management           | • take responsibility for planning and organising own work priorities and completing assigned tasks  
                            • monitor own performance to ensure work will be completed well and on time  
                            • understand the standard of work expected at a work site                                                                                                                                     |
| Learning                  | • be willing to learn new ways of working  
                            • seek information to improve performance from people and                                                                                                                                          |
| Technology          | Workplace documents like policies, procedures etc  
|                    | - understand equipment characteristics, technical capabilities, limitations and procedures  
|                    | - use technology to monitor and report on work progress  
|                    | - use communications technology appropriate to the workplace (email, mobile, radio, etc)  
|                    | - operate equipment safely |
Packaging Rules

Requirements for completion of the qualification

The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency.

Successful completion of fifteen (15) units of competency made up of:

- thirteen (13) Core units, and
- two (2) elective units of which:
  - at least one (1) must come from the Group A electives listed below
  - up to one (1) from the Group B electives listed below
  - up to one (1) unit may come from AQF level II or III level from this, or any other, Training Package.

Units of competency chosen must be relevant to the competency requirements for the job function.

Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

### Core units of competency

<table>
<thead>

Packaging Rules

Requirements for completion of the qualification
The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency.

Successful completion of thirteen (13) units of competency made up of:
- five (5) Core units, and
- eight (8) elective units of which:
  - at least three (3) must come from the Group A electives listed below
  - up to three (3) from the Group B electives listed below
  - up to two (2) from AQF level II, III or IV from this, or any other, Training Package

Units of competency chosen must be relevant to the competency requirements for the job function.
Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.
The unit RIICOM301B is part of the Communicate information S1, S2, S3 suite of competencies required in Queensland for supervisors in the coal sector.

Packaging Rules

Requirements for completion of the qualification

The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency. Successful completion of sixteen (16) units of competency made up of:

- six (6) Core units, and
- ten (10) elective units of which:
- at least five (5) must come from the Group A electives listed below
- up to five (5) from the Group B electives listed below
- up to one (1) unit may come from AQF level II, III or IV from this, or any other, Training Package.

Units of competency chosen must be relevant to the competency requirements for the job function. Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

RII30311 Certificate III in Underground Metalliferous Mining

Modification History
Not applicable.

Description
This qualification reflects the role of employees such as production operators in an underground metalliferous mine, who perform tasks involving a broad range of skilled applications in a varied work context, using some discretion and judgement in selecting equipment, services or contingency measures.

Pathways Information
Not applicable.

Licensing/Regulatory Information
Not applicable.

Entry Requirements
Not applicable.
**Employability Skills Summary**

The following table includes a summary of the employability skills as identified by the resources and infrastructure industry for this qualification. The table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes required here are broad industry requirements that may vary depending on packaging options.

Packaging Rules

Requirements for completion of the qualification

The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency.

Note about regulations: RIIERR302A and RIIGOV201A are Mandatory in NSW

Successful completion of thirteen (13) units of competency made up of:

- five (5) Core units, and
- eight (8) elective units of which:
  - at least six (6) must come from the Group A listed below
  - up to two (2) from the Group B electives listed below or from Certificate II, Certificate III or Certificate IV level from this, or any other Training Package

Units of competency chosen must be relevant to the competency requirements for the job function.
Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

RII30509 Certificate III in Mining Exploration

Modification History
Not applicable.

Description
This qualification reflects the role of exploration geological technicians or mining geological technicians who perform tasks involving a broad range of skilled applications applied in a wide variety of contexts, which may involve application of some discretion and judgement in selecting equipment, services or contingency measures.

Pathways Information
Not applicable.

Licensing/Regulatory Information
Not applicable.

Entry Requirements
Not applicable.
## Employability Skills Summary

The following table includes a summary of the employability skills as identified by the resources and infrastructure industry for this qualification. The table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes required here are broad industry requirements that may vary depending on packaging options.

<table>
<thead>
<tr>
<th>Employability Skill</th>
<th>Industry/enterprise requirements for this qualification include:</th>
</tr>
</thead>
</table>
| Communication               | • speak clearly and directly  
• listen carefully to instructions and information  
• read and interpret work instructions and safety signs  
• calculate basic weights, distances and volumes  
• complete incident and maintenance reports  
• adjust communication style to meet the needs of people with diverse backgrounds                                                                 |
| Teamwork                    | • apply teamwork in a range of situations, particularly in a safety context  
• contribute to the planning and execution of operations  
• work cooperatively with people of different ages, gender, race, religion or political persuasion and people with disability  
• recognise and respond sensitively to people from culturally and linguistically diverse backgrounds |
| Problem-solving             | • adjust work methods in response to changing weather and site conditions  
• participate in team solutions to safety issues                                                                                                                                                                                                      |
| Initiative and enterprise   | • independently adapt to changing work conditions or different work areas  
• identify potential improvements to working practice and conditions  
• identify and assess risks in the workplace                                                                                                                                                                                                          |
| Planning and organising     | • manage time and priorities to complete work  
• identify and obtain appropriate equipment and permits  
• identify potential hazards and prepare appropriate responses  
• follow procedures and techniques relevant to the equipment and work being done                                                                                                                                                                    |
| Self-management             | • take responsibility for planning and organising own work priorities and completing assigned tasks  
• monitor own performance to ensure work will be completed well and on time  
• understand the standard of work expected at a work site                                                                                                                                                                                     |
| Learning                    | • be willing to learn new ways of working  
• seek information to improve performance from people and                                                                                                                                                                                                  |
| Workplace documents like policies, procedures etc  
| understand equipment characteristics, technical capabilities, limitations and procedures |
| Technology                   |
| use technology to monitor and report on work progress  
| use communications technology appropriate to the workplace (email, mobile, radio, etc)  
| operate equipment safely |
Packaging Rules

Requirements for completion of the qualification

The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency.

Successful completion of eighteen (18) units of competency made up of:

- seven (7) Core units, and
- eleven (11) elective units of which:
  - at least six (6) must come from the Group A electives listed below
  - up to five (5) from the Group B electives listed below
  - up to one (1) unit may come from AQF level II, III or IV in this, or any other, Training Package or accredited course.

Units of competency chosen must

- be relevant to the competency requirements for the job function
- reflect the competency profile for the occupation at the enterprise level
- in the case of accredited course units of competency, not duplicate in part or in whole any unit from a Training Package.

Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

</tbody>
</table>
Packaging Rules

Requirements for completion of the qualification

The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency.

Successful completion of nineteen (19) units of competency made up of:

- fourteen (14) Core units of competency, and
- five (5) units from the electives list below, including:
  - one (1) unit from Group A electives listed below AND two (2) units from Group B electives listed below

**OR**

- two (2) units from Group A electives listed below
- additional units selected from Group A, B or C

Units of competency chosen must be relevant to the competency requirements for the job function.

Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

RII30912 Certificate III in Civil Construction

Modification History
CPCCCM2007A Use explosive power tools code change to CPCCCM2007B Use explosive power tools

Description
This qualification reflects the role of a skilled operator working in civil construction, who applies a broad range of skills in a varied work context, using some discretion and judgement and relevant theoretical knowledge.
The qualification applies to specialist occupations in Bituminous Surfacing Bridge Construction and Maintenance, Pipe Laying, Road Construction and Maintenance, Road Marking, Tunnel Construction, Timber Bridge Construction and Maintenance and Civil Construction general occupations. The individual may provide theoretical advice and support a team.

Pathways Information
Not applicable.

Licensing/Regulatory Information
Not applicable.

Entry Requirements
Not applicable.
## Employability Skills Summary

The following table includes a summary of the employability skills as identified by the resources and infrastructure industry for this qualification. The table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes required here are broad industry requirements that may vary depending on packaging options.

Packaging Rules

Requirements for completion of the qualification
The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency.
The qualification has core and elective units of competency requirements that cover the general and specialist skills for seven (7) specialist and one (1) general civil construction stream.
Stream 1 – Bituminous Surfacing
Stream 2 – Bridge Construction and Maintenance
Stream 3 – Pipe Laying
Stream 4 – Road Construction and Maintenance
Stream 5 – Road Marking
Stream 6 – Tunnel Construction
Stream 7 – Timber Bridge Construction and Maintenance
Stream 8 – Civil Construction General
The core units and requirements of one (1) stream must be met for award of this qualification.
The following units of competency are required:

**Stream 1 – Bituminous Surfacing**
Successful completion of twenty five (25) units of competency made up of:
seven (7) core units, plus seven (7) Group A units plus
eleven (11) elective units of which:
- at least six (6) must come from the Group B electives listed below including at least three (3) bituminous surfacing units at AQF 3 level (CBS3) OR at least two (2) bituminous surfacing units at AQF 3 level (CBS3) and one (1) at AQF 4 level (CBS4)
- up to five (5) units may come from AQF 2, 3 or 4 level from this, or any other Training Package
- up to three (3) units of competency may come from an AQF 2, 3 or 4 level accredited course

**Stream 2 – Bridge Construction and Maintenance**
Successful completion of twenty five (25) units of competency made up of:
seven (7) core units, plus eight (8) Group C units plus
ten (10) elective units of which:
- at least five (5) must come from the Group D electives listed below including at least two (2) bridge maintenance units at AQF 3 level (CBM3)
- up to five (5) units may come from AQF 2, 3 or 4 level from this, or any other Training Package
- up to three (3) units of competency may come from an AQF 2, 3 or 4 level accredited course

**Stream 3 – Pipe Laying**
Successful completion of twenty five (25) units of competency made up of:
seven (7) core units, plus ten (10) Group E units plus
eight (8) elective units of which:
- at least three (3) must come from the Group F electives listed below of which at least one (1) marked *
- at least four (4) of the units must be at AQF 3 level
- up to five (5) units may come from AQF 2, 3 or 4 level from this, or any other Training Package
- up to three (3) units of competency may come from an AQF 2, 3 or 4 level accredited course

**Stream 4 – Road Construction and Maintenance**
Successful completion of twenty five (25) units of competency made up of:
seven (7) core units, plus nine (9) Group G units plus
nine (9) elective units of which:
- at least four (4) must be road construction (CRC) units from the Group H electives listed below including at least two (2) at AQF 3 level - at least four (4) of the total elective units must be at AQF 3 level
- up to five (5) unit may come from AQF 2, 3 or 4 level from this, or any other Training Package
- up to three (3) units of competency may come from an AQF 2, 3 or 4 level accredited course

**Stream 5 – Road Marking**
Successful completion of twenty two (22) units of competency made up of:
seven (7) core units, plus four (4) Group I units plus
eleven (11) elective units of which:
- at least seven (7) must come from the Group J electives listed below including a minimum of five (5) road marking (CRM) units of which one (1) must be at AQF 3 level
- up to four (4) units may come from AQF 2, 3 or 4 level from this, or any other Training Package
- up to two (2) units of competency may come from an AQF 2, 3 or 4 level accredited course

**Stream 6 – Tunnel Construction**
Successful completion of twenty five (25) units of competency made up of:
seven (7) core units, plus eight (8) Group K units plus
ten (10) elective units of which:
- at least five (5) must come from the Group L electives listed below including a minimum of three (3) units at AQF 3 level, of which at least two (2) must be tunnel construction (CTC) units
- up to five (5) units may come from AQF 2, 3 or 4 level from this, or any other Training Package - up to three (3) units of competency may come from an AQF 2, 3 or 4 level accredited course

**Stream 7 – Timber Bridge Construction and Maintenance**
Successful completion of twenty eight (28) units of competency made up of:
seven (7) core units, plus twelve (12) Group M units plus
nine (9) elective units of which:
- at least five (5) must come from the Group N electives listed below including a minimum of two (2) units at AQF 3 level
- up to four (4) units may come from AQF 2, 3 or 4 level from this, or any other Training Package
- up to three (3) units of competency may come from an AQF 2, 3 or 4 level accredited course

**Stream 8 – Civil Construction General**
Successful completion of twenty five (25) units of competency made up of:
seven (7) core units, plus eighteen (18) elective units of which:
- at least thirteen (13) must come from the Group O electives or the Group P high risk work electives list below including at least ten (10) at AQF 3 level
- up to five (5) units may come from AQF 2, 3 or 4 level from this, or any other Training Package
- up to three (3) units of competency may come from an AQF 2, 3 or 4 level accredited course

Units of competency chosen must
- be relevant to the competency requirements for the job function
- reflect the competency profile for the occupation at the enterprise level
- in the case of accredited course units of competency, not duplicate in part or in whole any unit from a Training Package.

There are both licenced and non-licenced units of competency relating to high risk work in the RII09 Resources and Infrastructure Industry Training Package. To be appointed under any statutory requirements in related roles, units of competency should be demonstrated to meet the state/territory licensing requirements. State/territory licensing requirements need to be confirmed by the Registered Training Organisation delivering and/or assessing the competency.

Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

RII31609 Certificate III in Trenchless Technology

Modification History
Not applicable.

Description
This qualification reflects the role of a skilled operator working in trenchless technology in the civil construction industry, who applies a broad range of skills in a varied work context, using some discretion and judgement and relevant theoretical knowledge. The individual may provide theoretical advice and support a team.

Pathways Information
Not applicable.

Licensing/Regulatory Information
Not applicable.

Entry Requirements
Not applicable.
### Employability Skills Summary

The following table includes a summary of the employability skills as identified by the resources and infrastructure industry for this qualification. The table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes required here are broad industry requirements that may vary depending on packaging options.

</table>
Packaging Rules

Requirements for completion of the qualification

The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency

Successful completion of twenty six (26) units of competency made up of:

- eighteen (18) Core units, and
- eight (8) elective units of which:
  - at least five (5) must come from the Group A electives listed below including at least four (4) at Certificate III level, of which at least one (1) must be a trenchless technology (CTT) unit
  - up to three (3) units may come from AQF level III from this, or any other, Training Package or accredited course.

Units of competency chosen must

- be relevant to the competency requirements for the job function
- reflect the competency profile for the occupation at the enterprise level
- in the case of accredited course units of competency, not duplicate in part or in whole any unit from a Training Package.

Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

Packaging Rules

Requirements for completion of the qualification
The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency.
Successful completion of twenty five (25) units of competency made up of:

- fourteen (14) Core units, and
- eleven (11) elective units of which:
  - at least ten (10) must come from the Group A electives listed below including at least five (5) units at Certificate III level, two (2) of which must be foundation work (CFW) units
  - up to one (1) unit may come from AQF level II, III or IV in this, or any other Training Package.

Units of competency chosen must be relevant to the competency requirements for the job function.
Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

Packaging Rules

Requirements for completion of the qualification

The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency.

Successful completion of thirteen (13) units of competency made up of:

- eight (8) Core units, and
- five (5) elective units of which:
  - up to two (2) must come from the Group A electives listed below, including at least one (1) ‘Conduct’ unit
  - at least two (2) from the Group B electives listed below
  - up to one (1) unit may come from AQF level II, III or IV level from this, or any other, Training Package

Units of competency chosen must be relevant to the competency requirements for the job function.
Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

Packaging Rules

Requirements for completion of the qualification
The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency.
Successful completion of thirteen (13) units of competency made up of:
- ten (10) Core units, and
- three (3) elective units of which:
  - at least one (1) must come from the Group A electives listed below
  - up to one (1) from the Group B electives listed below
  - up to one (1) unit may come from AQF level II, III or IV in this, or any other Training Package.

Units of competency chosen must be relevant to the competency requirements for the job function.
Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

RII40311 Certificate IV in Metalliferous Mining Operations (Underground)

Modification History
Not applicable.

Description
This qualification reflects the role of employees such as a supervisor/team leader in an underground metalliferous mine. They perform tasks involving a broad range of varied activities most of which are complex and non-routine. They are responsible for the quantity and quality of the output of others, contribute to the development of technical solutions to non-routine problems and apply mine management plans to the workplace. This qualification is not applicable to coal mining.

Pathways Information

Packaging Rules

Requirements for completion of the qualification

The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency.

Successful completion of twelve (12) units of competency made up of:

- five (5) Core units, and
- seven (7) elective units of which:
  - at least one (1) must come from the Group A electives listed below
  - up to four (4) from the Group B listed below
  - up to two (2) units may come from AQF level III, IV or Diploma in this, or any other Training Package

Units of Competency chosen must be relevant to the competency requirements for the job function.
Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

RII40609 Certificate IV in Civil Construction Operations

Modification History
Not applicable.

Description
This qualification reflects the role of specialist civil construction personnel who perform technical specialist tasks. They perform tasks involving a broad range of varied activities most of which are complex and non-routine. They are responsible for applying the site work instructions and practices to ensure the quantity and quality of their outputs and contribute to the development of technical solutions for non-routine problems.

Pathways Information
Not applicable.

Licensing/Regulatory Information
Not applicable.

Entry Requirements
Not applicable.
## Employability Skills Summary

The following table includes a summary of the employability skills as identified by the resources and infrastructure industry for this qualification. The table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes required here are broad industry requirements that may vary depending on packaging options.

<table>

• use IT to create documents and maintain records of work activities |
Packaging Rules

Requirements for completion of the qualification
The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency.

Successful completion of twelve (12) units of competency made up of:

- four (4) Core units, and
- eight (8) elective units of which:
  - at least two (2) must come from the Group A electives listed below including either RIICWM401B Supervise civil works or at least one AQF IV Apply the principles unit of competency
  - at least two (2) from the Group B electives listed below
  - up to one (1) unit may come from AQF level III, IV or Diploma in this, or any other, Training Package or accredited course.

Units of competency chosen must

- be relevant to the competency requirements for the job function
- reflect the competency profile for the occupation at the enterprise level
- in the case of accredited course units of competency, not duplicate in part or in whole any unit from a Training Package.

Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

Description
This qualification reflects the role of people providing design support for professional engineers. They perform tasks involving a broad range of varied activities most of which are complex and non-routine, for example, this might include Civil Works drafting. They are responsible for applying the design work instructions and practices to ensure the quantity and quality of the output of others and contribute to the development of technical solutions to non-routine problems.

Pathways Information

Entry Requirements
Not applicable.
## Employability Skills Summary

The following table includes a summary of the employability skills as identified by the resources and infrastructure industry for this qualification. The table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes required here are broad industry requirements that may vary depending on packaging options.

<table>

</tr>
</thead>
</table>
| **Communication**         | • provide clear and direct feedback  
                            • listen carefully to instructions and information  
                            • read and interpret project plans and safety signs  
                            • calculate basic weights, distances and volumes  
                            • complete accurate work plans, technical reports, risk assessments, etc  
                            • negotiate solutions to customer and workplace based issues  
                            • negotiate project details with clients  
                            • network with other professionals working in the same field  
                            • adjust communication style to meet the needs of people with diverse backgrounds |
| **Teamwork**              | • plan and lead team performance and operations  
                            • coordinate project activities and timelines with clients  
                            • work cooperatively with people of different ages, gender, race, religion or political persuasion and people with disability  
                            • recognise and respond sensitively to people from culturally and linguistically diverse backgrounds  
                            • provide feedback and advice to staff  
                            • participate in site-wide planning and coordination activities |
| **Problem-solving**       | • re-allocate staff and resources in response to changing weather, site conditions and priorities  
                            • work with staff to solve problems and coordinate team member’s responsibilities and activities  
                            • work cooperatively with clients to resolve contract and operational issues  
                            • participate in ongoing review and adjustment of operations against performance indicators and project milestones |
| **Initiative and enterprise** | • act independently to identify potential improvements to working practice and conditions  
                                    • identify and take steps to resolve risks in the workplace  
                                    • encourage the exploration and application of innovative approaches to improve on operational performance |
| **Planning and organising** | • manage and coordinate time and priorities for self and team  
                                    • identify and obtain appropriate personnel and resources for work |
<table>
<thead>
<tr>
<th>Self-management</th>
<th>Learning</th>
<th>Technology</th>
</tr>
</thead>
</table>
| • ensure that risks are assessed and appropriate emergency plans are in place  
• ensure that project planning incorporates the possibility of adapting to future changes  
• take responsibility for ensuring team targets and goals are achieved  
• understand the standard of work expected at the work site  
• proactively manage team performance  
• develop trust and confidence in staff and customers  
• be willing to learn new ways of working  
• seek information to improve performance from people and workplace documents like policies, procedures etc  
• understand equipment characteristics, technical capabilities, limitations and procedures  
• participate in, and where appropriate, lead change processes  
• work with staff to create learning and development plans  
• prepare and lead formal or informal training sessions  
• apply a range of basic IT skills in monitoring and reporting on systems  
• operate equipment safely and according to manufacturer and workplace guidelines  
• use communications technology appropriate to the workplace (email, mobile, radio, etc)  
• computer technology is used to monitor and communicate project status  
• use IT to create documents and maintain records of work activities |
Packaging Rules

Requirements for completion of the qualification
The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency. Successful completion of twelve (12) units of competency made up of:

- a minimum of two (2) units of competency from Group A units listed
- a minimum of two (2) units of competency from Group B Drafting units listed
- a minimum of two (2) units of competency from Group C Design units listed
- a minimum of two (2) units of competency from Group D Technical units listed
- up to one (1) unit may come from this, or any other Training Package or accredited course.

Units of competency chosen must

- be relevant to the competency requirements for the job function
- reflect the competency profile for the occupation at the enterprise level
- in the case of accredited course units of competency, not duplicate in part or in whole any unit from a Training Package

Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

Packaging Rules

Requirements for completion of the qualification

The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency.

Successful completion of eleven (11) units of competency made up of:

- seven (7) Core units, and
- four (4) elective units of which:
  - at least one (1) must come from the Group A electives listed below
  - up to three (3) from the Group B electives listed below
  - up to one (1) unit may come from AQF level III, IV or Diploma in this, or any other Training Package

Units of competency chosen must be relevant to the competency requirements for the job function.

• use communications technology appropriate to the workplace (email, mobile, radio, etc)  
• computer technology is used to monitor and communicate project status  
• use IT to create documents and maintain records of work activities |
Packaging Rules

Requirements for completion of the qualification
The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency.
Successful completion of thirteen (13) units of competency made up of:

- twelve (12) Core units, and
- one (1) elective unit of which:
  - up to one (1) from the Group A electives listed below
  - up to one (1) unit may come from AQF level III, IV or Diploma in this, or any other Training Package

Units of competency chosen must be relevant to the competency requirements for the job function.
Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

RII41109 Certificate IV in Drilling Oil/Gas (On shore)

Modification History
Not applicable.

Description
This qualification reflects the role of employees such as senior drillers working in an on shore oil/gas context. They perform tasks involving a broad range of varied activities most of which are complex and non-routine. They are responsible for the quantity and quality of the output of others and contribute to the development of technical solutions to non-routine problems.

Pathways Information
Not applicable.

Licensing/Regulatory Information
Not applicable.

Entry Requirements
Not applicable.
## Employability Skills Summary

The following table includes a summary of the employability skills as identified by the resources and infrastructure industry for this qualification. The table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes required here are broad industry requirements that may vary depending on packaging options.

<table>
<thead>

RII50109 Diploma of Surface Operations Management

Modification History
Not applicable.

Description
This qualification reflects the role of mine managers in an open cut coal or metalliferous mine or a quarry, who perform tasks involving a high level of autonomy and requiring the application of significant judgement in planning and determining the selection of equipment/roles/techniques for themselves and others. They are required to demonstrate the application of a broad range of technical, managerial, coordination and planning and implement safety management plans.

Pathways Information
Not applicable.

Licensing/Regulatory Information
Not applicable.

Entry Requirements

Packaging Rules

Requirements for completion of the qualification
The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency.
Successful completion of thirteen (13) units of competency made up of:

- seven (7) Core units, and
- six (6) elective units of which:
  - at least three (3) must come from the Group A electives listed below
  - up to three (3) from the Group B electives listed below
  - up to one (1) unit may come from AQF level IV, Diploma or Advanced Diploma in this, or any other, Training Package

Units of competency chosen must be relevant to the competency requirements for the job function.
Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

RII50309 Diploma of Minerals Processing

Modification History
Not applicable.

Description
This qualification reflects the role of metal or coal processing facility managers who perform tasks involving a high level of autonomy and requiring the application of significant judgement in planning and determining the selection of equipment/roles/techniques for themselves and others. They are required to demonstrate the application of a broad range of technical, managerial, coordination and planning and implement mine management plans.

Pathways Information
Not applicable.

Licensing/Regulatory Information
Not applicable.

Entry Requirements
Not applicable.
 Employability Skills Summary

The following table includes a summary of the employability skills as identified by the resources and infrastructure industry for this qualification. The table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes required here are broad industry requirements that may vary depending on packaging options.

• operate equipment safely and according to manufacturer and workplace guidelines  
• use communications technology appropriate to the workplace (email, mobile, radio, etc)  
• computer technology is used to monitor and communicate project status  
• use IT to create documents and maintain records of work activities |
Packaging Rules

Requirements for completion of the qualification

The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency.

Successful completion of sixteen (16) units of competency made up of:

- eight (8) Core units, and
- eight (8) elective units of which:
- at least six (6) must come from the Group A electives listed below
- up to two (2) unit may come from AQF level IV, Diploma or Advanced Diploma in this, or any other Training Package or accredited course.

Units of competency chosen must

- be relevant to the competency requirements for the job function
- reflect the competency profile for the occupation at the enterprise level
- in the case of accredited course units of competency, not duplicate in part or in whole any unit from a Training Package

Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

Packaging Rules

Requirements for the completion of the qualification
The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency.
Successful completion of thirteen (13) units made up of:

- six (6) Core units of competency including either RIICWM501A or RIICWM502A (unit not selected may be included as a Group A elective)
- seven (7) elective units to be completed made up of:
  - at least five (5) units from the Group A electives units listed
  - up to two (2) units, drawn from this or any other endorsed Training Package or accredited course at any level

Units of competency chosen must

- be relevant to the competency requirements for the job function
- reflect the competency profile for the occupation at the enterprise level
- in the case of accredited course units of competency, not duplicate in part or in whole any unit from a Training Package

Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

|                                                   | • use IT to create documents and maintain records of work activities |
Packaging Rules

Requirements for completion of the qualification
The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency.
Successful completion of twenty (20) units made up of:

- a minimum of four (4) units from the Group A units listed
- a minimum of two (2) units from the Group B Drafting units listed
- a minimum of four (4) units of competency from the Group C Design units listed
- a minimum of four (4) units of competency from the Group D Technical units listed
- a maximum of two (2) units at Certificate IV, Diploma, or Advanced Diploma level, may come from this, or any other Training Package or accredited course

Units of competency chosen must

- be relevant to the competency requirements for the job function
- reflect the competency profile for the occupation at the enterprise level
- in the case of accredited course units of competency, not duplicate in part or in whole any unit from a Training Package.

Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

**Note:** The units chosen to satisfy the Diploma of Civil Construction Design must be additional to the units achieved to satisfy the Certificate IV in Civil Construction Design.

RII50609 Diploma of Drilling Operations

Modification History
Not applicable.

Description
This qualification reflects the role of employees such as senior drillers or field supervisors. They perform tasks involving a broad range of varied activities most of which are complex and non-routine. They are responsible for the quantity and quality of the output of others and contribute to the development of technical solutions to non-routine problems.

Pathways Information
Not applicable.

Licensing/Regulatory Information
Not applicable.

Entry Requirements
Not applicable.
**Employability Skills Summary**

The following table includes a summary of the employability skills as identified by the resources and infrastructure industry for this qualification. The table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes required here are broad industry requirements that may vary depending on packaging options.

RII50709 Diploma of Drilling Oil/Gas (Off shore)

Modification History
Not applicable.

Description
This qualification reflects the role of a supervisor in an off shore drilling operation. The tasks performed involve a high level of autonomy and require the application of significant judgement in planning and determining the selection of equipment/roles/techniques for themselves and others. They are required to demonstrate the application of a broad range of technical, managerial, coordination and planning skills.

Pathways Information
Not applicable.

Licensing/Regulatory Information
Not applicable.

Entry Requirements

• ensure that project planning incorporates the possibility of adapting to future changes |
| Self-management | • take responsibility for ensuring team targets and goals are achieved  
• understand the standard of work expected at the work site  
• proactively manage team performance  
• develop trust and confidence in staff and customers |
| Learning | • be willing to learn new ways of working  
• seek information to improve performance from people and workplace documents like policies, procedures etc  
• understand equipment characteristics, technical capabilities, limitations and procedures  
• lead change and continuous improvement processes  
• manage learning and development plans  
• prepare and lead formal or informal training sessions |
| Technology | • apply a range of basic IT skills in monitoring and reporting on systems  
• operate equipment safely and according to manufacturer and workplace guidelines  
• use communications technology appropriate to the workplace (email, mobile, radio, etc)  
• use computer technology to monitor and communicate project status  
• use IT to create documents and maintain records of work activities |
Packaging Rules

Requirements for completion of the qualification
The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency.
Successful completion of twelve (12) units of competency made up of:
ten (10) Core units, and
two (2) elective units of which:
• at least one (1) must come from the Group A electives listed below
• up to one (1) from the Group B electives listed below
• up to one (1) unit may come from AQF level IV, Diploma or Advanced Diploma in this, or any other Training Package

Units of competency chosen must be relevant to the competency requirements for the job function.
Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

RII60109 Advanced Diploma of Metalliferous Mining

Modification History
Not applicable.

Description
The Advanced Diploma of Metalliferous Mining reflects the role of open cut or underground metalliferous mine managers who perform tasks that are broad, specialised, complex and technical and include strategic areas and initiating activities. They are required to demonstrate self-directed application of theoretical and technical knowledge and initiate solutions to technical problems or management requirements.

Pathways Information
Not applicable.

Licensing/Regulatory Information
Not applicable.

Entry Requirements
Not applicable.
## Employability Skills Summary

The following table includes a summary of the employability skills as identified by the resources and infrastructure industry for this qualification. The table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes required here are broad industry requirements that may vary depending on packaging options.

Packaging Rules

Requirements for completion of the qualification
The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency.

The qualification has core and elective units of competency requirements that cover the general and specialist skills for two (2) streams.

Stream 1 – Open Cut Metalliferous Mining
Stream 2 – Underground Metalliferous Mining

The core units and requirements of one (1) stream must be met for award of this qualification.

The following units of competency are required:

Stream 1 – Open Cut Metalliferous Mining
Successful completion of fourteen (14) units of competency made up of:

Core Units

- eight (8) Core units of competency, plus two Group A Technical Management units as listed
- four (4) elective units of which all four (4) units are drawn from the Group C elective units listed, OR
- at least two (2) units are drawn from the Group C elective units listed, and
- up to two (2) units from elsewhere in this or any other Training Package

Stream 2 – Underground Metalliferous Mining
Successful completion of fourteen (14) units of competency made up of:

Core Units

- eight (8) Core units of competency, plus three (3) Group B Technical Management units as listed
- three (3) elective units of which all three (3) units are drawn from the Group C elective units listed, OR
- at least two (2) units are drawn from the Group C elective units listed, and
- up to one (1) unit from elsewhere in this or any other Training Package

Units of competency chosen must be relevant to the competency requirements for the job function. Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

Note: A maximum of two (2) units of competency for Open Cut Mining; and a maximum of one (1) unit of competency for Underground Mining, relevant to the job function, may be drawn from elsewhere in this Training Package, or any other endorsed Training Package.

|                                                                               | • use communications technology appropriate to the workplace (email, mobile, radio, etc)  
|                                                                               | • computer technology is used to monitor and communicate project status  
|                                                                               | • use IT to create documents and maintain records of work activities   |
Packaging Rules

Requirements for completion of the qualification
The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency.
Successful completion of twelve (12) units of competency made up of:

- ten (10) Core units, and
- two (2) Group A elective units

Units of competency chosen must be relevant to the competency requirements for the job function.
Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

Packaging Rules

Requirements for completion of the qualification
The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency.
Successful completion of twelve (12) units made up of:

- five (5) Core units
- seven (7) elective units made up of:
  - at least four (4) units from the Group A General Management units listed
  - at least one (1) unit from the Group B Design units listed
  - up to two (2) units, from this or any other Training Package or accredited course at any level

Units of competency chosen must

- be relevant to the competency requirements for the job function
- reflect the competency profile for the occupation at the enterprise level
- in the case of accredited course units of competency, not duplicate in part or in whole any unit from a Training Package

The units chosen to satisfy the Advanced Diploma of Civil Construction Design must be additional to the Units of Competency achieved to satisfy the Diploma of Civil Construction Design.
Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

Packaging Rules

Requirements for completion of the qualification
The following table provides the packaging rules for this qualification, followed by the list of relevant units of competency.
Successful completion of twelve (12) units of competency made up of:

- six (6) Core units
- six (6) elective units to be completed made up of:
  - a minimum of three (3) units from the Group A electives list
  - a maximum of two (2) units, from this or any other Training Package or accredited course at any level

Units of competency chosen must

- be relevant to the competency requirements for the job function
- reflect the competency profile for the occupation at the enterprise level
- in the case of accredited course units of competency, not duplicate in part or in whole any unit from a Training Package

Care must be taken to ensure that all prerequisites specified within imported units, or units chosen as electives, are complied with.

RII60709 Advanced Diploma of Surface Coal Mining Management

Modification History
Not applicable.

Description
The Advanced Diploma of Surface Coal Mining Management covers the role of open cut coal mine managers who perform tasks that are broad, specialised, complex and technical and include strategic areas and initiating activities. They are required to demonstrate self-directed application of theoretical and technical knowledge and initiate solutions to technical problems or management requirements.

Pathways Information
Not applicable.

Licensing/Regulatory Information
Not applicable.

Entry Requirements
Not applicable.
**Employability Skills Summary**

The following table includes a summary of the employability skills as identified by the resources and infrastructure industry for this qualification. The table should be interpreted in conjunction with the detailed requirements of each unit of competency packaged in this qualification. The outcomes required here are broad industry requirements that may vary depending on packaging options.

<table>
<thead>
<tr>
<th>Employability Skill</th>
<th>Industry/enterprise requirements for this qualification include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Communication</td>
<td>• provide clear and direct feedback</td>
</tr>
<tr>
<td></td>
<td>• listen carefully to instructions and information</td>
</tr>
<tr>
<td></td>
<td>• read and interpret project plans and safety signs</td>
</tr>
<tr>
<td></td>
<td>• calculate basic weights, distances and volumes</td>
</tr>
<tr>
<td></td>
<td>• complete accurate work plans, technical reports, risk assessments, etc</td>
</tr>
<tr>
<td></td>
<td>• negotiate solutions to customer and workplace based issues</td>
</tr>
<tr>
<td></td>
<td>• negotiate project details with clients</td>
</tr>
<tr>
<td></td>
<td>• network with other professionals working in the same field</td>
</tr>
<tr>
<td>Teamwork</td>
<td>• plan and lead team performance and operations</td>
</tr>
<tr>
<td></td>
<td>• coordinate project activities and timelines with clients</td>
</tr>
<tr>
<td></td>
<td>• work cooperatively with people of different ages, gender, race, religion or political persuasion</td>
</tr>
<tr>
<td></td>
<td>• provide feedback and advice to staff</td>
</tr>
<tr>
<td></td>
<td>• lead site-wide planning and coordination activities</td>
</tr>
<tr>
<td>Problem-solving</td>
<td>• re-allocate staff and resources in response to changing weather, site conditions and priorities</td>
</tr>
<tr>
<td></td>
<td>• manage staff to solve problems and coordinate individual responsibilities and activities</td>
</tr>
<tr>
<td></td>
<td>• work cooperatively with clients to resolve contract and operational issues</td>
</tr>
<tr>
<td></td>
<td>• manage the ongoing review and adjustment of operations against performance indicators and project milestones</td>
</tr>
<tr>
<td>Initiative and enterprise</td>
<td>• act independently to identify potential improvements to working practice and conditions</td>

RIISS00001 Skill Set Explosion Protected Diesel Engine Systems Maintenance

Modification History
Not applicable.

Description
Not applicable.
Pathways Information

These units provide a career development opportunity for experienced persons or tradespersons carrying out maintenance on explosion protected diesel engine systems used in underground coal mines.

Licensing/Regulatory Information

Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

<table>
<thead>
<tr>
<th>Skill Code</th>
<th>Skill Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>RIIDES301</td>
<td>Inspect, test and maintain diesel engine systems and their ancillary systems</td>
</tr>

<td>Inspect, test and maintain safety shutdown systems on diesel engine systems</td>
</tr>
<tr>
<td>RIIDES307</td>
<td>Test, determine the cause and rectify excessive emission levels on diesel engine systems</td>
</tr>
</tbody>
</table>

Target Group

This Skill Set is for those conducting maintenance on explosion protected diesel engine systems for vehicles used in underground coal mines. This skill set is suitable for persons with a metal, mechanical, electrical or automotive trade or mechanical or electrical engineering qualification.

Suggested words for Statement of Attainment

This Skill Set from the RII09 Resources and Infrastructure Industry Training Package meets the industry requirements for those carrying out maintenance on explosion protected diesel engine systems used in underground coal mines.
Custom Content Section

Not applicable.
RIISS00002 Skill Set Leading Hand

Modification History
Not applicable.

Description
This Skill Set is for those individuals working as a leading hand in the resources and infrastructure industries.

Pathways Information
These units provide credit toward a number of Certificate IV qualifications in this Training Package and towards other qualifications in management.

Licensing/Regulatory Information
Not applicable.

Skill Set Requirements

<table>
<thead>

</tr>
</tbody>
</table>
Target Group
This Skill Set is for those individuals working as a leading hand in the resources and infrastructure industries.

Suggested words for Statement of Attainment
This Skill Set from the RII09 Resources and Infrastructure Industry Training Package meets the industry requirements for those aiming to work as a leading hand.
RIISS00003 Skill Set Mine Surveying

Modification History
Not applicable.

Description
This skill set is for those working in mine surveying. It is essential that the individual already holds either a Diploma of Surveying qualification or a higher level surveying qualification. The skill set is designed to provide the mining specific competencies that a surveyor would need to work in a mining context.

Pathways Information
These units provide credit towards the Diploma of Surface Operations Management or the Diploma of Underground Coal Mining Management.

Licensing/Regulatory Information
Not applicable.

Skill Set Requirements

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>RIISDM501A</td>
<td>Conduct mine surveying operations</td>

</tr>
<tr>
<td>RIICOM301B</td>
<td>Communicate information</td>
</tr>
<tr>
<td>RIIOHS201A</td>
<td>Work safely and follow OHS policies and procedures</td>
</tr>
</tbody>
</table>

Target Group
This skill set is for those working in mine surveying. It is essential that the individual already holds either a Diploma of Surveying qualification or a higher level surveying qualification. The skill set is designed to provide the mining specific competencies that a surveyor would need to work in a mining context.
Suggested words for Statement of Attainment

This Skill Set from the RII09 Resources and Infrastructure Industry Training Package meets the industry requirements for those working in mine surveying.
RIISS00004 Skill Set Rouseabout Off Shore Oil and Gas

Modification History
Not applicable.

Description
This skill set is for those beginning work as an off shore oil and gas rouseabout.

Pathways Information
These units provide credit towards a number of qualifications from the RII09 Training Package, particularly the Certificate II in Drilling (Off Shore Oil and Gas).

Licensing/Regulatory Information
Not applicable.

Skill Set Requirements

<table>
<thead>
<tr>
<th>Unit Code</th>
<th>Unit Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BSBWOR203A</td>
<td>Work effectively with others</td>

<tr>
<td>RIIOGD202A</td>
<td>Carry out equipment and basic rig maintenance</td>
</tr>
<tr>
<td>RIIOGF201A</td>
<td>Carry out deck operations</td>
</tr>
<tr>
<td>RIIOHS201A</td>
<td>Work safely and follow OHS policies and procedures</td>
</tr>
</tbody>
</table>

Target Group
This skill set is for those beginning work as an off shore oil and gas rouseabout.

Suggested words for Statement of Attainment
This Skill Set from the RII09 Resources and Infrastructure Industry Training Package meets the industry requirements for induction to off shore oil and gas work.
RIISS00005 Skill Set Site Health and Safety Coordinator

Modification History
Not applicable.

Description
This skill set is for those entering the mining industry as a safety coordinator with experience in coordinating safety requirements but requiring skills in operating in a mining environment.

Pathways Information
These units provide credit towards a number of qualifications from the RII09 Training Package, including the Certificate IV Surface Extraction Operations.

Licensing/Regulatory Information
Not applicable.

Skill Set Requirements

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BSBOHS402B</td>
<td>Contribute to the implementation of the OHS consultation process</td>

</tr>
<tr>
<td>RIIOHS404A</td>
<td>Implement and monitor health and hygiene management systems</td>
</tr>
<tr>
<td>RIIRIS402A</td>
<td>Carry out risk management processes</td>
</tr>
</tbody>
</table>

Target Group
This skill set is for those entering the mining industry as a safety coordinator with experience in coordinating safety requirements but requiring skills in operating in a mining environment.
Suggested words for Statement of Attainment

This Skill Set from the RII09 Resources and Infrastructure Industry Training Package meets the industry requirements for those who work as a site health and safety coordinator in a mining context.
RIISS00006 Skill Set Supervision of Indigenous Employees

Modification History
Not applicable.

Description
This Skill Set is designed for experienced supervisors or managers who are seeking to broaden their skills for the purpose of leading a work team which includes Indigenous Australians or supervisors who are already working with Indigenous employees and require recognition of their current skills.

Pathways Information
These units of competency provide credit towards a range of supervisory qualifications in this or any other endorsed Training Package, including: BSB40807 Certificate IV in Frontline Management; TAE40110 Certificate IV in Training and Assessment.

Licensing/Regulatory Information
Not applicable.

Skill Set Requirements

<table>
<thead>
<tr>
<th>Unit Code</th>
<th>Skill Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>RIILAT401A</td>
<td>Provide leadership in the supervision of Indigenous employees</td>
</tr>

<td>Provide work skill instruction</td>
</tr>
</tbody>
</table>

Target Group
This Skill Set is designed for experienced supervisors or managers who are seeking to broaden their skills for the purpose of leading a work team which includes Indigenous Australians or supervisors who are already working with Indigenous employees and require recognition of their current skills.
Suggested words for Statement of Attainment

This Skill Set from the RII09 Resources and Infrastructure Industry Training Package meets the industry requirements for those leading a work team which include Indigenous Australians.
RIISS00007 Skill Set Surface Coal Mine Safety

Modification History
Not applicable.

Description
Not applicable.

Pathways Information
These units provide credit toward a number of Certificate II and III qualifications in this Training Package.

Licensing/Regulatory Information
Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements
This skill set addresses the regulatory requirements for open-cut coal mining specified in Recognised Standard 11, Training in coal mines - Coal Mining Safety and Health Act 1999, QLD.
Skill Set Requirements

| RIIOHS201A | Work safely and follow OHS policies and procedures |
| RIIERR205A | Apply initial first aid |
| RIIGOV201A | Comply with site work processes/procedures |
| RIIRIS201B | Conduct local risk control |
| RIICOM201A | Communicate in the workplace |
| RIIERR302A | Respond to local emergencies and incidents |

Target Group
This Skill Set is for those individuals working in surface coal mining operations in the resources and infrastructure industries.

Suggested words for Statement of Attainment
This Skill Set from the RII09 Resources and Infrastructure Industry Training Package meets the QLD regulatory requirements for those aiming to work as in open-cut coal mining operations.

Custom Content Section
Not applicable.
RIISS00009 Skill Set Underground Coal Mine Safety

Modification History
Not applicable.

Description
Not applicable.
Pathways Information
These units provide credit toward a number of Certificate II and III qualifications in this Training Package.

Licensing/Regulatory Information
Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements

Skill Set Requirements

<table>
<thead>
<tr>

<td>Escape from a hazardous situation unaided</td>
</tr>
</tbody>
</table>

Target Group
This Skill Set is for those individuals working in underground coal mines in the resources and infrastructure industries. This skill set addresses the regulatory requirements for underground coal mining specified in Recognised Standard 11, Training in coal mines - Coal Mining Safety and Health Act 1999, QLD

Suggested words for Statement of Attainment
This Skill Set from the RII09 Resources and Infrastructure Industry Training Package meets the QLD regulatory requirements for those aiming to work in underground coal mines.

Custom Content Section
Not applicable.
RIISS00008 Skill Set Surface Shotfiring

Modification History
Not applicable.

Description
This skill set is for those beginning work as a surface shotfirer.

Pathways Information
These units provide credit towards a number of qualifications from the RII09 Training Package, particularly the Certificate II in Surface Extraction Operations.

Licensing/Regulatory Information
Shotfiring regulations vary between states/territories. To be appointed under any statutory requirements as a shotfirer, state/territory licensing requirements must be met.

State/territory licensing requirements need to be confirmed by the employer, the participant and the Registered Training Organisation delivering and/or assessing the units of competency, before training commences.

Skill Set Requirements

<table>

<td>Conduct surface shotfiring operations</td>
</tr>
</tbody>
</table>

Target Group
This skill set is for those beginning work as a surface shotfirer.

Suggested words for Statement of Attainment
This Skill Set from the RII09 Resources and Infrastructure Industry Training Package meets the industry requirements for those beginning work as a surface shotfirer.
RIISS00010 Skill Set Underground Shotfiring - Coal

Modification History
Not applicable.

Description
This skill set is for those beginning work as an underground shotfirer in a coal mining context.

Pathways Information
These units provide credit towards a number of qualifications from the RII09 Training Package, particularly the Certificate III in Underground Coal Mining.

Licensing/Regulatory Information
Shotfiring regulations vary between states/territories. To be appointed under any statutory requirements as a shotfirer, state/territory licensing requirements must be met.

State/territory licensing requirements need to be confirmed by the employer, the participant and the Registered Training Organisation delivering and/or assessing the units of competency, before training commences.

Skill Set Requirements

| RIIBLA202B | Support underground shotfiring operations |
| RIIBLA302A | Conduct shotfiring operations in underground coal mines |

Target Group
This skill set is for those beginning work as an underground shotfirer in a coal mining context.

Suggested words for Statement of Attainment
This Skill Set from the RII09 Resources and Infrastructure Industry Training Package meets the industry requirements for those beginning work as an underground shotfirer.
RIISS00011 Skill Set Underground Shotfiring - Metalliferous

Modification History
Not applicable.

Description
This skill set is for those beginning work as an underground shotfirer in a metalliferous mining context.

Pathways Information
These units provide credit towards a number of qualifications from the RII09 Training Package, particularly the Certificate III in Underground Metalliferous Mining.

Licensing/Regulatory Information
Shotfiring regulations vary between states/territories. To be appointed under any statutory requirements as a shotfirer, state/territory licensing requirements must be met. State/territory licensing requirements need to be confirmed by the employer, the participant and the Registered Training Organisation delivering and/or assessing the units of competency, before training commences.

<td>RIIBLA305A</td>
<td>Conduct secondary blasting</td>
</tr>
</tbody>
</table>

Target Group
This skill set is for those beginning work as an underground shotfirer in a metalliferous mining context.
Suggested words for Statement of Attainment

This Skill Set from the RII09 Resources and Infrastructure Industry Training Package meets the industry requirements for those beginning work as an underground metalliferous shotfirer.
RIISS00013 Skill Set Work Zone Traffic Control - Implement Traffic Control Guidance Plan

Modification History
Not applicable.

Description
Not applicable.
Pathways Information
These units may provide credit toward a number of Certificate II or III qualifications in this Training Package.
Note: The unit of competency must be assessed in the context of the work zone traffic control environment.

Licensing/Regulatory Information
Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements

Skill Set Requirements

<table>

<td>RIICWD503A</td>
<td>Prepare work zone traffic management plan</td>
</tr>
</tbody>
</table>

Target Group

This Skill Set is for those individuals working as a work zone traffic control guidance plan developer in the resources and infrastructure industries. This may include selection, modification and design of the traffic control guidance scheme.

Suggested words for Statement of Attainment

This Skill Set from the RII09 Resources and Infrastructure Industry Training Package meets the industry requirements for those aiming to work as a traffic control guidance plan developer.

Custom Content Section

Not applicable.
RIISS00012 Skill Set Work Zone Traffic Control - Auditor/Inspector

Modification History
Not applicable.

Description
Not applicable.

Pathways Information
These units may provide credit toward a number of Certificate II, III, IV and Diploma qualifications in this Training Package and towards other qualifications in management. Note: The unit of competency must be assessed in the context of the work zone traffic control environment.

Licensing/Regulatory Information
Readers should ensure that they have also read the part of the Training Package that outlines licensing and regulatory requirements.

Skill Set Requirements

RIIBEF201B Plan and organise work

Modification History
Not applicable.

Unit Descriptor
This unit covers the planning and organisation of work in the resources and infrastructure industries. It includes planning and preparing for work, sequencing work safely, and resolving problems. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an assistant role at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for work | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Identify and clarify employment conditions, responsibilities and obligations  
1.3. Obtain, confirm and apply *work instructions*  
1.4. Plan work from an analysis of the required outcomes, standard work procedures, available time, resource requirements and known priorities  
1.5. *Inspect and prepare work areas* in *coordination with others*  
1.6. Select appropriate *tools, plant and equipment* for the task, check for serviceability and rectify and report any faults  
1.7. Identify and safely handle materials appropriate to the work application  
1.8. Identify and apply environmental protection requirements from the project environmental management plan or appropriate regulatory specification |
| 2. Sequence work safely | 2.1. Determine work plan to ensure tasks are performed in a logical, safe and efficient sequence  
2.2. Complete *work documentation and/or reports* to meet enterprise requirements |
| 3. Resolve problems | 3.1. Identify problems with work processes and make suggestions for improvement  
3.2. Modify work processes to suit changing circumstances, after consultation with supervisor or other relevant personnel |
| 4. Clean up | 4.1. Clear work area and correctly dispose of recyclable materials  
4.2. Clean, check and maintain machinery, tools and equipment |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to plan and organise work:

- apply legislative, organisation and site requirements and procedures for planning and organising work
- access, interpret and apply technical and operational information including work instructions, quality assurance procedures, manufacturer's instructions, materials safety data sheet and equipment instructions
- solve problems particularly in teams and in dealing practically with blockages to work flow and systematically work around these to avoid or minimise reworking and avoid wastage
- show initiative in adapting to changing work conditions or contexts particularly when working across a variety of work placements
- use mathematical ideas and techniques to correctly calculate time to complete tasks, calculate material requirements and establish quality checks

### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to plan and organise work:

- basic work planning processes
- operational safety requirements, such as equipment characteristics, technical capabilities and limitations, operational procedures, materials data safety sheet (MSDS)
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for planning and organising work</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of work plan</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the planning and organisation of work that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of a work plan that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
<td></td>
</tr>
<tr>
<td>• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
<td></td>
</tr>
<tr>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
<td></td>
</tr>
<tr>
<td>• Customisation of assessment and delivery environment should sensitively accommodate</td>
<td></td>
</tr>
</tbody>
</table>
cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Compliance documentation** may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Work instructions** may include:
- plans, specifications, quality requirements and operational details relevant to the tasks
- documentation or verbal instructions

**Inspect and prepare the work area** may include:
- identification of hazards
- selection and implementation of control measures for the hazards identified
- safeguarding site and non-site personnel by:
  - erection of barricades and posting of signs
  - selection of appropriate equipment to ensure personnel safety and protection
- determination of appropriate path of movement for loads and equipment/vehicles
- floor, pad, roads, ramps and bench clean up to specified levels and grade requirements

**Coordination with others** may include:
- yard persons
- laboratory personnel
- mobile plant operators
- processing plant operators
- haulage unit operators
- maintenance personnel

**Tools, plant and equipment** may include:
- those commonly used in relevant work environments

**Work documentation and/or reports** may include:
- shift reports
- handover briefs
- time cards
- other relevant records

</table>
**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to identify and rectify site operating problems:

- apply legislative, organisation and site requirements and procedures for identification and rectification of site operating problems
- access, interpret and apply technical and safety information
- operate plant and machinery
- communicate and coordinate activities with others
- maintain plant and equipment records
- apply diagnostic/fault finding techniques
- comply with environmental requirements

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to identify and rectify site operating problems:

- operational safety procedures
- operator responsibilities
- plant layouts
- operational procedures related to processes, plant and equipment carried out by the operator
- site communication procedures and systems
- process, plant and equipment type purpose, application, characteristics and limitations
- process, plant and equipment monitoring systems, programs and interpretation
- plant and equipment maintenance systems and procedures
- emergency shutdown procedures
- environmental requirements and controls related to processes, plant and equipment
- health and safety requirements and controls related to processes, plant and equipment
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Co-requisite units
Not applicable.
RIIBEF301A Run on-site operations

Modification History
Not applicable.

Unit Descriptor
This unit covers running on-site operations in the resources and infrastructure industries. It includes ensuring the occupational health and safety requirements are adhered to, communicating with key people, diagnosing and solving routine problems, monitoring the work program, coordinating work of the team and maintaining operating records. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Ensure the occupational health and safety requirements are adhered to by all on site</td>
<td>1.1. Access, interpret and apply <em>compliance documentation</em> relevant to the work activity 1.2. Relay <em>safety rules and regulations, legislation</em> and specific site instructions to crew, and monitor compliance 1.3. Conduct camp, site and equipment safety audits as required 1.4. Identify hazards on worksite 1.5. Determine a range of preventative measures for potential <em>work hazards</em> on site (e.g. Job Safety Analysis) 1.6. Communicate procedures for the use of personal protective clothing and installed safety equipment clearly to the crew 1.7. Provide clear instructions to all crew in emergency drills and their application 1.8. Establish methods for contacting all necessary medical services 1.9. Provide safety rig induction training as required to new personnel and visitors to the worksite (including supervising geologists/engineers) 1.10. Complete accurate occupational health and safety records for the work area</td>
</tr>
<tr>
<td>2. Communicate regularly with client, crew, and other relevant parties</td>
<td>2.1. Brief crew and other relevant parties regularly of up to date scope of activities 2.2. Maintain a good working relationship with landholder/client 2.3. Honour confidentiality clauses in contract 2.4. Communicate regular progress and problems encountered/anticipated to client/drill supervisor, as required 2.5. Maintain regular communication by radio/telephone to report progress and/or request information or assistance 2.6. Follow standard work procedures and communicate these requirements to crew members</td>
</tr>
<tr>
<td>3. Diagnose and solve routine problems</td>
<td>3.1. Confirm the existence and immediate effects/potential effects of the problem by</td>
</tr>
<tr>
<td>3.</td>
<td>Identify a clear and accurate definition of the problem</td>
</tr>
<tr>
<td>----</td>
<td>--------------------------------------------------------</td>
</tr>
<tr>
<td>3.2.</td>
<td>Identify the preferred option after an analysis of available information</td>
</tr>
<tr>
<td>3.3.</td>
<td>Gain approval to proceed with the preferred option from the appropriate party, if necessary</td>
</tr>
<tr>
<td>3.4.</td>
<td>Seek additional equipment and/or help/advice if problem is too complex</td>
</tr>
<tr>
<td>4.</td>
<td>Monitor work program</td>
</tr>
<tr>
<td>4.1.</td>
<td>Monitor work progress regularly and note deviation from program</td>
</tr>
<tr>
<td>4.2.</td>
<td>Check availability of consumable items and equipment is consistent with work schedules, the requirements of the task and delivery times for replacement items</td>
</tr>
<tr>
<td>4.3.</td>
<td>Implement alternative plans if required</td>
</tr>
<tr>
<td>4.4.</td>
<td>Allocate specific tasks to make effective use of crew</td>

6.5. Complete required written reports and submit

6.6. Take accurate measurements of length of drill string components and record

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to run on-site operations:

- apply legislative, organisation and site requirements and procedures for running on-site operations
- reading and writing
- communication to train and instruct, receive and pass on information
- diagnostic assessment
- hazard identification and risk assessment
- record keeping and logging

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to run on-site operations:

- operational and maintenance procedures
- environmental aspects
- fault finding and troubleshooting techniques
- team work
- time management
- communication systems, processes and procedures (e.g. 2-way radio)
- graphical representation (e.g. maps, diagrams, and their uses for interpretation and prediction)
- required documentation (e.g. requisition forms, daily log reports)
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>

<tr>
<td></td>
<td>• consistent timely completion of on-site operations that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
|                                                 | • Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances. |
|                                                 | • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. |
|                                                 | • Customisation of assessment and delivery environment should sensitively accommodate |
### Cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment
This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete on-site operations

### Guidance information for assessment
Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Compliance documentation may include: | • legislative, organisation and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• company's standard operating procedures  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
| Safety rules, regulations and legislation may include: | • tag out procedures  
• observance of safety signs  
• drugs and alcohol  
• use of personal protective equipment  
• personal hygiene and sanitation  
• environmental  
• heritage  
• anti-discrimination |
| Work hazards may include: | • accidents  
• working in the dark/at night  
• fatigue  
• drug or alcohol abuse  
• fire  
• emergencies such as chemical spills  
• confined spaces, hot work areas  
• environmental factors, heat/cold, flood, storm, lightning, contaminated sites, sunburn  
• flammable gases/liquids, explosives  
• noise, dust, slips, trips and falls  
• plant hazards such as rotating hazards and circulation hazards  
• in-hole fluids, gases and contaminants  
• hazards associated with aircraft, over water drilling, winching, crane use and forklifts |
| Problems may include: | • safety issues  
• environmental factors |
• transport difficulties
• equipment failure
• formation problems
• loss of sample/sampling difficulties
• lost circulation
• pressure formations
• differential pressure sticking
• hole deviation
• loss of sample integrity
• encountering unexpected contaminants, or contaminants in higher than expected concentrations
• old mine workings
• fishing
• loss of penetration
• sudden loss of pump pressure
• teams varying in size, and composition depending on their purpose, functions and geographic locations

**Operating records** may include:
• daily drill operations reports
• petty cash records
• records of other purchases, i.e. accounts/credit cards
• time sheets
• plant and vehicle logs
• maintenance records
• visitor induction records

**Reports** may include:
• drill operations reports
• bore logs
• bore completion reports
• site inspection reports
• plant inspection reports
• injury and accident reports
• site sketches and bore location reports
• monitoring bore construction details
• incident reports

**Unit Sector(s)**

Business Effectiveness
Competency field

Refer to Unit Sector(s).

Co-requisite units

RIIBEF302A Monitor site production activities

Modification History
Not applicable.

Unit Descriptor
This unit covers the monitoring of site production activities in the resources and infrastructure industries. It includes planning and preparing for operation, allocating and logging resources, monitoring and reporting plant/machinery activity, and monitoring movement of materials. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<td></td>
<td>3.3. Determine from data the location of where <em>material</em> is being moved, haul distances, and the location for dumping of materials</td>
</tr>
<tr>
<td></td>
<td>3.4. Interpret data to determine and generate reports on equipment usage, availability</td>
</tr>
</tbody>
</table>
3.5. Capture data for measuring operational outputs and resource usage, so as to report total usage and resource consumption rates

| 4. Monitor movement of materials | 4.1. Log the movement of loading and hauling machinery and the quantities of materials moved  
4.2. Monitor and report stock levels for availability of dispatched materials  
4.3. Monitor and report productivity rates and cycle times |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to monitor site production activities:

- apply legislative, organisation and site requirements and procedures for monitoring site production activities
- operate computers
- communicate effectively with site personnel
- apply diagnostic techniques
- work in a team
- be a self-starter
- comply with environmental requirements

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to monitor site production activities:

- computerised monitoring and control systems
- monitoring, recording and generating reports
- allocating and re-allocating site equipment and personnel
- consolidating end-of-shift reports
- shift production priorities
- control and access to site
- responses in the event of a site emergency
- site and equipment safety requirements and procedures
- stockpile management processes
- plant machinery characteristics, technical capabilities and limitations
- environmental requirements and constraints related to site operations
- recording and reporting processes
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Collect and analyse information | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Anticipate *problems* by constantly monitoring and analysing all available information  
1.3. Identify operational problems promptly and consider from an operational and client perspective  
1.4. Assess information for relevance and applicability  
1.5. Access other sources of *information* to assist in problem solving |
| 2. Diagnose and solve complex problems | 2.1. Diagnose actual problem using all available information  
2.2. Determine a range of possible solutions from extensive knowledge and experience  
2.3. Communicate diagnostic parameters to senior management  
2.4. Analyse problems for any long term impact and assess potential solutions  
2.5. Decide most appropriate action  
2.6. Carry out calculations necessary to implement action  
2.7. Implement action to resolve the immediate problem  
2.8. Monitor effectiveness of action  
2.9. Feed results of action taken through to supervisors and management |
| 3. Manage *non*-routine/complex technical operations | 3.1. Apply a *depth and breadth of knowledge and experience* to all operations  
3.2. Recognise and anticipate potential problems in both routine and *non-routine and complex technical operations*, and implement contingency planning  
3.3. Adapt to client paperwork and record keeping forms and document unusual requests  
3.4. Work independently of management  
3.5. Take responsibility for decision-making processes on the job |
3.6. Prepare necessary reports for a range of relevant topics

4. Use technology effectively

4.1. Use well developed physical and sensory skills to operate equipment to fullest capacity and anticipate potential problems

4.2. Apply scientific and technological principles to evaluate and reshape operational procedures

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out or possess the following, as required to manage non-routine, complex situations:

- apply legislative, organisation and site requirements and procedures for managing non-routine, complex situations
- reading and writing skills, to research problems and write reports
- mathematical skills to carry out technical problem solving
- plant diagnostic skills

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to manage non-routine, complex situations:

- communications systems, processes and procedures
- high level mathematical skills
- problem solving techniques and decision making
- extensive operational knowledge
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to supervise on-site operations:

- apply legislative, organisation and site requirements and procedures for supervision of on-site operations
- reading and writing ability
- communication ability to train and instruct, receive and pass on information
- hazard identification and risk assessment skills
- delegation and people management skills
- problem solving skills
- record keeping and logging skills
- counselling

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to supervise on-site operations:

- operational and maintenance procedures
- fault finding and troubleshooting techniques
- team work
- communication systems, processes and procedures (e.g. two way radio)
- graphical representation (e.g. maps, diagrams, and their uses for interpretation and prediction)
- required documentation (e.g. requisition forms, daily log reports)
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• knowledge of the requirements, procedures and instructions for supervision of on-site operations</td>
<td></td>
</tr>
<tr>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of supervision of on-site operations</td>
<td></td>
</tr>
<tr>
<td>• working with others to plan, prepare and conduct on-site operations</td>
<td></td>
</tr>
<tr>
<td>• evidence of the consistent successful supervision of on-site operations</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
</tr>
<tr>
<td></td>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
</tr>
<tr>
<td></td>
<td>• Customisation of assessment and delivery environment should sensitively accommodate</td>
</tr>
</tbody>
</table>
cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical applications using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the supervision of on-site operations
  - provision of clear and timely instruction and supervision by the individual of those involved in the conduct of the on-site operations |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Compliance documentation may include: | legislative, organisation and site requirements and procedures  |
|                                      | manufacturer’s guidelines and specifications  |
|                                      | Australian standards  |
|                                      | Employment and workplace relations legislation  |
|                                      | Equal Employment Opportunity and Disability Discrimination legislation  |

| Hazards may include: | accidents  |
|                     | fire  |
|                     | emergencies such as chemical spills  |
|                     | confined spaces, hot work areas  |
|                     | environmental factors (e.g. heat/cold, flood, storm, lightning, contaminated sites, sunburn)  |
|                     | flammable gases/liquids, explosives  |
|                     | noise, dust, slips, trips and falls  |
|                     | plant hazards such as rotating hazards and circulation hazards  |
|                     | in-hole fluids, gases and contaminants  |
|                     | hazards associated with aircraft, over water drilling, winching, crane use and forklifts  |

| Problems may include: | safety issues  |
|                     | environmental factors  |
|                     | transport difficulties  |
|                     | equipment failure  |

<p>| Downhole problems (drilling) that may be encountered may include: | formation problems  |
|                                                                | loss of sample/sampling difficulties  |
|                                                                | lost circulation  |
|                                                                | pressure formations  |
|                                                                | differential pressure sticking  |
|                                                                | hole deviation  |
|                                                                | loss of sample integrity  |
|                                                                | encountering unexpected contaminants, or contaminants in higher than expected concentrations  |</p>

**Action plans** to solve problems are prepared according to:
- objectives
- resource requirements
- coordination and feedback requirements
- safety requirements and risk assessment
- priority requirements
- company operating procedures

**Records** may include:
- daily operations reports
- petty cash records
- records of other purchases, i.e. accounts/credit cards
- time sheets
- plant and vehicle logs
- maintenance records

**Reports** may include:
- operations reports
- evaluation of sites
- evaluation of equipment
- injury and accident reports

Not applicable.
RIIBEF601A Conduct business negotiations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of business negotiations in the resources and infrastructure industries. It includes establishing and confirming the worksite's business objective(s), conducting business negotiations and evaluating negotiation outcomes. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a management or supervisory role at worksites within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

---
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Establish and confirm the worksite's business objectives | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Identify and target business opportunities available to the operations  
1.3. Facilitate discussions with *stakeholders* to provide strategies and ideas to meet outcome(s)  
1.4. Analyse information to allow for assessment of the short-term and long-term position of the business  
1.5. Ensure agreed decisions and recommendations fall within the operations business objectives, relevant *legislative requirements* and are appropriate to desired outcomes |
| 2. Conduct business negotiations | 2.1. *Consult* and/or lobby key stakeholders who can assist in achieving the outcome(s)  
2.2. Ensure preparation for the meeting is sufficient to enable effective business negotiation and to achieve desired outcome(s)  
2.3. Ensure contributions to the negotiations are clear, concise and relevant which help to achieve business objective(s)  
2.4. Document/record appropriate and accurate records and key outcomes of negotiations |
| 3. Evaluate negotiation outcomes | 3.1. Evaluate outcomes of negotiations  
3.2. Refer outcomes of negotiations to stakeholders who assisted in preparation of strategies  
3.3. Review outcomes of negotiations for improvement  
3.4. Follow up, and circulate as necessary, outcomes and decisions |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to conduct business negotiations:

- apply legislative, organisation and site requirements and procedures for conducting business negotiations
- initiate decision making actions
- establish the rules of procedure
- adopt communications styles appropriate to listeners and situations, including selecting an appropriate time and place
- identify the information needs of participants
- modify communications in response to feedback from participants
- actively encourage the free exchange of information
- encourage decisions which are realistic for the situation
- produce own ideas from experience and practice

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to conduct business negotiations:

- advanced written and oral communication methods
- organisational goals and objectives
- subject/product knowledge
- statutory and site rules, policies, procedures and regulations
- worksite operating procedures
- risk management processes and techniques
- risk control and management systems
- reporting and recording procedures
- access, evaluate and apply data from organisational systems
- action planning method
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify and research organisation's needs | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Analyse organisation goals, objectives and strategies to gain direction as to the type of research to be undertaken  
1.3. Investigate and analyse site environments to develop options, strategies and anticipated outcomes  
1.4. Clearly state in research briefs the objectives and outcomes, and the requirements for presentation of information  
1.5. Develop and implement strategies that translate the objectives into the planning process  
1.6. Evaluate existing system and equipment suitability  
1.7. Research, evaluate, select and purchase new equipment  
1.8. Analyse and interpret research information to establish options and opportunities |
| 2. Prepare business plans/budgets | 2.1. Involve internal and external *stakeholders* in the planning process in a way that uses their contribution effectively and gains their support for the outcomes  
2.2. Prepare and present business plans/budgets including contingency plans  
2.3. Prepare plans that contain a clear statement of priorities and schedules  
2.4. Provide optional strategies in the contingency plans in the event that all *resources* are not secured or the situation changes  
2.5. Identify all resources required for plans and strategies and how they will be acquired and utilised  
2.6. Develop implementation plans and schedules in line with operational requirements incorporating support from all stakeholders |
| 3. Design and implement | 3.1. Set and agree to operating targets |
| performance indicators | 3.2. Establish and monitor systems against human/financial/physical performance targets  
3.3. Establish and gain agreement on reporting mechanisms  
3.4. Ensure that criteria used to evaluate performance criteria provide sufficient information to make recommendations |
|-----------------------|--------------------------------------------------------------------------------------------------|
| 4. Monitor and review performance | 4.1. Interpret and analyse financial/human and physical information to monitor the relationship between budget/forecast/past performance and actual performance  
4.2. Prepare and gain agreement on operating budgets by relevant stakeholders  
4.3. Establish systems to monitor financial/human and physical performance using appropriate technology  
4.4. Identify variations in performance and take action to rectify out-of-specification results  
4.5. Make recommendations regarding future planning within the organisation's continuous improvement processes  
4.6. Produce and analyse management reports in accordance with company/auditors requirements  
4.7. Present operational performance in accurate, clear and concise manner, appropriate to audience |
| 5. Explain the cause of success or failure in operation performance | 5.1. Base explanations of the cause of success or failure on sufficient, reliable evidence  
5.2. Explain site performance in an accurate, clear and concise manner appropriate to the audience  
5.3. **Evaluate**, consider and present alternate explanations for operational performance  
5.4. Incorporate lessons drawn from success or failure in future operational planning and continuous improvement activities |
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to establish and evaluate an operational performance management system:

- apply legislative, organisation and site requirements and procedures for establishment and evaluation of an operational performance management system
- monitor mining plant and equipment performance and maintenance
- manage people and processes
- develop business plans
- prepare operating budgets and forecast trends
- analyse and review production costs and equipment/plant operating costs
- manage projects and tasks
- coordinate resources human, financial and physical
- control operating costs
- gain statutory/legal approvals
- prepare tender specifications
- implement change
- access and use appropriate technologies
- prepare and present management reports
- negotiate with internal/external customers, community and statutory/legal authorities
- resolve conflict

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to establish and evaluate an operational performance management system:

- site operations
- site products and services
- site plant and equipment
- team management
- quality systems
- relevant statutory/legal control
- organisational objectives
- resource quantification
- financial models
- fundamentals of contract law
- human resource policies and practices
- industrial awards/enterprise agreements
- business planning
- risk management, principles, strategies and applications
- customer/client relations
- organisational change and development
- environmental management
- occupational health and safety
- computer applications
- negotiation techniques
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Candidate's:
- working with others to undertake and complete the establishment and evaluation of operational performance management systems
- provision of clear and timely required support and advice on the establishment and evaluation of operational performance management systems
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Compliance documentation** may include:

- legislative, organisation and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- operational requirements
- budget requirements
- risk management
- statutory compliance
- development approval, mining licenses (or equivalent), which may include:
  - OHS
  - environmental
  - quality
  - purchasing
  - contract management
  - administration (including records and reports)
- common law
- dangerous goods
- development of training policies/programs to aid compliance
- industrial relations
- industry licensing
- local government
- Mines Act
- navigation
- planning and assessment
- trade practices
- waterways
- weights and measures
- workers compensation/WorkCover
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation
| Stakeholders may include: | • regulatory authorities  
• tenders  
• operating managers  
• project managers  
• contractors  
• employees  
• community  
• suppliers  
• customers |
|--------------------------|---------------------------------------------------------------|
| Resources may include:   | • people  
• buildings/facilities  
• finance  
• equipment  
• power/energy  
• technology  
• information |
| Evaluation may include:  | • cost-benefit analysis  
• pay-back period  
• discounted cash flow and net present value |

RIIBEF603A Manage decision making process

Modification History
Not applicable.

Unit Descriptor
This unit covers the management of the decision-making process in the resources and infrastructure industries. It includes establishing the decision-making process, obtaining and analysing the information needed for decision making, making decisions, and advising and informing others. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a management or supervisory role at worksites within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
**Elements and Performance Criteria Pre-Content**

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1. Establish the decision-making process** | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Develop policies which clearly express the worksite's commitment to decision making at the appropriate level  
1.3. Clearly define and allocate responsibilities and duties which allow the implementation and integration of the decision-making process  
1.4. Develop systems and procedures to provide the appropriate information to manage the decision-making process  
1.5. Provide information to the level necessary for effective decision making  
1.6. Notify decisions having impact beyond the decision maker's area of responsibility to the area(s) concerned in a timely manner |
| **2. Obtain and analyse the information needed for decision making** | 2.1. Research the advice and information needs of recipients in ways which are appropriate and sufficient and take account of worksite constraints  
2.2. Identify the information needed to make the required decisions at the various levels/sections of the worksite  
2.3. Select information which is accurate, relevant to the objectives, and sufficient to arrive at reliable decisions  
2.4. Ensure that methods of obtaining information are consistent with worksite values, policies and legal requirements  
2.5. Take prompt and effective remedial action where information is inadequate, contradictory or ambiguous  
2.6. Use methods of analysis which achieve the objectives, identify patterns and trends, and lead to clear conclusions  
2.7. Ensure that a record of the analysis is sufficient to indicate assumptions and decisions made at each stage |
| **3. Make decisions** | 3.1. Base decisions on sufficient, valid and reliable information and analysis |
3.2. Ensure that decisions are consistent with worksite values, policies, guidelines and procedures
3.3. Make decisions in time for appropriate action to be taken

4. Advise and inform others

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to manage decision-making processes:

- apply legislative, organisation and site requirements and procedures for managing decision-making processes
- clearly relate goals and actions to the strategic aims of the worksite
- identify and interpret reports and information
- take opportunities when they arise to achieve the longer-term aims or needs of the worksite
- listen actively, ask questions, clarify points and rephrase others’ statements to check mutual understanding
- adopt communication styles appropriate to listeners and situations, including selecting an appropriate time and place
- create and prepare strategies for influencing others
- understand the culture of the worksite and act to work within it or influence it
- establish information networks to search for and gather relevant information
- seek information from multiple sources
- produce a variety of solutions before taking a decision
- produce own ideas from experience and practice
- take decisions which are realistic for the situation
- take decisions in uncertain situations or based on restricted information when necessary

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to manage decision-making processes:

- strategic planning
- industrial awards/enterprise agreements
- OHS
- organisational change and development
- corporate, group and individual goal setting techniques
- corporate planning model and techniques
- critical path analysis and planning methods and techniques
- statutory and site rules, policies, procedures and regulations
- action planning methods
- information technology
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not
disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.

- Customisation of assessment and delivery environment should sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge in undertaking of the management of decision-making processes
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of decision-making processes that best meet the required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the management of decision-making processes
    - provision of clear and timely required
support and advice on the management of decision-making processes

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Compliance documentation may include:**

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- trade practices
- weights and measures
- waterways
- workers compensation/WorkCover
- planning and assessment
- local government
- dangerous goods
- industry licensing
- industrial relations
- navigation
- Mines Act
- common law
- development of training policies/programs to aid compliance
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Monitoring may include:**

- review of written reports
- performance appraisal
- auditing procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to conduct feasibility studies:

- apply legislative, organisation and site requirements and procedures for conducting feasibility studies
- monitor and maintain quarry plant and equipment
- manage people and processes
- prepare feasibility proposals
- develop business plans
- prepare operating budgets and forecast trends
- analyse and review production costs versus equipment/plant operating costs
- interpret survey data
- interpret geological data
- manage projects and tasks
- evaluate new and used equipment using appropriate techniques
- control operating costs
- gain statutory/legal approvals
- prepare tender specifications
- negotiate and finalise contracts
- implement change
- access and use appropriate technologies
- prepare and present management reports
- negotiate with internal/external customers, community and statutory/legal authorities
- resolve conflict

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to conduct a feasibility study:

- worksite operations
- site products and services
- site plant and equipment
- team management
- quality assurance principles
- statutory/legal control
- organisational objectives
- resource quantification
- financial models
- fundamentals of law and contract law
- human resource policies and practices
- industrial awards/enterprise agreements
- business planning
- risk management principles, strategies and applications
- customer/client relations
- organisational change and development
- environmental management
- occupational health and safety
- computer applications
- negotiation techniques
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example,
| Language, literacy and numeracy demands of assessment should not be greater than those required on the job. |
| Customisation of assessment and delivery environment should sensitively accommodate cultural diversity. |
| Aboriginal people and other people from a non English speaking background may have second language issues. |
| Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required. |

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the feasibility study
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of methods of conducting a feasibility study that best meet the required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the feasibility study
  - provision of clear and timely required support and advice on the conduct of the feasibility study
### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to resource site plans and objectives:

- apply legislative, organisation and site requirements and procedures for resourcing of site plans and objectives
- understand how the different parts of the worksite and its environment fit together
- clearly relate the goals and actions to the strategic aims of the worksite
- adopt communication styles appropriate to listeners and situations, including selecting an appropriate time and place
- develop and use contacts to trade information, and obtain support and resources
- create and prepare strategies for influencing others
- understand the culture of the worksite and act to work within it or influence it
- actively encourage the free exchange of information
- make best use of existing sources of information
- seek information from multiple sources
- break processes down into tasks and activities

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to resource site plans and objectives:

- financial analysis, planning and management
- advanced communication techniques
- critical path analysis, planning methods and techniques
- human resource management
- assertive techniques
- risk management processes and techniques
- industrial awards/enterprise agreements
- OHS
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following: |
| --- |
| • knowledge of the requirements, procedures and instructions for resourcing site plans and objectives |
| • implementation of procedures and techniques for the safe, effective and efficient resourcing of site plans and objectives |
| • the identification of the relevant information and scope of the work required to meet the required outcomes |
| • the identification of viable options and the selection of methods of resourcing site plans and objectives that best meet the required outcomes |
| • working with others to undertake and complete the resourcing of site plans and objectives |
| • consistent successful resourcing of site plans and objectives |

Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.

Customisation of assessment and delivery environment should sensitively accommodate cultural diversity.

Aboriginal people and other people from a non English speaking background may have second language issues.

Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge in undertaking the resourcing of site plans and objectives
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection for resourcing site plans and objectives that best meet the required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the resourcing of site plans and objectives

Unit Sector(s)
Business Effectiveness

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIBHD301A Conduct surface blast hole drilling operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conducting of surface blast hole drilling operations in resources and infrastructure industries. It includes planning and preparing for operations, marking out drill patterns, operating the drill system, relocation of the drill, and carrying out post-operational procedures.

Application of the Unit
Surface blast hole drills may include: diesel, electric, or pneumatic powered; pneumatic or hydraulic operated; rotary or rotary percussion; and tracked or wheeled drill rigs.
This unit is appropriate for those working in driller roles, at worksites within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

5.4. Maintain and process *records and reports* in accordance with requirements and procedures.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct surface blast hole drilling operations:

- apply legislative, organisation and site requirements and procedures
- interpret legislative requirements and procedures
- interpret site requirements and procedures
- interpret manufacturer's requirements and procedures
- interpret work requirements
- interpret geological and survey data
- identify worksite hazards and response procedures
- read and interpret plans, reports, maps and specifications
- interpret equipment technical information
- organise work tasks
- apply drilling techniques
- apply maintenance and housekeeping requirements and procedures
- operate and maintain drilling and ancillary equipment
- use communications equipment
- maintain records
- prepare reports
- work in a team
- carrying out relevant calculations, which may include; addition, subtraction, multiplication, division
- use appropriate instruments to measure volume, mass and length

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct surface blast hole drilling operations:

- legislative, site and manufacturer's requirements and procedures
- worksite coordination requirements and procedures
- site operating techniques and systems
- monitoring systems and alarms requirements and procedures
- ground preparation requirements and procedures
- inspection, fault finding and reporting requirements and procedures
- routine operator servicing, maintenance and housekeeping requirements and

# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for conducting surface blast hole drilling operations</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient conducting of surface blast hole drilling operations</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete surface blast hole drilling operations that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of surface blast hole drilling operations that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second
<table>
<thead>
<tr>
<th><strong>language issues.</strong></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.</td>
<td></td>
</tr>
<tr>
<td>• Where applicable, physical resources should include equipment modified for people with disabilities.</td>
<td></td>
</tr>
<tr>
<td>• Access must be provided to appropriate learning and/or assessment support when required.</td>
<td></td>
</tr>
</tbody>
</table>

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete surface blast hole drilling operations

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation | • legislative, organisation and site requirements and procedures  
| may include: | • manufacturer’s guidelines and specifications  
| | • Australian standards  
| | • code of practice  
| | • customisation of assessment and delivery environment to sensitively accommodate cultural diversity  
| | • Aboriginal people and other people from a non English speaking background may have second language issues |

| Work requirements and procedures | • nature and scope of tasks  
| may come from briefings, handovers, and work orders and may be written or verbal, formal or informal, depending on the complexity of the process and may include: | • the drill pattern plan  
| | • achievement targets  
| | • operational conditions  
| | • dust suppression  
| | • site layout and out of bounds areas  
| | • worksite inspection requirements  
| | • lighting conditions  
| | • plant or equipment defects,  
| | • hazards and potential hazards  
| | • coordination requirements or issues |

| Geological data | • rock type and characteristics  
| may include relevant site-specific information in relation to: | • faults and joints  
| | • water tables or other water sources |

| Survey data | • floor heights  
| may include relevant site-specific information in relation to: | • bench widths  
| | • grades |

| Inspection of the work area may include: | • identification of hazards  
| | • confirming geological and survey data, which may include:  
| | • high wall and low wall condition  
| | • amount of scale  
| | • stability of ground |
| Preparation of the work area may include: | • selection and implementation of control measures for the hazards identified  
• safeguarding site and non-site personnel by:  
  • erection of barricades and posting of signs  
  • selection of appropriate equipment to ensure personnel safety and protection  
  • preparing floor, pads, roads, ramps and bench requirements  
  • pads that are flat, sloping or benched |
| **Potential hazards and risks** may include: | • abandoned equipment  
• adjoining pit walls  
• adverse weather conditions (electrical storms, floods, fires)  
• chemicals  
• contaminants  
• equipment  
• fences  
• holes  
• materials  
• over-hanging rocks  
• personnel  
• pot holes  
• unsafe ground  
• unstable faces  
• vehicles  
• Installed services  
• damaged or defective pressurised hoses and fastenings  
• powerlines  
• dust  
• noise  
• conveyors  
• overhead services  
• void |

- broken ground  
- degree of compaction  
- dry and wet ground  
- location of water table  
- slope of working surface  
- old underground workings and voids  
- determination of appropriate path of movement for equipment
- tow and bent rods
- changing work conditions
- void management

**Coordination** may include with:

- shotfirer
- mobile plant operators
- processing plant operators
- maintenance personnel
- cable reelers
- water truck operators
- service vehicle operators
- crane and float operators
- contractors
- other drillers
- inspectors
- supervisors
- visitors

**Drilling plan** may be written or verbal, formal or informal, depending on the complexity of the process and may include:

- access road plan
- drill pattern
- equipment and resource allocations/requirements
- face plan
- geological details
- mine site
- services
- pre-start and start-up procedure may include:
  - external check of the machine
  - inspection of attachments to ensure security and identify defects
  - checking of fluid levels (windscreen washer tank, hydraulic oil, coolant, grease, water, engine oil, fuel)
  - carry out lubrication
  - checking of display instrumentation and gauges (indicators, gauges, laser levels), computer systems, engine and stop engine lights
  - inspection of air filter restriction indicator
  - inspection and checking of cab (horn, lights, air conditioner)
  - testing of engine and stop engine lights
  - testing visual and audio warning devices and lights
  - checking instruments and control lever

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct underground development drilling:

- apply legislative, organisation and site requirements and procedures
- maintain, clean and operate equipment
- apply drilling techniques
- apply driving techniques
- use hand and power tools

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct underground development drilling:

- auxiliary services procedures
- cleaning procedures
- down hole problems
- drilling procedures
- environmental procedures
- equipment processes, technical capability and limitations
- equipment safety requirements
- geological and technical data (e.g. basic)
- hazardous goods procedures (e.g. handling and transport)
- inspection procedures
- isolation procedures
- manufacturer's specifications
- mining regulations
- operational procedures and checks
- recovery procedures
- road rules
- site procedures
- site safety requirements
- start-up and shutdown procedures
- storage procedures
- towing procedures
- underground procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- customisation of assessment and delivery environment to sensitively accommodate cultural diversity
- Aboriginal people and other people from a non English speaking background may have second language issues

Equipment may include:
- collar piping
- covering devices (e.g. plugs, cones, hessian bags)
- drill rig (e.g. electric/hydraulic, pneumatic)
- drilling components (e.g. drill rods, bits, augers, down hole hammer, down hole tools)
- extra lighting (e.g. flood lights)
- flags
- hoses
- inclinometer
- lifting and handling equipment
- long hole extension drills
- measuring tape
- oils
- paint (e.g. spray cans)
- plates
- recovery equipment
- scaling bars
- signs
- support vehicles
- tamping sticks
- tapes
- witches hats
- recommended/required PPE
| **Pre-start checks** may include: | - air filter restriction indicator  
- cab (e.g. horn, lights, air conditioner)  
- computer systems  
- display instrumentation and gauges (e.g. indicators, gauges, laser levels)  
- engine and stop engine lights (e.g. orange and red)  
- fire and suppression systems  
- fire extinguishers  
- fluid levels (e.g. windscreen washer tank, hydraulic oil, coolant, grease, water, engine oil, fuel)  
- visual and audio warning devices and lights  
- drilling equipment (e.g. drill rig booms, drifters, hydraulic hoses, drill steels, bits and couplings)  
- drill rig platform, steps and hand rails |
| **Potential hazards and risks** may include: | - ground control failure  
- lack of ventilation  
- loose material on working surface  
- misfires  
- gases  
- entry by unauthorised personnel  
- uncovered open holes  
- unstable ground conditions  
- airborne dust and fibres  
- unstable footing  
- poor housekeeping  
- noise  
- rotating machinery (e.g. drill steels)  
- electrical hazards  
- airborne rock fragments  
- vibration from hand held equipment |
| **Drilling plan** may include: | - access to inclines and decline depending on the complexity of the process  
- drive plan  
- equipment and resource allocations/requirements  
- face  
- geological details  
- verbal or written instructions  
- mine site details |
**Dust suppression and extraction methods** may include:
- mobile/fixed sprays
- screens (e.g. vent doors, vent blinds)
- use of water trucks
- ventilation bags operational
- watering down site

**Personnel** may include:
- blasters
- contractors
- drillers
- drivers
- holders of appropriate tickets
- inspectors
- licensed operators
- maintenance staff
- personnel authorised by mine management
- service personnel
- supervisors
- surveyors
- tradespersons

**Drill techniques** may include:
- adjustment to feed
- compacting
- hammer
- removing debris
- rotation
- speed and pull force adjustments
- adjustments to drill steel angle

**Indicators** for proposed holes may include:
- collar tubes
- cones
- pegs
- spray painting

**Drilling problems** may be:
- environmental
- geological (e.g. ground conditions)
- mechanical (e.g. bogged)

**Auxiliary services** may include:
- compressed air
- de-watering pumps
- electricity
- ventilation
- water

**Parts of equipment cleaned** may include:
- platform
- steps and hand rails (removal of oil, grease,
Unit Sector(s)
Blast Hole Drilling

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIBHD303A Conduct long hole drilling

Modification History
Not applicable.

Unit Descriptor
This unit covers the conducting of long hole drilling in the metalliferous mining industry. It includes planning and preparing drilling site, moving equipment and materials to site, drilling and monitoring progression, packing-up drill site, carrying out operator maintenance and housekeeping activities.

Application of the Unit
Long hole drill rigs may be diesel, electric, hand-held, hydraulic, pneumatic, rotary, track or wheeled. This unit is appropriate for those working in driller roles, at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare drilling site | 1.1. Access, interpret and apply *compliance documentation* relevant to the conducting of long hole drilling  
1.2. Plan and prepare work according to site procedures and relevant legislation  
1.3. Receive interpret and clarify shift change over details and review historical information  
1.4. Select appropriate personal protective equipment  
1.5. Identify, manage and/or report *hazards and potential risks* according to the work plan  
1.6. Inspect and assess site conditions to determine if scaling is required and take action according to site requirements  
1.7. Place visible orientation marks to *drill plan* according to site procedures  
1.8. Ensure *auxiliary services* are available  
1.9. Erect physical barricades and signs and/or safety provisions to prevent unauthorised access  
1.10. Identify and clearly mark butts/misfires according to site procedures  
1.11. Ensure area is well ventilated before entry into work area using *dust suppression and extraction methods*  
1.12. Conduct *equipment pre-start checks* to insure equipment is safe and ready to use |
| 2. Move equipment and materials to site | 2.1. Conduct work according to procedures and relevant specifications in a safe and efficient manner  
2.2. Complete pre-start checks and confirm equipment is prepared for transportation  
2.3. Identify and manage hazards and potential risks to ensure safe transportation to drill site  
2.4. Transport *equipment* and attachments safely avoiding damage to equipment, site or injury to *personnel* according to road conditions |
<p>| | |</p>

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct long hole drilling:

- apply legislative, organisation and site requirements and procedures
- operate, maintain and clean auxiliary equipment
- apply drilling techniques
- apply driving techniques
- use hand and power tools
- apply rod recovering techniques

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct long hole drilling:

- auxiliary services procedures
- cleaning procedures
- potential down hole problems
- drilling equipment processes, technical capability and limitations
- equipment safety requirements
- geological and technical data
- handling and transport of hazardous substances
- isolation procedures
- manufacturer's specifications
- mining legislation
- operational procedures and checks
- recovery procedures
- site safety requirements
- start-up and shutdown procedures
- storage procedures
- towing procedures
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Critical aspects for assessment and evidence required to demonstrate competency in this unit</strong></td>
</tr>
<tr>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td>• knowledge of the requirements, procedures and instructions for conducting long hole drilling</td>
</tr>
<tr>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient conducting of long hole drilling</td>
</tr>
<tr>
<td>• working with others to undertake and complete the long hole drilling that meets all of the required outcomes</td>
</tr>
<tr>
<td>• consistent timely completion of long hole drilling that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
</tr>
<tr>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
</tr>
<tr>
<td>• Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.</td>
</tr>
<tr>
<td>• Aboriginal people and other people from a non English speaking background may have second language issues.</td>
</tr>
</tbody>
</table>
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete long hole drilling

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. - tapes
- witches’ hats
### Personnel may include:
- blasters
- contractors
- drillers
- drivers
- holders of appropriate tickets
- licensed operators
- maintenance staff
- personnel authorised by mine management
- service personnel
- supervisors
- surveyors
- tradespersons

### Ground conditions may include:
- broken ground
- dry
- location of water table
- noise
- slope of working surface
- stability of ground
- stable ground (compaction) amount of scale
- ventilation characteristics (fumes, dust)
- visibility
- wet

### Drilling techniques may include:
- adjustment to feed
- compacting
- hammer
- removing debris
- rotation
- speed and pull force adjustments
- adjustments to drill steel angle
- recovering procedures

### Equipment cleaned may include:
- platform
- steps and hand rails (removal of oil, grease, debris)

3.3. Identify and manage potential hazards to ensure safe transportation to drill site  
3.4. Move equipment and attachments safely and avoid damage to equipment and site or injury to personnel  
3.5. Align drill rig in appropriate position to access drill pattern efficiently  
3.6. Connect ancillary services |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to set-up and prepare for open cut drilling operations:

- apply legislative, organisation and site requirements and procedures
- apply diagnostic techniques
- apply blasting techniques
- make decisions
- direct operations
- apply drilling techniques
- apply driving techniques
- identify hazards
- handle hazardous goods
- interpret plans, reports, maps, specifications
- apply lifting techniques (manual, cranes and loads)
- maintain records
- organise work tasks
- report defects
- apply safe work practices
- select and fit personal protective equipment
- work in a team
- troubleshoot
- use communications equipment
- use hand tools

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to set-up and prepare for open cut drilling operations:

- blasting procedures
- breakdown procedures
- drilling pattern marking procedures
- drilling procedures
- emergency procedures
- environmental and heritage procedures
- equipment processes, technical capability and limitations
- equipment safety requirements
- geological and technical data
- hauling procedures
- hazardous goods procedures and consequences of spills
- isolation procedures
- mine operational system
- night and day working procedures
- OHS procedures
- open cut procedures
- operational procedures and checks
- road rules
- shutdown procedures
- site procedures
- site safety requirements
- start-up procedures
- towing procedures
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

RIIBHD305 Conduct down-hole hammer drilling

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of down-hole hammer drilling and blast hole drilling in the drilling industry. It includes planning and preparing for down-hole hammer drilling, operating down-hole hammer drilling, using drilling fluids, maintaining equipment, and responding to problems. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:

- Drilling
- Metalliferous mining

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Not applicable.
## Elements and Performance Criteria

| 1. Plan and prepare for down-hole hammer drilling | 1.1 Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2 Obtain, confirm and apply *work instructions* for the allocated task  
1.3 Identify, manage and report all potential *hazards and risks*  
1.4 Resolve *coordination requirements* with others at the site prior to commencing and during work activities  
1.5 Select *tools and equipment* to carry out tasks consistent with *driller's duties* and the requirements of the job, check for serviceability and rectify or report any faults  
1.6 Check *restraining devices* on all pressure hoses  
1.7 Fit/replace restraining devices on pressure hoses as required  
1.8 Raise alarm/report as required |
|---|---|
| 2. Operate down-hole hammer drill | 2.1 Select appropriate rod type, thread form and drill string components for job  
2.2 Measure and select appropriate bit for the job  
2.3 Collar hole  
2.4 Use rod handling equipment safely and correctly  
2.5 Add/break out and remove drill rods/pipes and down hole equipment  
2.6 Weight/feed/rotate drill at right rate for optimum penetration  
2.7 Adjust air pressure to achieve required hole clearance  
2.8 Measure line string and calculate depth of hole |
| 3. Use drilling fluids | 3.1 Identify hole conditions requiring the use of dust control *fluids*  
3.2 Select suitable ingredients/fluids  
3.3 Prepare/monitor the preparation of required fluids  
3.4 Use dust control fluids to achieve required result |
| 4. Maintain equipment | 4.1 Monitor wear  
4.2 Check all equipment and hoses  
4.3 Disassemble, inspect and reassemble down hole hammers  
4.4 Replace/adjust and report damaged/worn parts as required  
4.5 Undertake bit sharpening as required |
| 5. Respond to problems | 5.1 Monitor operation and chips/sample/air return  
5.2 Identify possible problems in equipment or process  
5.3 Clear blockages  
5.4 Determine other problems and *maintenance tasks* needing action  
5.5 Determine possible fault causes  
5.6 Rectify problem using appropriate solution within area of
5.7 Follow through items initiated until final resolution has occurred
5.8 Report problems outside area of responsibility to designated person

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct down-hole hammer drilling:

- apply legislative, organisation and site requirements and procedures for conducting down-hole hammer drilling
- identify various thread types on the equipment at site and the application of prescribed torque
- identify worn drill pipe and damaged threads
- identify and measure various bits in use
- correctly use the various rod/pipe handling equipment on site
- correctly and competently add/remove rods/pipe from the string
- correctly apply rotation speed and weight on the bit to maintain optimum performance
- correctly measure line string components and calculate hole depth
- utilise the correct combination of air volume and pressure to maintain productivity and sample integrity
- collar holes
- ensure that samples are correctly collected and handled
- ensure that all string components are correctly maintained
- correctly measure bits and related components to ensure compatibility
- ensure that bit sharpening equipment, used to sharpen TC bits are used correctly and safely and that bits are sharpened to correct tolerances
- correctly select various bit types for differing ground conditions
- disassemble describing the function of components, inspect components, replace unserviceable parts and reassemble a DTH hammer
- use prescribed techniques to safely clear sample delivery hose blockages
- monitor sample quality and correctly interpret changes
- accept responsibility for the correct installation and maintenance of restraining devices to pressure and sample delivery hoses
- communicate the hazards of cuttings in the return air stream to all crew members
- ensure that drill pipe is inspected regularly and wear rates monitored
- ensure that threads are inspected and maintained as required
Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct down-hole hammer drilling:

- critical need to match like threads with like threads on all tubular components and make up torque requirements
- parameters relating to wear of drill pipe and integrity of threads
- function of hole collaring
- methods required to limit the contamination of samples
- theory behind TC bit sharpening
- bit selection for different types of drilling and different ground conditions
- problems related to inaccurate measurement of bits and other related components
- importance of monitoring sample quantity
- role that blockages play in affecting sample quality
- methods commonly used to clear down hole blockages in air drilled holes and the hazards associated with clearing blockages
- methods used to clear a blockage in a sample delivery hose and the hazards associated with clearing blockages
- critical need for restraining devices to be fitted to all pressure delivery hoses and sample delivery hoses, the devices available and their methods of attachment
- dangers of drilled samples being returned to the surface at high velocity in air drilling operations and the parameters involved
- importance of checking gauges and monitoring pressures, flow rates and temperatures

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Context of and specific resources for assessment**

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate’s required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate’s:
  - implementation of appropriate requirement,
procedures and techniques for the safe, effective and efficient achievement of required outcomes
- consistent achievement of required outcomes
- first hand testimonial evidence of the candidate’s:
- working with others to undertake and complete the conduct of down-hole hammer drilling

Guidance information for assessment
Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

## Range Statement

### Relevant compliance documentation
may include:
- legislative, organisational and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Work instructions
may come from briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include:
- nature and scope of tasks
- specifications
- quality of finished works
- achieved targets
- operational conditions
- obtaining of required permits
- site layout
- out of bounds areas
- worksite inspection requirements
- lighting conditions
- plant of equipment defects
- coordination requirements or issues
- contamination control requirements
- environmental control requirements
- barricade and signage requirements

### Hazards
may include:
- working in proximity to drilling rig
- injuries to fingers, hands and back
- incorrect speed of operation
- inadequate maintenance
- heat, dust, fatigue, dehydration
### Coordination requirements

May include:

- Other equipment operators
- Maintenance personnel
- Supervisors
- Site personnel

### Tools and equipment

May include:

- Drill rods and drill pipe including:
  - Conventional drill pipe
  - API threads
  - BECO threads
  - Thread protectors
- Drill bits including:
  - DTH hammer concave, convex and flat face bits
  - Rod handling equipment:
  - Manual handling
  - Mechanised rod handlers
  - Hydraulic pipe/rod/clamps
  - Hydraulic pipe/rod/spinner
  - Make and break:
  - Stillsons
  - Hydraulic tongs
  - Pipe wrenches
  - Pipe/rod spinners
  - Hydraulic make/break devices
  - Make up torque requirements
  - Bit break out plates

### Driller’s duties

May include:

- Using correct rod to hole diameters
- Selecting best bit configuration for ground and hole conditions
- Maintaining correct rotation speed and weight on bit for optimum penetration
- Calculating line string and hole depth
- Using correct combination of air volume and pressure to suit drilling conditions
- Monitoring collection, splitting and bagging of samples
- Ensuring all equipment is kept clean and stored

**Unit Sector(s)**

Blast Hole Drilling

**Custom Content Section**

Not applicable.
RIIBHD401A Supervise blast hole drilling operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the supervision of blast hole drilling operations in resources and infrastructure industries. This includes: planning and preparing operations; initiating operations; and monitoring, adjusting, communicating and reporting on the execution of the operations.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

---
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for blast hole drilling operations | 1.1. Access, clarify and ensure the application of the **requirements and procedures** relevant to undertaking blast hole drilling operations  
1.2. Access, clarify and ensure the application of the specific **task information** and **required outcomes** relevant to undertaking blast hole drilling operations  
1.3. Prepare an **operational plan** which makes best use of the available **resources** and for the safe effective and efficient conduct of the operations |
| 2. Initiate blast hole drilling operations | 2.1. Acquire and make available the necessary resources for the safe, effective and efficient conduct of the operations  
2.2. Issue clear and timely **instructions** to **team members** and others involved, for the safe, effective and efficient conduct of the operations |
| 3. Monitor, adjust, communicate and report on the execution of blast hole drilling operations | 3.1. **Monitor** the execution of blast hole drilling operations  
3.2. **Initiate** adjustments to blast hole drilling operational practice or the operational plan to ensure safe, effective and efficient execution of the operations  
3.3. Provide advice to **team members** to overcome **operational problems** encountered during the execution of blast hole drilling operations  
3.4. Ensure plant equipment and tools maintenance requirements are carried out and recorded  
3.5. Ensure reports are completed and submitted  
3.6. Recommend changes to improve the safety, efficiency and effectiveness of the execution of blast hole drilling operations |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria of this unit, particularly for their application in the variety of circumstances in which this unit may be applied. This includes the ability to carry out the following:

- interpreting legislative requirements and procedures
- interpreting organisational requirements and procedures
- interpreting client requirements and procedures
- interpreting manufacturer's requirements and procedures
- interpreting blast hole drilling operations project site geological data
- interpreting blast hole drilling operations project site geotechnical data
- interpreting blast hole drilling operations project site hydrological data
- interpreting blast hole drilling operations project site metrological data
- interpreting blast hole drilling operations project engineering survey information
- interpreting blast hole drilling operations project plans and drawings
- interpreting blast hole drilling operations project specifications
- preparing for and conducting of briefings, toolbox and site meeting
- preparing of short messages
- preparing and presenting of job reports
- preparing and maintaining of log books and diaries
- providing leadership
- applying blast hole drilling operations performance monitoring skills
- applying blast hole drilling operations trouble shooting skills
- applying blast hole drilling operations problem solving skills
- performing calculations for the execution of blast hole drilling operations
- providing recommendations for the improvement of the safe, effective and efficient execution of blast hole drilling operations

Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly for their application in the variety of circumstances in which this unit may be applied. Assessment requires evidence of the ability to identify and explain the purpose of:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational safety and health requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- work zone traffic management requirements and procedures
- contract management requirements and procedures
- communication requirements and procedures
- administrative requirements and procedures
- blast hole drilling operations plant and equipment capabilities and application
- plant, equipment and tools maintenance requirements and procedures
- operational techniques for the execution of blast hole drilling operations
- potential operational problems in the execution of blast hole drilling operations
- blast hole drilling operations resource requirements and procedures
- activities scheduling requirements and procedures
- blast hole drilling operations materials delivery requirements and procedures
- job plan drafting of and administration requirements and procedures
- reporting requirements and procedures
- workplace relationship requirements and procedures
- organisational, client and site operational requirements
- relationship between various areas of resources and infrastructure activities and blast hole drilling operations
- team leadership techniques
- works planning techniques
- blast hole drilling operations monitoring methods
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

RIIBHD501A Manage blast hole drilling operations

Modification History
Not applicable.

Unit Descriptor
This unit covers managing blast hole drilling operations in resources and infrastructure industries. It includes preparation for, planning for and the implementation, monitoring and adjusting of blast hole drilling operations.

Application of the Unit
This unit is appropriate for those working in management or technical specialist roles, within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to manage blast hole drilling operations:

- apply legislative, organisation and site requirements and procedures
- interpret and apply legislative and organisational requirements
- interpret and apply geological and survey data
- provide team leadership
- manage people and processes
- resolve conflict
- coordinate human, financial and physical resources
- choose appropriate operational techniques
- choose and assign appropriate plant and equipment
- develop, initiate and administer work plans
- interpret and apply operational performance data
- monitor and maintain drilling operations
- prepare operating budgets and forecast trends
- manage projects and tasks
- deliver and maintain products and services to required specifications
- manage drilling traffic
- evaluate new and used equipment using appropriate techniques
- control operating costs
- performance auditing of finance, energy, safety, environment, quality assurance, human resources, legislative compliance and benchmarking
- gain statutory/legal approvals
- prepare tender specifications
- negotiate and finalise contracts
- access and use appropriate technologies
- prepare and present management reports
- negotiate with internal/external customers, community and statutory/legal authorities
- read, analyse and update plans

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to manage blast hole drilling operations:
operations:
- site risk, statutory compliance, health, safety, environmental, quality and communication requirements and procedures
- geological data
- survey data
- blasting parameters
- pit development options and procedures
- operational techniques required for execution of the plan
- plant and equipment capabilities
- work planning techniques
- team leadership techniques
- consultative and coaching techniques
- work monitoring methods
- recording and reporting systems
- drilling operations
- drilling products and services
- drilling plant and equipment
- team management
- organisational objectives
- resource monitoring
- surveying
- financial models
- fundamentals of contract law
- human resource management
- industrial awards/enterprise agreements
- planning processes
- risk management: principles, strategies and applications
- customer/client relations
- environmental management
- OHS
- computer applications
- negotiation techniques
- plan presentation
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Context of and specific resources for assessment

|  | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
|  | • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. |
|  | • Customisation of assessment and delivery |
environment to sensitively accommodate cultural diversity.

- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge to apply in undertaking of the management of blast hole drilling operations
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of blast hole drilling options that best meet the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial and documentary evidence of the candidate's:
  - working with others to undertake and complete blast hole drilling operations
  - provision of clear and timely required
| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>
<thead>
<tr>

| **Planning** may include: | • flow-charts  
• Gantt charts  
• critical path networks |
| **Selection and identification of the source of equipment** may include: | • site geological factors  
• blasting parameters  
• production requirements  
• availability of organisation's equipment  
• availability of contractors equipment  
• evaluation of drilling methods  
• evaluation of economics and efficiency  
• comparative costs of various options, which may include:  
  • ownership costs of drilling equipment  
  • operating costs of drilling equipment  
  • consumable cost of drilling  
  • total unit costs of a drilling operation |
| **Safety** considerations may include: | • faults in mechanical, electrical, hydraulic or other equipment  
• hazards related to drilling (e.g. explosion, drilling into butts, misfires)  
• drill rod handling  
• power lines  
• chemicals  
• care in used rod disposal  
• contaminants  
• toxic materials and gases  
• heat stress  
• climatic exposure  
• human error  
• lack of training  
• poor site preparation  
• non-use safety gear  
• ground slippage and geology  
• noise and dust  
• face stability  
• loose fitting clothing  
• bull hose  
• voids management |
- drilling into butts and misfires

**Resources** may include:
- financial
- labour
- materials
- services
- plant and
equipment, which may include:
  - down-hole tools such as tri-cone, button or cross bits
  - drill rigs:
  - drifter - hydraulic or pneumatic
  - rotary top drive
  - ancillary equipment:
    - pumps
    - compressors
    - generators
    - grout mixing equipment
    - diesel engines
    - vehicles

**Training** may include:
- hazards and potential accidents
- driller's personal safety equipment
- accident investigation and reporting
- location
- personal behaviour
- drilling operation
- noise and dust
- responsibility of key personnel
- associated legislation and regulations

**Unit Sector(s)**
Blast Hole Drilling

**Competency field**
Refer to Unit Sector(s).
Co-requisite units

Not applicable.
RIIBLA201A Support shotfiring operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the supporting of shotfiring operations in resources and infrastructure industries. It includes planning and preparing for and supporting of blast site operations.

Application of the Unit
This unit is appropriate for those working in a operational support roles, at worksites within:
- Civil construction
- Surface coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. ## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for supporting of blast site operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the supporting of shotfiring operations  
1.2. Obtain, confirm and apply *work instructions* for the allocated task  
1.3. Access, interpret and apply geological and survey data and weather conditions required to complete the allocated work  
1.4. Identify, manage and report all potential *hazards*  
1.5. Resolve *coordination requirements* with others at the site prior to commencing and during work activities  
1.6. Identify and *test* the *explosives and accessories* to be used for the allocated task  
1.7. Recognise and respond to hazardous and emergency situations  
1.8. *Check* blast holes |
| 2. Provide support at the blast site | 2.1. Prepare and mix explosives in accordance with shot requirements  
2.2. Pick up, carry and transport explosives and accessories on the shot site in required sequence  
2.3. Assist in *securing and isolating blast area* in accordance with instructions  
2.4. Prime, load, stem and tie in the explosive in accordance with instructions  
2.5. Carry out site clean up operations according to instructions  
2.6. Prepare and process reports and/or records of their support activities and others as directed |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to support shotfiring operations:

- apply legislative, organisation and site requirements and procedures for supporting blast site operations
- apply hazard identification and risk management processes
- apply operational safety requirements
- read, interpret and apply technical information
- apply blast site explosives storage control requirements
- apply explosives mix and handle requirements
- apply driving requirements and procedures for explosives transport vehicles
- apply the requirements for securing and isolating blast area
- apply explosives loading, stemming and tying in procedures
- apply record keeping procedures

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to support shotfiring operations:

- blast plan
- site security plan
- applicable legislation and reporting requirements
- site operational safety requirements
- hazardous goods handling and transport procedures
- blasting techniques and procedures
- types, physical and technical characteristics, uses and limitations of explosives
- explosive handling, transportation and storage requirements
- explosives transport vehicle driving regulations, rules and conventions
- site geological and survey data
- hazard identification and risk management processes
- site environmental requirements and constraints
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
</table>
|  | • knowledge of the requirements, procedures and instructions for supporting of shotfiring operations  
• implementation of requirements, procedures and techniques for the safe, effective and efficient supporting of shotfiring operations  
• working with others to undertake and complete the shotfiring operations that meet all of the required outcomes  
• consistent timely completion of shotfiring operations that safely, effectively and efficiently meets the required outcomes |

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second
language issues.

- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete shotfiring operations

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Work instructions

- nature and scope of tasks
- detailed responsibilities and coordination issues and requirements
- site layout
- essential survey data and locations
- essential geological information
- known information on blast holes, including:
  - alignment and location problems
  - obstructions or voids
  - wet holes
- specifications and equipment requirements
- transport and storage issues and requirements
- quality of finished works
- timings for preparation
- achievement targets
- operational conditions
- public relations
- out of bounds areas
- worksite inspection requirements
- lighting conditions
- plant or equipment defects
- hazards and potential hazards
- coordination requirements or issues
- environmental control requirements
- waste management requirements

<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan for supporting shotfiring | 1.1. Access, interpret and apply compliance documentation relevant to supporting underground shotfiring operations  
1.2. Obtain, interpret and clarify shotfiring requirements in the form of shift briefings, handover details or work orders  
1.3. Access, interpret and apply environmental, geological and survey data required to complete the allocated work  
1.4. Identify, manage and report all potential hazards  
1.5. Resolve coordination requirements with others at the site prior to commencement of, and during, the work activity |
| 2. Provide support at the blast site | 2.1. Establish, secure and isolate shot site  
2.2. Ensure holes are drilled to authorised pattern design, with specific reference to geology, hazards, and safety  
2.3. Flush or clean and test drill holes  
2.4. Apply explosion inhibitor  
2.5. Identify and report any deteriorated explosives and accessories  
2.6. Ensure explosives are transported in accordance with requirements and procedures  
2.7. Load and stem the explosive  
2.8. Recognise and respond to hazardous and emergency situations |
| 3. Clear the site | 3.1. Remove equipment and facilities not required from the shot site  
3.2. Secure and muck-out the shot site following the initiation of the blast |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to support underground shotfiring operations:

- apply legislative, organisation and site requirements and procedures
- apply personal and operational safety requirements
- access, interpret and apply technical and environmental information
- interpret geological and survey data
- apply procedures for drilling to patterns
- apply procedures for cleaning and testing holes
- apply explosives and detonators handling requirements and procedures
- identify potential hazards and manage risk
- apply record maintenance requirements
- use tools required to complete task
- apply environmental compliance requirements
- identify damaged/deteriorated explosives

#### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to support underground shotfiring operations:

- site personnel and operational safety requirements
- legislative and site shotfiring requirements
- types and characteristics of explosives and protection measures associated with their use
- shotfiring techniques and procedures
- explosive handling, transportation and storage requirements
- shotfiring equipment characteristics, technical capabilities and limitations, site operational and maintenance procedures
- geological and survey data essential to shotfiring
- site environmental requirements and constraints related to shotfiring including blast monitoring systems
- physical and technical quality of explosives
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for operations | 1.1. Access, interpret and apply *compliance documentation* relevant to mix *explosives* using *mobile processing units*  
1.2. Select *personal protective equipment* appropriate for work activities  
1.3. Inspect work area and establish, barricade and signpost loading area  
1.4. Identify, address and report potential hazards and risks  
1.5. Segregate *incompatible goods* prior to loading the mobile processing unit according to legislation and code of practice  
1.6. Inspect mobile processing unit for safe loading of explosives materials  
1.7. Ensure *attachments* comply with standards and licensing requirements  
1.8. Placard mobile processing unit and attachments to show the goods carried, Hazchem identity and emergency information  
1.9. Check that *safety equipment* is fitted and ready for use |
| 2. Load and mix explosives materials | 2.1. Calculate batch quantities for ingredients to manufacture explosive to specification, and check availability of ingredients  
2.2. Wear required personal protective equipment  
2.3. Ensure truck is empty of product and any identified water in storage bin removed  
2.4. Apply parking brake throughout materials loading operation  
2.5. Position truck and *operate controls* to load specified amounts of materials according to required procedures  
2.6. Set timer and operate controls to mix explosive for specified time according to procedures  
2.7. Load materials in a safe manner to prevent spillage or injury to personnel and observe *emergency procedures* |
| 2.8. Record the details of all materials loaded according to procedures and requirements |
|---|---|
| 3. Transport explosives to delivery point | 3.1. Carry out vehicle *pre-start checks*
3.2. Confirm and adhere to pre-planned route
3.3. Operate vehicle according to *road conditions* and in compliance with established mine traffic rules
3.4. Follow emergency procedures for accidents that result in a dangerous situation |
| 4. Deliver explosives in blast hole | 4.1. Select most appropriate hole discharge point and locate delivery chute over blast hole
4.2. Confirm the identity of blast hole and explosive loading requirements with *relevant personnel*
4.3. Regulate the discharge of explosive to the blast hole to achieve specified weight or stemming height
4.4. Complete loading hole and prepare vehicle for next blast hole
4.5. Complete records as required
4.6. Ensure area is clear and safe to move vehicle |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct mobile mixing of explosives:

- apply legislative, organisation and site requirements and procedures
- apply driving techniques in adverse conditions
- apply route planning processes
- apply hazard identification procedures
- apply hazardous goods handling procedures
- apply vehicle refuelling procedures
- apply emergency procedures

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct mobile mixing of explosives:

- authorities to operate an MPU
- types and properties of explosives materials
- MPU explosive materials capacity
- mixing parameters and ratios
- incompatible materials and methods of segregation
- safety and emergency procedures and equipment associated with the loading and operation of an MPU
- MPU operation
- configuration, accessories and working parts of MPUs
- MPU loading equipment and methods
- recording and reporting requirements
- transport emergency procedures
- explosives discharge methods and requirements
- placarding and signage requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
|                                                 | • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. |
|                                                 | • Customisation of assessment and delivery environment to sensitively accommodate cultural diversity. |
|                                                 | • Aboriginal people and other people from a non English speaking background may have second |
| language issues. |
| Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances. |
| Where applicable, physical resources should include equipment modified for people with disabilities. |
| Access must be provided to appropriate learning and/or assessment support when required. |

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the mobile mixing of explosives

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisation and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• code of practice  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
|---|---|

**Explosives** is defined as:

<table>
<thead>
<tr>
<th>Explosives is defined as:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• 'any material or mixture which, when initiated, undergoes a rapid chemical change with the development of heat and high pressure to produce an aural, visual or practical effect'</td>
</tr>
</tbody>
</table>

**Explosives materials may include:**

<table>
<thead>
<tr>
<th>Explosives materials may include:</th>
</tr>
</thead>
</table>
| • ANFO  
• heavy ANFO  
• SOFTLOAD |

**Mobile Processing Unit (MPU) may be defined as:**

<table>
<thead>
<tr>
<th>Mobile Processing Unit (MPU) may be defined as:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• 'A vehicle mounted plant which carries its own ingredients, can manufacture or blend a Class 1 explosive and which contains it own delivery system for the explosive; or a vehicle mounted bulk explosives container which contains its own delivery system for the explosive'</td>
</tr>
</tbody>
</table>

**Mobile Processing Units may include:**

<table>
<thead>
<tr>
<th>Mobile Processing Units may include:</th>
</tr>
</thead>
</table>
| • ANFO units  
• emulsion units  
• slurry trucks  
• bulk emulsion explosive delivery vehicles  
• re-pump vehicles  
• pre-blended ANFO trucks |

**Personal protective equipment may include:**

<table>
<thead>
<tr>
<th>Personal protective equipment may include:</th>
</tr>

**Incompatible goods may include:**

<table>
<thead>
<tr>
<th>Incompatible goods may include:</th>
</tr>
</thead>
</table>
| • combustible liquids  
• ammonium nitrate: |
- solutions of ammonium nitrate
- solutions of ammonium nitrate and other inorganic nitrates
- ammonium nitrate emulsions conforming to UN 3375
- urea/ammonium nitrate eutectics
- ammonium nitrate emulsions and water gels which meet the requirements of a class 1.5 explosive
- ANFO mixture:
  - mixtures of ammonium nitrate and fuel oils
- solid fuels including:
  - aluminium powder
  - polystyrene beads
  - pulverised rubber
  - 'premix' - solid fuels for water gels
- other solid fuels included in authorised explosive compositions
- 'effect' chemicals
- detonators and other Class 1 explosives
- water (except where carried for cleaning and/or processing purposes)

**Attachments** may include:
- elevated work platform
- trailer
- pumps
- auger
- emulsion unit

**Safety equipment** on the MPU may include:
- emergency kit
- emergency stops
- rotating beacon
- fire extinguishers
- handrail and walkway
- signage and placarding
- battery isolator
- fuel isolator

**Operating controls** may include:
- operating bin loading hatch
- auger raising, lowering and slewing
- discharge chutes
- operating scales/operating timers

**Emergency procedures** may include:
- emergency stops
- battery isolation
| **Pre-start checks** may include: | • fluid levels  
• auger/tumbler seal inspection  
• fire extinguishers  
• loading lights  
• signs/placards  
• flashing beacon |
|---|---|
| **Road conditions** may include: | • dust  
• fog  
• rough surface/corrugated surface  
• wet/slippery/boggy roads |
| **Emergency procedures for accidents** that result in a dangerous situation may include: | • notifying the emergency services of the incident as soon as possible  
• notifying the owner the owner or prime contractor  
• providing reasonable assistance to the emergency services  
• carrying out emergency procedures recommended in emergency information provided, including EPGs  
• carrying out the local emergency plan  
• preventing any other vehicles, dangerous goods or explosives from coming within a safe distance specified in the emergency information carried in the vehicle  
• warning any person in the vicinity who may be at risk  
• preventing or minimising the escape of any transported material and its entry into the surrounding environment |
| **Relevant personnel** may include: | • shotfirers  
• blast crews  
• contractors |

RIIBLA204A Store, handle and transport explosives in underground coal mines

Modification History
Not applicable.

Unit Descriptor
This unit covers the storage, handling and transport of explosives in underground coal mining. It includes planning and preparing for storage; handling and transport of explosives; accessing and managing explosives storage; preparing to transport explosives; and transporting explosives.

Application of the Unit
This unit is appropriate for those working in operational roles, at worksites within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
**Elements and Performance Criteria**

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for storage, handling and transport of explosives | 1.1. Access, interpret and apply *compliance documentation* relevant to the storage, handling and transport of explosives in underground coal mining  
1.2. Obtain, confirm and apply *work instructions* for the allocated task  
1.3. Identify, manage and report all potential *hazards*  
1.4. Resolve *coordination requirements* with others at the site prior to commencing and during work activities  
1.5. Identify the *explosives and accessories* used for different applications  
1.6. Classify explosives according to statutory criteria  
1.7. Apply safe handling procedures and precautions |
| 2. Access and manage explosives storage | 2.1. Gain access to *magazine* as *authorised person*  
2.2. Maintain compliance requirements for signage, construction, safety and security of magazines, storage limits  
2.3. Receive and despatch explosives and accessories according to type and quantity together with identity of recipient  
2.4. Segregate explosives and accessories according to type in magazines and to prevent deterioration, spoilage and spillage  
2.5. Ensure rotation of explosives in magazine  
2.6. Restrict access to store to authorised persons  
2.7. Maintain stock records and report discrepancies  
2.8. Conduct housekeeping of magazine  
2.9. Complete all required documentation and reports clearly, concisely and on time  
2.10. Pass on information regarding explosives stock and storage |
| 3. Prepare to transport explosives | 3.1. Receive orders and confirm authority of recipient to possess explosives |
3.2. Select sufficient quantities of explosives and accessories according to shot plan, for safe transport
3.3. Conduct and record results of pre-start check on explosive transport vehicle and confirm presence and operability of relevant safety equipment
3.4. Carry out vehicle start-up procedures
3.5. Display and ensure legibility of relevant signs on vehicles
3.6. Load vehicle in accordance with separation and segregation requirements
3.7. Adhere to emergency procedures in case of fire and/or accident

<table>
<thead>
<tr>
<th>4. Transport explosives</th>
<th>4.1. Communicate with other equipment operators and other persons using appropriate communication methods to advise of explosive movements</th>

</table>
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to store, handle and transport explosives in underground coal mining:

- apply legislative, organisation and site requirements and procedures for the storage, handling and transport of explosives in underground coal mining
- apply procedures for preparing explosives and equipment for transport
- apply control requirements and procedures explosives magazine
- apply explosives classification and segregation requirements
- apply hazard identification processes
- apply hazardous goods handling techniques
- apply driving regulations and site procedures for explosives transport
- apply towing requirements and procedures
- apply vehicle refuelling procedures
- implement emergency procedures
- apply mathematical calculations using addition, subtraction, multiplication and division
- apply record keeping

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to store, handle and transport explosives in underground coal mining:

- shot plan
- site security plan
- handling and transporting hazardous goods requirements
- OHS requirements and procedures
- equipment safety requirements
- emergency procedures
- site operational systems, procedures and checks
- manufacturer's instructions
- types, characteristics and applications of explosives and accessories
- explosives storage regulations and procedures
- explosive transportation procedures and regulations
- explosive magazine maintenance requirements
- waste management requirements and procedures
- equipment operational procedures, technical capability and limitations
- start-up and shutdown procedures
- isolation procedures
- labelling requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation
may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian Standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Work instructions
may come from briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include:
- nature and scope of tasks
- specifications
- achievement targets
- operational conditions
- obtaining of authorisations required
- site layout
- designated routes
- out of bounds areas
- worksite inspection requirements
- lighting conditions
- plant or equipment defects
- hazards and potential hazards
- coordination requirements or issues
- contamination control requirements
- barricade and signage requirements

### Hazards
may include:
- chemical energy, including:
  - premature explosion
  - deterioration of explosives
  - stored energy
- working environment, including:
  - weather conditions
  - insufficient illumination
  - NOx gases
  - poor road or rail conditions
  - ground conditions
- fire/flames/ignition sources
- atmospheric contaminants

Unit Sector(s)
Blasting

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIBLA301A Conduct surface shotfiring operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of surface shotfiring operations in resources and infrastructure industries. It includes planning and preparing for surface shotfiring operations; supervising the storage and transport of explosives and accessories; preparing for charging and charge holes; conducting the blast; completing post-blast activities; and carrying out equipment maintenance.

Application of the Unit
This unit is appropriate for those working in shotfirer roles, at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct surface shotfiring operations:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- read, interpret and apply technical information
- apply operational planning skills
- apply work coordination skills
- apply mathematical calculations using addition, subtraction, multiplication and division
- apply workplace communication techniques
- apply explosives preparation and mixing procedures
- apply diagnostic techniques
- apply explosives storage, handling and transport procedures
- apply hazard identify procedures
- apply procedures for identifying non-conformities
- apply records and reports maintenance procedures
- apply environmental compliance requirements

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct surface shotfiring operations:

- Australian standards and code of practice
- site and equipment safety procedures
- environmental requirements, including vibration, noise, dust and chemicals
- site environmental requirements and constraints
- types, physical and technical characteristics, uses and limitations of explosives and protection measures associated with their use
- site operational procedures
- planning processes
- explosive handling, transportation and storage requirements
- equipment characteristics, technical capabilities and limitations
- equipment maintenance procedures
- isolation and lock out procedures
- analysis of site geological and survey data
- selection of appropriate explosives to meet site/ground conditions
- monitoring and review processes and techniques
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>

<td></td>
</tr>
</tbody>
</table>
| • Aboriginal people and other people from a non English speaking background may have second
Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.

Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete surface shotfiring operations

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

  • fire/flames/ignition sources
  • atmospheric contaminants
  • dust and fumes
  • noise
  • ground conditions, including hot ground
  • lack of ventilation
  • extraneous electricity e.g. static electricity, lightning
• equipment and materials, including:
  • faulty explosives
  • misfires
  • faulty vehicle
  • faulty equipment
  • broken detonation leads
  • high voltage electricity
  • radio frequencies and transmitters
  • hot exhaust system
  • high air and water pressures
  • hydraulic oil pressure
• people, including those:
  • speeding
  • unauthorised persons
  • committing theft
  • trespassers
• processes and procedures, including:
  • back injuries
  • drilling in butts
  • lost holes

**Equipment** may include:

• siren
• radios
• signs
- vehicles approved for carrying dangerous goods and explosives  
- explosives mixers  
- pumps  
- plugs (to seal finished holes prior to loading)  
- measuring tape  
- cutting implements  
- blast monitoring systems  
- video camera

**Support requirements** may include:
- other equipment and their operators  
- vehicles  
- public and site notification

**Survey of blast area** includes:
- locate position, direction and incline of blast holes  
- survey reports

**Geological data** may include:
- rock type  
- structures  
- faults  
- intrusions  
- weathering  
- wet and dry holes  
- hot ground  
- reactive ground  
- hot and reactive ground

**Calculations** may include:
- depth of holes  
- temperatures  
- water problems  
- pattern design  
- types of explosive  
- BCM  
- explosives quantity  
- powder factor

**Explosives** may include:
- high explosives  
- low explosives  
- bulk and packaged explosives  
- deflagrating explosives  
- permitted explosives  
- wet or dry  
- variable density

**Accessories** may include:
- primers  
- delays
- down lines
- trunk lines
- lead-in lines
- detonators and detonator assemblies
- detonation mechanisms including:
  - bell wire and firing lines
  - delay mechanisms
  - blasting machines or mains firing equipment
  - explosives tester
- binding tape
- fuses and igniter cords
- detonators and detonating cord
- gas bags
- decking
- stemming
- hole liner
- blast monitoring equipment
- firing cables/bell wire
- exploders and testers
- electronic firing equipment
- specialist tools
- initiators

**Inventory control systems** may include:
- types and quantities of explosives
- shelf life
- distribution records

**Dispose of explosives** may include:
- burning by the shotfirers on site
- detonation in a production drill hole
- detonation in a controlled manner
- return to supplier or delivery or surrender to an explosives

**Secure shot area** may include:
- signage
- windrow
- bund wall
- ribbon
- tape
- witches hats
- ropes
- flags or pegs
- sentries
- gates
### Pre-blasting procedures may include:
- warnings
- sentries
- area clearance

### Initiating blast systems may include:
- safety fuse
- detonating cord
- non-electric detonator
- electric detonator
- electronic detonator
- remote firing

### Misfires may be caused by:
- faulty explosives or accessories
- damaged or deteriorated explosives or accessories
- improperly assembled explosives components
- inappropriate or incomplete combinations of components
- operator error or inexperience
- inattention to detail or ignorance
- environmental influences, e.g. wet weather or poor visibility

### Post-blast coordination may include:
- the return of unused explosives
- the return of other equipment
- the withdrawing sentries
- collection of environmental monitoring equipment
- recording of environmental monitoring data
- maintenance, which may include:
  - testing of exploders
  - servicing of mixing equipment
  - maintenance of hand tools
  - operational maintenance of bulk delivery equipment

</tr>
</thead>
</table>
| **1.** Plan and prepare for shotfiring operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the conduct of shotfiring operations in underground coal mines  
1.2. Obtain, confirm and apply *shotfiring requirements*  
1.3. *Inspect worksite* and identify, manage and report all potential *hazards* and ensure work area is safe  
1.4. Coordinate vehicle, *equipment* and personnel *support requirements* for the work  
1.5. Access, interpret and apply environmental, *geological and survey data* required to complete the allocated work  
1.6. Carry out *calculations* to enable pattern design, loading and tying in of shots  
1.7. Complete *pattern design*, including loading, hole spacing and depth, stemming and wiring requirements  
1.8. Carry out briefings  
1.9. Identify and confirm the *explosives and accessories* required for the work |
| **2.** Supervise the store and transport explosives and accessories | 2.1. Order and receive explosives and accessories  
2.2. Ensure explosives and accessories are safely and correctly stored in appropriate facilities  
2.3. Ensure *inventory control* systems are accurately and correctly maintained  
2.4. Ensure explosives and accessories are transported to blast area and segregate correctly  
2.5. Ensure that explosives are not left unattended  
2.6. Identify and *dispose* of any deteriorated or out of date explosives and accessories correctly |
| **3.** Prepare for charging | 3.1. Identify, manage and report potential hazards and risks |
3.2. **Secure blast area** in accordance with procedures and blast plan
3.3. Establish and communicate access routes to shot area for authorised persons and vehicle
3.4. Identify hole locations and any non-conforming conditions in preparation for charging
3.5. Set up charging equipment in accordance with site procedures
3.6. Prepare holes for charging in accordance with blast plan

### 4. Charge holes

4.1. Supervise blast personnel during loading operations
4.2. Prime and charge holes in accordance with the blast plan
4.3. Ensure blast holes are charged in accordance with loading plan and identify **non-conforming conditions**
4.4. Apply **explosion inhibitor**
4.5. Ensure blast holes are stemmed in accordance with blast plan
4.6. Clear the area of equipment, personnel and isolate/barricade the blast area, including warning signs
4.7. **Test** equipment and accessories
4.8. Maintain **records**
4.9. Conduct **blast monitoring**

### 5. Conduct the blast

5.1. Carry out **pre blasting procedures** and establish exclusion zone
5.2. Carry out tying in, in accordance with the blast plan
5.3. Supervise all personnel within the blast area during tie-in and initiation
5.4. **Initiate the blast**
5.5. Carry out and record activities in accordance with the blast plan

### 6. Complete post blast activities

6.1. Carry out post blast inspection
6.2. Secure firing circuits and **initiation** device
6.3. Report blasting has been completed to relevant personnel
6.4. Carry out **post-blast coordination** and declare area safe for re-entry
6.5. Inspect site and deal with non-conformities including *misfires*
6.6. Identify and dispose of surplus, *damaged and deteriorated explosives* and detonators
6.7. Ensure that emergency services are advised of the disposal activities in accordance with site procedures
6.8. Complete reports

| 7. Carry out equipment maintenance | 7.1. Carry out inspection and required maintenance during and after shotfiring operations
|                                | 7.2. Maintain maintenance records |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct shotfiring operations in underground coal mines operations:

- apply legislative, organisation and site requirements and procedures
- apply personal safety requirements
- apply operational safety requirements
- read, interpret and apply technical and environmental information
- apply shot planning processes
- apply operational planning skills
- apply work coordination skills
- apply mathematical calculations using addition, subtraction, multiplication and division
- apply workplace communication techniques
- apply blasting preparation techniques
- apply diagnostic techniques
- apply explosives storage, handling and transport procedures
- apply damaged/deteriorated explosives disposal procedures
- apply charging equipment operating procedures
- apply hazard identify procedures
- apply procedures for identifying non-conformities
- apply records and reports maintenance procedures
- apply environmental compliance requirements
- apply procedures to drill to pattern
- apply hole cleaning and testing procedures
- apply hazards identification
- apply misfire identification procedures
- apply risk management procedures
- use relevant and specialist hand tools

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct shotfiring operations in underground coal mines operations:

- Australian standards and code of practice
- explosives and safety and health legislation
- risk management including application of appropriate controls to identified risks
- site and equipment safety procedures
- personal safety procedures
- site emergency procedures
- environmental requirements and procedures, including vibration, noise, dust and chemicals
- site environmental requirements and constraints
- site geological and survey information
- types, physical and technical characteristics, uses and limitations of explosives and protection measures associated with their use
- initiation systems
- delayed blasts
- cause and management of misfires
- non-conforming conditions
- non-conformities
- explosives disposal methods
- blasting management plan requirements
- site security plan requirements
- site operational procedures
- shotfiring techniques and procedures
- planning processes
- explosive handling, transportation and storage requirements
- equipment characteristics, technical capabilities and limitations
- start-up and shutdown procedures
- equipment maintenance procedures
- isolation and lock out procedures
- analysis of site geological and survey data
- selection of appropriate explosives to meet site/ground conditions
- monitoring and review processes and techniques
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete shotfiring operations in underground coal mines

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

May include:

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Shotfiring requirements

May shift briefings, handover details or work orders include:

- nature and scope of tasks and achievement targets
- site location and layout
- location and direction of blast holes
- essential geological information
- essential survey information
- site environmental conditions
- detailed timings for the blast
- detailed responsibilities
- coordination requirements/issues
- identification of areas of influence
- sleeping charges
- equipment required
- security measures and procedures
- monitoring requirements
- type and quantity of explosives and
- wet or dry holes
- stemming material

**Site inspections** may include:

- positioning stemming
- cleaning up
- weather check
- fencing/signage and access routes
- marking/hole identification
- inspection
- measuring holes
- dewatering holes

**Hazards** may include:

- chemical energy, including:
  - premature explosion
  - deterioration of explosives
  - stored energy
- working environment, including:
  - rock stability and ventilation
  - weather conditions
  - insufficient illumination
  - methane
  - coal dust
  - NOx gases
  - poor road or rail conditions
  - strata conditions
  - fire/flames/ignition sources
  - atmospheric contaminants
  - dust and fumes
  - noise
  - ground conditions, including:
    - hot ground
    - scaling
    - lack of ventilation
    - extraneous electricity e.g. static electricity, lightning
    - tipping hazards
- debris
- air blast and fly
- lost holes
- radioactivity
- water
- equipment and materials, including:
  - faulty explosives
  - misfires
  - drilling into misfires
  - premature explosion
  - faulty vehicle
  - faulty equipment
  - broken detonation leads
  - high voltage electricity
  - radio frequencies and transmitters
  - hot exhaust system
  - high air and water pressures
  - hydraulic oil pressure
- people, including:
  - speeding
  - unauthorised persons
  - theft
  - trespassers
- processes and procedures, including:
  - back injuries
  - drilling in butts
  - lost holes

**Equipment** may include:

- siren
- radios
- signs
- vehicles approved for carrying dangerous goods and explosives
- explosives mixers
- pumps
- plugs (to seal finished holes prior to loading)
- measuring tape
- cutting implements
- blast monitoring systems
- video camera

**Support requirements** may include:

- other equipment and their operators
- vehicles
- public and site notification

**Geological and survey data** may include:
- wet or dry holes
- strength of material to be shot
- strength of surrounding strata
- blast pattern plan
- ventilation/gas data
- deputies reports
- details of cracking in holes.

**Survey of blast area** includes:
- locate position, direction and incline of blast holes
- survey reports

**Geological data** may include:
- rock type
- structures
- faults
- intrusions
- weathering
- wet and dry holes
- hot ground
- reactive ground
- hot and reactive ground

**Calculations** may include:
- measurement of depth of holes, temperature of holes, distances, spacings
- burdens, resistances, and other relevant blasting parameters
- addition, subtraction, multiplication, division
- determinations of areas and volumes
- calculations of delay timings in pattern designs
- density of explosives
- weight of explosives per hole
- maximum delay of the shot
- Maximum Instantaneous Charge (MIC)
- stemming requirements
- estimation and/or calculation of resistance of circuits, powder factors, hole
- loadings, exclusion zones, and other relevant factors

**Pattern design** may include:
- loading and wiring requirements
- reference to and consideration of geology, hazards
- safety distances and margins
- environmental licence conditions
| **Explosives** may include: | • high explosives  
• low explosives  
• bulk and packaged free flowing explosives  
• deflagrating explosives  
• permitted explosives  
• wet or dry  
• variable density |
|-------------------------|--------------------------------------------------|
| **Accessories** may include: | • primers  
• delays  
• down lines  
• trunk lines  
• lead-in lines  
• detonators and detonator assemblies  
• detonation mechanisms including:  
• bell wire and firing lines  
• delay mechanisms  
• blasting machines or mains firing equipment  
• explosives tester  
• binding tape  
• fuses and igniter cords  
• detonators and detonating cord  
• gas bags  
• decking  
• stemming  
• stemming equipment  
• crack detector  
• flushing wand  
• hole liner  
• blast monitoring equipment  
• firing cables / bell wire  
• exploders and testers  
• electronic firing equipment  
• specialist tools  
• initiators |
| **Inventory control** systems may include: | • types of explosives  
• quantities of explosives  
• shelf life  
• distribution records and detail |
| **Dispose of explosives** may include: | - burning by the shotfirers on site  
- detonation in a production drill hole  
- detonation in a controlled manner  
- return to supplier or delivery or surrender to an Explosives Inspector for destruction |
| **Secure blast area** sometimes referred to as 'exclusion zones', may be marked or delineated by one or more of the following: | - signage  
- windrow  
- bund wall  
- ribbon  
- tape  
- witches hats  
- ropes  
- flags or pegs  
- sentries  
- gates |
| **Non-conforming conditions** may include: | - misfires  
- blockages  
- break through  
- deviation  
- undercut  
- ground conditions  
- ventilation  
- water/wet holes  
- hot ground |
| **Explosion inhibitors** may include: | - stone dust |
| **Testing** includes | - the use of approved testing equipment |
| **Records and reports** may include: | - explosive transportation  
- records of consumption and disposal of explosives  
- magazine records  
- blast designs  
- blast plans  
- blast monitoring  
- incident reports |
| **Blast monitoring** systems may include: | - vibration monitors  
- noise monitors  
- gas detection  
- visibility |

RIIBLA303A Conduct underground development shotfiring

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of underground development shotfiring operations in the metalliferous mining industry. It includes planning and preparing for shotfiring operations; supervising the storage and transport of explosives and accessories; preparing for charging and charge holes; conducting the blast; completing post-blast activities; and carrying out equipment maintenance.

Application of the Unit
This unit is appropriate for those working in shotfirer roles, at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1. Plan and prepare for shotfiring operations** | 1.1. Access, interpret and apply *compliance documentation* relevant to underground development shotfiring  
1.2. Obtain, confirm and apply Blasting Management Plan and *blast plan requirements* for the shotfiring activity  
1.3. *Inspect worksite* and identify, manage and report all potential *hazards* and ensure work area is safe  
1.4. Coordinate vehicle, *equipment* and personnel *support requirements* for the work  
1.5. Arrange and/or ensure *survey of blast area* is complete and reported to appropriate personnel and records are maintained  
1.6. Access, interpret and apply *geological data* required to complete the work  
1.7. Carry out *calculations* to enable pattern design, loading and tying in of shots  
1.8. Identify and confirm the *explosives and accessories* required for the work |
| **2. Supervise the store and transport explosives and accessories** | 2.1. Ensure explosives and accessories are safely and correctly stored in appropriate facilities  
2.2. Ensure *inventory control* systems are accurately and correctly maintained  
2.3. Ensure explosives and accessories are transported to blast area and segregate correctly  
2.4. Ensure that explosives are not left unattended  
2.5. Identify and *dispose* of any deteriorated or out of date explosives and accessories correctly |
| **3. Prepare for charging** | 3.1. Identify, manage and report potential hazards and risks  
3.2. *Secure blast area* in accordance with procedures and blast plan  
3.3. Establish and communicate access routes to shot area for authorised persons and vehicle |
| 3.4. Identify hole locations and any non-conforming conditions in preparation for charging |
| 3.5. Set up charging equipment in accordance with site procedures |
| 3.6. Prepare holes for charging in accordance with blast plan |

4. **Charge holes**

| 4.1. Supervise blast personnel during loading operations |
| 4.2. Prime and charge holes in accordance with the blast plan |
| 4.3. Ensure blast holes are charged in accordance with loading plan and identify *non-conforming conditions* |
| 4.4. Ensure blast holes are stemmed in accordance with blast plan |
| 4.5. Clear the area of equipment, personnel and isolate/barricade the blast area, including warning signs |
| 4.6. Test equipment and accessories |
| 4.7. Maintain records |
| 4.8. Conduct blast monitoring |

5. **Conduct the blast**

| 5.1. Carry out *pre blasting procedures* and establish exclusion zone |
| 5.2. Carry out tying in, in accordance with the blast plan |
| 5.3. Supervise all personnel within the blast area during tie-in and initiation |
| **5.4. Initiate the blast** |
| 5.5. Carry out and record activities in accordance with the blast plan |

6. **Complete post blast activities**

<p>| 6.1. Carry out post blast inspection |
| 6.2. Secure firing circuits and <em>initiation</em> device |
| 6.3. Report blasting has been completed to relevant personnel |
| 6.4. Carry out <em>post-blast coordination</em> and declare area safe for re-entry |
| 6.5. Inspect site and deal with non-conformities including <em>misfires</em> |
| 6.6. Identify and dispose of surplus, <em>damaged and deteriorated explosives</em> and detonators |
| 6.7. Ensure that emergency services are advised |</p>
<table>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct underground development shotfiring operations:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- read, interpret and apply technical information
- apply operational planning skills
- apply work coordination skills
- apply mathematical calculations using addition, subtraction, multiplication and division
- apply workplace communication techniques
- apply blasting preparation techniques
- apply diagnostic techniques
- apply explosives storage, handling and transport procedures
- apply charging equipment operating procedures
- apply hazard identify procedures
- apply procedures for identifying non-conformities
- apply records and reports maintenance procedures
- apply environmental compliance requirements

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct underground development shotfiring operations:

- Australian standards and code of practice
- explosives and safety and health legislation
- risk management including application of appropriate controls to identified risks
- site and equipment safety procedures
- site emergency procedures
- environmental requirements and procedures, including vibration, noise, dust and chemicals
- site environmental requirements and constraints
- site geological information
- types, physical and technical characteristics, uses and limitations of explosives and protection measures associated with their use
• initiation systems
• delayed blasts
• cause and management of misfires
• non-conforming conditions
• non-conformities
• explosives disposal methods
• blasting management plan requirements
• site security plan requirements
• site operational procedures
• site underground shotfiring procedures
• planning processes
• explosive handling, transportation and storage requirements
• equipment characteristics, technical capabilities and limitations
• start-up and shutdown procedures
• equipment maintenance procedures
• isolation and lock out procedures
• analysis of site geological and survey data
• selection of appropriate explosives to meet site/ground conditions
• monitoring and review processes and techniques
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- Knowledge of the requirements, procedures and instructions for conducting underground development shotfiring operations.
- Implementation of requirements, procedures and techniques for the safe, effective and efficient completion of underground development shotfiring operations.
- Working with others to undertake and complete underground development shotfiring operations that meet all of the required outcomes.
- Consistent timely completion of underground development shotfiring operations that safely, effectively and efficiently meets the required outcomes.

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non
| English speaking background may have second language issues. |
| Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances. |
| Where applicable, physical resources should include equipment modified for people with disabilities. |
| Access must be provided to appropriate learning and/or assessment support when required. |

| Method of assessment |
| This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods: |
| written and/or oral assessment of the candidate's required knowledge |
| observed, documented and/or first hand testimonial evidence of the candidate's: |
| implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes |
| consistently achieving the required outcomes |
| first hand testimonial evidence of the candidate's: |
| working with others to undertake and complete underground development shotfiring operations |

| Guidance information for assessment |
| Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

may include:

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Blast plan requirements

may include:

- nature and scope of tasks and achievement targets
- site location and layout
- location and direction of blast holes
- sleeping charges
- equipment required
- security measures and procedures
- monitoring requirements
- type and quantity of explosives and
- wet or dry holes
- stemming material
- type and quantity of explosives and accessories
- initiation methods
- out of bounds areas
- operational conditions
- coordination requirements or issues
- hazards and potential hazards
- waste management requirements
- environmental control requirements worksite inspection requirements
- barricade and signage requirements
- obtaining of permits required
- equipment availability and/or requirements
- plant or equipment defects
- transport arrangements and/or requirements
- safe storage requirements
| **Site inspections** may include: | • positioning stemming  
• cleaning up  
• weather check  
• fencing/signage and access routes  
• marking/hole identification  
• inspection  
• measuring holes  
• dewatering holes |
|-------------------------------|----------------|
| **Hazards** may include:      | • chemical energy, including:  
• premature explosion  
• deterioration of explosives  
• stored energy  
• working environment, including:  
• rock stability and ventilation  
• weather conditions  
• insufficient illumination  
• methane  
• coal dust  
• NO\textsubscript{x} gases  
• poor road or rail conditions  
• strata conditions  
• fire/flames/ignition sources  
• atmospheric contaminants  
• dust and fumes  
• noise  
• ground conditions, including:  
• hot ground  
• scaling  
• lack of ventilation  
• extraneous electricity e.g. static electricity, lightning  
• tipping hazards  
• debris  
• air blast and fly  
• lost holes  
• radioactivity  
• water  
• equipment and materials, including:  
• faulty explosives |
- misfires
- drilling into misfires
- premature explosion
- faulty vehicle
- faulty equipment
- broken detonation leads
- high voltage electricity
- radio frequencies and transmitters
- hot exhaust system
- high air and water pressures
- hydraulic oil pressure
- people, including:
  - speeding
  - unauthorised persons
  - theft
  - trespassers
- processes and procedures, including:
  - back injuries
  - drilling in butts
  - lost holes

| **Equipment** may include: | • siren  
| | • radios  
| | • signs  
| | • vehicles approved for carrying dangerous goods and explosives  
| | • explosives mixers  
| | • pumps  
| | • plugs (to seal finished holes prior to loading)  
| | • measuring tape  
| | • cutting implements  
| | • blast monitoring systems  
| | • video camera |

| **Support requirements** may include | • other equipment and their operators  
| | • vehicles  
| | • public and site notification |

| **Survey of blast area** includes: | • locate position, direction and incline of blast holes  
| | • survey reports |

| **Geological data** may include: | • rock type  
| | • structures |
### Calculations may include:

- depth of holes
- temperatures
- water problems
- pattern design
- types of explosive
- BCM
- explosives quantity
- powder factor

### Explosives may include:

- high explosives
- low explosives
- bulk and packaged explosives
- deflagrating explosives
- permitted explosives
- wet or dry
- variable density

### Accessories may include:

- primers
- delays
- down lines
- trunk lines
- lead-in lines
- detonators and detonator assemblies
- detonation mechanisms including:
  - bell wire and firing lines
  - delay mechanisms
  - blasting machines or mains firing equipment
  - explosives tester
- binding tape
- fuses and igniter cords
- detonators and detonating cord
- gas bags
- decking
- stemming
- hole liner

- blast monitoring equipment
- firing cables / bell wire
- exploders and testers
- electronic firing equipment
- specialist tools
- initiators

**Inventory control systems** may include:
- types and quantities of explosives
- shelf life
- distribution records

**Dispose of explosives** may include:
- burning by the shotfirers on site
- detonation in a production drill hole
- detonation in a controlled manner
- return to supplier or delivery or surrender to an Explosives Inspector for destruction

**Secure blast area** sometimes referred to as 'exclusion zones', may be marked or delineated by one or more of the following:
- signage
- windrow
- bund wall
- ribbon
- tape
- witches hats
- ropes
- flags or pegs
- sentries
- gates

**Non-conforming conditions** may include:
- misfires
- blockages
- break through
- deviation
- undercut
- ground conditions
- ventilation
- water/wet holes
- hot ground

**Pre-blasting procedures** may include:
- warnings
- sentries
- area clearance

**Blast initiation** systems may include:
- safety fuse
- detonating cord
- non-electric detonator
- electric detonator
- electronic detonator
| **Misfires** may be caused by: | • remote firing  
• faulty explosives or accessories  
• damaged or deteriorated explosives or accessories  
• improperly assembled explosives components  
• inappropriate or incomplete combinations of components  
• operator error or inexperience  
• inattention to detail or ignorance  
• environmental influences, e.g. wet weather or poor visibility |
| --- | --- |
| **Post-blast coordination** may include: | • the return of unused explosives  
• the return of other equipment  
• the withdrawing sentries  
• removal of signs  
• turning off safety devices  
• ventilation of area  
• collection of environmental monitoring equipment  
• recording of environmental monitoring data  
| maintenance may include: | • testing of exploders  
• servicing of mixing equipment  
• maintenance of hand tools  
• operational maintenance of bulk delivery equipment |
| **Damaged and deteriorated explosives** may be identified by: | • exudation  
• efflorescence  
• sweating  
• liquefaction  
• hardening  
• softening  
• discolouration  
• crystallisation  
• staining  
• damage to wrappers and carcasses  
• damage to containers  
• physical wear and tear  
• kinking  
• abrasions and cuts  
• crushing  
• loss of identification labels and markings |
• exposure to the elements.

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct underground production shotfiring operations:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- read, interpret and apply technical information
- apply operational planning skills
- apply work coordination skills
- apply mathematical calculations using addition, subtraction, multiplication and division
- apply workplace communication techniques
- apply blasting preparation techniques
- apply diagnostic techniques
- apply explosives storage, handling and transport procedures
- apply charging equipment operating procedures
- apply hazard identify procedures
- apply procedures for identifying non-conformities
- apply records and reports maintenance procedures
- apply environmental compliance requirements

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct underground production shotfiring operations:

- Australian standards and code of practice
- explosives and safety and health legislation
- risk management including application of appropriate controls to identified risks
- site and equipment safety procedures
- site emergency procedures
- environmental requirements and procedures, including vibration, noise, dust and chemicals
- site environmental requirements and constraints
- site geological information
- types, physical and technical characteristics, uses and limitations of explosives and protection measures associated with their use
• initiation systems
• delayed blasts
• cause and management of misfires
• non-conforming conditions
• non-conformities
• explosives disposal methods
• blasting management and blast plan requirements
• site security plan requirements
• site operational procedures
• site underground shotfiring procedures
• planning processes
• explosive handling, transportation and storage requirements
• equipment characteristics, technical capabilities and limitations
• start-up and shutdown procedures
• equipment maintenance procedures
• isolation and lock out procedures
• analysis of site geological and survey data
• selection of appropriate explosives to meet site/ground conditions
• monitoring and review processes and techniques
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
| --- | --- |
|  | • knowledge of the requirements, procedures and instructions for conducting underground production shotfiring operations
|  | • implementation of requirements, procedures and techniques for the safe, effective and efficient completion of underground production shotfiring operations
|  | • working with others to undertake and complete underground production shotfiring operations that meet all of the required outcomes
|  | • consistent timely completion of underground production shotfiring operations that safely, effectively and efficiently meets the required outcomes |

### Context of and specific resources for assessment

|  | This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
|  | The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
|  | Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
|  | Aboriginal people and other people from a non
English speaking background may have second language issues.

- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

<table>

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

may include:

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Blast plan requirements

may include:

- nature and scope of tasks and achievement targets
- site location and layout
- location and direction of blast holes
- sleeping charges
- equipment required
- security measures and procedures
- monitoring requirements
- type and quantity of explosives and
- wet or dry holes
- stemming material
- type and quantity of explosives and accessories
- initiation methods
- out of bounds areas
- operational conditions
- coordination requirements or issues
- hazards and potential hazards
- waste management requirements
- environmental control requirements
- worksite inspection requirements
- barricade and signage requirements
- obtaining of permits required
- equipment availability and/or requirements
- plant or equipment defects
- transport arrangements and/or requirements
- safe storage requirements

**Calculations** may include:
- depth of holes
- temperatures
- water problems
- pattern design
- types of explosive
- BCM
- explosives quantity
- powder factor

**Explosives** may include:
- high explosives
- low explosives
- bulk and packaged explosives
- deflagrating explosives
- permitted explosives
- wet or dry
- variable density

**Accessories** may include:
- primers
- delays
- down lines
- trunk lines
- lead-in lines
- detonators and detonator assemblies
- detonation mechanisms including:
  - bell wire and firing lines
  - delay mechanisms
  - blasting machines or mains firing equipment
  - explosives tester
  - binding tape
  - fuses and igniter cords
  - detonators and detonating cord
  - gas bags
  - decking
  - stemming
  - hole liner
- blast monitoring equipment
- firing cables / bell wire
- exploders and testers
- electronic firing equipment
- specialist tools
- initiators

**Inventory control systems** may include:
- types and quantities of explosives
- shelf life
- distribution records

**Dispose of explosives** may include:
- burning by the shotfirers on site
- detonation in a production drill hole
- detonation in a controlled manner
- return to supplier or delivery or surrender to an Explosives Inspector for destruction

**Secure blast area** sometimes referred to as 'exclusion zones', may be marked or delineated by one or more of the following:
- signage
- windrow
- bund wall
- ribbon
- tape
- witches hats
- ropes
- flags or pegs
- sentries
- gates

**Non-conforming conditions** may include:
- misfires
- blockages
- break through
- deviation
- undercut
- ground conditions
- ventilation
- water/wet holes
- hot ground

**Pre-blasting procedures** may include:
- warnings
- sentries
- area clearance

**Blast initiation** systems may include:
- safety fuse
- detonating cord
- non-electric detonator
- electric detonator
- electronic detonator
**Misfires** may be caused by:

- faulty explosives or accessories
- damaged or deteriorated explosives or accessories
- improperly assembled explosives components
- inappropriate or incomplete combinations of components
- operator error or inexperience
- inattention to detail or ignorance
- environmental influences, e.g. wet weather or poor visibility

**Post-blast coordination** may include:

- the return of unused explosives
- the return of other equipment
- the withdrawing sentries
- removal of signs
- turning off safety devices
- ventilation of area
- collection of environmental monitoring equipment
- recording of environmental monitoring data
- maintenance which may include:
  - testing of exploders
  - servicing of mixing equipment
  - maintenance of hand tools
  - operational maintenance of bulk delivery equipment

**Damaged and deteriorated explosives** may be identified by:

- exudation
- efflorescence
- sweating
- liquefaction
- hardening
- softening
- discolouration
- crystallisation
- staining
- damage to wrappers and carcasses
- damage to containers
- physical wear and tear
- kinking
- abrasions and cuts
- crushing
- loss of identification labels and markings
• exposure to the elements.

Unit Sector(s)
Blasting

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIBLA305A Conduct secondary blasting

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting secondary blasting in resources and infrastructure industries. It includes: planning and preparation; conducting blasting; and completing blasting operations.

Application of the Unit
This unit is appropriate for those working in operational roles, at worksites within:
- Civil construction
- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for blasting | 1.1. Access, interpret and apply *compliance documentation* relevant to secondary blasting  
1.2. Obtain, confirm and apply *work instructions* for the allocated task  
1.3. *Inspect* and assess *site conditions* and identify, manage and report all potential *hazards* and ensure work area is safe  
1.4. Carry out *calculations* to enable pattern design, loading and tying in of shots  
1.5. Identify and confirm the *explosives and accessories* required for the work  
1.6. Access safety information in accordance with site procedures  
1.7. Coordinate vehicle, *equipment* and *personnel support requirements* for the work  
1.8. Use personal protective equipment appropriate for the job  
1.9. Manage environmental issues  
1.10. Ensure area is free of blasting fumes before entry into work area |
| 2. Conduct blasting | 2.1. Carry out *pre blasting procedures* and establish exclusion zone  
2.2. Use appropriate explosives and/or *techniques* to achieve *blast objective*  
2.3. Activate warnings and notify relevant personnel of intended blasting in accordance with site procedures  
2.4. Hook up and initiate blast |
| 3. Complete blasting operations | 3.1. Carry out *post blast coordination* and declare area safe for re-entry  
3.2. Inspect site and deal with *non-conforming conditions*  
3.3. Inspect *equipment* for defects and conduct housekeeping activities  
3.4. Complete reports  
3.5. Pass on end of shift information to oncoming shift |

### Context of and specific resources for assessment

|  | This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
|  | The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. |
|  | Customisation of assessment and delivery environment to sensitively accommodate cultural diversity. |
|  | Aboriginal people and other people from a non English speaking background may have second language issues. |
Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.

Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the conducting of secondary blasting

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisation and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• code of practice  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |

| Work instructions may come from briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include: | • nature and scope of tasks and achievement targets  
• site location and layout  
• out of bounds areas  
• operational conditions  
• coordination requirements or issues  
• hazards and potential hazards  
• waste management requirements  
• environmental control requirements worksite inspection requirements  
• barricade and signage requirements  
• obtaining of permits required

• plant or equipment defects  
• transport arrangements and/or requirements  
• safe storage requirements  
• public relations requirements |

| Site conditions may include: | • ventilation  
• ground conditions (e.g. scaling)  
• illumination  
• radioactivity  
• weather conditions  
• water |

| Hazards and associated risks may | • ground conditions |
include:

- loose rocks from overhead
- tipping hazards
- fire/flames
- not following safety precautions near an open stope
- broken detonation leads
- premature explosion
- atmospheric contaminants
- debris
- faulty equipment
- air blast and fly
- high air and water pressures
- high voltage electricity
- oxygen-deficient atmosphere
- unauthorised personnel
- wet holes
- radio frequencies and transmitters
- EMF hazards (e.g. static electricity, lightning)
- hot material
- lost holes
- drilling in butts
- drilling into misfires

**Explosives may include:**

- high explosives
- permitted explosives
- propellant charges
- black powder
- shaped charges
- plaster charges or charges in drill holes

**Explosives and associated materials may include:**

- blasting agents
- detonators
- detonating cords
- water gels or emulsions
- bulk or packaged
- shaped charges
- permitted explosives
- high explosives
- propellants
- pressure loaders (kettle)
- detonation mechanisms including:
  - bell wire
  - delay mechanisms
  - initiators
- meter readings
- safety fuses and tapes
- tape
- exploders
- circuit testers
- connecting wire and cables
- crimpers
- approved detonator chord cutters
- stemming rods
- loading poles
- gas bags
- decking
- stemming
- hole liner
- blast monitoring equipment
- firing cables/bell wire
- remote firing equipment (e.g. PED)

| Equipment may include: | • drill rig
• pneumatic or electric drill/machine drill
• other hand held tools
• explosives and accessories
• poles or rods
• recommended/required PPE
• ties and bagging material
• sandbags
• stemming
• blast mats |
|------------------------|-------------------------------------------------|
| Support requirements may include | • other equipment and their operators
• vehicles
• public and site notification |
| Environmental issues may include: | • ventilation
• fume
• dust |
| Pre-blasting procedures may include: | • warnings
• sentries
• area clearance |
| Exclusion zones may be marked or delineated by one or more of the following: | • signage
• windrow
• bund wall
• ribbon
• tape |

</tr>
</tbody>
</table>
| 4. Complete process | 4.1. Disconnect the firing circuit and secure the firing device  
4.2. Declare the area safe and inspect the blast area to verify blast objective has been attained  
4.3. Manage misfires  
4.4. Remove safety provisions, deactivate warning devices and give clearances  
4.5. Conduct housekeeping activities |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct accretion firing:

- apply legislative, organisation and site requirements and procedures
- apply workplace communication skills
- apply documentation requirements
- apply hazard identification and management requirements and procedures
- use hand tools
- perform basic calculations required to perform accretion firing tasks
- apply diagnostic techniques
- apply explosives handling and transport requirements and procedures

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct accretion firing:

- site procedures
- explosives legislation
- emergency procedures/environmental procedures
- equipment purpose, technical capability and limitations
- equipment safety requirements
- causes of accretion/effects of accretion
- hazardous goods procedures (handling and transport)
- blast area security
- safe operating procedures and techniques
- risk management including application of appropriate controls to identified risks
- start-up and shutdown procedures
- explosives storage procedures
- types and characteristics of blasting agents, explosives and initiation systems
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for conducting accretion firing</td>
</tr>
<tr>
<td></td>
<td>• Implementation of requirements, procedures and techniques for the safe, effective and efficient conducting of accretion firing</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete accretion firing that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of accretion firing that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete accretion firing |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

| may include:                                                                 | legislative, organisation and site requirements and procedures |
|                                                                            | manufacturer's guidelines and specifications                   |
|                                                                            | Australian standards                                           |
|                                                                            | code of practice                                               |
|                                                                            | Employment and workplace relations legislation                 |
|                                                                            | Equal Employment Opportunity and Disability Discrimination legislation |

### Accretion may be defined as:

- ‘A solid build up of any material or substance being processed which will require blasting to dislodge it’.

### Accretion may include:

- lead cooling in a furnace
- build up of material inside a mill

### Potential hazards and risks may include:

- heat
- manual handling
- tripping hazards
- confined spaces
- open voids/working at height
- moving equipment
- fire/flames
- broken detonation leads
- premature explosion
- atmospheric contaminants
- debris
- faulty equipment
- high air and water pressures
- high voltage electricity
- gases and fumes
- unauthorised personnel
- radio frequencies and transmitters
- EMF hazards (e.g. static electricity, lightning)
- hot material

### Basic calculations may include:

- depth of blast pipe
- quantity of explosives
- pipe placement
- timing

**Equipment** may include:
- water/air hoses
- jack hammer
- thermal lance
- shotgun
- drill steels
- piping
- PPE
- skewers
- hand tools
- vice
- winch
- exploder
- bomb points
- blast pipe

**Support requirements** may include:
- environmental monitoring
- trucks, excavators, bobcats or other machinery
- assistants
- metallurgists
- furnace/mill operators
- observers
- cranes/winches

**Personnel** may include:
- other operators
- metallurgists
- assistants
- trainers/assessors
- furnace operators
- mobile equipment operators
- supervisors

**Safety provisions** may include:
- warning whistles
- signs and barricades
- sentries
- flashing lights
- broadcasts
- exclusion zones
- blast shields

**Establishing blast pipe** may include:
- jack hammering
- use of thermal lance
- use of a shotgun
| **Prepare and test** may include: | - cooling  
- inserting dummy explosive prior to blasting |
| **Explosives** may include: | - high explosives  
- permitted explosives  
- detonators |
| **Warning devices** may include: | - firing whistles  
- flashing lights  
- broadcasts |

**Unit Sector(s)**
Blasting

**Competency field**
Refer to Unit Sector(s).

**Co-requisite units**
Not applicable.
RIIBLA307A Conduct blast survey

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting blast survey in resources and infrastructure industries. It includes: planning and preparing for operations; operating the survey equipment; and carrying out basic maintenance.

Application of the Unit
This unit is appropriate for those working in operational roles, within:
- Civil construction
- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for operations | 1.1. Access, interpret and apply *compliance documentation* relevant to conduct blast survey  
1.2. Interpret and apply relevant *geological data* required to complete the allocated task  
1.3. Receive, interpret and clarify survey parameters  
1.4. Carry out *survey equipment* checks |
| 2. Operating surveying equipment | 2.1. Set up appropriate signage  
2.2. Carry out the set up and start of equipment  
2.3. *Survey* blast area to task requirements  
2.4. Prepare survey reports, report to appropriate personnel and maintain records  
2.5. Complete work in accordance with the agreed plans and outcomes and within the operating capacities of the equipment  
2.6. Carry out operations in accordance with quality requirements  
2.7. Diagnose, rectify or report equipment faults to appropriate personnel |
| 3. Carry out basic maintenance | 3.1. Carry out inspections and fault finding  
3.2. Carry out routine servicing and housekeeping  
3.3. Carry out minor maintenance  
3.4. Maintain records |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct blast survey:

- apply legislative, organisation and site requirements and procedures
- apply survey equipment operating procedures
- apply field geometry methods
- apply equipment records requirements
- access, interpret and apply technical information
- use relevant hand tools
- apply diagnostic techniques
- apply eye/hand co-ordination
- apply hazard identification procedures
- apply computer software
- apply workplace communications
- work wearing personal protective equipment
- apply procedures for working in confined spaces
- apply procedures for working at heights
- apply using linear and angular survey measurements
- read and interpret plans
- apply plan documents updating requirements

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct blast survey:

- site and equipment safety requirement
- equipment and characteristics, technical capabilities and limitations
- operational and maintenance procedures
- environmental requirements and procedures
- survey techniques for set up and collection of data
- linear measurement
- angular measurement
- manual and electronic means of conducting survey
- plans and maps
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to manage blasting operations:

- apply legislative, organisation and site requirements and procedures
- apply legislative and site requirements and procedure for blasting activities
- select and use PPE
- read plans and documents
- apply electronic, radio and other means of communication
- apply blasting preparation techniques
- identify hazards/apply hazardous substances handling techniques
- perform blasting mathematical calculations
- apply diagnostic techniques
- apply inspection and monitoring procedures for:
  - storage, handling and transport of explosives
  - charging
  - blast initiation
  - post blast activities
  - environmental impact monitoring
  - equipment maintenance management
  - explosives disposal
  - records maintenance

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to manage blasting operations:

- Australian standards and codes
- blast site procedures
- explosives and safety and health legislation
- emergency procedures
- environmental procedures
- equipment processes, technical capability and limitations
- equipment safety requirements
- basic geological and technical information
- blast plans
- hazardous goods procedures (handling and transport)
- isolation and lock out procedures
- manufacturers' instructions
- management systems
- preparation for and use of explosives
- safe operating procedures
- risk management including application of appropriate controls to identify risks
- site procedures
- transportation of explosives
- job safety analysis
- start up and shut down procedures
- explosives storage procedures
- types and characteristics of blasting agents, explosives and initiation systems
- concepts such as density, velocity and relationships between variable
- assimilation, interpretation and application of information and technical data
- mathematical processes and applications
- cause and management of misfires
- identification of safety and environmental hazards
- explosives disposal methods
- record keeping requirements and formats
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

English speaking background may have second language issues.

- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to plan, prepare and conduct blasting operations
  - provision of clear and timely instruction and supervision by the individual of those involved in the conduct of the blasting operations

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Explosives may include:

- high explosives (e.g. packaged and bulk high explosives)
- low explosives (e.g. black powder)
- deflagrating explosives (e.g. propellants used for secondary blasting)
- detonators and detonator assemblies
- detonating cords and accessories
- fuses and igniter cords

Potential hazards may include:

- broken detonator leads
- dust and fumes
- faulty equipment
- faulty explosives
- ground conditions
- high air and water pressures
- high voltage electricity
- hydraulic oil pressure
- lost holes
- misfires
- trespassers
- radio frequencies and transmitters
- EMF hazards (e.g. static electricity, lightning)
- hot ground

Storage locations may include:

- permanent licensed-to-store magazines
- relocatable magazines
- underground magazines
| **Environmental hazards** may include: | • the transmission of compression-tension elastic vibrations in both solids and gases  
• the generation and projection of elements, compounds and particulates from the site of explosion and related quantifiable damage  
• physical damage to the environment  
• damage to infrastructure  
• damage to fauna and flora  
• impact on human and domestic animal life and amenity  
• perceived and psychological-emotional disturbance  
• fluctuations and alterations of the hydrosphere |

| **Blast plan** requirements may include: | • location  
• sleeping charges  
• equipment required  
• security measures and procedures  
• monitoring requirements  
• type and quantity of explosives and initiation methods  
• wet or dry holes  
• stemming material |

| **Site inspections** may include: | • positioning stemming  
• cleaning up  
• weather check  
• fencing/signage and access routes  
• marking/hole identification  
• inspection  
• measuring holes  
• dewatering holes |

| **Explosives and associated materials** may include: | • blasting agents  
• detonators  
• detonating cords  
• water gels or emulsions  
• bulk or packaged  
• shaped charges  
• permitted explosives  
• high explosives |
- propellants
- pressure loaders (kettle)
- detonation mechanisms including:
  - bell wire
  - delay mechanisms
  - initiators
  - meter readings
  - safety fuses and tapes
  - tape
  - exploders
  - circuit testers
  - connecting wire and cables
  - crimpers
  - approved chord cutters
  - stemming rods
  - loading poles
  - gas bags
  - decking
  - stemming
  - hole liner
  - blast monitoring equipment
  - firing cables/bell wire
  - remote firing equipment (e.g. PED)

**Personnel** may include:
- shotfirers
- magazine keepers
- contractors
- drillers
- drivers
- miners
- visitors
- trainees/apprentices
- inspectors
- licensed operators
- maintenance staff
- management
- service personnel
- supervisors
- surveyors
- tradespersons

**Equipment** may include:
- vehicles approved for carrying dangerous goods and explosives
- explosives mixers
| **Post-blast coordination** may include: | • withdrawal of sentries  
• return of unused explosives and equipment  
• removal of signs  
• turning off safety devices  
• ventilation of area |
| **Site inspections** may include: | • positioning stemming  
• cleaning up  
• weather check  
• fencing/signage and access routes  
• marking/hole identification  
• inspection  
• measuring holes  
• dewatering holes |
| **Documents, records, and reports may include:** | • records of purchase  
• records of carriage  
• records of consumption and disposal of explosives  
• cart notes  
• magazine records  
• blast designs  
• blast plans  
• shotfirer's reports  
• blast monitoring records  
• complaints, injury and accident reports  
• records of face profiling and bore tracking surveys, videotapes or photographs  
• records may be kept as papers, bound forms, field books, computer printouts, floppy disks, videotapes, digital recordings, specific or routine reports or logbooks |
| **Misfires** may be caused by: | • faulty explosives or accessories  
• damaged or deteriorated explosives or accessories  
• improperly assembled explosives components  
• inappropriate or incomplete combinations of components |
### Deteriorated explosives may show symptoms of:

- exudation
- efflorescence
- sweating
- liquefaction
- hardening
- softening
- discoloration
- crystallisation
- staining
- damage to wrappers and carcasses
- damage to containers
- physical wear and tear
- kinking
- abrasions and cuts
- crushing
- loss of identification labels and markings
- exposure to the elements

### Disposal methods may include:

- burning by the shotfirers on site
- detonation in a production drill hole
- detonation in a controlled manner
- return to supplier or delivery or surrender to an explosives inspector

### Unit Sector(s)

Blasting

### Competency field

Refer to Unit Sector(s).

### Co-requisite units

Not applicable.
RIIBLA402A Monitor and control the effects of blasting on the environment

Modification History
Not applicable.

Unit Descriptor
This unit covers the monitoring and controlling of the effects of blasting on the environment in resources and infrastructure industries. It includes developing monitoring and control strategies, implementing monitoring systems and reviewing strategies.

Application of the Unit
This unit is appropriate for those working in operational or technical specialist roles, within:

- Civil construction
- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
# Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Develop strategies to control the effects of blasting on the environment | 1.1. Access, interpret and apply compliance documentation relevant to monitoring and control of the effects of blasting on the environment  
1.2. Identify and evaluate the environmental hazards and controls to minimise the impact on the environment of ground vibration resulting from blasting  
1.3. Identify and evaluate the environmental hazards and controls to minimise the impact on the environment of flyrock resulting from blasting  
1.4. Identify and evaluate the environmental hazards and controls to minimise the impact on the environment of air blast, noise and overpressure resulting from blasting  
1.5. Identify and evaluate the environmental hazards and controls to minimise the impact on the environment of air pollution and dust resulting from blasting  
1.6. Identify and evaluate the environmental hazards and controls to minimise the impact on the environment of water pollution resulting from blasting  
1.7. Identify and analyse the objectives and criteria for safe and effective blast monitoring  
1.8. Evaluate and select monitoring device options  
1.9. Prepare procedures for the installation, establishment and operation of monitoring systems  
1.10. Formulate the monitoring system maintenance program and procedures  
1.11. Determine procedures for the audit, review and updating of the monitoring system |
| 2. Implement environment monitoring systems | 2.1. Implement procedures for monitoring, recording and reporting on environmental controls according to statutory requirements  
2.2. Implement procedures for the installation |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to monitor and control the effects of blasting:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply safety rules and procedures
- plan and coordinate work
- assess the risks and hazards attached to explosives in the environment
- interpret the impact of blast design on ground vibration, air blast and flyrock
- interpret and apply manufacturer’s instructions
- audit data and apply to blasting strategy

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to monitor and control the effects of blasting:

- legislative and statutory requirements and procedures
- sources of legislation
- differing geological features and conditions’ effect on ground vibration, air blast and flyrock
- portable monitoring equipment characteristics, technical capabilities and limitations
- maintenance surveys and procedures
- audit and review processes and techniques
- procedures for estimation of ground vibration levels
- procedures for estimation of blast overpressure
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Overview of assessment | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

  - knowledge of the requirements, procedures and instructions for the monitoring and control of the effects of blasting
  - implementation of procedures and techniques for the safe, effective and efficient monitoring and control of the effects of blasting
  - working with others to plan, prepare and conduct the monitoring and control of the effects of blasting
  - provision of clear and timely instruction and supervision by the individual of those involved in the monitoring and control of the effects of blasting
  - evidence of the consistent successful monitoring and control of the effects of blasting |

| Critical aspects for assessment and evidence required to demonstrate competency in this unit |

| Context of and specific resources for assessment |

  - This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
  - The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
  - Customisation of assessment and delivery environment to sensitively accommodate
cultural diversity.

- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to plan, prepare and conduct the monitoring and control of the effects of blasting
  - provision of clear and timely instruction and supervision by the individual of those involved in the monitoring and control of the effects of blasting

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisation and site requirements and procedures |
|                                             | manufacturer's guidelines and specifications |
|                                             | Australian standards |
|                                             | code of practice |
|                                             | Employment and workplace relations legislation |
|                                             | Equal Employment Opportunity and Disability Discrimination legislation |

Mechanisms which may contribute to ground vibration may include:
- peak particle velocity
- vibration
- frequency
- damage criteria

Vibration may:
- contribute to, or result in damage to, cracking and collapse of structures

Vibration controls may include:
- vibration monitoring
- establishment of vibration limit

Flyrock may result in:
- injury to people
- damage to buildings and services
- scatter of materials

Air blast, noise and over pressure may result in:
- structural and building damage
- public reaction

Mechanisms which may contribute to air blast, noise and over pressure may include:
- peak values
- frequency range
- damage criteria

Air blast, noise and over pressure controls may include:
- the establishment of noise limits
- overpressure limits
- measurement and recording
- provision and testing of monitoring equipment

Air pollution may include:
- dust
- toxic gases, including:
  - oxides of nitrogen
  - carbon monoxide
Monitor and control the effects of blasting on the environment

| Dust control measures may include: | establishment of a dust control program  
|                                 | monitoring of dust  
|                                 | identification and responses to dust problems  
|                                 | selection of appropriate control measures  

| Design criteria for portable monitoring devices may include: | battery capacity  
|                                                            | battery recharge requirements  
|                                                            | statutory compliance provision for:  
|                                                            | calibration  
|                                                            | size  
|                                                            | weight  
|                                                            | ease of operation  
|                                                            | robust construction  

| Defects to monitoring devices may include: | inferior design  
|                                           | deterioration of materials  
|                                           | inadequate quality of manufacture  
|                                           | physical damage  
|                                           | water damage  

| Monitoring may include: | portable blasting seismographs  
|                        | sound level meters  
|                        | dust sampling tubes  
|                        | video and still cameras  

| Maintenance may include: | inspection  
|                         | servicing  
|                         | repair

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to design surface blasts:

- apply legislative, organisation and site requirements and procedures
- interpret and apply legislative and organisational requirements
- interpret and apply geological and survey data
- apply blast design procedures and calculations
- provide team leadership
- choose appropriate operational techniques
- choose and assign appropriate plant and equipment
- apply procedures for developing, initiating and administering work plans
- interpret and apply operational performance data

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to design surface blasts:

- site risk, statutory compliance, health, safety, environmental, quality and communication requirements and procedures
- geological data
- survey data
- range of blasting parameters
- operational techniques required for execution of the plan
- plant and equipment capabilities
- work planning techniques
- team leadership techniques
- consultative and coaching techniques
- work monitoring methods
- recording and reporting systems
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

<table>

RIIBLA602A Establish and maintain a blasting system

Modification History
Not applicable.

Unit Descriptor
This unit covers establishing and maintaining a blasting system in the coal and metalliferous mining and extractive industries. It includes: identifying and evaluating the criteria; establishing the system, support arrangements and systems for audit and review.

Application of the Unit
This unit is appropriate for those working in management or technical specialist roles, within:

- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify and evaluate the criteria | 1.1. Access, interpret and apply *compliance documentation* relevant to establishing and maintaining blasting systems  
1.2. Identify blasting methods and options from an analysis of all relevant technical, environmental and operational and financial information  
1.3. Identify the requirements for blasting materials against mine requirements  
1.4. Identify the requirements for, and purpose of blasting equipment and supporting infrastructure in accordance with mine design and system of mining  
1.5. Assess potential sites/routes for blasting and supporting infrastructure by visit, and locate and confirm on mine plan |
| 2. Establish a system for blasting | 2.1. Establish procedures to identify *hazards* and analyse, evaluate and *manage risks* associated with blasting  
2.2. Develop operational procedures for blasting, covering methods, materials, equipment and infrastructure from site and legislative requirements and incorporate into site documentation  
2.3. Establish recording and reporting procedures for blasting information  
2.4. Develop safe blasting procedures, including design *management*, for the site to comply with company and statutory/legal requirements  
2.5. Establish *monitoring* procedures for blasting  
2.6. Develop and establish procedures for reviewing and modifying work processes  
2.7. Develop blasting system as an integral component of the OHS *management* system of the mine |
| 3. Establish the support arrangements | 3.1. Identify and establish appropriate magazine/storage facilities from an analysis of all relevant statutory, technical and management information |
3.2. Identify and establish appropriate transportation and handling methods for explosives from an analysis of all relevant statutory, technical, operational and financial information

3.3. Develop maintenance procedures for blasting equipment and infrastructure systems from statutory and site requirements, and incorporate into site documentation

3.4. Establish a program, including systems and procedures, to satisfy blasting and shotfiring training requirements

4. Establish systems for audit and review

4.1. Establish procedures to evaluate and confirm the blasting system compliance with statutory and site requirements

4.2. Identify and assess future blasting and supporting infrastructure system requirements and incorporate into planning processes

4.3. Establish procedures to confirm the currency and compliance of blasting equipment and infrastructure maintenance and safety standards

4.4. Establish procedures for incorporating feedback into the audit and review process

4.5. Establish procedures to confirm the currency, relevance and compliance of the blasting training program against identified requirements

4.6. Establish procedures for response to instances of non-compliance or other discrepancies/deficiencies revealed by audit

4.7. Audit emergency response and evacuation plans and procedures for compliance with legislative and site requirements
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to establish and maintain a blasting system:

- apply legislative, organisation and site requirements and procedures
- access and use mine-site information and recording systems
- apply blasting operations analyse and review techniques
- apply information analysis techniques
- apply brainstorming to collect maximum information
- apply fault-tree or equivalent type of risk analysis
- apply human, financial and physical resource coordinate procedures
- apply delegation of responsibility and tasks
- apply action plans develop procedures
- apply systems and equipment evaluation procedures
- facilitate groups to work together
- apply hazards and assess risk identification procedures
- apply procedures for identifying or establishing mine-site facilities for blasting management
- apply effective decision making
- apply magazines and contents management requirements and procedures
- apply projects and tasks manage procedures
- participate as a team member
- read and interpret mine plans
- apply report write techniques

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to establish and maintain a blasting system:

- blast design criteria
- blast monitoring techniques
- blast timings
- blasting operations
- characteristics and applications of blasting products
- charging techniques
- computer applications
- customer/client relations
- delays and their application
- document control systems
- drilling plant and equipment
- environmental management
- explosives disposal procedures
- explosives inventory control requirements
- explosives procurement procedures
- control of explosives
- explosives storage and magazine requirements
- explosives transport and handling requirements
- mine products and services
- misfire management techniques
- negotiation techniques
- quality systems
- risk management: principles, strategies and applications
- safety and health requirements
- statutory requirements and controls
- surveying
- team management techniques
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for establishing and maintaining blasting systems</td>
</tr>
<tr>
<td></td>
<td>• implementation of procedures and techniques for the safe, effective and efficient establishment and maintenance of blasting systems</td>
</tr>
<tr>
<td></td>
<td>• the identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• the identification of viable program options and the selection of programs that best meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the establishing and maintenance of blasting systems</td>
</tr>
<tr>
<td></td>
<td>• consistent and timely establishing and maintenance of blasting systems</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those...
required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required
  - identification of viable options and the selection of options that best meet the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial and documentary evidence of the candidate's:
  - working with others to establish and maintain blasting systems
  - consistent and timely gaining of approval of
<table>
<thead>
<tr>
<th>blasting systems</th>
<th>• provision of clear, timely required support and advice on the implementation of blasting systems</th>
</tr>
</thead>
</table>

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Hazard is:

- a source of potential harm or a situation with a potential to cause loss

Risk is:

- the chance of something happening that will have an impact upon objectives. It is measured in terms of consequences and likelihood

Management is responsible for:

- blasting schedules in compliance and accordance with statutory/legal regulations that are in place
- site conditions that may vary and may require differing methods of safe initiation (weather, winds, storms etc)
- geological factors influencing blast design, initiation systems and environmental compliance
- geographic location of site in relation to neighbours who may be affected by consequence of blast or blast design
- alternate explosives types and availability that may affect or influence blast design
- delay designs and ignition sources
- blasting licences, competencies and permits
- laser profiling
- bore hole tracking
- interpreting and communicating information
- pursuing optimum performance in blasting operations
- monitoring/videoing blasting practice for safety
and other considerations

- monitoring processes for noise and vibration
- processes for minimising fly rock
- statutory/legal compliance may include:
  - Australian Standard
  - Australian Explosives Manufacturers Safety Committee Code of Good Practice: Precursors for Explosives
  - Australian Code for the Transport of Explosives by Road & Rail (Australian Explosives Code)
  - common law
  - dangerous goods
  - development of training policies/programs to aid compliance
  - environmental
  - explosives
  - industrial relations
  - local government
  - minerals and extractive industry licensing
  - navigation
  - planning and assessment
  - safety and health
  - trade practices
  - waterways
  - weights and measures
  - workers compensation/WorkCover

**Monitoring** of activities may include:

- review of written reports
- performance appraisal
- auditing procedures

**Planning processes** may include:

- interpreting and communicating information
- business/performance plans
- location
- tender specifications
- communication liaison/public relations
- resources
- statutory/legal/organisational requirements and control
- resource parameters
- technical standards established by industry and/or enterprise
- legal issues/processes
- planning approvals
- surveying
- monitoring

**Audit is:**
- a systematic examination against defined criteria to determine whether activities and related results conform to planned arrangement, and whether these arrangements are implemented effectively and are suitable to achieve the organisation's policy and objectives

**Unit Sector(s)**
Blasting

**Competency field**
Refer to Unit Sector(s).

**Co-requisite units**
Not applicable.
RIICAR301A Rehabilitate exploration site

Modification History
Not applicable.

Unit Descriptor
This unit covers the rehabilitation of an exploration sites in the drilling and metalliferous mining industry industries. It includes: preparing for and rehabilitating exploration sites; capping drill holes; and rehabilitating access tracks.

Application of the Unit
This unit is appropriate for those working in operational roles, at exploration sites within:
- Drilling
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>
</thead>
</table>

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for site rehabilitation | 1.1. Access, interpret and apply *compliance documentation* relevant to the rehabilitation of an exploration sites  
1.2. Access, interpret and apply the rehabilitation plan and Environmental Work Procedures (EWP)  
1.3. Identify, address and report *potential hazards* and risks  
1.4. Select and wear appropriate *personal protective equipment*  
1.5. Obtain map of area and identify location of sites to be rehabilitated  
1.6. Establish communication system and protocols  
1.7. Carry out rehabilitation plant and equipment pre-start checks |
| 2. Rehabilitate exploration site | 2.1. Assess *hydrocarbon* spills at drill site and deal with according to legislation, environmental policies and procedures and company requirements  
2.2. Ensure saline or contaminated water sumps are completely dry  
2.3. Push waste materials resulting from exploration operations into sumps, and back fill, compact and cover with topsoil  
2.4. Operate *plant and machinery*, following EWPs, to scarify all cleared areas  
2.5. Retrieve cleared vegetation and put back onto rehabilitated site  
2.6. Remove and dispose of all rubbish  
2.7. *Re-vegetate* area if required under the rehabilitation plan  
2.8. Record rehabilitation details  
2.9. *Inspect* rehabilitated site for compliance with environmental and legislative requirements and safe entry |
| 3. Cap drill holes | 3.1. Excavate hole collar to suitable depth  
3.2. Pour excess drill chips into drill hole  
3.3. Select and insert appropriate hole plug firmly into hole opening or collar, such that |
3. Water ingress and future erosion is prevented.
3.4. Backfill excavated soil onto plug and compact firmly ensuring that sufficient compacted soil is left on hole to allow for subsidence and encourage run off.
3.5. Peg hole site and mark with ID number.

4. Rehabilitate access tracks

- 4.1. Remove all windrows
- 4.2. Scarify tracks
- 4.3. Retrieve as much as possible cleared vegetation and restore to access track
- 4.4. Block or disguise the entrance to the track with any available materials.
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to rehabilitate exploration sites:

- apply legislative, organisation and site requirements and procedures
- apply communication and recording skills
- apply manual and mechanical handling techniques
- apply maintenance requirements and procedures
- apply procedures to acquire required licences and permits
- apply diagnostic and troubleshooting procedures
- use hand tools
- apply problem solving techniques

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to rehabilitate exploration sites:

- provisions of the Workplace Health and Safety Acts, their regulations and code of practice
- particular State or Territory regulations relating to rehabilitation
- relevant OHS requirements associated with rehabilitation activities
- rehabilitation principles and practices
- rehabilitation planning
- environmental work procedures
- hazards associated with rehabilitation work
- types and operational characteristics of plant/equipment used in rehabilitation operations
- basic maintenance
- environmental principles and practices
- re-vegetation methods and types
- hole-capping methods
- recording and reporting
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

</tr>
</tbody>
</table>
Plant and machinery may include:
- hydraulic excavators
- wheel loaders
- crawler dozers
- crawler loaders
- motor graders and scrapers
- dump trucks
- backhoes
- log skidders

Re-vegetation methods may include:
- hand sowing
- direct seeding
- tube planting
- hand or machine assisted planting of seedlings
- planting of divisions
- transplanting
- assisted regeneration
- natural regeneration

Inspections may include:
- checking that access paths are clear of debris, waste material, tools, equipment and machinery
- ensuring that equipment and machinery is disabled after use
- ensuring that signage and safety barriers are removed
- removing debris and waste from the work area swiftly and efficiently

Materials may include:
- cleared vegetation
- dead logs
- boulders

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Establish rehabilitation requirements and plan | 1.1. Access, interpret and apply *compliance documentation* relevant to the rehabilitation of small mine sites  
1.2. Identify rehabilitation and *vegetation* removal requirements from recognised rehabilitation standards, environmental requirements, applicable codes and instructions  
1.3. Inspect site to determine impact of mining or other operations and specific rehabilitation requirements  
1.4. Identify natural water flow/water courses around the site  
1.5. Ensure removal of all recoverable equipment no longer required  
1.6. Identify specific equipment, materials and operations required to rehabilitate the site  
1.7. Identify, address and report hazards associated with the rehabilitation operation  
1.8. Determine and plan sequence to minimise rehabilitation time and residual damage to meet environmental care principles, statutory body requirements and applicable OHS and fire safety regulations, policies and precautions |
| 2. Rehabilitate site | 2.1. Observe and follow OHS procedures, practices, policies, and precautions  
2.2. Adhere to site environmental concerns in accordance with relevant national, state, and local *legislation* and/or regulations  
2.3. Select and use *equipment and materials* for rehabilitation  
2.4. Remove abandoned materials and rubbish from site  
2.5. Restore surface in accordance with *rehabilitation plan*  
2.6. Remove residual mullock to designated location  
2.7. Establish run-off and drainage channels to approximate natural drain lines in accordance with rehabilitation plan |
2.8. Maintain *communication* with other personnel and external authorities to ensure effective rehabilitation of the site

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to rehabilitate small mine site:

- apply legislative, organisation and site requirements and procedures
- recognise non-native plants
- apply mine site rehabilitation requirements
- communicate and liaise with internal and external bodies/groups
- read and interpret written material appropriate for local conditions
- read graphic information including charts, tables and weather maps
- use hand and power tools
- apply operational safety requirements
- maintain records
- identify faults
- apply environmental constraints
- apply procedures for the disposal of environmentally sensitive fluids and materials

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to rehabilitate small mine site:

- specific site rehabilitation requirements
- small underground mine rehabilitation methods and materials
- statutory requirements for rehabilitation
- hazards associated with rehabilitation operations
- rehabilitation planning
- OHS guidelines, procedures, and principles, including manual handling
- general environmental care and statutory body requirements
- ground-water behaviour and handling
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan, prepare for and initiate operations | 1.1. Access, interpret, apply and share with team members the compliance documentation relevant to conducting rehabilitation operations  
1.2. Access and share with team members the geological, hydrological and survey data required to complete the rehabilitation operations  
1.3. Prepare an action plan, in consultation with team members, which makes best use of the available resource and meets the site rehabilitation requirements and relevant legislative, site and manufacturer's requirements and procedures  
1.4. Acquire and make available the necessary resources for the safe, effective and efficient conduct of rehabilitation operations  
1.5. Issue clear and timely instructions to team members and others involved for the safe, effective and efficient conduct in the rehabilitation operations to meet site rehabilitation requirements |
| 2. Monitor, adjust and report on execution of the operations | 2.1. Ensure safe, effective and efficient execution of rehabilitation tasks  
2.2. Monitor rehabilitation operations performance to ensure achievement of the site rehabilitation requirements  
2.3. Initiate adjustments to work programs to take into account non-achievement of planned outcomes  
2.4. Complete and submit reports  
2.5. Recommend changes to improve the safety, efficiency and effectiveness of the rehabilitation operations |
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to supervise rehabilitation operations:

- apply legislative, organisation and site requirements and procedures
- provide team leadership
- apply techniques for selecting operational techniques
- apply techniques for selecting and assigning plant and equipment
- apply procedures for developing and administering work plans

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to supervise rehabilitation operations:

- risk, statutory compliance, health, safety, environmental, quality and communication requirements and procedures
- site operational requirements
- team leadership techniques
- operational techniques required for execution of the rehabilitation tasks
- plant and equipment capabilities
- work planning techniques
- work monitoring methods
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| **Method of assessment** | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to plan, prepare and conduct rehabilitation operations
  - provision of clear and timely instruction and supervision by the individual of those involved in the conduct of the rehabilitation operations |

| **Guidance information for assessment** | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>
<thead>

</table>

- **Geological data** may include relevant site-specific information in relation to:
  - rock type and characteristics
  - faults and joints
  - water tables or other water sources

- **Hydrological data** may include:
  - rainfall
  - surface water, existing streams and dams
  - catchment areas and runoff characteristics
  - groundwater and bores

- **Survey data** may include relevant site-specific information in relation to:
  - existing and required landform plans
  - drainage and water management structure plans

- **Site rehabilitation requirements** may be conditions of development approval, mining lease (or equivalent) conditions and/or organisation's requirements and may include:
  - progressive and/or final land form changes
  - environmental structures
  - soil management
  - drainage and/or water management
  - revegetation
  - maintenance of rehabilitated areas

- **Resources** may include:
  - labour
  - materials
  - services
  - plant and equipment

- **Instructions** may be issued in briefings, handovers, and work orders and may include:
  - nature and scope of tasks
  - achievement targets
  - refuelling arrangements
  - operational conditions

RIICBM201A Strip pile heads

Modification History
Not applicable.

Unit Descriptor
This unit covers the stripping of pile heads in the civil construction industry. It includes planning and preparing, stripping pile heads, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, confirm and apply work instructions, including plans, specifications, quality requirements and operational details to the allotted task  
1.3. Obtain and confirm *safety requirements* from the *site* safety plan and organisational policies and procedures, and apply to the allotted task  
1.4. Identify, obtain and implement *signage requirements* from the project *traffic* management plan  
1.5. Select *plant, tools and equipment* to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.6. Identify *environmental protection requirements* from the project environmental management plan, and confirm and apply to the allotted task |
| 2. Strip pile heads | 2.1. Check work platform and false work in preparation for *pile head stripping procedures*  
2.2. Determine and mark specified height of pile cut-off  
2.3. Cut horizontal groove to the specified depth at the marked height around the pile to avoid spalling  
2.4. Attach pile excess to a crane with a sling  
2.5. Strip back concrete above the groove from steel bars/stands without damage to the reinforcing  
2.6. Cut steel reinforcing to specified length, and bend to project drawings and specifications |
| 3. Clean up | 3.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan  
3.2. Clean, check, maintain and store plant, tools and equipment |

2.5. Report completed repairs and maintenance, noting and documenting any new faults in accordance with organisational requirements |
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to maintain concrete bridges:

- apply legislative, organisation and site requirements and procedures for maintaining concrete bridges
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to maintain concrete bridges:

- site and equipment safety requirements
- bridge components
- bridge faults and repair methods
- safety procedures for working at heights and over water
- processes for interpreting engineering drawings
- equipment types, characteristics, technical capabilities and limitations
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statements
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example,
language, literacy and numeracy demands of assessment should not be greater than those required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the maintenance of concrete bridges

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to install pre-cast girders:

- apply legislative, organisation and site requirements and procedures for installing pre-cast girders
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to install pre-cast girders:

- site and equipment safety requirements
- bridge construction and sequencing
- pre-cast concrete girder installation
- bearing types and installation
- safe lifting techniques
- structural technology
- safe working procedures for working at heights and over water
- processes for interpreting engineering drawings
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
</table>
| Critical aspects for assessment and evidence required to demonstrate competency in this unit | - knowledge of the requirements, procedures and instructions for installing pre-cast girders  
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of pre-cast girder installation  
- working with others to undertake and complete the installation of pre-cast girders that meets all of the required outcomes  
- consistent timely completion of pre-cast girder installation that safely, effectively and efficiently meets the required outcomes  
- installation of all the pre-cast concrete girders on a multi-span bridge of not less than twenty metres in length to specifications. It is to include installing bearings, installing lateral bracing, installing locating brackets and bolts, identifying hog, checking direction of skew angle, lateral bow and twist prior to lifting |

| Context of and specific resources for assessment | - This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.  
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites |
may differ due to the site circumstances.

- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
| Safety requirements may include: | • OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances  
• safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance are kept from excavations, and areas secured from unauthorised access or movement  
• safe operating procedures including recognising and preventing hazards associated with uneven/unstable terrain, trees, pits, poles, trip hazards, dirt mounds, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working in proximity to others, worksite visitors and the public  
• recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials  
• emergency procedures related to equipment |
operation including emergency shutdown and stopping, extinguishing equipment fires, organisational First Aid requirements and evacuation

Not applicable.
RIICBM303A Install pre-cast parapets

Modification History
Not applicable.

Unit Descriptor
This unit covers the installation of pre-cast parapets in the civil construction industry. It includes planning and preparing, confirming installation details, installing pre-cast parapet units, finishing parapets, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
### Elements and Performance Criteria

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to operate a bridge inspection unit:

- apply legislative, organisation and site requirements and procedures for operating a bridge inspection unit
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to operate a bridge inspection unit:

- site and equipment safety requirements
- bridge construction
- bridge components
- under bridge inspection units and operation
- safe working procedures for working at heights and over water
- processes for interpreting engineering drawings
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statements
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• knowledge of the requirements, procedures and instructions for operating a bridge inspection unit</td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of bridge inspection unit operations</td>
</tr>
<tr>
<td>• working with others to undertake and complete the operation of bridge inspection units that meets all of the required outcomes</td>
<td>• consistent timely completion of bridge inspection unit operation that safely, effectively and efficiently meets the required outcomes</td>
</tr>
<tr>
<td>• operation of a self propelled or truck mounted under bridge inspection unit to inspect the underside and the outer sides of a whole bridge of at least twenty metres in length, for two bridges, wharves or jetties to specifications</td>
<td></td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the operation of bridge inspection units

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Safety requirements** may include:

- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance are kept from excavations, and areas secured from unauthorised access or movement
- safe operating procedures including recognising and preventing hazards associated with uneven/unstable terrain, trees, pits, poles, trip hazards, dirt mounds, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working in proximity to others, worksite visitors and the public
- recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to equipment
| **Signage requirements** may include: | • site safety signage  
• temporary signage for the benefit of motorists and pedestrians  
• barricades  
• traffic conditions signage |
|-------------------------------|---------------------------------------------------------------|
| **Traffic** may include:      | • congested urban environments  
• low traffic rural areas  
• off-road un-trafficked areas  
• buildings  
• parking sites  
• pedestrian areas |
| **Plant, tools and equipment** may include: | • fall arrestors  
• signage  
• under bridge inspection units  
• buckets or platforms  
• maintenance tools and equipment |
| **Environmental protection requirements** may include: | • organisational/project environmental management plan  
• waste management  
• water quality protection  
• noise  
• vibration  
• dust and clean-up management |
| **Bridge inspection unit** may include: | • truck mounted and self propelled units  
*And may be used on:*  
• bridges, wharves, piers and jetties  
• concrete or timbre structures |

Constructions and Maintenance (General)

**Competency field**
Refer to Unit Sector(s).
Co-requisite units

Not applicable.
RIICBM305A Install pre-cast concrete bridge decks

Modification History
Not applicable.

Unit Descriptor
This unit covers the installation of pre-cast concrete bridge decks in the civil construction industry. It includes planning and preparing, installing bearings, installing concrete bridge decks, fixing bridge fittings, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to install pre-cast concrete bridge decks:

- apply legislative, organisation and site requirements and procedures for the installation of pre-cast concrete bridge decks
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to install pre-cast concrete bridge decks:

- site and equipment safety requirements
- bridge construction and sequencing
- pre-cast concrete bridge decks and installation
- bearing types and installation
- safe lifting techniques
- safe working procedures, working at heights and over water
- processes for interpreting engineering drawings
- equipment types, characteristics, technical capabilities and limitations
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statements
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
|                                                                                           | • knowledge of the requirements, procedures and instructions for installing pre-cast concrete bridge decks
|                                                                                           | • implementation of requirements, procedures and techniques for the safe, effective and efficient completion of pre-cast concrete bridge deck installation
|                                                                                           | • working with others to undertake and complete the installation of pre-cast concrete bridge decks that meets all of the required outcomes
|                                                                                           | • consistent timely completion of pre-cast concrete bridge deck installation that safely, effectively and efficiently meets the required outcomes
|                                                                                           | • installation of pre-cast concrete deck units including installation of transverse stressing bars and bearings on a multi-span bridge with a minimum length of twenty metres to specifications |

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites
may differ due to the site circumstances.

- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the installation of pre-cast concrete bridge decks

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Safety requirements may include:
- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance are kept from excavations, and areas secured from unauthorised access or movement
- safe operating procedures including recognising and preventing hazards associated with uneven/unstable terrain, trees, pits, poles, trip hazards, dirt mounds, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working in proximity to others, worksite visitors and the public
- recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to equipment

5.2. Clean, check, maintain and store plant, tools and equipment |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to undertake concreting work on concrete bridges:

- apply legislative, organisation and site requirements and procedures for undertaking concreting work on concrete bridges
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to undertake concreting work on concrete bridges:

- site and equipment safety requirements
- bridge construction and sequencing
- steel reinforcement characteristics
- concrete characteristics and properties
- concreting principles
- structural technology
- working in confined spaces
- working at heights and over water
- processes for interpreting engineering drawings
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statements
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</thead>
</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, confirm and apply work instructions, including plans, specifications, quality requirements and operational details to the allotted task  
1.3. Obtain and confirm *safety requirements* from the site safety plan and organisational policies and procedures, and apply to the allotted task  
1.4. Identify, obtain and implement *signage requirements* from the project *traffic management plan*  
1.5. Select *plant, tools and equipment* to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.6. Identify *environmental protection requirements* from the project *environmental management plan*, and confirm and apply to the allotted task |
| 2. Prepare for formwork erection | 2.1. Identify location and design of *formwork/falsework* from site drawings, engineers' design and specifications  
2.2. Accurately place *key set out locations* to requirements of job drawings  
2.3. Prepare work area and materials for the erection of formwork/falsework  
2.4. Assemble formwork shutters to design form requirements and specified dimensions  
2.5. Sequentially erect formwork support system (falsework) according to initial set out and standards  
2.6. Check scaffolding and/or hand railing where required in accordance with job specification and standards  
2.7. Place *bracing* of formwork support to job requirements and design specifications to maintain rigidity and stability  
2.8. Set support system to correct height level, |
<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>
| 3. Erect formwork | 3.1. Fabricate, position and fix formwork for beams, drop panels and cantilevers into place  
3.2. Assemble, erect and fix formwork for walls into place, plumb and to specified tolerance  
3.3. Fabricate, position and fix soffit formwork into place  
3.4. Fix edge boxing to formwork in correct position and plumb to alignment.  
3.5. Brace formwork  
3.6. Install **cast-ins, inserts and penetration blocks** to locations |
| 4. Inspect formwork | 4.1. Inspect erected formwork and formwork support system for safety and quality of work in accordance with standards  
4.2. Remove loose dirt, sawdust and other waste material with due care to welfare of site personnel and public  
4.3. Apply release agent to formwork in accordance with specifications  
4.4. Monitor formwork and support system during concrete pour |
| 5. Stripping of formwork | 5.1. Obtain approval to remove formwork support from appropriate site authority  
5.2. Carefully remove edge boxing and braces, denail, clean and store/stack  
5.3. Back off support system to appropriate height to loosen soffit decking  
5.4. Safely and sequentially remove formwork, denail and relocate or store  
5.5. Select and install appropriate back propping system, where applicable, according to standards and engineers' requirements |
| 6. Clean up | 6.1. Clear work area and dispose of or recycle **materials** in accordance with project environmental management plan  
6.2. Clean, check, maintain and store plant, tools and equipment |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to construct formwork and falsework on concrete bridges:

- apply legislative, organisation and site requirements and procedures for constructing formwork and falsework on concrete bridges
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to construct formwork and falsework on concrete bridges:

- site and equipment safety requirements
- bridge construction and sequencing
- formwork and falsework
- steel reinforcement
- concrete
- bracing and loading
- structural characteristics of reinforced concrete
- working in confined spaces
- working at heights and over water
- processes for interpreting engineering drawings
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the construction of formwork and falsework on concrete bridges

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
| | • manufacturer's guidelines and specifications  
| | • Australian standards  
| | • Employment and workplace relations legislation  
| | • Equal Employment Opportunity and Disability Discrimination legislation |

| Safety requirements may include: | • OHS requirements in accordance with State or Territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances  
| | • safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance are kept from excavations, and areas secured from unauthorised access or movement  
| | • safe operating procedures including recognising and preventing hazards associated with uneven/unstable terrain, trees, pits, poles, trip hazards, dirt mounds, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working in proximity to others, worksite visitors and the public  
| | • recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials  
<p>| | • emergency procedures related to equipment |</p>
<table>
<thead>
<tr>
<th><strong>Site may include:</strong></th>
<th>operation including emergency shutdown and stopping, extinguishing equipment fires, organisational First Aid requirements and evacuation</th>
</tr>
</thead>
</table>
| **Signage requirements may include:** | • escort vehicle  
• highway traffic signs  
• site safety signage  
• temporary signage for the benefit of motorists and pedestrians  
• barricades  
• traffic conditions signage |
| **Traffic may include:** | • congested urban environments  
• low traffic rural areas  
• off-road un-trafficked areas  
• buildings  
• parking sites  
• pedestrian areas |
| **Plant, tools and equipment may include:** | • spanners  
• saws  
• power saws  
• nail guns  
• drills  
• string lines  
• levelling equipment  
• spirit levels  
• chisels  
• hammers  
• compressors  
• hoses  
• tape measures  
• rulers  
• marking equipment  
• crow bars  
• pinch bars  
• scaffolding  
• ladders |
| **Environmental protection requirements may include:** | • organisational/project environmental management plans  
• waste management  
• water quality protection |
Formwork is erected to provide a moulded shape, structure and finish to:
- cast-in situ concrete decks
- piers/headstocks
- footings/pile caps/abutments
- cast-in situ girders

Falsework may include:
- a temporary support structure designed to carry the various loads imposed on the formwork during construction of bridge components

Key set out locations may include:
- points
- lines
- profiles
- grids

Bracing may include:
- adjustable props
- timber

Soffit may include:
- flooring
- decking
- base work making up the underside of formwork

Cast-ins, inserts and penetration blocks may include:
- services
- anchor bolts
- other fixtures

Materials may include:
- screws
- nails
- plywood
- structural timber
- proprietary shutters
- walers
- soldiers
- soldier sets
- release agent
- adjustable props
- brackets
- base plates
- she bolts
- clips
Unit Sector(s)
Construction and Maintenance (General)

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIICBS201A Conduct tack coat spraying operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of tack coat spraying operations in the civil construction industry. It includes planning and preparing, preparing for spraying operations, spraying tack coat, operating hand lance, and performing operator maintenance and clean up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an assistant role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Plan and prepare</td>
<td>1.1. Access, interpret and apply <em>compliance documentation</em> relevant to the work activity</td>
</tr>
<tr>
<td></td>
<td>1.2. Obtain and confirm <em>safety requirements</em> from the <em>site</em> safety plan and organisational policies and procedures, and apply to the allotted task</td>
</tr>
<tr>
<td></td>
<td>1.3. Identify, obtain and implement signage requirements from the project <em>traffic</em> management plan</td>
</tr>
<tr>
<td></td>
<td>1.4. Select <em>tools and equipment</em> to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults</td>
</tr>
<tr>
<td></td>
<td>1.5. Identify <em>environmental protection requirements</em> from the project environmental management plan, and confirm and apply to the allotted task</td>
</tr>
<tr>
<td>2. Prepare for spraying</td>
<td>2.1. Carry out pre-operational checks in accordance with organisation, manufacturer or site authorised procedures</td>
</tr>
<tr>
<td>operations</td>
<td>2.2. Check tank for cleanliness and contaminants prior to filling, and ensure transfer connections are completed and fully functional</td>
</tr>
<tr>
<td></td>
<td>2.3. Conduct all loading and unloading operations safely in accordance with manufacturer’s or company instructions</td>
</tr>
<tr>
<td></td>
<td>2.4. Fill spray tank and ensure adequate <em>materials</em> are made available to perform spray operations</td>
</tr>
<tr>
<td></td>
<td>2.5. Identify <em>application rate</em> and translate into the relevant travel speed and pump characteristics where necessary</td>
</tr>
<tr>
<td></td>
<td>2.6. Select jets and fit to spray bar to enable spraying operations</td>
</tr>
<tr>
<td>3. Spray tack coat</td>
<td>3.1. Select and modify spraying techniques for <em>tack coating</em> to meet changing work conditions and <em>types of surfaces</em></td>
</tr>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct tack coat spraying operations:

- apply legislative, organisation and site requirements and procedures for conducting tack coat spraying operations
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct tack coat spraying operations:

- site and equipment safety requirements
- equipment types, characteristics, technical capabilities and limitations
- operational and maintenance procedures
- bituminous surfacing operations
- site isolation and traffic control responsibilities and authorities
- bituminous products
- tack coat spraying techniques
- processes for the calculation of material requirements, application rates and travel speed
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statements
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Context of and specific resources for assessment

|  | This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
|  | Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites |
may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Safety requirements** may include:

- OHS requirements in accordance with State or Territory legislation and regulations, organisational safety policies and procedures, and project safety plan including: protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances

- safe operating procedures including recognising and preventing hazards associated with high voltage power lines, uneven/unstable terrain, trees, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working at heights, working in proximity to others, worksite visitors and the public

- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement

- recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials

- emergency procedures related to equipment
| **Site locations may include:** | • car parks  
• airport runways  
• container yards  
• hard stands  
• footpaths  
• bikeways  
• roadways |
| **Traffic conditions may include:** | • congested urban environments  
• low traffic rural areas  
• off-road un-trafficked areas  
• buildings  
• parking sites  
• pedestrian areas |
| **Tools and equipment may include:** | • trucks  
• tanks  
• spraying equipment  
• hand lances  
• transfer hoses  
• brooms  
• jets  
• shovels  
• compressors  
• storage tanks |
| **Environmental protection requirements may include:** | • organisational/project environmental management plan  
• waste management  
• water quality protection  
• noise  
• vibration  
• dust and clean-up management |
| **Materials may include:** | • bitumen emulsions (cationic and anionic)  
• cutback bitumen  
• cutters  
• distillates  
• water |
| **Application rate are:** | • to be followed within specified tolerances |
### Tack coating

**Tack coating** refers to:
- an application in preparation for further surface coatings which are to include but not be limited to asphalt, geo-textile and slurry

---

### Types of surface

**Types of surface** may include:
- spray seal
- asphalt
- concrete
- granular pavement
- pavement which is limited to a clean dry surface which may be coated day or night

---

### Tack coat sprayer

**Tack coat sprayer** may be:
- a mechanical bitumen sprayer or a truck/trailer mounted bitumen emulsion sprayer used to apply tack coat at a specified rate on a pavement surface
- they also provide facilities for hand spraying

---

### Unit Sector(s)

**Bituminous Surfacing**

---

### Competency field

|                            | • vibration  
|                            | • dust and clean-up management  |
| Asphalt spreading may include: | • constructing new work  
|                            | • repairing surfaces  
|                            | • repair of defects  
|                            | • paver runs  
|                            | • joints  |
| Asphalt may include: | • dense graded  
|                            | • open graded  
|                            | • stone mastic  |
| Joints may include: | • longitudinal  
|                            | • transverse  
|                            | • hot to hot  
|                            | • cold to hot  |
### Defects may include:
- bumps
- segregation
- blemishes
- bony materials
- voids

### Materials may include:
- asphalt and release agents including emulsion, slurry and Styrene Butadiene Styrene modified binders (SBS) handled and used in accordance with the Australian Asphalt Paving Association (AAPA) code of practice for SBS modified binders

### Unit Sector(s)
Bituminous Surfacing

### Competency field
Refer to Unit Sector(s).

### Co-requisite units
Not applicable.
RIICBS203A Safely handle bituminous materials

Modification History
Not applicable.

Unit Descriptor
This unit covers the safe handling of bituminous materials in the civil construction industry. It includes planning and preparing, working safely with bituminous materials, demonstrating First Aid for bitumen burns, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an assistant role at worksites within:

- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Plan and prepare</td>
<td>1.1. Access, interpret and apply <em>compliance documentation</em> relevant to the work activity&lt;br&gt;1.2. Obtain and confirm <em>safety requirements</em> from the <em>site</em> safety plan and organisational policies and procedures, and apply to the allotted task&lt;br&gt;1.3. Select <em>tools and equipment</em> to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults&lt;br&gt;1.4. Identify, confirm and apply <em>environmental protection requirements</em> from the project environmental management plan</td>
</tr>
<tr>
<td>2. Work safely with bituminous materials</td>
<td>2.1. Identify characteristics and uses of bituminous <em>materials</em> and additives used in surfacing&lt;br&gt;2.2. Identify hazards associated with working with hot bitumen and implement <em>minimisation strategies</em>&lt;br&gt;2.3. Adhere to Australian Asphalt Paving Association (AAPA) code of practice for working with Styrene Butadiene Styrene (SBS) modified binders&lt;br&gt;2.4. Adhere to fire precautions associated with hot bitumen as detailed in Austroads Bitumen Sealing Safety Guide&lt;br&gt;2.5. Extract and apply information including OHS from materials safety data sheet associated with bituminous materials&lt;br&gt;2.6. Perform work to the requirements of the organisation's environmental policy and EPA standards</td>
</tr>
<tr>
<td>3. Demonstrate First Aid for bitumen burns</td>
<td>3.1. Perform First Aid in the case of a bitumen burn in accordance with Austroads Bitumen Sealing Safety Guide&lt;br&gt;3.2. Attach 'Bitumen Burn Tag' to victims of burns who are to be treated off site in accordance with Austroads Bitumen Sealing Safety Guide</td>
</tr>
<tr>
<td>4. Clean up</td>
<td>4.1. Clear work area and dispose of or recycle materials in accordance with project</td>
</tr>
</tbody>
</table>
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to safely handle bituminous materials:

- apply legislative, organisation and site requirements and procedures for safe handling of bituminous materials
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to safely handle bituminous materials:

- site and equipment safety requirements
- bituminous materials
- SBS modified binders
- materials safety data sheet requirements
- equipment types, characteristics, capabilities and limitations
- operational and maintenance procedures
- site isolation responsibilities and authorities
- processes for the calculation of material requirements
- materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
|---|---|
| Safety requirements may include: | • OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances  
• safe operating procedures including recognising and preventing hazards associated with uneven/unstable terrain, trees, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working in proximity to others, worksite visitors and the public  
• recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials  
• emergency procedures including extinguishing fires, organisational First Aid requirements and evacuation |
| Site locations may include: | • car parks  
• airport runways  
• container yards  
• hard stands |
• footpaths
• bikeways
• roadways

**Tools and equipment** may include:
• infrared thermometers
• hazchem signs
• water finding paste

**Environmental protection requirements** may include:
• organisational/project environmental management plan
• waste management
• water quality protection
• noise
• vibration
• dust and clean-up management

**Materials** may include:
• bituminous materials (bitumen, cutback bitumen products, emulsions, asphalt, slurries, additives, fluxes, cutters)
• aggregates
• SBS modified binders
• Polymers
• geo-synthetic products

**Minimisation strategies** may include:
• temperature control
• correct product changeover procedures
• correct mixing/blending procedures
• avoiding the presence of water in hot bitumen
• avoiding fumes, exposure to heat, static electricity, fires, burns
• safe handling of flammable substances

**Unit Sector(s)**
Bituminous Surfacing

**Competency field**
Refer to Unit Sector(s).

**Co-requisite units**
Not applicable.
RIICBS204A Conduct aggregate spreader box operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of aggregate spreader box operations in the civil construction industry. It includes planning and preparing, setting up and disconnecting the spreader box, spreading aggregate, performing hand spreading and spotting duties, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an assistant role at worksites within:
- Civil Construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Empoyability Skills Information
This unit contains employability skills.

</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain and confirm *safety requirements* from the *site* safety plan and organisational policies and procedures, and apply to the allotted task  
1.3. Identify, obtain and implement signage requirements from the project *traffic* management plan  
1.4. Place cut on/cut off paper in preparation for bitumen spraying and at the end of the spray run  
1.5. Select plant, *tools and equipment* to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.6. Identify, confirm and apply *environmental protection requirements* from the project environmental management plan |
| 2. Set up and disconnect spreader box | 2.1. Connect equipment to the truck in accordance with the manufacturer's and site requirements prior to operation  
2.2. Set spreader box to required width  
2.3. Check *spreader box operation* to ensure correct operation  
2.4. Check spreader box calibration as conforming to job specifications  
2.5. Disconnect spreader box after operation in accordance with manufacturer's recommended procedures  
2.6. Check truck to ensure that it is completely free of spreader and the spreader has all connecting parts correctly positioned for transportation or further use |
| 3. Spread aggregate | 3.1. Establish communication with the truck driver  
3.2. Check and record size of aggregate prior to spreading  
3.3. Remove cut on/cut off paper in preparation for *aggregate spreading*  
3.4. Coordinate opening and closing of the |
| 3. Spread aggregate spreader box accurately with speed and application of aggregate  |
| 3.5. Instruct driver to adjust speed, line or angle of body as required to suit operations  |
| 3.6. **Monitor** spread rate and make adjustments to ensure aggregate is spread to specifications  |
| 3.7. Complete spreading within specifications  |

| 4. Perform hand spreading and spotting duties  |
| 4.1. Check and correct uniformity of run as required  |
| 4.2. Use correct hand spreading method to specifications  |

| 5. Clean up  |
| 5.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan  |
| 5.2. Clean, check, maintain and store plant, tools and equipment  |

| | remote controlled spreader boxes (preferred method) |
| | shovels |
| | hand brooms |
| | drag brooms |
| | measuring equipment |
| | calibration test equipment |
| | ride on spreader boxes |
| | spreader boxes with rollers |

| Environmental protection requirements may include: | organisational/project environmental management plan |
| | waste management |
### Spread Box Operation

- Box is securely in place
- There is no spillage over side of box or tailgate
- Gates work smoothly
- Aggregate flows smoothly

### Aggregate Spreading

- Applied on a sprayed bituminous material

### Monitor

- Spreading started and finished on cut on/cut off paper
- Correct speed
- Adjustment of tray angle to ensure smooth flow of aggregate
- Correct line followed
- Aggregate spread at a uniform rate
- Stones do not bounce or scatter
- Over spreading or under spreading is corrected
- Over spread and under spread areas are identified and repaired
- Blockages in spreader are cleared quickly or truck directed off spreading area
- Areas where sprayer has missed marked and reported

### Materials

- Aggregate
- Cut on/cut off paper
- Sprayed seal including seals, primers seals and emulsion seals including gritting of primes, bleeding seals and rack in seals

RIICBS206A Conduct pavement sweeping operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of pavement sweeping operations in the civil construction industry. It includes planning and preparing, sweeping surfaces, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an assistant role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct pavement sweeping operations:

- apply legislative, organisation and site requirements and procedures for conducting pavement sweeping operations
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct pavement sweeping operations:

- site and equipment safety requirements
- pavement sweeping operations
- operating platforms for use with mounted broom attachments
- primerseal, seal, asphalt and aggregate materials
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- processes for the calculation of material removal, sweeping patterns and travel speed
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statements

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• knowledge of the requirements, procedures and instructions for conducting pavement sweeping operations</td>
<td></td>
</tr>
<tr>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of pavement sweeping operations</td>
<td></td>
</tr>
<tr>
<td>• working with others to undertake and complete pavement sweeping operations that meets all of the required outcomes</td>
<td></td>
</tr>
<tr>
<td>• consistent timely completion of pavement sweeping operations that safely, effectively and efficiently meets the required outcomes</td>
<td></td>
</tr>
<tr>
<td>• a minimum of 2000m$^2$ are to be swept on each of three projects, including primerseal or priming, to job specifications</td>
<td></td>
</tr>
<tr>
<td>• a minimum of 2000m$^2$ are to be swept on each of three projects, including asphalt or sealed or slurry, to job specifications</td>
<td></td>
</tr>
<tr>
<td>• a minimum of 2000m$^2$ are to be swept on each of three projects removing loose aggregate from newly completed primerseal or seal, to job specifications</td>
<td></td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment.
Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.

- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete pavement sweeping operations

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and
equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Safety requirements may include:

- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance are kept from excavations, and areas secured from unauthorised access or movement
- safe operating procedures including recognising and preventing hazards associated with uneven/unstable terrain, trees, pits, poles, trip hazards, dirt mounds, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working in proximity to others, worksite visitors and the public
- recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to equipment
| **Signage** may include: | • escort vehicle  
• highway traffic signs  
• site safety signage  
• temporary signage for the benefit of motorists and pedestrians  
• traffic conditions signage |
| **Traffic conditions may include:** | • congested urban environments  
• low traffic rural areas  
• off-road un-trafficked areas  
• buildings  
• parking sites  
• pedestrian areas |
| **Tools and equipment** may include: | • tractors  
• skid steer loader  
• trucks  
• drawn brooms  
• attachments to various items of equipment  
• broom cores |
| **Environmental protection requirements** may include: | • organisational/project environmental management plan  
• waste management  
• water quality protection  
• noise  
• vibration  
• dust and clean-up management |
| **Sweeping plan** may include: | • noting wind direction and methods to minimise dust blowing on to the seal, neighbouring properties, vehicular traffic and other work in the vicinity |
| **Sweeping operations may include:** | • surface preparation for bituminous surfaces  
• removal of loose aggregate |
| **Surface to be swept may include:** | • prior to primer or primersealing  
• primed surface  
• sealed or asphalt surface  
• concrete surface |

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to take samples of materials used in road surfacing:

- apply legislative, organisation and site requirements and procedures for taking samples of materials used in road surfacing
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to take samples of materials used in road surfacing:

- site and equipment safety requirements
- bituminous materials
- sampling techniques
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statements

| 4. **Carry out operator maintenance** | 4.1. Conduct fault finding inspections in accordance with manufacturer's specifications and organisational requirements |
|   | 4.2. Maintain equipment and the asphalt storage hopper in good working order |
|   | 4.3. Carry out routine operational servicing and lubrication tasks to manufacturer's and organisational requirements |
|   | 4.4. Maintain equipment condition reports and records |

| 5. **Clean up** | 5.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan |
|   | 5.2. Clean, check, maintain and store plant, tools and equipment |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct road maintenance operations:

- apply legislative, organisation and site requirements and procedures for conducting road maintenance operations
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct road maintenance operations:

- site and equipment safety requirements
- bitumen/asphalt repair procedures
- bituminous materials and their characteristics
- pavement defects
- bituminous surfacing operations
- processes for heating bitumen
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- processes for the calculation of material requirements, application rates and travel speed
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statements
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
|---|---|
|  | • knowledge of the requirements, procedures and instructions for conducting road maintenance operations
|  | • implementation of requirements, procedures and techniques for the safe, effective and efficient conduct of road maintenance operations
|  | • working with others to undertake and complete the conduct of road maintenance operations that meets all of the required outcomes
|  | • consistent timely completion of road maintenance operations that safely, effectively and efficiently meets the required outcomes
|  | • completion of road maintenance operations for a minimum of 50m² of road surface defects by loading and mixing the specified materials, applying all of the road maintenance unit equipment and repairing the damaged areas to specification
|  | • completion of all records of repair work undertaken and materials used for each site

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and
infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.

- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate’s:
  - working with others to undertake and complete the conduct of road maintenance operations

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Safety requirements** may include:
- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance are kept from excavations, and areas secured from unauthorised access or movement
- safe operating procedures including recognising and preventing hazards associated with uneven/unstable terrain, trees, pits, poles, trip hazards, dirt mounds, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working in proximity to others, worksite visitors and the public
- recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to equipment

#### Road maintenance unit

- a purpose built truck fitted with a hopper, conveyor belt, tank, spreader, tools and equipment for the repair of pavement defects, set up to carry bitumen emulsion, cutback bitumen, aggregate, cold mix, asphalt, granular pavement material, tools and equipment required to prepare, fill, level and compact pavement defects

#### Materials

- bitumen emulsions
- asphalts
- aggregates
- water
- cleaning agents

#### Damaged areas

- pot holes
- uneven, stripped or worn small areas requiring resurfacing
- sunken trenches
- kerb and channel joints
- cracks
- other minor defects

#### Surface

- spray sealed road
- asphaltic concrete pavement

#### Record

- necessary calculations for quantities, rates of application achieved
- a repair record for each site
RIICBS301A Conduct profile planer operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of profile planer operations in the civil construction industry. It includes planning and preparing, conducting profile planer pre-operational checks, operating profile planer, selecting, removing and fitting attachments, relocating the profile planer, carrying out profile planer operator maintenance, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

SkillsDMC
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct profile planer operations:

- apply legislative, organisation and site requirements and procedures for conducting profile planer operations
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct profile planer operations:

- profile planer types, characteristics, technical capabilities and limitations
- basic soil types and characteristics
- basic principles of soil compaction
- site and equipment safety requirements
- profile planer techniques related to essential tasks
- processes for interpreting engineering drawings and sketches
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- methods of changing machine attachments
- safe operating techniques in all terrain
- basic earthworks calculations
- JSAs/safe work method statements

4.2. Clear work area and dispose of or recycle *materials* in accordance with project environmental management plan  
4.3. Clean, check, maintain and store plant, tools and equipment |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct paver screeding operations:

- apply legislative, organisation and site requirements and procedures for conducting paver screeding operations
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct paver screeding operations:

- site and equipment safety requirements
- paver screed operations
- aggregate types and sizes
- bituminous materials
- longitudinal and transverse joints
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- processes for the calculation of material uniformity and travel speed
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- safe operating techniques in all terrain
- JSAs/safe work method statements
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Safety requirements** may include:

- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance are kept from excavations, and areas secured from unauthorised access or movement
- safe operating procedures including recognising and preventing hazards associated with uneven/unstable terrain, trees, pits, poles, trip hazards, dirt mounds, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working in proximity to others, worksite visitors and the public
- recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to equipment operation including emergency shutdown and stopping, extinguishing equipment fires, organisational First Aid requirements and evacuation

**Site** may include:
- car parks
- airport runways
- container yards
- hard stands
- footpaths
- bikeways
- roadways

**Signage** may include:
- escort vehicle
- highway traffic signs
- site safety signage
- temporary signage for the benefit of motorists and pedestrians
- traffic conditions signage

**Traffic conditions** may include:
- congested urban environments
- low traffic rural areas
- off-road un-trafficked areas
- buildings
- parking sites
- pedestrian areas

**Tools and equipment** may include:
- paver screeds
- shovels
- measuring tapes
- depth gauges
- standard tool kits
- string lines
- thermometers
- straight edges

**Environmental protection requirements** may include:
- organisational/project environmental management plan
- waste management
- water quality protection
- noise
- vibration
- dust and clean-up management

**Set equipment** may include:
- use of boards to correct the height for transverse joint construction
- setting up string lines and sensors to job
| Specifications | • adjusting machine attachments to string line  
• preparing and setting a screed to achieve a specified level and texture of asphalt |
| --- | --- |
| Surface may include: | • formed/prepared roads  
• pads  
• sealed  
• primersealed  
• primed  
• asphalt  
• profiled  
• profile concrete  
• slurry |
| Electronic levelling equipment may include: | • grade sensors/averaging sensors  
• matching shoes  
• levelling beams  
• sonic, contact and laser |
| Paver screeding operations may include: | • uniform flow of asphalt  
• electronic/manual levelling  
• auguring  
• width of the screed  
• adjustment of the crown  
• control of burners,  
• hot and cold transverse and longitudinal joints  
• manual screed level control  
• automatic screed level control |
| Operation may include: | • spreading bituminous materials  
• mixing materials  
• spreading granular materials  
• spreading concrete materials |
| Communication method may include: | • verbal instructions  
• two way radio  
• hand signals  
• mobile phone |
| Materials may include: | • aggregates  
• gravel asphalt  
• granular materials |
Unit Sector(s)
Bituminous Surfacing

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIICBS303A Conduct materials transfer vehicle operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of materials transfer vehicle operations in the civil construction industry. It includes planning and preparing, transferring materials, carrying out operator maintenance, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>

</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain and confirm *safety requirements* from the *site* safety plan and organisational policies and procedures, and apply to the allotted task  
1.3. Identify, obtain and implement *signage* requirements from the project *traffic* management plan  
1.4. Select plant, *tools and equipment* to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.5. Identify *environmental protection requirements* from the project environmental management plan, and confirm and apply to the allotted task |
| 2. Transfer materials | 2.1. Establish *communication* with other plant operators and personnel to ensure safety of operation  
2.2. Fit feeder bin following manufacturer's instructions  
2.3. Perform start-up, park and shutdown procedures in accordance with manufacturer’s instructions or company procedures  
2.4. Test vehicle controls and functions before commencing operations  
2.5. Position transfer vehicle to deliver asphalt to paver without spillage  
2.6. Direct delivery truck into position with the *materials transfer vehicle*  
2.7. Receive asphalt from delivery truck into the materials transfer vehicle hoppers and monitor to ensure recommended levels  
2.8. Deliver asphalt to paver smoothly and without impact that would cause bounce in the paver  
2.9. Maintain speed as directed by paver operator during transfer operations |
<p>| 3. Carry out operator | 3.1. Park safely, shot down and prepare the |</p>

### 4. Clean up

| 4.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan |
| 4.2. Clean, check, maintain and store plant, tools and equipment |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct materials transfer vehicle operations:

- apply legislative, organisation and site requirements and procedures for conduct of materials transfer vehicle operations
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct materials transfer vehicle operations:

- site and equipment safety requirements
- asphalt paving techniques
- material transfer vehicle equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- processes for the calculation of material requirements, application rates and travel speed
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- safe operating techniques in all terrain
- JSAs/safe work method statements
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- Knowledge of the requirements, procedures and instructions for conducting materials transfer vehicle operations
- Implementation of requirements, procedures and techniques for the safe, effective and efficient completion of materials transfer vehicle operations
- Working with others to undertake and complete materials transfer vehicle operations that meets all of the required outcomes
- Consistent timely completion of materials transfer vehicle operations that safely, effectively and efficiently meets the required outcomes

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those
required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

<table>
<thead>

4.2. Conduct inspection and fault finding  
4.3. Remove and replace defective parts safely and effectively  
4.4. Carry out regular programmed maintenance tasks |
| 5. **Relocate roller** | 5.1. Prepare roller for relocation  
5.2. Drive roller safely on highways and construction sites, observing highway code and local safety requirements |
| 6. **Clean up** | 6.1. Clear work area and dispose of or recycle *materials* in accordance with project environmental management plan  
6.2. Clean, check, maintain and store plant, tools and equipment |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to compact asphalt with rollers:

- apply legislative, organisation and site requirements and procedures for compacting of asphalt with rollers
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to compact asphalt with rollers:

- site and equipment safety requirements
- asphalt compacting techniques
- asphalt paving operations
- asphalt strength and performance characteristics
- edge and joint treatments
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- processes for the calculation of material uniformity and travel speed
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- safe operating techniques in all terrain
- JSAs/safe work method statements
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct asphalt paver operations:

- apply legislative, organisation and site requirements and procedures for conducting asphalt paver operations
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct asphalt paver operations:

- site and equipment safety requirements
- asphalt paving techniques
- asphalt paving operations
- asphalt strength and performance characteristics
- edge and joint treatments
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- processes for the calculation of material requirements, mix, application rates, uniformity and travel speed
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Safety requirements may include:
- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance are kept from excavations, and areas secured from unauthorised access or movement
- safe operating procedures including recognising and preventing hazards associated with uneven/unstable terrain, trees, pits, poles, trip hazards, dirt mounds, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working in proximity to others, worksite visitors and the public
- recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
### emergency procedures related to equipment operation including emergency shutdown and stopping, extinguishing equipment fires, organisational First Aid requirements and evacuation

| Site may include: | • car parks  
• airport runways  
• container yards  
• hard stands  
• footpaths  
• bikeways  
• roadways |

| Signage may include: | • escort vehicle  
• highway traffic signs  
• site safety signage  
• temporary signage for the benefit of motorists and pedestrians  
• traffic conditions signage |

| Traffic conditions may include: | • congested urban environments  
• low traffic rural areas  
• off-road un-trafficked areas  
• buildings  
• parking sites  
• pedestrian areas |

| Materials may include: | • asphalt  
• granular materials  
• bound materials |

| Tools and equipment may include: | • pavers  
• basic tool kits  
• shovels |

| Asphalt paver tasks may include: | • spreading bituminous materials  
• mixing materials  
• spreading concrete  
• spreading granular materials |

| Environmental protection requirements may include: | • organisational/project environmental management plan  
• waste management  
• water quality protection  
• noise  
• vibration  
• dust and clean-up management |

### Unit Sector(s)

Bituminous Surfacing

### Competency field

Refer to Unit Sector(s).

### Co-requisite units

Not applicable.
RIICBS306A Conduct slurry sealing operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of slurry sealing operations in the civil construction industry. It includes planning and preparing, preparing mix materials, preparing surface for slurry application, applying slurry seal, carrying out operator maintenance, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain and confirm *safety requirements* from the *site* safety plan and organisational policies and procedures, and apply to the allotted task  
1.3. Identify, obtain and implement *signage* requirements from the project *traffic* management plan  
1.4. Determine *material* to be laid and handling procedures to be employed according to specifications  
1.5. Select plant, *tools and equipment* to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.6. Identify *environmental protection requirements* from the project environmental management plan, and confirm and apply to the allotted task |
| 2. Prepare mix materials | 2.1. Confirm material availability for *slurry seal operations*  
2.2. Ascertain and confirm mix specifications  
2.3. Check paving unit to ensure correct calibration of metering devices to mix specification  
2.4. Clean and test spreader box for correct operation |
| 3. Prepare surface for slurry application | 3.1. Protect surfaces in accordance with company or client instructions  
3.2. Note surface defects and rectify or treat during sealing operation  
3.3. Clean and clear work area of loose stones, oil or other contaminants  
3.4. Set out work area ensuring a straight edge is maintained along kerbs, shoulders and through intersections |
| 4. Apply slurry seal | 4.1. Maintain consistency of mix as per specification or job instructions  
4.2. Mix spread in accordance with |
| 4.3. Achieve surface finish in accordance with specification or job instructions |
| 4.4. Ensure joints are neat with no overlapping or excess materials showing |
| 4.5. Use hand spreading to cover small or difficult areas |
| 5. Carrying out operator maintenance |
| 5.1. Conduct inspection and fault finding in accordance with manufacturer's specifications and/or organisational requirements |
| 5.2. Carry out routine operational servicing and lubrication tasks |
| 5.3. Carry out minor maintenance |
| 5.4. Record performance of machine constantly to enable timely repair of equipment |
| 6. Clean up |
| 6.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan |
| 6.2. Clean, check, maintain and store plant, tools and equipment |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct slurry sealing operations:

- apply legislative, organisation and site requirements and procedures for conducting slurry sealing operations
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct slurry sealing operations:

- site and equipment safety requirements
- slurry sealing techniques
- paving operations
- different types of slurry, mixes and their characteristics
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- processes for the calculation of material requirements, mix, application rates and travel speed
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statements
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.

- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.

- The assessment environment should not
disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment
This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate’s required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate’s:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate’s:
  - working with others to undertake and complete slurry sealing operations

### Guidance information for assessment
Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Safety requirements** may include:
- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances
- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance are kept from excavations, and areas secured from unauthorised access or movement
- safe operating procedures including recognising and preventing hazards associated with uneven/unstable terrain, trees, pits, poles, trip hazards, dirt mounds, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working in proximity to others, worksite visitors and the public

</thead>
</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain and confirm *safety requirements* from the *site* safety plan and organisational  
policies and procedures, and apply to the allotted task  
1.3. Identify, obtain and implement *signage* requirements from the project *traffic*  
management plan  
1.4. Select plant, *tools and equipment* to carry out tasks consistent with the requirements  
of the job, check for serviceability and rectify or report any faults  
1.5. Identify *environmental protection requirements* from the project environmental  
management plan, and confirm and apply to the allotted task  |
| 2. Set up sprayer   | 2.1. Carry out pre-operational checks on *bitumen sprayer* in accordance with  
organisation, manufacturer or site authorised procedures  
2.2. Ensure ancillary tanks are full and adequate *materials* are determined to perform spray  
operations  
2.3. Check tank for prevention of contamination  
2.4. Obtain and translate spraying details  
2.5. Calculate spraying speed and pump rpm  
2.6. Introduce correct amount of cutter  
2.7. Fit appropriate number and size of jets to the spray bar  |
| 3. Load sprayer     | 3.1. Check previous load details for compatibility  
3.2. Load tank with the prescribed type and quantity of material  
3.3. Add additives and mix where required  
3.4. Check temperature of the material and heat material to comply with manufacturer's  
specifications  
3.5. Measure, calculate and *record* material quantities and additives  |
| 4. Operate bitumen sprayer | 4.1. Carry out start-up, park and shutdown procedures in accordance with manufacturer’s and site requirements  
4.2. Select and modify *bitumen spraying* techniques to appropriately meet changing work conditions  
4.3. Plan work to maximise machine coverage and minimise hand spraying  
4.4. Set control valves correctly for the type of operation  
4.5. Conduct, control and monitor spraying operations to ensure materials are sprayed to specification  
4.6. Carry out operations adjacent to traffic in accordance with authorised traffic management controls and in a safe manner at all times  
4.7. Complete spraying without damage to property or vehicles |
|---|---|
| 5. Operate hand lance | 5.1. Inspect hand lance to ensure correct operation  
5.2. Select *hand lancing techniques* to match work conditions  
5.3. Conduct, control and monitor hand spraying operations to ensure compliance with specification  
5.4. Carry out hand spraying operations adjacent to traffic in accordance with authorised traffic management plans |
| 6. Unload/empty sprayer | 6.1. Unload or empty tank into storage or waste  
6.2. Clean tank interior and spray bar in accordance with Austroads Bitumen Sealing Safety Guide |
| 7. Carry out operator maintenance | 7.1. Conduct fault finding inspections in accordance with manufacturer’s specifications and organisational requirements  
7.2. Maintain spray bars and nozzles in good working order  
7.3. Carry out routine operational servicing and lubrication tasks to manufacturer’s and organisational requirements  
7.4. Maintain equipment condition reports and |
| 8. Clean up | 8.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan  
8.2. Clean, check, maintain and store plant, tools and equipment |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct bitumen sprayer operations:

- apply legislative, organisation and site requirements and procedures for conducting bitumen sprayer operations
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct bitumen sprayer operations:

- site and equipment safety requirements
- bitumen spraying procedures
- bituminous materials and their characteristics
- processes for heating bitumen
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- processes for the calculation of material requirements, application rates and travel speed
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- safe operating techniques in all terrain
- JSAs/safe work method statements
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| **Environmental protection requirements may include:** | • organisational/project environmental management plan  
• waste management  
• water quality protection  
• noise  
• vibration  
• dust and clean-up management |
### Bitumen sprayer

**Refers to:**
- vehicles which are purpose built, self contained units fitted with pumping and heating equipment that can load, mix heat and spray bituminous materials onto a pavement at a specified rate: they also provide facilities for hand spraying

### Materials

May include:
- bitumen
- cutback bitumen
- polymer modified binders
- multi-grade bitumen
- bitumen emulsions
- kerosene
- distillate
- adhesion agents

### Record

May include:
- necessary calculations for quantities and rates of application achieved

### Bitumen spraying

Is restricted to include mechanical bitumen: sprayers only and may include
- nominated rates of application
- uniformity
- loading
- unloading
- transferring
- heating
- spraying
- hand lancing

### Hand lancing techniques

May include:
- vehicle being positioned so that hoses are not run over or entangled
- correct pump pressure is used
- area is sprayed to specification
- a lookout is used to watch hoses and for other workers/public

### Conditions

May include:
- weather conditions including visibility day or night, prevailing winds and dust

### Unit Sector(s)

Bituminous Surfacing

### Competency field

Refer to Unit Sector(s).
Co-requisite units

Not applicable.
RIICBS308A Load aggregate using a purpose built loader

Modification History
Not applicable.

Unit Descriptor
This unit covers the loading of aggregate using a purpose built loader in the civil construction industry. It includes planning and preparing, preparing loader for operation, managing stack site, loading, screening and pre-coating aggregate, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</td>

| 1. Plan and prepare | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Obtain and confirm safety requirements from the site safety plan and organisational policies and procedures, and apply to the allotted task  
1.3. Identify, obtain and implement signage requirements from the project traffic management plan  
1.4. Select plant, tools and equipment to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.5. Identify environmental protection requirements from the project environmental management plan, and confirm and apply to the allotted task |
| 2. Prepare loader for operation | 2.1. Conduct pre-operational checks on loader in accordance with manufacturer's handbook or company instructions  
2.2. Check type and quantity of pre-coat in tank and adjust to required level  
2.3. Check loader vehicle for functionality  
2.4. Check pre-coating requirements and select correct loader size  
2.5. Record material quantities and screen sizes  
2.6. Select screens appropriate to the aggregate size |
| 3. Manage stack site | 3.1. Identify and record aggregate sizes  
3.2. Check ground conditions at stack site to minimise contamination  
3.3. Estimate and record quantities in aggregate stockpiles  
3.4. Identify suitable parking availability and reserve for trucks while waiting and loading  
3.5. Position truck entry/exit signs as required  
3.6. Keep stack site free from contamination by pre-coat material |
<p>| 4. Load/screen/pre-coat aggregate | 4.1. Direct trucks into position to minimise dust to workers and contamination of aggregates |</p>
<table>

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to load aggregate using a purpose built loader:

- apply legislative, organisation and site requirements and procedures for loading aggregate using a purpose built loader
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to load aggregate using a purpose built loader:

- site and equipment safety requirements
- aggregate types, characteristics and uses
- aggregate loading procedures
- aggregate screening and pre-coating procedures
- stock pile control
- dust control
- silica, its properties and dangers
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- processes for the calculation of material quantities
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>

</tbody>
</table>

**Context of and specific resources for assessment**

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical
| resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.  
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.  
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.  
- Aboriginal people and other people from a non English speaking background may have second language issues.  
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:  
- written and/or oral assessment of the candidate's required knowledge  
- observed, documented and/or first hand testimonial evidence of the candidate's:  
- implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes  
- consistent achievement of required outcomes  
- first hand testimonial evidence of the candidate's:  
- working with others to undertake and complete the loading of aggregate using a purpose built loader |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisational and site requirements and procedures |
|                                            | manufacturer's guidelines and specifications |
|                                            | Australian standards |
|                                            | Employment and workplace relations legislation |
|                                            | Equal Employment Opportunity and Disability Discrimination legislation |

| Safety requirements may include: | OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances |
|                                | safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance are kept from excavations, and areas secured from unauthorised access or movement |
|                                | safe operating procedures including recognising and preventing hazards associated with uneven/unstable terrain, trees, pits, poles, trip hazards, dirt mounds, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working in proximity to others, worksite visitors and the public |
|                                | recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials |
|                                | emergency procedures related to equipment |
| **Site may include:** | • car parks  
• airport runways  
• container yards  
• hard stands  
• footpaths  
• bikeways  
• roadways |
|-----------------------|---------------------------------------------------------------|
| **Signage may include:** | • escort vehicle  
• highway traffic signs  
• site safety signage  
• temporary signage for the benefit of motorists and pedestrians  
• traffic conditions signage |
| **Traffic conditions may include:** | • congested urban environments  
• low traffic rural areas  
• off-road un-trafficked areas  
• buildings  
• parking sites  
• pedestrian areas |
| **Tools and equipment may include:** | • purpose built aggregate loaders  
• screens  
• tool kits |
| **Environmental protection requirements may include:** | • organisational/project environmental management plan  
• waste management  
• water quality protection  
• noise  
• vibration  
• dust and clean-up management |
| **Loader may include:** | • truck mounted loader that can load, screen and pre-coat aggregate in one operation  
• trailer mounted that can screen and pre-coat in one operation (usually fed by a front end loader) |
| **Materials may include:** | • sealing aggregates  
• pre-coated aggregates  
• coating materials |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct self propelled aggregate spreader operations:

- apply legislative, organisation and site requirements and procedures for self propelled aggregate spreader operations
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct self propelled aggregate spreader operations:

- site and equipment safety requirements
- aggregates
- aggregate spreading procedures
- sprayed sealing operations
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- processes for the calculation of material requirements, application rates and travel speed:
  - materials safety data sheets and materials handling methods
  - project quality requirements
  - civil construction terminology
  - safe operating techniques in all terrain
- JSAs/safe work method statements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | \- legislative, organisational and site requirements and procedures  
\- manufacturer's guidelines and specifications  
\- Australian standards  
\- Employment and workplace relations legislation  
\- Equal Employment Opportunity and Disability Discrimination legislation |
| --- | --- |
| Safety requirements may include: | \- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances  
\- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance are kept from excavations, and areas secured from unauthorised access or movement  
\- safe operating procedures including recognising and preventing hazards associated with uneven/unstable terrain, trees, pits, poles, trip hazards, dirt mounds, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working in proximity to others, worksite visitors and the public  
\- recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials  
\- emergency procedures related to equipment |
**Operation** including emergency shutdown and stopping, extinguishing equipment fires, organisational First Aid requirements and evacuation.

**Site** may include:
- car parks
- airport runways
- container yards
- hard stands
- footpaths
- bikeways
- roadways

**Signage** may include:
- escort vehicle
- highway traffic signs
- site safety signage
- temporary signage for the benefit of motorists and pedestrians
- traffic conditions signage

**Traffic conditions** may include:
- congested urban environments
- low traffic rural areas
- off-road un-trafficked areas
- buildings
- parking sites
- pedestrian areas

**Tools and equipment** may include:
- self propelled aggregate spreaders and shovels
- calibration equipment

**Environmental protection requirements** may include:
- organisational/project environmental management plan
- waste management
- water quality protection
- noise
- vibration
- dust and clean-up management

**Aggregate** is applied to:
- sprayed binder which has been distributed to surfaces that are to include but not be limited to granular materials, sprayed sealing, asphalt and may include concrete

**Changing work conditions** may include:
- surface materials
- size and geometry of area to be spread
- proximity to traffic and public
- dust sensitive situations
- aggregate seal size
| Materials may include: | • weather conditions  
• sealing aggregates  
• pre-coated aggregates |

</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and conduct patching operations |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- graphical instructions, signage, work schedules/plans/specifications, work bulletins, charts and hand drawings, memos, maps, material safety data sheets (MSDS) and diagrams or sketches
- safe work procedures or equivalent related to the conducting of patching operations
- regulatory/legislative requirements pertaining to the conducting of patching operations
- organisation work specifications and requirements
- instructions issued by authorised organisational or external personnel
- relevant Australian standards and Austroads
- AAPA advisory notes and code of practice
- quality requirements including dimensions, tolerances, standards of work and material standards as detailed in the project drawings, specifications and project documentation to meet client satisfaction
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Safety requirements may include:

- OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of first aid equipment, hazard control and hazardous materials and substances
- safe operating procedures including recognising
and preventing hazards associated with traffic, uneven/unstable terrain, poles, dirt mounds, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working in proximity to others, worksite visitors and the public

- safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement
- hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials
- emergency procedures related to equipment operation including emergency shutdown and stopping, extinguishing equipment fires, organisational first aid requirements and evacuation

<table>

</tr>
</tbody>
</table>
Environmental protection requirements may include:
- organisational/project environmental management plan
- waste management
- water quality protection
- noise
- vibration
- dust and clean-up management

Patching operations truck refers to:
- a purpose built machine that is able to clean the area to be patched and apply bitumen emulsion and small size aggregate to fill/repair the area to be treated, set up to carry bitumen emulsion, aggregate, tools and equipment to prepare the patch, spray the emulsion and spread the aggregate

Damaged surfaces may include:
- pot holes
- stripped or worn areas
- other minor defects

Patching material may include:
- bitumen emulsion that is cationic and anionic

Patching work refers to:
- manual or automatic operating systems
- vehicle being positioned so that hoses/boom are not run over, entangled or hit by other vehicles, correct pump pressure is used, area is patched to specification, and a lookout is used to watch hoses/boom and for other workers/public

Materials may include:
- bitumen emulsion
- aggregates

</tr>
</thead>
</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain and confirm *safety requirements* from the *site* safety plan and organisational policies and procedures, and apply to the allotted task  
1.3. Select *plant, tools and equipment* to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.4. Identify, confirm and apply *environmental protection requirements* from the project environmental management plan |
| 2. Operate plant | 2.1. Determine production requirements  
2.2. Test aggregate and sand regularly as it arrives  
2.3. Monitor cold feed bins to ensure sufficient *raw material* is maintained  
2.4. Ensure proportion of material allocation is set to batch requirements  
2.5. Select *mix* design to batch requirements  
2.6. Heat and mix material to the correct temperature and tolerance  
2.7. Store material ready for dispatch and loading  
2.8. Monitor loading operations  
2.9. *Test* mixed material regularly for bitumen content and grading |
| 3. Carry out operator maintenance | 3.1. Conduct fault finding inspections  
3.2. Maintain equipment and mixing chamber to ensure good working order  
3.3. Carry out routine operational servicing and lubrication tasks  
3.4. Maintain equipment condition reports and records |
| 4. Clean up | 4.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan  
4.2. Clean, check, maintain and store plant, |
tools and equipment
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to produce asphalt products:

- apply legislative, organisation and site requirements and procedures for producing asphalt products
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to produce asphalt products:

- site and equipment safety requirements
- plant operations
- batching systems
- mix specifications (temperatures and tolerances)
- production requirements
- bituminous materials and their characteristics
- aggregate and sand properties and conformance
- additives
- processes for heating bitumen and controlling temperature
- testing procedures
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- processes for the calculation of material requirements and application rates
- materials safety data sheets and materials handling methods
- project quality requirements
- civil construction terminology
- JSAs/safe work method statements
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for producing asphalt products</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of producing asphalt products</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the production of asphalt products that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely production of asphalt products that safely, effectively and efficiently meets the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• completion of programming and planning of the mix specification for three separate mixes, with the temperature and mix produced within tolerance for 300 tonne of mix, without plant down time</td>
</tr>
</tbody>
</table>

## Context of and specific resources for assessment

• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.

• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.

• The assessment environment should not
disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
|                       | - written and/or oral assessment of the candidate's required knowledge
|                       | - observed, documented and/or first hand testimonial evidence of the candidate's:
|                       |   - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
|                       |   - consistent achievement of required outcomes
|                       |   - first hand testimonial evidence of the candidate's:
|                       |     - working with others to undertake and complete the production of asphalt products

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation  
• graphical instructions, signage, work schedules/plans/specifications, work bulletins, charts and hand drawings, memos, maps, material safety data sheets (MSDS) and diagrams or sketches  
• safe work procedures or equivalent related to the production of asphalt products  
• regulatory/legislative requirements pertaining to the production of asphalt products  
• instructions issued by authorised organisational or external personnel  
• relevant Australian standards and Austroads  
• AAPA advisory notes and code of practice  
• quality requirements including dimensions, tolerances, standards of work and material standards as detailed in the project drawings, specifications and project documentation to meet client satisfaction |

| Safety requirements may include: | • OHS requirements are to be in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan, including protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances  
• safe operating procedures including recognising and preventing hazards associated with moving |
| Project Safety Management | machinery, flammable, toxic and dangerous materials, personnel, working in proximity to others, worksite visitors and the public  
emergency procedures related to equipment operation including emergency shutdown and stopping, extinguishing equipment fires, organisational First Aid requirements and evacuation |
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Site</strong> may include:</td>
<td></td>
</tr>

</table>
- car parks  
- airport runways  
- container yards  
- hard stands  
- footpaths  
- bikeways  
- roadways |
| **Plant** may include: |  
- fixed  
- mobile plant |
| **Tools and equipment** may include: |  
- asphalt plant and loaders |
| **Environmental protection requirements** may include: |  
- organisational/project environmental management plan  
- waste management  
- water quality protection  
- noise  
- vibration  
- dust and clean-up management |
| **Materials** may include: |  
- aggregates  
- sand  
- various grades and types of bitumen  
- fly ash  
- additives  
- cutters  
- bitumen emulsions |
| **Mix** may include: |  
- cold mix (also known as pre-mix or SMK) is used for temporary patching of potholes, walkways, bike tracks and temporary pavements  
hot mix is used for roads, car parks and other long term requirements  
cold mix is usually produced at a lower temperature with cutter added to make the mix softer and extend usability |
| Test may include: | • monitoring bitumen content, grading and may include maximum theoretical density, bulk density, voids, stability and flow |

**Unit Sector(s)**
Bituminous Surfacing

**Competency field**
Refer to Unit Sector(s).

</thead>
</table>
| **1. Plan and prepare** | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain and confirm *safety requirements* from the *site* safety plan and organisational policies and procedures, and apply to the allotted task  
1.3. Select plant, *tools and equipment* to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.4. Identify, confirm and apply *environmental protection requirements* from the project environmental management plan |
| **2. Set up tanker for operation** | 2.1. Carry out pre-operational checks on *bitumen tanker*  
2.2. Fill ancillary tanks and ensure adequate *materials* are available to perform tanker operations  
2.3. Check tanks to prevent contamination  
2.4. Obtain load details, including correct amount of any additives |
| **3. Load tanker** | 3.1. Check previous load details for compatibility  
3.2. Load tank with the prescribed amount of material  
3.3. Add and mix additives to specifications  
3.4. Check temperature of the material to ensure compliance with manufacturer's specifications  
3.5. Measure, calculate and record material quantities and additives  
3.6. Heat materials in accordance with manufacturer's/suppliers' instructions |
| **4. Transfer materials** | 4.1. Set up transfer site according to Austroads Bitumen Sealing Safety Guide  
4.2. Confirm transfer procedures with depot supervisor/sprayer driver  
4.3. Transfer materials in accordance with organisational procedures  
4.4. Record details of transferred materials |
| 5. Empty tanker | 5.1. Empty tank into storage or waste in accordance with environmental plan  
| 5.2. Clean tank interior in accordance with organisation instructions or Austroads Bitumen Sealing Safety Guide |
|-----------------|-----------------------------------------------------------------------------------------------------------------------------------|
| 6. Carry out operator maintenance | 6.1. Inspect for faults in accordance with manufacturer's specifications and organisational requirements  
| 6.2. Carry out routine operational servicing and lubrication tasks  
| 6.3. Maintain equipment condition reports and records |
| 7. Clean up | 7.1. Clear work area and dispose of or recycle *materials* in accordance with project environmental management plan  
| 7.2. Clean, check, maintain and store plant, tools and equipment |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct bitumen tanker operations:

- apply legislative, organisation and site requirements and procedures for conducting bitumen tanker operations
- organise work activities
- select and use relevant tools and equipment safely
- identify and report on hazards related to the worksite and work activity
- communicate effectively to receive and clarify work instructions

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct bitumen tanker operations:

- bituminous materials
- site and equipment safety requirements
- bituminous materials and their characteristics
- processes for heating bitumen
- operational, maintenance and basic diagnostic procedures
- materials safety data sheets and materials handling methods
- treatment for bitumen burns
- quality requirements and environmental systems and standards
- handling and safe use of bitumen hoses
- civil construction terminology
- JSAs/safe work method statements
Evidence Guide

Bitumen tanker refers to:

- vehicles which are purpose built, self contained units and have the capability to load, unload, heat, transfer and circulate materials using their own pumping and heating systems
- tankers which may be truck mounted, semi trailers, towed or any other purpose built mechanically operated tanker

Materials may include:

- bitumen
- cutback bitumen and polymer modified binders (PMB)
- kerosene and distillate
- multi-grade bitumen
- bitumen emulsions
- adhesion agents

</thead>
</table>
| 1. Ensure appropriate planning and preparation of tasks is carried out | 1.1 Access, interpret and apply compliance documentation relevant to the work activity  
1.2 Access, interpret and clarify the specific task information and requirements relevant to undertaking asphalt paving and compaction  
1.3 Ensure a job plan is available which makes best use of the available resources and meets the task requirements |
| 2. Ensure appropriate initiation of tasks is carried out | 2.1 Confirm that the necessary resources are available for the safe, effective and efficient conduct of the tasks  
2.2 Ensure clear and timely instructions are communicated to team members and others involved, for the safe, effective and efficient conduct of the tasks, to meet the specific task requirements  
2.3 Set out tasks as required for the effective completion of the task |
| 3. Oversee the execution of tasks | 3.1 Monitor task performance to ensure it achieves the required outcomes  
3.2 Initiate adjustments to work practice or job plan to ensure safe execution of work and achievement of required outcomes  
3.3 Ensure plant equipment and tools maintenance requirements are carried out and recorded |
| 4. Report on the execution of tasks | 4.1 Complete and submit reports as required  
4.2 Recommend changes to improve the safety, efficiency and effectiveness of the execution of asphalt paving and compaction tasks |

### Required Skills and Knowledge

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to apply the principles for the asphalt paving and compaction:

- apply legislative, organisation and site requirements and procedures
• interpret project contract and specification requirements and procedures
• interpret project site soil and geological data
• identify soil and rock types
• interpret meteorological data
• identify drainage issues
• interpret material properties and test results, including compaction test results
• interpret project engineering survey information
• interpret project plans and drawings
• interpret project specifications
• prepare for and conduct briefings, toolbox and site meeting
• prepare short messages
• prepare and present job reports
• prepare and maintain log books and diaries
• provide leadership
• apply performance monitoring skills
• apply set out requirements and procedures
• set up and use levelling devices
• establish construction offsets
• apply supervisory skills
• develop workplace relationships
• develop individuals and the team
• apply inspection requirements and procedures
• calculate quantities for the execution of tasks, including:
  • volumes
  • tonnage required
  • paver and roller speeds
  • grades
  • percentages
  • areas
• resource consumption figures, including required supply rates
• provide recommendations for the improvement of the safe, effective and efficient execution
  of asphalt paving and compaction tasks

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its
application in a variety of circumstances in which the unit may be used. This includes
knowledge of the following, as required to apply the principles for the asphalt paving and
compaction:

• risk assessment and management requirement and procedures
• statutory compliance requirements and procedures
• occupational health and safety requirements and procedures
• environmental management requirements and procedures
**Evidence Guide**

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</tbody>
</table>
EVIDENCE GUIDE

- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate’s required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate’s:
- implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
- consistently achieving the required outcomes
- first hand testimonial evidence of the candidate’s:
- working with others to plan, prepare and conduct asphalt paving and compaction
- provision of clear and timely instruction and supervision by the individual of those involved in the conduct of asphalt paving and compaction

Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:

- legislative, organisational and site requirements and procedures
- manufacturer’s guidelines and specifications
### RANGE STATEMENT

- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Specific task information and requirements may include:

- site meteorological data, including:
  - rainfall
  - humidity
  - temperature
  - wind
- known and potential site hazards, constraints and conditions
- site cultural and heritage information
- task specifications
- site engineering survey data
- task drawings
- sources of materials
- types of asphalt
- other organisations and contractors involved in the task or related tasks
- coordination, timing and budgeting requirements

### Asphalt paving and compaction may include:

- new pavement construction
- existing pavement repair and maintenance

### Job plan is to include:

- human resource requirements
- plant and machinery requirements
- construction materials requirements
- sub-contractor support requirements
- waste disposal requirements
- coordination requirements
- activity scheduling
- materials delivery scheduling
- risk assessment and management requirements
- occupational health and safety requirements
- quality management requirements, including testing scheduling requirements
- traffic management requirements
- environmental requirements
- task monitoring requirements
- task performance monitoring requirements
- communication requirements

Unit Sector(s)
Bituminous Surfacing

Competency field
Bituminous Surfacing

Co-requisite units
Not applicable.
RIICBS402B Apply the principles for the application of bituminous sprayed treatment

Modification History
Not applicable.

Unit Descriptor
This unit covers the supervision the application of bituminous sprayed treatment in the civil construction industry. It includes the requirements for ensuring that the planning, preparing, initiating, monitoring, adjusting and reporting for bituminous sprayed treatment tasks are carried out in accordance with the accepted industry principles.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, applying the principles for the application of bituminous sprayed treatment within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Ensure appropriate planning and preparation is carried out for tasks | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Access, interpret and clarify the specific task information and requirements relevant to undertaking bituminous sprayed treatment task  
1.3. Ensure a job plan, is available which makes best use of the available resources and the task requirements |
| 2. Ensure appropriate initiation for tasks is carried out | 2.1. Ensure clear and timely instructions are communicated to team members and others involved, for the safe, effective and efficient conduct of the tasks, to meet the specific task requirements  
2.2. Confirm that the necessary resources are available for the safe, effective and efficient conduct of the tasks  
2.3. Set out as required for the effective completion of the task |
| 3. Oversee the execution of tasks | 3.1. Monitor bituminous sprayed treatment task performance to ensure it achieves the required outcomes  
3.2. Initiate adjustments to work practice or job plan to ensure safe execution of work and achievement of required outcomes  
3.3. Ensure plant equipment and tools maintenance requirements are carried out and recorded |
4.2. Recommend changes to improve the safety, efficiency and effectiveness of the execution of bituminous sprayed treatment tasks |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- interpret project site soil and geological data
- identify soil and rock types
- interpret meteorological data
- identify drainage issues
- interpret material properties and test results
- interpret project plans and drawings
- interpret project specifications
- prepare for and conduct briefings, toolbox and site meeting
- prepare short messages
- prepare and present job reports
- prepare and maintain log books and diaries
- provide leadership
- apply performance monitoring skills
- apply set out requirements and procedures
- set up and use levelling devices
- establish construction offsets
- apply supervisory skills
- develop workplace relationships
- develop individuals and the team
- conduct and interpret the outcomes of visual assessments of completed works, including bleeding and stripping
- calculate quantities, including:
  - volumes
  - tonnages of materials
  - sprayer forward speed
  - materials’ rates of application
  - additive requirements
  - areas
  - resource consumption figures, including required supply rates
- provide recommendations for the improvement of the safe, effective and efficient execution of tasks

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to apply bituminous sprayed treatment:
• risk assessment and management requirement and procedures
• statutory compliance requirements and procedures
• occupational health and safety requirements and procedures
• environmental management requirements and procedures
• quality management requirements and procedures
• work zone traffic management requirements and procedures
• contract management requirements and procedures
• communication requirements and procedures
• administrative requirements and procedures
• bituminous sprayed treatment plant and equipment capabilities and application
• plant, equipment and tools maintenance requirements and procedures
• operational techniques for the execution of various bituminous sprayed treatment tasks, including:
  • priming or pre-sealing
  • normal bitumen sealing
  • polymer modified binder sealing
  • use of different aggregate sizes
• requirements for low, low-medium, high and very high traffic conditions
• pavement preparation requirements and procedures
• sprayer and spreader calibration requirements and procedures
• design rates of application of bituminous spray treatment materials
• bituminous sprayed treatment task resource requirements and procedures
• activities scheduling requirements and procedures
• bituminous sprayed treatment materials delivery requirements and procedures
• job plan drafting of and administration requirements and procedures
• reporting requirements and procedures
• workplace relationship requirements and procedures
• organisational, client and site operational requirements
• relationship between various areas of civil works
• team leadership techniques
• materials quality and delivery requirements and procedures
• mentoring techniques
• estimating principles
• civil works construction sequencing
• spray sealing and related activities’ terminology
• set out requirements and procedures
• road geometry
• ground surface treatment requirements and procedures e.g. proof rolling
• pavement drainage requirements
• works planning techniques
• monitoring methods
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

RIICBS404B Apply the principles for the selection and use of bituminous emulsion

Modification History
Not applicable.

Unit Descriptor
This unit covers the supervision of bituminous emulsion selection and use in Civil Construction. It includes the requirements for ensuring that the planning, preparing, initiating, monitoring, adjusting and reporting of bituminous emulsion selection and use are carried out in accordance with the accepted industry principles.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, for bituminous emulsion selection and use within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Ensure appropriate planning and preparation of tasks is carried out | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Access, interpret and clarify the specific task information and requirements relevant to undertaking bituminous emulsion selection and use tasks  
1.3. Ensure a job plan, is available which makes best use of the available resources and meets task requirements |
| 2. Ensure appropriate initiation of tasks is carried out | 2.1. Confirm that the necessary resources are available for the safe, effective and efficient conduct of tasks  
2.2. Ensure clear and timely instructions are communicated to team members and others involved, for the safe, effective and efficient conduct of the specific task requirements  
2.3. Set out tasks as required for the effective completion of the task |
| 3. Oversee the execution of tasks | 3.1. Monitor bituminous emulsion selection and use performance to ensure it achieves the required outcomes  
3.2. Initiate adjustments to work practice or job plan to ensure safe execution of work and achievement of required outcomes  
3.3. Ensure plant equipment and tools maintenance requirements are carried out and recorded |
| 4. Report on the execution of tasks | 4.1. Complete and submit reports as required  
4.2. Recommend changes to improve the safety, efficiency and effectiveness of the execution of tasks |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to supervise bituminous emulsion selection and use:

- apply legislative, organisation and site requirements and procedures
- interpret project contract and specification requirements and procedures
- interpret project site soil and geological data
- identify soil and rock types
- interpret meteorological data
- identify drainage issues
- interpret material properties and test results, including compaction test results
- interpret project plans and drawings
- interpret project specifications
- prepare for and conduct briefings, toolbox and site meeting
- prepare short messages
- prepare and present job reports
- prepare and maintain log books and diaries
- provide leadership
- apply performance monitoring skills
- apply set out requirements and procedures
- apply bituminous emulsion selection processes
- establish construction offsets
- apply supervisory skills
- develop workplace relationships
- develop individuals and the team
- apply inspection requirements and procedures
- calculate quantities for the execution of tasks, including:
  - volumes
  - tonnage required
  - paver and roller speeds
  - grades
  - percentages
  - areas
  - resource consumption figures, including required supply rates
  - interpret bituminous emulsion properties and test results
- provide recommendations for the improvement of the safe, effective and efficient execution of bituminous emulsion selection and use
### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to supervise bituminous emulsion selection and use:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- work zone traffic management requirements and procedures
- contract management requirements and procedures
- communication requirements and procedures
- administrative requirements and procedures
- types of bituminous emulsion, their specifications, applications and constraints on their use
- bituminous emulsion heating, handling and storage methods
- bituminous emulsion plant and equipment capabilities
- bituminous emulsion manufacturing processes
- plant, equipment and tools maintenance requirements and procedures
- operational techniques for the execution of bituminous emulsion tasks
- bituminous emulsion task resource requirements and procedures
- activities scheduling requirements and procedures
- bituminous emulsion delivery requirements and procedures
- job plan drafting of and administration requirements and procedures
- reporting requirements and procedures
- workplace relationship requirements and procedures
- organisational, client and site operational requirements
- relationship between various areas of civil works
- team leadership techniques
- works planning techniques
- bituminous emulsion monitoring methods
- bituminous emulsion sampling and testing methods
- materials quality and delivery requirements and procedures
- mentoring techniques
- estimating principles
- civil works construction sequencing
- bituminous emulsion and related activities’ terminology
- set out requirements and procedures
- road geometry
- ground surface treatment requirements and procedures e.g. proof rolling
• pavement drainage requirements
• monitoring methods
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

equity issues.
## Range Statement

| Relevant compliance documentation | • legislative, organisational and site requirements and procedures  
| | • manufacturer’s guidelines and specifications  
| | • Australian standards  
| | • code of practice  
| | • Employment and workplace relations legislation  
| | • Equal Employment Opportunity and Disability Discrimination legislation  

| Specific task information and requirements | • site meteorological data, including:  
| | • rainfall  
| | • humidity  
| | • temperature  
| | • wind  
| | • known and potential site hazards, constraints and conditions  
| | • site cultural and heritage information  
| | • task specifications  
| | • task drawings  
| | • sources of materials  
| | • other organisations and contractors involved in the task or related tasks  

| Bituminous emulsion selection and use may include: | • new pavements sealing  
| | • existing pavement repair and rehabilitation  
| | • their use as tack coat for asphalt, as spray seal, cold mix and stabilisation binders and in slurry sealing  
| | • modification with polymers  

| Bituminous emulsion selection and use tasks may include: | • site preparation methods  
| | • load and haulage methods  
| | • heating, handling and storage methods  
| | • placement methods  
| | • distribution methods  
| | • surface finishing methods  
| | • line, grade and level control methods  
| | • compaction and water selection and use methods  
| | • sediment control methods  
| | • application as tack coat for asphalt, as spray seal, cold mix and stabilisation binders and in slurry sealing  

| Job plan is to include: | • human resource requirements  
| | • plant and machinery requirements  
| | • construction materials requirements  

- sub-contractor support requirements
- waste disposal requirements
- coordination requirements
- activity scheduling
- materials delivery scheduling
- risk assessment and management requirements
- occupational health and safety requirements
- quality management requirements, including testing scheduling requirements
- traffic management requirements
- environmental requirements
- task monitoring requirements
- task performance monitoring requirements
- communication requirements
- reporting requirements

### Resources are to include:
- labour
- plant, equipment and tools
- highway haulage vehicles
- construction materials
- sub-contractor services

### Instructions are to include:
- briefings
- handovers
- work orders
- toolbox meetings
- site meetings

### Teams members may include:
- other members of the organisation’s management team
- members of the team directly involved in the task
- suppliers representatives
- sub-contractors representatives
- supervisors or managers of other organisations who are involved in related tasks

### Set out is to include:
- control lines
- cleared width
- batters
- off-sets

### Monitor is to include:
- ongoing risk assessment
- engineering survey
- sampling and testing
- observation and recording
- general supervision
**Required outcomes may include:**
- task specifications requirements
- task drawings requirements
- coordination requirements
- activity scheduling requirements
- unit cost requirements
- overall task cost requirements
- waste management requirements

<table>

# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:

- legislative, organisational and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Specific task information and requirements may include:

- site geological data
- site geotechnical data
- site meteorological data
- site engineering survey data
- known and potential site hazards, constraints and conditions
- site cultural and heritage information
- task specifications
- task drawings
- sources of materials
- other organisations and contractors involved in the task or related tasks
- coordination, timing and budgeting requirements

### Slurry surfacing application may include:

- new pavement sealing
- existing pavement repair and rehabilitation
- its use in rut filling, shape core

### Job plan may include:

- human resource requirements
- plant and machinery requirements
- construction materials requirements
- sub-contractor support requirements
- waste disposal requirements
- coordination requirements
- activity scheduling
- materials delivery scheduling
- risk assessment and management requirements
- occupational health and safety requirements
- quality management requirements, including materials and product sampling and testing requirements
- plant area traffic management requirements
- environmental requirements
- task monitoring requirements
- task performance monitoring requirements
- communication requirements
- reporting requirements

**Resources** may include:
- labour
- plant, equipment and tools
- highway haulage vehicles
- materials for the manufacture of cold mix
- sub-contractor services

**Instructions** may include:
- briefings
- handovers
- work orders
- toolbox meetings
- site meetings

**Team members** may include:
- other members of the organisation's management team
- members of the team directly involved in the task
- suppliers representatives
- sub-contractors representatives
- supervisors or managers of other organisations who are involved in related tasks

**Monitor** may include:
- ongoing risk assessment
- sampling and testing
- process control information
- observation and recording
- general supervision

**Required outcomes** may include:
- slurry specifications requirements
- coordination requirements
- activity scheduling requirements
- unit cost requirements
- overall task cost requirements
- waste management requirements

**Initiate** may include:
- written communication
- oral communication

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisational and site requirements and procedures |
| | manufacturer's guidelines and specifications |
| | Australian standards |
| | code of practice |
| | Employment and workplace relations legislation |
| | Equal Employment Opportunity and Disability Discrimination legislation |

| Specific task information and requirements may include: | site geological and geotechnical data, including: |
| | rock types and characteristics |
| | soil types and characteristics |
| | site meteorological data, including: |
| | rainfall |
| | humidity |
| | temperature |
| | wind |
| | known and potential site hazards, constraints and conditions |
| | site cultural and heritage information |
| | cold mix specifications |
| | sources of materials and their specifications |
| | other organisations and contractors involved in the task or related tasks |
| | materials and product sampling and testing requirements |
| | coordination, timing and budgeting requirements |

| Pavement profiling using a profiler may include: | existing pavement repair and rehabilitation |
| | removal or excavation of: |
| | existing subgrade |
| | granular loose material or surfacing |
| | asphalt |
- concrete
- trenching of asphalt or concrete
- regulating surface profile
- small areas to large works
- clean up of finished surfaces to remove loose or dusty materials
- side casting or loading into trucks

### Job plan

is to include:

- human resource requirements
- plant and machinery requirements
- construction materials requirements
- sub-contractor support requirements
- waste disposal requirements
- coordination requirements
- activity scheduling
- materials delivery scheduling
- risk assessment and management requirements
- occupational health and safety requirements
- quality management requirements, including materials and product sampling and testing requirements
- plant area traffic management requirements
- environmental requirements
- task monitoring requirements
- task performance monitoring requirements
- communication requirements
- reporting requirements

### Resources

are to include:

- labour
- plant, equipment and tools
- highway haulage vehicles
- materials for the manufacture of cold mix
- sub-contractor services

### Instructions

are to include:

- briefings
- handovers
- work orders
- toolbox meetings
- site meetings

### Team members

may include:

- other members of the organisation's management team
- members of the team directly involved in the task
- suppliers representatives
- sub-contractors representatives

Refer to Unit Sector(s).

**Co-requisite units**

Not applicable.
RIICBS407A Apply the principles for the manufacture and delivery of hot mix asphalt

Modification History
Not applicable.

Unit Descriptor
This unit covers the supervision of the manufacture and delivery of hot mix asphalt in the civil construction industry. It includes the requirements for ensuring that the planning, preparing, initiating, monitoring, adjusting and reporting of the manufacture and delivery of hot mix asphalt are carried out in accordance with the accepted industry principles.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, to apply the principles for the manufacture and delivery of hot mix asphalt within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Ensure appropriate planning and preparation is carried out | 1.1. Access, interpret and apply **compliance documentation** relevant to the work activity  
1.2. Access, interpret and clarify the **specific task information and requirements** relevant to undertaking the **manufacture and delivery of hot mix asphalt**  
1.3. Ensure a **job plan** is available which makes best use of the available resources and meets the manufacture and delivery requirements |
| 2. Ensure appropriate initiation of manufacture and delivery | 2.1. Confirm that the necessary **resources** are available for the safe, effective and efficient conduct of the tasks  
2.2. Ensure clear and timely **instructions** are communicated to **team members** and others involved, for the safe, effective and efficient conduct of the manufacture and delivery |
| 3. Oversee the execution of manufacture and delivery | 3.1. **Monitor** the hot mix asphalt manufacture and delivery performance to ensure it achieves the **required outcomes**  
3.2. **Initiate** adjustments to manufacturing and delivery practice or job plan to ensure safe execution of work and achievement of required outcomes  
3.3. Ensure plant equipment and tools maintenance requirements are carried out and recorded |
| 4. Report on the execution of manufacture and delivery | 4.1. Complete and submit reports as required  
4.2. Recommend changes to improve the safety, efficiency and effectiveness of the execution of the manufacture and delivery of hot mix asphalt |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to apply the principles for the manufacture and delivery of hot mix asphalt:

- apply legislative, organisation and site requirements and procedures
- interpret project contract and specification requirements and procedures
- interpret project site soil and geological data
- identify soil and rock types
- interpret meteorological data
- identify drainage issues
- interpret material properties and test results, including compaction test results
- interpret project site geotechnical data
- interpret project site hydrological data
- interpret project engineering survey information
- interpret project plans and drawings
- interpret project specifications
- prepare for and conduct briefings, toolbox and site meeting
- prepare short messages
- prepare and present job reports
- prepare and maintain log books and diaries
- provide leadership
- apply performance monitoring skills
- apply supervisory skills
- develop workplace relationships
- develop individuals and the team
- apply inspection requirements and procedures
- select binders
- calculate quantities for the execution of the manufacture and delivery of hot mix asphalt, including:
  - volumes
  - tonnages
  - grades
  - percentages
  - resource consumption figures
- provide recommendations for the improvement of the safe, effective and efficient execution of the manufacture and delivery of hot mix asphalt
### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to apply the principles for the manufacture and delivery of hot mix asphalt:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures, including aggregates, binders and product
- work zone traffic management requirements and procedures
- contract management requirements and procedures
- communication requirements and procedures
- administrative requirements and procedures
- hot mix asphalt manufacturing and delivery plant and equipment capabilities and application
- plant, equipment and tools maintenance requirements and procedures
- hot mix delivery truck loading requirements and procedures
- operational techniques for the execution of the manufacture and delivery of hot mix asphalt
- hot mix asphalt raw materials and product handling, storage, moisture and temperature control requirements and procedures
- hot mix asphalt manufacturing and delivery resource requirements and procedures
- hot mix asphalt raw materials and product delivery requirements and procedures
- hot mix asphalt manufacturing sampling, testing and production monitoring methods
- activities scheduling requirements and procedures
- job plan drafting of and administration requirements and procedures
- reporting requirements and procedures
- workplace relationship requirements and procedures
- organisational, client and site operational requirements
- relationship between various areas of civil works
- team leadership techniques
- works planning techniques
- engineering survey principles
- mentoring techniques
- estimating principles
- road construction sequencing
- asphalt manufacture and delivery and related activities' terminology
- works planning techniques
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
|---|---|
|  | • knowledge of the requirements, procedures and instructions for the manufacture and delivery of hot mix asphalt
|  | • implementation of procedures and techniques for the safe, effective and efficient manufacture and delivery of hot mix asphalt
|  | • working with others to plan, prepare and conduct the manufacture and delivery of hot mix asphalt
|  | • provision of clear and timely instruction and supervision by the individual of those involved in the manufacture and delivery of hot mix asphalt
|  | • evidence of the consistent successful manufacture and delivery of hot mix asphalt

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Evidence for assessment is best gathered using the outcomes of products and processes in the workplace.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those
required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to plan, prepare and conduct the manufacture and delivery of hot mix asphalt
  - provision of clear and timely instruction and supervision by the individual of those involved in the manufacture and delivery of hot mix asphalt

**Guidance information for**

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to apply the principles of the manufacture of cold mix:

- apply legislative, organisation and site requirements and procedures
- interpret project contract and specification requirements and procedures
- interpret project geological data
- identify rock types
- interpret meteorological data
- interpret material properties and test results, including compaction test results
- interpret project geotechnical data
- interpret project hydrological data
- interpret project plans and drawings
- interpret project specifications
- prepare for and conduct briefings, toolbox and site meeting
- prepare short messages
- prepare and present job reports
- prepare and maintain log books and diaries
- provide leadership
- apply performance monitoring skills
- apply supervisory skills
- develop workplace relationships
- develop individuals and the team
- apply inspection requirements and procedures
- calculate quantities for the execution of tasks, including:
  - volumes
  - tonnage required
  - grades
  - percentages
  - areas
  - resource consumption figures, including required supply rates
- interpret cold mix materials and product properties and test results
- provide recommendations for the improvement of the safe, effective and efficient execution of the manufacture of cold mix

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit.
particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to apply the principles of the manufacture of cold mix:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures, including aggregate, binder and product sampling and testing
- contract management requirements and procedures
- communication requirements and procedures
- administrative requirements and procedures
- cold mix manufacturing plant and equipment capabilities and application
- plant, equipment and tools maintenance requirements and procedures
- binder and product handling and storage requirements and procedures
- cold mix delivery truck loading requirements and procedures
- operational techniques for the execution of the manufacture of cold mix

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to supervise of the manufacture of polymer modified binder:

- apply legislative, organisation and site requirements and procedures
- interpret project contract and specification requirements and procedures
- interpret project site soil and geological data
- identify soil and rock types
- interpret meteorological data
- interpret material properties and test results, including compaction test results
- interpret project site geotechnical data
- interpret project site hydrological data
- interpret project engineering survey information
- interpret project plans and drawings
- interpret project specifications
- prepare for and conduct briefings, toolbox and site meeting
- prepare short messages
- prepare and present job reports
- prepare and maintain log books and diaries
- provide leadership
- apply performance monitoring skills
- apply supervisory skills
- develop workplace relationships
- develop individuals and the team
- apply inspection requirements and procedures
- calculate quantities for the execution of tasks, including:
  - volumes
    - tonnage required
    - percentages
    - areas
    - resource consumption figures, including required supply rates
- interpret polymer modified binder properties and test results,
- provide recommendations for the improvement of the safe, effective and efficient execution of the manufacture of polymer modified binder

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit,
particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to supervise of the manufacture of polymer modified binder:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- contract management requirements and procedures
- communication requirements and procedures
- administrative requirements and procedures
- polymer modified binder manufacturing plant and equipment capabilities and application
- plant, equipment and tools maintenance requirements and procedures
- operational techniques for the execution of the manufacture of polymer modified binder
- polymer modified binder manufacture resource requirements and procedures
- activities scheduling requirements and procedures
- polymer modified binder raw materials and product delivery requirements and procedures
- job plan drafting of and administration requirements and procedures
- reporting requirements and procedures
- workplace relationship requirements and procedures
- organisational, client and site operational requirements
- relationship between various areas of civil works
- team leadership techniques
- works planning techniques
- polymer modified binder manufacture monitoring methods
- engineering survey principles
- materials quality and delivery requirements and procedures
- mentoring techniques
- estimating principles
- civil works construction sequencing
- works planning techniques
- monitoring methods
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the supervision of the manufacture of polymer modified binder</td>
</tr>
<tr>
<td></td>
<td>• implementation of procedures and techniques for the safe, effective and efficient supervision of the manufacture of polymer modified binder</td>
</tr>
<tr>
<td></td>
<td>• working with others to plan, prepare and conduct the manufacture of polymer modified binder</td>
</tr>
<tr>
<td></td>
<td>• provision of clear and timely instruction and supervision by the individual of those involved in the manufacture of polymer modified binder</td>
</tr>
<tr>
<td></td>
<td>• evidence of the consistent successful supervision of the manufacture of polymer modified binder</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Evidence for assessment is best gathered using the outcomes of products and processes in the workplace.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those
| **Method of assessment** | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate’s required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate’s:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate’s:
  - working with others to plan, prepare and conduct the manufacture of polymer modified binder
  - provision of clear and timely instruction and supervision by the individual of those involved in the conduct of the manufacture of polymer modified binder |

| **Guidance information for** | Consult the SkillsDMC User Guide for further |
| assessment | information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

<table>
<thead>
<tr>
<th>may include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>- legislative, organisational and site requirements and procedures</td>
</tr>
<tr>
<td>- manufacturer's guidelines and specifications</td>
</tr>
<tr>
<td>- Australian standards</td>
</tr>
<tr>
<td>- code of practice</td>
</tr>
<tr>
<td>- Employment and workplace relations legislation</td>
</tr>
<tr>
<td>- Equal Employment Opportunity and Disability Discrimination legislation</td>
</tr>
</tbody>
</table>

### Specific task information and requirements

<table>
<thead>

<td>• engineering survey</td>
</tr>
</tbody>
</table>
Required outcomes may include:
- task specifications requirements
- task drawings requirements
- coordination requirements
- activity scheduling requirements
- unit cost requirements
- overall task cost requirements
- waste management requirements

Initiate is to include:
- written communication
- oral communication

Unit Sector(s)
Bituminous Surfacing

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIICBS410A Apply the principles for the manufacture of bituminous emulsion

Modification History
Not applicable.

Unit Descriptor
This unit covers the supervision of the manufacture of bituminous emulsion in Civil Construction. It includes the requirements for ensuring that the planning, preparing, initiating, monitoring, adjusting and reporting of the manufacture of bituminous emulsion are carried out in accordance with the accepted industry principles.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, for the manufacture of bituminous emulsion within:

- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Ensure appropriate planning and preparation of tasks is carried out | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Access, interpret and clarify the specific task information and requirements relevant to undertaking the manufacture of bituminous emulsion  
1.3. Ensure a job plan is available which makes best use of the available resources and meets task requirements |
| 2. Ensure appropriate initiation of tasks is carried out | 2.1. Confirm that the necessary resources are available for the safe, effective and efficient conduct of the tasks  
2.2. Ensure clear and timely instructions are communicated to team members and others involved, for the safe, effective and efficient conduct of the tasks, to meet the specific task requirements |
| 3. Oversee the execution of tasks | 3.1. Monitor the manufacture of bituminous emulsion performance to ensure it achieves the required outcomes  
3.2. Initiate adjustments to work practice or job plan to ensure safe execution of work and achievement of required outcomes  
3.3. Ensure plant equipment and tools maintenance requirements are carried out and recorded |
| 4. Report on the execution of tasks | 4.1. Complete and submit reports as required  
4.2. Recommend changes to improve the safety, efficiency and effectiveness of the execution of tasks |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to supervise the manufacture of bituminous emulsion:

- apply legislative, organisation and site requirements and procedures
- interpret project contract and specification requirements and procedures
- interpret project geological data
- identify rock types
- interpret meteorological data
- interpret material properties and test results, including compaction test results
- interpret project geotechnical data
- interpret project hydrological data
- interpret project engineering survey information
- interpret project specifications
- prepare for and conduct briefings, toolbox and site meeting
- prepare short messages
- prepare and present job reports
- prepare and maintain log books and diaries
- provide leadership
- apply performance monitoring skills
- apply supervisory skills
- develop workplace relationships
- develop individuals and the team
- apply inspection requirements and procedures
- calculate quantities for the execution of tasks, including:
  - volumes
  - tonnage required
  - percentages
  - areas
  - resource consumption figures, including required supply rates
- interpret the manufacture of bituminous emulsion properties and test results
- provide recommendations for the improvement of the safe, effective and efficient execution of the manufacture of bituminous emulsion

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used.
This includes knowledge of the following, as required to supervise the manufacture of bituminous emulsion:

- risk assessment and management requirement and procedures
- statutory compliance requirements and procedures
- occupational health and safety requirements and procedures
- environmental management requirements and procedures
- quality management requirements and procedures
- work zone traffic management requirements and procedures
- contract management requirements and procedures
- communication requirements and procedures
- administrative requirements and procedures
- bituminous emulsion manufacturing plant and equipment capabilities and application
- plant, equipment and tools maintenance requirements and procedures
- operational techniques for the execution of the manufacture of bituminous emulsion
- bituminous emulsion resource requirements and procedures
- activities scheduling requirements and procedures
- bituminous emulsion raw materials and product delivery requirements and procedures
- job plan drafting of and administration requirements and procedures
- reporting requirements and procedures
- workplace relationship requirements and procedures
- organisational, client and site operational requirements
- relationship between various areas of civil works
- team leadership techniques
- works planning techniques
- bituminous emulsion manufacturing monitoring methods
- engineering survey principles
- materials quality and delivery requirements and procedures
- mentoring techniques
- estimating principles
- civil works construction sequencing
- manufacture of bituminous emulsion and related activities' terminology
- works planning techniques
- monitoring methods
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

<table>
<thead>
<tr>

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Evidence for assessment is best gathered using the outcomes of products and processes in the workplace.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
| Method of assessment | Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.  
| | Aboriginal people and other people from a non English speaking background may have second language issues.  
| | Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.  
| | Where applicable, physical resources should include equipment modified for people with disabilities.  
| | Access must be provided to appropriate learning and/or assessment support when required.  
| Guidance information for assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:  
| | written and/or oral assessment of the candidate's required knowledge  
| | observed, documented and/or first hand testimonial evidence of the candidate's  
| | implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes  
| | consistently achieving the required outcomes  
| | first hand testimonial evidence of the candidate's:
