BSBPMG508A Manage project risk

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to manage risk within a project to avoid adverse effects on project outcomes. It covers determining, monitoring and controlling project risks, and assessing risk management outcomes. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to an individual who is clearly and solely responsible for the management and leadership of a complex project, either as an employee of an organisation or an external consultant. In the context of this unit a complex project is defined as a project which involves:  
  - the need for a comprehensive and multi faceted project plan  
  - the need for a formal internal or external communications strategy  
  - a dedicated and diverse project budget  
  - multiple administrative components  
  - multiple operational components  
  - a wide range of stakeholders  
  - a project operations team.  
The functions performed by a program manager to manage risk within multiple projects are addressed in BSBPMG608A Direct risk management of a project program. |
Licensing/Regulatory Information
Not applicable.

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- demonstrated evidence of effective risk management for multiple complex projects
- knowledge of risk management techniques, strategies and tools.

#### Context of and specific resources for assessment

Assessment must ensure:

- access to workplace risk management documentation
- consideration of feedback from project stakeholders as to how risks were managed.

#### Method of assessment

A range of assessment methods should be used to assess practical skill and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- oral or written questioning to assess knowledge of the risk management framework
- analysis of responses in addressing case studies and scenarios which present project scope management issues and problems
- review of risk management plans
- evaluation of monitoring of progress against project plans
- assessment of identified and documented risk issues and recommended improvements.

#### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units in the Diploma of Project Management.
## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Risks may be:
- actual
- likely/probable
- perceived
- potential

### Risk management techniques and tools may include:
- calling upon personal experience and/or subject matter experts
- conducting or supervising qualitative and/or quantitative risk analysis, such as schedule simulation, decision analysis, contingency planning and alternative strategy development
- using specialist risk analysis tools to assist in the decision making process

### Delegated authority refers to planning and activities that may:
- be conducted routinely or as changing circumstances dictate
- be done independently within broad guidance or by taking the lead of a team
- involve consultation with other project members, teams and internal stakeholders
- involve the selection, use and supervision of appropriate risk management methods, tools and techniques

### Risk management processes and procedures may include:
- communication with stakeholders, dispute resolution and modification procedures
- implementation of risk control trigger mechanisms
- measurement of actual progress against planned milestones
- recording and reporting of major variance
- setting key milestones at significant points during the project and at completion

### Recommended responses to variations may be made:
- in consultation with project team members, section heads, project manager and stakeholders
- independently or with higher project authority

| 1. Determine procurement requirements | 1.1. Identify procurement requirements with input from stakeholders as the basis for procurement planning and contracts  
1.2. Establish and maintain, within delegated authority, an agreed procurement management plan and strategies to ensure clarity of understanding between stakeholders and achievement of project objectives |
| 2. Establish agreed procurement processes | 2.1. Obtain information from established sources capable of fulfilling procurement requirements to determine how project objectives can be met  
2.2. Adopt established selection processes and selection criteria, including occupational health and safety (OHS) requirements, and communicate to stakeholders and prospective contractors or suppliers to ensure fair competition  
2.3. Obtain approvals for procurement processes to be used for the project from higher project authority to enable formal discussions to be conducted |
| 3. Conduct contracting and procurement activities | 3.1. Communicate agreed proposals and/or specifications to prospective contractors or suppliers to ensure clarity of understanding of project objectives  
3.2. Evaluate responses and select preferred contractors or suppliers in accordance with current legal requirements and agreed selection processes  
3.3. Conduct negotiations with preferred contractor or supplier, with guidance of higher project authority if necessary, to agree on contract terms and conditions, establish common goals and minimise uncertainty |
| 4. Implement contract and/or procurement | 4.1. Implement established procurement management plan and make modifications with higher project authority approval, to ensure a common approach to achievement of objectives  
4.2. Review progress and manage agreed changes to ensure timely completion of tasks, resolution of conflicts and achievement of project objectives within the legal framework of the contract  
4.3. Identify and report procurement management problems to higher project authority and implement agreed remedial actions to ensure project objectives are met |
| 5. Manage contract and | 5.1. Conduct finalisation activities to ensure contract |
ELEMENT  |  PERFORMANCE CRITERIA
-----|------------------------
procurement finalisation procedures | deliverables meet contractual requirements
5.2. Review project outcomes using available *procurement records and information* to determine effectiveness of contracting and procurement processes and procedures
5.3. Document lessons learned and recommended improvements, and pass on to higher project authority for application in future projects

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- problem-solving skills to resolve contractual and logistic issues
- negotiation skills to obtain required agreement in procurement and contracting discussions
- planning and organisational skills to identify procurement and contract requirements and to adjust and sequence these appropriately
- literacy and numeracy skills to produce and work with a range of procurement and contract documentation
- technology skills to use procurement and financial management software.

**Required knowledge**

- contracts and legal obligations as they relate to project management
- procurement options, procedures and documentation
- relevant legislation, codes and national standards relevant.

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:
- demonstrated experience in managing procurement and contracting processes in multiple complex projects
- knowledge of contracts and legal obligations as they relate to project management.

#### Context of and specific resources for assessment

Assessment must ensure:
- access to workplace documentation in the area of procurement and contracts
- consideration of evidence from stakeholders as to how procurement was managed.

#### Method of assessment

A range of assessment methods should be used to assess practical skill and knowledge. The following examples are appropriate for this unit:
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- oral or written questioning to assess knowledge of strategies for managing project procurement and their application to different situations
- analysis of responses in addressing case studies and scenarios which present project procurement and contract management issues and problems
- review of procurement management plan
- review of communication of agreed proposals and/or specifications to prospective contractors or suppliers
- assessment of evaluation of responses and selection processes for preferred contractors or suppliers
- review of identification and reporting of procurement management problems.

### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:
EVIDENCE GUIDE

- other units in the Diploma of Project Management.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Delegated authority** refers to planning and activities that may:

- be conducted routinely or as changing circumstances dictate
- be done independently within broad guidance or by taking the lead of a team
- involve consultation with other project members, teams and internal stakeholders
- involve the selection, use and supervision of appropriate procurement management methods, tools and techniques
- take into account internal organisational change and external environmental change

**Procurement management plan** identifies and outlines:

- how procurement arrangements are communicated to stakeholders
- processes to be used for procurement of resources
- process for monitoring and evaluating procurement related to the project
- procurement objectives, strategies and time lines
- resources to be obtained against a time line and budget
- responsibilities for staff/team members

**Modifications** may be made:

- in consultation with project team members, section heads, project manager and stakeholders
- independently or with higher project authority endorsement if necessary
- regularly throughout the project life cycle
- taking into account internal organisational change and external environmental change

**Procurement records and information** may include:

- contract change proposals and approvals
- contract discharge and asset disposal register
- contract documentation
- contract negotiation documentation
RANGE STATEMENT

- contractor selection criteria, processes and recommendations
- procurement management plan
- product specifications
- test and acceptance procedures and documentation

BSBPMG510A Manage projects

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to manage a straightforward project or a section of a larger project. This unit addresses the management of projects including the development of a project plan, administering and monitoring the project, finalising the project and reviewing the project to identify lessons learnt for application to future projects. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | The unit focuses on the application of project management skills and the requirement to meet time lines, quality standards, budgetary limits and other requirements set for the project. The unit does not apply to specialist project managers. For specialist project managers, the units of competency in the Project Management competency field will be applicable. |

Licensing/Regulatory Information

# Required Skills and Knowledge

## REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- communication and negotiation skills to work with team members and other stakeholders to maintain project schedules
- literacy skills to read, write and review a range of documentation
- planning and organising skills to develop, monitor and maintain implementation schedules
- numeracy skills to analyse data, and to compare time lines and promotional costs against budgets
- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities.

### Required knowledge

- relevant legislation from all levels of government that may affect aspects of business operations, such as:
  - anti-discrimination legislation
  - ethical principles
  - codes of practice
  - privacy laws
  - environmental issues
  - OHS
- organisational structure, and lines of authority and communication within the organisation
- how the project relates to organisation's overall mission, goals, objectives and operations.
# Evidence Guide

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:
- development of a project plan
- details of monitoring arrangement/s and evaluation of the project plan's efficacy to address time lines and budgets of project
- knowledge of relevant legislation.

## Context of and specific resources for assessment

Assessment must ensure:
- access to workplace project documentation.

## Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- observation of presentations
- oral or written questioning to assess knowledge of how the project relates to the organisation's overall mission, goals, objectives and operations
- review of project risk management plan and project plan
- evaluation of project reports forwarded to stakeholders
- analysis of documentation reviewing project outcomes and processes against the project scope and plan
- evaluation of documentation outlining lessons learnt from the project.

## Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:
- other project management units.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Project scope and other relevant documentation** may include:
- contract or other agreement
- project brief
- project plan or summary
- other documents outlining expected outcomes of the project, inclusions and exclusions from project, timeframes for project, quality standards for project, project resources

**Stakeholders** may include:
- clients or customers (internal and external)
- funding bodies
- management, employees and relevant key personnel (internal and external) with special responsibilities
- project sponsor

**Delegating authority** may include:
- customer or client
- funding body
- manager or management representative
- project sponsor

**Project parameters** may include:
- finances for project
- integration of project within organisation
- legislative and quality standards
- physical, human and technical resources available or required for project
- procurement requirements associated with project
- reporting requirements
- risks associated with project, including OHS
- scope of project
- time lines

**Project management tools** may include:
- cost schedule control system
- Critical Path Method
- Gantt and bar charts
- life cycle cost analysis
- logistics support analysis
### RANGE STATEMENT

- PERT charts
- project management software
- spreadsheets
- technical resources required for the project, for example OHS management system tools

**Support for project team members** may include:
- additional physical, human and technical resources (within allocated budget) if and as required
- encouragement
- feedback
- learning and development
- regular project team meetings
- supervision, mentoring and coaching

**Required record keeping systems** may include systems for:
- correspondence
- financial data including costs, expenditure, income generated, purchases
- project outcomes
- quality data including any test results
- recording of time spent on project and progress in completing project
- samples, prototypes, models

**Risk management** may include:
- changing roles and responsibilities within project team
- negotiating an extension of deadline, or redefining completion or quantities or quality of outcomes
- outsourcing some aspects of the project
- reducing costs
- researching and applying more efficient methods for completing project tasks
- seeking further resources to meet deadline
- sharing of ideas to gain improvements to work undertaken within the project

**Necessary sign offs** may be required by:
- clients, customers
- funding body
- management
- project sponsor

BSBPMG601A Direct the integration of projects

Modification History

Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to manage the integration of all functions of project management in a program or multiple project context.

This covers managing conflicting priorities between projects, directing project managers in realigning projects within the program, directing the internal environment with the needs and expectations of the external environment, and directing projects within the program throughout their life cycle.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | A program is defined as a set of interrelated projects, each of which has a project manager. Multiple projects (sometimes called a portfolio of projects) refers to a number of projects related in some way and managed by the same person as a program to achieve a common organisational objective/s.

For the purposes of this unit someone who manages a suite of projects (a program) will be referred to as a program manager.

The functions performed by a project manager to manage integration within individual projects are addressed in BSBPMG501A Manage application of project integrative processes. |

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Direct integration of all functions of project management | 1.1. Support project managers in project stakeholder analysis to determine the influence of others on project outcomes  
1.2. Analyse, rationalise and integrate the requirements of all projects and the inter-relationships of *project management functions* to determine agreed, *achievable program objectives* that align to organisational goals, strategies and objectives as stated in strategic planning documentation  
1.3. Review, rationalise and, when approved, integrate project plans into a structured, cohesive program plan for ongoing program management  
1.4. Derive integrated program control mechanisms from project plans, to establish program control requirements  
1.5. Use project plans to develop consolidated program budgets, schedules and interdependencies, and to identify program risks |
| 2. Direct the internal project environment to meet external needs and expectations | 2.1. Direct the *internal project working environment* to ensure project managers’ work is conducted effectively throughout multiple, aligned project life cycles  
2.2. Establish and maintain links to direct the alignment between projects and organisational objectives within the program  
2.3. Evaluate project proposals (scope definitions) against the organisation’s strategic objectives  
2.4. Coordinate and direct conflicting requirements of individual projects to achieve program objectives  
2.5. Modify, where necessary, individual project objectives to achieve overall program objectives  
2.6. Coordinate the impact of *external environmental influences* on individual projects to achieve program objectives |
| 3. Direct projects throughout project life cycles | 3.1. Direct all project managers to provide project phases, approval points, review points and other milestones, to allow program integration  
3.2. Establish project baselines and report progress in relation to these baselines, to measure program performance throughout the business reporting cycle  
3.3. Progressively review project baselines to ensure |
nominated benefits are consistent with organisational expectations

3.4. Direct *finalisation plans, procedures and activities* to ensure final outcomes are met and that projects meet agreed program objectives

3.5. Review projects finalised in a program management reporting period to evaluate benefits to the business

3.6. Pass on integration management lessons learned to higher project authority and provide feedback for application to other projects

### Required Skills and Knowledge

#### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

**Required skills**

- high level leadership skills to gain confidence and trust from people working on all levels
- literacy skills to communicate decisions and to write quality reports
- high level prioritising, planning and organising skills
- innovation skills to develop new and better systems for managing in complex situations
- problem-solving skills to deal with project management issues.

**Required knowledge**

- program planning
- methodologies, tools and techniques for project management
- leadership models
- relevant legislation, codes and national standards.
**Evidence Guide**

# Range Statement

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Project management functions are:

- communications
- cost
- human resources
- procurement
- quality
- risk
- scope
- time

### Achievable program objectives may include:

- client's objectives, for example maximum value for money or maximum performance at minimum cost
- end-user/s objectives, for example maximum performance as well as optional extras
- higher project authorities' objectives (that is, management/projects governance group), for example reputation, retention of market share, buying into market within the constraints of performance, time, cost, quality, resources and skills
- organisation's objectives, for example quantifiable benefits
- supplier's/contractor's objectives, for example minimum cost, minimum time and acceptable quality

### Internal project working environment may include:

- computing support and integrated computer networks
- identity and differentiation of the program's projects within the larger environment
- personal working conditions (physical and emotional)
- physical location of program project managers, personnel and equipment
- physical location of projects within the organisation
RANGE STATEMENT

- teams and interpersonal dynamics
- employee representative groups, such as unions, professional associations and lobby groups
- external stakeholder expectations
- parent organisation, enterprise and/or industry
- physical environment, for example geography, ecology and environmental sensitivity
- political, environmental and societal influences
- public and media interest

**External environmental influences** may include:

**Finalisation plans, procedures and activities** may include:

- assessment of stakeholder satisfaction against expectations
- evaluation of projects completed in a reporting period
- evaluation of projects for benefits derived
- forwarding program progress report to higher governance authority for projects
- review of success/failure criteria for projects completed in a given reporting period
- settling of financial liabilities for projects completed in a consolidated budget context
- transition of responsibility/ownership of projects' deliverables/products for those projects that concluded in a reporting/management period (such as financial year)

BSBPMG602A Direct the scope of a project program

Modification History

Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to direct the scope of projects within a program or multiple projects context. It covers the management of project authorisations and defining, planning and managing the program scope.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | A program is defined as a set of interrelated projects, each of which has a project manager. Multiple projects (sometimes called a portfolio of projects) refers to a number of projects related in some way and managed by the same person as a program to achieve a common organisational objective/s.

For the purposes of this unit someone who manages a suite of projects (a program) will be referred to as a program manager.

The functions performed by a project manager to manage scope within individual projects are addressed in BSBPMG502A Manage project scope. |

Licensing/Regulatory Information

Not applicable.

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Authorise projects | 1.1. Analyse *needs*, in consultation with client and relevant stakeholders, to justify each project and to designate project managers  
1.2. Conduct project selection and prioritisation within guidelines provided by, or under the direction of, a relevant (governance) authority  
1.3. Make *project authorisation recommendations* to relevant authority as the basis for future project management activity, and commitment of resources and effort |
| 2. Define and plan program scope | 2.1. Define projects' objectives, major deliverables and resource requirements at the project and program level, and confirm them with the governance group or relevant authority  
2.2. Determine and agree measurable project outcomes and benefits to enable quantified evaluation of program performance  
2.3. Develop, agree on and communicate scope definition, *scope management* strategies and plans  
2.4. Align program scope to business requirements and organisational strategy |
| 3. Manage program scope | 3.1. Conduct regular program reviews to measure *project performance* and to ensure that stated program and business/strategic objectives are met  
3.2. Establish and maintain *change management system* to form the basis of ongoing scope management  
3.3. Conduct *reviews of scope changes* and take action to ensure that project and program objectives are achieved or modified  
3.4. Measure project outcomes against defined program scope and aligned strategic objectives  
3.5. Communicate results of program outcomes to relevant authority  
3.6. Pass on scope management lessons learned to higher project authority for application in planning and implementation of later projects within the program |
### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

#### Required skills

- high level literacy skills to review and amend project plans, to communicate decisions and to write quality reports
- high level analysis, planning, organising, problem-solving and evaluating skills in relation to project scope management
- self management skills to prioritise actions for successful outcomes
- negotiation skills to control proposed changes in scope.

#### Required knowledge

- scope management plans, methodologies, techniques and tools
- project life cycle and the significance of scope management
- typical challenges and issues encountered in project scope management and options for addressing these.
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the following is essential:

- demonstrated experience in directing a range of concurrent projects so that scope is successfully managed across all projects
- knowledge of a broad range of project scope management tools, methodologies and techniques.

### Context of and specific resources for assessment

Assessment must ensure:

- access to workplace documentation, including feedback from stakeholders, which reflects how scope was managed for projects.

### Method of assessment

A range of assessment methods should be used to assess practical skill and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance of scope management techniques by the candidate
- analysis of responses addressing different project scope management case studies and scenarios
- oral or written questioning to assess knowledge of strategies for managing project scope and their application to different situations
- review of project authorisation recommendations
- assessment of measurement of project performance.

### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units from the Advanced Diploma of Project Management.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Needs** may be:
- activity-oriented, for example to stage major sporting events
- improvement-oriented, for example to find better way/s of doing something
- outcome-oriented, for example to fulfil needs
- product-oriented, for example to acquire new computer systems or buildings

**Project authorisation recommendations** may include:
- broad details of required project outcomes and objectives
- major projects phases, activities and milestones that will require timing coordination across the program (particularly as new approved projects enter the program)
- project managers' terms of reference, authorisations and limitations directed by the program manager
- relationship between multiple project objectives and the programs and strategic objectives of the organisation

**Scope management** may include:
- controlling program scope creep, that is incremental increases to scope, to accommodate wishes rather than needs
- determining that a scope change has occurred or is about to occur
- managing factors which influence changes to scope
- managing scope changes when they occur
- managing the effect of scope changes on other areas and on the achievement of multiple project objectives
- progressive refinement of scope throughout multiple project life cycles

**Project performance** may include:
- time and resources spent on the projects, as compared to baseline data
- projects’ progress in terms of time and
### RANGE STATEMENT

<table>
<thead>
<tr>
<th>resources</th>
</tr>
</thead>
</table>

**Change management system** may include:
- change to control boards/committees
- configuration management
- documentation
- impact analysis
- risk analysis

**Reviews of scope changes** may include:
- formal agreements, that is contracts, sub-contracts and memoranda of understanding
- major elements of the program liable to change, for example deletion of a line of business endeavour, new projects prioritising program and deletion of poorly performing projects
- potential, perceived and actual changes
- program documentation, including plans, integrated schedules, integrated budgets and integrated (program) risk analysis

Employability skills | This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Direct project schedule development | 1.1. Determine from individual project plans the duration, effort, sequence and interdependencies of major activities and milestones to form the basis of the program schedule  
1.2. Direct project managers by the use of *time management* methods, *techniques and tools*, preferred schedules, *time management plans*, resource allocation and financial requirements to enable continuous updating and refining of the program schedule  
1.3. Formalise and communicate project schedules, with agreement, to stakeholders as the basis for planning, implementation and review of progress |
| 2. Manage program schedules | 2.1. Develop, implement and modify mechanisms to monitor, control, record and report actual progress in relation to the agreed schedule and plans  
2.2. Conduct ongoing analysis to identify and forecast variances and trends, and to develop responses so that projects meet their schedules  
2.3. Manage durations of key activities and interdependencies between projects to enable financial and resource rationalisation across the program, to meet strategic expectations within the management/reporting period of the program  
2.4. Review progress and refine the schedule throughout the program life cycle to ensure consistency with changing scope, objectives and constraints related to time and resource availability  
2.5. Ensure responses to perceived, potential or actual project schedule changes are authorised to achieve program objectives |
| 3. Analyse time management outcomes | 3.1. Review and analyse multiple project and program outcomes from available *records* and information to determine the effectiveness of the schedule and time management processes  
3.2. Pass on lessons learned to higher project authority and provide feedback for application, planning and implementation of later projects within the program |
## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- high level leadership skills to inspire trust and confidence in all stakeholder groups
- literacy skills to communicate decisions and to write quality reports
- communication and interpersonal skills to convey expectations, negotiate, resolve conflict and motivate performance
- planning and organising skills to ensure that time lines are met across projects
- time management skills (of self and others)
- problem-solving skills to address time management issues.

### Required knowledge

- relationship between time, cost and resources to the project management framework
- time management and estimating
- methodologies, techniques and tools, their capabilities, limitations, applicability and outcomes.
### Evidence Guide

#### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Time management may: | • be conducted non-routinely to meet complex, changing circumstances  
• be done by taking the lead in a team environment  
• involve consultation with project managers and selective involvement of stakeholders  
• involve the direction of the use of appropriate time management methods, processes, procedures, tools and techniques  
• take into account the impact of organisational and environmental change on the program’s projects and vice versa |
| Techniques and tools may include: | • assessing and reporting the potential impact of multiple project timings and their potential for change on the program, and therefore the organisation  
• collating and using the products of specialist time analysis to make program-wide time management decisions  
• directing qualitative and/or quantitative time analysis, such as schedule simulation, decision analysis, contingency planning and alternative strategy development  
• using personal experience and/or subject matter experts |
| Time management plans may include: | • alternative schedule management strategies and actions  
• assigned schedule management responsibilities  
• contingency plans  
• formal arrangements  
• important milestones and critical interdependencies between projects  
• program consolidated schedule  
• responsibility assignment  
• sub-schedules |
### RANGE STATEMENT

**Records** may take the form of:

- diaries, incident logs, occurrence reports and other such documentation
- gantt, PERT and other scheduling charts
- lists of variances, trends and forecasts of potential schedule events
- program and/or organisation files and records
- records of analysis, evaluation of options and selection processes
- records of responses, results and lessons learned

BSBPMG604A Direct cost management of a project program

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to analyse, coordinate, and refine the budgets of multiple projects that contribute to an overall program budget. It covers directing project budget development, managing program costs and directing the financial completion of projects.
No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | A program is defined as a set of interrelated projects, each of which has a project manager. Multiple projects (sometimes called a portfolio of projects) refers to a number of projects related in some way and managed by the same person as a program to achieve a common organisational objective/s.
For the purposes of this unit someone who manages a suite of projects (a program) will be referred to as a program manager.

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Direct project budget development | 1.1. Direct project managers to determine resource requirements for individual tasks, in consultation with appropriate stakeholders, to develop a project budget which contributes to the program budget  
1.2. Direct project cost estimation to enable budgets and cost management processes to be developed for the project life cycles  
1.3. Direct and authorise cost strategies and cost management plans to ensure clarity of understanding and ongoing management of project finances and the program budget overall |
| 2. Manage program costs       | 2.1. Develop and maintain cost management systems to direct monitoring of actual expenditure and to control costs throughout multiple project life cycles and for the program overall  
2.2. Conduct analysis, evaluate options and implement responses to project cost variations to maintain control over changing financial and overall program objectives  
2.3. Monitor internal and external influences on program costs and, where necessary, seek approval from business management for changes to the approved program budget |
| 3. Direct financial completion | 3.1. Provide direction for project finalisation activities to achieve integrated financial and physical project completion within program and therefore client and organisational expectations  
3.2. Review project outcomes from available records at the finalisation of each project, and analyse information to determine the effectiveness of cost management systems  
3.3. File program lessons learned as a resource for future reference and, where necessary, refer to higher project authority for application in planning strategic direction changes and business outcomes for future projects |
## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- technology skills to oversee project financial performance
- numeracy skills to develop and interpret project budgets and to provide financial information
- literacy skills to communicate decisions and to write quality reports
- leadership skills to inspire trust and confidence in teams, managers and stakeholders
- communication and interpersonal skills to convey expectations, resolve conflict and motivate performance
- planning skills to review project resource requirements and to cost estimates
- problem-solving skills to resolve costing issues.

### Required knowledge

- regulatory and legislative financial reporting requirements
- methods for costing and estimating project resources
- methods for monitoring and controlling project expenditure.
Evidence Guide

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| **Cost estimation** may take account of: | • availability of information at the time  
• contingencies to allow for identified risks and uncertainty  
• government regulations, industry codes of practice and organisational influences  
• overhead and profit margin  
• stage in each project's life cycle |
|---|---|
| **Cost management plans** and activities throughout program management may: | • be conducted non-routinely to meet complex and changing circumstances  
• be done independently or by taking the lead in a team environment  
• involve consultation with, and selective involvement of, appropriate project stakeholders  
• involve the selection, modification and supervision of the use of appropriate cost management methods, processes, procedures, tools and techniques  
• take into account the impact of organisational and environmental change on the project/program and vice versa |
| **Management of project finances** may include: | • approval processes  
• audit and review  
• communication, reports and briefs  
• financial authorisations/delegations  
• invoice procedures |
| **Development of cost management systems** may involve: | • application of personal judgement  
• authorising and revising financial delegations  
• cost modelling and estimating  
• financial analysis, for example benefit-cost analysis, cash flow analysis, earned value analysis  
• modification of program methodologies and procedures |
RANGE STATEMENT

- program obligation, expenditure forecasting and long-term planning
- progress and financial change management

**Finalisation activities** may include:

- comparison of one project’s cost management outcomes with success rates of other projects and with overall (organisation) budgetary expectations
- direction of project team managers in their:
  - final audit/reconciliation
  - close-out of account codes and other financial documentation
  - settling of financial liabilities
  - transfer of assets to the client or originating owner
  - transition of responsibility/ownership of project deliverables/products
  - warranty requirements resolution

**Records** may take the form of:

- budgets, commitment and expenditure
- cost management lessons learned
- cost management plans
- financial charts and graphs
- financial summaries
- program and/or organisation files and records
- records of potential and actual costs
- reports to higher authority

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Direct quality requirements development | 1.1. Direct reviews and consultation to ensure that the organisation's quality objectives, standards, levels and criteria are applied at the project level, in consultation with stakeholders  
1.2. Modify *quality management* methods, techniques and tools to the requirements of the program, as necessary  
1.3. Identify and communicate program quality criteria to project managers for implementation  
1.4. Direct project managers to develop and implement quality plans that will be used as the basis for performance measurement |
| 2. Direct project quality assurance management | 2.1. Analyse results of project activities and product performance to determine compliance with agreed quality standards throughout the project life cycles within the program  
2.2. Identify causes of unsatisfactory results in consultation with project managers, clients and stakeholders, and initiate appropriate actions to enable continuous improvement in quality outcomes  
2.3. Direct inspections of quality processes and analyse results to determine compliance with quality standards set for the overall program and the organisation  
2.4. Develop and maintain a *quality management system* to enable effective management and communication of quality issues and outcomes |
| 3. Improve program and project quality | 3.1. Continually review and modify the quality management system throughout project activities to ensure project team commitment to continuous improvement of quality processes and outcomes  
3.2. Direct project outcomes review and analysis against performance criteria to determine the effectiveness of the quality management system  
3.3. Aggregate and use *quality improvements* and lessons learned to benefit the business and, where appropriate, pass on program initiatives/projects to organisational management for consideration in support of strategic planning and (re)direction |
## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- leadership, communication and interpersonal skills to foster compliance with quality benchmarks
- literacy skills to communicate decisions and to write quality reports
- skills in analysing, interpreting and reviewing data to assess performance against quality benchmarks
- problem-solving skills to address gaps in quality assurance.

### Required knowledge

- range of quality management methods, techniques, tools and systems and their various applications
- relevant Australian and international standards.
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:
- demonstrated experience in directing the successful application of quality management across a range of concurrent projects
- knowledge of relevant Australian and international standards.

#### Context of and specific resources for assessment

Assessment must ensure:
- access to workplace quality documentation
- consideration of feedback from project team/s and stakeholders as to how quality was managed.

#### Method of assessment

A range of assessment methods should be used to assess practical skill and knowledge. The following examples are appropriate for this unit:
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance of scope management techniques by the candidate
- analysis of responses addressing different project quality management case studies and scenarios
- oral or written questioning to assess knowledge of strategies for managing project quality and their application to different situations
- assessment how program quality criteria were identified and communicated
- review of actions initiated to enable continuous improvement.

#### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:
- other units in the Advanced Diploma of Project Management.
Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential italicised conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| **Quality management** may: | • be conducted non-routinely to meet complex and changing circumstances  
• be done independently or by taking the lead in a team environment  
• involve consultation with and direction to, project managers regarding their selective involvement of appropriate project stakeholders  
• involve the overall direction to project managers for the selection, modification and supervision of the use of appropriate quality management methods, processes, procedures, tools and techniques  
• take into account the impact of organisational and environmental change on the program and vice versa |
| **Quality management system** may include: | • ISO 9000 series or as designed to meet the specific needs of the project |
| **Quality improvements** may include: | • formal practices, such as total quality management or continuous improvement  
• less formal processes which improve both the product quality and processes of the project, for example client surveys to determine client satisfaction with project performance |

**Unit Sector(s)**

| Unit sector |  |

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Direct human resources management planning                           | 1.1. Direct human resource requirement analysis for projects to determine numbers and skill levels required for the overall program  
1.2. Direct stakeholder assessment to establish a basis for stakeholder management within projects and the overall program  
1.3. Direct responsibility assignment for project activities and tasks, and establish authorisation protocols |
| 2. Manage program organisation and staffing                             | 2.1. Determine resource requirements for projects in consultation with project managers and appropriate stakeholders, to establish program staffing levels, allocation to projects and required competencies  
2.2. Direct *project organisation and structure* to optimise alignment of individual and group competencies within projects  
2.3. Direct recruitment of *staff* for allocation to projects or reallocation within the organisation, within agreed delegated authority, to meet competency requirements throughout the program  
2.4. Direct project managers' use of *human resources management (HRM) methods, techniques and tools*, and modify for program requirements  
2.5. Utilise organisational HRM system and HRM processes across projects |
| 3. Direct project staff performance management                           | 3.1. Obtain agreement of performance measurement criteria for clarity of roles and responsibilities and ongoing assessment  
3.2. Ensure systems for ongoing *development and training* of personnel across the program are established and implemented by project managers  
3.3. Measure individuals' performance against agreed criteria and authorise actions to overcome shortfalls in performance and encourage career progression |
| 4. Provide overall leadership to project teams                          | 4.1. Manage a system of continuous improvement of staff to enhance program effectiveness  
4.2. Analyse individual and team performance and morale levels and take action where necessary  
4.3. Direct procedures for interpersonal communication, counselling and conflict resolution by project managers, and review results to maintain and promote a positive working environment |
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>4.4. Identify and positively manage intra-organisational and intra-project conflict to maximise achievement of program objectives</td>
<td></td>
</tr>
<tr>
<td>4.5. Aggregate HRM lessons learned for application in planning and, where appropriate, pass on information to others for consideration in strategic planning and direction</td>
<td></td>
</tr>
</tbody>
</table>

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- planning skills to identify human resource requirements across the program
- literacy skills to communicate decisions and to write quality reports
- high level leadership skills to inspire trust and confidence in teams, managers and stakeholders
- communication and interpersonal skills to convey expectations, negotiate, resolve conflict and motivate performance
- problem-solving skills to address HRM issues across the program
- coaching and mentoring skills.

**Required knowledge**

- human resource management methods, techniques and tools
- relevant legislation
- models of performance management and performance development.
# Evidence Guide

## EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>Evidence of the following is essential:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• demonstrated experience in directing human resources across a range of concurrent projects so that project objectives are achieved</td>
</tr>
<tr>
<td></td>
<td>• knowledge of relevant legislation</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th>Assessment must ensure:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• access to workplace HRM documentation</td>
</tr>
<tr>
<td></td>
<td>• consideration of feedback from project teams and stakeholders as to how human resource management was handled.</td>
</tr>
</tbody>
</table>

### Method of assessment

A range of assessment methods should be used to assess practical skill and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance of scope management techniques by the candidate
- analysis of responses addressing different project scope management case studies and scenarios
- oral or written questioning to assess knowledge of strategies for managing project human resources and their application to different situations
- observation of demonstrated techniques in performance feedback and/or conflict resolution
- observation of performance in role plays
- review of the measurement of individuals' performance against agreed criteria
- evaluation of how the staff continuous improvement system was managed
- assessment of analysis of individual and team performance and morale levels.

### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended,

BSBPMG607A Direct communications management of a project program

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to provide the critical link between people, ideas and information at all stages in the life cycles of multiple projects across a program. It covers directing project communications and information management, managing program communications and analysing communications management outcomes for projects and programs. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | A program is defined as a set of interrelated projects, each of which has a project manager. Multiple projects (sometimes called a portfolio of projects) refers to a number of projects related in some way and managed by the same person as a program to achieve a common organisational objective/s. For the purposes of this unit someone who manages a suite of projects (a program) will be referred to as a program manager. The functions performed by a project manager to manage communications within individual projects are addressed in BSBPMG507A Manage project communications. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- technology skills to direct the management and flow of project information and communications
- planning skills to identify project and program information requirements
- literacy skills to communicate decisions and to write quality reports
- problem-solving skills to address communication management problems
- interpersonal skills to communicate with customers and to manage customer relationships and networks
- analytical skills to review and analyse project outcomes.

Required knowledge

- PMIS structures and options
- information validation processes and their application to various contexts
- new technologies for communications and their relative strengths and weaknesses.
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:
- demonstrated experience in directing communications and information across a range of concurrent projects
- knowledge of PMIS structures and options.

#### Context of and specific resources for assessment

Assessment must ensure:
- access to examples of relevant workplace documentation (including electronic media)
- consideration of feedback from project teams and stakeholders as to how communications were managed.

#### Method of assessment

A range of assessment methods should be used to assess practical skill and knowledge. The following examples are appropriate for this unit:
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance of scope management techniques by the candidate
- analysis of responses addressing different project communications management case studies and scenarios
- oral or written questioning to assess knowledge of strategies for managing project communications and their application to different situations
- review of the project management information system developed
- review of how communication and management information systems were used to address potential, perceived and actual problems
- evaluation of how project outcomes were reviewed and analysed to determine the effectiveness of management information and communications systems.

| 1. Direct planning of project risk management | 1.1. Direct potential, perceived and actual risk events for identification, documentation and analysis, in consultation with project managers and appropriate stakeholders, as the basis for project risk management planning  
1.2. Select and modify project risk management methods, techniques and tools for project managers to analyse information, evaluate options and determine preferred risk approaches within the overall program environment  
1.3. Direct development, communication and implementation of project risk management plans and strategies to ensure clarity of understanding and achievement of project objectives across the program  
1.4. Develop and maintain a project risk management system to enable effective management and communication of risk events, responses and results to stakeholders across projects within the program |
| 2. Direct management of project risk and manage program risk | 2.1. Manage the program in accordance with agreed project risk management plans  
2.2. Review progress, analyse variance and initiate risk responses to achieve program and multiple project objectives in changing environments  
2.3. Direct risks to multiple project outcomes for monitoring, and ensure remedial actions are authorised to achieve project objectives |
| 3. Assess project and program risk management outcomes | 3.1. Review and analyse project outcomes to assess the effectiveness of the project risk management system for projects, program and organisational outcomes  
3.2. Aggregate, analyse and structure lessons learned, for project managers and senior management to undertake strategic review and planning |
Required Skills and Knowledge

REQUARED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to plan and review risk management approaches
- literacy skills to communicate decisions and to write quality reports
- initiative to identify and address risks leading to negative consequences for projects
- problem-solving skills to initiate risk responses in changing environments.

Required knowledge

- risk management tools, frameworks, systems, methodologies and standards.
# Evidence Guide

## EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | Evidence of the following is essential:
|                                                                                           | • demonstrated experience in successfully directing risk management efforts across a range of concurrent projects
|                                                                                           | • knowledge of risk management tools, frameworks, systems, methodologies and standards. |

### Context of and specific resources for assessment

| Assessment must ensure:                                                                 |
|                                                                                       | • access to workplace risk management documentation
|                                                                                       | • consideration of feedback from project teams and stakeholders as to how risks were managed. |

### Method of assessment

A range of assessment methods should be used to assess practical skill and knowledge. The following examples are appropriate for this unit:

• direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance of scope management techniques by the candidate

• analysis of responses addressing different project risk management case studies and scenarios

• oral or written questioning to assess knowledge of strategies for managing project risks and their application to different situations

• review of the development, communication and implementation of project risk management plans.

### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

• other units in the Advanced Diploma of Project Management.

BSBPMG609A Direct procurement and contracting for a project program

Modification History

Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to direct the management of contracting and procurement activities across projects and programs. It covers setting up the contracting process, directing the management of contract and procurement processes and finalising contracts for projects across the program. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | A program is defined as a set of interrelated projects, each of which has a project manager. Multiple projects (sometimes called a portfolio of projects) refers to a number of projects related in some way and managed by the same person as a program to achieve a common organisational objective/s. For the purposes of this unit someone who manages a suite of projects (a program) will be referred to as a program manager. The functions performed by a project manager to manage procurement within individual projects are addressed in BSBPMG509A Manage project procurement. It should be noted that conflicting priorities between projects are managed with higher project authority support, in this case project governance committees or senior management. |
Licensing/Regulatory Information
Not applicable.

| **1. Direct planning for project contracting and procurement** | 1.1. Direct product specifications and procurement requirements for procurement and contract planning, in consultation with appropriate stakeholders  
1.2. Direct development of procurement strategies, methods and management plans in line with project objectives across the program |
| **2. Direct set up of contract and procurement process** | 2.1. Direct project managers to source organisations that meet procurement requirements  
2.2. Establish selection processes and selection criteria, in consultation with stakeholders, and arrange for communication to prospective contractors  
2.3. Ensure contract and procurement actions accord with organisation and program objectives |
| **3. Direct management of contract and procurement process** | 3.1. Provide direction for requirements of proposals and arrange communication to prospective contractors  
3.2. Ensure responses are evaluated and preferred contractors are selected in accordance with agreed selection processes  
3.3. Direct negotiation of contract terms and conditions between client and preferred contractor |
| **4. Direct management of contracts** | 4.1. Direct management of contract and procurement activities in accordance with program contract and procurement management guidelines  
4.2. Provide direction for regular reviews from available records and information, and ensure variances are analysed and changes are agreed for implementation  
4.3. Ensure project managers work within the legal and organisational framework for contracts  
4.4. Identify potential, perceived and actual contractual conflicts and approve remedial actions to minimise disruption |
| **5. Direct finalisation of contracts** | 5.1. Direct finalisation activities for management of contract deliverables in accordance with contractual project and program requirements  
5.2. Direct review and analysis of project outcomes to determine the effectiveness of contract and procurement processes and procedures  
5.3. Aggregate and use lessons learned for application in planning and implementation of later projects within the program and, where appropriate, pass on to |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
 | organisational management for use in strategic planning

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- literacy skills to communicate decisions, to comprehend complex contractual provisions and to write quality reports
- negotiation skills to set up contracts, to agree prices and terms, and to resolve disputes
- planning and organising skills to ensure procurement processes are properly established and sequenced
- analytical skills to review program performance and to recommend improvements

**Required knowledge**

- contract management and legal obligations of both parties
- procurement processes and options
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>Evidence of the following is essential:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• demonstrated experience in successfully directing procurement and contract management processes across a range of concurrent projects</td>
</tr>
<tr>
<td></td>
<td>• knowledge of contract management and legal obligations.</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

Assessment must ensure:

- access to workplace contractual and procurement documentation
- consideration of feedback from project team and stakeholders as to how procurement and contractual processes were handled.

### Method of assessment

A range of assessment methods should be used to assess practical skill and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance of scope management techniques by the candidate
- analysis of responses addressing different project scope management case studies and scenarios
- oral or written questioning to assess knowledge of strategies for managing project procurement and contracts, and their application to different situations
- review of established selection processes and selection criteria and how they were communicated to prospective contractors
- assessment of identified potential, perceived and actual contractual conflicts and remedial actions taken to minimise disruption.

### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units in the Advanced Diploma of Project
| EVIDENCE GUIDE | Management |
Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential italicised conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| **Procurement strategies, methods and management plans** may include: | • conflict resolution processes  
• contract performance plans and an associated performance monitoring processes  
• contractor and sub-contractor responsibilities, controls and reporting relationships  
• explanatory information (for example background, restrictions or expectations) relating to special terms and conditions, planning for long lead-time items and critical program components, and transition plans  
• procurement, test and acceptance procedures and payment schedules |
| --- | --- |
| **Proposals** may take the form of: | • expressions of interest  
• quotations  
• submissions  
• tenders |
| **Records** may take the form of: | • contract analysis, evaluation of options and strategy development  
• contract discharge procedures and outcomes  
• contract negotiation documentation, for example contract negotiation strategies, plans, team and individual directives  
• contractor identification, evaluation and selection records  
• development and management of contract change procedures  
• procurement management lessons learned  
• procurement management plans  
• product specifications  
• progress measurement and conflict resolution process records  
• test and acceptance procedures |

BSBPUR301B Purchase goods and services

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor                  | This unit specifies the outcomes required to determine purchasing requirements, and make and receive purchases. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to individuals who conduct low risk, low expenditure purchasing for an organisation using established and documented purchasing strategies. The unit may be undertaken by someone working in a small organisation who has general responsibility for conducting purchasing within an organisation, or by a purchasing specialist working in a large organisation. Some judgement may be required to make decisions in the implementation of purchasing strategies and work is generally conducted under the supervision of others. |

Licensing/Regulatory Information
Not applicable.

### Employability Skills Information

| Employability skills | This unit contains employability skills. |

### Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Understand purchasing and own requirements | 1.1. Read, understand and clarify organisation's purchasing strategies as required  
1.2. Determine own role and limits of authority in consultation with relevant personnel |
| 2. Make purchases | 2.1. Receive purchase specifications from relevant personnel and clarify as required  
2.2. Select purchasing methods most appropriate to particular purchases within limits of own role  
2.3. Obtain approvals for purchases as required  
2.4. Obtain quotations from suppliers as required  
2.5. Select suppliers, place orders and make purchases |
| 3. Receive purchases | 3.1. Receive goods or make arrangements to receive services  
3.2. Advise relevant personnel of receipt of purchase  
3.3. Ensure goods received are checked for compliance with specifications  
3.4. Take action to resolve non-compliance with specifications  
3.5. Facilitate registration of new assets  
3.6. File and store purchase records |
## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities
- communication skills to liaise with suppliers and end users of purchases
- literacy skills to document purchases and write reports on purchasing activities
- information management and research skills to analyse and assess purchasing options and offers
- technology skills to use of software to keep records of purchases made
- data collection skills to keep records related to purchasing.

### Required knowledge

- codes of ethics and conduct
- identification and overview knowledge of key provisions of relevant legislation from all levels of government that affects business operations, codes of practice and national standards, such as:
  - consumer protection legislation
  - contract law
  - import of goods and services, where relevant
  - sale of goods legislation
  - Trade Practices Act
- organisation policy and procedures relating to:
  - purchasing strategies
  - record-keeping systems related to purchasing and assets
  - standard contracting arrangements
- product knowledge about the goods and services being supplied
- purchasing and procurement principles for:
  - accountability
  - probity and transparency
  - risk management
  - value for money.
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- obtaining quotes from prospective suppliers for a low risk, low expenditure good to be purchased
- selection of appropriate purchasing methods for a low risk, low expenditure purchase
- receipt, checking and documentation of a low risk, low expenditure purchase.

#### Context of and specific resources for assessment

Assessment must ensure:

- access to an actual workplace or simulated environment
- access to office equipment and resources
- organisation's purchasing strategies and relevant purchasing records.

#### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies and scenarios
- assessment of written reports documenting purchasing requirements and records of purchases made
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- observation of obtaining quotes from suppliers
- oral or written questioning to assess knowledge
- review testimony from team members, colleagues, supervisors or managers.

#### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other purchasing units.
## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential italicised conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Purchasing strategies may include:
- criteria for making purchasing decisions
- legal requirements and policies and procedures that underpin strategies and that are relevant to role
- policies, procedures, guidelines and documentation formats for purchasing from suppliers including entities owned by the organisation, partners, alliance members and local and distant suppliers

### Limits may include:
- approval processes for purchases
- expenditure approval limits

### Relevant personnel may include:
- CEOs
- managers
- leaders
- coordinators
- supervisors
- other persons authorised to commit the organisation to purchases
- internal users of purchased goods and services
- owner
- Board members
- specialist personnel involved in purchasing, asset maintenance and finance

### Purchasing methods may include:
- credit card purchases
- direct purchases from retail outlets
- online purchases
- petty cash
- purchases using standing agreements or accounts with suppliers
- written and/or verbal quotations
- written and/or verbal supply agreements

### Purchase records may include:
- corporate credit card transaction documentation
RANGE STATEMENT

- invoices, statements and payment requests
- petty cash vouchers
- purchase requests and orders
- receipt advices for goods and services
- records of supplier performance

BSBRKG304B Maintain business records

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to maintain the records of a business or records system in good order on a day to day basis. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to individuals requiring some understanding of relevant theoretical knowledge relating to recordkeeping functions. It is not assumed that individuals at this level would have responsibility for supervising the work of others; however it is assumed that as a recordkeeping practitioner their work will support effective recordkeeping and governance practices across the organisation. The application is in relation to the maintenance of records from an existing business or records system that has guidelines and processes to assist in the process. Work carried out in the interest of system maintenance will be performed under supervision or in consultation with more senior staff or users of the system. |

Licensing/Regulatory Information
Not applicable.

</table>
| 1. Collate business records | 1.1. Identify individual records or information which should be incorporated into business or records system according to organisational criteria  
1.2. Sort records in accordance with workplace requirements  
1.3. Adhere to security and access requirements in accordance with organisational procedures |
| 2. Update business or records system | 2.1. Identify and record control information for describing new records to be incorporated into business or records system  
2.2. Update control information describing movement or use of records within business or records system  
2.3. Accurately record and update control information in business or records system  
2.4. Identify and remove records of completed business activities from current system for disposal |
| 3. Prepare reports from the business or records system | 3.1. Interpret requests for reports and clarify the content and frequency sought, where necessary  
3.2. Prepare reports from business or records system in accordance with instructions or request  
3.3. Prepare reports in accordance with organisational security and access procedures |
## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- communication skills to explain and clarify procedures, and to interview users to identify their records/information needs
- literacy skills to read and interpret nature of record content, functions and problems
- problem-solving and analysis skills to identify and manage records.

### Required knowledge

- key provisions of relevant legislation from all forms of government, regulations, standards and documentation that may affect aspects of business operations, such as:
  - AS 5044.1:2002 AGLS Metadata element set
  - AS 5090:2003 Work process analysis for recordkeeping
  - AS ISO 15489:2004 Records management
  - AS ISO 23081.1:2006 Information and documentation - Records management processes - Metadata for records - Principles
  - Australian Stock Exchange(ASX) Principles of Good Corporate Governance
  - ethical principles
  - codes of practice
  - privacy and freedom of information
  - archives and records legislation
  - occupational health and safety
- general principles and processes of records management and records management systems, such as:
  - systems of control
  - records continuum theory
  - mandate and ownership of business process
  - environmental context
  - records characteristics.
Evidence Guide

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the following is essential:
- complying with organisational procedures and workplace requirements
- knowledge and understanding of business or records systems
- accurately recording information.

**Context of and specific resources for assessment**

Assessment must ensure:
- access to an actual workplace or simulated work environment
- access to office equipment and resources
- access to examples of records, recordkeeping systems and policies
- access to workplace reference materials such as procedural manuals and company policies.

**Method of assessment**

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:
- analysis of responses to case studies and scenarios
- demonstration of techniques
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- review of authenticated documents from the workplace or training environment
- oral or written questioning to assess knowledge of general principles and processes of business or records systems.

**Guidance information for assessment**

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:
- administration units
- other knowledge management units.

BSBRKG403C Set up a business or records system for a small business

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
</table>
| Release 1 | This version first released with BSB07 Business Training Package version 6.0. 
Revised unit. Required knowledge and Range Statement changed to include environmentally sustainable practices. 
Replaces BSBRKG403B Set up a business or records system for a small business |

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to research, develop and implement business or records systems for a small office.

Application of the Unit

This unit applies to individuals who are required to demonstrate understanding of a broad knowledge base incorporating some theoretical recordkeeping concepts. The application is in relation to individuals working in a range of ‘small’ office environments where, in most cases, recordkeeping is only part of the individual’s responsibilities; the unit addresses the less formal recordkeeping requirements of micro or small businesses or branches and technical operations centres of larger organisations.

Typically, the individual would report to a supervisor or manager within the organisation and be solely responsible for the development and implementation of business or records systems, including training users of the system.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.
Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<tr>
<td></td>
<td>1.3 Analyse business documentation to determine organisational reporting and accountability requirements</td>
</tr>
<tr>
<td></td>
<td>1.4 Identify organisational functions and activities for which records must be kept, from analysis of business and context documentation</td>
</tr>
<tr>
<td></td>
<td>1.5 Determine nature, detail, and format of records (content and metadata) for each organisational function and activity from analysis of the business and its context</td>
</tr>
<tr>
<td>2. Devise an appropriate recordkeeping system</td>
<td>2.1 Determine metadata needed to manage records (store, locate and retrieve) in a business or records system</td>
</tr>
<tr>
<td></td>
<td>2.2 Select scale and number of business or records systems appropriate to scale and nature of business operations</td>
</tr>
<tr>
<td></td>
<td>2.3 Select technological requirements of business or records systems appropriate to scale and nature of business operations</td>
</tr>
<tr>
<td></td>
<td>2.4 Select cost structure for business or records systems appropriate to scale, nature, and organisational cash flow requirements</td>
</tr>
<tr>
<td></td>
<td>2.5 Ensure maintenance, disposal and updating requirements of business or records system conform to scale, nature, and culture of the organisation</td>
</tr>
<tr>
<td></td>
<td>2.6 Select business or records system suited to projected growth of the organisation</td>
</tr>
<tr>
<td>3. Develop business rules and procedures to support operations</td>
<td>3.1 Develop rules for incorporating individual records and information (records capture) into the business or records system</td>
</tr>
<tr>
<td></td>
<td>3.2 Develop rules for deciding and recording retention periods and appropriate disposal actions for records</td>
</tr>
<tr>
<td></td>
<td>3.3 Develop and document procedures for the use of the system</td>
</tr>
<tr>
<td></td>
<td>3.4 Provide system users with training or instructions in the use of the business or records system, in line with the culture and scale of the organisation</td>
</tr>
</tbody>
</table>
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to explain and clarify procedures, and to consult with users of a records or business system
- literacy skills to read and interpret record content, functions and problems
- problem-solving and analysis skills to identify requirements of business or records system.

Required knowledge

- key provisions of relevant legislation from all forms of government, regulations, standards and documentation that may affect aspects of business operations, such as:
  - AS 5044.1:2002 AGLS Metadata element set
  - AS 5090:2003 Work process analysis for recordkeeping
  - AS ISO 15489:2004 Records management
  - Australian Stock Exchange (ASX) Principles of Good Corporate Governance
  - ethical principles
  - codes of practice
  - privacy and freedom of information
  - archives and records legislation
  - occupational health and safety
  - environmental sustainability practices in business operations
- general principles and processes of records management and records management systems, such as:
  - systems of control
  - records continuum theory
  - mandate and ownership of business process
  - environmental context
  - records characteristics
- internal controls
- organisational functions, structure and culture
- organisational policies and strategies
- organisational technological base.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Employability Skills Information

| Employability skills | This unit contains employability skills. |

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1. Identify costs, calculate prices and prepare profit statement** | 1.1. Identify and document *costs* associated with the production and delivery of the business' products/services  
1.2. Calculate prices based on costs and profit margin, as an hourly charge out rate for labour or unit price for products  
1.3. Calculate break-even sales point to establish business viability and profit margins  
1.4. Identify appropriate *pricing strategies* in relation to market conditions to meet business profit targets  
1.5. Prepare projected profit statement to supplement the business plan |
| **2. Develop a FINANCIAL PLAN** | 2.1. Set *profit targets/goals* to reflect owner's desired returns  
2.2. Identify working capital requirements necessary to attain profit projections  
2.3. Identify non-current asset requirements and consider alternative asset management strategies  
2.4. Prepare *cash flow projections* to enable business operation in accordance with business plan and *legal requirements*  
2.5. Identify capital investment requirements accurately for each operational period  
2.6. Select budget targets to enable ongoing monitoring of financial performance |
| **3. Acquire finance** | 3.1. Identify start-up and ongoing financial requirements according to financial plan/budget  
3.2. Identify *sources of finance*, including potential *financial backers*, to provide required liquidity for the business to complement business goals and objectives  
3.3. Investigate cost of securing finance on optimal terms  
3.4. Identify strategies to obtain finance as required to ensure financial viability of the business |
# Required Skills and Knowledge

## REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- analytical skills to interpret financial data
- communication skills to secure finance
- literacy skills to develop a financial plan and to interpret legal requirements and financial reports
- numeracy skills to calculate costs, prices, profit and other financial information
- research skills to identify costs and sources of finance.

### Required knowledge

- break-even analysis
- costing for the business, including margin/mark-up, hourly charge out rates and unit costs
- financial decision making relevant to the business
- methods and relative costs of obtaining finance
- principles for preparation of balance sheets
- principles for preparation of cash flow forecasts
- principles for preparation of profit and loss statements
- purpose of financial reports
- relevant accounting terminology
- working capital cycles.
# Evidence Guide

## EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>Evidence of the following is essential:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• development of a financial plan which identifies the financial requirements of the business, including profit targets, cash flow projections and strategies for the acquisition of finance</td>
</tr>
<tr>
<td></td>
<td>• knowledge of financial decision making relevant to the business.</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

Assessment must ensure:

- access to relevant documentation
- candidate's individual circumstances and work in the context of establishing or running a small business, are the basis for assessment.

### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- portfolio of evidence including financial plan and records
- review of projected profit statement prepared to supplement the business plan
- review of cash flow projections
- oral or written questioning to assess knowledge of principles for preparation of cash flow forecasts.

### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- BSBSMB401A Establish legal and risk management requirements of small business
- BSBSMB404A Undertake small business planning
- BSBSMB405A Monitor and manage small business operations
- BSBSMB406A Manage small business finances.
### Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>
<thead>

<td></td>
</tr>
<tr>
<td>• projections, which may vary depending on the importance of such information and the stage in the life of the business</td>
<td></td>
</tr>
<tr>
<td>• resources required to implement the proposed marketing and production strategies (staff,</td>
<td></td>
</tr>
</tbody>
</table>
### RANGE STATEMENT

| materials, plant and equipment) | • review of financial inputs required (sources and forms of finance)  
| • risks and measures to manage or minimise risks  
| • working, fixed, debt and equity capital  
| • working in conjunction with external consultants e.g. investment analysts, accountants, financiers |

### Profit targets/goals may include:

- break-even point  
- cost of goods/services sold  
- gross profit/net profit  
- desired actual/notional salary for owners/managers  
- desired return on investment  
- sales turnover/gross fees or income

### Cash flow projections may include:

- anticipated payments  
- anticipated receipts  
- customer credit policy/debt recovery  
- taxation provisions

### Legal requirements may include:

- contractual arrangements (partnership agreements, trust deeds)  
- corporations law  
- industrial law (for payroll records)  
- taxation law

### Sources of finance may include:

- personal, financial institutions, trade/industry sources  
- government sources, for example commonwealth and state/territory governments which provide various forms of technical and financial assistance including direct cash grants, loans, subsidies, tax concessions, and professional and technical advice

### Financial backers may include:

- financiers/banks/lending institutions  
- leasing and hire purchase financiers  
- providers of venture capital  
- shareholders/partners/owners/family/friends

# Range Statement

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Marketing objectives and strategies

- achieving lower costs of production and distribution than competitors
- creating a very different product line or service so that the business becomes a class leader in the industry
- distribution
- pricing, presentation and display of products/services
- product design and packaging
- product range and mix
- promotion and advertising
- pursuing cost leadership and/or product differentiation within a specialist market segment

### Relevant people

- accountant or other specialist services
- family members, work team members, sub-contractors, community members
- franchise agency
- financial backers, clients
- owner/operator, partners, directors, shareholders
- regulatory bodies
- trade or industry associations

### Distribution channels

- dealer, re-seller, franchisee
- distributor, delivery service, mail order, telesales
- self-access, wholesale, retail

### Levels of customer service

- after sales service
- one-on-one personal service
- sales assistance for problems/queries only

### Marketing mix

- distribution
- level of service
- pricing

## Evidence Guide

### Evidence Guide

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:
- development of a business plan which provides for finance, marketing and provision of products/services to facilitate the business goals and objectives
- identification of and planning for, OHS and duty of care responsibilities
- development of risk management strategies
- knowledge of relevant legislation.

#### Context of and specific resources for assessment

Assessment must ensure:
- access to relevant documentation
- candidate's individual circumstances and work in the context of running a small business, are the basis for assessment.

#### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:
- portfolio of evidence including a business plan and risk management strategies
- oral or written questioning to assess knowledge of OHS responsibilities and procedures for identifying hazards relevant to the business
- demonstration of practical skills
- review of documented business goals and objectives
- review of contingency plans developed to address possible areas of non-conformance with the business plan.

#### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:
- BSBSMB401A Establish legal and risk management requirements of small business
- BSBSMB402A Plan small business finances
- BSBSMB403A Market the small business.

## Elements and Performance Criteria

| 1. Develop operational strategies and procedures | 1.1 Develop an action plan to provide a clear and coherent direction, in accordance with the **business goals and objectives**  
1.2 Identify **occupational health and safety (OHS) and environmental issues** and implement strategies to minimise risk factors  
1.3 Develop a **quality system** for the business in line with industry standards, compliance requirements and cultural criteria  
1.4 Develop performance measures and **operational targets** to conform with the business plan  
1.5 Develop strategies for innovation, including the utilisation of existing, new or emerging technologies, where practicable, to optimise business performance |
| 2. Implement operational strategies and procedures | 2.1 Implement systems and key performance indicators/targets to monitor business performance and customer satisfaction  
2.2 Implement systems to control stock, expenditure/cost, wastage/shrinkage and risks to health and safety in accordance with the business plan  
2.3 Maintain staffing requirements, where applicable, within budget to maximise productivity  
2.4 Carry out the provision of goods/services in accordance with established legal, ethical cultural and **technical standards**  
2.5 Provide goods/services in accordance with time, cost and quality specifications, and customer requirements  
2.6 Apply quality procedures to address product/service and customer requirements |
| 3. Monitor business performance | 3.1 Regularly monitor/review the achievement of operational targets to ensure optimum business performance, in accordance with the business plan goals and objectives  
3.2 Review systems and structures, with a view to more effectively supporting business performance  
3.3 Investigate and analyse operating problems to establish causes and implement changes as required as part of the business quality system  
3.4 Amend operational policies and procedures to incorporate corrective action |
| 4. Review business operations | 4.1 Review and adjust business plan, as required, to maintain business viability, in accordance with business goals and objectives |
4.2 Clearly record proposed changes to aid future planning and evaluation
4.3 Undertake ongoing research into new business opportunities and adjust business goals and objectives as new business opportunities arise

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills
- analytical skills to develop criteria and targets for the business plan
- communication skills to question, clarify and report
- literacy skills to interpret legal requirements, company policies and procedures
- numeracy skills to manage performance information and to control the finances
- technology skills to use relevant business equipment.

Required knowledge
- methods for developing and maintaining networks
- methods for implementing operation and revenue control systems
- methods for monitoring performance and implementing improvements
- OHS responsibilities and procedures for managing hazards
- principles of risk management relevant to the business, including risk assessment
- quality system principles and methods
- relevant industry codes of practice
- relevant marketing, sales and financial concepts
- relevant performance measures
- role of innovation
- systems to manage staff, stock, expenditure, services and customer service
- environmentally sustainable business practice and operation
- technical or specialist skills relevant to the business operation.
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>

BSBSUS201A Participate in environmentally sustainable work practices

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to effectively measure current resource use and to carry out improvements including reducing the negative environmental impact of work practices. 

This unit requires the ability to access industry information, and applicable legislative and occupational health and safety (OHS) guidelines. 

While no licensing, legislative, regulatory or certification requirements apply holistically to this unit at the time of publication, relevant national, state and territory legislation, regulations and codes of practice impact upon this unit. |

Application of the Unit

| Application of the unit | This unit applies to operators/team members under supervision or guidance, who are required to follow workplace procedures and instructions, and to work in an environmentally sustainable manner. It covers: 

efficient resource use 

potential environmental hazards 

regulatory compliance 

improving environmental performance (within the scope of competency, authority and own level of responsibility). 

It addresses the knowledge, processes and techniques necessary to participate in environmentally sustainable work practices. |
Licensing/Regulatory Information
Not applicable.

</table>
**Required Skills and Knowledge**

<table>
<thead>
<tr>
<th>REQUIRED SKILLS AND KNOWLEDGE</th>
</tr>
</thead>
<tbody>
<tr>
<td>This section describes the skills and knowledge required for this unit.</td>
</tr>
</tbody>
</table>

**Required skills**

- analytical skills to comply with all relevant legislation associated with job specifications and procedures
- communication and problem-solving skills to question, seek clarification and make suggestions relating to work requirements and efficiency
- communication and teamwork skills to recognise procedures; to follow instructions; to respond to change, such as current workplace environmental/sustainability frameworks; and to support team work and participation in a sustainable organisation
- literacy, numeracy and technology skills to interpret workplace information in relation to work role, and to document and measure resource use
- technology skills to select and use technology appropriate for a task.

**Required knowledge**

- environmental and resource hazards/risks
- environmental or sustainability legislation, regulations and codes of practice applicable to own work role
- OHS issues and requirements
- organisational structure, and reporting channels and procedures
- relevant environmental and resource efficiency systems and procedures
- sustainability in the workplace
- terms and conditions of employment including policies and procedures, such as daily tasks, employee and employer rights, equal opportunity.
## Evidence Guide

### Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- accessing, interpreting and complying with a range of environment/sustainability legislation and procedural requirements relevant to daily responsibilities
- accurately following organisational information to participate in and support an improved resource efficiency process and reporting as required
- developing and/or using tools such as inspection checklists, to collect and measure relevant information on organisation resource consumption, within work role
- identifying organisational improvements by applying efficient resource use to daily activities
- knowledge of environmental and resource hazards/risks.

#### Context of and specific resources for assessment

Assessment must ensure:

- access to an actual workplace or simulated environment
- evidence is relevant to the particular workplace role, including work area, equipment, systems, and documentation
- review of current work area directly relating to own work, to assess measurement of resources used, hazards and compliance
- individual or team discussion about potential for increased resource efficiency within current work area
- access to workplace documents, information and resources (such as compliance obligations, enterprise plans, work responsibilities).

#### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace

## Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- BSBINN201A Contribute to workplace innovation
- BSBSMB301A Investigate micro business opportunities
- BSBWOR202A Organise and complete daily work activities.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential italicised conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Environmental and resource efficiency issues** may include:
- maximising opportunities to improve business environmental performance
- minimising environmental risks
- promoting more efficient production and consumption of natural resources, for example minimising waste by participating in or using a waste management system
- using resources efficiently such as material usage, energy usage (seeking alternative sources of energy or energy conservation) or efficient water usage

**Appropriate techniques** may include:
- examining and documenting resources in work area
- examining invoices from suppliers
- examining relevant information and data
- measuring resource usage under different conditions
- reports from other parties involved in the process of identifying and implementing improvements

**Compliance** may include:
- meeting relevant laws, by-laws and regulations or best practice to support compliance in environmental performance and sustainability at each level as required (such as Environmental Protection or Biodiversity Conservation Act):
  - international
  - commonwealth
  - state/territory
  - local government
  - industry
  - organisation

**Organisational plans** may include:
- documented policies and procedures
- work plans to minimise waste or to increase
### RANGE STATEMENT

<table>
<thead>
<tr>
<th>include: efficiency of resources such as a green office program, supply chain program for purchasing sustainable products or an environmental management framework</th>
</tr>
</thead>
</table>

**Suggestions** may include ideas that help to:

- improve energy efficiency
- increase use of renewable, recyclable, reusable and recoverable resources
- maximise opportunities such as use of solar power or other alternative forms of energy, where appropriate
- prevent and minimise risks
- reduce emissions of greenhouse gases
- reduce use of non-renewable resources

BSBSUS301A Implement and monitor environmentally sustainable work practices

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to effectively analyse the workplace in relation to environmentally sustainable work practices and to implement improvements and monitor their effectiveness.

This unit requires the ability to access industry information, applicable legislative and occupational health and safety (OHS) guidelines.

While no licensing, legislative, regulatory or certification requirements apply holistically to this unit at the time of publication, relevant national, state and territory legislation, regulations and codes of practice impact upon this unit. |
Application of the Unit

| Application of the unit | This unit applies to those with responsibility for a specific area of work or who lead a work group or team. It addresses the knowledge, processes and techniques necessary to implement and monitor environmentally sustainable work practices, including the development of processes and tools, such as:
| | • identifying areas for improvement
| | • developing plans to make improvements
| | • implementing and monitoring improvements in environmental performance.

A person who demonstrates competence in this unit must be able to provide evidence of the ability to implement and monitor integrated environmental and resource efficiency management policies and procedures within an organisation. Evidence must be strictly relevant to the particular workplace role.

Licensing/Regulatory Information

Not applicable.

# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Investigate current practices in relation to resource usage | 1.1. Identify environmental regulations applying to the enterprise  
1.2. Analyse procedures for assessing *compliance* with environmental/sustainability regulations  
1.3. Collect information on environmental and resource efficiency systems and procedures, and provide to the work group where appropriate  
1.4. Collect, analyse and organise information from a range of *sources* to provide information/advice and tools/resources for improvement opportunities  
1.5. Measure and document current resource usage of members of the work group  
1.6. Analyse and document current *purchasing strategies*  
1.7. Analyse current work processes to access information and data to assist in identifying areas for improvement |
| 2. Set targets for improvements | 2.1. Seek input from *stakeholders, key personnel and specialists*  
2.2. Access external sources of information and data as required  
2.3. Evaluate alternative solutions to workplace environmental issues  
2.4. Set efficiency targets |
| 3. Implement performance improvement strategies | 3.1. Source and use appropriate *techniques and tools* to assist in achieving efficiency targets  
3.2. Apply continuous improvement strategies to own work area of responsibility, including ideas and possible solutions to communicate to the work group and management  
3.3. Implement and integrate *environmental and resource efficiency improvement plans* for own work group with other operational activities  
3.4. Supervise and support team members to identify possible areas for improved practices and resource efficiency in work area  
3.5. Seek *suggestions* and ideas about environmental and resource efficiency management from stakeholders and act upon where appropriate  
3.6. Implement costing strategies to fully value |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- analytical skills to analyse problems, to devise solutions and to reflect on approaches taken
- change management skills
- communication skills to answer questions, clarify and acknowledge suggestions relating to work requirements and efficiency
- communication/consultation skills to support information flow from stakeholders to the work group
- innovation skills to identify improvements, to apply knowledge about resource use to organisational activities and to develop tools
- literacy skills to comprehend documentation, to interpret environmental and energy efficiency requirements, to create tools to measure and monitor improvements and to report outcomes
- numeracy skills to analyse data on organisational resource consumption and waste product volumes
- planning and organising skills to implement environmental and energy efficiency management polices and procedures relevant to own work area
- problem-solving skills to devise approaches to improved environmental sustainability and to develop alternative approaches as required
- technology skills to operate and shut down equipment; where relevant, to use software systems for recording and filing documentation to measure current usage; and to use word processing and other basic software for interpreting charts, flowcharts, graphs and other visual data and information
- supervisory skills to work effectively with a team

Required knowledge

- best practice approaches relevant to own area of responsibility and industry
- compliance requirements within work area for all relevant environmental/sustainability legislation, regulations and codes of practice including resource hazards/risks associated with work area, job specifications and procedures
- environmental and energy efficiency issues, systems and procedures specific to industry practice
- external benchmarks and support for particular benchmarks to be used within organisation, including approaches to improving resource use for work area and expected outcomes
- OHS issues and requirements
- organisational structure and reporting channels and procedures
- quality assurance systems relevant to own work area
- strategies to maximise opportunities and to minimise impact relevant to own work
### REQUIRED SKILLS AND KNOWLEDGE

<table>
<thead>
<tr>
<th>area</th>

<table>
<thead>
<tr>
<th>EVIDENCE GUIDE</th>
</tr>
</thead>
<tbody>
<tr>
<td>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</td>
</tr>
</tbody>
</table>

### Overview of assessment

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the following is essential:

- knowledge of relevant compliance requirements within work area
- developing plans to make improvements
- planning and organising work group activities in relation to measuring current use and devising strategies to improve usage
- monitoring resource use and improvements for environmental performance relative to work area and supervision
- ensuring appropriate action is taken within work area in relation to environmental/sustainability compliance and potential hazards
- implementing new approaches to work area in an effort to resolve and improve environmental and resource efficiency issues and reporting as required.

### Context of and specific resources for assessment

Assessment must ensure:

- access to an actual workplace or simulated environment
- access to a range of environment/sustainability legislation, standards, guidelines and procedural requirements relevant to specific work area, daily responsibilities and supervision
- access to a range of information, workplace documentation and resources such as compliance obligations, organisation plans, work supervision and responsibilities
- access to reports from other parties involved in the process of identifying and implementing improvements
- evidence is relevant to the particular workplace role, including work area, staff, stakeholders, equipment, systems and documentation.

### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples
### EVIDENCE GUIDE

are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- response to case studies
- review of reports of activities of work group in relation to measuring resource use and developing improvement strategies
- review of work plans outlining approaches to improved practices with documented benchmarks
- analysis of the way in which advice is sought and suggestions are made about improvements
- observation over time and in a range of situations in relation to review of overall work area and staff, to assess and measure resource use, hazards and compliance
- review of checklists to identify and assess resource usage at the beginning and end of the unit; reports on meetings around procedures and improvement processes and monitoring within the workplace; lists of environmental hazards/risks or inefficiencies or opportunities for improvements identified in the workplace
- analysis of implementation of programs such as a green office program, supply chain program for purchasing sustainable products, or an environmental management framework
- oral or written questioning to assess knowledge of environmental and energy efficiency issues, systems and procedures specific to industry practice.

### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- BSBATSC411C Communicate with the community
- BSBINN301A Promote innovation in a team environment
- BSBLED401A Develop teams and individuals
- BSBMGT402A Implement operational plan
- BSBMGT403A Implement continuous improvement
- BSBRSK401A Identify risk and apply risk management processes.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential italicised conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Compliance** may include:
- meeting relevant laws, by-laws and regulations or best practice or codes of practice to support compliance in environmental performance and sustainability at each level as required (such as Environmental Protection or Biodiversity Conservation Act):
  - international
  - commonwealth
  - state/territory
  - industry
  - organisation.

**Sources** may include:
- organisation specifications
- regulatory sources
- relevant stakeholders
- resource use.

**Purchasing strategies** may include:
- influencing suppliers to take up environmental sustainability approaches
- researching and participating in programs such as a supply chain program to purchase sustainable products.

**Stakeholders, key personnel and specialists** may include:
- individuals and groups both inside and outside the organisation who have direct or indirect interest in the organisation's conduct, actions, products and services, including:
  - customers
  - employees at all levels of the organisation
  - government
  - investors
  - local community
  - other organisations
  - suppliers
  - key personnel within the organisation, and specialists outside the organisation who may

</tbody>
</table>
RANGE STATEMENT

Suggestions may include ideas that help to:

- prevent and minimise risks and maximise opportunities such as:
  - usage of solar or renewable energies where appropriate
  - reducing emissions of greenhouse gases
  - reducing use of non-renewable resources
  - making more efficient use of resources, energy and water
  - maximising opportunities to re-use, recycle and reclaim materials
  - identifying strategies to offset or mitigate environmental impacts:
    - purchasing carbon credits
    - energy conservation
    - reducing chemical use
    - reducing material consumption
  - expressing purchasing power through the selection of suppliers with improved environmental performance e.g. purchasing renewable energy
  - eliminating the use of hazardous and toxic materials.

| Release 1 | This version first released with *BSB07 Business Training Package version 6.0.*  
Revised unit. Required knowledge and Range Statement changed to include environmentally sustainable practices  
Replaces BSBWOR203A Work effectively with others |

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to work in a group environment promoting team commitment and cooperation, supporting team members and dealing effectively with issues, problems and conflict.

Application of the Unit

This unit applies to individuals who perform a range of routine tasks using a limited range of practical skills and fundamental knowledge of teamwork in a defined context under direct supervision or with limited individual responsibility.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

<tr>
<td></td>
<td>1.3 Encourage, acknowledge and act upon constructive <strong>feedback</strong> provided by others in the workgroup</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>2. Contribute to workgroup activities</th>
<th>2.1 Provide <strong>support to team members</strong> to ensure workgroup goals are met</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>2.2 Contribute constructively to workgroup goals and tasks according to organisational requirements</td>
</tr>
<tr>
<td></td>
<td>2.3 Share <strong>information</strong> relevant to work with workgroup to ensure designated goals are met</td>
</tr>
<tr>
<td></td>
<td>2.4 Identify and plan <strong>strategies/opportunities for improvement</strong> of workgroup in liaison with workgroup</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>3. Deal effectively with issues, problems and conflict</th>
<th>3.1 Respect differences in personal values and beliefs and their importance in the development of relationships</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>3.2 Identify any linguistic and cultural differences in communication styles and respond appropriately</td>
</tr>
<tr>
<td></td>
<td>3.3 Identify issues, problems and conflict encountered in the workplace</td>
</tr>
<tr>
<td></td>
<td>3.4 Seek assistance from workgroup members when issues, problems and conflict arise and suggest possible ways of dealing with them as appropriate or refer them to the appropriate person</td>
</tr>
</tbody>
</table>
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to read and understand the organisation’s policies and work procedures, to write simple instructions for particular routine tasks and to interpret information gained from correspondence
- communication skills to request advice, to receive feedback and to work with a team
- technology skills to select and use technology appropriate to a task
- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities.

Required knowledge

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
  - anti-discrimination legislation
  - ethical principles
  - codes of practice
  - privacy laws
  - occupational health and safety (OHS)
  - environmentally sustainable work practices
- organisational policies, plans and procedures
- workgroup member responsibilities and duties, and relationship to individual responsibilities and duties.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
</tr>
</thead>
</table>
| Critical aspects for assessment and evidence required to demonstrate competency in this unit | Evidence of the following is essential:  
- providing support to team members to ensure goals are met  
- seeking feedback from clients and/or colleagues and taking appropriate action  
- knowledge of appropriate conflict resolution techniques. |

| Context of and specific resources for assessment | Assessment must ensure:  
- access to an actual workplace or simulated environment  
- access to office equipment and resources  
- examples of customer complaints or staff conflict. |

| Method of assessment | A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:  
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate  
- analysis of responses to case studies and scenarios  
- demonstration of techniques  
- observation of demonstrated techniques in resolving conflict  
- observation of presentations  
- review of documentation identifying and planning strategies/opportunities for workgroup improvement. |

| Guidance information for assessment | Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:  
- interpersonal communication units  
- other industry capability units. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Responsibilities and duties may include: | • Code of Conduct  
• job description and employment arrangements  
• organisation’s policy relevant to work role  
• skills, training and competencies  
• supervision and accountability requirements including OHS  
• environmentally sustainable working practices  
• team structures. |
| Workgroup members may include: | • coach/mentor  
• other members of the organisation  
• peers/work colleagues/team/enterprise  
• supervisor or manager. |
| Feedback on performance may include: | • formal/informal performance appraisals  
• obtaining feedback from clients  
• obtaining feedback from supervisors and colleagues  
• personal, reflective behaviour strategies  
• routine organisational methods for monitoring service delivery. |
| Support to team members may include: | • explaining/clarifying  
• helping colleagues  
• problem-solving  
• providing encouragement  
• providing feedback to a team member  
• undertaking extra tasks if necessary. |
| Information to be shared may include: | • acknowledging satisfactory performance  
• acknowledging unsatisfactory performance  
• assisting a colleague  
• clarifying the organisation’s preferred task completion methods  
• encouraging colleagues  
• open communication channels  
• workplace hazards, risks and controls. |
| Strategies/opportunities for | • career planning/development  
• coaching, mentoring and/or supervision |
**improvement** may include:

- formal/informal learning programs
- internal/external training provision
- performance appraisals
- personal study
- recognition of current competence (RCC)/skills recognition/initial assessment
- work experience/exchange/opportunities
- workplace skills assessment.

BSBWOR401A Establish effective workplace relationships

Modification History

Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to collect, analyse and communicate information and to use that information to develop and maintain effective working relationships and networks, with particular regard to communication and representation. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | Frontline managers play an important role in developing and maintaining positive relationships in internal and external environments so that customers, suppliers and the organisation achieve planned outputs and outcomes. They play a prominent part in motivating, mentoring, coaching and developing team cohesion through providing leadership for the team and forming the bridge between the management of the organisation and team members. At this level, work will normally be carried out within routine and non routine methods and procedures, which require planning and evaluation, and leadership and guidance of others. |

Licensing/Regulatory Information

Not applicable.

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Collect, analyse and communicate information and ideas | 1.1. Collect relevant *information* from appropriate sources and analyse and share with the work team to improve work performance  
1.2. Communicate ideas and information in a manner which is appropriate and sensitive to the cultural and social diversity of the audience and any specific needs  
1.3. Implement *consultation processes* to encourage employees to contribute to issues related to their work, and promptly relay feedback to the work team in regard to outcomes  
1.4. Seek and value contributions from internal and external sources in developing and refining new ideas and approaches  
1.5. Implement *processes* to ensure that issues raised are resolved promptly or referred to *relevant personnel* as required |
| 2. Develop trust and confidence | 2.1. Treat all internal and external contacts with integrity, respect and empathy  
2.2. Use the *organisation's social, ethical and business standards* to develop and maintain effective relationships  
2.3. Gain and maintain the trust and confidence of *colleagues, customers and suppliers* through competent performance  
2.4. Adjust interpersonal styles and methods to meet organisation's social and cultural environment  
2.5. Encourage other members of the work team to follow examples set, according to *organisation's policies and procedures* |
| 3. Develop and maintain networks and relationships | 3.1. Use *networks* to identify and build relationships  
3.2. Use networks and other work relationships to provide identifiable benefits for the team and organisation |
| 4. Manage difficulties into positive outcomes | 4.1. Identify and analyse difficulties, and take action to rectify the situation within the requirements of the organisation and relevant legislation  
4.2. Guide and support colleagues to resolve work difficulties  
4.3. Regularly review and improve *workplace outcomes* |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
in consultation with relevant personnel
4.4. Manage *poor work performance* within the organisation's processes
4.5. Manage conflict constructively within the organisation's processes

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- coaching and mentoring skills to provide support to colleagues
- literacy skills to research, analyse, interpret and report information
- relationship management and communication skills to:
  - deal with people openly and fairly
  - forge effective relationships with internal and/or external people, and to develop and maintain these networks
  - gain the trust and confidence of colleagues
  - respond to unexpected demands from a range of people
  - use supportive and consultative processes effectively.

**Required knowledge**

- relevant legislation from all levels of government that affects business operation, especially in regard to occupational health and safety (OHS), and environmental issues, equal opportunity, industrial relations and anti-discrimination
- theory associated with managing work relationships to achieve planned outcomes:
  - developing trust and confidence
  - maintaining consistent behaviour in work relationships
  - understanding the cultural and social environment
  - identifying and assessing interpersonal styles
  - establishing, building and maintaining networks
  - identifying and resolving problems
  - resolving conflict
  - managing poor work performance
  - monitoring, analysing and introducing ways to improve work relationships.
**Evidence Guide**

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

BSBWOR404B Develop work priorities

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to plan one's own work schedules, to monitor and to obtain feedback on work performance and development. It also addresses the requirement to take responsibility for one's own career planning and professional development. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to individuals who are required to design their own work schedules and work plans, and to establish priorities for their work. They will typically hold some responsibilities for the work of others and have some autonomy in relation to their own role. |

Licensing/Regulatory Information
Not applicable.

BSBWOR501B Manage personal work priorities and professional development

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to manage own performance and professional development. Particular emphasis is on setting and meeting priorities, analysing information and using a range of strategies to develop further competence. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to managers and focuses on the need for managers to be organised, focussed and skilled, in order to effectively manage the work of others. As such it is an important unit for most managers, particularly as managers serve as role models and have a significant influence on the work culture and patterns of behaviour. |

Licensing/Regulatory Information
Not applicable.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Establish personal work goals | 1.1. Serve as a positive role model in the workplace through personal work planning and organisation  
1.2. Ensure personal work goals, plans and activities reflect the organisation's plans, and own responsibilities and accountabilities  
1.3. Measure and maintain personal performance in varying work conditions, work contexts and contingencies |
| 2. Set and meet own work priorities | 2.1. Take initiative to prioritise and facilitate competing demands to achieve personal, team and organisational goals and objectives  
2.2. Use technology efficiently and effectively to manage work priorities and commitments  
2.3. Maintain appropriate work-life balance, and ensure stress is effectively managed and health is attended to |
| 3. Develop and maintain professional competence | 3.1. Assess personal knowledge and skills against competency standards to determine development needs, priorities and plans  
3.2. Seek feedback from employees, clients and colleagues and use this feedback to identify and develop ways to improve competence  
3.3. Identify, evaluate, select and use development opportunities suitable to personal learning style/s to develop competence  
3.4. Undertake participation in networks to enhance personal knowledge, skills and work relationships  
3.5. Identify and develop new skills to achieve and maintain a competitive edge |
## Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

### Required skills

- communication skills to receive, analyse and report on feedback
- literacy skills to interpret written and verbal information about workplace requirements
- organisational skills to set and achieve priorities.

### Required knowledge

- principles and techniques involved in the management and organisation of:
  - performance measurement
  - personal behaviour, self-awareness and personality traits identification
  - personal development plan
  - personal goal setting
  - time management
- management development opportunities and options for self
- organisation’s policies, plans and procedures
- types of learning style/s and how they relate to the individual
- types of work methods and practices that can improve personal performance.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential italicised conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| **Own responsibilities and accountabilities** may include: | • expectations of workplace performance as expressed in a performance plan  
• outputs as expressed in position descriptions or duty statements  
• statement of conduct outlining an individual's responsibilities/actions/performances |
| --- | --- |
| **Technology** may include: | • computerised systems and software, databases, project management and word processing  
• electronic diary  
• personal digital assistant (PDA) |
| **Competency standards** may include: | • enterprise-specific units of competency consistent with work requirements  
• nationally endorsed units of competency consistent with work requirements |
| **Clients and colleagues** may be: | • colleagues at the same level and more senior managers  
• internal or external customers  
• people from a wide range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities  
• team members |
| **Development opportunities** may include: | • action learning  
• coaching  
• exchange/rotation  
• induction  
• mentoring  
• shadowing  
• structured training programs |

| 1. Establish team performance plan           | 1.1. **Consult** team members to establish a common understanding of team purpose, roles, responsibilities and **accountabilities** in accordance with organisational goals, plans and objectives  
1.2. Develop **performance plans** to establish expected **outcomes, outputs, key performance indicators** and goals for work team  
1.3. **Support** team members in meeting expected performance outcomes  |
| 2. Develop and facilitate team cohesion      | 2.1. Develop **strategies** to ensure team members have input into planning, decision making and operational aspects of work team  
2.2. Develop **policies and procedures** to ensure team members take responsibility for own work and assist others to undertake required roles and responsibilities  
2.3. Provide feedback to team members to encourage, value and reward individual and team efforts and contributions  
2.4. Develop **processes** to ensure that issues, concerns and problems identified by team members are recognised and addressed  |
| 3. Facilitate teamwork                       | 3.1. Encourage team members and individuals to participate in and to take responsibility for team activities, including communication processes  
3.2. Support the team in identifying and resolving work performance problems  
3.3. Ensure own contribution to work team serves as a role model for others and enhances the organisation’s image for all **stakeholders**  |
| 4. Liaise with stakeholders                  | 4.1. Establish and maintain open communication processes with all stakeholders  
4.2. Communicate information from **line manager/management** to the team  
4.3. Communicate unresolved issues, concerns and problems raised by team members and follow-up with line manager/management and other relevant stakeholders  
4.4. Evaluate and take necessary corrective action regarding unresolved issues, concerns and problems raised by internal or external stakeholders  |
Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- Communication skills to explain team goals, to address team conflict and to build an environment of trust
- Planning and organisational skills to keep team on track and focused on work outcomes.

**Required knowledge**

- Group behaviour
- Strategies for mentoring and coaching to informally guide and instruct team members
- Issue resolution
- Strategies for gaining consensus.
# Evidence Guide

## EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the following is essential:

- range of techniques that can be used to build work teams, strengthen communications in the team and resolve issues
- methods for engaging with stakeholders and obtaining advice from outside the work team, to ensure team is focussed and on track
- knowledge of group behaviour.

**Context of and specific resources for assessment**

Assessment must ensure:

- access to appropriate documentation and resources normally used in the workplace.

**Method of assessment**

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies and scenarios
- assessment of written reports
- demonstration of team building techniques
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- observation of performance in role plays
- review of performance plans developed for work team
- review of policies and procedures developed to ensure team members take responsibility for own work.

**Guidance information for assessment**

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units from the Diploma of Management.
# Range Statement

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| **Consultation** may refer to: | • conducting meetings, interviews, brainstorming sessions, email/intranet communications, newsletters or other processes and devices which ensure that all employees have the opportunity to contribute to team and individual performance plans  
• mechanisms used to provide feedback to the work team in relation to outcomes of consultation |
|---|---|
| **Accountabilities** may refer to: | • responsibilities as defined in position descriptions, codes of conduct/behaviour, duty statements or similar  
• statement of conduct outlining responsibilities/ actions/ performance |
| **Performance plans** may refer to: | • individual performance plans linked to team goals  
• team plans based on work assignments and responsibilities |
| **Outcomes, outputs, key performance indicators** may refer to agreed: | • changes in work roles and responsibilities  
• improved individual and team, performance and participation  
• improvements to systems, operations  
• measures for monitoring and evaluating the efficiency or effectiveness of systems or services  
• quality standards and expectations  
• targets for productivity improvements such as reduced downtime, higher production levels, decreases in absenteeism  
• targets for training and development |
| **Support** may include: | • Coaching  
• Mentoring  
• Training and development opportunities  
• Clarification of roles and expectations |
<table>
<thead>
<tr>
<th>RANGE STATEMENT</th>
</tr>
</thead>
</table>
| • Long term or short term plans  
• Meetings  

**Strategies** may refer to:  
• clarification of roles and expectations  
• electronic communication devices and processes, such as intranet and email communication systems, to facilitate input  
• long-term or short-term plans factoring in opportunities for team input  
• mentoring and 'buddy' systems to support team members in providing input  
• newsletters and briefings  
• training and development activities  

**Policies and procedures** may refer to:  
• organisational guidelines and systems that govern operational functions  
• procedures that detail the activities that must be carried out for the completion of actions and tasks  
• Standard Operating Procedures  

**Processes** may refer to:  
• brainstorming options with the team for addressing concerns  
• creating a matrix of issues and concerns and distributing for comment  
• discussions with individuals regarding their concerns  
• distributing drafts for comment with a range of options for resolution of concerns  
• training and development sessions  

**Stakeholders** may include:  
• Board members  
• business or government contacts  
• funding bodies  
• union/employee groups and representatives  
• work team  

**Line manager/management** may refer to:  
• chief executive officer  
• direct superior  
• other management representatives

BSBWRK509A Manage industrial relations

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to manage industrial relations matters within an organisation, with day to day involvement. It includes strategic planning and policy development for industrial relations as well as negotiation, conflict management and dispute resolution. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to individuals with a well established, sound theoretical knowledge base in human resources management and industrial relations who are proficient in using a range of specialised technical and managerial techniques to plan, carry out and evaluate their own work and/or the work of a team. They may or may not have responsibility for supervising the work of others but are authorised to oversee industrial relations in the organisation. However they will have knowledge of current industrial relations trends and legislation. The unit addresses staff who have responsibility for working across the organisation to ensure that there is a policy infrastructure which ensures legislative compliance and clarifies issues. It also addresses the requirement for responding to industrial conflict and grievances. |

CPCCCM2007B Use explosive power tools

Modification History
Minor changes made to range statement, including addition of photovoltaic (solar) panels
Equivalent to CPCCCM2007A

Unit Descriptor
This unit of competency specifies the outcomes required to apply safe and effective operation of explosive power tools (EPT), used to fasten materials or fix fasteners to bases. It includes both direct action and indirect action explosive powered fastening tools.

Application of the Unit
This unit of competency supports achievement of skills to safely and effectively use a range of EPT used in the construction industry.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Plan and prepare. 1.1 Work instructions, including plans, specifications, quality requirements and operational details, are obtained, confirmed and applied from relevant information for planning and preparation.

1.2 Safety (OHS) requirements are followed in accordance with safety plans and policies.

1.3 Signage and barricade requirements are identified and implemented.

1.4 Plant, tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and any faults are rectified or reported prior to commencement.

1.5 Material quantity requirements are calculated in accordance with plans and specifications.

1.6 Materials appropriate to work application are identified, obtained, prepared, safely handled and located ready for use.

1.7 Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority obligations, and are applied.

2 Set out fasteners. 2.1 Minimum distances for set out from edge of substrate material are adhered to in accordance with legislation, regulations and codes of practice.

2.2 Material is located and temporarily held or fixed into designed position according to detailed drawings.

3 Use EPT. 3.1 EPT is checked for operation according to manufacturer specifications and safety (OHS) requirements for use of EPT.

3.2 Fastener is selected according to requirements of job.

3.3 Charge is selected to assessed requirements for material, base and penetration.
3.4 **Attachments** and accessories are installed to EPT in accordance with manufacturer specifications and safety (OHS) requirements.

3.5 **Fastener and charge** in EPT are located to manufacturer specifications.

3.6 EPT operation is carried out and fastener is fixed into place in accordance with manufacturer recommendations, legislation, regulations and codes of practice.

3.7 Fastening penetration is checked and appropriate depth into material is applied.

3.8 Power regulating device is adjusted for conditions.

3.9 Misfire procedures are carried out according to manufacturer recommendations, legislation, regulations and codes of practice.

3.10 Temporary holding and fixings are removed without damage to material.

4 **Secure and store equipment and charges.**

4.1 Charges are stored in designated container in accordance with legislation, regulations and codes of practice and used charges are recorded.

4.2 Unused fasteners, the EPT and attachments are stored in a carry case in line with manufacturer recommendations.

4.3 Logbook is checked and maintenance recorded according to manufacturer recommendations.

5 **Maintain EPT and kit.**

5.1 Safety features of tools are checked for serviceability in accordance with manufacturer operating manual.

5.2 Tools are cleaned and lubricated to manufacturer recommendations.

5.3 Periodic maintenance service is carried out to manufacturer specifications.

5.4 Diminished stocks of charges and fasteners are replenished to designed effectiveness of EPT kit.
6 Clean up.

6.1 Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

6.2 Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
    - report faults
    - use language and concepts appropriate to cultural differences
    - use and interpret non-verbal communication, such as hand signals
    - written skills to record maintenance in logbook
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - numeracy skills to apply measurements and make calculations
  - organisational skills, including the ability to plan and set out work
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction terminology
- EPT materials
- EPT charges and fasteners
- equipment safety manuals and instructions
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
- relevant Acts, regulations and codes of practice
- security and storage procedures for equipment and charges
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- fix metal or timber to a steel, concrete or masonry base on one project of each to job specifications, including:
  - completion of stripping and assembly of the tool
  - completing log of serviceability
  - maintaining and cleaning
• selecting charges and fasteners applicable to base material and material being fixed
• misfire procedures
• using attachments
• complying with storage and security regulations and OHS requirements for the working environment
• selecting signage
• test fire.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

• an induction procedure and requirement
• realistic tasks or simulated tasks covering the mandatory task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to
confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information** includes:

- diagrams or sketches
• instructions issued by authorised organisational or external personnel
• manufacturer specifications and instructions where specified
• memos
• MSDS
• organisation work specifications and requirements
• plans and specifications
• regulatory and legislative requirements pertaining to using EPT
• relevant Australian standards
• safe work procedures related to using EPT
• signage
• verbal or written and graphical instructions
• work bulletins
• work schedules.

**Planning and preparation** include:
• work site inspection
• equipment defect identification
• assessment of conditions and hazards
• determination of work requirements.

**Safety (OHS)** is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:
• emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
• handling of materials
• hazard control
• hazardous materials and substances
• safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  • earth leakage boxes
  • lighting
  • photovoltaic (solar) panels
  • power cables, including overhead service trays, cables and conduits
  • restricted access barriers
  • surrounding structures
  • traffic control
  • trip hazards
  • work site visitors and the public
working at heights
working in confined spaces
working in proximity to others
working with dangerous materials
organisational first aid
personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
use of firefighting equipment
use of tools and equipment
workplace environment and safety.

**Tools and equipment** may include:
- direct action EPT
- indirect action EPT
- clamps and levels.

**Materials** include:
- timber
- metals
- patented fasteners.

**Environmental requirements** include:
- clean-up management
- noise and dust
- vibration
- waste management.

**Statutory and regulatory authorities** include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Minimum distance for set out of fasteners** is to be in accordance with:
- regulated minimum distances
- bases, including concrete, masonry or steel.

**Use of EPT** includes:
- stripping and assembling tools
- completing log of serviceability
- maintaining and cleaning tools
- selecting charges and fasteners applicable to the base material and material being fixed
- misfire procedures
- using attachments
- complying with storage and security regulations
and OHS requirements for the working environment
- selecting signage
- test fire.

**Attachments** include:
- channel, rebate and other manufacturer attachments.

**Fastener and charge** include:
- firing a test shot with misfire procedures, complying with the regulated safety procedure for misfire.

Unit Descriptor
Unit descriptor This unit specifies the outcomes required to perform slinging techniques, including the selection and inspection of lifting gear and/or the directing of the crane operator in the movement of the load when the load is out of view of the crane/ operator for licensing purposes.

Application of the Unit
Application of the unit This unit covers the scope of work to demonstrate competency in the application of slinging techniques, selection and inspection of lifting gear and/or the directing of the crane/ operator in the movement of the load.

This unit is based upon the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>

</table>
| 1. Plan job.                             | 1.1. *Site information* is obtained and related to the task.  
1.2. *Hazard* s and potential hazards associated with the slinging and directing of loads are identified.  
1.3. *Hazard control measures* consistent with *appropriate standards* are identified to ensure the safety of personnel and equipment.  
1.4. The weight, dimensions and centre of gravity of the load are identified and assessed.  
1.5. Suitable lifting/slinging points on the load are identified.  
1.6. Appropriate *lifting equipment* needs are assessed.  
1.7. Appropriate *communication methods* are assessed with crane/ operators and other appropriate personnel.  
1.8. Manufacturer's specifications/information is obtained for special loads where necessary. |
| 2. Select and inspect equipment.          | 2.1. Lifting equipment appropriate to the task is selected.  
2.2. Lifting equipment is inspected for serviceability.  
2.3. Damaged or excessively worn lifting equipment is identified, labelled and rejected.  
2.4. Appropriate communication methods for the crane/operator and appropriate personnel are selected.  
2.5. Appropriate *communication equipment* is selected and its serviceability is checked.  
2.6. Appropriate *personal protective equipment* (PPE) is selected and checked. |
| 3. Prepare site and equipment.            | 3.1. Hazard prevention/control measures are applied consistent with appropriate standards to ensure the safety of personnel and equipment.  
3.2. Appropriate slinging method is selected.  
3.3. Lifting equipment is prepared and assembled where appropriate.  
3.4. Load destination is prepared.         |
| 4. Perform task.                         | 4.1. Lifting equipment is attached and secured to the lifting hook using appropriate techniques.  
4.2. Lifting hook is positioned over the load centre of gravity.  
4.3. Lifting equipment is attached and secured to the load |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
in an appropriate manner.
4.4. Tag line is attached and secured where appropriate.
4.5. Test lift is conducted to ensure security of load.
4.6. Load is moved maintaining stability and control at all times.
4.7. Appropriate communication methods and *communication signals* are applied to safely coordinate the load movement both within sight and out-of-sight of crane operator.
4.8. The load is landed to ensure that it is stable and secure from movement.
4.9. Lifting equipment is removed or disconnected from load and prepared for next task or storage.

5. Shut down job and clean up.
5.1. Unserviceable lifting equipment inspected and rejected.
5.2. *Defective equipment* is isolated and tagged.
5.3. Lifting equipment is stored in accordance with procedures and appropriate standards.
5.4. Hazard prevention/control measures are removed where appropriate.
5.5. Excess materials from the work area are removed (where applicable).
5.6. Defects are reported and recorded according to procedures and appropriate action is taken.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:
- communication techniques in the workplace including whistles, hand signals and use of fixed channel two-way radios
- communication skills at a level sufficient to communicate with other site personnel
- calculate rated capacity of lifting equipment
- apply different methods for making temporary connections to loads using fibre and synthetic ropes
REQUIRED SKILLS AND KNOWLEDGE

- ability to interpret rated capacity and working load limit tags
- hazard identification and control
- slinging techniques
- selection and inspection of lifting equipment
- directing crane operators in the moving of loads in a safe manner, using a slewing crane
- inspection and care of a wide range of lifting equipment to appropriate Australian Standards and/or manufacturer's specifications.

Required knowledge

Required knowledge for this unit is:

- appropriate mathematical procedures for estimation and measurement of loads
- basic knowledge of types of cranes and their functions
- Commonwealth, state or territory OHS legislation, standards and codes of practice relevant to the full range of techniques for undertaking dogging activities
- load stability and safety factors in line with manufacturer's specifications
- types of lifting equipment and slinging techniques for use, and their limitations and performance in a wide range of conditions (including but not limited to slings, beams, accessories, clamps, work-boxes, bins and pallets)
- understanding of the hierarchy of control.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment of this unit which have been endorsed by the national body responsible for OHS matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with Commonwealth, state or territory OHS legislation, standards relevant to safe dogging and crane operations.
- communicate and work safely with others in the work area.
- apply Hazard prevention and control measures consistent with appropriate standards.
- apply to move loads in conjunction with cranes including, the reading of tags, slinging, loading, directing and landing loads with a slewing mobile crane with a telescopic boom and a winch, in and out of sight of the crane/operator, moving four loads of varying shapes, sizes and weights.
- use fibre and/or synthetic rope as tag lines, and connecting to loads using clove hitch, rolling hitch, bowline and single sheetbend.
- conduct pre and post operational checks of the lifting equipment.
- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the national OHS endorsed Assessment Instrument
- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.

Context of and specific resources for assessment

- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the national OHS endorsed Assessment Instrument
- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.
EVIDENCE GUIDE

- Assessors must ensure that the assessment in the workplace is organised through a workplace supervisor to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.
- Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with the requirements of any relevant Standards or operating procedures for dogging activities.
- Applicants must have access to:
  - personal protective equipment (PPE) for the purpose of the performance assessment.
  - four different loads as prescribed in the endorsed assessment instrument.
  - lifting and associated equipment.
  - suitable slewing crane.
  - communication equipment (eg. fixed channel, two-way radios) as applicable.

Method of assessment

Assessment must be conducted using the national OHS endorsed Assessment Instrument. This Instrument provides instruction on the application of the assessment.

Assessment may be in conjunction with the assessment of other units of competency.

The use of 'simulators' in the assessment of this unit of competency is not acceptable.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

Guidance information for assessment

Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Site information may include but not be limited to:

- local conditions such as access and egress
- work method statements.

Hazards may include but not limited to:

- ground stability (e.g. ground condition, recently filled trenches, slopes)
- overhead hazards (e.g. power lines, service pipes, trees, buildings, etc)
- insufficient lighting
- traffic (e.g. pedestrians, vehicles, plant)
- weather (e.g. wind, lightning, storms)
- other specific hazards (e.g. trip hazards, heights, radio interference, etc).

Hazard prevention/control measures

The systematic process of eliminating or reducing the risk to personnel and property through the application of controls. It includes the application of the hierarchy of controls, including:

1. elimination.
2. substitution.
3. isolation.
4. engineered control measures.
5. safe work practices.
6. personal protective equipment.

Appropriate standards may include:

- codes of practice
- legislation
- Australian Standards
- manufacturer’s specifications
- industry standards.

Lifting Equipment may include but not limited to:

- fibre ropes
- wire ropes
- chain
RANGE STATEMENT

- wire and synthetic slings
- shackles
- eyebolts
- beam clamps
- plate clamps
- spreader beams
- lifting beams
- pallet forks and cages
- concrete kibbles
- personnel boxes.

Communication Methods may include but are not limited to:

- written instructions
- signage,
- hand signals
- listening
- questioning to confirm understanding
- appropriate worksite protocol.

Cranes may include but not limited to:

- tower cranes (including self erecting)
- portal boom cranes
- vehicle loading cranes
- slewing mobile cranes
- non-slewing cranes
- derrick cranes.

Appropriate personnel may include but are not limited to:

- supervisors
- colleagues
- managers who are authorised to take responsibility for the workplace or operations.

Communication Equipment may include but not limited to:

- fixed channel two-way radios
- whistles
- bells.

Personal protective equipment (PPE) may include but not limited to:

- hard hat
- safety boots
- gloves
- high visibility clothing
- reflective vest
- relevant breathing, hearing, sight, skin and sun protection.

Load destination may include but not limited to:

- ground
- loading platforms
- suspended floors
- vehicles.
RANGE STATEMENT

**Communication signals** may include but not limited to:
- stop - hand
- stop - whistle
- hoist up - hand
- hoist up - whistle
- hoist down - hand
- hoist down - whistle
- luff boom down - hand
- luff boom down - whistle
- luff boom up - hand
- luff boom up - whistle
- telescope out - hand
- telescope out - whistle
- telescope in - hand
- telescope in - whistle
- slew left - hand
- slew left - whistle
- slew right - hand
- slew right - whistle.

**Defective Equipment** may include but not limited to:
- excessive wear
- damage
- stretched
- broken wires
- cut/damaged fibres.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- ability to calculate Safe Working Load (SWL) and Working Load Limit (WLL)
- ability to erect and dismantle, level, plumb and stabilise associated plant and structures
- ability to work safely at heights including the correct application of safety equipment.
- accurate interpretation of basic structural charts and structural plans (site information)
- applying methods for making temporary connections of ropes using fibre and synthetic types
- apply methods of splicing and whipping fibre and synthetic ropes
- correct application and use of all rigging and associated equipment
- risk assessment and hazard control strategies
- interpersonal and communication skills at a level sufficient to site/workplace requirements. This includes the relevant communication methods and equipment.
- verify problems and equipment faults and demonstrate appropriate response.

**Required knowledge**

Required knowledge for this unit is:

- appropriate mathematical procedures for estimation and measurement of loads
- ability to interpret manufacturer's specifications for all plant and equipment use in rigging operations
- knowledge of principles relating to all plant, equipment and structural stability
- knowledge of the types and functions of rigging, safety and associated equipment including an understanding of their limitations.
- organisational and workplace standards, requirements, policies and procedures for rigging
REQUIRED SKILLS AND KNOWLEDGE

- understanding of the hierarchy of hazard identification and control
- relevant Commonwealth, state or territory and local government OHS legislation, standards and codes of practice for undertaking rigging activities
- understanding of inspection and maintenance requirements of a wide range of appropriate plant and equipment in line with Australian Standards or manufacturer's specifications
- estimation of ground bearing pressures of the full range of soil types and associated ground conditions for setting up plant and equipment.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment endorsed by the national body responsible for OHS matters for the assessment of this unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS licensing legislation.
- effectively communicate and work safely with others in the work area.
- effectively conduct risk assessment and management procedures.
- effectively complete the following tasks:-
  - inspection of all plant and equipment, and
  - installation of a fall arrest system (Static line), and
  - use of a safety harness / fall arrest system, and
  - installation of crane loading platforms and
  - installation of a safety net, and
  - installation of a shutter and safety screen, and
  - demonstrated ability to work safely at heights, and
  - erection of structural steel, and
  - erection of precast panel, and
  - set up and operation of a winch for load movement, and
  - installation of a materials hoist, or
  - installation of a mast climber.
- effectively demonstrate the following knots,
EVIDENCE GUIDE

bends and hitches:
- Sheet bend,
- Becket hitch,
- Running bowline,
- Double bowline.
- effectively demonstrate the following splices and whippings:
  - Eye splice,
  - Back splice,
  - Short splice,
  - Sail makers whipping,
  - Common whipping,
  - West countryman's

Context of and specific resources for assessment

Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the National OHS endorsed Assessment Instrument.

Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.

Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.

Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.

Assessment is to comply with the requirements of any relevant Standards or operating procedures for basic rigging.

Applicants must have access to:
- personal protective equipment (PPE) for the purpose of the Performance Assessment.
- appropriate safety equipment in safe condition
- appropriate rigging equipment, associated equipment associated plant in safe condition as described in the endorsed assessment instrument
- communication equipment (e.g. two-way
EVIDENCE GUIDE

- radios) where applicable
- appropriate materials as required for safe erection of structures
- appropriate materials for conducting fibre rope slicing, whipping, knots, bends and hitches.

Method of assessment

Assessment must be conducted using the national OHS endorsed Assessment Instruments. These Instruments provide advice on their application.

The use of 'simulators' in the assessment of this unit of competency is not acceptable.

Assessment may be in conjunction with the assessment of other units of competency.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

Guidance information for assessment

Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards may include but are not limited to:

- ground stability (e.g. ground condition, recently filled trenches, slopes)
- overhead hazards (e.g. power lines, service pipes) (NB: minimum clearance distance from powerlines or electrical equipment as determined by relevant state authority or
RANGE STATEMENT

- electrical supply authority.
- traffic (e.g. pedestrians, vehicles, other plant)
- insufficient lighting
- environmental conditions (e.g. wind, lightning, storms)
- other specific hazards (e.g. dangerous materials).

Hazard control measures:
Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls.

It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:

- elimination
- substitution
- isolation
- engineering control measures
- using safe work practices
- personal protective equipment.

Appropriate standards may include:

- codes of practice
- legislation
- Australian Standards
- manufacturer's specifications
- industry standards (where applicable).

Site Information may include, but not limited to:

- local conditions such as access and egress,
- work method statements,
- site specific job safety analyses and other site specific documentation as required.
- task plans / Schedules and structural plans.

Forces and Loads may include, but not limited to:

- dead loads
- live loads
- static load
- dynamic loads
- wind loads.

Structures may include but are not limited to:

- structural steel
- precast panels.

Associated plant may include but not limited to:

- static lines
- safety nets
- hoists
RANGE STATEMENT

**Appropriate personnel** may include:
- mast climbers
- loading platforms.
- engineers
- supervisors
- colleagues
- managers who are authorised to take responsibility for the workplace or operations.

**Rigging Equipment** may include but is not limited to:
- scaffolds
- elevated work platforms
- personnel box
- cantilevered crane loading platforms
- mast climbers.
- safety screens and shutters
- cranes including but not limited to:
  - non-slewing cranes
  - mobile slewing cranes
  - vehicle loading cranes
  - tower cranes
  - self-erecting tower cranes
  - portal boom cranes
  - derrick cranes
  - bridge and gantry cranes.

**Associated equipment** may include but is not limited to:
- all types of power and manually operated lifting gear
- fibre ropes
- flexible steel wire rope (FSWR)
- chains
- wire and synthetic slings
- shackles
- terminations
- wedge sockets
- eye bolts
- beam clamps
- plate clamps
- rope grips
- turnbuckles
- rigging screws
- chain blocks
- lever blocks
- lever-action winches
RANGE STATEMENT

- sheaves
- spreader bars
- lifting beams
- jacks
- levers
- skates
- wedges
- rollers
- girder trolley

Procedures may include but is not limited to:

- manufacturer's guidelines (instructions, specifications or checklists)
- industry operating procedures, relevant codes of practice
- workplace procedures (work instructions, operating procedures, checklists).

Safety Equipment may include but not limited to:

- safety harness
- energy absorber
- lanyard
- inertia reel
- static safety lines
- safety nets.

Communication Methods may include but is not limited to:

- verbal and non-verbal language
- written instructions
- signage
- hand signals
- listening,
- questioning to confirm understanding, and appropriate worksite protocol.

NB: Mobile phones are not to be used for signalling purposes during the rigging process.

Communication equipment may include but is not limited to:

- fixed channel two-way radios

Hazard prevention/control measures may include but is not limited to:

- safety tags on electrical switches/isolators
- powerlines are insulated
- safety observer used inside exclusion zone
- power disconnected
- traffic barricades and control
- pedestrian barricades
- trench covers
RANGE STATEMENT

- movement of obstructions
- personal protective equipment
- adequate illumination
- safety shutters and screens.

*Ground suitability* may include but is not limited to:

- rough uneven ground
- backfilled ground
- soft soils
- hard compacted soil
- rock
- bitumen
- concrete
- suspended concrete floors
- building roofs
- landings
- ground bearing pressure.

*Appropriate personnel* may include but not limited to:

- other riggers
- doggers
- crane operators.

*Temporary connections* may include but not limited to:

- knots
- bends
- hitches
- spicing
- whipping.

*Flexible Steel Wire Rope (FSWR)* includes:

May include termination for:

- static lines,
- guys,
- purchase systems,
- lashing,
- cranes,
- hoist and winch ropes.

Unit sector: Construction
Co-requisite units

Co-requisite units       Nil

Functional area

Functional area
CPCCLSF2001A Licence to erect, alter and dismantle scaffolding basic level

Modification History
Not Applicable

Unit Descriptor
Unit descriptor This unit specifies the outcomes required to erect, alter and dismantle scaffolding at the basic level, consisting of scaffolding work connected with the operation or use of modular or pre-fabricated scaffolds, cantilevered materials hoists with a maximum working load of 500kg, ropes and gin wheels, safety nets and static lines, and bracket scaffolds (tank and formwork) for licensing purposes.

Application of the Unit
Application of the unit This unit covers the scope of work to plan the job, select and inspect equipment, set up task, erect scaffold and scaffold equipment and dismantle scaffold and scaffold equipment.

This unit is based upon the National Standard for Licensing Persons Performing High Risk Work.

This unit in its current form it state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan job. | 1.1. Task to be undertaken is assessed.  
1.2. Potential workplace hazards are identified.  
1.3. Hazard control measures are identified consistent with appropriate standards to ensure the safety of personnel and equipment.  
1.4. Site information is obtained.  
1.5. Scaffold, associated equipment and scaffolding equipment are identified from site information and in consultation with appropriate personnel (where applicable).  
1.6. Safety equipment is identified.  
1.7. All forces and loads exerted on and by the scaffold and/or scaffolding equipment are determined and calculated.  
1.8. Appropriate communication methods are identified with appropriate personnel. |
| 2. Select and inspect plant and equipment. | 2.1. Scaffold, associated equipment and scaffold equipment are selected and inspected according to procedures and site information.  
2.2. Safety equipment is selected and inspected according to procedures.  
2.3. All defective Scaffold, associated equipment, scaffold equipment and safety equipment are isolated according to procedures.  
2.4. All defective Scaffold, associated equipment, scaffold equipment and safety equipment are reported and recorded according to procedures.  
2.5. Communication equipment is selected and inspected for serviceability (where applicable). |
| 3. Set up task | 3.1. Appropriate hazard prevention/control measures are applied to the work area according to procedures.  
3.2. Ground suitability is checked.  
3.3. Appropriate footings are prepared to support scaffold and scaffold equipment according to procedures and the appropriate standard.  
3.4. Scaffold and scaffold equipment are prepared for erection according to procedures and the appropriate standard.  
3.5. Safety equipment is fitted and secured according to procedures (where applicable). |
### ELEMENT | PERFORMANCE CRITERIA
--- | ---
3.6. Scaffold and scaffold equipment are positioned for work application and *stability* according to procedures and the appropriate standard.  

4. Erect scaffold and scaffold equipment.  
4.1. Scaffold and scaffold equipment are erected according to procedures and the appropriate standard.  
4.2. Work is conducted safely at heights including safe and effective use of safety equipment.  
4.3. Scaffold and scaffold equipment are erected consistent with site information.  
4.4. Appropriate communication methods are used to coordinate the tasks.  
4.5. Completed tasks are inspected for compliance with the appropriate standard.  
4.6. Handover certificate is completed as required and handed to appropriate personnel.  
4.7. Excess materials from the work area are removed (where applicable).  

5. Dismantle scaffold and scaffold equipment.  
5.1. Scaffold and scaffold equipment are dismantled according to procedures and the appropriate standard.  
5.2. Work is conducted safely at heights including safe and effective use of safety equipment.  
5.3. Scaffold, associated equipment and scaffold equipment are inspected for damage and defects.  
5.4. All damaged and defective scaffold, associated equipment and scaffold equipment are tagged and isolated according to procedures.  
5.5. Hazard prevention/control measures are removed (where appropriate).  
5.6. All damaged and defective scaffold, associated equipment and scaffold equipment are reported and recorded according to procedures and appropriate action taken.

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.
REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- ability to calculate Safe Working Load (SWL) and Working Load Limit (WLL)
- ability to erect scaffold within the scope of the basic scaffolder
- ability to erect, level, plumb and stabilise cantilever hoists and scaffolds
- ability to interpret manufacturer's specifications for plant and equipment
- ability to work safely at heights
- ability to set up fall arrest systems, including safety nets
- ability to work safely in confined spaces
- accurate interpretation of basic structural charts and structural plans
- applying methods for making temporary connection using fibre ropes
- correct application of all scaffolding equipment
- methods for making temporary connection of guy ropes and static lines using Flexible Steel Wire Rope (FSWR)
- verify problems and equipment faults and demonstrate appropriate response.

Required knowledge

Required knowledge for this unit is:

- use of appropriate mathematical procedures for estimation and measurement of loads Commonwealth, state or territory OHS legislation and local government regulations, including standards and codes of practice relevant to the full range of techniques for undertaking basic scaffolding activities
- knowledge of principles relating to plant and equipment stability
- knowledge of types of scaffolding and their application
- knowledge of scaffolding erection and dismantling techniques
- knowledge of types of hoists, plant and equipment associated with basic scaffolding and their use/s
- risk assessment and control, including understanding of the hierarchy of control
- estimation of bearing pressures of the full range of soil types and associated ground conditions for setting up plant and equipment
- load capabilities of different types of scaffolding constructions
- understanding and application of organisational and workplace standards, requirements, policies and procedures for scaffolding
- safety equipment applicable to scaffolding
- understanding and application of the inspection and maintenance requirements for basic scaffold, associated equipment and scaffold equipment
- uses and limitations of tools and equipment, appropriate to scaffolding tasks and activities.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Successful assessment of this unit meets the competency requirement of the National Standard for licensing Persons Performing High Risk Work.

State/Territory OHS regulators have mandated the use of Assessment Instruments and Instructions for Assessment endorsed by the national body responsible for OHS matters for the assessment of this unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS licensing requirements.
- effectively communicate and work safely with others in the work area.
- effectively apply risk assessment and hazard management procedures at a basic scaffolder level.
- effectively complete the planning, erection and dismantling of a scaffolding system, in accordance with procedures, including a minimum of erect and dismantle:
  - Modular Scaffold with return and ladder access and platform brackets (hop-up brackets)
  - Bracket Scaffold
  - Mobile Scaffold
  - gin wheel
  - Cantilever Hoist
  - safety net and static line
  - safety screen

Scaffold to be of a minimum height of at least 5.0 metres above the supporting surface with full edge protection (includes safety screen) for each work platform including toe boards and handrails.

- correctly demonstrate fibre rope bends and hitches.
EVIDENCE GUIDE

Context of and specific resources for assessment

- effectively conduct pre and post operational checks of basic scaffolding.
- complete handover certificate as required.
- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the National OHS endorsed Assessment Instrument
- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting
- Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace
- Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints for basic scaffolding
- Applicants must have access to:
  - personal protective equipment (PPE) for the purpose of the Performance Assessment
  - appropriate safety equipment in safe condition
  - appropriate scaffolding and associated scaffolding equipment
  - communication equipment (e.g. fixed channel two way radios) where applicable
  - appropriate personnel to assist with the erecting and dismantling of scaffold and scaffold equipment.

Method of assessment

Assessment must be conducted using the national OHS endorsed Assessment Instruments. These Instruments provide advice on their application.

Assessment may be in conjunction with the assessment of other units of competency.

The use of 'simulators' in the assessment of this unit of competency is not acceptable.

Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.
EVIDENCE GUIDE

Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

Guidance information for assessment

Further information about endorsed Assessment Instruments may be obtained from state/territory OHS regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards may include but not limited to:

- ground conditions (e.g. ground bearing pressure/s, back filled trenches, underground services, slopes)
- overhead hazards (e.g. power lines, service pipes) (minimum clearance distance from powerlines or electrical equipment as determined by relevant state authority or electrical supply authority)
- traffic (e.g. pedestrians, vehicles, other plant)
- insufficient lighting
- environmental conditions (e.g. wind, lightning, storms)
- other site specific hazards (e.g. hazardous materials).

Hazard control measures:

Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls.

It includes the application of the hierarchy of control, the six-step preference of control measures to manage and control risk:

- elimination
RANGE STATEMENT

- substitution
- isolation
- engineering control measures
- using safe work practices
- personal protective equipment.

**Appropriate standards** may include:

- codes of practice
- legislation
- Australian Standards
- manufacturer's specifications
- industry standards (where applicable).

**Site Information** may include, but not be limited to:

- local conditions such as access and egress
- work method statements
- site-specific job safety analyses and other documentation as required
- task plans.

**Scaffold** may include but not limited to:

- mobile scaffolding
- bracket scaffolding
- modular scaffolding, including:
  - steel
  - fibreglass and
  - aluminium frame scaffolding
- prefabricated scaffolding.

**Associated equipment** may include but not limited to:

- planks
- flexible steel wire rope and fittings.

**NB**: including identification, uses and connections which may include termination for static lines and guys for cantilever hoists.

- ladders
- tie tubes and fittings
- fibre rope

**NB**: including identification and uses (natural and synthetic), and connections associated with bends and hitches.

- stairways and screening
- hand tools, including, but not limited to:
  - box spanners
  - hammers
  - spirit levels
  - tape measures
RANGE STATEMENT

- scaffold belts
- podgers
- hammers
- wire nips
- wrenches
- torpedo levels
- shovels
- spanners
- cutters
- hammer drills
- sledge hammers
- wheel barrows and
- relevant maintenance equipment.

*Scaffolding equipment* may include but not limited to:

- materials hoists
- gin wheels
- safety nets
- static lines and fittings.

*Appropriate personnel* may include, but are not limited to:

- supervisors
- colleagues
- managers who are authorised to take responsibility for the workplace or operations
- other scaffolders
- other site personnel as applicable.

*Safety equipment* may include but not limited to:

- safety harness
- energy absorber
- lanyard
- inertia reel.

*Forces and Loads* may include, but are not limited to:

- dead loads
- live loads
- static load
- dynamic loads
- wind loads.

*Communication Methods* may include but not limited to:

- verbal and non-verbal language
- written instructions
- signage
- communication signals
- listening
- questioning to confirm understanding, and appropriate worksite protocol.
RANGE STATEMENT

**Procedures** may include but not limited to:
- manufacturer’s guidelines (instructions, specifications or checklists)
- industry operating procedures, relevant codes of practice
- workplace procedures (work instructions, operating procedures, checklists)
- reporting and recording procedures such as e.g. equipment defect/s.

**Communication equipment** may include but is not limited to:
- fixed frequency two way radios
- mobile phones.

**Hazard prevention/control measures** may include but not limited to:
- safety tags on electrical switches/isolators
- safety observer used inside exclusion zone (e.g. Spotter), to include the use of power line warning systems (e.g. Tiger tails)
- power disconnected by competent authority where applicable
- traffic and pedestrian barricades and controls
- safe and adequate access / egress is established
- personal protective equipment
- adequate illumination.

**Ground suitability** may include but not limited to:
- rough uneven ground
- backfilled ground
- soft soils
- hard compacted soil
- rock
- bitumen
- concrete.

**Stability** may include but is not limited to:
- ground bearing pressure
- sole plates/boards
- screw jacks
- levelling
- ties/guys.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Plant, tools and equipment are selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Stock of reinforcement materials is checked for correct type, quality and quantities against reinforcement schedule and details in plans/specifications.  
1.6. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied. |
| 2. Prepare for reinforcement placement. | 2.1. Formwork is checked for completion and conformity to receive reinforcement.  
2.2. Reinforcement bars are cut and bent to required set out and plans and specifications.  
2.3. Bars are tied to designed configuration from plans and specifications.  
2.4. Reinforcement sheets are cut to required sizes.  
2.5. Stiffening rods are attached to panels as required to facilitate handling processes.  
2.6. Bar chairs and spacers are located to requirements of reinforcement schedule and plans and specifications. |
| 3. Place and fix reinforcement. | 3.1. Fabric reinforcement sheets are placed into position in accordance with engineer's drawings and specifications.  
3.2. Reinforcement bars are located and positioned in accordance with engineer's drawings and specifications.  
3.3. Reinforcement is located and placed using bar chairs, ligatures and spacers according to engineer's drawings and specifications.  
3.4. Reinforcement material is supported and secured |
### ELEMENT | PERFORMANCE CRITERIA
---|---
| | into position in accordance with engineer's drawings and specifications.
| 3.5. | Cast-in items are secured to reinforcement in accordance with engineer's drawings and specifications.
| 3.6. | Ends of protruding reinforcement material are covered and protected in accordance with plans and specifications.
| 4. | Check reinforcement prior to concrete pour.
| 4.1. | Location and position of reinforcement and fixing ties to reinforcement are checked for accuracy.
| 4.2. | Depth of coverage, clearance, spacing and overlap of reinforcement material are checked in accordance with engineer's drawings and job specification.
| 5. | Clean up.
| 5.1. | Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
| 5.2. | Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

### Required Skills and Knowledge

#### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - identifying and accurately reporting to appropriate personnel any faults in tools,
REQUIRED SKILLS AND KNOWLEDGE

- equipment or materials
- numeracy skills to apply calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction and steelfixing terminology
- job safety analysis (JSA) and safe work method statements
- job specifications related to the layout of reinforcement materials
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- reinforcement materials placement and fixing techniques
- types, properties, uses and limitations of reinforcement materials
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- place and fix reinforcement materials to specification on a minimum of three different jobs and involving deformed bars, rods and mesh sheets.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
EVIDENCE GUIDE

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete
EVIDENCE GUIDE

confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

**Information** includes:
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the placement and fixing of reinforcement materials
RANGE STATEMENT

- relevant Australian standards
- safe work procedures relating to the placement and fixing of reinforcement materials
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Scope of work:

- steelfixing may involve reinforcing concrete for foundations, pits and slabs, columns, walls, stairs, plinths, kerbs, gutters, pathways and hard standings.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - cutting, grinding and welding equipment
  - lighting
  - power equipment
  - power leads and sources
  - trip hazards
  - work site visitors and the public
  - working in confined spaces
  - working in proximity to others
  - working with metals under stress
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Tools and equipment:

- include:
RANGE STATEMENT

- bolt cutters
- measuring tapes and rules
- mesh guillotines
- reinforcement benders
- tie wire reels
- wire nippers
- may include:
  - general hand and power tools
  - manual metal arc welding (MMAW) machines
  - oxy-acetylene setting and cutting attachments.

Reinforcement materials:

- include:
  - bar chairs
  - deformed bars
  - ligatures
  - mesh sheets of deformed bars
  - mesh sheets of plain bars
  - plain rods
  - spacer/spreader assemblies
  - wire ties
- may include:
  - pipe sections
  - scaffolding components
  - structural steel sections.

Environmental requirements include:

- clean-up management
- dust and noise
- stormwater protection
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Unit Sector(s)

Unit sector Construction
Functional area

Functional area
CPPSIS3015A Collect spatial data

Modification History
Unit revised and not equivalent to CPPSIS3005A Collect basic spatial data
New unit title
Element structure, performance criteria and critical aspects reviewed to reflect workplace requirements
Skills and knowledge requirements and the range statement updated

Unit Descriptor
This unit of competency specifies the outcomes required to collect spatial data through a range of methods. It requires the ability to work with others in performing set task requirements within deadlines. It also requires the ability to perform a range of basic activities in the use of information technology and equipment within a spatial information handling framework. Functions would be carried out under supervision, often in a team environment, and within organisational guidelines.

Application of the Unit
This unit of competency supports the application of teamwork, verbal and written workplace communication skills, and the use of technology. The skills and knowledge acquired upon completion of this unit would support the needs of employees in the surveying and spatial information services (SSIS) industry sector in positions such as field coordination, data collection and administration.

Licensing/Regulatory Information
No licensing, legislative and regulatory requirements apply to this unit at the time of endorsement.

Pre-Requisites

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for the task. 1.1 Requirements for the task are clarified with appropriate persons.

1.2 Equipment, supplies and SIS technologies are selected according to task requirements.

1.3 Equipment is checked to ensure it is in safe working order.

2 Gather basic data. 2.1 Data and attributes are collected using methodologies detailed in a data collection plan.

2.2 Metadata is documented according to accepted industry standards.

2.3 Discrepancies between specifications and actual activities are identified, recorded and reported.

2.4 Administrative and legal requirements for data collection are complied with and recorded.

2.5 Assistance is given to relevant personnel assisting in the data collection process.

2.6 OHS requirements are planned for and adhered to.

3 Use equipment. 3.1 Supervisor guidance is sought on the selection of appropriate equipment.

3.2 Appropriate equipment is operated according to the task requirements and manufacturer specifications.
3.3 Safety requirements are adhered to at all times.

3.4 Data is recorded correctly and according to specifications.

4 Maintain equipment.

4.1 Supervisor guidance is sought on the manner in which equipment is to be maintained.

4.2 *Operational maintenance* of equipment is undertaken according to organisational guidelines.

4.3 *Contingencies* that may affect equipment usage are reported.

4.4 Unsafe or faulty equipment is reported and referred for repair.

4.5 Tools and equipment are stored safely in appropriate locations and according to manufacturer specifications.

5 Contribute to finalising the collection process.

5.1 *Required documentation* is completed according to organisational requirements.

5.2 All data and documentation are stored according to *organisational guidelines*. 
Required Skills and Knowledge

This section describes the essential skills and knowledge and their level, required for this unit.

Required skills

- communication skills to:
  - discuss vocational issues effectively with colleagues
  - impart knowledge and ideas through oral, written and visual means
- computer skills to develop business documentation
- literacy skills to:
  - assess and use workplace information
  - read and record data
  - read and interpret datums and projections
- numeracy skills to:
  - accurately record and collate
  - undertake basic computations
- organisational skills to prioritise daily activities
- spatial skills to:
  - perform basic spatial and aspatial data collection in an accurate manner
  - use spatial information technology to perform basic data collection
- work effectively as part of a team
- use a range of equipment in the field safely, accurately and as required for the task

Required knowledge

- characteristics, capabilities and limitations of tools, technology and equipment used
- data collection methods and equipment suitable to spatial data, including electronic
- organisational policies and guidelines relating to data storage and retrieval practices
- OHS guidelines relating to operating computers
- processes for recording metadata
- spatial and aspatial data acquisition methods, including using electronic equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Overview of assessment

This unit of competency could be assessed on its own or in combination with other units relevant to the job function.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- selecting, using and maintaining equipment for spatial data collection
- gathering spatial data
- knowledge of metadata recording processes.

Specific resources for assessment

Resource implications for assessment include access to:

- assessment instruments, including personal planner and assessment record book
- assignment instructions, work plans and schedules, policy documents and duty statements
- registered training provider of assessment services
- relevant guidelines, regulations and codes of practice
- suitable venue and equipment.

Access must be provided to appropriate learning and assessment support when required.

Where applicable, physical resources should include equipment modified for people with disabilities.

Context of assessment

Holistic: based on the performance criteria, evidence guide, range statement, and required skills and knowledge.

Method of assessment

Demonstrated over a period of time and observed by the assessor (or assessment team working together to conduct the assessment).

Demonstrated competency in a range of situations, that may include customer/workplace interruptions and involvement in related activities normally experienced in the workplace.

Obtained by observing activities in the field and reviewing induction information. If this is not practicable, observation in realistic simulated environments may be substituted.
**Guidance information for assessment**

Assessment requires that the clients’ objectives and industry expectations are met. If the clients’ objectives are narrowly defined or not representative of industry needs, it may be necessary to refer to portfolio case studies of a variety of surveying and spatial information services requirements to assess competency.

Oral questioning or written assessment and hypothetical situations (scenarios) may be used to assess underpinning knowledge (in assessment situations where the candidate is offered a preference between oral questioning or written assessment, questions are to be identical).

Supplementary evidence may be obtained from relevant authenticated correspondence from existing supervisors, team leaders or specialist training staff.

All practical demonstration must adhere to the safety and environmental regulations relevant to each State or Territory.

Where assessment is for the purpose of recognition (recognition of current competencies [RCC] or recognition of prior learning [RPL]), the evidence provided will need to be authenticated and show that it represents competency demonstrated over a period of time.

In all cases where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge.

Assessment processes will be appropriate to the language and literacy levels of the candidate and any cultural issues that may affect responses to the questions, and will reflect the requirements of the competency and the work being performed.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording in the performance criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

*Appropriate persons* may

- assessors
include:

- colleagues
- managers
- supervisors
- trainers.

**SIS technologies may include:**

- data recording equipment
- digital imagery
- handheld global navigation satellite system (GNSS)
- maps (digital or hard copy)
- measuring instruments
- non-navigational aids relevant to duties, including:
  - compass
  - clinometer
  - distance measuring wheel
  - personal digital assistant
  - personal computer-based digitising boards
  - tools
  - ultra high frequency (UHF) radio.

**Attributes are properties associated with a dataset and may include:**

- condition
- date
- size
- type.

**Data collection plan may include:**

- data logging
- digitising theodolite
- GNSS scanning
- photogrammetry
- remote sensing
- sonar
- survey
- total station.

**Metadata is summarised information about a spatial dataset that describes the characteristics of the dataset, including:**

- availability
- conditions of use
- coordinate system
- currency
- date of acquisition
- quality
- source
- spatial data acquisition methodologies
- version control.

**Administrative and legal requirements may include:**

- Australian standards, quality assurance and certification requirements
- award and enterprise agreements
- company OHS guidelines
- licensing arrangements
- relevant codes of practice
- relevant state, territory or federal legislation that affects organisational operations, including:
  - anti-discrimination and diversity
  - industrial relations.

**Relevant personnel** may include:
- colleagues
- registered surveyors
- site personnel
- staff or employee representatives
- supervisors or line managers
- suppliers
- users.

**OHS requirements** may include:
- Australian standards
- development of site safety plan
- identification of potential hazards
- inspection of work sites
- training staff in OHS requirements
- use of personal protective equipment and clothing.

**Manufacturer specifications** may be found in:
- electronic format
- equipment specifications
- operator manuals
- printed product instructions and information
- spatial database
- warranty documents.

**Operational maintenance tasks** may include:
- adjusting
- cleaning
- lubricating
- tightening
- maintaining battery
- simple repairs.

**Contingencies** may include:
- adverse weather
- equipment failure.

**Required documentation** may include:
- accident and injury reports
- authority/approval documentation
- meeting reports
- records and reports of communication
- reimbursements.

**Organisational guidelines** may include:
- code of ethics
- company policy
- legislation relevant to the work or service function
- manuals
- OHS policies and procedures
- personnel practices and guidelines outlining work roles and responsibilities.

**Unit Sector(s)**

Surveying and spatial information services

**Custom Content Section**

Not applicable.
CPPSIS3016A Provide field support services

Modification History
Unit revised and not equivalent to CPPSIS3006A Provide field support services
Element structure, performance criteria, and critical aspects reviewed to reflect workplace requirements
References to sustainability strengthened
Skills and knowledge requirements and the range statement updated

Unit Descriptor
This unit of competency specifies the outcomes required to provide field support services. It requires the ability to work with others on site to perform key organisational requirements within a surveying and spatial information services (SSIS) framework, working from site drawings and specifications. Functions would be carried out under supervision, often in a team environment, and within organisational guidelines.

Application of the Unit
This unit of competency supports the application of communication, interpersonal and teamwork skills, and the use of technology. The skills and knowledge acquired upon completion of this unit would support the needs of employees in the SSIS industry sector in positions such as field coordination and data collection.

Licensing/Regulatory Information
No licensing, legislative and regulatory requirements apply to this unit at the time of endorsement.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare for support task.
   1.1 Requirements of the job are clarified with **relevant personnel** according to **organisational guidelines**.
   1.2 Tools, **equipment and supplies** appropriate to the environment are selected and prepared according to **specifications**.
   1.3 Safety requirements for the protection of site personnel and the public are determined with regard to the field support services and their effect on the environment.
   1.4 Plans are examined to determine the location of services.
   1.5 **Personal protective equipment** is used according to **OHS guidelines**.

2 Execute support tasks.
   2.1 Barricades, protective works and signs are erected, when required according to organisational guidelines.
   2.2 Surface positions are determined and marked according to **accepted standards** using information available from site drawings and references, and relevant personnel.
   2.3 **Support tasks** are carried out under direction and according to specifications.

3 Finalise the task.
   3.1 Site is restored as near as practicable to original condition and any waste generated is disposed of in an **environmentally friendly manner**.
   3.2 Tools and equipment are cleaned and stored in a secure
location.

3.3 Repair work is organised for unsafe or faulty tools and equipment.

3.4 Required spatial business documentation is completed accurately and promptly according to organisational guidelines.

Required Skills and Knowledge

This section describes the essential skills and knowledge and their level, required for this unit.

Required skills

- ability to select and use required tools appropriately
- communication skills to:
  - discuss vocational issues effectively with colleagues
  - impart knowledge and ideas through oral, written and visual means
  - interpersonal skills e.g. cooperation and flexibility
- literacy skills to:
  - assess and use workplace information
  - read and record data
- numeracy skills to:
  - accurately record and collate
  - undertake basic computations
- organisational skills to prioritise daily activities
- spatial skills to apply understanding of height, depth, breadth, dimension and position to actual operational activity and virtual representation

Required knowledge

- industry ethics and practices relating to field activity
- OHS requirements relating to field activity
- spatial data measuring and recording
- work allocation procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Overview of assessment

This unit of competency could be assessed on its own or in combination with other units relevant to the job function, for example CPPSIS3017A Select, operate and maintain equipment and supplies, and CPPSIS3018A Transfer personnel and loads.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- selecting equipment
- demonstrating critical aspects of working safely
- providing support in determining and marking positions
- knowledge of the required spatial tools and equipment.

Specific resources for assessment

Resource implications for assessment include access to:

- assessment instruments, including personal planner and assessment record book
- assignment instructions, work plans and schedules, policy documents and duty statements
- registered training provider of assessment services
- relevant guidelines, regulations and codes of practice
- suitable venue and equipment.

Access must be provided to appropriate learning and assessment support when required.

Where applicable, physical resources should include equipment modified for people with disabilities.

Context of assessment

Holistic: based on the performance criteria, evidence guide, range statement, and required skills and knowledge.

Method of assessment

Demonstrated over a period of time and observed by the assessor (or assessment team working together to conduct the assessment).

Demonstrated competency in a range of situations, that may include customer/workplace interruptions and involvement in related activities normally experienced in the workplace.

Obtained by observing activities in the field and reviewing induction information. If this is not practicable, observation in realistic simulated environments may be substituted.
Guidance information for assessment

Assessment requires that the clients’ objectives and industry expectations are met. If the clients’ objectives are narrowly defined or not representative of industry needs, it may be necessary to refer to portfolio case studies of a variety of surveying and spatial information services requirements to assess competency.

Oral questioning or written assessment and hypothetical situations (scenarios) may be used to assess underpinning knowledge (in assessment situations where the candidate is offered a preference between oral questioning or written assessment, questions are to be identical).

Supplementary evidence may be obtained from relevant authenticated correspondence from existing supervisors, team leaders or specialist training staff.

All practical demonstration must adhere to the safety and environmental regulations relevant to each State or Territory.

Where assessment is for the purpose of recognition (recognition of current competencies [RCC] or recognition of prior learning [RPL]), the evidence provided will need to be authenticated and show that it represents competency demonstrated over a period of time.

In all cases where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge.

Assessment processes will be appropriate to the language and literacy levels of the candidate and any cultural issues that may affect responses to the questions, and will reflect the requirements of the competency and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording in the performance criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

**Relevant personnel** may include:
- colleagues
- staff or employee representatives
- supervisors or line managers
suppliers
users.

Organisational guidelines may include:
- code of ethics
- company guidelines
- legislation relevant to the work or service function
- manuals
- OHS policies and procedures
- personnel practices and guidelines outlining work roles and responsibilities.

Equipment and supplies may include:
- data recording equipment
- measuring instruments
- personal computer-based digitising boards
- tools
- vehicles.

Specifications may include:
- budget
- data capture methods
- personnel required
- project deliverables
- resources needed
- timelines.

Personal protective equipment may include:
- breathing apparatus
- gloves
- helmets
- overalls
- masks and respirators
- safety boots
- safety glasses
- safety vests
- sun protection equipment.

OHS may include:
- Australian standards
- development of site safety plan
- identification of potential hazards
- inspection of work sites
- training staff in OHS requirements
- use of equipment and signage.

Accepted standards may include:
- Environment Protection Authority (EPA) recommendations
- state, territory and federal legislative requirements
- manufacturer instructions and specifications
- OHS standards
- organisational guidelines
- relevant industry codes of practice.
Support tasks may include:
- equipment maintenance
- identifying, determining and marking positions
- obtaining supplies
- recording data
- driving.

Environmentally friendly manner may include:
- placing hazardous material such as chemical-based products, paint cans and used oil into a designated bin and taking it to an appropriate disposal centre
- placing recyclable rubbish such as plastic, paper, cans, cardboard, glass and plastic bottles into a designated bin
- separating degradable and non-degradable waste.

Spatial business documentation may include:
- databases
- detailed technical description of the spatial data and its qualifiers
- emails and faxes
- quotations and estimates
- standard letters
- tax invoices
- statements.

CPPSIS5032A Capture new spatial data

Modification History
Unit revised and not equivalent to CPPSIS5002A Capture new spatial data
Element structure, performance criteria, and critical aspects reviewed to reflect workplace requirements
Skills and knowledge requirements and the range statement updated

Unit Descriptor
This unit of competency specifies the outcomes required to capture new data using a variety of methods. It requires the ability to plan and execute the data capture process in a supervisory capacity, incorporating technical problems and management requirements and applying appropriate solutions to a range of data collection situations. Functions would be carried out within organisational guidelines.

Application of the Unit
This unit of competency supports the application of theoretical and practical analysis; organisational, team leadership and sound problem-solving skills; the ability to demonstrate initiative and enterprise; and a sound understanding of technology. The skills and knowledge acquired upon completion of this unit would support the needs of employees in surveying, cartography, town planning, mapping or geographic information systems.

Licensing/Regulatory Information
Licensing, legislative, regulatory and certification requirements may impact on this unit. Incorporate these requirements according to state, territory and federal legislation.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for data collection.
   1.1 Key activities and timelines are scheduled with full consideration given to specification, available resources and organisational requirements.

   1.2 Administrative and legal requirements for data collection are complied with and recorded.

   1.3 Appropriate persons or relevant personnel are informed about the project.

   1.4 Equipment, supplies and spatial information services (SIS) technologies are selected according to the task requirements.

   1.5 Designated responsibilities are communicated to staff to ensure clarity of understanding of the work and provide a basis for ongoing assessment.

2 Gather data.
   2.1 Equipment is operated according to manufacturer specifications, and statutory and organisational guidelines.

   2.2 Entities are related to a reference system based on the specifications.

   2.3 Data and attributes are collected using methodologies detailed in the data capture methodology.

   2.4 Metadata is documented according to accepted industry standards.

   2.5 Discrepancies between specifications and actual activities are identified, recorded and reported.
2.6 Administrative and legal requirements for data collection are complied with and recorded.

2.7 Guidance is given to staff assisting in the data collection process.

2.8 OHS requirements are planned for and adhered to.

3 Use equipment.

3.1 Appropriate equipment is selected.

3.2 Equipment is operated according to the task requirements and manufacturer specifications.

3.3 All safety requirements are adhered to.

4 Maintain equipment.

4.1 Operational maintenance of equipment is undertaken according to organisational guidelines.

4.2 Contingencies that may affect equipment usage are reported.

4.3 Unsafe or faulty equipment is reported and referred for repair.

4.4 Tools and equipment are stored safely in appropriate locations and according to manufacturer specifications.

5 Finalise the collection process.

5.1 Attributes and topological structures are added to spatial data according to specifications.

5.2 Data is recorded correctly and required documentation is completed according to specifications and organisational requirements.

5.3 Data and documentation are stored according to organisational requirements.

5.4 Data integrity is checked according to the validation plan.
Required Skills and Knowledge

This section describes the essential skills and knowledge and their level, required for this unit.

Required skills

- analytical skills to analyse theory, concepts and statistics
- communication skills to:
  - consult effectively with clients and colleagues
  - impart knowledge and ideas through oral, written and visual means
  - provide customer service
- computer skills to complete business documentation
- functional application of data capture techniques
- literacy skills to:
  - assess and use workplace information
  - read and write technical reports
  - research and evaluate
- numeracy skills to:
  - analyse errors
  - conduct image analysis
  - perform mental calculations
  - interpret and analyse statistics
  - record with accuracy and precision
  - undertake computations
- planning and organising skills to:
  - coordinate technical and human resource inputs to research activities
  - plan for equipment and supplies required to capture spatial data
  - prioritise activities to meet contractual requirements
- project management skills to provide guidance to staff and organise data capture operations
- spatial skills to:
  - display proficiency in the operation of spatial data capture equipment
  - exercise precision and accuracy in relation to spatial and aspatial data acquisition and the use of electronic equipment
  - archive and retrieve spatial data
  - manage and manipulate spatial data
  - manage files
- solve problems relating to height, depth, breadth, dimension, direction and position
in actual operational activity and virtual representation
• work effectively as part of a team

Required knowledge
• characteristics, capabilities and limitations of tools, technology and equipment used
• customer relations guidelines
• data collection techniques as applied to the use of:
  • data collection equipment for electronic and hard copy data
  • spatial data
  • topographical structures
• information management procedures
• OHS requirements relating to field activity and computer operations
• organisational policies and guidelines relating to spatial data capture techniques
• process improvement methods
• quality assurance principles to validate spatial data captured
• quality improvement tools
• reference systems and their relationship to each other
• relevant federal, state and local government laws which are applicable to the spatial data capture methodology used
• risk assessment principles relating to data capture operations
• safe work practices
• spatial data formats, handling and structure
• spatial information principles and their application
• SIS project contingencies
• spatial technologies
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Overview of assessment

This unit of competency could be assessed on its own or in combination with other units relevant to the job function, for example CPPSIS5031A Plan spatial data collection and validation, CPPSIS5035A Obtain and validate spatial data, CPPSIS5036A Integrate spatial datasets, CPPSIS5037A Maintain complex spatial data systems, and CPPSIS5038A Develop a complex spatial and aspatial database.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- using data collection methods to capture spatial data
- using and maintaining equipment used in the capture of spatial data
- operational knowledge in relevant data capture and validation methodologies.

Specific resources for assessment

Resource implications for assessment include access to:

- assessment instruments, including personal planner and assessment record book
- assignment instructions, work plans and schedules, policy documents and duty statements
- registered training provider of assessment services
- relevant guidelines, regulations and codes of practice
- suitable venue and equipment.

Access must be provided to appropriate learning and assessment support when required.

Where applicable, physical resources should include equipment modified for people with disabilities.

Context of assessment

Holistic: based on the performance criteria, evidence guide, range statement, and required skills and knowledge.

Method of assessment

Demonstrated over a period of time and observed by the assessor (or assessment team working together to conduct the assessment).

Demonstrated competency in a range of situations,
which may include customer/workplace interruptions and involvement in related activities normally experienced in the workplace.

Obtained by observing activities in the field and reviewing induction information. If this is not practicable, observation in realistic simulated environments may be substituted.

**Guidance information for assessment**

Assessment requires that the clients’ objectives and industry expectations are met. If the clients’ objectives are narrowly defined or not representative of industry needs, it may be necessary to refer to portfolio case studies of a variety of SIS requirements to assess competency.

Oral questioning or written assessment and hypothetical situations (scenarios) may be used to assess underpinning knowledge (in assessment situations where the candidate is offered a preference between oral questioning or written assessment, questions are to be identical).

Supplementary evidence may be obtained from relevant authenticated correspondence from existing supervisors, team leaders or specialist training staff.

All practical demonstration must adhere to the safety and environmental regulations relevant to each State or Territory.

Where assessment is for the purpose of recognition (recognition of current competencies [RCC] or recognition of prior learning [RPL]), the evidence provided will need to be authenticated and show that it represents competency demonstrated over a period of time.

In all cases where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge.

Assessment processes will be appropriate to the language and literacy levels of the candidate and any cultural issues that may affect responses to the questions, and will reflect the requirements of the competency and the work being performed.

**Range Statement**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording in the performance criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

**Administrative and legal requirements** may include:

- access protocols and obligations
- Australian standards, quality assurance and certification requirements
- award and enterprise agreements
- company OHS guidelines
- licensing arrangements
- organisational protocols for accessing physical, financial and human resources
- reimbursements
- Indigenous considerations
- relevant codes of practice
- relevant state, territory or federal legislation that affects organisational operations, including:
  - anti-discrimination and diversity
  - copyright and digital copyright
  - industrial relations
- royalty obligations
- title search processes.

**Appropriate persons or relevant personnel** may include:

- administrative staff
- assessors
- colleagues
- contractors
- field survey staff
- land occupiers
- land owners
- managers
- supervisors
- technicians
- trainers.

**Equipment, supplies and SIS technologies** may include:

- data logger or other mobile computing device
- data recording equipment
- digital imagery
- electronic theodolites
- handheld global navigation satellite system (GNSS)
- levels
- maps (digital or hard copy)
- measuring instruments
- non-navigational aids relevant to duties, including:
  - compass
  - clinometer
  - distance measuring wheel
  - personal digital assistant
- personal computer-based digitising boards
- sonar
- tide gauge
- tools
- total station
- ultra high frequency (UHF) radio
- vehicles.

**Manufacturer specifications** may be found in:
- electronic format
- equipment specifications
- operator manuals
- printed product instructions and information
- spatial database
- warranty documents.

**Entities** may include:
- event
- object.

**Reference system** may include coordinate systems that are:
- global
- local
- regional.

**Attributes** are properties associated with a dataset and may include:
- condition
- date
- size
- type.

**Data capture methodology** may include:
- conversion or translation from existing information (hard copy or digital)
- data logging
- digitising theodolite
- direct or indirect
- field
- GNSS scanning
- manual entry
- photogrammetry
- remote sensing
- sonar
- survey
- total station.

**Metadata** may include:
- summarised information about a spatial dataset that describes the characteristics of the dataset, including:
  - availability
  - conditions of use
  - coordinate system
  - currency
  - date of acquisition
  - quality
  - source
  - spatial data acquisition methodologies
  - version control.

**OHS requirements** may include:
- Australian standards
- development of site safety plan
- identification of potential hazards
- inspection of work sites
- training staff in OHS requirements
- use of personal protective clothing
- use of safety equipment and signage.

**Operational maintenance** tasks may include:
- adjusting
- cleaning
- lubricating
- maintaining battery
- simple repairs
- tightening.

**Contingencies** may include:
- adverse weather
- equipment failure.

**Topological structures** may include:
- relationship between entities.

**Required documentation** may include:
- accident and injury reports
- authority/approval documentation
- meeting reports
- records and reports of communication
- reimbursement documentation.

**Unit Sector(s)**
Surveying and spatial information services

3 Complete documentation.

3.1 Metadata is recorded according to industry standards.

3.2 Required documentation is stored according to organisational requirements.
Required Skills and Knowledge

This section describes the essential skills and knowledge and their level, required for this unit.

Required skills

- communication skills to:
  - consult effectively with clients and colleagues
  - impart knowledge and ideas through oral, written and visual means
- computer skills to complete spatial data documentation
- initiative and enterprise skills to:
  - delegate duties
  - undertake day-to-day human resource management and business negotiation
- literacy skills to:
  - assess and use workplace information
  - read and interpret datums and projections
  - read and write technical reports
  - research and evaluate
- numeracy skills to:
  - analyse errors
  - conduct image analysis
  - perform mental calculations
  - interpret and analyse statistics
  - record with accuracy and precision
  - undertake computations
- organisational skills to:
  - coordinate technical and human resource inputs to research activities
  - prioritise activities to meet contractual requirements
  - quality assurance
- spatial skills to:
  - display proficiency in the operation of spatial data capture equipment
  - exercise precision and accuracy in relation to spatial and aspatial data acquisition using electronic equipment
  - archive and retrieve spatial data
  - manage and manipulate spatial data
  - manage files
Required knowledge

- classification systems, processes and products linked to specification
- industry standards relating to obtaining and validating spatial data
- information management procedures
- legislation as it applies to the spatial industry sector
- methods of assessing spatial datasets and dataset sources
- need for precision and accuracy in relation to spatial data acquisition
- organisational policies and guidelines, such as pricing and working within budgetary constraints
- quality assurance principles
- spatial data capture methodologies
- spatial data management practices
- spatial data formats and structure
- spatial information principles and their application
- spatial referencing systems
- spatial technologies to locate and validate spatial data
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Overview of assessment

This unit of competency could be assessed on its own or in combination with other units relevant to the job function, for example CPPSIS5031A Plan spatial data collection and validation, CPPSIS5032A Capture new spatial data, CPPSIS5036A Integrate spatial datasets, CPPSIS5037A Maintain complex spatial data systems, and CPPSIS5038A Develop a complex spatial and aspatial database.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- sourcing data according to agreed processes and protocols and that it satisfies requirements
- applying cost considerations
- assessing and acting upon contingencies
- knowledge of spatial data access and validation processes.

Specific resources for assessment

Resource implications for assessment include access to:

- assessment instruments, including personal planner and assessment record book
- assignment instructions, work plans and schedules, policy documents and duty statements
- registered training provider of assessment services
- relevant guidelines, regulations and codes of practice
- suitable venue and equipment.

Access must be provided to appropriate learning and assessment support when required.

Where applicable, physical resources should include equipment modified for people with disabilities.

Context of assessment

Holistic: based on the performance criteria, evidence guide, range statement, and required skills and knowledge.

Method of assessment

Demonstrated over a period of time and observed by the assessor (or assessment team working together to conduct the assessment).

Demonstrated competency in a range of situations, that may include customer/workplace interruptions and involvement in related activities normally experienced in the workplace.
Obtained by observing activities in the field and reviewing induction information. If this is not practicable, observation in realistic simulated environments may be substituted.

**Guidance information for assessment**

Assessment requires that the clients’ objectives and industry expectations are met. If the clients’ objectives are narrowly defined or not representative of industry needs, it may be necessary to refer to portfolio case studies of a variety of surveying and spatial information services requirements to assess competency.

Oral questioning or written assessment and hypothetical situations (scenarios) may be used to assess underpinning knowledge (in assessment situations where the candidate is offered a preference between oral questioning or written assessment, questions are to be identical).

Supplementary evidence may be obtained from relevant authenticated correspondence from existing supervisors, team leaders or specialist training staff.

All practical demonstration must adhere to the safety and environmental regulations relevant to each State or Territory.

Where assessment is for the purpose of recognition (recognition of current competencies [RCC] or recognition of prior learning [RPL]), the evidence provided will need to be authenticated and show that it represents competency demonstrated over a period of time.

In all cases where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge.

Assessment processes will be appropriate to the language and literacy levels of the candidate and any cultural issues that may affect responses to the questions, and will reflect the requirements of the competency and the work being performed.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording in the performance criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional...
contexts.

**Client instructions** refer to the description of outputs and may be contained in:
- contracts
- memos
- tender briefs
- verbal instructions
- written instructions.

**Determine specific need** may be conducted via:
- response to a direction regarding scope and needs
- independent assessment.

**Spatial data requirements** may include:
- administration (e.g. postcodes, suburbs, and federal and state electoral counties)
- analysis of environmental, land and geographic information
- asset management
- cartographic services
- civil engineering
- digital imagery
- electricity
- emergency services management
- environmental datasets
- geographic information systems
- integrated services – environmental, land and geographic related datasets
- land ownership tenure system
- local government
- location-based services
- global positioning
- mapping facilities
- site analysis
- survey marks
- sewerage
- telecommunications
- town planning
- utility services such as water.

**Specifications** refer to:
- detailed technical description of the spatial data and its qualifiers.

**Relevant personnel** may include:
- colleagues
- registered surveyors
- company personnel
- staff or employee representatives
- supervisors or line managers
- suppliers
Spatial data providers may include:
- associations
- clearing houses
- educational institutions
- government
- internal sources
- non-government agencies
- online services
- software providers
- specialist companies.

Advice may include information from:
- financial or legal specialists
- internal and external personnel
- management
- registered surveyors
- town planners.

Agreement may include:
- contract
- copyright
- licence
- royalty contract
- memorandum of understanding.

Collection options may include:
- data logging
- digitising theodolite
- global position system
- photogrammetry
- remote sensing
- scanning
- sonar
- survey
- total station.

Organisational guidelines may include:
- code of ethics
- company policy
- legislation relevant to the work or service function
- manuals
- OHS policies and procedures
- personnel practices and guidelines outlining work roles and responsibilities.

Validity means reflecting the true state of a test result, including tests for systematic distortions such as:
- confounding bias
- information/data bias
- observational bias
- recall bias
- selection bias.
**Integrity** may include:

- authenticity
- relevance to the project.

**OHS** may include:

- Australian standards
- development of site safety plan
- identification of potential hazards
- inspection of work sites
- training staff in OHS requirements
- use of equipment and signage.

**Metadata** may include:

- summarised information about a spatial dataset that describes the characteristics of the dataset, including:
  - availability
  - conditions of use
  - coordinate system datum
  - currency
  - date of acquisition
  - quality
  - source
  - spatial data acquisition methodologies
  - version control.

**Required documentation** may include:

- electronic or paper-based correspondence with client
- field records
- final report
- records of conversation
- survey plots
- organisational work activity sheets.

**Stored** may include:

- activity and sequence of activity determined to be appropriate in order to meet project objectives.

**Unit Sector(s)**

Surveying and spatial information services

**Custom Content Section**

Not applicable.
CPPSIS5036A Integrate spatial datasets

Modification History
Unit revised and not equivalent to CPPSIS5006A Integrate spatial datasets
Element structure, performance criteria, and critical aspects reviewed to reflect workplace requirements
Skills and knowledge requirements and the range statement updated

Unit Descriptor
This unit of competency specifies the outcomes required to integrate spatial datasets including linking spatial, aspatial and attribute data for the purpose of providing spatially referenced information. It requires the ability to apply theoretical spatial concepts to a range of situations in order to correctly identify and integrate the appropriate information. Functions would be carried out within organisational guidelines.

Application of the Unit
This unit of competency supports the application of self-management skills, planning and organising within data management and data manipulation, and the use of technology. The skills and knowledge acquired upon completion of this unit would support the needs of employees in surveying, cartography, town planning, mapping or geographic information systems.

Licensing/Regulatory Information
No licensing, legislative and regulatory requirements apply to this unit at the time of endorsement.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1  Confirm task.
   1.1 *Client specifications* are analysed to determine specific needs and required outcomes.
      1.2 Requirements for spatial data and *constraints* are identified through further consultation with *client* or *relevant personnel* and outcomes are recorded according to *organisational guidelines*.

2  Obtain spatial and attribute data.
   2.1 Sources are determined consistent with specifications using relevant *metadata*.
      2.2 Data is obtained according to organisational guidelines.
      2.3 Data is checked for integrity and quality.
      2.4 Geographic coverage is assessed for completeness.
      2.5 A metadata set is compiled based on sourced spatial data.
      2.6 *Exception reports* are referred to relevant personnel.
      2.7 *OHS* requirements are planned for and adhered to.

3  Create resultant spatial dataset.
   3.1 *Filtering parameters* are established in line with scientific accuracy, redundancy, and client and organisational requirements.
      3.2 Spatial and *aspatial* data is translated into a format which satisfies specifications.
      3.3 *Spatial datasets* are populated with edited spatial data.
according to organisational spatial requirements.

3.4 Spatial and attribute data are linked according to specifications and industry standards.

4 Link spatial and attribute data.

4.1 Method required for referencing the location of the attribute data is identified.

4.2 Linking of the spatial and attribute data is completed according to the specifications.

4.3 Spatial queries are carried out via the spatial data to access the attribute data.

5 Test and validate spatial datasets.

5.1 Test queries are determined and implemented to ensure spatial datasets meet specifications.

5.2 Spatial data is checked to ensure correctness of links.

5.3 An exception report is developed according to organisational guidelines and reported back to relevant personnel.

5.4 Relevant documentation is completed according to organisational guidelines.

5.5 Quality and useability of datasets are ensured according to organisational guidelines.
Required Skills and Knowledge

This section describes the essential skills and knowledge and their level, required for this unit.

**Required skills**

- ability to translate requirements into design
- analytical skills, including systems analysis
- communication skills to:
  - consult effectively with clients and colleagues
  - impart knowledge and ideas through oral, written and visual means
- computer skills to complete business documentation and apply software and hardware
- literacy skills to:
  - assess and use workplace information
  - read and write technical reports
  - research and evaluate in order to assess sources of spatial data
- numeracy skills to:
  - analyse errors
  - conduct image analysis
  - perform mental calculations
  - interpret and analyse statistics
  - record with accuracy and precision
  - undertake computations
- organisational skills to:
  - coordinate technical and human resource inputs to research activities
  - manage information
  - prioritise activities to meet contractual requirements
- spatial skills to:
  - exercise precision and accuracy in relation to spatial and aspatial data integration
  - archive and retrieve spatial data
  - manage and manipulate spatial data
  - manage files

**Required knowledge**

- classification systems, processes and products
- coordinating reference systems
- high-level computer knowledge
- industry standards and organisational policies and guidelines relating to spatial datasets
- key characteristics of spatial and aspatial data
- key features of spatial data storage technology
- precision and accuracy in relation to spatial information
- principles of data acquisition (e.g. photogrammetry, remote sensing, terrestrial survey and hydrography)
- quality guidelines regarding the validity of spatial data
- reference systems and their relationship to each other
- relevant spatial database design tools
- security management guidelines
- spatial database operation
- spatial data handling
- spatial data management practices
- spatial dataset integration, including the role of scale in dataset integration
- spatial data structure requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Overview of assessment

This unit of competency could be assessed on its own or in combination with other units relevant to the job function, for example CPPSIS5031A Plan spatial data collection and validation, CPPSIS5032A Capture new spatial data, CPPSIS5035A Obtain and validate spatial data, CPPSIS5037A Maintain complex spatial data systems, CPPSIS5038A Develop a complex spatial and aspatial database, and CPPSIS5059A Determine suitable information sources to create new spatial datasets.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- devising and implementing a cost-effective, functional solution to spatial datasets
- measuring outcomes against specifications
- obtaining spatial and attribute data
- testing and validating spatial datasets
- knowledge of data acquisition methods.

Specific resources for assessment

Resource implications for assessment include access to:

- assessment instruments, including personal planner and assessment record book
- assignment instructions, work plans and schedules, policy documents and duty statements
- registered training provider of assessment services
- relevant guidelines, regulations and codes of practice
- suitable venue and equipment.

Access must be provided to appropriate learning and assessment support when required.

Where applicable, physical resources should include equipment modified for people with disabilities.

Context of assessment

Holistic: based on the performance criteria, evidence guide, range statement, and required skills and knowledge.

Method of assessment

Demonstrated over a period of time and observed by the assessor (or assessment team working together to conduct the assessment).

Demonstrated competency in a range of situations, that
may include customer/workplace interruptions and involvement in related activities normally experienced in the workplace.

Obtained by observing activities in the field and reviewing induction information. If this is not practicable, observation in realistic simulated environments may be substituted.

**Guidance information for assessment**

Assessment requires that the clients’ objectives and industry expectations are met. If the clients’ objectives are narrowly defined or not representative of industry needs, it may be necessary to refer to portfolio case studies of a variety of surveying and spatial information services requirements to assess competency.

Oral questioning or written assessment and hypothetical situations (scenarios) may be used to assess underpinning knowledge (in assessment situations where the candidate is offered a preference between oral questioning or written assessment, questions are to be identical).

Supplementary evidence may be obtained from relevant authenticated correspondence from existing supervisors, team leaders or specialist training staff.

All practical demonstration must adhere to the safety and environmental regulations relevant to each State or Territory.

Where assessment is for the purpose of recognition (recognition of current competencies [RCC] or recognition of prior learning [RPL]), the evidence provided will need to be authenticated and show that it represents competency demonstrated over a period of time.

In all cases where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge.

Assessment processes will be appropriate to the language and literacy levels of the candidate and any cultural issues that may affect responses to the questions, and will reflect the requirements of the competency and the work being performed.

**Range Statement**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording in the performance criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

**Client specifications** refer to description of outputs and may be contained in:
- contracts
- memos
- tender briefs
- verbal instructions
- written instructions.

**Constraints** may include:
- coverage
- datum
- environmental factors
- industry requirements
- legal and statutory
- financial
- resource availability
- time.

**Client** may include:
- customers with routine or special request
- external to organisation
- internal to organisation
- regular and new customers, including:
  - business enterprises
  - government agencies
  - members of the public
  - suppliers.

**Relevant personnel** may include:
- colleagues
- staff or employee representatives
- supervisors or line managers
- suppliers
- users.

**Organisational guidelines** may include:
- code of ethics
- company policy
- legislation relevant to the work or service function
- manuals
- OHS policies and procedures
- personnel practices and guidelines outlining work roles and responsibilities.

**Metadata** may include:
- summarised information about a spatial dataset that describes the characteristics of the dataset, including:
  - availability
  - conditions of use
- coordinate system
- currency
- date of acquisition
- quality
- source
- spatial data acquisition methodologies
- version control.

**Exception reports** may include:
- information on non-conforming items that require attention by other functions.

**OHS** may include:
- Australian standards
- development of site safety plan
- identification of potential hazards
- inspection of work sites
- training staff in OHS requirements
- use of personal protective clothing
- use of safety equipment and signage.

**Filtering parameters** may include:
- attribute range accuracy
- geographic location.

**Aspatial** data refers to:
- data without a spatial component.

**Spatial datasets** may include:
- digital
- hard copy
- image
- propriety standards
- text or vector.

**Organisational spatial requirements** may include:
- administration (e.g. postcodes, suburbs, and federal and state electoral counties)
- analysis of environmental, land and geographic information
- asset management
- cartographic services
- civil engineering
- digital imagery
- electricity
- emergency services management
- environmental datasets
- geographic information systems
- hydrography
- integrated services – environmental, land and geographic related datasets
- land ownership tenure system
- local government

FPICOT2239A Trim and cut felled trees

Modification History
Not Applicable

Unit Descriptor
Unit descriptor
This unit describes the outcomes required to trim and cut felled trees with a chainsaw. It is intended for use in situations where the production of timber is not the primary focus of the activity. The unit also includes equipment maintenance.

General workplace legislative and regulatory requirements apply to this unit; specific licensing or certification requirements may apply in some states and territories.

This unit replaces FPICOT2221A Trim and cross cut felled trees.

Application of the Unit
Application of the unit
This unit involves trimming and cutting felled trees with a chainsaw in a variety of work settings including a forest, agriculture, domestic, local council and emergency services environment, as relevant to the unit.

The skills and knowledge required for competent workplace performance are to be used within the scope of the person’s job and authority.

Licensing/Regulatory Information

**Elements and Performance Criteria Pre-Content**

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for trimming and cutting | 1.1. Applicable Occupational Health and Safety (OHS), environmental, legislative and organisational requirements and manufacturer's specifications relevant to trimming and cutting felled trees are identified and followed  
1.2. Site environmental protection measures and enterprise environmental management systems are identified and adhered to in line with relevant legislation and regulations  
1.3. Job requirements are reviewed and clarified with appropriate personnel  
1.4. Trimming and cutting activities are planned in line with site procedures  
1.5. Tools and equipment are selected appropriate to work requirements and checked for operational effectiveness in line with organisational procedures and manufacturer’s recommendations  
1.6. Communication with others is established and maintained in line with OHS requirements |
| 2. Visually assess felled trees | 2.1. Trees to be trimmed and cut are identified in line with job requirements  
2.2. Environmental requirements are identified and used to plan the trimming and cutting activities  
2.3. Tree, location and stability are assessed for conditions likely to affect safety of trimming and cutting activities  
2.4. Tree is visually assessed for defects  
2.5. Stresses within the tree are identified  
2.6. Trees unable to be cut safely are identified and referred to appropriate personnel |
| 3. Plan cutting | 3.1. Tree is moved or stabilised for safe cutting in line with site standards and regulations  
3.2. Cutting pattern is selected to optimise time and manageable removal of the sections  
3.3. Options for utilisation of product are identified  
3.4. Sequence of cuts is planned to maintain control of |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
cut sections and minimise cutting problems

3.5. Cut location is determined with consideration of tree stresses

4. Conduct trimming and cutting

4.1. *Debris* is cleared from the work area to prevent saw damage or injury in line with OHS requirements

4.2. *Pre start-up* checks are carried out on equipment in line with site requirements

4.3. Movement and whereabouts of other personnel is monitored and work is modified in line with OHS regulations

4.4. Tree section on each side of planned cut is secured and potential movement is assessed and planned

4.5. Chainsaw is operated to cut tree and limbs with cutting techniques adjusted in response to movement and condition of the tree/limbs

4.6. Trimming and cutting is completed in line with OHS and job requirements

4.7. Trimming and cutting records are prepared and problems reported to the appropriate personnel

5. Conduct equipment maintenance

5.1. Equipment is inspected on completion of trimming and cutting activities

5.2. Damaged saws and cutting attachments are identified for repair or replacement in line with organisational requirements and manufacturer's recommendations

5.3. Chain and other components are removed, cleaned, maintained, adjusted or replaced in line with manufacturer's recommendations

5.4. Tools and equipment are maintained in line with OHS requirements and manufacturer's recommendations

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.
REQUIRED SKILLS AND KNOWLEDGE

Required skills

- Technical skills sufficient to select, use and maintain relevant equipment to safely trim and cut felled trees in a range of situations
- Ability to assess the implications related to identified stresses of the tree
- Communication skills sufficient to interact with colleagues and others
- Literacy skills sufficient to review and accurately identify work requirements and to locate, record and report information
- Numeracy skills sufficient to estimate and measure tolerances and minimum diameter, and calculate time to complete tasks
- Problem solving skills sufficient to identify problems, equipment faults and apply appropriate response procedures

Required knowledge

- Applicable Commonwealth, State or Territory legislation, regulations, standards, codes of practice and established safe practices relevant to the full range of processes for trimming and cutting felled trees
- Industry, organisational and site standards, requirements, policies and procedures for trimming and cutting felled trees
- Environmental protection requirements, including the safe disposal of waste material
- Characteristics of trees and types of timber defects that may affect cutting
- Cutting patterns, sequences and techniques
- Chainsaw operation, safety and maintenance procedures
- Risk assessment processes
- Problem identification and resolution strategies and common fault finding techniques
- Types of tools and equipment and procedures for their use, operation and maintenance for trimming and cutting felled trees
- Procedures for reporting workplace records and information

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment  A person who demonstrates competency in this unit must be able to provide evidence that they can safely and
EVIDENCE GUIDE

efficiently trim and cut felled trees and conduct equipment maintenance within industry and organisational requirements

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- following applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice, including OHS and environmental, relevant to trimming and cutting felled trees
- following industry and organisational policies and procedures relevant to trimming and cutting felled trees
- effective communication and safe working practices
- planning of trimming and cutting activities in line with site standards and regulations
- trimming and cutting of felled trees in line with job requirements in a range of workplace situations
- equipment maintenance

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
  - workplace location or simulated workplace
  - materials and equipment relevant to undertaking work applicable to this unit
  - specifications and work instructions

Method of assessment

- Assessment must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
- Assessment must be by direct observation of tasks,
EVIDENCE GUIDE

with questioning on underpinning knowledge and it must also reinforce the integration of employability skills

- Assessment methods must confirm the ability to access and correctly interpret and apply the essential underpinning knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential italicised conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

OHS requirements: are to be in line with applicable Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures, and may include:

- personal protective equipment and clothing
RANGE STATEMENT

- safety equipment
- first aid equipment
- fire fighting equipment
- communications equipment
- location of other workers
- hazard and risk control
- fatigue management
- elimination of hazardous materials and substances
- safe workplace practices including required actions relating to forest fire
- awareness of danger zone for kickback
- manual handling including shifting, lifting and carrying
- erection of warning signs
- potential falling objects
- procedures for cutting on slopes

**Legislative requirements:**

are to be in line with applicable Commonwealth, State or Territory legislation, regulations, certification requirements and codes of practice and may include:

- Australian Standards
- OHS
- the environment
- equal opportunity
- relevant industry codes of practice
- award and enterprise agreements
- industrial relations
- confidentiality and privacy
- duty of care
- heritage and traditional land owner issues

**Organisational requirements**

may include:

- legal
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- quality assurance
- procedural manuals
- quality and continuous improvement processes and standards
- OHS
- emergency and evacuation procedures
RANGE STATEMENT

- fire prevention procedures
- recording and reporting requirements
- equipment use and maintenance and storage requirements
- environmental management requirements (waste disposal, recycling and re-use guidelines)
- access and equity principles and practices

**Trees** may include:
- hardwood trees
- softwood trees

**Environmental protection measures** may include:
- action to limit the impact of noise, wind speed and direction, fallen trees, ground slope, ground hazards and obstacles, general forest lean
- action to limit the impact to ground growth, canopy, density of trees

and may relate to:
- soil and water protection
- contingencies for modifying operations during wet or other adverse weather conditions
- the safe disposal of waste material

**Job requirements** refer to information and instructions relevant to trimming and cutting operations including:
- size
- length
- quantity and grade
- removal status

**Appropriate personnel** may include:
- supervisors
- clients
- colleagues
- line management

**Tools and equipment** may include:
- chainsaws
- Personal Protective Equipment (PPE)
- maintenance tools
- fuel and oil containers

and ancillary equipment, which may include:
- hammer
- axe
- wedges
RANGE STATEMENT

- cant hook or breaking bar
- first aid kit
- fire control equipment
- tool belt
- loggers tape
- warning signs
- chainsaw maintenance kit

Communication may include:

- verbal and non-verbal language
- hand or other agreed signals
- eye contact with other operators or personnel
- use of electronic devices

Environmental requirements may be assessed in relation to:

- ground growth
- ground slope
- ground hazards and obstacles

and may include environmental protection measures to:

- limit the impact of noise, fumes in enclosed spaces, waste, fire, disposal of fuel and oil
- limit the impact on flora, fauna and habitat

Defects may include:

- splits
- falling damage
- fire damage
- infestation
- pipe
- shake
- twist
- branch/knot locations

Stresses may include:

- tension (fibres being stretched)
- compression (fibres being squashed)
- neutral fibres

Cutting pattern refers to:

- the best direction or angle for making a cut

Sequence of cuts refers to:

- the plan of cuts to optimise time and recovery of logs

Debris may include:

- stones
- rocks
- loose branches
- other timber
RANGE STATEMENT

- woody material
- any loose hazards underfoot or in escape path
- any material underfoot or in the cutting area which may impinge on safe cutting procedures

Pre start-up checks may include:
- checking that equipment is suitable for task and has been set up correctly
- checking that systems are performing accurately
- checking equipment is operating to optimum performance

Cutting techniques may include:
- bridging cuts
- swinging cuts
- side bind cuts
- delimming
- boring
- wedge cuts
- ripping cuts

Records may include:
- quality outcomes; hazards, incident reports, equipment malfunctions and damage
and may be compiled using a computer-based system or another appropriate organisational communication system to record and report

Maintenance must include:
- sharpening
and may include:
- refuelling
- inspection, identification and replacement of bar, chain, drive sprockets
- bar oil checks and top up
- air filter check, clean and replacement
- cleaning of saw body, air intake vents and cooling fans
- fitting spare chain and tension chain

Unit Descriptor

This unit describes the outcomes required to assess, plan and safely carry out manual tree-felling operations using a chainsaw in a non-production environment. This unit covers the felling procedures for trees with a level of complexity that requires significant tree assessment and practical felling skills. Persons competent in this unit should be able to effectively fell most trees with the exception of the very large and those that have significant defects and/or characteristics causing excessive complexity. Techniques for trees with a diameter greater than the bar length would generally be regarded as within the scope of this unit.

Application of the Unit

This unit involves felling trees in a non-production environment. It applies to a forest, rural and community environment.

These skills and knowledge are to be used within the scope of the person’s job and authority.

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements may apply in various jurisdictions.

Pre-Requisites

Not applicable
Employability Skills Information

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

</table>
| 1. Prepare for felling | 1.1 Identify and comply with applicable *occupational health and safety* (OHS), environmental, *legislative* and *organisational requirements* relevant to felling trees  
1.2 Identify and adhere to site *environmental protection measures* according to relevant legislation and regulations  
1.3 Review and check *job requirements* with *appropriate personnel* as required  
1.4 Sharpen and adjust chainsaw or change components according to manufacturer recommendations  
1.5 Assess tree and determine felling requirements  
1.6 Identify and control potential and existing risks and *hazards* in the work area  
1.7 Identify trees to be retained and felled  
1.8 Establish and maintain *communication* with others according to OHS requirements |
| 2. Visually assess site conditions and surroundings | 2.1 Identify and comply with site environmental concerns according to relevant federal, state or territory legislation and local regulations  
2.2 Review terrain and slope to determine if they add complexity to the operation  
2.3 Maintain awareness of *environmental conditions* and other personnel activity in the work area and modify felling activity where required  
2.4 Assess general factors affecting felling requirements and detect and control specific forest or site risks and hazards |
| 3. Assess tree and plan felling | 3.1 Visually assess tree for felling characteristics  
3.2 Select *tools and equipment* appropriate to work requirements and check them for operational effectiveness according to manufacturer recommendations  
3.3 Identify trees to be felled for size, significant defects and any characteristics causing excessive complexity  
3.4 Assess and progressively plan tree-felling sequence for individual trees  
3.5 Assess and check required falling direction and possible deviation |
ELEMENT PERFORMANCE CRITERIA

3.6 Plan sequence of cuts to fell tree according to standard felling procedures

3.7 Select suitable escape route

3.8 Assess limitations of own skills in safely felling trees, identify trees considered outside own skill level and seek assistance from appropriate personnel where required

3.9 Monitor and exclude location and activity of other personnel on the work site

4. Apply tree-felling techniques

4.1 Select suitable escape route and clear of growth and other obstacles according to environmental care principles and statutory requirements

4.2 Fell individual trees using planned techniques according to site requirements, at a safe distance from other personnel in the work area

4.3 Adjust cutting technique in response to movement and condition of tree

4.4 Use planned escape route when tree starts to fall and monitor the fall and movement of tree on ground until determined stable

4.5 Identify procedures for removal of trees that are hung-up

4.6 Detect, rectify and report blunt or damaged saw chain according to workplace procedures

4.7 Monitor chainsaw for operational effectiveness and record and report faults, malfunctions and problems according to workplace procedures
Required Skills and Knowledge

Required skills:

- Technical skills to:
  - use and maintain relevant tools and equipment
  - safely operate and maintain a chainsaw
  - assess, plan and carry out tree-felling operations appropriate to site conditions

- Communication skills to:
  - use appropriate communication and interpersonal techniques and methods with colleagues and others
  - use hand signals with other operators to maintain effective and safe tree felling

- Literacy skills to:
  - locate and report information
  - interpret, apply and convey information in written, diagrammatic and/or verbal form

- Numeracy skills to:
  - estimate tree height
  - calculate product mass and determine tree fall zone
  - measure tree length and diameter

- Problem-solving skills to:
  - review and identify work requirements
  - recognise own limitations in conditions and trees for felling
  - identify problems and equipment faults and demonstrate appropriate response procedures
  - apply safe work practices, including using personal protective equipment (PPE) and controlling hazards
  - comply with legislation, regulations, standards, codes of practice and established safe practices and procedures for felling trees manually

- Planning and organising skills to plan work to site requirements
Required knowledge:

- Basic knowledge of applicable federal, state or territory legislation, regulations, standards and codes of practice relevant to the full range of processes for felling trees manually
- Environmental protection requirements, including the safe disposal of waste material
- Organisational and site standards, requirements, policies and procedures for felling trees manually
- Types of tools and equipment for felling trees manually, and the procedures for their safe use, operation and maintenance
- Problem identification and resolution strategies and common fault-finding techniques
- Established communication channels and protocols
- Procedures for identifying and evaluating structural defects and stresses in trees
- Types and purposes of a range of cuts to fell trees
- Operational principles and limitations of a chainsaw
- Procedures for recording and reporting workplace information
- Chainsaw product specifications
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to provide evidence that they can assess, plan and safely and efficiently operate chainsaw equipment to manually fell trees at the intermediate level in a forest environment.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements of this unit and include demonstration of:

- compliance with applicable federal, state or territory legislative and regulatory requirements and codes of practice relevant to felling trees manually at an intermediate level
- compliance with organisational policies and procedures relevant to felling trees manually at an intermediate level
- compliance with applicable licensing and certification requirements
- communicating effectively and working safely with others in the work area
- identifying and describe key features of structural defects and stresses in trees and the impact on
- conducting an assessment of a range of intermediate trees, and planning and safely felling trees without damage to personnel, equipment and surrounding environment
- planning felling sequence and preparing surroundings including escape route
- felling a range of intermediate trees using a range of cuts safely without damage to personnel, equipment and surrounding environment
- preparing, operating and maintaining chainsaw equipment and other felling equipment

Context of and specific resources for assessment

- Competency is to be assessed in the workplace or a realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

confirmatory questions, will usually be conducted in an off-site context

- Assessment is to comply with relevant regulatory requirements and Australian standards
- The following resources should be made available:
  - workplace location or simulated workplace
  - materials and equipment relevant to undertaking work applicable to this unit
  - specifications and work instructions

**Method of assessment**

- Assessment methods must satisfy the endorsed Assessment Guidelines of the FPI11 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of employability skills
- Assessment methods must confirm the ability to access, interpret and apply the essential underpinning knowledge
- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role
Range Statement

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below.

OHS requirements: • are to be in accordance with applicable federal, state or territory legislation and regulations, and organisational safety policies and procedures, and may include:
  - PPE and clothing
  - safety equipment
  - first aid equipment
  - firefighting equipment
  - hazard and risk control
  - fatigue management
  - appropriate signage
  - elimination of hazardous materials and substances
  - safe forest practices, including required actions relating to fire
  - techniques for manual handling, including shifting, lifting and carrying

Legislative requirements: • are to be in accordance with applicable federal, state or territory legislation, regulations, certification requirements and codes of practice and may include:
  - award and organisational agreements
  - industrial relations
  - Australian standards
  - confidentiality and privacy
  - OHS
  - the environment
  - native vegetation
  - equal employment opportunity
  - anti-discrimination
  - relevant industry codes of practice
  - duty of care
Organisational requirements may include:

- legal compliance documentation
- organisational and site guidelines
- policies and procedures relating to own role and responsibility
- procedural manuals
- quality and continuous improvement processes and standards
- OHS, emergency and evacuation procedures
- ethical standards
- recording and reporting requirements
- equipment use, maintenance and storage requirements
- environmental management requirements, including waste disposal, recycling and re-use guidelines

Trees typical to the scope of this unit may include the following characteristics:

- lean and weight distribution, which can be assessed and readily adapted to falling direction with the use of wedges and/or control with hinge-wood
- various dimensions relative to local forest size distribution
- limited visible damage or defect
- species prone to free splitting and adverse reactions during felling
- a crown that contains dead or broken material, entanglement or malformation and is visible for assessment and monitoring
- single or multi-stems
- diameter of tree greater than chainsaw bar length
- grown on terrain and slope that can add complexity to the operation

Environmental protection measures may include action to limit the impact to:

- native vegetation
- soil and water
- heritage and archeological artefacts
- flora and fauna
- geomorphologic features
- landscape
- external site pollution
- recreational opportunities
- regeneration opportunities
Job requirements may include:
- information and instructions relevant to tree-felling operations, including processing location details and trees to be felled and retained
- general environmental requirements
- site plan and environmental features

Appropriate personnel may include:
- supervisors
- clients
- colleagues
- managers

Hazards may include:
- uneven or unstable terrain
- unsafe trees
- fires
- overhead and underground services
- excavations
- traffic
- structures
- hazardous materials
- insects and animals
- other personnel and machinery

Communication may include:
- verbal and non-verbal language
- hand or other agreed signals
- eye contact with other operators or personnel
- active listening and questioning to clarify and confirm understanding
- electronic communication devices

Environmental conditions may relate to:
- ground growth
- canopy
- general tree lean
- ground slope
- ground hazards
- wind speed and direction

Tools and equipment may include:
- warning signs
- chainsaw and components
- PPE and clothing
- first aid equipment
- maintenance requirements
- support tools

**Limitations** may relate to:
- job role and responsibilities
- own competency level
- industry requirements
- own understanding of risk identification processes
- own interpretation of legislation, regulations and procedures
- complying with OHS requirements

**Trees considered outside own skill level** include:
- trees that contain hazards and are deemed unsafe
- trees that are considered to be in the advanced category
- trees where cuts made may lead to loss of control of tree in falling

**Techniques:**
- will include:
  - scarf cutting
  - back cutting to provide hinge-wood and maintain control of tree
- may include:
  - use of wedges to assist in controlling falling direction

**Unit Sector(s)**
Forest Growing and Management

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to monitor and control boiler operation in the pulp and paper industry.

General legislation, regulatory, licensing and certification requirements applicable to this unit are detailed in the range statement.

Specific high risk licensing requirements for this unit may be applicable and are to be met separately and prior to the achievement of this unit.

Application of the Unit

Application of the unit

This unit applies to operators who monitor and control boiler operation in the pulp and paper industry. This work typically involves complex integrated equipment and continuous operations.

This unit generally applies to those who:

- confirm operational status
- monitor and control boiler and ancillary plant operation
- handover boiler operations, and
- record and document boiler and plant performance
to meet safety, quality and productivity requirements.

It does not include starting up and shutting down of steam boiler operations or troubleshooting and rectifying boiler plant systems.

Licensing/Regulatory Information

Refer to Unit Descriptor.

Pre-Requisites

Not Applicable.
Employability Skills Information

Employability skills This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
**Elements and Performance Criteria**

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Confirm operational status | 1.1. Operational status is confirmed within Occupational Health and Safety (OHS) regulations, environmental and safe working requirements/practices, Standard Operating Procedures (SOP), and housekeeping requirements  
1.2. Production requirements are checked at start of shift to plan the daily activities as required  
1.3. Continuing process supplies are maintained  
1.4. Combustion processes are confirmed to be within operational specifications  
1.5. Boiler performance is recorded in the operational log  
1.6. Operational status is communicated to relevant personnel |
| 2. Monitor and control boiler and ancillary plant operation | 2.1. Boiler and ancillary plant operation is monitored and controlled within OHS regulations, environmental and safe working requirements/practices, SOP, and housekeeping requirements  
2.2. Operational status is confirmed by inspection, observations and other information  
2.3. Water quality tests are conducted and chemical addition adjusted as required  
2.4. Steam pressures are monitored and maintained as required  
2.5. Fuel efficiency calculations and recordings are made  
2.6. Boiler control adjustments are made to maintain operation within specification  
2.7. Pre-treatment systems for water to be monitored, tested and maintained are made up  
2.8. Steam distribution systems are monitored and maintained to client requirements  
2.9. Operator level maintenance is carried out as required |
| 3. Handover boiler operations | 3.1. Handover of boiler operations is completed within OHS regulations, environmental and safe working requirements/practices, SOP, and housekeeping requirements |
ELEMENT | PERFORMANCE CRITERIA
---|---
3.2. Workplace records are maintained in accordance with statutory requirements and workplace procedures
3.3. Handover is carried out according to workplace procedure
3.4. Boiler operators are aware of boiler status and related equipment at completion of handover
4. Record and document boiler and plant performance
4.1. Boiler and plant performance is recorded and documented within OHS regulations, environmental and safe working requirements/practices, SOP, and housekeeping requirements
4.2. Operating log is maintained
4.3. Maintenance requirements are identified and documented as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the skills and knowledge required for this unit.

Required skills

- Uses required forms of communication in monitoring and controlling boiler operation
- Reads and interprets required documentation, procedures and reports within level of responsibility
- Accesses, navigates and enters computer-based information
- Interprets instruments, gauges and data recording equipment
- Interprets specifications and customer orders
- Identifies and actions problems within level of responsibility
- Identifies and monitors process control points
- Maintains situational awareness in the work area
- Perform tests and interprets and record results as required
- Uses measuring equipment as required
- Conducts pre-operational checks
- Inspects and maintains boiler and ancillary equipment and services to operating standards
- Operates high risk equipment as required
REQUIRED SKILLS AND KNOWLEDGE

- Analyses and uses sensory information to adjust process to maintain safety, quality and productivity
- Uses electronic and other control systems to control equipment and processes as required

Required knowledge

- Procedures, regulations and legislative requirements relevant to monitoring and controlling boiler operation systems including OHS, environmental including relevant sustainability requirements/practices, SOP, isolation procedures, safe working requirements, risks and hazard identification and housekeeping
- Relevant forms of communication
- Basic problem-solving techniques consistent with level of responsibility
- Working knowledge of steam generation plant, processes, layout and associated services including operating parameters, variation and associated adjustments within level of responsibility
- Sampling and testing process for plant and system operations, and process steam supply monitoring - purpose, standards and procedures as per site agreements
- Boiler water treatment system and reasons for treatment
- Operation of plant and systems
- Application of high risk equipment as required
- Sensory information that indicates a deviation from standard operating parameters
- Sufficient knowledge of electronic and other control systems, operation and application to make appropriate adjustments that control boiler operation, within level of responsibility
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence should be relevant to the work. It should satisfy the requirements of the elements and performance criteria and include consideration of:

- the required knowledge and skills tailored to the needs of the specific workplace
- applicable OHS regulations, environmental and safe working requirements/practices, SOP and housekeeping requirements
- applicable aspects of the range statement
- practical workplace demonstration of skills in monitoring and controlling boiler operation

Context of and specific resources for assessment

A workplace assessment must be used to assess:

- the application of required knowledge on the job
- the application of skills on the job, over time and under a range of typical conditions that may be experienced in steam generation operations

Access to the full range of equipment involved in integrated continuous manufacturing of steam generation operations in a pulp or paper mill is required

Method of assessment

A combination of assessment methods should be used. The following examples are appropriate for this unit:

- observation of applied skills and knowledge on the job
- workplace demonstrations via a mock-up or simulation that replicate part/s of the job
- answers to written or verbal questions about specific skills and knowledge
- third-party reports from relevant and skilled personnel
- written evidence e.g. log sheet entries, checklist entries, test results

Assessment processes and techniques must be culturally appropriate and in keeping with the language
EVIDENCE GUIDE

and literacy capacity of the learner and the work being performed. This includes conducting an assessment in a manner that allows thoughts to be conveyed verbally so that the learner can both understand and be understood by the assessor (e.g. use plain English and terminology used on the job)

A holistic assessment with other units relevant to the pulp and paper industry, mill and job role is recommended

Additional information on approaches to assessment for the pulp and paper industry is provided in the Assessment Guidelines for this Training Package

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Productivity requirements may include:

- energy efficiency
- waste minimisation
- evaporation minimisation, including landfill and waste water reduction
- environmentally safe waste disposal
- consideration of resource utilisation, including fibre efficiency
- minimising delays
- chemical recovery maximisation
- meeting key performance indicators
- line speed
- handovers
- quality checks
- meeting output targets i.e. net tonnes per employee per annum
- machine/process time availability i.e. time the machine or process is making product
RANGE STATEMENT

Boiler types may include:

- fire tube
- water tube

and may be operated in conjunction with other steam driven plant and operations including:

- paper making machines
- turbines
- digesters
- evaporators
- heating plant

Pre-operational checks may include:

- low water level alarm
- high water level alarm
- low water level alarm lockout
- hydrostatic test
- burner management system
- safety valve test

Materials and supplies may include:

- chemicals
- coal
- oil
- gas
- additives
- air
- water
- wood waste
- steam
- recovery process products
- power

Equipment may include:

- boiler and auxiliary plant
- boiler heating systems
- steam distribution system
- fuel and fuel delivery system plant
- dust removal and combustion waste
- fuel management system
- extraction systems
- water distribution systems
- compressed air systems
- steam temperature control plant
- chemical dosing system
- water treatment system
**RANGE STATEMENT**

- flame detection equipment
- hand and power tools
- computer systems
- electronic screens and alarms
- process control systems
- analogue and digital instrumentation
- fully automated, semi-automated, manually operated plant and equipment appropriate to steam generation operations

Electronic control systems may include:

- Digital Control System (DCS)
- touch screens
- robotics

Legislation, regulatory, licensing and certification requirements may include:

- OHS and environmental requirements (local, state and commonwealth)
- as applicable, activity or task specific high risk licensing requirements
- appropriate boiler/pressure vessel operator certification
- confined space standards and regulations

Documentation, procedures and reports may include:

- SOP
- quality procedures
- environmental sustainability requirements/practices
- plant manufacturing operating manuals
- oil or chemical spills and disposal guidelines
- plant isolation documentation
- safe work documentation e.g. plant clearance, job safety analysis, permit systems
- enterprise policies and procedures
- job sheets
- manufacturer's specifications
- maintenance documentation
- statutory requirements
- Materials Safety Data Sheets (MSDS)
- operator's log
- process and instrument diagrams

Maintenance may include:

- operator level as per site agreements
- operator schedules
- systems
- suppliers
- proactive strategies e.g. Total Productive
RANGE STATEMENT

Maintenance (TPM), Reliability Centred Maintenance (RCM)

Actions may include:
- process adjustments
- reporting to authorised person
- rectifying problem within level of responsibility

Communications may include interaction with:
- internal/external customers and suppliers
- team members
- production/service coordinators
- maintenance services
- operational management
- statutory authorities

Situational awareness may include:
- traffic
- pedestrians
- location of equipment
- product
- hazards
- obstruction
- unexpected movement

Forms of communication may include:
- written e.g. log books, emails, incident and other reports, run sheets, data entry
- reading and interpreting documentation e.g. SOP, manuals, checklists, drawings
- verbal e.g. radio skills, telephone, face to face, handover
- non-verbal e.g. hand signals, alarms, observations
- signage e.g. safety, access

Sensory information may include:
- visual
- sound
- feel
- touch
- smell
- vibration
- temperature

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**ELEMENT**  | **PERFORMANCE CRITERIA**
--- | ---
1. Conduct pre-operational safety checks | 1.1. Pre-operational safety checks are conducted within Occupational Health and Safety (OHS) regulations, environmental and safe working requirements/practices, Standard Operating Procedures (SOP), and housekeeping requirements
1.2. Plant status is confirmed by inspection, observations and other information
1.3. Potential work area hazards are identified, reported and prevention or control measures implemented
1.4. Work and output requirements are established
1.5. Pre-operational and safety checks are conducted
1.6. Isolations are removed
1.7. Availability of process supplies are confirmed

2. Conduct startup procedures | 2.1. Startup procedures are conducted within OHS regulations, environmental and safe working requirements/practices, SOP, and housekeeping requirements
2.2. Pre-light conditions are established
2.3. Boiler condition during startup is monitored to detect abnormal conditions
2.4. Boiler is started and brought on-line
2.5. System and plant is observed for correct operational response
2.6. Deviations from required operating conditions are detected and corrective action undertaken to rectify
2.7. Responses to corrective actions are documented as required
2.8. Startup information is recorded and reported as required

Required Skills and Knowledge
REQUIRED SKILLS AND KNOWLEDGE

This describes the skills and knowledge required for this unit.

Required skills

- Uses required forms of communication in managing a steam boiler startup
- Reads and interprets required documentation, procedures and reports
- Interprets instruments, gauges and data recording equipment
- Prepares written information and enters data to support groups and teams
- Interprets specifications and customer orders
- Accesses, navigates and enters computer-based information
- Identifies and actions problems within level of responsibility
- Identifies and monitors process control points
- Maintains situational awareness in the work area
- Implements isolation and access procedures
- Maintains a clean and hazard free work area
- Sets up and starts boiler within an appropriate time
- Uses measuring equipment as required
- Operates high risk equipment as required
- Analyses and uses sensory information to adjust process to maintain and co-ordinate safety, quality and productivity
- Uses electronic and other control systems to control equipment and processes as required

Required knowledge

- Procedures, regulations and legislative requirements relevant to steam generation operations including OHS, environmental including relevant sustainability requirements/practices, SOP, isolation procedures, safe working requirements, risks and hazard identification and housekeeping
- Relevant forms of communication
- Basic problem-solving techniques consistent with level of responsibility
- Working knowledge of steam generation plant, processes, layout and associated services sufficient to carry out startup activities within level of responsibility
- Boiler water treatment system and reasons for treatment
- Pre-operative checks and requirements
- Application of high risk equipment as required
- Sensory information that indicates a deviation from standard operating parameters
- Sufficient knowledge of electronic and other control systems, operation and application to make appropriate adjustments that control steam generation systems, within level of responsibility
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence should be relevant to the work. It should satisfy the requirements of the elements and performance criteria and include consideration of:

- the required knowledge and skills tailored to the needs of the specific workplace
- applicable OHS regulations, environmental and safe working requirements/practices, SOP and housekeeping requirements
- applicable aspects of the range statement
- practical workplace demonstration of skills in managing a steam boiler startup

Unit Descriptor

Unit descriptor

This unit describes the outcomes required to shut down and bank steam boiler/s in the pulp and paper industry. General legislation, regulatory, licensing and certification requirements applicable to this unit are detailed in the range statement. Specific high risk licensing requirements for this unit may be applicable and are to be met separately and prior to the achievement of this unit.

Application of the Unit

Application of the unit

This unit applies to operators who shut down and bank steam boiler/s in the pulp and paper industry. This work typically involves complex integrated equipment and continuous operations.

This unit generally applies to those who:

- prepare boiler for shutdown
- conduct boiler inspection and maintenance
- store boiler in shutdown mode
- respond to unplanned or emergency shutdowns, and
- record and report shutdown data

...to meet safety, quality and productivity requirements.

It does not include managing steam boiler startup, monitoring and controlling boiler operation or troubleshooting and rectifying boiler plant systems.

Licensing/Regulatory Information

Employability Skills Information

Employability skills  This unit contains employability skills

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare boiler for shutdown | 1.1. Boiler is prepared for shutdown within Occupational Health and Safety (OHS) regulations, environmental and safe working requirements/practices, Standard Operating Procedures (SOP), and housekeeping requirements  
1.2. Maintenance requirements are identified and reported  
1.3. Appropriate isolations are initiated  
1.4. Faulty plant is isolated/contained where possible to allow continued production as required  
1.5. Boiler and ancillary plant are shut down |
| 2. Conduct boiler inspection and maintenance | 2.1. Boiler inspection and maintenance is conducted within OHS regulations, environmental and safe working requirements/practices, SOP, and housekeeping requirements  
2.2. Boiler is prepared for inspection  
2.3. Condition of boiler is established to ensure safe removal of equipment  
2.4. Inspections and maintenance is carried out  
2.5. Internal and external cleaning of boiler and fittings are undertaken as required |
| 3. Store boiler in shutdown mode | 3.1. Boiler is stored in shutdown mode within OHS regulations, environmental and safe working requirements/practices, SOP, and housekeeping requirements  
3.2. Storage time and condition of storage are established  
3.3. Boiler is stored in a safe condition for access in accordance with manufacturer's specifications  
3.4. Stored boiler water and chemicals are analysed and handled when boiler is stored for extended periods |
| 4. Respond to unplanned or emergency shutdowns | 4.1. Unplanned or emergency shutdowns are responded to within OHS regulations, environmental and safe working requirements/practices, SOP, and housekeeping requirements  
4.2. Shutdown requirement is responded to immediately |
ELEMENT PERFORMANCE CRITERIA

4.3. Emergency conditions are complied with in accordance with legislative and enterprise procedures, where applicable

4.4. Cause of shutdown is identified and located where possible

4.5. Immediate safety of personnel and plant is ensured

4.6. Continuing plant operation is monitored and maintained in safe working conditions and customers are notified

4.7. Relevant personnel are notified to rectify and make plant ready for restart

5. Record and report shutdown data

5.1. Shutdown data is recorded and reported within OHS regulations, environmental and safe working requirements/practices, SOP, and housekeeping requirements

5.2. Shutdown information is recorded, including corrective action as required

5.3. Shutdown information is reported to relevant personnel as required

Required Skills and Knowledge

REQUICKED SKILLS AND KNOWLEDGE

This describes the skills and knowledge required for this unit.

Required skills

- Uses required forms of communication in shutting down and banking steam boiler/s
- Reads and interprets required documentation, procedures and reports within level of responsibility
- Accesses, navigates and enters computer-based information
- Interprets instruments, gauges and data recording equipment
- Interprets specifications and customer orders
- Prepares written information and enters data to support groups and teams
- Identifies and actions problems within level of responsibility
- Identifies and monitors process control points
- Implements boiler bank, standby or store procedures
REQUIRED SKILLS AND KNOWLEDGE

- Sets up boiler and/or re-starts within appropriate time
- Conducts pre-operational checks
- Identifies and responds appropriately to shutdown causes
- Respond to problems associated with plant shutdown and unplanned shutdown to ensure safety quality and productivity
- Coordinates and plans shutdown activity
- Maintains situational awareness in the work area
- Uses measuring equipment as required
- Operates high risk equipment as required
- Analyses and uses sensory information to adjust process to maintain and co-ordinate safety, quality and productivity
- Uses electronic and other control systems to control equipment and processes as required

Required knowledge

- Procedures, regulations and legislative requirements relevant to steam generation operations including OHS, environmental including relevant sustainability requirements/practices, SOP, isolation procedures, safe working requirements, risks and hazard identification and housekeeping
- Relevant forms of communication
- Basic problem-solving techniques consistent with level of responsibility
- Working knowledge of steam generation plant, processes, layout and associated services sufficient to carry out shutdown activities within level of responsibility
- Types, causes and effects of steam boiler shutdowns
- Required responses to all unplanned shutdowns (e.g. power outage, mechanical breakdown, blockages, jamming, air supply, control system failure) to ensure safety quality and productivity
- Process and procedures for plant shutdowns and unplanned shutdowns
- Plant and machinery functions and operations
- Emergency procedures and responses
- Boiler water treatment system and reasons for treatment
- Operation of plant and systems
- Application of high risk equipment as required
- Sensory information that indicates a deviation from standard operating parameters
- Sufficient knowledge of electronic and other control systems, operation and application to make appropriate adjustments that control boiler plant operations, within level of responsibility
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence should be relevant to the work. It should satisfy the requirements of the elements and performance criteria and include consideration of:

- the required knowledge and skills tailored to the needs of the specific workplace
- applicable OHS regulations, environmental and safe working requirements/practices, SOP and housekeeping requirements
- applicable aspects of the range statement
- practical workplace demonstration of skills in the shutting down and banking of steam boilers

Context of and specific resources for assessment

A workplace assessment must be used to assess:

- the application of required knowledge on the job
- the application of skills on the job, over time and under a range of typical conditions that may be experienced in steam generation operations

Access to the full range of equipment involved in integrated continuous manufacturing of steam generation operations in a pulp or paper mill is required

Method of assessment

A combination of assessment methods should be used. The following examples are appropriate for this unit:

- observation of applied skills and knowledge on the job
- workplace demonstrations via a mock-up or simulation that replicate part/s of the job
- answers to written or verbal questions about specific skills and knowledge
- third-party reports from relevant and skilled personnel
- written evidence e.g. log sheet entries, checklist entries, test results

Assessment processes and techniques must be culturally appropriate and in keeping with the language
EVIDENCE GUIDE

and literacy capacity of the learner and the work being performed. This includes conducting an assessment in a manner that allows thoughts to be conveyed verbally so that the learner can both understand and be understood by the assessor (e.g. use plain English and terminology used on the job).

A holistic assessment with other units relevant to the pulp and paper industry, mill and job role is recommended.

Additional information on approaches to assessment for the pulp and paper industry is provided in the Assessment Guidelines for this Training Package.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Productivity requirements may include:

- energy efficiency
- waste minimisation
- evaporation minimisation, including landfill and waste water reduction
- environmentally safe waste disposal
- consideration of resource utilisation, including fibre efficiency
- minimising delays
- chemical recovery maximisation
- meeting key performance indicators
- line speed
- handovers
- quality checks
- meeting output targets i.e. net tonnes per employee per annum
- machine/process time availability i.e. time the machine or process is making product
RANGE STATEMENT

Boiler types may include:
- fire tube
- water tube

and may be operated in conjunction with other steam driven plant and operations including:
- paper making machines
- turbines
- digesters
- evaporators
- heating plant

Pre-operational checks may include:
- low water level alarm
- high water level alarm
- low water level alarm lockout
- hydrostatic test
- burner management system
- safety valve test

Materials and supplies may include:
- chemicals
- coal
- oil
- gas
- additives
- air
- water
- wood waste
- steam
- recovery process products
- power

Equipment may include:
- boiler and auxiliary plant
- boiler heating systems
- steam distribution system
- fuel and fuel delivery system plant
- dust removal and combustion waste
- fuel management system
- extraction systems
- water distribution systems
- compressed air systems
- steam temperature control plant
- chemical dosing system
- water treatment system
RANGE STATEMENT

- flame detection equipment
- hand and power tools
- computer systems
- electronic screens and alarms
- process control systems
- analogue and digital instrumentation
- fully automated, semi-automated, manually operated plant and equipment appropriate to steam generation operations

Electronic control systems may include:
- Digital Control System (DCS)
- touch screens
- robotics

Legislation, regulatory, licensing and certification requirements may include:
- OHS and environmental requirements (local, state and commonwealth)
- activity or task specific high risk licensing requirements
- appropriate boiler/pressure vessel operator certification
- confined space standards and regulations

Documentation, procedures and reports may include:
- SOP
- quality procedures
- environmental sustainability requirements/practices
- plant manufacturing operating manuals
- oil or chemical spills and disposal guidelines
- plant isolation documentation
- safe work documentation e.g. plant clearance, job safety analysis, permit systems
- enterprise policies and procedures
- job sheets
- manufacturer's specifications
- maintenance documentation
- statutory requirements
- Materials Safety Data Sheets (MSDS)
- operator's log
- process and instrument diagrams

Maintenance may include:
- operator level maintenance as per site agreements
- operator maintenance schedules
- maintenance systems
- maintenance suppliers
RANGE STATEMENT

- proactive maintenance strategies e.g. Total Productive Maintenance (TPM), Reliability Centred Maintenance (RCM)

Actions may include:
- process adjustments
- reporting to authorised person
- rectifying problem within level of responsibility

Communications may include interaction with:
- internal/external customers and suppliers
- team members
- production/service coordinators
- maintenance services
- operational management
- statutory authorities

Situational awareness may include awareness of:
- traffic
- pedestrians
- location of equipment
- product
- hazards
- obstruction
- unexpected movement

Forms of communication may include:
- written e.g. log books, emails, incident and other reports, run sheets, data entry
- reading and interpreting documentation e.g. SOP, manuals, checklists, drawings
- verbal e.g. radio skills, telephone, face to face, handover
- non-verbal e.g. hand signals, alarms, observations
- signage e.g. safety, access

Sensory information may include:
- visual
- sound
- feel
- touch
- smell
- vibration
- temperature

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify and diagnose causes of faults | 1.1. Causes of faults are identified and diagnosed within Occupational Health and Safety (OHS) regulations, environmental and safe working requirements/practices, Standard Operating Procedures (SOP), and housekeeping requirements  
1.2. Abnormal plant conditions and system alarms are interpreted to determine fault type and location  
1.3. Physical inspections of plant and processes are made to identify faults  
1.4. Cause and source of fault is identified and located  
1.5. Faulty plant is isolated, if possible, and confirmed with production and maintenance  
1.6. Diagnosis is confirmed by access and reference to relevant historical data  
1.7. Diagnoses are communicated to relevant personnel |
| 2. Rectify faults | 2.1. Faults are rectified within OHS regulations, environmental and safe working requirements/practices, SOP, and housekeeping requirements  
2.2. Shutdown and isolation procedures are implemented as required  
2.3. Faulty equipment is repaired or replaced  
2.4. Adjustments to process and systems are made to restore normal operations  
2.5. Normal operation is communicated to relevant personnel |
| 3. Record and report operational data | 3.1. Operational data is recorded and reported within OHS regulations, environmental and safe working requirements/practices, SOP, and housekeeping requirements  
3.2. Variations from standard specification and boiler operation faults are documented  
3.3. Troubleshooting process and corrective actions are recorded  
3.4. Relevant information is communicated to appropriate personnel |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the skills and knowledge required for this unit.

Required skills

- Identifies, accesses and interprets relevant historical and operational data and information
- Uses required forms of communication in troubleshooting and rectifying boiler plant systems
- Reads and interprets required documentation, procedures and reports within level of responsibility
- Accesses, navigates and enters computer-based information
- Interprets instruments, gauges and data recording equipment
- Communicates effectively with personnel to assist with analysis and resolution of operational problems
- Assists others to identify and resolve operational problems in the workplace
- Identifies and actions systems, quality and equipment faults within level of responsibility
- Identifies causes and effects of faults and corrective action on associated processes
- Identifies and responds to causes of shutdowns
- Determines quality faults, effects and causes
- Selects and uses appropriate troubleshooting methods
- Uses troubleshooting guides and processes
- Takes timely corrective action to maximise safety, quality and productivity
- Undertakes necessary calculations to aid troubleshooting as required
- Identifies and monitors process control points
- Maintains situational awareness in the work area
- Performs tests, interpret and record results as required
- Confirms and maintains required production throughput after restart
- Initiates isolations in accordance with SOP
- Conducts routine checking procedures during plant and systems operation
- Maintains plant operation within specification
- Uses measuring equipment as required
- Operates high risk equipment as required
- Analyses and uses sensory information to adjust process to maximise safety, quality and productivity
- Uses electronic and other control systems to control equipment and processes as required
REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

- Procedures, regulations and legislative requirements relevant to steam generation operations including OHS, environmental including relevant sustainability requirements/practices, SOP, isolation procedures, safe working requirements, risks and hazard identification and housekeeping
- Relevant forms of communication
- Detailed knowledge of steam generation system, processes and associated services sufficient to troubleshoot including:
  - plant layout
  - theory of operation
  - causes and effects of adjustments made to steam generation plant and processes
  - relationships between steam generation system, processes and associated services
- An appropriate range of troubleshooting methods
- Types, causes and effects of plant shutdowns
- Impact and effect of inappropriate responses to shutdown
- Plant startup and shutdown procedures
- Plant operation and control mechanisms
- Boiler water treatment system and reasons for treatment
- Application of high risk equipment as required
- Sensory information that indicates a deviation from standard operating parameters
- Sufficient knowledge of electronic and other control systems, operation and application to make appropriate adjustments that control boiler plant operations, within level of responsibility

Unit Descriptor

This unit of competency describes the skills and knowledge required to provide first aid response, life support, management of casualty(s), the incident and other first aiders, until the arrival of medical or other assistance.

Application of the Unit

These skills and knowledge may be applied in a range of situations, including community and workplace settings.

Training Package users should ensure implementation is consistent with any specific workplace and/or relevant legislative requirements in relation to first aid, including State/Territory requirements for currency.

Application of these skills and knowledge should be contextualised as required to address specific industry, enterprise or workplace requirements and to address specific risks and hazards and associated injuries.

A current Senior First Aid, Workplace Level 2 or Level 2 qualification may provide evidence of skills and knowledge required by this competency unit. However, as with all evidence of competence, evidence must be assessed against the requirements specified in the competency unit.

## Elements and Performance Criteria Pre-Content

Elements define the essential outcomes of a unit of competency. The Performance Criteria specify the level of performance required to demonstrate achievement of the Element. Terms in italics are elaborated in the Range Statement.

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Assess the situation</td>
<td>1.1 Identify assess and minimise <em>hazards</em> in the situation that may pose a risk of injury or illness to self and others&lt;br&gt;1.2 Minimise immediate <em>risk</em> to self and casualty's health and safety by controlling any hazard in accordance with occupational health and safety requirements&lt;br&gt;1.3 Assess casualty and identify injuries, illnesses and conditions</td>
</tr>
</tbody>
</table>
ELEMENT 2. Apply first aid procedures

PERFORMANCE CRITERIA

2.1 Calmly provide information to reassure casualty, adopting a communication style to match the casualty's level of consciousness

2.2 Use available resources and equipment to make the casualty as comfortable as possible

2.3 Respond to the casualty in a culturally aware, sensitive and respectful manner

2.4 Determine and explain the nature of casualty's injury/condition and relevant first aid procedures to provide comfort

2.5 Seek consent from casualty prior to applying first aid management

2.6 Provide first aid management in accordance with established first aid principles and Australian Resuscitation Council (ARC) Guidelines and/or State/Territory regulations, legislation and policies and industry requirements

2.7 Seek first aid assistance from others in a timely manner and as appropriate

2.8 Correctly operate first aid equipment as required for first aid management according to manufacturer/supplier's instructions and local policies and/or procedures

2.9 Use safe manual handling techniques as required

2.10 Monitor casualty's condition and respond in accordance with effective first aid principles and procedures

2.11 Finalise casualty management according to casualty's needs and first aid principles
### ELEMENT

3. Communicate details of the incident

#### PERFORMANCE CRITERIA

3.1 Request ambulance support and/or appropriate medical assistance according to relevant circumstances using relevant *communication media and equipment*

3.2 Accurately convey assessment of casualty's condition and management activities to ambulance services /other emergency services/relieving personnel

3.3 Prepare reports as appropriate in a timely manner, presenting all relevant facts according to established procedures

3.4 Accurately record details of casualty's physical condition, changes in conditions, management and response to management in line with established procedures

3.5 Maintain confidentiality of records and information in line with privacy principles and statutory and/or organisation policies

4. Evaluate own performance

#### PERFORMANCE CRITERIA

4.1 Seek feedback from *appropriate clinical expert*

4.2 Recognise the possible psychological impacts on rescuers of involvement in critical incidents

4.3 Participate in debriefing/evaluation as appropriate to improve future response and address individual needs

---

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

**Essential knowledge:**

The candidate must be able to demonstrate essential knowledge required to effectively do the task outlined in elements and performance criteria of this unit, manage the task and manage contingencies in the context of the identified work role

This includes knowledge of:
REQUIRED SKILLS AND KNOWLEDGE

- ARC Guidelines relating to provision of first aid as outlined
- Awareness of stress management techniques and available support
- First aid management of:
  - abdominal injuries
  - allergic reactions
  - altered and loss of consciousness
  - bleeding
  - burns - thermal, chemical, friction, electrical
  - cardiac arrest
  - casualty with no signs of life
  - chest pain
  - choking/airway obstruction
  - injuries: cold and crush injuries; eye and ear injuries; head, neck and spinal injuries; minor skin injuries; needle stick injuries; soft tissue injuries including sprains, strains, dislocations
  - envenomation - snake, spider, insect and marine bites
  - environmental impact such as hypothermia, hyperthermia, dehydration, heat stroke
  - fractures
  - medical conditions, including cardiac conditions, epilepsy, diabetes, asthma and other respiratory conditions
  - near drowning
  - poisoning and toxic substances (including chemical contamination)
  - respiratory distress
  - seizures
  - shock
  - stroke
  - substance misuse - common drugs and alcohol, including illicit drugs
- Social/legal issues:
  - duty of care
  - need to be culturally aware, sensitive and respectful
  - importance of debriefing
  - confidentiality
  - own skills and limitations
- Understanding of the use of an Automated External Defibrillator (AED), including when to use and when not to

continued ...

Essential knowledge (contd):

- Working knowledge of:
REQUIRED SKILLS AND KNOWLEDGE

- basic occupational health and safety requirements in the provision of first aid
- basic principles and concepts underlying the practice of first aid
- chain of survival
- first aiders' skills and limitations
- infection control principles and procedures, including use of standard precautions
- priorities of management in first aid when dealing with life threatening conditions
- procedures for dealing with major and minor injury and illness

Essential skills:

It is critical that the candidate demonstrate the ability to effectively do the task outlined in elements and performance criteria of this unit, manage the task and manage contingencies in the context of the identified work role

This includes the ability to:

- Administer medication in line with state/territory regulations, legislation and policies
- Apply first aid principles
- Call an ambulance and/or medical assistance according to relevant circumstances and report casualty's condition
- Communicate effectively and assertively in an incident
- Conduct an initial casualty assessment
- Demonstrate correct procedures for performing CPR using a manikin, including standard precautions (i.e. as per unit HLT CPR201A Perform CPR)
- Demonstrate:
  - ability to call an ambulance
  - consideration of the welfare of the casualty
  - safe manual handling
  - site management to prevent further injury
- Evaluate own response and identify appropriate improvements where required
- Follow OH&S guidelines
- Infection control, including use of standard precautions
- Make prompt and appropriate decisions relating to managing an incident in the workplace
- Plan an appropriate first aid response in line with established first aid principles, policies and procedures, ARC Guidelines and/or State/Territory regulations, legislation and policies and industry requirements and respond appropriately to contingencies in line with own skills
- Prepare a written incident report or provide information to enable preparation of an incident report
- Provide assistance with self-medication as per subject's own medication regime and in line with State/Territory legislation, regulations and policies and any available
REQUIRED SKILLS AND KNOWLEDGE

medical/pharmaceutical instructions

• Use literacy and numeracy skills as required to read, interpret and apply guidelines and protocols

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. The evidence guide supplements assessment requirements that apply to all units in this Training Package. Users of this evidence guide should first read the package’s assessment guidelines.

Critical aspects of assessment:

• The individual being assessed must provide evidence of specified essential knowledge as well as skills
• Competence should be demonstrated working individually and, where appropriate, as part of a first aid team
• Consistency of performance should be demonstrated over the required range of situations relevant to the workplace or community setting
• Currency of first aid knowledge and skills is to be demonstrated in line with State/Territory regulations, legislation and policies, ARC and industry guidelines

Context and resources required for assessment:

• Skills in performing first aid procedures are to be assessed through demonstration, with questioning to confirm essential knowledge
• For assessment purposes, demonstration of skills in CPR procedures requires using a model of the human body (resuscitation manikin) in line with Australian Resuscitation Council Guidelines
EVIDENCE GUIDE

Access and equity considerations:
- All workers in the health industry should be aware of access and equity issues in relation to their own area of work
- All workers should develop their ability to work in a culturally diverse environment
- In recognition of particular health issues facing Aboriginal and Torres Strait Islander communities, workers should be aware of cultural, historical and current issues impacting on health of Aboriginal and Torres Strait Islander people
- Assessors and trainers must take into account relevant access and equity issues, in particular relating to factors impacting on health of Aboriginal and/or Torres Strait Islander clients and communities

Related units:
This unit incorporates the content of units:
- HLTCP201B Perform CPR
- HLTFA201B Provide basic emergency life support

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.
RANGE STATEMENT

Contextualisation to address specific requirements may include:

- Focus on first aid management of specific types of injury
- First aid provision under specific constraints or circumstances (e.g. in confined spaces, in maritime work environment or in work environment involving identified risks/hazards)

Established first aid principles include:

- Preserve life
- Prevent illness, injury and condition(s) becoming worse
- Promote recovery
- Protect the unconscious casualty

Vital signs include:

- Consciousness
- Breathing
- Circulation

A hazard is:

- A source or situation with the potential for harm in terms of human injury or ill-health, damage to property, the environment, or a combination of these

Hazards may include:

- Physical hazards
- Biological hazards
- Chemical hazards
- Hazards associated with manual handling

Risks may include:

- Risks from equipment, machinery and substances
- Risks from first aid equipment
- Environmental risks
- Exposure to blood and other body substances
- Risk of further injury to the casualty
- Risks associated with the proximity of other workers and bystanders
- Risks from vehicles
RANGE STATEMENT

Casualty's condition is managed for:

- Abdominal injuries
- Airway obstruction
- Allergic reactions
- Altered and loss of consciousness
- Bleeding
- Burns - thermal, chemical, friction, electrical
- Chest pain/cardiac arrest
- Injuries: cold and crush injuries; eye and ear injuries; head, neck and spinal injuries; minor skin injuries; needle stick injuries; soft tissue injuries including sprains, strains, dislocations
- Near drowning
- Envenomation - snake, spider, insect and marine bites
- Environmental conditions such as hypothermia, hyperthermia, dehydration, heat stroke
- Fractures
- Medical conditions, including cardiac conditions, epilepsy, diabetes, asthma and other respiratory conditions
- No signs of life
- Poisoning and toxic substances (including chemical contamination)
- Respiratory distress/arrest
- Seizures
- Shock
- Stroke
- Substance misuse - common drugs and alcohol, including illicit drugs.
RANGE STATEMENT

First aid management must take into account applicable aspects of:

- The setting in which first aid is provided, including:
  - workplace policies and procedures
  - industry/site specific regulations, codes etc.
  - OHS requirements
  - state and territory workplace health and safety legislative requirements
  - location and nature of the incident
  - situational risks associated with, for example, electrical and biological hazards, weather, motor vehicle accidents
  - location of emergency services personnel.
- The use and availability of first aid equipment and resources
- Infection control
- Legal and social responsibilities of first aider

Resources and equipment are used appropriate to the risk to be met and may include:

- AED
- First aid kit
- Auto-injector
- Puffer/inhaler
- Resuscitation mask or barrier
- Spacer device

Communication media and equipment may include but are not limited to:

- Telephones, including landline, mobile and satellite phones
- HF/VHF radio
- Flags
- Flares
- Two way radio
- Email
- Electronic equipment
- Hand signals

Appropriate clinical expert may include:

- Supervisor/manager
- Ambulance officer/paramedic
- Other medical/health worker
RANGE STATEMENT

Documentation may include:

- Injury report forms
- Workplace documents as per organisation requirements

Documentation may include recording:

- Time
- Location
- Description of injury
- First aid management
- Fluid intake/output, including fluid loss via:
  - blood
  - vomit
  - faeces
  - urine
- Administration of medication including:
  - time
  - date
  - person administering
  - dose
- Vital signs

Unit Sector(s)

Not Applicable
HLTFA402C Apply advanced first aid

Modification History
Not Applicable
Unit Descriptor

This unit deals with the provision of advanced first aid response, life support, management of casualty(s), the incident and other first aiders, until the arrival of medical or other assistance, and provision of support to other providers.

This unit builds on HLTFA301B: Apply first aid to include additional skills and use of a range of equipment.

Application of the Unit

Training Package users should ensure implementation is consistent with any specific workplace and/or relevant legislative requirements in relation to first aid, including State/Territory requirements for currency.

Application of these skills and knowledge should be contextualised as required to address specific industry, enterprise or workplace requirements and to address specific risks and hazards and associated injuries.

This unit includes coverage of skills and knowledge in advanced resuscitation techniques.

Competency outcomes in advanced resuscitation are to be equivalent to unit:

- HLTFA404B Apply advanced resuscitation techniques

To achieve equivalence of outcome, providers assessing HLTFA402C may refer to specific detail included in unit HLTFA404B and may choose to award both units.

Licensing/Regulatory Information

Not Applicable
Pre-Requisites

Pre-requisite units

This unit must be assessed after successful achievement of pre-requisite:
- HLTFA301B Apply first aid

Employability Skills Information

Employability Skills

Elements and Performance Criteria Pre-Content

Elements define the essential outcomes of a unit of competency.

The Performance Criteria specify the level of performance required to demonstrate achievement of the Element. Terms in italics are elaborated in the Range Statement.

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Assess the situation</td>
<td>1.1 Identify, assess and minimise hazards that may pose a risk of injury or illness to self and others</td>
</tr>
<tr>
<td></td>
<td>1.2 Assess risks to first aider and others and determine appropriate response to ensure prompt control of situation</td>
</tr>
<tr>
<td></td>
<td>1.3 Ascertain and prioritise need(s) for emergency services/medical assistance and undertake triage where required</td>
</tr>
<tr>
<td></td>
<td>1.4 Deploy resources to appropriate locations as required in line with workplace procedures</td>
</tr>
</tbody>
</table>
2. Manage the casualty(s)

2.1 Determine and explain the nature of casualty's injury/condition and relevant first aid procedures to provide comfort

2.2 Respond to the casualty in a culturally aware, sensitive and respectful manner

2.3 Seek consent for management of the casualty's injury/illness from person(s) where relevant

2.4 Determine and implement welfare procedure according to casualty(s) needs

2.5 Control effects of injury and determine and apply appropriate first aid management to meet the needs of the casualty and situation

2.6 Assist with self-medication in accordance with State/Territory regulations, legislation and policies and manufacturer’s/supplier’s instructions and subject to casualty's regime

2.7 Monitor casualty's condition and respond in a timely manner in accordance with effective first aid principles

2.8 Correctly operate basic life support equipment where appropriate according to relevant legislation and manufacturer's/supplier’s instructions

2.9 Apply safety procedures for operation of pressurised gases

2.10 Use safe manual handling techniques

2.11 Finalise management according to casualty's needs and first aid principles
ELEMENT

3. Coordinate first aid activities until arrival of medical assistance

PERFORMANCE CRITERIA

3.1 Identify available resources required and establish communication links with appropriate personnel, emergency management services and medical assistance as appropriate

3.2 Deploy correct amount of resources to appropriate locations in an effective manner to ensure timely arrival of required resources

3.3 Document the provision of resources and recommend modifications as required

3.4 Monitor the condition of casualties in accordance with first aid principles and workplace procedures

3.5 Coordinate evacuation of casualties according to relevant evacuation procedures

3.6 Arrange support services for personnel involved in the incident in accordance with relevant principles and procedures

4. Communicate essential incident details

4.1 Maintain communication with relevant personnel using appropriate media and equipment

4.2 Communicate first aid information with other providers/carers as appropriate to meet their needs and in accordance with workplace procedures

4.3 Calmly provide information to reassure casualty, adopting a communication style to match the casualty's level of consciousness

4.4 Prepare an incident report in line with organisation requirements

4.5 Maintain confidentiality of records and information in line with privacy principles and statutory and/or organisation policies
ELEMENT  
5. Evaluate the incident  

PERFORMANCE CRITERIA  
5.1 Evaluate management of the incident and where required develop an action plan in consultation with relevant parties  
5.2 Participate in debriefing/evaluation in order to improve future operations and address individual's needs  
5.3 Formulate and review contingency planning to identify and select alternative management principles and procedures as required  

Required Skills and Knowledge  

REQUIRED SKILLS AND KNOWLEDGE  
This describes the essential skills and knowledge and their level required for this unit.  

Essential knowledge:  
The candidate must be able to demonstrate essential knowledge required to effectively do the task outlined in elements and performance criteria of this unit, manage the task and manage contingencies in the context of the identified work role  
This includes knowledge of:  
- Working knowledge of:  
  - legal responsibilities and duty of care, including confidentiality  
  - basic anatomy (skeleton, muscles, joints, bones), physiology and toxicology  
  - ARC Guidelines and/or State/Territory regulations, legislation and policies relating to provision of first aid  
  - procedures for dealing with major and minor accidents in the workplace  
  - infection control principles and procedures, including using standard precautions  
  - how to gain access to and interpret material safety data sheets (MSDSs)  
  - company/organisation standard operating procedures (SOPs)  
  - priorities of management in first aid  
  - occupational health and safety requirements in the provision of first aid.  
  - capabilities of emergency management services  
  - first aiders' skills and limitations  
  - safe storage and handling procedures for pressurised gases
REQUIRED SKILLS AND KNOWLEDGE

- advanced resuscitation techniques as per HLTFA404A Apply advanced resuscitation techniques
- First aid management procedures in accordance with ARC Guidelines, state/territory regulations, legislation and policies and organisation requirements for conditions identified in the Range Statement and including:
  - use of AED, oxygen, bronchodilator
  - spinal care
  - management of anaphylactic shock reaction
  - use of analgesic gases
- Incident management procedures:
  - manual handling, hazardous substances, dangerous goods or chemicals
  - basic triage for a multiple casualty incident
  - safe access to the casualty
  - awareness of confined spaces and dangerous places
  - removal of casualty to safe area, if appropriate
  - coordinate activities of other first aiders, if applicable
- First aid management procedures may also relate to emergency childbirth
- Complications and associated methods of management for conditions identified in the Range Statement
- State and territory regulatory requirements relating to currency of skill and knowledge

continued ...

Essential knowledge (contd):

- Social issues, especially in particular workplace or community context(s) in which first aid is to be applied, including:
  - importance of debriefing
  - need to be culturally aware, sensitive and respectful
  - confidentiality
  - own skills and limitations
- Awareness of stress management techniques and available support
- Safety procedures for the operation of pressurised gases

Essential skills:

It is critical that the candidate demonstrate the ability to effectively do the task outlined in elements and performance criteria of this unit, manage the task and manage contingencies in the context of the identified work role

This includes the ability to:

- Administer medication in line with State/Territory regulations, legislation and policies
REQUIRED SKILLS AND KNOWLEDGE

and any available medical/pharmaceutical instructions

- Apply advanced resuscitation techniques as per HLTFA404A Apply advanced resuscitation techniques
- Call an ambulance and/or medical assistance according to relevant circumstances and report casualty's condition
- Communicate effectively and assertively and show leadership in an incident
- Comply with OHS legislation
- Conduct an initial casualty assessment
- Demonstrate the application of first aid principles
- Demonstrate:
  - adequate infection control procedures
  - consideration of the welfare of the casualty
  - safe manual handling
  - safe storage and handling procedures for pressurised gases
- Interpret and use listed documents
- Make prompt and appropriate decisions relating to managing an incident in the workplace
- Manage specific injuries/illnesses and conditions as identified in the Range Statement for this competency unit
- Plan an appropriate first aid response in line with established first aid principles, policies and procedures, ARC Guidelines and/or State/Territory regulations, legislation and policies and industry requirements and respond appropriately to contingencies in line with own skills
- Prepare a written incident report or provide information to enable preparation of an incident report
- Provide assistance with self-medication as per subject's own medication regime and in line with State/Territory legislation, regulations and policies and any available medical/pharmaceutical instructions
- Use a range of first aid equipment as outlined in the Range Statement
- Use literacy and numeracy skills as required to read, interpret and apply guidelines and protocols

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.
EVIDENCE GUIDE

Critical aspects of assessment:
- The individual being assessed must provide evidence of specified essential knowledge as well as skills
- Competence should be demonstrated working individually and, where appropriate, as part of a first aid team
- Consistency of performance should be demonstrated over the required range of situations relevant to the workplace or community setting
- Currency of first aid knowledge and skills is to be demonstrated in line with state/territory regulations, legislation and policies, ARC and industry guidelines

Method of assessment may include:
- Skills in performing first aid procedures are to be assessed through demonstration, with questioning to confirm essential knowledge
- Skills may be assessed through simulations, using anatomical models, manikins or in a high fidelity simulation centre
- For assessment purposes, demonstration of skills in CPR procedures requires using a model of the human body (resuscitation manikin) in line with ARC Guidelines

Access and equity considerations:
- All workers in the health industry should be aware of access and equity issues in relation to their own area of work
- All workers should develop their ability to work in a culturally diverse environment
- In recognition of particular health issues facing Aboriginal and Torres Strait Islander communities, workers should be aware of cultural, historical and current issues impacting on health of Aboriginal and Torres Strait Islander people
- Assessors and trainers must take into account relevant access and equity issues, in particular relating to factors impacting on health of Aboriginal and/or Torres Strait Islander clients and communities
Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Contextualisation to address specific requirements may include:

- Focus on first aid management of specific types of injury
- First aid provision under specific constraints or circumstances (e.g., in confined spaces, in maritime work environment or in work environment involving identified risks/hazards)

First aid management must take into account:

- Workplace policies and procedures
- Industry/site specific regulations, codes etc.
- OHS requirements
- State and territory workplace health and safety requirements

A hazard is:

- A source or situation with the potential for harm in terms of human injury or ill-health, damage to property, the environment, or a combination of these

Hazards may include:

- Physical hazards
- Biological hazards
- Chemical hazards
- Hazards associated with manual handling
RANGE STATEMENT

*Risks may include:*

- Risks from worksite equipment, machinery and substances
- Risks from first aid equipment (oxygen cylinders, AED)
- Environmental risks
- Exposure to blood and other body substances
- Risk of further injury to the casualty
- Risks associated with the proximity of other workers and bystanders
- Risks from vehicles
- Fallen power lines, step and touch potential
RANGE STATEMENT

**Casualty's condition is managed for:**

- Abdominal injuries
- Airway obstruction
- Allergic reactions
- Altered and loss of consciousness
- Bleeding
- Burns - thermal, chemical, friction, electrical
- Chest pain
- Injuries: cold and crush injuries; eye and ear injuries; head, neck and spinal injuries; minor skin injuries; needle stick injuries; soft tissue injuries including sprains, strains, dislocations
- Near drowning
- Envenomation - snake, spider, insect and marine bites
- Environmental conditions such as hypothermia, hyperthermia, dehydration, heat stroke
- Fractures
- Medical conditions, including cardiac conditions, epilepsy, diabetes, asthma and other respiratory conditions
- No signs of life
- Pain relief
- Poisoning and toxic substances (including chemical contamination)
- Respiratory distress
- Shock
- Seizures
- Stroke
- Substance misuse - all drugs and alcohol, including illicit drugs

**First Aid management skills must include in accordance with ARC Guidelines, State/Territory regulations, legislation and policies and industry requirements:**

- Administration of analgesia
- CPR
- Infection control
- AED
- Identification and management of anaphylactic shock reaction in accordance with ARC Guidelines, State/Territory regulations, legislation and policies and industry requirements
- Oxygen administration
RANGE STATEMENT

First aid management must account for:

- Location and nature of the workplace
- Environmental conditions eg electricity (high or low voltage), biological risks, weather, motor vehicle accidents
- Location of emergency services personnel
- Number of casualties and potential casualties
- Use and availability of first aid equipment, resources and pharmaceuticals
- Types of dangers/risks to the casualty and any others in the vicinity of the situation
- Confined spaces, subject to industry need

Medications may include in accordance with ARC Guidelines, State/Territory regulations, legislation and policies and industry requirements:

- Oxygen
- Analgesics
- Bronchodilators
- Casualty's own medications
- Auto-injectors

Resources and equipment are used appropriate to the risk to be met and may include:

- Oxygen resuscitation/cylinders
- AED
- Thermometers
- Auto-injectors
- Back boards
- Stretchers
- Soft bag resuscitator
- First aid kit
- Casualty's medication
- Analgesic inhalers
- Analgesic gas equipment
- Resuscitation mask or barrier
- Spacer device
- Cervical collars
RANGE STATEMENT

Information to be documented may include:

- Time
- Location
- Description of injury
- First aid management
- Fluid intake/output, including fluid loss via:
  - blood
  - vomit
  - faeces
  - urine
- Administration of medication including:
  - time
  - date
  - person administering
  - dose
- Vital signs

Established first aid principles include:

- Checking the site for danger to self, the casualty and others and minimising the danger
- Checking and maintaining the casualty's airway, breathing and circulation

Unit Sector(s)

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to use computer applications employing advanced features. It involves manipulating data and accessing support resources to solve routine problems.

Application of the Unit

This unit applies to individuals who are expert users or advanced users and capable of tutoring colleagues in the use of commercial applications.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes of a unit of competency.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</td>
</tr>
</tbody>
</table>

## Elements and Performance Criteria

| 1. Manipulate data | 1.1 Employ *advanced features* of applications in the preparation and presentation of data  
1.2 Transfer data between applications, linking and embedding related data files as required  
1.3 Create and employ *objects*, macros and templates for routine activities  
1.4 Use shortcuts and features to increase personal productivity |
| 2. Access and use support resources | 2.1 Solve routine problems using support resources  
2.2 Use online help to overcome difficulties with applications  
2.3 Solve problems with manuals and training booklets  
2.4 Access and apply technical support for *system* problems, using troubleshooting results and alert messages |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - communicate with supervisors and peers
  - seek assistance and expert advice
  - use online help
- literacy skills to interpret technical documentation, equipment manuals and specifications
- planning and organisational skills to prioritise and monitor own work
- problem-solving skills to solve operational problems as they arise
- research skills to source support resources to solve routine problems
- safety awareness skills to work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- technical skills to:
  - apply technical support for system problems
  - operate software applications
  - use applications features
  - use online help.

Required knowledge

- basic knowledge of operating systems software and system tools
- vendor product directions in computer applications
- vendor applications and their features.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>

| Guidance information for assessment | Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate. |
Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.

Indigenous people and other people from a non-English speaking background may need additional support.

In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Advanced features may include: | • conditional formatting  
• cross-referencing  
• form controls  
• forms  
• formulas  
• graphics  
• hyperlinks  
• macros  
• mail merge  
• master documents  
• names  
• object linking and embedding (OLE)  
• ranges  
• sections  
• styles  
• tables  
• templates  
• validation. |
| --- | --- |
| Applications may include: | • commercial software applications and organisation-specific software:  
  • communication packages  
  • database  
  • graphic  
  • presentation functionalities  
  • spreadsheet  
  • word-processing  
  • presentation applications contained in:  
    • Claris Works  
    • Lotus Suite  
    • Microsoft Office  
    • Star Office  
    • other similar applications. |
| Objects may include: | • buttons |
- checkboxes
- drop-down lists
- option buttons
- text boxes.

**System** may include:
- application
- business
- computers
- financial system
- information system
- management system
- network
- software.

**Unit Sector(s)**
General ICT

**Custom Content Section**
Not applicable.
LGACOM401A Administer contracts

Modification History
Not applicable.

Unit Descriptor
This unit covers the administration, monitoring and transition of contracts.

Application of the Unit
This unit supports the attainment of skills and knowledge required for competent workplace performance in councils of all sizes. Knowledge of the legislation and regulations within which councils must operate is essential. The unique nature of councils, as a tier of government directed by elected members and reflecting the needs of local communities, must be appropriately reflected.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a Unit of Competency | Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the Required Skills and Knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Establish administration procedures | 1.1 Administrative processes for contracts are implemented according to council quality improvement.  
1.2 Contract requirements are confirmed with relevant contract personnel.  
1.3 Complaint system is established according to council policy and procedures.  
1.4 Consistent and accurate records of contract progress are maintained. |
| 2 Monitor contract time frame and specifications | 2.1 Regular inspections of contract services are undertaken to ensure compliance with specifications and program for completion.  
2.2 Regular planned progress meetings are held and documented between all contract personnel to ensure problems are identified and resolved early.  
2.3 Variations between the specified scope of services and the contract are identified and documented, and relevant personnel are notified without delay.  
2.4 Testing of services in progress is carried out as required by the contract and in accordance with legislation, regulations and council policy. |
| 3 Monitor costs | 3.1 Contract costs are monitored on a regular basis to ensure that the service is carried out in accordance with financial and contractual requirements.  
3.2 Payments for contract services are authorised in accordance with the conditions of contract and delegation of officer.  
3.3 Transaction costs are monitored through an established system. |
| 4 Resolve contractual disputes | 4.1 Disagreements are investigated to identify cause and validity.  
4.2 Terms of resolution are negotiated and agreed.  
4.3 Contract provisions for dispute resolution are followed.  
4.4 Legal and management advice is sought at an early stage of any dispute to ensure that the contractor has a clear understanding of the council's legal position and that the council is not exposed to undue legal risk.  
4.5 Appropriate legal advice is sought at any stage in order to clarify any technical aspects of a dispute. |
| 5 Implement contract transition | 5.1 Contract conditions and responsibilities are reviewed with relevant personnel to ensure satisfactory |
ELEMENT | PERFORMANCE CRITERIA
---|---
| completion of contract.
5.2 Contract completion is authorised in writing to confirm completed services have been undertaken according to contract objectives and specifications.
5.3 Final statement is reconciled.
5.4 Contractor performance and level of service are evaluated against agreed benchmark.
5.5 End-of-service or renewed contracts are coordinated to meet council requirements.
5.6 Quality of contract documentation is assessed.

Hidden text
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit

Required Skills

- negotiation and liaison across a range of internal and external customers
- contingency management
- contract interpretation
- project management
- conflict resolution
- client interaction
- financial and time management.

Required Knowledge

- relevant legislation, regulations, codes of practice and policies applicable to the industry and the council, including those relating to environmental/sustainable practice and OHS
- relevant systems and procedures to aid in the achievement of sustainable practice
- contract procedures
- contract law
- knowledge of the contract service
- performance standards and analysis
- complaint procedures
- costing processes.

Hidden text
Evidence Guide

EVIDENCE GUIDE

Overview of assessment requirements
A person who demonstrates competency in this unit will be able to perform the outcomes described in the Elements to the required performance level detailed in the Performance Criteria. The knowledge and skill requirements described in the Range Statement must also be demonstrated. For example, knowledge of the legislative framework and safe work practices that underpin the performance of the unit are also required to be demonstrated.

Critical aspects of evidence to be considered
Maintenance of files relating to records of meetings, payments, progress reports, file notes and discussions.
Effective communication with the contractor.
Monitoring of industry changes.
Making recommendations covering a range of contracts.
Maintenance of WorkCover, OHS and audit processes and up-to-date insurance files.
Monitoring relevant laws, by laws and regulations or best practice on environmental performance and sustainability.

Context of assessment
On the job or in a simulated work environment.

Relationship to other units (prerequisite or co-requisite units)
Prerequisite units: nil.
Co-requisite units: nil.

Method of assessment
The following assessment methods are suggested:
observation of the learner performing a range of workplace tasks over sufficient time to demonstrate handling of a range of contingencies
written and/or oral questioning to assess knowledge and understanding
completion of workplace documentation
third-party reports from experienced practitioners
completion of self-paced learning materials including personal reflection and feedback from trainer, coach or supervisor.

Evidence required for demonstration of consistent performance
Evidence will need to be gathered over time across a range of variables.

<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. **Receive tenders** | 1.1. Tenders are received in accordance with council procedures.  
1.2. Record of applications is maintained. |
| 2. **Evaluate tenders against agreed criteria** | 2.1. A comparative statement of tenders highlighting key factors is prepared.  
2.2. Bids are compared and assessed.  
2.3. The bid or shortlist of bids that meets service requirements is identified.  
2.4. Tender presentations are organised and attended to assist in the selection process, where required. |
| 3. **Prepare recommendations for council** | 3.1. Quality accreditation, previous project records, employment practices and occupational health and safety (OHS) records are verified.  
3.2. An accurate report with clear recommendations is prepared for council to enable informed decision making to occur. |
| 4. **Formalise acceptance of tender** | 4.1. A letter of acceptance is sent to successful tenderer outlining accurate details and conditions.  
4.2. Contract documentation is completed in accordance with standards and council procedures.  
4.3. Unsuccessful tenderers are informed of outcome according to council procedures.  
4.4. Quality of contract documentation is evaluated in the light of tenders received. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit

Required Skills

- report writing
- oral presentation skills and interview techniques
- applying criteria
- verifying claims
- investigating.

Required Knowledge

- relevant council policies and procedures
- quality assurance methods
- relevant Australian and industry standards
- statutory and council tender requirements
- contractual processes
- statutory council requirements
- tendering codes of practice
- evaluation methods.
- Strategies, policies and procedures on sustainable practice

# Evidence Guide

## EVIDENCE GUIDE

### Overview of assessment requirements

A person who demonstrates competency in this unit will be able to perform the outcomes described in the Elements to the required performance level detailed in the Performance Criteria. The knowledge and skill requirements described in the Range Statement must also be demonstrated. For example, knowledge of the legislative framework and safe work practices that underpin the performance of the unit are also required to be demonstrated.

### Critical aspects of evidence to be considered

- Provide an accurate evaluation report.
- Identify the financial stability of the tenderer.
- Identify the quality standards of the tenderer.
- Ensure confidentiality of the tender process.
- Adhere to sustainable practices.
- Observe relevant environmental procedures.

### Context of assessment

On the job or in a simulated work environment.

### Relationship to other units (prerequisite or co-requisite units)

- Prerequisite units: nil.
- Co-requisite units: nil.

### Method of assessment

The following assessment methods are suggested:

- Observation of the learner performing a range of workplace tasks over sufficient time to demonstrate handling of a range of contingencies.
- Written and/or oral questioning to assess knowledge and understanding.
- Completion of workplace documentation.
- Third-party reports from experienced practitioners.
- Completion of self-paced learning materials including personal reflection and feedback from trainer, coach or supervisor.

### Evidence required for demonstration of consistent performance

Evidence will need to be gathered over time across a range of variables.

### Resource implications

Access to a workplace or simulated case study that enables competency to be assessed and that provides such resources as: relevant council policy and procedure documentation.
EVIDENCE GUIDE

- relevant Australian and industry standards
- a range of tender examples.
Range Statement

RANGE STATEMENT

The Range Statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below.

Comparative statement may include:
- matrix
- data
- criteria
- compliance
- score.

Council procedures may include:
- code of conduct
- probity guidelines
- anti-corruption policies
- equal employment opportunity
- OHS
- risk management
- resource management/sustainable practice
- environmental awareness
- storage and disposal of documentation
- security of tenders.

Formalisation may include:
- contract signing procedure
- preliminary deposits.

Service requirements may include:
- life-cycle costing
- financial stability
- capacity
- sustainability
- employment and industrial relations history
- quality assurance
- OHS records.

Presentations may include:
- meetings
- site visits
- project inspections
- interviews.

</table>
| 1. Identify the extent and nature of services to be contracted | 1.1. Scope of the services is confirmed and reviewed to ensure parameters meet current requirements.  
1.2. Statutory and council requirements are identified to determine available options.  
1.3. Detailed parameters are specified to enable a complete brief to be prepared.  
1.4. The extent of the contract package is determined. |
| 2. Select appropriate method for tender | 2.1. Area to be contracted is examined.  
2.2. Contract options are identified and analysed.  
2.3. Benefits, costs and opportunities of each option are identified.  
2.4. Appropriate contract option is selected. |
| 3. Prepare tender specifications according to council and Australian standards | 3.1. Complete and detailed service specifications are prepared consistent with council policy and Australian standards and based on service profile and review.  
3.2. Legislative, environmental, sustainability practices, occupational health and safety and risk management requirements are applied.  
3.3. Quality assurance methods are applied to the preparation of service specifications.  
3.4. Service specifications are prepared in consultation with relevant staff that complement required outcomes.  
3.5. Details on methods, standards, materials, products, contractors and performance period are provided by quality service specifications, as applicable. |
| 4. Prepare evaluation criteria | 4.1. A tender review panel or team is selected from appropriate personnel.  
4.2. Criteria are established based on the specifications, product and service required.  
4.3. Criteria are written clearly to enable bids to be compared.  
4.4. Criteria are ranked against council procedures. |
| 5. Prepare tender document | 5.1. Tender documents are prepared clearly and concisely.  
5.2. Tender documents are prepared that enable competitive pricing of products.  
5.3. Tender documents are designed to enable valid comparisons between tenders received. |
| 6. Invite tenders | 6.1. Invitations are prepared based on the type of tendering method used. |
ELEMENT | PERFORMANCE CRITERIA
---|---
6.2. Source list is prepared according to council procedures.
6.3. Advertisement is prepared and placed according to the tender method.

Evidence Guide

EVIDENCE GUIDE

Overview of assessment requirements
A person who demonstrates competency in this unit will be able to perform the outcomes described in the Elements to the required performance level detailed in the Performance Criteria. The knowledge and skill requirements described in the Range Statement must also be demonstrated. For example, knowledge of the legislative framework and safe work practices that underpin the performance of the unit are also required to be demonstrated.

Critical aspects of evidence to be considered
The demonstrated ability to:

- plan a community consultation to enable and encourage relevant groups or individuals to be involved
- facilitate a community consultation that produces valid and useful information and ensures that the council's image and reputation are maintained or enhanced
- prepare an accurate report on the outcomes of the community consultation that enables informed decision making to occur.

Context of assessment
Competency is demonstrated by performance of all stated criteria, with particular attention to the critical aspects and the knowledge and skills elaborated in the Evidence Guide, and within the scope of the Range Statement.

Assessment must take account of the endorsed Assessment Guidelines in the Local Government Training Package.

Assessment of the performance requirements in this unit should be undertaken in an actual workplace or simulated environment.

Assessment should reinforce the integration of the key competencies for the particular AQF level. Refer to the key competency levels at the end of this unit.

Relationship to other units (prerequisite or co-requisite units)
To enable holistic assessment this unit may be assessed with other units that form part of the job role, in particular:

LGACOMP024A Develop community relations.

Method of assessment
The following assessment methods are suggested:

- observation of the learner performing a range of workplace tasks over sufficient time to demonstrate handling of a range of contingencies
- written and/or oral questioning to assess knowledge and understanding
### EVIDENCE GUIDE

- completion of workplace documentation
- third-party reports from experienced practitioners
- completion of self-paced learning materials including personal reflection and feedback from trainer, coach or supervisor.

**Evidence required for demonstration of consistent performance**

Evidence should be collected over a set period of time that is sufficient to include dealings with an appropriate range and variety of situations.

**Resource implications**

The learner and trainer should have access to appropriate documentation and resources normally used in the workplace.
Range Statement

Evidence Guide

EVIDENCE GUIDE

Overview of assessment requirements

A person who demonstrates competency in this unit will be able to perform the outcomes described in the Elements to the required performance level detailed in the Performance Criteria. The knowledge and skill requirements described in the Range Statement must also be demonstrated. For example, knowledge of the legislative framework and safe work practices that underpin the performance of the unit must be demonstrated.

Critical aspects of evidence to be considered

Assets register is used effectively.
Council budget and planning estimate processes are adhered to.
Information is presented clearly and concisely along with recommendations.
Effective communication strategies for use with council personnel and council customers are developed and implemented.

Context of assessment

May be assessed through:
- on the job
- simulated workplace environment
- written assignment
- short-answer test
- oral questioning
- observation
- or any combination of the above.

Relationship to other units (prerequisite or co-requisite units)

To enable holistic assessment this unit may be assessed with other units that form part of the job role.

Method of assessment

The following assessment methods are suggested:
- observation of the learner performing a range of workplace tasks over sufficient time to demonstrate handling of a range of contingencies
- written and/or oral questioning to assess knowledge and understanding
- completion of workplace documentation
- third-party reports from experienced practitioners
- completion of self-paced learning materials including personal reflection and feedback from trainer, coach or supervisor.
EVIDENCE GUIDE

Evidence required for demonstration of consistent performance

Evidence will need to be gathered over time across a range of variables.

Resource implications

In accordance with a range of variable requirements.

Range Statement

RANGE STATEMENT

The Range Statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording in the Performance Criteria is detailed below.

Source of funding may include:

- commonwealth, state and local government
- other public tenders
- council loans
- infrastructure bonds.

Assets may include:

- as determined by the council assets register.

Customers may include:

- residents
- rate payers
- businesses
- elected members
- other personnel.

Council procedures may include:

- assets management system
- customer requests
- work plans
- budget and planning estimates.

Unit Descriptor
Unit Descriptor This unit covers preparing a works project plan that is conveyed to relevant stakeholders.

Application of the Unit
Application of the Unit This unit supports the attainment of skills and knowledge required for competent workplace performance in councils of all sizes. Knowledge of the legislation and regulations within which councils must operate is essential. The unique nature of councils, as a tier of government directed by elected members and reflecting the needs of local communities, must be appropriately reflected.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the Required Skills and Knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
**Elements and Performance Criteria**

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. **Prepare a plan to undertake works** | 1.1. Plans for works tasks are developed within allocated budgets, council policy, relevant management plans and in compliance with relevant structural design standards.  
1.2. Plans are communicated to, and understood by, persons responsible for carrying out the works.  
1.3. Accurate quantities of resources and materials are assessed to meet the project needs.  
1.4. Areas for amenities and/or storage of tools, equipment and materials are identified.  
1.5. Works are planned within occupational health and safety requirements.  
1.6. Liaison with relevant agencies and authorities is undertaken to identify the location of potential hazards. |
| 2. **Assess current conditions and traffic volume** | 2.1. Relevant authorities and persons affected by the work are informed of traffic control and other necessary measures.  
2.2. Traffic control devices and signals are selected in accordance with regulations and standard practice.  
2.3. Appropriate traffic control equipment is selected according to the conditions that apply. |
| 3. **Inform the general public and relevant authorities** | 3.1. Instructions and requests to the public and authorities are transmitted concisely and in accordance with council’s operating procedures.  
3.2. Public enquiries are responded to in accordance with council procedures.  
3.3. Information relating to incidents or accidents is reported and recorded clearly and accurately in accordance with council and legal requirements. |
| 4. **Procure and confirm required materials and equipment** | 4.1. Availability of specified resources and materials or alternatives is confirmed.  
4.2. Resources and materials are procured in accordance with council policies and procedures. |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit

Required Skills

- organisational capability across a range of physical and human resources
- communicating with public, other authorities and council staff
- estimating resources and capacity
- calculating quantities of resources and materials.

Required Knowledge

- materials technology
- construction technology
- works methods
- state and local government standards
- relevant environmental legislation
- climatic conditions
- supply networks and council procurement policies
- road and traffic safety regulations.

Hidden text
## Evidence Guide

### EVIDENCE GUIDE

#### Overview of assessment requirements

A person who demonstrates competency in this unit will be able to perform the outcomes described in the Elements to the required performance level detailed in the Performance Criteria. The knowledge and skill requirements described in the Range Statement must also be demonstrated. For example, knowledge of the legislative framework and safe work practices that underpin the performance of the unit must be demonstrated.

#### Critical aspects of evidence to be considered

- Works project information is relayed to relevant staff.
- Liaison with public and relevant authorities is undertaken.
- Safety of work site is ensured.

#### Context of assessment

May be assessed through:

- on the job
- simulated workplace environment
- written assignment
- short-answer test
- oral questioning
- observation
- or any combination of the above.

#### Relationship to other units (prerequisite or co-requisite units)

To enable holistic assessment this unit may be assessed with other units that form part of the job role.

#### Method of assessment

The following assessment methods are suggested:

- observation of the learner performing a range of workplace tasks over sufficient time to demonstrate handling of a range of contingencies
- written and/or oral questioning to assess knowledge and understanding
- completion of workplace documentation
- third-party reports from experienced practitioners
- completion of self-paced learning materials including personal reflection and feedback from trainer, coach or supervisor.

#### Evidence required for demonstration of consistent performance

Evidence will need to be gathered over time across a range of variables.
EVIDENCE GUIDE

Resource implications  In accordance with a range of variable requirements.
## Range Statement

### RANGE STATEMENT

The Range Statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording in the Performance Criteria is detailed below.

| Council programs may include:          | • council works programs  
|                                       | • departmental works programs  
|                                       | • depot programs  
|                                       | • maintenance programs  
|                                       | • works patrols.  
| Council procedures may include:        | • communicating to the public on traffic disruption  
|                                       | • planning  
|                                       | • seeking permission or approval from other agencies  
|                                       | • procuring materials and equipment.  
| Specialists may include:               | • state road and rail authorities  
|                                       | • civil and traffic engineers  
|                                       | • consultants.  
| Documentation may include:             | • analysis sheets  
|                                       | • time sheets  
|                                       | • diary entries  
|                                       | • work sheets  
|                                       | • meeting notes  
|                                       | • cost analysis  
|                                       | • planning specifications  
|                                       | • drawing plans.  
| Authorities may include:               | • police  
|                                       | • fire  
|                                       | • emergency.  
| Traffic may include:                   | • vehicular  
|                                       | • aircraft  
|                                       | • locomotive  
|                                       | • pedestrian  
|                                       | • livestock.  
| Relevant stakeholders may include:     | • utilities  
|                                       | • road traffic authorities  
|                                       | • residents  
|                                       | • businesses  
|                                       | • community groups  
|                                       | • community services  
|                                       | • environmental protection agencies.

<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Manage job for civil construction | 1.1. Job is planned in accordance with drawings and specifications to enable completion on budget and within allocated time.  
1.2. Operations identified are consistent with the job plan, work activities are integrated and priorities are established consistent with enterprise policies. |
| 2. Select appropriate plant and equipment | 2.1. Plant cycles of operation to undertake specific tasks are calculated.  
2.2. Plant is selected in relation to its cycle of operation in a primary, secondary or static role.  
2.3. Selection of plant and equipment is consistent with work plans, schedules and requirements of the task.  
2.4. Availability of existing internal resources is identified.  
2.5. Type and availability of external resources are assessed against the demands of the project. |
| 3. Supervise and organise operation of plant and equipment | 3.1. Selected plant and equipment are monitored on a regular basis to ensure maximum output is achieved.  
3.2. Regular planned meetings are held between plant supervisors and works personnel to ensure plant operations are carried out with maximum efficiency.  
3.3. Plant and equipment are organised to meet scheduled requirements.  
3.4. Testing of works in progress is carried out to ensure selected plant and equipment are achieving specified standards in an efficient manner.  
3.5. Consistent and accurate records of plant and equipment operation and use are recorded and maintained.  
3.6. Progressive checks are conducted to ensure both routine and periodic plant and equipment maintenance is being carried out. |
| 4. Maintain records | 4.1. Records are kept in accordance with council requirements.  
4.2. Details are recorded clearly, accurately and legibly.  
4.3. Records are secured, made accessible and kept up to date. |
Required Skills and Knowledge

This describes the essential skills and knowledge and their level, required for this unit

**Required Skills**

- plant and equipment
- operating procedures
- prioritising and scheduling
- organising
- supervising
- estimating
- record keeping.

**Required Knowledge**

- plant and equipment functions
- manufacturers' specifications
- works management
- works methods relating to plant operation
- records maintenance.

## EVIDENCE GUIDE

### Overview of assessment requirements

A person who demonstrates competency in this unit will be able to perform the outcomes described in the Elements to the required performance level detailed in the Performance Criteria. The knowledge and skill requirements described in the Range Statement must also be demonstrated. For example, knowledge of the legislative framework and safe work practices that underpin the performance of the unit must be demonstrated.

### Critical aspects of evidence to be considered

- Knowledge of operations and functions of plant and equipment used in civil construction and maintenance is demonstrated.
- Safety at work site and plant operation is achieved.
- Relevant council policies and procedures in the operation and maintenance of plant and equipment are adhered to.

### Context of assessment

May be assessed through:

- on the job
- simulated workplace environment
- written assignment
- short-answer test
- oral questioning
- observation
- or any combination of the above.

### Relationship to other units (prerequisite or co-requisite units)

To enable holistic assessment this unit may be assessed with other units that form part of the job role.

### Method of assessment

The following assessment methods are suggested:

- observation of the learner performing a range of workplace tasks over sufficient time to demonstrate handling of a range of contingencies
- written and/or oral questioning to assess knowledge and understanding
- completion of workplace documentation
- third-party reports from experienced practitioners
- completion of self-paced learning materials including personal reflection and feedback from trainer, coach or supervisor.

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Establish design criteria | 1.1. Project objectives are defined so that the preliminary design can address required outcomes.  
1.2. Regulations and restrictions on design are identified to ensure design meets relevant standards and codes.  
1.3. The physical dimensions of the project are specified to enable the design to proceed.  
1.4. An appropriate level of design detail is established to enable a preliminary design to be prepared. |
| 2. Prepare alternative concepts | 2.1. Similar projects are examined to build on existing knowledge and improve efficiency.  
2.2. Feasible concept layouts and supporting statements are prepared that satisfy design objectives within design parameters.  
2.3. Alternative concepts are prepared with supporting statements.  
2.4. Indicative cost estimates are prepared. |
| 3. Conduct a safety design audit | 3.1. Agents or authorities relevant to the design are identified.  
3.2. A safety design audit is conducted.  
3.3. Safety design audit feedback is incorporated into the preliminary design. |
| 4. Obtain project approvals | 4.1. Relevant utilities that are to be affected, or whose assistance is required, are notified.  
4.2. Necessary approvals and permits from relevant authorities are obtained. |
| 5. Finalise public consultation and prepare report to council | 5.1. An accurate preliminary design report is prepared.  
5.2. Consultation opportunities are provided for interested parties to view plan.  
5.3. Public feedback is reported in accordance with statutory and legislative requirements.  
5.4. Modifications are made to incorporate amendments, and design criteria are adjusted accordingly.  
5.5. Final concept plan is submitted to council. |

- short-answer test
- oral questioning
- observation
- or any combination of the above.

Relationship to other units (prerequisite or co-requisite units)
To enable holistic assessment this unit may be assessed with other units that form part of the job role.

Method of assessment
The following assessment methods are suggested:
- observation of the learner performing a range of workplace tasks over sufficient time to demonstrate handling of a range of contingencies
- written and/or oral questioning to assess knowledge and understanding
- completion of workplace documentation
- third-party reports from experienced practitioners
- completion of self-paced learning materials including personal reflection and feedback from trainer, coach or supervisor.

Evidence required for demonstration of consistent performance
Evidence will need to be gathered over time across a range of variables.
EVIDENCE GUIDE

Resource implications  In accordance with a range of variable requirements.
Range Statement

RANGE STATEMENT

The Range Statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording in the Performance Criteria is detailed below.

| Requirements may include: | • budget  
|                         | • project scope  
|                         | • facilities  
|                         | • regulations  
|                         | • user group needs  
|                         | • life cycle costing  
|                         | • environment management. |

| Surveys may include: | • traffic counts  
|                     | • topographical survey  
|                     | • features survey  
|                     | • historical review  
|                     | • title boundaries  
|                     | • local knowledge  
|                     | • levels survey  
|                     | • cross-sectional  
|                     | • people opinion survey  
|                     | • detailing and locating services such as gas, water, electricity and telecommunications. |

| Drafting standards may include: | • Australian standards code for building and engineering AS1100 - technical drawing  
|                                 | • council requirements  
|                                 | • council policies and standards. |

| Stakeholders may include: | • community groups  
|                           | • related government bodies and authorities  
|                           | • internal council sections. |

| Relevant authorities may include: | • roads and traffic authorities  
|                                  | • gas  
|                                  | • electricity  
|                                  | • other utilities. |

| Affected parties may include: | • business  
|                             | • community groups  
|                             | • residents. |

Unit Descriptor

| Unit descriptor | This unit covers applying in situ design skills by personnel who are then responsible for the manufacture of the design outcome either individually or as part of a team. |

Application of the Unit

| Application of the unit | This unit includes the determination of requirements such as location, assembly or other parts of the manufacturing or engineering process and where the designer must consider the impact of the design on other equipment, process or personnel, for example safety aspects of the design. Design tasks undertaken include the application of design concepts to, for example, the fabrication and modification of structures, plant and equipment, and design of tooling and gauges, production control systems, fluid power layouts, electrical circuits etc. The unit applies to the fields of mechanical, production, electrical/electronic, fabrication, and fluid power. |

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Determine design requirements | 1.1. Design requirement is established from job sheets, instructions or in consultation with appropriate people.  
1.2. Design concepts are established and may include consideration of process, material, quantity, cost and outcome.  
1.3. Where appropriate, codes, regulations and technical documentation are consulted to establish design limitations in accordance with standard operating procedures.  
1.4. Sources of expert assistance are identified and used as required. |
| 2. Create design | 2.1. Design meets end use requirement.  
2.2. Design meets all legislative and regulatory requirements.  
2.3. Design concept is verified in accordance with standard operating procedures.  
2.4. Design outcome is produced as per job requirements and may include sketch, drawing, prototype, document, model or finished product. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- obtaining all relevant drawings, job sheets, instructions and specifications
- consulting, where appropriate, relevant personnel as to the design requirements
- inspecting, where appropriate, the object, plant or equipment to which engineering design concepts are to be applied
- determining, where appropriate, design limitations imposed by relevant codes, standards and regulations
- where appropriate, seeking assistance from relevant sources
- verifying the design concept.
## REQUIRED SKILLS AND KNOWLEDGE

- presenting the design object in a form appropriate to the job requirements
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- checking and clarifying task related information
- planning and sequencing operations
- checking for conformance to specifications
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

### Required knowledge

Look for evidence that confirms knowledge of:

- design requirements
- functional requirements of the design
- the material(s) appropriate to the environment in which the object(s) to be designed is to operate
- processes to be used in the manufacture of the object(s)
- where appropriate, the costs associated with the manufacture of the object(s)
- reasons for selecting the chosen design concept
- all relevant codes, standards and regulations applying to the object to be designed
- the impact of the applicable codes, standards and regulations on the design requirements of the object
- sources of expert assistance in the design process
- the end use requirements of the design
- checks to ensure the design complies with the relevant codes, standards, legislative and regulatory requirements
- the procedures for verifying design concepts
- the means by which the design concept is to be presented
- safe work practices and procedures

### Overview of assessment

A person who demonstrates competency in this unit must be able to apply basic engineering design concepts. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

### Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with applying basic engineering design concepts or other units requiring the exercise of the skills and knowledge covered by this unit.

### Method of assessment

Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor’s reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

| 1. Identify drawing requirements | 1.1. All relevant job requirements and design specifications are obtained in accordance with workplace procedures.  
1.2. Drawing requirements and specifications are identified and interpreted. |
| 2. Prepare assembly, layout and general drawings in accordance with instructions | 2.1. Drawings are prepared in plane orthogonal, isometric projection or equivalent.  
2.2. Problems are resolved in consultation with a supervisor. |
| 3. Draw sections through simple engineering components as required for clarity | 3.1. Sections are drawn through an engineering component incorporating correct use of cutting plane(s) symbols and conventions. |
| 4. Select physical dimensions from manufacturer handbooks | 4.1. Where required, components and/or materials are selected from supplier/manufacturer catalogues using predetermined design specifications. |
| 5. Prepare engineering parts list | 5.1. An engineering parts list is produced in accordance with workplace procedures. |
| 6. Issue or file completed drawing/parts list | 6.1. Approved drawings and/or parts lists are stored, catalogued and issued in accordance with standard operating procedures. |

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

Look for evidence that confirms skills in:
- correctly using and maintaining equipment including CAD
- manual drafting, filing and printing
- reading and interpreting specifications
- communicating
### REQUIRED SKILLS AND KNOWLEDGE

- visualising components
- preparing a drawing in plane orthogonal, isometric projection or equivalent

### Required knowledge

Look for evidence that confirms knowledge of:

- drafting media including cartridge paper, tracing paper, drafting film, plan printing paper
- layout conventions
- effective use of blank space, location of notes and symbols
- sectioning
- draw sections through an engineering component incorporating correct use of cutting plane(s) symbols and conventions.
- overview of graphical techniques
- assembly drawings, explosion drawings
- schematics/line drawings, graphs, pictorials

Required Skills and Knowledge

REQUARED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:
- drawing
- documenting
- applying principles of geometric tolerances
- identifying functional surfaces and datums on assembly drawings
- producing detail drawings of machine components and dimension from datums

Required knowledge
### REQUIRED SKILLS AND KNOWLEDGE

Look for evidence that confirms knowledge of:

- projection
- auxiliary views, special attention
- detail drawing methods
- standard engineering drawing symbols, references and terminology
- projection lines
- arrangements
- general tolerancing
- limits and fits
- shaft and hole basis
- extremes of fit
- surface texture
- selection of standard roughness values for given processes
- application of surface finish symbols to drawings
- selection and application of equivalent surface roughness numbers
- geometric tolerancing
- simple geometry tolerancing (no datum references, flatness, roundness etc.)
- geometry tolerance with datum reference (e.g. parallel squareness)

Unit Descriptor

| Unit descriptor | This unit covers using a CAD program to produce and plot basic three dimensional view drawings. |

Application of the Unit

| Application of the unit | This unit applies to the production of three dimensional models using computer aided design and drawing software and associated equipment. This will include the use of region and solid modelling techniques, section views, and pre-drawn library files. Work also includes extraction of properties and application of basic rendering techniques. All work is conducted under supervision. |

<tr>
<td>1. Set up a three dimensional environment</td>
<td>1.1. Set up a three dimensional environment on the screen to allow multiple viewing.</td>
</tr>
</tbody>
</table>
| 2. Create three dimensional views | 2.1. Three dimensional views are created on the screen by manipulation of drawing planes and insertion of three dimensional geometric shapes.  
2.2. Any plane of the three dimensional view is drawn on.  
2.3. Editing functions are used to modify three dimensional geometric shapes in creating three dimensional views. |
| 3. Display three dimensional views | 3.1. Wire line, surface and solid face displays are produced in isometric, perspective and orthographic projections. |
| 4. Extract mass and area properties of a 3D model | 4.1. The mass and surface area of a given solid model made from a nominated material is extracted. |
| 5. Apply basic rendering techniques to a 3D model | 5.1. A solid model is rendered to a specified set of criteria. |
| 6. Save completed drawing file in various formats | 6.1. File is saved in an appropriate format to enable retrieval and use in a CAD system.  
6.2. File is saved in other formats to enable retrieval in other software applications. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:
- reading and interpreting engineering specifications
- organising information
- using computer and peripherals
### REQUIRED SKILLS AND KNOWLEDGE

- using CAD program
- saving 3D modes in various file formats
- preparing drawings in plane orthogonal, isometric projection or equivalent

### Required knowledge

Look for evidence that confirms knowledge of:

- region modelling techniques.
- solid modelling techniques
- development of sectioned models
- use of cutting plane
- use of cross hatching
- use of pre-drawn library files and primitives to produce a 3D model
- use of third level software to produce 3D models
- how to extract mass and area properties
- how to extract area properties from region models
- application of basic rendering techniques to a 3D model
Evidence Guide

<table>
<thead>
<tr>
<th>EVIDENCE GUIDE</th>
</tr>
</thead>
<tbody>
<tr>
<td>The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>A person who demonstrates competency in this unit must be able to use CAD to create and display 3D models. Competency in this unit cannot be claimed until all prerequisites have been satisfied.</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</th>
</tr>
</thead>
</table>

| Context of and specific resources for assessment | This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. 

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with using CAD to create and display 3D models or other units requiring the exercise of the skills and knowledge covered by this unit. |
|--------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

<table>
<thead>
<tr>
<th>Method of assessment</th>
<th>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</th>
</tr>

MSAPMPER200C Work in accordance with an issued permit

Modification History

Not applicable.

Unit Descriptor

<table>
<thead>
<tr>
<th>Unit Descriptor</th>
</tr>
</thead>
</table>
| This unit aims to ensure that people working under a permit to work understand the system, know the limitations of the permit under which they are working and comply with all the requirements of the permit. The people to whom this unit applies may be called 'permit recipients' or 'permit holders' by some organisations. Some organisations call permits 'clearances'.

This unit covers the basic competency of working under a permit. Where entry to a confined space is required, then MSAPMPER205B Enter confined space is also required. The safety observer (standby person) competencies are covered by MSAPMPER202A Observe permit work. Atmospheric testing is covered by MSAPMOHS217A Gas test atmospheres. The issuing of permits is covered by MSAPMPER300B Issue work permits. |
Application of the Unit

<table>
<thead>
<tr>
<th>Application of the unit</th>
</tr>
</thead>
<tbody>
<tr>
<td>This competency applies to persons who are required to conduct work activities under the authority of an issued permit to work and within the context and requirements of that permit. This typically applies to all work done by maintenance staff and contractors, and also to any other non-process work performed on the plant. It includes:</td>
</tr>
<tr>
<td>• identifying the range and scope of work covered by the permit</td>
</tr>
<tr>
<td>• checking that the right type of permit has been issued for the type of work</td>
</tr>
<tr>
<td>• adequately preparing to undertake the work, including obtaining all necessary safety equipment and PPE</td>
</tr>
<tr>
<td>• undertaking the work strictly in accordance with the provisions of the permit</td>
</tr>
<tr>
<td>• maintaining correct housekeeping with permit activities</td>
</tr>
<tr>
<td>• completing work in accordance with the permit requirements</td>
</tr>
<tr>
<td>• querying or raising matters about the permit if the scope of work/nature of the tools to be used varies from that covered by the permit</td>
</tr>
<tr>
<td>• handing back the permit in accordance with procedures and obtaining appropriate sign off as required.</td>

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Apply for permit(s) | 1.1. Confirm the scope and location of the work to be done  
1.2. Identify the need for a work permit(s) for the work to be carried out.  
1.3. Identify the type of work permit required.  
1.4. Collate information required for the issue of the permit  
1.5. Apply for the permit following the organisations requirements |
| 2. Identify the scope of the permit. | 2.1. Check that work to be done complies with the permit type.  
2.2. Check that the scope and location of work comply with the permit issued  
2.3. Check that the hazard controls specified on the permit are consistent with the hazard analysis  
2.4. Check that preparations specified on the permit have been completed  
2.5. Sign onto/receive the permit. |
| 3. Prepare for permitted work. | 3.1. Maintain safe working conditions and environment by using available isolation procedures, safety equipment and emergency procedures.  
3.2. Monitor plant conditions and hazards to ensure work under the permit remains safe.  
3.3. Ensure that appropriate safety equipment and clothing are selected and worn as required by the permit and relevant procedures.  
3.4. Inspect work area to ensure safety and compliance with permit requirements and procedures. |
| 4. Work in accordance with an issued permit. | 4.1. Use required hazard reduction/control measures.  
4.2. Comply with requirements of the permit including safety observer if required.  
4.3. Display issued permit on work site as required  
4.4. Ensure compliance with scope, location and timeframe specified in the permit or seek re-authorisation as required  
4.5. Suspend job and make work site safe before leaving job.  
4.6. Formally seek and receive authorised extensions to the permit when required.  
4.7. Give end of day status report to permit issuer. |
| 5. Complete permit(s) to work. | 5.1. Obtain new permit(s) or have existing permit(s) revalidated before work is recommenced.  
5.2. Check the work conducted against the issued permit(s) to ensure that all the nominated work requirements have been |
<table>
<thead>

</thead>
<tbody>
<tr>
<td></td>
<td>satisfied.</td>
</tr>
<tr>
<td>5.3.</td>
<td>Monitor general housekeeping to ensure that the site has been left in a clean and safe condition.</td>
</tr>
<tr>
<td>5.4.</td>
<td>Ensure personal lockouts/tag outs/isolations are removed in accordance with procedures</td>
</tr>
<tr>
<td>5.5.</td>
<td>Communicate status of the work conducted and the results of the permit to relevant personnel.</td>
</tr>
<tr>
<td>5.6.</td>
<td>Complete documentation as required and have permit signed off when job is completed.</td>
</tr>
</tbody>
</table>
## Required Skills and Knowledge

<table>
<thead>
<tr>
<th>REQUIRED SKILLS AND KNOWLEDGE</th>
</tr>
</thead>
<tbody>
<tr>
<td>This describes the essential skills and knowledge and their level, required for this unit.</td>
</tr>
</tbody>
</table>

### Required skills:

Competence includes the ability to:

- access and interpret information relevant to specific tasks (eg labels, MSDSs hazchem signs)
- identify changes to conditions which may lead to the permit being revoked before the job is completed
- describe and/or explain hazards associated with tasks covered by the permit, types of tests required for the issue of work permits - the types of tests to include, atmospheric/oxygen/breathability, flammability/explosivity, toxicity/TWA, temperature, humidity
- the impact of the regulatory framework and organisation procedures under which the permit operates upon the particular job(s) requiring the permit.

Language, literacy and numeracy requirements

- This unit may require the ability to read and correctly interpret complex P&ID's; speak clearly and unambiguously in English; and to explain, describe and verify sometimes complex needs and issues.
- Writing is required to the level of completing workplace forms.
- Numeracy is required to the level of being able to correctly differentiate between high and low pressures and temperatures, voltages or masses.

### Required knowledge:

Knowledge and understanding of the relevant OHS and environmental requirements, in particular those relating to various situations requiring work permits, with an ability to implement the requirements in a manner that is relevant to the job. Knowledge of the organisation's standard procedures and work instructions and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and in a manner relevant to the job.

Sufficient knowledge of all types of permits is required to ensure work is not carried out without the correct permit. This includes recognizing hot work and confined spaces.

Knowledge of regulatory frameworks should include:

- licence requirements for the job,
- company policy and procedures
- permit control systems
### Evidence Guide

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Assessment of this unit should demonstrate competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Simulation may be required to allow for assessment of parts of this unit. Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.</th>
</tr>
</thead>
</table>
| Critical aspects for assessment and evidence required to demonstrate competency in this unit | Competence must be demonstrated in the ability to distinguish between situations requiring the types of permit and to list the major requirements of each type of permit. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster. It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:  
  - provide reasons for a permit system  
  - recognise the importance of different work permits  
  - comply with permit conditions including the wearing of appropriate personal protective equipment (PPE)  
  - take appropriate action to resolve faults or report faults to appropriate personnel  
  - explain and implement incident response procedures. Consistent performance should be demonstrated, e.g. look to see that:  
  - communications are timely and effective  
  - deviations from permit conditions are recognised, reported, corrected and re-authorization arranged  
  - actions specified in the permit/standard procedures are carried out  
  - all safety procedures are followed. |
| Context of and specific resources | A holistic approach should be taken to the assessment. |
EVIDENCE GUIDE

for assessment

Assessment will occur over a range of situations which may include disruptions to normal, smooth operation. Competence in this unit may be assessed:

- on a plant/in the work place/a work situation
- by using a suitable simulation based on the actual plant and including walk throughs of the relevant competency components and/or a range of case studies/scenarios and role plays
- by questioning and using 'what if' scenarios both on the plant (during demonstration of normal operations and walk throughs of abnormal operations) and off the plant
- through a combination of these techniques.

These aspects may be best assessed using a range of simulations/scenarios/case studies and 'what ifs' as the stimulus with a walk through forming part of the response. These assessment activities should cover a range of problems, including new or unusual situations which may have been generated from the past incident history of the plant, incidents on similar plants around the world, hazard analysis activities and similar sources.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed. In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units.

While oral assessments may be appropriate there needs to be a written record for audit purposes.

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions which will be used to probe the reasoning behind the observable actions will also be required to the extent that they form part of the assessment method.
**EVIDENCE GUIDE**

<table>
<thead>
<tr>
<th>Method of assessment</th>
<th>Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Guidance information for assessment</td>
<td>Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.</td>
</tr>
<tr>
<td></td>
<td>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed and the safety standard required.</td>
</tr>
</tbody>

# Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.

<table>
<thead>
<tr>
<th>Codes of practice/standards</th>
<th>Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version/version specified by the local regulatory authority must be used.</th>
</tr>
</thead>
</table>
| Context | This unit typically applies to all work done by maintenance staff and contractors, and also to any other non-process work performed on the plant. All work is to be conducted using the appropriate personal protective equipment.  
The types of work permits may include:  
- cold work/general permit to work  
- excavation  
- hot work  
- vehicle entry  
- minor repairs  
- working at heights  
- other special permits.  
Note that entry to a confined space is covered by MSAPMPER205C Enter confined space. The Australian Standard (AS2865) definition given for confined space entry is used in this Training Package.  
All operations are performed in accordance with standard operating procedures (SOPs).  
Checks to ensure a workplace is safe may include:  
- process isolations complete  
- mechanical and electrical isolations in place  
- atmospheric testing complete and atmosphere safe. If it is not safe and cannot be made safe, then appropriate measures are implemented as per SOPs.  
- relevant personnel informed of work and agree that it is safe and appropriate to proceed. |

| Procedures | All operations are performed in accordance with procedures. Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards. These may include: |
### RANGE STATEMENT

- legislation/codes
- OHS legislation, codes of practice and guidance material
- EPA
- National and Australian standards
- licence and certification requirements
- internal permit control system.
- process isolations complete
- mechanical and electrical isolations in place
- atmospheric testing complete and atmosphere safe. If it is not safe and cannot be made safe, then appropriate measures are implemented as per SOPs.
- relevant personnel informed of work and agree that it is safe and appropriate to proceed.

</tr>
<tr>
<td>having it folded in overall pockets in a manner which allows it to be readily shown on request.</td>
<td></td>
</tr>
</tbody>
</table>

### Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical problems may include:

- provision of the wrong permit
- incorrect information being supplied with the permit
- errors being made in the understanding of permit data
- failure to correctly correspond to the requirements of the permit
- failure to seek clarification when anomalies occur.

### Variables

Key variables to be monitored include:

- sites under which permit activities must be applied
- type of permit to be executed
- types of tools and equipment to be employed
- size of work team
- scope and urgency of work.

### Health, safety and environment (HSE)

All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Unit Descriptor

| Unit Descriptor | This competency unit addresses the need for personnel who issue work permits to understand the permit system, know the limitations of each permit and make decisions regarding the need for and correct use of each permit. This competency unit includes the issue of any and all permits. It applies to the issuing of permits covering a single plant or plant area such as might be an operators scope of responsibility. |

Application of the Unit

| Application of the unit | This competency applies to personnel who are required to issues appropriate permits to work to persons conducting a variety of activities in workplace environments in which hazards exist or specific procedures need to followed and monitored to protect the safety of personnel and the integrity of plant or process. It includes:  
  - reviewing the conditions under which the work will be undertaken  
  - examining the site to determining the hazards and safety requirements applicable to the site  
  - ensuring the appropriate permit(s) is (are) selected depending on the organisations procedures  
  - determining the appropriate conditions for the permit(s)  
  - raising, authorising and issuing the necessary permit(s)  
  - monitoring compliance with the permit conditions  
  - reporting any indiscretions or violations of permit conditions and where necessary revoking permits  
  - managing the permit process especially in shift hand overs or extensions to work activities  
  - withdrawing and signing off work permits on completion of the work and verification that the requirements of the permit have been complied with. |

Elements and Performance Criteria Pre-Content
Not applicable.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1. Identify need for work permit** | 1.1. Understand work permit system.  
1.2. Identify and confirm with appropriate personnel the need for work permit.  
1.3. Identify the correct permit for each situation. |
| **2. Prepare work site for authorised work** | 2.1. Undertake an inspection of the work site.  
2.2. Identify OHS and environmental requirements.  
2.3. Conduct hazard identification and risk assessment.  
2.4. Ensure work site is prepared in accordance specified work permit conditions.  
2.5. Check permit conditions and report to appropriate personnel.  
2.6. Identify need for and carry out testing in accordance with standard operating procedures. |
| **3. Raise and issue work permits** | 3.1. Ensure conditions are documented on permit.  
3.2. Ensure appropriate testing carried out and results documented on permit.  
3.3. Determine an appropriate validity period  
3.4. Check that permit conditions are met (ie validate permit).  
3.5. Complete and authorise permit.  
3.6. Ensure recipient(s) is advised of and agrees to abide by the requirements of the permit(s).  
3.7. Ensure recipient(s) signs permit(s). |
4.2. Monitor conditions and work progress and respond appropriately to changing conditions and circumstances.  
4.3. Ensure permit currency and revalidate as required.  
4.4. Ensure permit is displayed in prominent position.  
4.5. Identify and, act on incidences of non-compliance and report promptly to relevant personnel.  
4.6. Report any issues which arise with regard to work under the permit in accordance with procedures. |
| **5. Receive end of day report** | 5.1. Receive end of day report from permit recipients  
5.2. Confirm job progress and status.  
5.3. Revalidate/arrange for revalidation of permit as required  
5.4. Confirm work area has been left safe  
5.5. Handover ongoing permits and status of suspended permits to oncoming shift. |
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 6. Close work permit | 6.1. Inspect job status.  
6.2. Check that work undertaken satisfies permit conditions.  
6.3. Ensure that work site is ready for a safe return to working conditions.  
6.4. Check required returns to work status have been completed.  
6.5. Sign off documentation and close permit in accordance with standard operating procedures.  
6.6. Communicate work site and process status to relevant personnel. |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills:

Competence includes the ability to select, apply and/or explain:

- appropriate PPE
- Australian Standard AS2865 -Confined Space
- Australian Standard AS1674.1 Safety in welding and allied processes (covers all hotn work)
- types of permits and what they cover
- hazards associated with each type of permit
- permit control system
- hazards of the area for which permit is being issued
- hazards that may be created by the interactions of the permit, the process and the plant area
- identification of container and goods coding and HAZCHEM markings
- production workflow sequences
- focus of operation of work systems and equipment
- application of relevant agreements, codes of practice and other legislative requirements
- methods of hazard analysis
- hazards of the materials and process and appropriate hazard control procedures, including hierarchy of control
- identification and correct use of equipment, processes and procedures
- selecting appropriate tests and knowing what the tests are for
- conducting and interpreting tests for contaminant gases and other hazards
- testing - types of testing may include:
  - atmospheric, including explosivity, O₂
  - flammability
  - toxicity
  - temperature
  - humidity
  - combustibles' oxygen, enriched or reduced
- estimating ventilation required for making vessels safe (eg for confined space entry, hot work) including applying the formula for factors such as:
  - space turnover rate,
  - number of turnovers
- challenging/checking performance of monitoring and testing equipment against a standard sample
- supervision/monitoring of contractors.
### REQUIRED SKILLS AND KNOWLEDGE

Some sources of underpinning OHS knowledge include appropriate OHS and Dangerous Goods legislation, Australian Standards and Safework Australia, State or Territory codes such as:

- NOHSC:1010 - National Standard for Plant
- AS4024.1 Safeguarding of machinery - general principles
- NOHSC: 1003 National exposure standards for atmospheric contaminants in the occupational environment.

The regulatory framework to include:

- OHS
- EPA
- OHS authorities and Safework Australia
- licence and certification requirements
- company policy and permit control systems
- other relevant standards.

This unit requires the ability to:

- read and correctly interpret complex P&IDs
- speak clearly and unambiguously in English
- explain, describe and verify sometimes complex needs and issues.

**Required knowledge:**

Knowledge and understanding of the materials, equipment and process sufficient to recognise situations requiring different types of work permits and then implement the appropriate action.

Knowledge of the organisation's standard procedures and work instructions and relevant regulatory requirements under which permit systems operate, along with the ability to implement them within appropriate time constraints and in a manner relevant to the job.

Knowledge of the relevant requirements under AS2865.

Writing is required to the level of completing workplace forms and producing reports.

Numeracy is required to the level of being able to correctly differentiate between high and low pressures and temperatures, voltages or masses.
### Evidence Guide

#### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Assessment of this unit should demonstrate competence on actual plant and equipment in a work environment.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Critical aspects for assessment and evidence required to demonstrate competency in this unit</td>
<td>Competence must be demonstrated in the ability to distinguish between situations requiring the major types of permits and to list the major requirements of each type of permit. It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:</td>
</tr>
</tbody>
</table>

- correctly identify situations requiring work permits
- identify and apply legislative requirements, relevant standards and codes of practice (which may be incorporated in the organisation's procedures) to the issuing of work permits
- list the requirements of each type of permit
- plan own work process within workplace procedures and explain the reasons for the steps in the process.

Consistent performance should be demonstrated. For example, look to see that:

- correct permit issued
- hazards are identified and controlled in the permit by applying the hierarchy of control
- required personal protective equipment (PPE) is specified
- problems are anticipated
- problems are efficiently resolved.

These aspects may be best assessed using a range of scenarios/case studies/what ifs as the stimulus with a walk through forming part of the response. These assessment activities should include a range of problems, including new or unusual situations which may have been generated from the past incident history of the plant, incidents on similar plants around
**Context of and specific resources for assessment**

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge. A holistic approach should be taken to the assessment.

Competence in this unit may be assessed:

- by use of a suitable simulation and/or a range of case studies/scenarios. Simulations should be based on the actual plant and will include walk throughs of the relevant competency components.
- through questioning and the use of "what if" scenarios both on the plant and off the plant.
- by a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

**Method of assessment**

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

### RANGE STATEMENT

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>
|   | equipment failures  
|   | releases of toxic or noxious substances.  

### Returns to work status

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>
|   | Returns to work status may include:  
|   | de-isolation  
|   | removal of lockouts/tag outs  
|   | removal of drain covers  
|   | etc.  

### Problems

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>
|   | Anticipate and solve problems means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution/ a solution recorded in the procedures.  
|   | Typical process and product problems may include:  
|   | selection of the wrong permit  
|   | incorrect information being supplied with the permit  
|   | errors being made in the completion of permit data  
|   | failure to correctly correspond to the requirements of the permit  
|   | failure to seek clarification when anomalies occur.  

### Variables

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>
|   | Key variables to be monitored include:  
|   | types of permits being issued  
|   | permit issuing procedures  
|   | permit protocols for extended work activities beyond the end of shift  
|   | permit hand-over procedures.  

### Health, safety and environment (HSE)

|   | All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

|Co-requisite Units|
MSAPMSUP101A Clean workplace or equipment

Modification History
Not applicable.

Unit Descriptor

Unit descriptor
This competency covers general housekeeping duties, as well as the cleaning of plant and equipment. This competency is typically demonstrated by all operators working either independently or as part of a work team.

Application of the Unit

Application of this unit
This competency applies to personnel who are required to keep the work area, plant and equipment clean and tidy. The key factors are the identification, scheduling and performance of housekeeping requirements. This may include:

- identifying the range and scope of work required
- checking if any type of permit has been issued for the work
- knowing site safety and housekeeping standards
- adequately preparing to undertake the work, including obtaining all necessary safety equipment and PPE
- scheduling housekeeping duties
- handling chemicals and solvents safely
- keeping assigned plant and equipment clean.
- undertaking the work strictly in accordance with the provisions of any permit
- completing work in accordance with requirements
- moving work and waste materials to designated locations
- querying or raising matters about the scope of work if it varies from that normally undertaken
- completing the work in accordance with procedures and obtaining appropriate sign off as required.

Licensing/Regulatory Information
Not applicable.
Pre-Requisites

Prerequisites
This unit has no prerequisites.

Employability Skills Information

Employability Skills
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<td>Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.</td>
</tr>
<tr>
<td><strong>PERFORMANCE CRITERIA</strong></td>
<td></td>
</tr>
</tbody>
</table>
| 1. Identify housekeeping requirements. | 1.1 Explain and understand site safety and housekeeping standards.  
1.2 Undertake housekeeping inspection in accordance with procedures/work instructions.  
1.3 Identify and schedule housekeeping requirements as appropriate. |
| 2. Perform general housekeeping duties. | 2.1 Keep designated work areas clean to organisation specific standards.  
2.2 Keep designated work areas clear of obstructions.  
2.3 Handle and use chemicals and solvents as per the manufacturer guidelines and company specifications.  
2.4 Ensure work area is ready for next user.  
2.5 Remove work materials to designated locations. |
| 3. Clean plant and equipment. | 3.1 Keep assigned plant and equipment clean following established organisation procedures.  
3.2 Perform specialised cleaning procedures as required.  
3.3 Ensure that appropriate personal protective equipment is used as required. |
| 4. Dispose of waste materials. | 4.1 Correctly identify waste materials.  
4.2 Remove waste materials to a designated location. |
Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit. Knowledge and understanding of the process sufficient to recognise non-standard situations and then determine an appropriate action which is consistent with operating guidelines. Knowledge of organisation standard procedures and work instructions and relevant regulatory requirements, along with the ability to implement them within appropriate time constraints and in a manner relevant to the operation of the process.

Competence includes the ability to:

- apply and describe:
- duty of care
- requirements for housekeeping process
- procedures for plant maintenance
- safe handling procedures
- the standard of cleanliness required.
- distinguish between:
- re-usable materials and waste
- routine and special cleaning needs.
- plan own work, including predicting consequences and identifying improvements
- use PPE
- safely handle products and materials
- read relevant safety information and apply safety precautions appropriate to the task/relevant to the practical operation of the process.

Language, literacy and numeracy requirements

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators. Writing is required to the level of completing workplace forms. Basic numeracy is required, e.g. to determine that two 25 kg bags are needed to make up a requirement for 50 kg.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment. Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action.
Consistent performance should be demonstrated. For example, look to see that:

- early warning signs for work areas in need of cleaning are recognised
- work areas are kept tidy and clean
- equipment and/or materials is/are neatly stored, in a safe manner, in the correct location at all times when not in use
- equipment is always tidy and safe when in use.

**Assessment method and context**

Assessment will occur using industrial equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- in the operation of all ancillary equipment to the level required for this competency unit
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

**Specific resources for assessment**

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

**Range Statement**

**RANGE STATEMENT**

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

**Context**

This competency unit may vary between organisations depending upon a range of practices and procedures, with consideration given to plant configuration and process.

**Procedures**

All operations are performed in accordance with procedures.
Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

**Tools and equipment**
This competency includes use of equipment and tools such as:

- cleaning equipment and materials
- brooms
- shovels
- solvents
- waste containers
- safety equipment.

**Hazards**
Typical hazards include:

- materials or equipment obstructing work areas
- heat, smoke, dust or other atmospheric hazards
- sharp edges, protrusions or obstructions
- limited head spaces or overhangs
- equipment or product mass
- slippery surfaces, spills or leaks
- noise, rotational equipment or vibration

**Problems**
'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'.

Typical process and product problems may include:

- correct equipment not immediately available
- safety issues associated with housekeeping and/or cleaning
- ensuring that process aids rather than interferes with production.

**Variables**
Key variables to be monitored include:

- housekeeping and/or cleaning methods and procedures
- the type of tools and equipment used in special situations
- the use of personal protective equipment.
- correct use of tools
- waste collection and disposal
- conformance with frequency and quality of organisational reporting requirements

**Unit Sector(s)**
Not applicable.
MSL913002A Plan and conduct laboratory/field work

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit of competency covers the ability to plan and complete tasks individually or in a team context. The tasks involve established routines and procedures using allocated resources with access to readily available guidelines and advice. Work plans may need to be modified with supervisor agreement to suit changing conditions and priorities. |

Application of the Unit

| Application of the unit | This unit of competency is applicable to instrument operators, laboratory assistants and technical assistants working in all industry sectors. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'. |

Licensing/Regulatory Information
Not applicable.

Pre-Requisites

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and organise daily work activities | 1. Clarify allocated work activities and required resources if necessary  
1.2. Prioritise work activities as directed  
1.3. Break down work activities into small achievable components and efficient sequences  
1.4. Review work plan in response to new information, urgent requests, changed situations or instructions from appropriate personnel  
1.5. Update work plan and communicate changes to appropriate personnel |
| 2. Complete allocated work | 2.1. Locate relevant workplace procedures for required tasks  
2.2. Undertake tasks following prescribed and routine work related sequences  
2.3. Seek assistance from relevant personnel when difficulties cannot be handled  
2.4. Record completion of activities to confirm outputs in accordance with plan |
| 3. Identify and resolve work problems | 3.1. Recognise problems or opportunities for improved work performance  
3.2. Apply agreed problem solving strategies to consider possible causes and solutions  
3.3. Identify and access appropriate sources of help  
3.4. Consider available alternatives and keep them open before agreeing on the most appropriate action |
| 4. Work in a team environment | 4.1. Cooperate with team members to negotiate and achieve agreed outcomes, timelines and priorities  
4.2. Recognise personal abilities and limitations when undertaking team tasks  
4.3. Confirm personal role and responsibility within the team for particular outputs  
4.4. Demonstrate sensitivity to the diversity of other team members’ backgrounds and beliefs |
| 5. Update knowledge and skills as required | 5.1. Recognise own strengths and weaknesses and take advantage of skill development opportunities |
**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- conducting work based on ethical values and principles
- clarifying tasks and recognising resource needs
- following relevant procedures consistently
- recognising potential disruptions or changed circumstances and modifying work plan in conjunction with relevant personnel
- ability to adjust to a variety of working environments (indoor, outdoor and night)
- seeking assistance from relevant personnel when difficulties arise
- achieving quality outcomes within timelines
- working effectively with team members who may have diverse work styles, cultures and perspectives
- promoting cooperation and good relations in the team
- assisting team members to organise and manage its workload

### Required knowledge

Required knowledge includes:

- enterprise procedures:
  - customer service
  - quality
  - occupational health and safety (OHS) and environmental legislative requirements
  - technical work that the candidate routinely performs
- workplace agreements and employment conditions:
  - workers compensation
  - industrial awards enterprise agreements
  - equal employment opportunity
  - anti-discrimination and anti-harassment
- ethical background relevant to the nature of the work:
  - use of animals for research
  - genetic modification, gene therapy, cloning and stem cells
  - invitro fertilisation
  - forensic testing of populations
  - importance of commercial confidentiality
- problem solving strategies
**REQUIRED SKILLS AND KNOWLEDGE**

- interpersonal communication and conflict resolution techniques
- relevant health, safety and environment requirements
Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors should ensure that candidates can:
- follow workplace procedures to achieve quality outcomes within timelines
- identify and resolve work problems
- work effectively with team members and promote cooperation and good relations
- prioritise activities and recognise potential disruptions or changed circumstances and modify the work plan in conjunction with relevant personnel.

Context of and specific resources for assessment

This unit of competency is to be assessed in the workplace or simulated workplace environment.

This unit of competency may be assessed with:
- *MSL913001A Communicate with other people*
- *MSL943002A Participate in laboratory/field workplace safety*
- technical units related to the tasks undertaken.

Resources may include:
- enterprise procedures, equipment and materials for relevant technical tasks.

Method of assessment

The following assessment methods are suggested:
- review of a flowchart prepared by the candidate to show efficient sequencing of tasks
- observation of the candidate performing a range of technical tasks over sufficient time to demonstrate their handling of a variety of contingencies
- review of documents detailing completed tasks, such as completed job cards, a report or suggestions for quality improvement
- feedback from peers and team members
- feedback from supervisors
- written or oral questions to partly assess the candidate's ability to handle a range of contingencies and work in a team environment.
## EVIDENCE GUIDE

In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.

Access must be provided to appropriate learning and/or assessment support when required.

The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.

### This competency in practice

Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting.

**Manufacturing**

A plastic processing plant had to halt production because of a suspect raw material. The plant manager immediately requested the polymer testing laboratory to test and identify all batches of polypropylene additives and colouring agents. The laboratory team of three assistants and one technical officer allocated the workload amongst themselves to conduct the twelve different tests within a period of four hours to identify the ‘out of specification’ materials and report them to the production supervisor. All laboratory assistants had to reschedule their workplan, perform the required tests and assist each other to solve the production problem.

**Biomedical**

As part of a routine sequence, a technical officer is required to perform a series of tasks, including the calibration of instruments required for testing of blood samples. These tasks are to be completed within a specified timeframe to meet the output requirements of the enterprise. During the calibration of one of the instruments, the technician experiences difficulties that require expert technical assistance. The problem is referred to the appropriate person and is quickly resolved. Consequently, the officer is able to complete all
### EVIDENCE GUIDE

necessary tasks within the prescribed timeframe and the required output is maintained.

**Food processing**

Each of the technical assistants working in the laboratory of a food processing company was dedicated to performing specific analyses. As a result, they often alternated between periods of inactivity and excessive workload (the latter case had the potential to compromise their health and safety and the accuracy of their food analyses). One of the contributing factors to the periods of intense activity was the need to quickly prepare standard solutions and reagents. The team discussed this problem and agreed that while it was not appropriate for each assistant to become competent to perform every analytical procedure, it was feasible for each person to be able to prepare solutions and reagents used by others. The team developed a central register in which impending shortages of these materials was noted. Each assistant referred to this register when no other work was due and prepared the materials on a 'first in, first out' basis unless a task was given a priority rating. The team found that this strategy more evenly distributed the workload over their shift, improved safety in the laboratory and reduced the risk of error.
## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>
<thead>
<tr>
<th>Codes of practice</th>
<th>Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used</th>

<td>• sampling and testing following standard procedures&lt;br&gt;• maintenance and cleaning tasks</td>
<td>Workplace procedures may include:&lt;br&gt;• standard operating procedures (SOPs)&lt;br&gt;• job cards, batch cards and production schedules&lt;br&gt;• job descriptions&lt;br&gt;• methods, recipes, procedures and protocols</td>
</tr>
</tbody>
</table>
### RANGE STATEMENT

- the size of enterprise
- the scope of the laboratory
- their level of responsibility

### Strategies to maintain work flow

Strategies to maintain work flow may include:

- communicating critical events on shift
- recognising shortages in reagents and problems with equipment
- communicating quality breakdowns
- recognising urgent and abnormal results to be processed
- communicating and behaving in a courteous manner
- being punctual

### Occupational health and safety (OHS) and environmental management requirements

OHS and environmental management requirements:

- all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time
- all operations assume the potentially hazardous nature of samples and require standard precautions to be applied
- where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health

MSL916003A Supervise laboratory operations in work/functional area

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit of competency covers planning, allocation of tasks, coordination, quality assurance, monitoring resource usage and recording and reporting of laboratory operations. This requires using significant judgement about work sequences and choosing appropriate technology and procedures to ensure that products and services meet customer expectations, and are provided safely and efficiently in keeping with the enterprise business plan. |

Application of the Unit

| Application of the unit | This unit of competency is applicable to senior technical officers and laboratory supervisors working in all industry sectors. Responsibility is undertaken for the day-to-day operation of the functional area under broad direction from more senior staff such as scientists, medical staff and engineers, Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These can be found at the end of this unit of competency under the section 'This competency in practice'. |

Licensing/Regulatory Information
Not applicable.

Employability Skills Information

Employability skills | This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1. Monitor and direct work practices within functional area** | 1.1. Ensure that personnel follow all relevant procedures, regulations and standards  
1.2. Confirm that all technical work is performed in accordance with relevant standards, standard operating procedures (SOPs) and schedules  
1.3. Ensure that analytical results/data are checked, collated and distributed in accordance with enterprise requirements  
1.4. Monitor testing and sampling procedures for quality control in accordance with enterprise requirements  
1.5. Identify and resolve complex problems by using agreed problem solving strategies and act to prevent their recurrence |
| **2. Manage personnel within work area** | 2.1. Develop and coordinate rosters to balance job requirements, laboratory efficiency and skill development opportunities  
2.2. Empower work groups/teams in dealing with technical and work flow problems and suggesting improvements  
2.3. Provide coaching and mentoring to support personnel who have difficulties with meeting targets for performance and/or resource usage  
2.4. Establish and maintain effective communication with all personnel and clients to ensure smooth and efficient operations |
| **3. Establish resource requirements and operating budgets** | 3.1. Collect and analyse available resource information in consultation with appropriate personnel  
3.2. Prepare operational plans which make the best use of available resources, taking into account client needs and enterprise plans  
3.3. Identify and analyse possible variances due to external/internal factors and prepare contingency plans  
3.4. Compile operating budgets as required |
| **4. Procure resources to achieve operational plans** | 4.1. Analyse resource requirements and sources of supply in terms of suitability, cost, quality and availability  
4.2. Select and purchase new materials and equipment in accordance with enterprise procedures  
4.3. Coordinate stocktaking of materials and equipment |
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| to ensure maintenance of stock at prescribed levels  
4.4. Ensure that personnel are competent to perform required tasks and organise training if required  
4.5. Arrange for the recruitment and induction of personnel as appropriate | |
| 5. Monitor and optimise operational performance and resource usage | 5.1. Monitor the relationship between budget and actual performance to foresee problems  
5.2. Analyse variations in budget performance and either report or rectify abnormal/sub-optimal performance  
5.3. Negotiate with designated personnel and seek approval for variations to operational plans as required  
5.4. Assess utilisation of plant, equipment and consumables and compare with planned usage  
5.5. Rectify sub-optimal utilisation of plant, equipment and consumables  
5.6. Program and arrange for maintenance of plant and equipment in accordance with enterprise maintenance schedules  
5.7. Maintain systems, procedures and records associated with resource usage in accordance with enterprise requirements |
## Required Skills and Knowledge

<table>
<thead>
<tr>
<th>REQUIRED SKILLS AND KNOWLEDGE</th>
</tr>
</thead>
<tbody>
<tr>
<td>This section describes the skills and knowledge required for this unit.</td>
</tr>
</tbody>
</table>

### Required skills

Required skills include:

- collecting, analysing and reporting information for enterprise operational plans, budgets and performance management
- organising and optimising the use of resources within agreed parameters to achieve planned outcomes
- revising plans to take account of the unexpected
- solving non-routine problems
- making decisions within limits of responsibility and authority
- ensuring that legislation, statutory and enterprise requirements are met in work operations
- monitoring outputs, analyses, processes and introducing ways to improve operations
- using effective consultative processes
- promoting a learning environment for personnel in the immediate work area
- motivating and counselling personnel to improve performance

### Required knowledge

Required knowledge includes:

- enterprise:
  - business, strategic and operational plans
  - key performance indicators
  - laboratory services
  - products
  - customers
- legislation, codes, standards and registration criteria relevant to the work area or function
- principles of budgeting, operational planning and efficient resource use
- workplace industrial agreements and regulations dealing with hygiene, dress and behaviour of employees
- SOPs and the technical details of sampling, testing, equipment and instrumentation within the work area
- problem solving techniques and contingency planning
- broad trends in production data (e.g. seasonal and annual)
- auditing procedures
- team leadership and development techniques
**REQUIRED SKILLS AND KNOWLEDGE**

- mentoring and coaching techniques
- relevant health, safety and environment requirements

**Specific industry**

Additional knowledge requirements may apply for different industry sectors. For example:

Biomedical and environmental:

- access information from sources, such as relevant Federal and State/Territory Acts, Environmental Protection Agency (EPA), National Pathology Accreditation Advisory Council (NPAAC) and National Health and Medical Research Council (NHMRC)

Food processing:

- Codex Alimentarius standards, Association of Analytical Communities International (AOAC International) Official Methods of Analysis
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Critical aspects for assessment and evidence required to demonstrate competency in this unit</td>
</tr>
</tbody>
</table>

Assessors should ensure that candidates can:
- collect, analyse and report on information for enterprise operational plans, budgets and performance management
- organise and optimise the use of resources within agreed parameters to achieve planned outcomes
- revise plans to take account of the unexpected
- make decisions within limits of responsibility and authority
- supervise laboratory operations and personnel so that planned outcomes are achieved within agreed resource and budget parameters without compromising safety, quality and ethics
- ensure that legislation, statutory and enterprise requirements are met in work operations
- monitor outputs, analyses processes and introduce ways to improve operations
- solve a range of non-routine problems
- use effective consultative processes
- promote a learning environment for personnel in immediate work area
- motivate and counsel personnel to improve performance.

</tr>
</tbody>
</table>

In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.

Access must be provided to appropriate learning and/or assessment support when required.

The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.

### This competency in practice

| Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. |
EVIDENCE GUIDE

### Manufacturing

A laboratory supervisor analysed the costs of regular heavy metal testing of the wastewater stream leaving the company's plant. He/she compared these costs with a quotation from an external environmental consulting company and noted that it would be more cost effective to outsource the current level of testing. However, the supervisor argued that the company should retain this capability in-house given the impact of impending legislation which will require it to develop an environmental management plan and introduce more complex monitoring. He/she demonstrated that it would benefit the company more in the long run if they recruited one new technician, retrained existing laboratory staff and continued to perform all wastewater testing on site.

### Food processing

A technical officer had to complete a wide range of chemical analyses that required samples to be ignited for many hours in a muffler furnace, digested with acid, prepared for analysis by atomic absorption spectroscopy and gas chromatography (GC), and titrated against standard solutions. The laboratory supervisor noticed that the number of analyses performed each day by the technician tended to fluctuate widely without an obvious cause. Closer observation showed that the technician's efficiency was dependent on the order in which the analyses were begun and the use of the auto sampler for overnight operation of the GC.

The supervisor suggested several ways to improve the technician's time management. The supervisor installed a timer on the muffler furnace so that it could be operated overnight and organised the technician to perform labour intensive tasks after automated analyses had been initiated. The supervisor then showed the technician the optimum order to perform individual tasks and verified that his instructions were followed over succeeding weeks. The supervisor's actions significantly improved the productivity of the laboratory. Later it became obvious that the technician's time management system was not working as effectively as it had. Again, the supervisor monitored the technician's work and realised that since the daily analytical load was seasonal, a second management system had to be developed that was...
dedicated to the new season. Both systems were sufficiently flexible to take account of short term fluctuations in workload. In summary, the organisational skills of the supervisor and technician's ability to follow detailed instructions resulted in a more efficient use of company time, labour and resources.
Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>
<thead>
<tr>
<th>Codes of practice</th>
<th>Standards, codes, procedures and/or enterprise requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used.</td>
<td></td>
</tr>
</tbody>
</table>

Standards, codes, procedures and/or enterprise requirements may include:

- Australian and international standards such as:
  - AS ISO 17025-2005 General requirements for the competence of testing and calibration laboratories
  - AS/NZS 2243 Set:2006 Safety in laboratories set
  - AS/NZS ISO 14000 Set:2005 Environmental management standards set
  - AS/NZS ISO 9000 Set:2008 Quality management systems set
  - Australia New Zealand Food Standards (ANZFS) Code
  - Australian code of good manufacturing practice for medicinal products (GMP)
  - Australian Dangerous Goods Code
  - occupational health and safety (OHS) national standards and codes of practice
  - principles of good laboratory practice (GLP)
  - standard Australian test methods
  - registration/licensing requirements
  - ethical and legal responsibilities of enterprise personnel such as:
    - animal welfare
    - poisons
    - environmental protection
  - National Association of Testing Authorities (NATA) accreditation
  - staff performance measures, such as:
### RANGE STATEMENT

- SOPs
- three stage proficiency testing (external, interpersonal and replicate)
- customer needs, specific testing requirements and standards
- waste auditing and minimisation processes
- strategic plans, productivity/profit targets and business plans
- quality and continuous improvement processes and standards
- cost-benefit analysis principles
- workplace industrial agreements
- hygiene/dress/behaviour regulations
- grievance and dispute resolution procedures
- access/equity/ethics principles, processes and procedures
- batch cards, work schedules and rosters
- maintenance and housekeeping schedules

#### Equipment and systems

Equipment and systems may include:
- computer equipment
- information management systems
- financial accounting systems

#### Problem solving

Problem solving may include:
- troubleshooting and fault finding
- risk analysis, root cause analysis and aspect/impact analysis
- non-routine operational/technical problems
- non-routine administrative and personnel related problems

#### Communication

Communication may be with:
- supervisors and managers
- laboratory and production personnel
- work teams
- members of the public
- customers
- suppliers

#### Supervisory responsibilities

Supervisory responsibilities may include:
- work practices within functional area:
**RANGE STATEMENT**

- determining quality assurance sequences to minimise errors and inconsistencies
- participating in external quality control programs
- ensuring documentation of results and that data is processed and records maintained
- personnel within functional area:
  - developing rosters to fulfil both work requirements and skill development opportunities
  - identifying roles and responsibilities for individuals and team members
  - providing effective communication pathways to ensure smooth and efficient operations
  - encouraging teams to solve problems relating to work flow and to suggest possible improvements to work organisation to maximise efficiency
- operational plans:
  - determining work schedules that use resources efficiently and meet customer and enterprise needs
  - identifying possible variances of operational plans in order to prepare contingency plans
- operational performance:
  - recognising problems and initiating corrective actions
  - continuously improving the skills of personnel in the workplace

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- performing calculations of scientific quantities
- using scientific notation
- applying the concepts of metrology
- applying calculations to the workplace
- coding, recording and checking of data accurately
- presenting accurate results in the required format
- preparing graphs, tables and charts (pie, bar, histogram) and interpreting trends
- preparing and interpreting process control charts
- maintaining the confidentiality of data in accordance with workplace and regulatory requirements

### Required knowledge

Required knowledge includes:

- concepts of metrology
- the international system of units (SI)
- relevant scientific and technical terminology
- uncertainty associated with measurement steps
- procedures for coding, entering, storing, retrieving and communicating data
- procedures for verifying data and rectifying mistakes
- converting units involving multiples and submultiples
- significant figures, rounding off, estimating, approximating
- transposing and evaluating formulae
- calculations involving fractions, decimals, proportions and percent
- determining statistical values of data such as mean, median, mode and standard deviation
- procedures for maintaining and filing records, and maintaining security of data
Evidence Guide

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Assessors should ensure that candidates can:
- code, record and check the documentation of data
- calculate scientific and statistical quantities relevant to the workplace and present accurate results in the required format
- recognise anomalies and trends in data
- maintain the confidentiality of data in accordance with workplace and regulatory requirements
- keep records up-to-date and secure.

### Context of and specific resources for assessment

This unit of competency is to be assessed in the workplace or simulated workplace environment.

This unit of competency may be assessed with:
- **MSL924002A Use laboratory application software**
- technical units, such as:
  - relevant **MSL973000 series units of competency**
  - relevant **MSL974000 series units of competency**.

Resources may include:
- data sets and records
- computer and relevant software or laboratory information system
- relevant workplace procedures.

### Method of assessment

The following assessment methods are suggested:
- review of data worksheets, calculations, computer files (such as spreadsheets, databases, statistical analysis), graphs, tables and/or charts prepared by the candidate
- review of records transcribed, maintained or stored by the candidate
- feedback from supervisors and peers
- questions to assess understanding of relevant procedures and trends in data
- observation of the candidate as they process data, file
**EVIDENCE GUIDE**

**Manufacturing**

A laboratory assistant in a materials testing laboratory was performing routine tensile tests on samples of vinyl sheet. The assistant converted the readings from the machine to appropriate units using a simple calculation and recorded them in the logbook for that test method. After comparing these test results with previous results for the same type of vinyl material, the assistant found that the tensile strength was within the required range. However, it was at the lower rather than the upper end of the range as in previous testing. The assistant discussed the results with the laboratory supervisor. The calibration file for that machine showed that it had been calibrated four months previously and had not needed adjustment. Test results for the same period showed that the machine was giving lower than normal tensile strength readings for the few higher strength materials tested over the last two months. The assistant did some more checks and confirmed this trend. The machine was re-calibrated by the instrument company and the frequency of internal calibration checks by the laboratory assistant was increased. This problem would not have been detected or corrected as quickly without the assistant's initiative and competent recording and retrieval of test results and
| EVIDENCE GUIDE | calibration information.  
**Biomedical**  
A technical assistant works in a team with laboratory scientists and technical officers. Analyses of electrolytes are routine and occur in large volume throughput even in this small diagnostic laboratory. The assistant is assigned tasks that contribute to the overall production of results, their reporting and the quality control evaluation of the results. One task is the daily collection of the electrolyte analyses from the internal quality control area. In this case, the technical assistant plots the results on a Levy-Jennings graph and computes the mean value. The assistant reports immediately to the supervisor if the plots show deviations which indicate out-of-control results.  
**Food processing**  
Cooking and holding temperatures greatly affect the nutrient composition of processed foods. The CSIRO provides documentation of nutrient losses with temperature variations. For cooked foods, there is the added problem of microbial growth in the so called 'danger zone'. In one laboratory, the technical assistant conducts simple testing of foods using a temperature probe and also measures the temperature of the storage areas, holding trays or bainmaries and individual tray units. Careful documentation of the temperatures of the foods and times of measurement must be kept. The technical assistant supplies the data as tables and a plot of temperature versus time. For quality control purposes, the assistant is directed to use a cross reference of mercury thermometer readings versus probe measurements for ambient temperature. The assistant plots the thermometer readings against the probe readings and reports to the supervisor if the plot shows a slope other than the defined value. |
## Range Statement

### RANGE STATEMENT

- that all measurements are estimates
- measurements belong to a population of measurements of the measured parameters
- repeatability
- precision
- accuracy
- significant figures
- sources of error
- uncertainty
- traceability

### Data

Data may be recorded on:
- worksheets
- spreadsheets
- databases linked to information management systems

Data may include results of:
- observations
- tests and measurements
- analyses
- surveys
- quality assurance and control assessments

Data may be presented in the form of:
- graphs
- tables
- histograms
- pie charts
- bar charts
- control charts
- semi-quantitative observations and be expressed on a scale (for example, 1 to 4 or + to ++++)

### Calculations

Calculations may be performed:
- with or without a calculator
- using computer software, spreadsheets, databases and statistical packages

### Calculations of scientific quantities

Calculated of scientific quantities may include:
- converting units involving multiples and submultiples
## RANGE STATEMENT

- significant figures, round off, estimate and approximate
- transposing and evaluating formulae
- fractions, decimals, proportions and percentages
- perimeters and angles
- percentage and absolute uncertainties in measurements and test results
- statistical values of data, such as mean, median, mode and standard deviation
- areas (m²) and volumes (mL, L, m³) of regular shapes, such as packaging
- dose (mg), average mass, mass percentage, density, specific gravity, moisture, relative and absolute humidity, viscosity and permeability
- ratios, such as mass to mass, mass to volume and volume to volume percentages
- concentration, such as molarity, g/100mL, mg/L, mg/L, ppm, ppb, dilution mL/L
- average count, colonies per swab surface and cell counts, such as live and dead/total
- process variables, such as pressure, gauge pressure, velocity and flow rates
- biological oxygen demand (BOD), chemical oxygen demand (COD) and total organic carbons (TOC)
- % content of moisture, ash, fat, protein, alcohol, sulphur dioxide and trace metals, such as calcium or zinc
- food properties, such as % concentration (dry), friability, bitterness, brix, free amino nitrogen, diastatic power, calorific content and yeast viability
- stress, strain, moduli and force

### Records

Records could include information associated with:
- purchase of equipment and materials, service records
- safety procedures
- history of calibration and test results

### Occupational health and safety (OHS) and environmental

OHS and environmental management requirements:
**RANGE STATEMENT**

| management requirements | • all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time  
• all operations assume the potentially hazardous nature of samples and require standard precautions to be applied  
• where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health |

MSL925001A Analyse data and report results

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit of competency covers the ability to perform scientific calculations, analyse trends and uncertainty in data and report results within the required timeframe. |

Application of the Unit

| Application of the unit | This unit of competency is applicable to technical officers and laboratory technicians working in all industry sectors. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These can be found at the end of this unit of competency under the section ‘This competency in practice’. |

Licensing/Regulatory Information
Not applicable.

Pre-Requisites

| Prerequisite units | MSL924001A Process and interpret data |
### Employability Skills Information

| Employability skills | This unit contains employability skills. |

### Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Perform scientific calculations | 1.1. Ensure raw data are consistent with expectations and reasonable ranges  
1.2. Calculate scientific quantities involving algebraic, power, exponential and/or logarithmic functions  
1.3. Ensure calculated quantities are consistent with estimations  
1.4. Present results using the appropriate units, uncertainties and number of significant figures |
| 2. Analyse trends and relationships in data | 2.1. Determine linear and non-linear relationships between sets of data  
2.2. Prepare and analyse control charts to determine if a process is in control  
2.3. Identify possible causes for out-of-control condition  
2.4. Follow enterprise procedures to return process to in-control operation |
| 3. Determine variation and/or uncertainty in data distributions | 3.1. Organise raw data into appropriate frequency distributions  
3.2. Calculate means, medians, modes, ranges and standard deviations for ungrouped and grouped data  
3.3. Interpret frequency distributions to determine the characteristics of the sample or population  
3.4. Calculate standard deviations and confidence limits for means and replicates  
3.5. Estimate the uncertainty in measurements using statistical analysis  
3.6. Determine data acceptability using statistical tests and enterprise procedures |
| 4. Check for aberrant results | 4.1. Identify results that cannot be reconciled with sample, sample documentation, testing procedures and/or expected outcomes  
4.2. Determine appropriate actions in consultation with supervisor as required |
| 5. Report results | 5.1. Use charts, tables and graphs to present results in the required format  
5.2. Verify that entry of data and results are correct  
5.3. Prepare reports in a format and style consistent with their intended use and enterprise guidelines  
5.4. Communicate results within the specified time and in accordance with enterprise confidentiality and |

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- performing laboratory computations
- calculating scientific quantities
- statistical analysis
- graphical analysis
- reporting results in the required formats and expected timeframe
- storing, retrieving and manipulating data following document traceability procedures
- maintaining the security and confidentiality of data in accordance with workplace and regulatory requirements

### Required knowledge

Required knowledge includes:

- relevant scientific and technical terminology such as: variables, dispersion, central tendency, process control, process stability, normal distribution, confidence level and replication
- calculations involving evaluation of formulae containing algebraic, power, exponential and/or logarithmic functions
- preparation and interpretation on linear and non-linear graphs, complex control charts and frequency distribution plots
- determination of regression line equations, correlation coefficients
- statistical analysis and significance tests, such as t-test, f-test, analysis of variance (ANOVA)
- data acceptability tests, such as Q, T and Youden
- the characteristics of a valid measurement
- relevance/importance of the national measurement legislation and guidelines to laboratory measurement
- sources and estimates of uncertainty in measurements
- procedures for data traceability
- procedures for verifying data and rectifying mistakes
- procedures for maintaining and filing records, and maintaining security of data
# Evidence Guide

## EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## EVIDENCE GUIDE

| Candidate | questions to assess understanding of relevant procedures, trends in data and sources of uncertainty  
| review of reports prepared by the candidate  
| feedback from supervisors and peers regarding the candidate's ability to analyse and report data in accordance with enterprise procedures. |

In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.

Access must be provided to appropriate learning and/or assessment support when required.

The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.

### This competency in practice

Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting.

**Manufacturing**

Before pharmaceutical products can be approved for use in Australia, they must be tested for shelflife in their Australian sales packs. The shelf life of a preparation is the time of storage which results in a preparation becoming unfit for use, either through chemical decomposition of the active substances or physical deterioration of the preparation. Stability profiles are determined by storing the preparation under a range of temperature conditions and evaluating it at predetermined time intervals. For example, a technical assistant may be required to evaluate the physical parameters of the new tablet to detect any changes in its appearance, hardness, friability, disintegration and dissolution profile. The assistant regularly assays the tablets using a stability indicating assay. The results are plotted and the information gained is used to predict the
EVIDENCE GUIDE

period of time for which the tablets will meet the appropriate standards for physical characteristics, purity and potency when stored under defined conditions.

**Biomedical**

Supplementation of vitamins and minerals in the diet as a means to avert a clinical problem is a popular area of research, linking epidemiological and clinical investigation with food analyses. In the example of folate, such combined studies have led to the fortification of a number of foods and the requirement for folate supplementation for women of child bearing age. A typical project team would involve medical staff, a dietician and a scientific or technical officer to perform the assays. One possible line of study is to control the level of supplementation for the person and introduce the micronutrient in a dose form over and above that given in a controlled baseline diet. Blood samples would be collected and the serum micronutrient levels assayed. The technical officer would be responsible for keeping the statistical quality control data and analysing the assays. The technical officer would work with the research team to correlate the serum levels with the dose input. To contribute effectively, the technical officer must understand the significance of the relationships between collected test data and the controlled experimental variables.

**Food processing**

A state government analytical laboratory recently performed comparative assays of (β-carotene using ultraviolet-visible (UV-VIS) spectrometric and high performance liquid chromatography (HPLC) techniques. In any procedure where the assay is to be replaced, side by side analyses must be performed on multiple samples and the correlations between the data compared statistically. The two procedures are then developed or modified for local laboratories and a routine procedure developed. At this point, technical officers would assay the samples by the two methods. They would ensure that all procedures were followed with close attention to quality control. Precision would be assessed through frequent assays of the same samples. Sensitivity of the assay would be assessed by performing the assay over a range of sample concentrations. The technical officers would carefully document the procedures and record all
EVIDENCE GUIDE

| data for later validation. They may also provide preliminary graphical representations of data for their supervisor. |
### Range Statement

#### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RANGE STATEMENT

- half life, dose, activity and exposure
- optical properties:
  - absorbance/transmittance, path length, extinction coefficient, concentration (Beers law) and detection limits
- electrical properties:
  - conductivity, resistivity and dielectric constants
- mechanical properties:
  - stress, strain, elastic moduli, yield strength and hardness
- thermal properties:
  - heat capacity, thermal expansion, thermal conductivity and thermal resistance
- food content (%) of water, ash, dietary and crude fibre, carbohydrate, protein, fat and specific vitamin
- quantities associated with quality control monitoring, assessment and reporting

Graphical analysis

Graphical analysis may include:
- determination of linear, logarithmic, exponential and power relationships
- regression lines and interpretation of correlation coefficients
- preparing frequency distributions for given data
- calculating and interpreting measures of central tendency and dispersion

Calculations

Calculations may be performed:
- with a calculator
- without a calculator
- with computer software such as:
  - spreadsheets
  - databases
  - statistical packages

Statistical analysis

Statistical analysis may include the use of:
- histograms, frequency plots, stem and leaf plots, boxplots and scatter plots
- probability and normal probability plots
- Pareto diagrams, Stewhart control charts and

## Records

Records may include information associated with:

- purchase of equipment and materials
- service records
- safety procedures
- history of calibration and test results

## Occupational health and safety (OHS) and environmental management requirements

OHS and environmental management requirements:

- all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time
- all operations assume the potentially hazardous nature of samples and require standard precautions to be applied
- where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health

MSL943001A Work safely with instruments that emit ionising radiation

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit of competency covers the ability to safely store, transport and operate instruments that emit ionising radiation following established safe work practices and in accordance with laboratory procedures and licensing requirements. Examples include, use of process control instrumentation, such as fluid level gauges using radioactive sources, on-site non-destructive testing of weldments using X-ray and gamma ray sources and density testing of asphaltic concrete. |

Application of the Unit

| Application of the unit | This unit of competency is applicable to laboratory or field assistants working in construction materials testing or similar industry sectors. They work under supervision or direction of paraprofessionals. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'. |

Licensing/Regulatory Information
Not applicable.

<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1. Store instruments safely and securely** | 1.1. Identify state or territory requirements for storage facilities and associated document processes  
1.2. Store instruments in accordance with state or territory requirements and documented procedures  
1.3. Secure instruments to prevent unauthorised access  
1.4. Record instruments’ movements and usage in accordance with documented procedures |
| **2. Transport instruments safely and securely** | 2.1. Select vehicle suitable for the purpose  
2.2. Attach regulation signage in accordance with state or territory requirements to indicate that radioactive sources are being carried  
2.3. Ensure that instruments are properly located and fixed securely in place  
2.4. Ensure security of instruments when the vehicle is unattended |
| **3. Use instruments safely and maintain security** | 3.1. Follow safe working practices to minimise own exposure to radiation  
3.2. Use radiation dosimeter to monitor own exposure to radiation  
3.3. Follow safe work practices to minimise exposure of others to radiation  
3.4. Follow safe work practices to protect the instrument from damage  
3.5. Maintain instrument security |
| **4. Monitor radiation levels** | 4.1. Check operation and calibration status of radiation survey meter  
4.2. Perform radiation survey following documented procedure  
4.3. Report atypical conditions and/or problems to appropriate personnel |
| **5. Maintain records** | 5.1. Record observations, data and results in accordance with enterprise procedures  
5.2. Maintain confidentiality of enterprise information |
| **6. Perform emergency procedures** | 6.1. Identify potential emergency situations  
6.2. Respond to emergencies in accordance with documented procedures  
6.3. Report emergency situations to appropriate personnel |
## Required Skills and Knowledge

<table>
<thead>
<tr>
<th>REQUIRED SKILLS AND KNOWLEDGE</th>
</tr>
</thead>
<tbody>
<tr>
<td>This section describes the skills and knowledge required for this unit.</td>
</tr>
</tbody>
</table>

### Required skills

Required skills include:
- demonstrating emergency procedures
- performing and documenting radiation surveys using radiation monitors
- using a radiation dosimeter
- placing the instrument into storage safely and securely
- transporting the instrument in a motor vehicle safely
- safely handling and maintaining the instrument and keeping other personnel clear of radiation sources
- observing, interpreting and reporting atypical situations
- promptly communicating problems to appropriate personnel

### Required knowledge

Required knowledge includes:
- health, safety and emergency procedures relevant to radioactive devices
- factors affecting radiation intensity
- principles of external radiation protection and practical methods of minimising radiation exposure
- methods of measuring and detecting ionising radiation
- nature of radiation, different types of radiation, their characteristics, sources and shielding methods
- physiological effects of ionising radiation
- state or territory licensing requirements
- national codes of practice
- general guidelines for safe handling of radiation sources
**Evidence Guide**

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>

<td>• recognise, interpret and report problems to appropriate personnel promptly</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

This unit of competency is to be assessed in the workplace or simulated workplace environment.

This unit of competency may be assessed with:

- MSL924001A Process and interpret data
- MSL943002A Participate in laboratory/field workplace safety
- MAL974010A Perform mechanical tests

Resources may include:

- appropriate tools, instruments, equipment and materials
- enterprise procedures, test methods, equipment and manuals

### Method of assessment

The following assessment methods are suggested:

- analysis of work completed by the candidate over a period of time to ensure accuracy, consistency and timeliness
- observation of candidate using the instruments in a range of work contexts
- review of enterprise documentation completed by the candidate
- feedback from peers and supervisors
- use of suitable simulation and/or a range of case studies/scenarios

In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those
EVIDENCE GUIDE

| aspects of competency which are difficult to assess directly. |
| Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. |
| Access must be provided to appropriate learning and/or assessment support when required. |
| The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment. |

**This competency in practice**

Industry representatives have provided the case study below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting.

**Construction materials testing**

Soil moisture density gauges are used extensively for measuring the density of soils, cement treated roadbase, roller compacted concrete and asphalt. They provide a non-destructive means of monitoring compaction operations during construction, so that additional rolling can be provided before the material sets or is covered with another layer. National and state/territory codes of practice regulate the use of equipment that emits ionising radiation. States and territories also have licensing and registration requirements for people involved in owning, storing, transporting or using such equipment.

Soil moisture density gauges are used on construction sites, so they are transported to the test site in motor vehicles. They must be protected from damage and stored safely and securely while not in use. The operator must ensure that bystanders are kept clear to minimise radiation exposure. Owners of gauges are required to have documented procedures and ensure that operators are adequately trained. To ensure the safety and integrity of the gauge, radiation surveys are required at regular intervals. A hand-held radiation meter is used, and the results recorded.
## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. MSL973001A Perform basic tests

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit of competency covers the ability to perform tests and measurements using standard methods with access to readily available advice from supervisors. |

Application of the Unit

| Application of the unit | This unit of competency is applicable to laboratory/field assistants working in all industry sectors. In general, they do not calibrate equipment and make only limited adjustments to the controls. They do not interpret or analyse results or troubleshoot equipment problems. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'. |

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Interpret test requirements | 1.1. Review test request to identify samples to be tested, test method and equipment involved  
1.2. Identify hazards and enterprise controls associated with the sample, preparation methods, reagents and/or equipment |
| 2. Prepare sample             | 2.1. Record sample description, compare with specification, record and report discrepancies  
2.2. Prepare sample in accordance with appropriate standard methods |
| 3. Check equipment before use | 3.1. Set up test equipment in accordance with test method  
3.2. Perform pre-use and safety checks in accordance with enterprise procedures and manufacturer's instructions  
3.3. Identify faulty or unsafe equipment and report to appropriate personnel  
3.4. Check calibration status of equipment and report any out of calibration items to appropriate personnel |
| 4. Perform tests on samples   | 4.1. Identify, prepare and weigh or measure sample and standards to be tested  
4.2. Conduct tests in accordance with enterprise procedures  
4.3. Record data in accordance with enterprise procedures  
4.4. Perform calculations on data as required  
4.5. Identify and report out of specification or atypical results promptly to appropriate personnel  
4.6. Shut down equipment in accordance with operating procedures |
| 5. Maintain a safe work environment | 5.1. Use established safe work practices and personal protective equipment to ensure personal safety and that of other laboratory personnel  
5.2. Minimise the generation of wastes and environmental impacts  
5.3. Ensure safe disposal of laboratory and hazardous wastes  
5.4. Clean, care for and store equipment and reagents as required |
## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- interpreting enterprise procedure or standard methods accurately
- using safety information, such as material safety data sheets (MSDS) and performing procedures safely
- checking test equipment before use
- completing all tests within required timeline without sacrificing safety, accuracy or quality
- calculating, recording and presenting results accurately and legibly
- maintaining security, integrity and traceability of all samples, data/results and documentation
- cleaning and maintaining equipment

#### Required knowledge

Required knowledge includes:

- concepts of metrology
- the international system of units (SI)
- purpose of test
- principles of the standard method
- pre-use equipment checks
- relevant standards/specifications and their interpretation
- sources of uncertainty in measurement and methods for control
- enterprise and/or legal traceability requirements
- interpretation and recording of test result, including simple calculations
- procedures for recognition/reporting of unexpected or unusual results
- relevant health, safety and environment requirements
Evidence Guide

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>Assessors should ensure that candidates can:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• accurately interpret enterprise procedures or standard methods</td>
</tr>
<tr>
<td></td>
<td>• complete all tests within the required timeline without sacrificing safety, accuracy or quality</td>
</tr>
<tr>
<td></td>
<td>• demonstrate close attention to the accuracy and precision of measurements and the data obtained</td>
</tr>
<tr>
<td></td>
<td>• maintain the security, integrity and traceability of all samples, data/results and documentation.</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

This unit of competency is to be assessed in the workplace or simulated workplace environment.

This unit of competency may be assessed with:

- MSL922001A Record and present data.

Resources may include:

- standard laboratory equipped with appropriate equipment standards and materials
- enterprise procedures and standard methods, and equipment manuals
- MSDS.

### Method of assessment

The following assessment methods are suggested:

- review of the quality of test data/results achieved by the candidate over time
- inspection of records and workplace documentation completed by the candidate
- feedback from peers and supervisors
- observation of the candidate performing a range of basic tests
- oral or written questioning to check underpinning knowledge of test procedures.

In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess.
### EVIDENCE GUIDE

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.

Access must be provided to appropriate learning and/or assessment support when required.

The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.

### This competency in practice

Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting.

#### Manufacturing

Standard testing methods may be viewed as legal requirements that must be followed to ensure that a product manufactured in a chemical plant meets the specification by which it is sold to the customer.

Technical assistants perform tests in a quality control laboratory to ensure that material meets legal requirements and the material is safe and effective in use. Peroxides may be present in ether as a result of light-catalysed air oxidation. Peroxides are toxic and can give rise to mixtures which are explosive when distilled. Technical assistants test ether to ensure that the level of peroxide is within acceptable limits. The test is done by shaking ether with a solution of potassium iodide. After standing for 30 minutes in the dark the yellow colour of the aqueous phase, due to the liberation of iodine, must not be more intense than a prepared standard solution. These tests ensure the quality and safety of the ether.

#### Food processing

A snack food company produces a range of high quality, impulse purchase snack foods. Some of these products are moisture and/or oxygen sensitive and are therefore packaged in multi-layer flexible packaging to provide optimum shelflife. The packaging must also be able to withstand the rigours of the production and distribution process. While the packaging is purchased to meet the shelflife and distribution specifications, the quality
EVIDENCE GUIDE

assurance program requires the periodic evaluation of the packaging materials against these specifications. A laboratory assistant uses standard methods to test the tearing resistance, bursting strength, impact resistance and permeability and/or leakage of the snack food packaging. Tests are also conducted on aspects of the manufacturing process that can affect shelf life. These tests involve the measuring of the heat-seam strength and the sealing performance of the closure process. The test results are recorded by the laboratory assistant to verify the conformance of the materials to the supplier specifications and of the process to the manufacturing specifications. The assistant reports any anomalies or non-conformances to the appropriate personnel.

Construction materials testing

A technician performs an Aggregate Stripping Test (AS 1141.50) and enters the results in the laboratory's information management system (LIMS). The resulting 20-30% stripped values (i.e. 70-80% adhering) indicate a 'fail' result. The technician notes that he has repeated the test and obtained the same 'fail' result. The laboratory manager reviews the results and asks the technician to explain how he performed the test. He describes how he prepared 3-4 mm thick plates of bitumen and binding agent in the mould and then placed 50 small clean pieces of aggregate on top. After treatment in an oven for 24 hours and a 50°C water bath in accordance with the test method, the technician had then carefully pulled out the pieces of aggregate and avoiding any twisting motion. He then estimated the % of bitumen adhering to each of the stones with the expectation that the stripped value would be about 5% (i.e. 95% adhering). The manager is satisfied that the technician has performed the test in accordance with the method and suggested that he now re-run the test with a known aggregate as a control. This test gives a stripped value of 5-7% (i.e. 93-95% adhering). The manager is now sufficiently confident of the laboratory's results to sign and issue the test report and explain the aggregate's 'test failure' to the client.
# Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### RANGE STATEMENT

- flammable liquids
- dry ice and liquid nitrogen
- fluids under pressure
- sources of ignition
- occupational overuse syndrome, slips, trips and falls
- manual handling, working at heights and working in confined spaces
- crushing, entanglement and cuts associated with moving machinery or falling objects

### Enterprise controls to address hazards

Enterprise controls to address hazards may include:

- use of MSDS
- use of signage, barriers and service isolation tags
- use of personal protective equipment, such as hard hats, hearing protection, sunscreen lotion, gloves, safety glasses, goggles, face guards, coveralls, gowns, body suits, respirators and safety boots
- use of appropriate equipment, such as biohazard containers and cabinets and laminar flow cabinets
- recognising and observing hazard warnings and safety signs
- labelling of samples, reagents, aliquoted samples and hazardous materials
- handling and storage of all hazardous materials and equipment in accordance with labelling, MSDS and manufacturer's instructions, and enterprise procedures and regulations
- cleaning and decontaminating equipment and work areas regularly using recommended procedures
- following established manual handling procedures for tasks involving manual handling

### Minimising environmental impacts

Minimising environmental impacts may involve:

- recycling of non-hazardous waste, such as chemicals, batteries, plastic, metals and glass
- appropriate disposal of hazardous waste
- correct disposal of excess sample/test material
- correct storage and handling of hazardous materials
RANGE STATEMENT

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Safely use laboratory chemicals, glassware and equipment | 1.1. Apply appropriate safety precautions for use of laboratory equipment and hazardous chemical materials  
1.2. Use appropriate laboratory glassware and measuring equipment  
1.3. Clean and store glassware and equipment in accordance with enterprise procedures |
| 2. Make up working solutions | 2.1. Identify the relevant standard methods for solution preparation  
2.2. Assemble specified laboratory equipment  
2.3. Select and prepare materials and solvent of specified purity  
2.4. Measure appropriate quantities of reagents for solution preparation and record data  
2.5. Prepare labels and log solution details in laboratory register  
2.6. Transfer solutions to appropriately labelled containers |
| 3. Check existing stock of solutions | 3.1. Monitor shelf life of working solutions according to laboratory procedures  
3.2. Replace out-of-date or reject solutions according to laboratory procedures  
3.3. Conduct routine titrimetric analyses, if appropriate, to determine if solutions are fit for purpose |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:
- using appropriate materials, equipment and procedures to prepare solutions
- following appropriate occupational health and safety (OHS), and hygiene procedures, if appropriate
- using all equipment safely and efficiently
- using enterprise procedures to calculate concentrations
- identifying solutions not fit for use
- using titrations to determine the concentration of solutions
- labelling, storing and disposing of solutions appropriately
- recording and presenting data appropriately

Required knowledge

Required knowledge includes:
- relevant biological, chemical, food and laboratory terminology
- principles of metrology
- the international system of units (SI)
- concentration terms, such as % w/w, % w/v, % v/v, ppm (mg/L) and molarity
- basic theory of acids, bases, salts, buffers and neutralisation
- enterprise procedures for preparing solutions
- calculations required to prepare specified amounts of solutions of specified concentration
- appropriate OHS procedure for preparing, handling and disposal of solutions
- use of material safety data sheets (MSDS)
- relevant health, safety and environment requirements
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Assessors should ensure that candidates can:
- prepare working solutions in compliance with relevant standards, appropriate procedures and/or enterprise requirements
- follow OHS procedures to safely use laboratory chemicals, glassware and equipment
- make up working solutions according enterprise procedures
- check existing stocks of solutions as being fit for purpose.

**Context of and specific resources for assessment**

This unit of competency is to be assessed in the workplace or simulated workplace environment.

This unit of competency may be assessed with:
- *MSL922001A Record and present data*
- *MSL943002A Participate in laboratory/field workplace safety.*

Resources may include:
- standard laboratory equipped with appropriate equipment and reagents
- SOPs and testing methods
- access to appropriate containers and storage facilities.

### Method of assessment

The following assessment methods are suggested:
- inspection of solutions prepared, labelled and stored by the candidate
- review of solution records and workplace documentation completed by the candidate
- feedback from peers and supervisors
- observation of the candidate preparing working solutions
- oral or written questioning.

In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess.
<table>
<thead>
<tr>
<th>EVIDENCE GUIDE</th>
<th>Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting.</th>
</tr>
</thead>
</table>
| This competency in practice        | **Manufacturing**  
When starting materials used for the manufacture of common household materials are in transit from the supplier to the manufacturer, they may degrade if subjected to conditions, such as heat, moisture, light and oxygen. Even when the supplier ships quality materials to the manufacturing plant, the materials may be sub-standard when they arrive. Quality control tests are designed to test starting materials to ensure they are within specification. For example, aspirin forms salicylic acid when stored under adverse conditions. Laboratory assistants prepare and monitor the quality of solutions, such as ferric chloride solution, which gives an intense violet colour when added to salicylic acid but gives no colour with aspirin. Absence of the violet colouration indicates that breakdown of the aspirin hasn’t occurred. |
| Biomedical                         | **Biomedical**  
A laboratory assistant made up 1 litre of buffer solution using buffer tablets and a 1 litre volumetric flask as specified in the method. To ensure the solution was suitable for use the assistant measured the pH and found it was within acceptable range. The assistant then appropriately labelled a storage vessel and stored the buffer according to requirements. By following enterprise procedures the shelf life of the buffer was maximised. |
<table>
<thead>
<tr>
<th><strong>Environmental</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>An environmental laboratory is contracted to determine the acidity of water samples taken from local lakes and streams. A laboratory assistant is required to make up small batches of 0.01M sodium hydroxide and to determine its concentration by titrating it against a standard solution of potassium acid phthalate using phenolphthalein indicator. This procedure is carried out monthly to ensure that the concentration of the sodium hydroxide solution is accurately known. Alternatively, the laboratory assistant may be required to prepare and standardise a fresh batch of sodium hydroxide on a monthly basis. In this case, he/she must understand the underpinning knowledge of basic acid/base theory, potential problems of interferences (such as slow absorption of carbon dioxide by sodium hydroxide solution) so as to ensure that the concentrations of workup solutions are accurately known. He/she must also be skilled in calculating and performing dilution when required to prepare such low concentrations (0.01M) of working solutions.</td>
</tr>

## RANGE STATEMENT

- standard operating procedures (SOPs)

### Concepts of metrology

Concepts of metrology may include:
- that all measurements are estimates
- measurements belong to a population of measurements of the measured parameters
- repeatability
- precision
- accuracy
- significant figures
- sources of error
- uncertainty
- traceability

### Typical test solutions

Typical test solutions may include:
- solutions required for diagnostic/analytical and limit tests in food and chemical laboratories, such as sulphates, chlorides and heavy metals
- solutions, such as stains for standard diagnostic/analytical procedures in biomedical/environmental laboratories, such as cell staining, fixation of cells and tissues, suspension of cells and titrimetric indicators
- solutions required for laboratory maintenance and disinfection, such as 70% ethanol and hypochlorite

### Laboratory equipment

Laboratory equipment may include:
- pH meters
- balances
- magnetic stirrers, water baths and hot plates
- measuring cylinders, beakers, conical flasks, volumetric flasks, pipettes and burettes
- filter papers and funnels
- fume cupboards

### Hazards

Hazards may include:
- corrosive chemicals, such as acids and alkalis
- sources of heat, such as burners
- sharps and broken glassware
- spillages

### Safety precautions

Safety precautions may include:
### RANGE STATEMENT

- use of MSDS
- use of personal protective equipment, such as safety glasses, gloves and coveralls
- correct labelling of reagents and hazardous materials
- handling and storing hazardous materials and equipment in accordance with labels, MSDS, manufacturer's instructions, and enterprise procedures and regulations
- regular cleaning and/or decontamination of equipment and work areas

### Monitoring quality of solutions

Monitoring quality of solutions may include:

- noting turbidity to exclude absorption of moisture
- noting deposits to exclude microbial contamination or chemical degradation
- noting crystals to exclude evaporation
- conducting titrations to check concentration
- noting colour changes indicating a pH shift with solutions containing indicators
- checking expiry dates on solution containers

### Occupational health and safety (OHS) and environmental management requirements

OHS and environmental management requirements:

- all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time
- all operations assume the potentially hazardous nature of samples and require standard precautions to be applied
- where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health

Unit Descriptor

| Unit descriptor | This unit of competency covers the ability to prepare trial batches of materials for evaluation. Materials can include soil, minerals and manufactured products, such as concrete, asphalt, food, plastics, paint and other industrial chemicals. |

Application of the Unit

| Application of the unit | This unit of competency is applicable to laboratory assistants working in all industry sectors. It describes work conducted by laboratory assistants, generally working under the guidance of a senior technician or laboratory supervisor/manager. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section ‘This competency in practice’. |

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for trial batch mixing | 1.1. Identify the job, materials, appropriate procedures and safety requirements  
1.2. Record description of the job to be undertaken, compare with specification and report any variations  
1.3. Select and prepare tools, equipment and materials in accordance with job requirements  
1.4. Confirm the properties and quantities of materials to be used  
1.5. Confirm that the required materials are available and ready for use |
| 2. Mix trial batch for evaluation | 2.1. Measure out quantities of materials ready for mixing  
2.2. Mix the materials according to established procedures  
2.3. Discharge the mixture ready for inspection and testing according to established procedures  
2.4. Record details of the mix and any observations according to established procedures |
| 3. Evaluate properties of the mixture by inspection and standard test methods | 3.1. Obtain representative samples of the mix for testing  
3.2. Perform specified tests according to established procedures  
3.3. Handle and transport samples in accordance with established procedures  
3.4. Label samples and record details in accordance with established procedures |
| 4. Clean equipment and dispose of materials | 4.1. Clean mixing, measuring, sampling and testing equipment after use  
4.2. Return unused materials to storage  
4.3. Dispose of excess materials safely and ethically |
| 5. Maintain records | 5.1. Record data in accordance with established procedures  
5.2. Maintain equipment records in accordance with established procedures  
5.3. Maintain confidentiality of enterprise information |
| 6. Maintain a safe work environment | 6.1. Use established safe work practices and personal protective equipment to ensure personal safety and that of other laboratory personnel  
6.2. Minimise the generation of wastes and environmental impacts |

### Required Skills and Knowledge

#### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- performing simple calculations
- making accurate measurements of volume and mass
- representative sampling
- working safely with equipment and hazardous materials
- working safely in laboratory and field conditions
- setting up and maintaining tools and equipment
- using tools and equipment to perform basic sampling and testing techniques
- observing and recording information on testing and sampling
- handling, transporting and storing materials
- observing interpreting and reporting atypical situations

#### Required knowledge

Required knowledge includes:

- the international system of units (SI)
- concepts of metrology
- the properties of mixing materials and how they affect the properties of the final product
- hazards involved with materials and equipment involved
- representative sampling
- uses of various materials/enterprise products
- basic testing methods for relevant materials
- enterprise traceability requirements
- relevant health, safety and environment requirements
### Evidence Guide

#### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.

Access must be provided to appropriate learning and/or assessment support when required.

The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.

Industry representatives have provided the case study below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting.

**Construction materials**

A laboratory assistant works for a concrete manufacturer. A client requires concrete for a specific project that cannot be supplied using existing standard mixes. The manufacturer must use special aggregates and cement to meet the durability and strength specifications for the project. The laboratory manager obtains quantities of the materials for evaluation purposes. The assistant tests the aggregates to determine their grading properties. From these results, he/she designs a mix to satisfy the project specifications using a standard design method. The mix requires the use of pozzolanic materials and admixtures that were obtained from the suppliers.

The manager provides the assistant with the batch quantities required to produce one cubic metre of concrete. To test the mix design, the assistant will produce a 20litre batch in the laboratory. He/she calculates that this quantity will provide sufficient material for the required tests, without undue waste. He/she calculates the quantity of each material required for the trial batch. The assistant selects and prepares the tools and equipment she needs to mix, sample and test the concrete. He/she wears overalls, safety boots and glasses, and uses a barrier cream. He/she measures out...
EVIDENCE GUIDE

| the quantities required for the trial batch, charges the mixer and allows it to mix for the specified time. He/she then discharges the concrete onto a suitable surface. He/she checks its slump, cohesiveness and air content, recording the data on standard enterprise forms. The manager inspects the concrete, and decides that it is over-sanded and has excessive slump. He/she adjusts the batch quantities and draws up amended values. He/she disposes of the excess concrete and cleans the equipment and tools. He/she then mixes a new batch using the amended figures. This process continues until the manager is satisfied with the concrete quality. He/she then mixes a larger batch so that he/she can prepare specimens for testing its hardened-state properties. |
# Range Statement

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:
- interpreting and following enterprise standard operating procedures (SOPs)
- determining equivalence points using indicators and graphical methods
- using calculation methods, including appropriate units, uncertainties, balancing equations, the concentration of the solution given the chemical reaction for the titration
- using apparatus and reagents to prepare standard solutions such as balances and volumetric glassware
- selecting and using primary and secondary standards and indicators
- performing quality assurance checks for solution performance
- performing titrations
- recognising control results that are not within acceptable range
- interpreting and using safety information, such as that provided by material safety data sheets (MSDS) and follow relevant safety procedures

### Required knowledge

Required knowledge includes:
- solution terminology, chemistry of acids, bases, buffers, redox reactions and complexiometric reactions
- concepts of metrology
- grades of glassware, reagents and their use
- reactions used for standardisation and desirable characteristics
- enterprise communication and reporting procedures
- occupational health and safety (OHS) procedures, including those for using corrosive materials
- relevant health, safety and environment requirements
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Assessors should ensure that candidates can:
- use balances and volumetric glassware
- select and use primary and secondary standards
- select and use indicators
- perform quality assurance checks for solution performance
- perform titrations using laboratory procedures with required accuracy and precision and within required timelines
- calculate the concentration of the solution given the chemical reaction for the titration
- recognise control results that are not within acceptable range
- record results to enterprise standards
- label and store solutions in accordance with enterprise procedures
- interpret and follow enterprise SOPs
- interpret and use safety information, such as that provided by MSDS and follow relevant safety procedures.

### Context of and specific resources for assessment

This unit of competency is to be assessed in the workplace or simulated workplace environment.

This unit of competency may be assessed with:
- *relevant MSAL974000 series units of competency, and*
- *relevant MSAL975000 series units of competency dealing with sampling, tests and measurements.*

Resources may include:
- standard laboratory equipped with appropriate volumetric equipment
- laboratory reagents and equipment
- SOPs and testing methods.

### Method of assessment

The following assessment methods are suggested:
## EVIDENCE GUIDE

- inspection and/or testing of solutions prepared by the candidate
- review of records and workplace documentation completed by candidate
- review of work outputs by the candidate over time to ensure accuracy, consistency and timeliness
- feedback from peers and supervisors
- observation of the candidate preparing, standardising and using a range of solutions
- oral or written questioning.

In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.

Access must be provided to appropriate learning and/or assessment support when required.

The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.

### This competency in practice

Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting.

**Manufacturing**

A standard solution is used to determine the concentration of unknown solutions. The quality of these analyses is critically related to the accuracy with which the concentration of the standard solution is known. Therefore, laboratory technicians spend considerable effort to ensure that the materials and methods used for the preparation and standardisation will lead to a solution of accurately known concentration. For example, anhydrous sodium carbonate is often used to prepare solutions to determine the concentrations of acids. The sodium carbonate is heated at a suitable temperature to remove any trace of moisture and cooled in a dessicator. An appropriate quantity is dissolved in distilled water.
and made up to volume in a volumetric flask. This solution of known concentration is then titrated with acids of unknown concentration and the concentration of the acids determined.

**Environmental**

A laboratory technician was required to determine the total acidity of a water sample as part of a quality control program. The total acidity was measured by titrating the water sample with sodium hydroxide of known concentration using an appropriate indicator. The concentration of the sodium hydroxide was determined via a volumetric titration against a primary standard of potassium hydrogen phthalate.

The value of the total acidity was determined by multiplying the volume of sodium hydroxide used with a numerical 'factor' which had been determined by the laboratory supervisor in order to save time. The value of the 'factor' was displayed on the titration equipment. However, a new technical assistant did the full calculation and found that his/her result differed slightly from that obtained using the 'factor'. After discussion with the laboratory supervisor it was agreed that the error was in the 'factor' and the assumption that each new batch of sodium hydroxide prepared was exactly the same concentration as all previous batches. This was incorrect as the concentration of each batch differed slightly and its actual concentration was determined accurate, using the primary standard. The procedure was changed so that the full calculation was required for all tests.
### Range Statement

<table>
<thead>
<tr>
<th>RANGE STATEMENT</th>
</tr>
</thead>
</table>

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit of competency covers the ability to interpret chemical test requirements, prepare samples, conduct pre-use and calibration checks on equipment and perform routine chemical tests/procedures. These tests will involve several measurement steps. The unit includes data processing and interpretation of results and tracking of obvious test malfunctions where the procedure is standardised. However, personnel are not required to analyse data, optimise tests/procedures for specific samples or troubleshoot equipment problems where the solution is not apparent. |

Application of the Unit

| Application of the unit | This unit of competency is applicable to laboratory or technical assistants and instrument operators in all industry sectors. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section ‘This competency in practice’. |

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- interpreting test methods and procedures
- sample preparation procedures
- performing calibration checks
- using instruments for qualitative and/or quantitative analysis
- maintaining and evaluating reagents
- troubleshooting basic equipment/method
- using calculation methods, including appropriate units, uncertainties, balancing equations, and the concentration of the solution given the chemical reaction for the titration
- preparing calibration graphs and calculating results using appropriate units and precision
- applying theoretical knowledge to interpret gross features of data and make relevant conclusions such as identifying atypical results as out of normal range or an artefact
- tracing and sourcing obvious causes of an artefact
- recording and communicating results in accordance with enterprise procedures
- maintaining security, integrity, traceability of samples, sub-samples, test data, results and documentation

### Required knowledge

Required knowledge includes:

- chemical principles and concepts underpinning test/procedure
- purpose of the tests
- concepts of metrology
- principles and concepts related to equipment/instrument operation and testing
- function of key components of the equipment/instrument and/or reagents
- effects of modifying equipment/instrument variables
- use of calibration procedures
- enterprise and/or legal traceability requirements
- relevant health, safety and environment requirements
Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<tr>
<th>Method of assessment</th>
<th>The following assessment methods are suggested:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• review of test data/results obtained by the candidate</td>
</tr>
</tbody>
</table>
### EVIDENCE GUIDE

| Over a period of time to check accuracy, consistency and timeliness of results |
| - review of test records and workplace documentation completed by the candidate |
| - observation of candidate conducting a range of chemical tests and procedures and sample preparation |
| - feedback from peers and supervisors |
| - oral or written questioning of chemical principles and concepts, test methods and enterprise procedures. |

In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.

Access must be provided to appropriate learning and/or assessment support when required.

The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.

### This competency in practice

Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting.

**Manufacturing**

Ultraviolet spectroscopy is a suitable method for determining the concentration of sulphanilamide in pharmaceutical preparations. The ultraviolet absorption spectrum is pH dependent, with the wavelength maximum different in acid and alkaline solutions.

Example: a technician was conducting an analysis and noted that the wavelength maxima had moved from approximately 250nm to below 230nm. After reviewing the procedure being used and checking for possible errors, the technician found that an incorrect solvent had been used for the analysis. The hydrochloric acid solvent was replaced with sodium hydroxide, as per the standard method, and the correct absorption spectrum was obtained.
### Environmental

A technician was asked to test water samples from a local lake over several days to determine the lake's nutrient levels following reports of algal blooms in the lake over the preceding weeks. He/she used a field colorimeter kit to determine both nitrates and orthophosphates using SOPs. Because the same colorimetric cells were used for the nitrate and orthophosphate tests, they were carefully washed and rinsed with distilled water between all tests (as specified in the SOP). After reviewing the results from the first three days, the technician noted that the first orthophosphate result, which was done immediately after all the nitrate tests, was much higher than subsequent orthophosphate tests which were all consistently low. The technician argued that the 'high' results for the first orthophosphate test may be due to cross-contamination from trace amounts of reagents used in previous nitrate tests despite having closely followed the cleaning/rinsing SOPs. After discussion with his/her supervisor, the technician modified the field procedures by using totally different colorimetric cells for the nitrate and orthophosphate tests. For all subsequent tests no 'high' orthophosphate results were obtained for the first sample. As a result, the laboratory supervisor amended the SOPs to incorporate this new requirement.

### Food processing

Regular checks are conducted on the percentage of salt in cheese at a dairy company's laboratory. A technician checks the results from the atomic salt-titration equipment and, if the results are abnormal, notifies the supervisor before taking appropriate action. After obtaining a high result, for example, the assistant notified the supervisor and then began checking the machine to identify a possible reason for the high reading. He/she found that the supply bottle of silver nitrate used in the test was almost empty. This had resulted in less solution being pumped through the equipment than required, leading to graph readings that indicated a high percentage of salt. After replacing the silver nitrate bottle and recalibrating the equipment, the assistant retested the cheese samples and found that they contained the expected 1-2% salt.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Non-instrumental test/procedures | Non-instrumental test/procedures may include:  
- gravimetric analysis:  
  - loss on drying  
  - suspended solids  
  - ashes, such as sulphated and gravimetric assays (e.g. sulphates and nitrogen in fertilisers)  
  - Ni by dimethylglyoxime  
  - bitumen content of asphaltic concrete |
## RANGE STATEMENT

- titrimetric analysis:
  - acid/base determinations
  - complexiometric, such as water hardness, Fe by dichromate and binder content analysis
  - redox, such as precipitation of chlorides in water
  - dissolved oxygen (DO), chemical oxygen demand (COD) and biochemical oxygen demand (BOD)
  - filtration, separation and solvent extraction techniques
  - corrosion testing, cement content and accelerated weathering

### Instrumental tests

- Instrumental tests may include:
  - spectrometry
  - chromatography
  - electrochemistry

### Types of instrumentation and instrumental techniques

- Types of instrumentation and instrumental techniques may include:
  - colorimetric techniques, such as enzyme activity, chlorine in water, specific cations and anions
  - infrared, ultraviolet-visible (UV-VIS) spectrophotometry
  - other spectrometric techniques:
    - fluorimetric analysis, flame atomic emission and flame atomic absorption spectrometry
    - fourier transform infrared
  - chromatographic techniques:
    - column and thin layer analytical and preparative chromatography
    - gas or liquid chromatography for purity, raw material and formulation checks
    - ion chromatography for detection of nitrates, phosphates, sulphates, chlorides and bromides
    - gel filtration chromatography for purification of proteins
### RANGE STATEMENT

- electrochemical techniques, such as pH, eH, conductivity and ion-selective electrodes
- electrophoretic techniques for DNA patterns and determination of protein purity
- soil testing:
  - moisture content
  - organic matter content
  - specific anions and cations
- auto-analysers for determination of total P, total Kjeldahl N, orthophosphate, nitrite/nitrate and ammonia

### Chemical principles and concepts

Chemical principles and concepts may include:
- ions, atoms, molecules, bonding and links to chemical properties
- chemical reactions involving acid/base, redox, complex ion formation, solubility and equilibrium
- energy levels and absorption/emission spectra

### Chemical tests methods

Chemical tests methods may include:
- control of starting materials, in-process materials and finished products
- environmental monitoring
- basic troubleshooting and/or problem solving within the scope of SOPs and enterprise processes

### Hazards

Hazards may include:
- chemicals:
  - acids (e.g. sulphuric, perchloric and hydrofluoric)
  - heavy metals and pesticides
  - anions (e.g. fluoride)
  - hydrocarbons (e.g. mono-aromatics)
  - aerosols from broken centrifuge tubes, pipetting
  - sharps and broken glassware
  - flammable liquids and gases
  - cryogenics, such as dry ice and liquid nitrogen
  - fluids under pressure, such as hydrogen in gas liquid chromatography, acetylene in atomic
## RANGE STATEMENT

| | absorption spectrometry  
| | • sources of ignition  
| | • high-temperature ashing processes  
| | • disturbance or interruption of services |

### Hazard control measures:

Hazard control measures may include:

- ensuring access to service shut-off points
- recognising and observing hazard warnings and safety signs
- labelling of samples, reagents, aliquoted samples and hazardous materials
- handling and storage of hazardous materials and equipment in accordance with labelling, MSDS and manufacturer's instructions
- identifying and reporting operating problems or equipment malfunctions
- cleaning and decontaminating equipment and work areas regularly using enterprise procedures
- using personal protective clothing and equipment, such as gloves, safety glasses and coveralls
- using containment facilities (PCII, PCIII and PCIV physical containment laboratories), containment equipment (biohazard containers, laminar flow cabinets, Class I, II and III biohazard cabinets) and containment procedures
- reporting abnormal emissions, discharges and airborne contaminants, such as noise, light, solids, liquids, water/waste water, gases, smoke, vapour, fumes, odour and particulates to appropriate personnel

### Records

Records may include:

- test and calibration results
- equipment use, maintenance and servicing history
- faulty or unsafe equipment

### Occupational health and safety (OHS) and environmental management requirements

OHS and environmental management requirements:

- all operations must comply with enterprise OHS and environmental management
### RANGE STATEMENT

MSL974005A Perform physical tests

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit of competency covers the ability to interpret physical test requirements, prepare samples, conduct pre-use and calibration checks on equipment and perform routine physical tests. These tests will involve several measurement steps. The unit includes data processing and interpretation of results and tracking of obvious test malfunctions where the procedure is standardised. However, personnel are not required to analyse data, optimise tests/procedures for specific samples or troubleshoot equipment problems where the solution is not apparent. |

Application of the Unit

| Application of the unit | This unit of competency is applicable to laboratory or technical assistants and instrument operators working in the manufacturing, environment, food and construction materials testing industry sectors. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'. |

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:

- using instruments for qualitative and/or quantitative analysis
- interpreting test methods and procedures
- sample preparation procedures
- performing calibration checks
- metrology techniques underpinning test/procedure including estimating uncertainty
- using instruments for qualitative and/or quantitative analysis
- maintaining and evaluating reagents
- troubleshooting basic equipment/method
- preparing calibration graphs and calculating results using appropriate units and precision
- applying theoretical knowledge to interpret gross features of data and make relevant conclusions such as identifying atypical results as out of normal range or an artefact
- tracing and sourcing obvious causes of an artefact
- recording and communicating results in accordance with enterprise procedures
- maintaining security, integrity, traceability of samples, sub-samples, test data, results and documentation

#### Required knowledge

Required knowledge includes:

- physical principles and concepts underpinning the test/procedure
- purpose of tests
- function of key components of the equipment/instrument
- effects on test of modifying equipment/instrument variables
- sample preparation procedures
- concepts of metrology
- basic equipment/method troubleshooting procedures
- enterprise and/or legal traceability requirements
- relevant health, safety and environment requirements
## Evidence Guide

### EVIDENCE GUIDE

EVIDENCE GUIDE

- review of test records and workplace documentation completed by the candidate
- observation of candidate conducting a range of physical tests and procedures and sample preparation
- feedback from peers and supervisors
- oral or written questioning of physical principles and concepts, test methods and enterprise procedures.

In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.

Access must be provided to appropriate learning and/or assessment support when required.

The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.

This competency in practice

Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting.

**Manufacturing**

A technical assistant was measuring the specific density of a shipment of glycerol using a standard laboratory procedure. The result did not agree with the manufacturer's certificate of analysis. The assistant notified the manufacturer who came to the plant and checked the delivered material. It had been raining while the glycerol was in transit and rain water had entered the drum, diluting the glycerol. The drum was returned to the manufacturer and a new drum was supplied to the manufacturing plant. The manufacturer investigated the seals on the glycerol drums and took action to ensure that new seals would protect the product in transit.

**Food processing**

A technician was testing the melt flow index of a new type of polymer that was to be used as a sealant for
<table>
<thead>
<tr>
<th>EVIDENCE GUIDE</th>
</tr>
</thead>
<tbody>
<tr>
<td>packages of freeze dried coffee. The technician measured the melt flow rate and found it was much too high. The technician then checked the melt flow equipment as per the manufacturer's directions and found the machine was out of calibration. After recalibration using recommended standards, another sample was obtained and retested. This time, the polymer was within specification and was released for use in production.</td>
</tr>
</tbody>
</table>
Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. MSL974010A Perform mechanical tests

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit of competency covers the ability to interpret mechanical test requirements, prepare samples, conduct pre-use and calibration checks on equipment and perform routine mechanical tests. These tests will involve several measurement steps. The unit includes data processing and interpretation of results and tracking of obvious test malfunctions where the procedure is standardised. However, personnel are not required to analyse data, optimise tests/procedures for specific samples or troubleshoot equipment problems where the solution is not apparent. |

Application of the Unit

| Application of the unit | This unit of competency is applicable to laboratory or technical assistants and instrument operators working in the manufacturing, food and construction materials testing industry sectors. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'. |

Licensing/Regulatory Information

### Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Interprett and schedule test requirements | 1.1. Review test request to identify samples to be tested, test method and equipment/instruments involved  
1.2. Identify hazards and enterprise control measures associated with the sample, preparation/test methods and/or equipment  
1.3. Plan work sequences to optimise throughput of multiple samples, if appropriate |
| 2. Receive samples and prepare test pieces | 2.1. Log samples using standard operating procedures (SOPs)  
2.2. Record sample description, compare with specification and note and report discrepancies  
2.3. Prepare test pieces, and standards if appropriate, in accordance with mechanical testing requirements  
2.4. Ensure traceability of samples from receipt to reporting of results |
| 3. Check equipment before use | 3.1. Set up equipment/instruments in accordance with test method requirements  
3.2. Perform pre-use and safety checks in accordance with relevant enterprise and operating procedures  
3.3. Identify faulty or unsafe components and equipment and report to appropriate personnel  
3.4. Check equipment calibration using specified procedures, if applicable  
3.5. Quarantine out-of-calibration equipment/instruments |
| 4. Test samples to determine mechanical properties | 4.1. Operate equipment/instruments in accordance with test method requirements  
4.2. Perform tests/procedures on all test pieces and standards, if appropriate in accordance with specified methods  
4.3. Shut down equipment/instruments in accordance with operating procedures |
| 5. Process and interpret data | 5.1. Record test data noting atypical observations  
5.2. Ensure calculated values are consistent with expectations  
5.3. Record and report results in accordance with enterprise procedures  
5.4. Estimate and document uncertainty of measurement in accordance with enterprise procedures, if required  
5.5. Interpret trends in data and/or results and report out |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- using instruments for qualitative and/or quantitative analysis
- interpreting test methods and procedures
- sample preparation procedures
- performing calibration checks
- metrology techniques underpinning test/procedure including estimating uncertainty
- using instruments for qualitative and/or quantitative analysis
- maintaining and evaluating reagents
- troubleshooting basic equipment/method
- preparing calibration graphs and calculating results using appropriate units and precision
- applying theoretical knowledge to interpret gross features of data and make relevant conclusions such as identifying atypical results as out of normal range or an artefact
- tracing and sourcing obvious causes of an artefact
- recording and communicating results in accordance with enterprise procedures
- maintaining security, integrity, traceability of samples, sub-samples, test data, results and documentation

Required knowledge

Required knowledge includes:

- mechanical principles and concepts underpinning the test/procedure
- purpose of tests
- metrology techniques underpinning test/procedure
- principles and concepts related to equipment/instrument operation and testing
- function of key components of the equipment/instrument
- effects on test of modifying equipment/instrument variables
- sample preparation procedures
- basic equipment/method troubleshooting procedures
- calibration procedures
- calculation steps to give results in appropriate units and precision
- enterprise and/or legal traceability requirements
- relevant health, safety and environment requirements
**Evidence Guide**

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</tr>
</tbody>
</table>

In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.

Access must be provided to appropriate learning and/or assessment support when required.

The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.

### This competency in practice

Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting.

#### Construction materials

A technical assistant is responsible for compressive strength testing of concrete cylinders. Typically, there are 20 to 30 to be tested each day. On arrival in the morning the assistant records the maximum and minimum temperatures of the curing tanks, locates the particular cylinders to be tested and removes them from the tanks. She/he dries each cylinder, weighs it and measures its diameter and length using a comparator gauge. The ends are checked for excessive roughness and non-parallelism. She/he then starts the compression test machine and checks that the load pacer is set to the correct loading rate. She/he places a rubber cap on the finished end of each cylinder in turn and places it centrally on the platen of the load frame. The assistant closes the protective screen, applies load at the specified rate until failure occurs, and records the maximum load. After the
### EVIDENCE GUIDE

<table>
<thead>
<tr>
<th>Cylinder has failed, the assistant removes it from the platen and checks for invalid failure modes. When this occurs (e.g., a shear failure) she/he puts the cylinder aside for further investigation. Any debris is removed from the platen and the next cylinder is tested. When all cylinders have been tested, the assistant cleans away any material left on the compression machine and switches it off. She/he enters all the data in into the laboratory information management system (LIMS) which calculates the unit mass and ultimate compressive strength of each cylinder. Finally, the assistant reviews the data for unusual or unexpected results that may indicate an error.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Manufacturing</strong></td>
</tr>
<tr>
<td>A technician is asked to test a new polymeric material that is to be used to manufacture children's toys. The technician makes several representative test pieces and measures the elastic properties of the polymer as well as the durability of the polymer to flex many times without cracking. Because the polymer is to be used in a toy, the technician also dispatches samples of the polymer for chemical testing by a consulting laboratory to determine whether any toxic monomer could leach out if a child sucked the toy.</td>
</tr>
</tbody>
</table>
## Range Statement

<table>
<thead>
<tr>
<th>RANGE STATEMENT</th>
</tr>
</thead>
<tbody>
<tr>
<td>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</td>

**Mechanical principles and concepts underpinning the test/procedure**

Mechanical principles and concepts underpinning the test/procedure may include:

- matter, interatomic and intermolecular forces and states of matter
- mass, weight, forces, pressure and energy
- cohesive/adhesive forces, friction and slip resistance
- elasticity, hardness, ductility, malleability, strength of materials, elastic limit, elastic moduli and ultimate stress
- electrical concepts, including electric field, voltage, current, resistance and AC/DC
- elasticity, hardness, strength of materials, plasticity, permeability and dispersion

**Preparation of samples and test pieces**

Preparation of samples and test pieces may include processes such as:

- cutting
- trimming
- machining
- etching

**Mechanical tests and procedures**

Mechanical tests and procedures may include:

- adhesive strength
- elastic properties and strength of materials
- slip resistance and friction
- viscosity and torque
- creep and endurance
- abrasion, hardness, impact, indent and penetration resistance
- pressure and/or vacuum testing using manometers and load cells

**Tests**

Tests may include methods for:

- control of starting materials, in-process materials and finished products

MSL975007A Supervise sampling, inspections and testing at construction sites

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit of competency covers the ability to supervise and direct the placement of materials such as soil, concrete and asphalt at a construction site. The unit involves confirming the requirements of the inspection and testing plans, liaising with site personnel and organising sampling and testing activities, collecting reliable data and reporting results. Personnel are also expected to interpret results in the field, provide reliable advice to construction personnel, recognise and rectify obvious errors or unexpected results and troubleshoot common problems. |

Application of the Unit

| Application of the unit | This unit of competency is applicable to technical officers working in the construction materials testing sector. This unit of competency is typically performed by experienced technicians or engineering paraprofessionals, who often supervise or direct less experienced technical personnel. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These can be found at the end of this unit of competency under the section 'This competency in practice'. |

| 1. Prepare for on-site operations | 1.1. Identify the job, consult with the client and obtain relevant information, including the level of supervision required, drawings and specifications  
1.2. Select equipment and materials required for the job  
1.3. Identify site hazards and the personal protective equipment and safety procedures specified for job  
1.4. Organise site induction for self and support personnel as required  
1.5. Record description of the job to be undertaken, compare with specification and resolve any variations  
1.6. Select suitable transport for site access  
1.7. Brief support personnel on job-specific requirements |
| 2. Establish on-site operations | 2.1. Consult with the site superintendent to determine methods of communication, roles, responsibilities and expectations of each party, including identification of potential problems and conflicts  
2.2. Set up facilities for supervision, testing and sample storage  
2.3. Inspect the site to determine the characteristics of the project, including survey control points  
2.4. Design inspection, sampling and testing program in accordance with specifications |
| 3. Supervise materials placement | 3.1. Conduct inspection, sampling and testing in accordance with project requirements  
3.2. Direct and advise the site superintendent based on test results and observations  
3.3. Record test data and observations in accordance with enterprise practices  
3.4. Remit samples to the base laboratory for testing as required  
3.5. Ensure cleaning of equipment does not cause environmental damage  
3.6. Supervise the removal of equipment and materials from site |
| 4. Analyse project data and report to client | 4.1. Report test results to site superintendent at specified intervals  
4.2. Analyse project data and provide reports to client in the agreed format and at agreed times |

Required Skills and Knowledge

**Required skills include:**

- identifying and describing materials used in civil construction
- directing materials placement operations
- reading and interpreting site plans, specifications and codes to determine sampling locations and frequencies
- identifying and locating sampling and testing sites and taking representative samples
- setting up and maintaining tools and equipment
- measuring and estimating elevations, lengths, areas and volumes
- observing and recording project information in writing, by sketching and photography
- using tools and equipment to perform required sampling and insitu testing
- working safely with equipment and around civil construction plant and sites
- driving safely on and off-road
- cleaning equipment before leaving site in compliance with environmental authority requirements
- handling, transporting and storing samples
- comparing test results with specifications
- resolving problems appropriately
- seeking advice about problems beyond technical competence from appropriate personnel
- report writing
- using computer software to create/maintain databases and produce detailed reports

**Required knowledge**

**Required knowledge includes:**

- engineering properties of civil construction materials relevant to job role
- techniques used in civil construction
- plant and equipment used in civil construction
- insitu and laboratory test methods and their application to various materials
- roles and responsibilities for different levels of supervision
- relevant health, safety and environment requirements
**Evidence Guide**

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### This competency in practice

Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting.

**Construction materials (1)**

A geotechnical consultancy company has been contracted to provide level-one supervision for a commercial development in accordance with AS3798 - *Guidelines on earthworks for commercial and residential developments*. This will involve the construction of roadways, building pads and parking areas for heavy vehicles. A senior technician has been placed in charge of the project with an experienced tester to assist with routine testing and supervision. The principal contractor has provided copies of specifications, drawings and local authority requirements for this type of project. The project will involve clearing and stripping, setting-out (by contract surveyors), cut-to-fill, drainage, sewer lines and other services and construction of roadways and building pads. The supervision will be carried out in accordance with local authority requirements. Testing will involve measuring in situ densities of fill (including trench backfill) and road base materials. California Bearing Ratio (CBR) tests will be used as an aid in determining pavement thicknesses. Additional tests will be used to monitor the quality of pavement materials supplied from a local quarry. This will involve both on-site and off-site testing and require liaison with off-site personnel to ensure that the testing is timely and
as specified. Based on test results and direct observations, the technician is able to direct and advise the contractor's operators so that the materials are correctly placed and compacted. Test locations are marked on drawings and sketches and photographs used to record details of the project. Detailed daily records are used to prepare monthly reports for the contractor, accompanied by test certificates. Office staff use this information to invoice the client. The technician monitors the project to avoid exceeding the project budget. When the project is finished, the technician prepares a completion report, including all test results, site observations and a scale drawing showing all filled areas and reviews the information as a guide to planning and costing future projects.

**Construction materials (2)**

A concrete supply company has been contracted to provide supervision and technical support for a high-rise commercial development. This will involve pumping concrete for placement up to forty floors. A senior technician has been placed in charge of the project with an experienced tester to assist with routine testing and supervision. The principal contractor has provided copies of specifications and drawings. The project will involve supervising the placement of concrete. Testing for consistency will be required for each truckload. Compressive strength cylinders and a flexure beam will be required for every fifth truckload and a shrinkage bar for each day's production. This will involve both on-site and off-site testing and require liaison with off-site personnel to ensure that the testing is timely and as specified. Based on test results and direct observations, the technician is able to direct the batch plant how to adjust the mix to improve its pumpability and advise the contractor's operators so that the materials are correctly placed and compacted.

**Construction materials (3)**

An asphalt supply company has been contracted to provide supervision and technical support for a runway upgrade at a major regional airport. This will involve laying asphalt so that airport operations are not impeded. A senior technician has been placed in charge of the project with an experienced tester to assist with routine testing and supervision. The principal contractor has
<table>
<thead>
<tr>
<th>EVIDENCE GUIDE</th>
</tr>
</thead>
<tbody>
<tr>
<td>provided copies of specifications and drawings and a Gantt chart showing the critical stages of the project. Testing for asphalt temperature will be required for each truckload. Nuclear density tests and core samples will be required for each lot. This will involve both on-site and off-site testing and require liaison with off-site personnel to ensure that the testing is timely and as specified. Based on test results and direct observations, the technician is able to advise the contractor's operators so that the materials are correctly placed and compacted.</td>

## Range Statement

<table>
<thead>
<tr>
<th>Codes of practice</th>
<th>Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used</th>
</tr>
</thead>
</table>

### Standards, codes, Procedures and/or enterprise requirements may include:

- Australian and international standards, such as:
  - AS ISO 1000-1998 The international system of units (SI) and its application
  - AS ISO 17025-2005 General requirements for the competence of testing and calibration laboratories
  - AS/NZS ISO 14000 Set:2005 Environmental management standards set
  - AS/NZS ISO 9000 Set:2008 Quality management systems set
  - calibration and maintenance schedules
  - enterprise recording and reporting procedures
  - environmental legislation and regulations
  - equipment manuals
  - equipment startup, operation and shutdown procedures
  - industry codes of practice
  - material, production and product specifications
  - National Association of Testing Authorities (NATA) documents regarding construction materials testing
  - occupational health and safety (OHS) national standards and codes of practice
  - production and laboratory schedules
  - quality manuals
  - standard operating procedures (SOPs)

### Tools and equipment

Tools and equipment used may include:

- sampling equipment including moulds and coring equipment
- hand tools, including shovels, crowbars,
**RANGE STATEMENT**

</tr>
<tr>
<td>• still/video camera</td>
</tr>
<tr>
<td>• two-way radio and mobile telephone</td>
</tr>
<tr>
<td>• levelling equipment and global positioning system (GPS) receiver</td>
</tr>
</tbody>
</table>

**Site hazards**

Site hazards may include:

- solar radiation, dust and noise
- manual handling of heavy materials and equipment
- falling objects, slips, trips and fall hazards
- vehicular and pedestrian traffic

**Safety procedures**

Safety procedures may include:

- use of material safety data sheets (MSDS)
- use of personal protective equipment, such as hard hats, hearing protection, sunscreen, gloves, masks, goggles, coveralls, safety boots and high visibility clothing
- handling, and storage of hazardous materials and equipment in accordance with labels, MSDS, manufacturer's instructions, enterprise procedures and regulations
- regular cleaning of equipment and vehicles
- machinery guards
- signage, barriers, flashing lights and traffic control

**Typical problems**

Typical problems include:

- uncooperative site personnel
- non-conformances leading to confrontation with other personnel
- delays in obtaining test results
- damage to services, materials and site conditions
- displaced, missing and inaccurate survey markers

MSL975016A Perform complex tests to measure engineering properties of materials

Modification History

Not applicable.

Unit Descriptor

| Unit descriptor | This unit of competency covers the ability to prepare test specimens and perform multi-stage mechanical tests on them. The unit requires personnel to create test conditions that suit the materials intended use, optimise measurement procedures and recognise critical measurement points during the tests.

The unit also covers data analysis and troubleshooting procedures/equipment that have led to atypical data or results. |

Application of the Unit

| Application of the unit | This unit of competency is applicable to laboratory personnel in the construction materials, mining and manufacturing industry sectors.

Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting, at the end of this unit of competency under the section 'This competency in practice'. |

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Interpret and schedule test requirements | 1.1. Review test request and sample documentation to identify required test parameters and intended use of bulk material  
1.2. Identify hazards and enterprise control measures associated with the sample, preparation/testing methods and equipment  
1.3. Inspect samples, compare with specifications, record and report discrepancies  
1.4. Liaise with client when samples and/or request forms do not comply with enterprise procedures  
1.5. Match required parameters with suitable test methods, available equipment and instrument specifications  
1.6. Plan parallel work sequences to optimise throughput of multiple sets of samples, as required |
| 2. Prepare and measure test specimens | 2.1. Prepare test specimens in accordance with test method  
2.2. Conduct preliminary measurements to establish initial dimensions and conditions  
2.3. Store test specimens and residual sample materials to maintain their integrity |
| 3. Check equipment before use | 3.1. Set up equipment/instruments in accordance with test method  
3.2. Perform pre-use and safety checks in accordance with enterprise procedures and manufacturers specifications  
3.3. Identify faulty or unsafe components and equipment and report to appropriate personnel  
3.4. Check calibration status of equipment and quarantine out of calibration or faulty items |
| 4. Test samples | 4.1. Position and secure test specimen in test equipment/instrument  
4.2. Conduct preliminary measurements to determine optimum test conditions and instrument settings  
4.3. Perform each measurement stage in sequence, terminating each stage at the appropriate end point  
4.4. Record all test measurements, observations and factors that may impact on quality of results  
4.5. Remove test piece and conduct post-test measurements |
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>4.6.</td>
<td>Shut down equipment and store used test pieces in accordance with enterprise procedures</td>
</tr>
</tbody>
</table>
| 5. Process and analyse data  | 5.1. Confirm data is the result of valid measurements  
5.2. Perform required calculations and ensure results are consistent with estimations and expectations  
5.3. Record results with the appropriate accuracy, precision and units  
5.4. Estimate and document uncertainty of measurement in accordance with enterprise procedures, if required  
5.5. Analyse trends in data and/or results and report out of specification or atypical results promptly to appropriate personnel  
5.6. Troubleshoot procedure or equipment problems which have led to atypical data or results                                                                 |
| 6. Maintain a safe work environment | 6.1. Use established safe work practices to ensure personal safety and that of other laboratory personnel  
6.2. Minimise the generation of wastes and environmental impact  
6.3. Ensure the safe disposal of laboratory wastes  
6.4. Clean, care for and store equipment and consumables in accordance with enterprise procedures                                                                 |
| 7. Maintain laboratory records | 7.1. Enter approved data and results into laboratory information management system  
7.2. Maintain security and confidentiality of enterprise information and laboratory data  
7.3. Maintain equipment and calibration logs in accordance with enterprise procedures |
## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills include:

- interpreting client requests, complex tests and sample preparation methods accurately
- applying enterprise procedures
- planning work sequences involving multiple/parallel tasks
- interpreting safety information, such as material safety data sheets (MSDS) and working safely
- checking and using test equipment in accordance with enterprise procedures
- maintaining concentration and applying multi-stage test methods accurately
- estimating/calculating scientific quantities (e.g. total and effective stress, strain and pressure)
- using calibration charts
- interpreting significant features of data and graphs and making logical conclusions
- identifying atypical data, errors and unexpected results and tracing any obvious causes
- recording and presenting results accurately and legibly
- maintaining security, integrity and traceability of all samples/test pieces, data/results and technical records
- cleaning and maintaining equipment
- seeking advice from a supervisor
- communicating with clients or outside service technician
- demonstrating a professional approach and positive company/organisation image

### Required knowledge

Required knowledge includes:

- complex test methods routinely used in job role, including:
  - purpose and principles of test
  - relationship between the engineering properties and uses of construction materials
  - key sample preparation stages
  - key treatment/measurement stages
  - calculation steps to give results in appropriate units and precision
  - expected values for sample type
  - sources of uncertainty and methods for their control
  - principles and concepts underpinning the test method, such as:
### REQUIRED SKILLS AND KNOWLEDGE

- stress, strain, pressure, total and effective stress, fatigue, creep, failure modes of materials, strength/consolidation of materials and permeability
- electrical safety concepts including voltage, current, resistance, conductors/insulators and AC/DC
- principles and concepts related to equipment/instrument operation including the function of key components and effects on test of modifying variables
- pre-use checks and operating procedures for test equipment/instruments routinely used in job role
- basic equipment/method troubleshooting procedures
- enterprise and/or legal traceability requirements for samples, test pieces, test data and results
- procedures for recording and reporting test results, calculations, test observations and unexpected or atypical results and equipment problems
- health, safety and environmental management requirements relevant to job role
- confidentiality requirements relevant to job role
# Evidence Guide

## EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors should ensure that candidates can:

- select test methods, operating parameters and test ranges to suit the material and its intended use
- prepare and orient test pieces precisely
- safely set up, start up and shut down equipment
- maintain close attention to measurement procedures, accuracy and precision during lengthy complex tests
- calculate/determine required engineering properties with appropriate accuracy, precision and units
- recognise atypical data/results and trace artefacts and problems with procedures or equipment
- record and report data/results in accordance with enterprise procedures
- maintain security, integrity and traceability of all samples, test pieces and documentation.

#### Context of and specific resources for assessment

This unit of competency is to be assessed in the workplace or simulated workplace environment.

This unit of competency may be assessed with:

- MSL925001A Analyse data and report results.

Resources may include:

- engineering materials testing laboratory with appropriate test equipment, instruments and samples
- SOPs and test methods.

#### Method of assessment

The following assessment methods are suggested:

- review of results obtained by the candidate over a period of time to ensure accurate and consistent results are obtained within required timelines
- inspection of testing records and workplace documentation completed by the candidate
- observation of candidate conducting a range of complex tests on engineering materials
- feedback from clients, peers and supervisors
- oral or written questioning.
### EVIDENCE GUIDE

In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.

Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.

Access must be provided to appropriate learning and/or assessment support when required.

The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.

### This competency in practice

Industry representatives have provided the case study below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting.

**Construction materials**

A consulting company is investigating a possible dam site and needs to assess a particular soil in the foundation. They request a geotechnical testing authority to determine the permeability of the soil. A senior technician checks the client request and inspects the soil sample, noting that it is plastic, clay and fissured. He/she checks the dam design parameters and notes that the overburden pressure will be 500 kPa.

The senior technician uses a triaxial permeability test using a constant head configuration. He/she trims a cylindrical test piece, determines the sample's bulk density and uses the trimmings to determine its moisture content. The test piece is mounted in a triaxial test cell and the equipment carefully de-aired. All pressure gauges, regulators and transducers are checked and the equipment is leak tested. A confining stress is applied and after allowing the sample to come to equilibrium, it is back saturated. The cell pressure is increased to 500 kPa and as the sample consolidates, the technician monitors the sample volume change and pore water pressure. A differential pressure is applied in stages and the water flow through the sample is optimised. After reaching a steady state the flow rate is monitored to
determine the sample permeability.

After taking sufficient readings to ensure a valid measurement, the senior technician prepares plots of permeability and time and reports the steady state values. After completing the test, he/she shuts down the equipment in the recommended sequence, cleans and restores all items. He/she then removes the test piece and determines the after-test moisture content.
## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RANGE STATEMENT

- handling and storage for hazardous materials and equipment in accordance with labelling, MSDS and manufacturer's instructions
- identifying and reporting operating problems or equipment malfunctions
- cleaning equipment and work areas regularly using enterprise procedures
- using personal protective clothing and equipment, such as hard hats, hearing protection, gloves, safety glasses, coveralls and safety boots
- following established manual handling procedures
- reporting abnormal emissions, discharges and airborne contaminants such as noise, light, solids, liquids, water/waste water, gases, smoke, vapour, fumes, odour and particulates to appropriate personnel

Occupational health and safety (OHS) and environmental management requirements:

- all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time
- all operations assume the potentially hazardous nature of samples and require standard precautions to be applied
- where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health

MSL953001A Receive and prepare samples for testing

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit of competency covers the ability to log samples, check sample documentation, schedule and prepare samples for testing in accordance with enterprise procedures. This unit does not include testing, tissue processing or similar techniques. |

Application of the Unit

| Application of the unit | This unit of competency is applicable to field and laboratory assistants in all industry sectors who receive and prepare samples as part/all of their jobs in a sample reception area. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'. |

Licensing/Regulatory Information

<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Log samples              | 1.1. Record date (and time of arrival, if required) of samples at enterprise  
1.2. Check and match samples with request forms before they are accepted  
1.3. Enter samples into the laboratory information management system (LIMS)  
1.4. Apply required document tracking mechanisms  
1.5. Process ‘urgent’ test requests according to enterprise requirements  
1.6. Ensure security and traceability of all information, laboratory data and records |
| 2. Address customer service issues | 2.1. Report to referring client when samples and request forms do not comply with enterprise requirements  
2.2. Refer to supervisor for instruction where ‘return to source’ is inappropriate or not possible  
2.3. Maintain confidentiality of all client/enterprise data and information  
2.4. Ensure that information provided to customers is accurate, relevant and authorised for release  
2.5. Deal with customers politely and efficiently and in accordance with enterprise procedures |
| 3. Prepare samples for testing | 3.1. Perform physical separation of the samples, as required  
3.2. Prepare the required number of sub-samples  
3.3. Perform chemical separation of the samples as required  
3.4. Place samples in appropriate transport media, if appropriate  
3.5. Monitor and control sample conditions before, during and after processing |
| 4. Distribute samples       | 4.1. Group samples requiring similar testing requirements  
4.2. Distribute samples to work stations maintaining sample integrity  
4.3. Distribute request forms for data entry or filing in accordance with enterprise procedures  
4.4. Check that samples and relevant request forms have been received by laboratory personnel |
<p>| 5. Maintain a safe work     | 5.1. Apply safe work practices to ensure personal safety |</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- receipt and logging in of samples
- checking of samples for history and acceptable transport conditions
- preparing and sub-sampling of samples
- labelling samples accurately and completely
- using standard precautions when dealing with potentially hazardous materials
- applying knowledge of the relationship between specific sample preparation and associated tests
- clarifying specific client requirements with appropriate personnel promptly
- labelling and storing samples in a way which maintains sample integrity and traceability
- disposing of samples following required procedures
- maintaining equipment and the workspace

Required knowledge

Required knowledge includes:

- enterprise procedures for the receipt, documentation, distribution and storage of samples
- potentially hazardous and unstable nature of samples
- requirement of specified sample types for specific tests
- importance of maintaining effective customer relations
- sample storage and transport requirements
- relevant health, safety and environment requirements

Specific industry

Additional knowledge requirements may apply for different industry sectors. For example: Biomedical laboratories:

- potentially infective nature of all biological materials
- nature of unstable solutions, such as anti-coagulated whole blood
- non-conformance of clotted samples for procedures, such as routine haematological tests
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>Assessors should ensure that candidates can:</th>
</tr>
</thead>
</table>
| - safely receive and log samples in accordance with enterprise procedures  
- apply knowledge of the relationship between sample preparation requirements and associated tests  
- deal with customers politely and efficiently  
- recognise and deal with problems according to enterprise procedures  
- maintain sample integrity and traceability. |

### Context of and specific resources for assessment

This unit of competency is to be assessed in the workplace or simulated workplace environment.

This unit of competency may be assessed with:

- MSL913001A Communicate with other people  
- MSL943002A Participate in laboratory/field workplace safety.

Resources may include:

- a selection of sample containers, tubes, request forms and sample documentation  
- simulated samples when an authentic sample is unavailable or inappropriate.

### Method of assessment

The following assessment methods are suggested:

- review of sample receipt and preparation records prepared by the candidate  
- feedback from supervisors and peers  
- direct observation of sample receipt and preparation  
- questioning to assess knowledge of procedures where direct observation is difficult (such as sample receipt and preparation in the field).

In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly.
| **EVIDENCE GUIDE** | Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. Access must be provided to appropriate learning and/or assessment support when required. The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment. |
| **This competency in practice** | Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and show its relevance in a workplace setting. **Environmental** A laboratory assistant at a hazardous liquid waste recycling plant is required to log in all samples, match all samples with the in-house profile of the source of the waste, label them and activate the tracking procedure. He/she then prepares a sample for a series of standard tests which are determined by the profile of the waste material (acid or alkali, organic or heavy metal, etc). Given the hazardous nature of the waste, the laboratory assistant must use appropriate safety equipment at all times and ensure the safe disposal of all hazardous material. The assistant must work efficiently as these procedures are activated upon arrival of a road tanker and when the hazardous waste has been verified and judged acceptable for treatment at the plant by the laboratory supervisor. The laboratory assistant also liaises with the truck driver, or the referring client, should the samples (and/or subsequent tests) not comply with enterprise conditions for receiving the hazardous waste. **Construction materials testing and mineral assay** A laboratory assistant has received a consignment of disturbed soil samples from a client for classification testing. A test request and field logs have been sent by mail. Each sample is bagged and labelled, with the label showing the name of the client, project, date and sampling location, and a field description of the material. The laboratory policy is that samples weighing more than 20 kg must be bagged so that the individual bags do not exceed this limit and labelled as bag 1 of ..., bag 2 of ..., |
EVIDENCE GUIDE

The assistant checks to ensure all component bags of such samples are present. He/she is careful to handle the samples using safe manual handling techniques. The assistant arranges the samples in order of location and reconciles them with the test request and logs. Two samples have been shown on the request but have not been received. The assistant emails the technician who despatched them and subsequently is advised that they were overlooked during despatch and will be forwarded as soon as possible.

The assistant compares the samples with the field descriptions and finds that they match. Samples that are not designated for testing immediately are set aside in the laboratory store. The remainder are placed in trays for drying in the 50°C oven. The tray numbers are carefully written on the respective worksheets. When the samples have dried and cooled they are split out sufficiently for sieve analysis and plasticity testing, making allowance for the maximum particle size of each sample. The assistant is careful to avoid raising dust during the process.

Biomedical

A laboratory assistant has just started a shift in specimen reception and puts on a coat and gloves before touching any samples. There is a pile of samples and forms in the sample box. In some cases, the samples and forms are enclosed in a plastic bag. In other cases, they are seemingly unconnected. The assistant notices that one of the samples has a bloodstained label. She/he quickly examines the samples, isolates the leaking sample in a lockable plastic bag and places the related request form in the bag’s separate compartment. The assistant then disposes of her/his dirty gloves. The assistant now logs all samples into the computer, placing to one side a sample and request form that is inadequately labelled. She/he makes a note to call the referring doctor as soon as possible. The assistant places the haematology samples in the colour-coded tray and calls the laboratory for their pickup. She/he then calls the doctor of the patient whose sample is inadequately labelled. She/he records the missing date of birth on the request form, and then barcode/labels tubes for the samples' testing. Within 30 minutes, she/he has cleared the first rush of samples. She/he takes the time to carefully empty the bin of

</tr>
<tr>
<td></td>
<td>- procedure sheets indicating how samples and sub-samples are to be labelled, processed, distributed, flagged for urgent testing or for other non-routine requirements, including referral to external laboratories</td>
</tr>
</tbody>
</table>
### RANGE STATEMENT

- procedure sheets indicating transport and storage requirements
- safety manuals describing personal protective equipment requirements, control of hazardous wastes, containment and cleanup of spillages, and disposal and recycling of wastes

### Samples received

Samples received may include:

- gas or air samples
- liquid samples, such as water and waste water, stormwater, sludges and complex mixtures and sewage
- solid samples, such as soils and sediments, rocks/minerals, concrete, quarry or mining products
- solid wastes, such as hazardous, non-hazardous, domestic, commercial, industrial, mining and agricultural
- biological specimens such as tissue and blood
- raw materials, start, middle, end of production run samples and final products

### Hazards

Hazards may include:

- biohazards, such as micro-organisms and agents associated with soil, air, water, blood and blood products, and human or animal tissue and fluids
- dust and noise
- chemicals, such as acids and hydrocarbons
- aerosols
- sharps and broken glassware
- manual handling of heavy sample bags and containers
- crushing, entanglement and cuts associated with moving machinery

### Safe work practices

Safe work practices may include:

- use of MSDS
- use of personal protective equipment, such as hard hats, hearing protection, gloves, safety glasses, goggles, face guards, coveralls, gowns, body suits, respirators and safety boots
- use of biohazard containers and laminar flow cabinets
RANGE STATEMENT

- correct labelling of reagents and hazardous materials
- handling, and storing hazardous materials and equipment in accordance with labels, MSDS, manufacturer's instructions, and enterprise procedures and regulations
- regular cleaning and/or decontamination of equipment and work areas

Occupational health and safety (OHS) and environmental management requirements

OHS and environmental management requirements:
- all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time
- all operations assume the potentially hazardous nature of samples and require standard precautions to be applied
- where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health

MSAPMSUP172A Identify and minimise environmental hazards

Modification History
Not applicable.

Unit Descriptor

Unit descriptor
This competency covers the awareness of environmental issues and organisation environmental policies and procedures to minimise environmental threats.

Application of the Unit

Application of this unit
This competency is performed by all operators in all plants. It reflects the regulatory requirements and the industry's concern to operate in an environmentally friendly manner. The operator will:

- identify activities/materials likely to be an environmental issue
- take the appropriate action on environmental issues as required.

Licensing/Regulatory Information
Not applicable.
Pre-Requisites

Prerequisites
This unit has **no** prerequisites. Individual organisations may choose to add prerequisites and co-requisites relevant to their processes.

Employability Skills Information

Employability Skills
This unit contains employability skills.

</tr>
<tr>
<td><strong>ELEMENT</strong></td>
<td>Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.</td>
</tr>
</tbody>
</table>
| 1. Identify potential environmental threats. | 1.1 Recognise the type and severity of environmental threat posed by the materials and processes used for own work.  
1.2. Identify ways materials used may enter the environment.  
1.3. Identify sensitive features of the local environment and their impact on work practice and procedures. |
| 2. Identify workplace procedures and policies to minimise environmental threats. | 2.1 Identify workplace policy for environmental protection.  
2.2. Identify in relevant standard operating procedures environmental protection measures appropriate for work.  
2.3. Explain contact procedures for personnel involved in environmental response teams.  
2.4. Recognise abnormal or unacceptable emission levels. |
| 3. Follow procedures to minimise environmental threats. | 3.1 Implement environmental protection measures in relevant procedures.  
3.2. Report abnormal emissions/environmental issues to appropriate personnel.  
3.3. Apply containment procedures in accordance with SOPs where appropriate.  
3.4. Implement approved waste management procedures and practices.  
3.5. Follow approved safety procedures and use personal protective equipment as specified in procedures. |
Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit. Knowledge and understanding is required of organisation environment protection systems, procedures and equipment sufficient to for work activities. Knowledge is required of organisation standard procedures and work instructions and relevant regulatory requirements, along with the ability to implement them within appropriate time constraints and in a manner relevant to the operation of the system.

- internal environmental control standards
- severity of environmental risks from materials and work processes used
- likely impact on the environment of materials and process.

Competence includes an awareness of:
- sensitive waterways/wetlands
- flows from the plant to the environment (eg through sandy soil, local creek)
- particular environmental threats posed by materials and processes used and the work practices required to minimise these threats.

Also required is the ability to:
- communicate using in-plant reporting systems - verbal, electronic and written
- initiate first response to an environmental incident in accordance with SOPs
- use containment equipment
- use personal protective equipment
- use other required resources.

Language, literacy and numeracy requirements

This unit requires the ability to read and understand typical product specifications, job sheets, procedures and work instructions, material labels and safety information as provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is required to the extent required by work instructions and procedures.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to identify actual and potential environmental breaches as appropriate to the job level. Consistent performance should be demonstrated. For example, look to see that:

- standard procedures are followed
- deviations from desired conditions are recognised
- action specified in the standard procedures is carried out
- the impact of work practices/actions on the environment is understood.

**Assessment method and context**

Assessment will occur using a simulation and will occur in a work like environment. Competence in this unit may be assessed:

- by observation over time on a processing plant
- in a situation allowing the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions. Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

**Specific resources for assessment**

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required. Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

**Range Statement**

**RANGE STATEMENT**

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts. Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

**Context**

This competency applies to all work environments and sectors in the industries. Responses are restricted to a 'first response' approach, including the notifying of appropriate organisation personnel.
Procedures
All operations are performed in accordance with procedures. Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment
This competency includes use of equipment and tools such as:
- PPE
- spill kits.

Hazards
Typical workplace hazards include:
- chemicals and hazardous materials
- gases and liquids under pressure
- moving machinery
- materials handling.

Emissions/discharges
Typical emissions/discharges include:
- noise
- light
- odour
- gas
- smoke vapour
- liquid and solids
- particulates
- fumes.

Problems
Respond to routine problems means 'apply known solutions to a limited range of predictable problems'. Typical problems include:
- required information/materials not available
- required tool/equipment not available

Appropriate action for non-routine problems may be reported to designated person or other action specified in the procedures.

Unit Sector(s)
Not applicable.
NWP331B Inspect conduit and report on condition and features

Modification History
Not applicable.

Unit Descriptor
Unit descriptor This unit of competency describes the outcomes required to plan, prepare and conduct an inspection of gravity sewer or stormwater conduits, using specialised CCTV camera and transport systems, and reporting on observed defects and other features of the conduit in accordance with the industry code and job specifications. The ability to interpret technical information, identify and assess hazards, operate and maintain specialised technical equipment and produce computer generated reports on the condition and features of the conduit inspected are essential to performance.

Application of the Unit
Application of the unit This unit supports the attainment of skills and knowledge required for operators with a specific responsibility for: inspecting and reporting on the condition of operational gravity sewers and stormwater conduits and new or rehabilitated sewers or stormwater conduits; and operating and maintaining specialised CCTV inspection equipment in compliance with organisational and statutory requirements. This unit may also be applied to the inspection of other types of conduit system.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.
Employability Skills Information

Employability Skills  This unit of competency contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where *bold italicised* text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Plan and prepare for conduit inspection. | 1.1 Identify the purpose of the inspection and the location, size, type and extent of the conduit assets from relevant documentation.  
1.2 Determine the inspection method and equipment to be used according to organisational and statutory requirements.  
1.3 Conduct and document hazard identification and risk assessment and implement appropriate risk control processes.  
1.4 Establish and implement asset isolation / flow management plans and inspection schedules in consultation with the system operator.  
1.5 Arrange for preparation of the conduit and site for inspection as required. |
| 2 Operate and maintain equipment. | 2.1 Set up and calibrate equipment to suit the size, type and conditions of conduit according to relevant industry codes and/or specifications.  
2.2 Operate equipment according to relevant industry codes and/or specifications and examine, record and report features of the conduit accurately.  
2.3 Conduct routine maintenance of equipment in accordance with manufacturer's recommendations.  
2.4 Diagnose and correct equipment malfunctions.  
2.5 Recognise and appropriately respond to potential risks to equipment and/or system operation. |
| 3 Identify and code defects and other features observed during conduit inspection. | 3.1 Identify and code structural defects, service conditions and other features of the conduit according to relevant industry codes and/or specifications.  
3.2 Record asset and inspection data using approved data capture software according to relevant industry codes and/or specifications.  
3.3 Investigate and report unrecognisable defects, service conditions or other features.  
3.4 Identify a conduit at risk of imminent failure and communicate details to the system operator or owner according to organisational and statutory requirements.  
3.5 Identify and report defects or malfunctioning of access structures in accordance with industry codes and/or specifications. |
| 4 Withdraw inspection equipment and reinstate system operation. | 4.1 Clean and inspect equipment for damage during and after withdrawal from the conduit.  
4.2 Reinstate system operation according to asset isolation / flow management plan and/or specifications.  
4.3 Restore work site to meet organisational, safety, property owner's |
ELEMENT: PERFORMANCE CRITERIA

5 Review, record and report work.

5.1 Check inspection data and video records prior to removal of equipment for completeness, quality and accuracy.

5.2 Compile conduit inspection reports and present to the client in the required format.

5.3 Complete job documentation and communication according to the asset owner or operator’s, and statutory requirements.
**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level, required for this unit.

**Required skills:**

- identify structural defects, service conditions and other features in a range of different conduits
- apply industry inspection reporting code requirements
- use data capture software
- operate CCTV camera controls and recording systems
- identify and solve operational problems
- operate communication equipment
- access and interpret GIS data, interpret plans/maps, house service diagrams, instructions, specifications and standard operating procedures
- interpret policies, procedures and standards
- use safety equipment and personal protective equipment
- use tools and instruments associated with camera/transport operation, maintenance and calibration
- identify hazards
- give and receive instructions
- communicate with customers and other employees
- prepare and restore work site.

**Required knowledge:**

- industry inspection reporting code
- data capture, recording and reporting software
- occupational health and safety
- confined space entry procedures
- typical traffic control arrangements
- personal work site safety
- potential hazards and risk factors of operational processes
- equipment operation
- techniques of operation in unusual situations
- capabilities of camera, lights and transport system
- routine maintenance and calibration requirements of camera, lights and transport system
- effects of weather and conditions on operation of site or plant
- environmental aspects of operation and installation
- features of conduits used in Australia for gravity sewer and stormwater construction over the last 100 years
- construction and operation of sewerage and stormwater systems.
Evidence Guide

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The candidate should demonstrate the ability to plan, prepare and conduct an inspection of gravity sewer or stormwater conduits including:

- preparing for conduit inspection by:
- identifying the location and extent of the work, methods to be applied, and equipment, including safety equipment, to be used
- assessing risks and preparing for hazards
- implementing appropriate isolation and inspection procedures
- calibrating equipment for conduit inspection
- operating and maintaining equipment
- conducting inspections and identifying and coding conduit defects and condition
- recording data manually, or using approved software program
- investigating and recording anomalies
- reporting conduit at risk of failure
- removing equipment and reinstating system operation
- restoring worksite
- completing and processing inspection information according to organisational procedures.

Context of and specific resources for assessment

Access to the workplace and resources including:

- documentation that should normally be available in a water industry organisation
- relevant codes, standards, and government regulations.

Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the language and literacy capacity of the candidate and the work being performed.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of
EVIDENCE GUIDE

time reflecting the scope of the role and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice
- a decision of competence only taken at the point when the assessor has complete confidence in the person’s competence over time and in various contexts
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence
- where assessment is for the purpose of recognition (RCC/RPL), the evidence provided will need to be authenticated and show that it represents competency demonstrated over a period of time
- assessment can be through simulated project-based activity and must include evidence relating to each of the elements in this unit.

In all cases where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge. Questioning will be undertaken in a manner appropriate to the skill levels of the operator, any cultural issues that may affect responses to the questions, and reflecting the requirements of the competency and the work being performed.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.

**Conduit assets** may include:
- pipes, including those manufactured from:
  - vitrified clay (earthenware)
  - reinforced concrete
  - polyvinyl chloride (PVC)
  - polyethylene
  - polypropylene
  - unlined cast iron
  - cast iron cement lined
  - asbestos cement
  - ductile iron cement lined
  - glass reinforced plastic
  - mild steel cement lined
  - profiled thin gauge steel
  - other types of conduit, including:
    - concrete box culverts
    - circular or oviform brick
    - circular or oviform cast in situ concrete
    - circular, rectangular or variable cross section stone masonry block
    - lined pipes
    - other cross sections
    - asset structures, such as:
      - maintenance holes
      - maintenance shafts
      - drainage pits.

**Relevant documentation** may include:
- plans
- GIS asset data on digital media
- drawings
- 'house' service diagrams
- specifications
- work instructions.

**Equipment used** may include:
- specialised closed circuit television conduit inspection equipment and associated apparatus
- hand-held still camera
RANGE STATEMENT

- computer hardware and software for data entry
- hand and power tools
- manhole cover lifters
- lifting and winching equipment
- mechanical excavation equipment
- pneumatic and motorised equipment:
  - compressors
  - pneumatic spades and attachments
  - motorised cutting equipment
- on- and off-road vehicles
- road signage
- portable pumps
- sewer plugs - pneumatic, or other types
- communication equipment
- breathing apparatus
- gas detection equipment
- rescue equipment
- appropriate personal protective equipment.

Organisational and statutory requirements may include:

- interpretation or assessment of:
  - specifications
  - instructions
  - codes
  - conduit size and configuration
  - access to conduit
  - sewerage or stormwater system operation.
  - by-laws
  - organisational policies
  - standard operating procedures
  - communication and reporting protocols
  - environment protection
  - occupational health and safety, including the use of personal protective equipment
  - lifts and cranes
  - mines and subsidence
  - road signage
  - electrical
  - dangerous goods.

Risk control processes include:

- traffic control arrangements
- grating or barricading of openings
- asset isolation/flow control
RANGE STATEMENT

- compliance with confined space entry procedures
- compliance with asset access procedures
- personal protective equipment such as gloves
- personal hygiene practices.

Asset isolation / flow management plans may include:

- arrangements with system operator or owner for:
- shutting down, tagging and/or lockout of parts of the system, for example:
  - pumping stations
  - valves
  - reinstatement of operations
  - conducting inspections to coincide with low flow in the conduit
  - blocking off flow in a sewer and monitoring backup
  - blocking off flow and bypass pumping.

Preparation of the conduit and site for inspection includes:

- high pressure water jet cleaning to remove surface build-up on the wall of the conduit, roots and or debris
- locating, exposing, removal and replacement of maintenance hole/pit covers or grates
- arranging special access requirements, such as:
  - across private land
  - through gates
  - inside buildings
  - construction of platforms for above ground maintenance holes.

Industry codes and/or specifications may include:

- the Conduit Inspection reporting code of Australia WSA 05 2006
- other codes as nominated by the asset owner, operator or regulator
- contract specifications for work activity.

Features of the conduit may include:

- structural condition
- service condition.

Potential risks to equipment and/or system may include:

- loss of camera or equipment due to the condition of the conduit
- backup of sewage caused by camera or equipment and/or sudden changes in flow.

Data recording may be conducted:

- manually
- using approved data capture software.

Conduit evaluation reports may comprise:

- videotapes
- log sheets
- asset information such as plans, maps, asset location,
RANGE STATEMENT

- number, age and type
- photographs.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Determine inspection reporting requirements | 1.1 Determine the *inspection reporting standard* and *special inspection and reporting requirements* of the client or asset owner from specifications and/or instructions.  
1.2 Obtain *plans and maps of assets* to be inspected and identify relevant asset data.  
1.3 Seek clarification of inspection reporting requirements from the client/asset owner for unusual or non-routine inspections.  
1.4 Verify the competence of operators undertaking the inspection. |
| 2 Review video images, data and reports from inspections. | 2.1 Check *video records* of inspections.  
2.2 Compile documentation from inspection and check for completeness and accuracy.  
2.3 Recognise unsatisfactory video images and other non-compliant data and submit non-compliance reports to the operator.  
2.4 Label and reference inspection information according to specifications and/or enterprise procedures. |
| 3 Identify and code defects and other features from video images of conduit inspection. | 3.1 Identify and code structural defects, service conditions and other features of the *conduit* in accordance with industry code and/or specifications.  
3.2 Record asset and inspection data using appropriate software in accordance with industry code and/or specifications.  
3.3 Investigate and report unrecognisable defects, service conditions or other features.  
3.4 Identify a conduit at risk of imminent failure and communicate details to the system operator/asset owner according to *operational procedures*.  
3.5 Confirm defects or malfunctioning of maintenance holes, pits or other access structures with the operator and report in accordance with industry code and/or specifications. |
| 4 Prepare conduit inspection reports for client. | 4.1 Compile *inspection reports* and present to the client in the format required by the industry code/specifications or enterprise practice.  
4.2 Follow *inspection video and data security procedures* in accordance with the specifications and or enterprise procedures. |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

**Required skills:**

- identify structural defects, service conditions and other features in a range of different conduits
- apply industry inspection reporting code requirements
- use data capture software
- access and interpret conduit details from asset information systems (GIS), construction drawings, plans/maps, house service diagrams
- identify inspection reporting requirements in specifications
- interpret policies, procedures and standards
- communicate with clients and operators.

**Required knowledge:**

- industry inspection reporting code
- data capture, recording and reporting software
- asset information systems
- operational plans/maps
- design plans for construction
- features of conduits used in Australia or operating area for gravity sewer and stormwater construction over the last 100 years
- construction and operation of sewerage and stormwater systems.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

The candidate should demonstrate the ability to supervise or manage the inspection and reporting of the condition and features in sewer and stormwater conduits using specialised CCTV equipment Including:

- identifying and correctly coding all critical defects and or features of conduits observable in inspection video records
- recognising poor quality, inaccurate and other non-compliant video images and data from conduit inspections
- interpreting correctly all relevant asset information on maps, plans and drawings of the conduit provided by the asset owner/operator/client.

Context of and specific resources for assessment

Access to the workplace and resources including:

- documentation that should normally be available in a water industry organisation
- relevant codes, standards, and government regulations.

Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the language and literacy capacity of the candidate and the work being performed.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice
- a decision of competence only taken at the point when the assessor has complete confidence in the person's competence over time and in various contexts
- all assessment that is part of a structured learning
EVIDENCE GUIDE

experience must include a combination of direct, indirect and supplementary evidence

- where assessment is for the purpose of recognition (RCC/RPL), the evidence provided will need to be authenticated and show that it represents competency demonstrated over a period of time
- assessment can be through simulated project-based activity and must include evidence relating to each of the elements in this unit.

In all cases where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge. Questioning will be undertaken in a manner appropriate to the skill levels of the operator, any cultural issues that may affect responses to the questions, and reflecting the requirements of the competency and the work being performed.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.

**Inspection reporting standards** may include:
- Conduit inspection reporting code of Australia WSA 05 2006
- Australian conduit condition evaluation manual
- other enterprise or national reporting codes.

**Special inspection and reporting requirements** may include:
- pre-cleaning preparation of asset
- detailed inspection of certain defects and/or features in the conduit
- type and number of photographs / video clips of defects and or features
- measurement and reporting of operational or conduit parameters such as gas concentrations.

**Plans and maps of assets** may include:
- geographic information systems (GIS)
- construction drawings
- manual systems
- hard copy systems.

**Checkvideo records** includes:
- image quality
- completeness
- camera operation
- compliance with the inspection reporting standard and special inspection or reporting requirements.

**Conduit** may include:
- pipes manufactured from:
- vitrified clay (earthenware)
- reinforced concrete
- polyvinyl chloride (PVC)
- polyethylene
- polypropylene
- unlined cast iron
- cast iron cement lined
- asbestos cement
- ductile iron cement lined
- glass reinforced plastic
- mild steel cement lined
- profiled thin gauge steel
- other conduits include:
RANGE STATEMENT

- concrete box culverts
- circular or oviform brick
- circular or oviform cast in situ concrete
- circular, rectangular or variable cross section stone masonry block
- lined pipes or other cross sections
- access structures such as:
  - maintenance holes
  - drainage pits
  - maintenance shafts.

*Operational procedures* may include:

- communication and reporting protocols
- standard operating procedures
- organisational policies.

*Inspection reports* may include:

- videotapes
- CDs, DVDs or other digital media
- computer generated reports in a variety of formats
- asset information such as plans, maps, asset location, number, age and type
- photographs.

*Inspection video and data security procedures* may include:

- backup copies of computer files
- tracking of tapes and disks
- authorised deletion of files.

| 1. Identify emergency equipment. | 1.1. Locate emergency equipment  
1.2. Ensure access is provided to emergency equipment. |
| 2. Inspect and assemble emergency equipment. | 2.1. Inspect emergency equipment for faults or damage  
2.2. Secure couplings/connections and operational condition  
2.3. Assemble equipment in accordance with manufacturer specifications  
2.4. Identify and report any missing or damaged components. |
| 3. Carry out minor servicing of equipment. | 3.1. Maintain and clean equipment according to specifications/procedures  
3.2. Conduct servicing in accordance with specifications/procedures  
3.3. Ensure equipment is 'made-ready' and stored in designated location  
3.4. Ensure equipment functions in accordance with specifications. |
| 4. Report and record equipment status. | 4.1. Record and report equipment status  
4.2. Raise maintenance requests as required  
4.3. Undertake corrective actions as required. |
## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

### Required skills

- hand skills
- follow procedures
- observation
- completing records
- assembling and operating various pieces of emergency response equipment
- servicing various pieces of emergency response equipment
- storing various pieces of emergency response equipment.

### Required knowledge

Knowledge and understanding of the emergency response procedures and equipment, sufficient to recognise standard and non-standard situations with regards to the equipment used, and then determine the appropriate action which is consistent with operating guidelines. These include:

- principles of operation of the emergency response equipment
- hazards policies and procedures
- emergency, fire and accident procedures.

Knowledge of the relevant OHS and environmental requirements, and enterprise standard operating procedures (SOPs), along with an ability to implement them in a manner that is relevant to emergency response practices. These include procedures for the use of personal protective clothing and equipment.
Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment of this unit should include demonstrated competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations which will include disruptions to normal, smooth operation.

Simulation may be required to allow for assessment of parts of this unit. Simulation should be based on the actual plant and will include walk-throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios and role plays.

This unit of competency requires a body of knowledge which will be assessed through questioning and the use of what-if scenarios both on the plant (during demonstration of normal operations and walk-throughs of abnormal operations) and off the plant.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate action. The emphasis should be on the ability to minimise the affect of an emergency situation.

Consistent performance should be demonstrated. In particular look to see that:

- early warning signs of equipment in need of servicing are recognised
- equipment is always 'made ready'
- equipment is always stored in the designated location at all times when not in use
- access to equipment is available at all times when not in use.

These aspects may be best assessed using a range of scenarios/case studies/what ifs as the stimulus, with a walk through forming part of the response. These assessment activities should include a range of problems, including new, unusual and extreme situations that may have been generated from the past incident history of the plant, incidents on similar plants around the world, hazard analysis activities (eg HAZOP) and similar sources.

Context of and specific

Assessment will require access to an operating plant over an
### EVIDENCE GUIDE

<table>

PMAOMIR444B Develop incident containment tactics

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit covers the competency required in the development of tactics that are to be used in the containment of incidents in on-shore and off-shore facilities. The person would typically be an incident coordinator who would respond to the incident manager. |
Application of the Unit

<table>
<thead>
<tr>
<th>Application of the unit</th>
</tr>
</thead>
<tbody>
<tr>
<td>In a typical scenario the person must ensure that the tactics proposed to be employed in response to an incident are appropriate to the circumstances and that actions taken in changing circumstances are effective in dealing with the incident. For instance the options available to incident response teams may be limited and include the need to follow specific procedures or sequences of events. In such a situation the organisation may need clearly defined procedures to ensure that all levels of incident response are aware of how the incident is to be confronted. Key aspects of this competency include:</td>
</tr>
<tr>
<td>- forming clear and unambiguous views about the nature of the potential incident</td>
</tr>
<tr>
<td>- evaluating and prioritising alternative tactics</td>
</tr>
<tr>
<td>- analysing and interpreting information for trends and impacts</td>
</tr>
<tr>
<td>- forwarding key information to those who require it</td>
</tr>
<tr>
<td>The person may:</td>
</tr>
<tr>
<td>- undertake critical analysis and problem solving</td>
</tr>
<tr>
<td>- examine specific scenarios and develop tactics to physically contain those events</td>
</tr>
<tr>
<td>- evaluate alternative tactics</td>
</tr>
<tr>
<td>- recommend the most appropriate strategy</td>
</tr>
<tr>
<td>- document strategies</td>
</tr>
<tr>
<td>Generally the person would be an incident coordinator, manager or technical specialist and be part of an incident response team during the incident. They may have an ongoing role for managing incident information and/or the incident information system.</td>
</tr>
</tbody>
</table>

| 1. Identify incident containment tactics | 1.1. Identify risk characteristics of the possible incident scenarios  
1.2. Identify specific objectives of incident containment  
1.3. Identify existing tactics  
1.4. Develop a range of alternative tactics |
| 2. Evaluate tactics | 2.1. Predict incident behaviour and growth under alternative strategy scenarios  
2.2. Consider issues relating to health, safety and environment  
2.3. Identify and secure resource requirements for alternative tactics  
2.4. Identify the impact of tactics on a range of factors  
2.5. Identify and clearly document tactics  
2.6. Obtain, collate and record feedback on tactics from stakeholders and incident managers and ensure this is reflected into the documentation according to procedures  
2.7. Negotiate stakeholder needs and address |
| 3. Select tactics | 3.1. Document findings and feedback on the suitability of different tactics  
3.2. Recommend preferred tactics according to procedures  
3.3. Document tactics and build into strategies and training doctrines |
| 4. Adopt strategies | 4.1. Incorporate documentation on selected tactics into the appropriate incident management manuals  
4.2. Notify stakeholders of new tactics  
4.3. Incorporate selected tactics into incident training exercises |
## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

### Required skills

Competence includes the ability to isolate the causes of problems within the incident response system and to be able to distinguish between causes of problems indicated by:

- tactics fail to achieve the desired outcomes
- input to tactic development is limited or of less value than expected
- tactics when exercised show gaps or limitations in effectiveness
- adoption of tactics proves problematic or resistance is encountered
- incident containment proves to be of limited success.

### Required knowledge

The knowledge referred to in the Evidence Guide for this unit includes:

- different types of incidents and risks
- incident prediction
- equipment required
- rescue techniques
- intervention and control techniques for heating, fires and explosions
- incident resources and how to access them
- incident response and disaster planning processes and techniques
- relevant legislation
- hazard identification and control
- risk management principles and techniques
- structure, roles, capabilities and operational limitations of external resources and agencies
- insurance policies and considerations
- economic impact and considerations.
Evidence Guide

<table>
<thead>
<tr>
<th>EVIDENCE GUIDE</th>
</tr>
</thead>
<tbody>
<tr>
<td>The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.</td>
</tr>
</tbody>
</table>

### Overview of assessment

Assessment for this unit of competency will be by way of simulation or observation under incident conditions. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations which can include a variety of incident circumstances.

Simulations must, as closely as possible, approximate actual incident conditions and should be based on the actual facility.

Assessments should include walk-throughs of the relevant competency components and may include the use of case studies/scenarios and role plays.

This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of 'what-if' scenarios both in the facility (during demonstration of normal operations and walk-throughs of abnormal operations) and off the site.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate responsive action. The emphasis should be on the ability to deal effectively with the incident or to contribute effectively to the recovery from the incident.

Consistent performance should be demonstrated. In particular look to see that:

- understanding of incident containment tactics is demonstrated
- understanding of the regulatory environment in which actions need to take place is explained
- the impact of the incident on environment, local community and economy of the organisation is understood
- tactics are evaluated with consideration given to advantages and disadvantages
- hazard risk identification and control is demonstrated
- information gathering, analysis and communication are demonstrated to the required level
- relevant personnel and experts/specialists with whom consultation must take place are identified

These assessment activities should include a range of problems,

## RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.

### Codes of practice/standards

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

### Context

Incidents may include:
- fire
- explosion
- gas or oil leak
- accident
- bomb threat
- missing personnel
- combination of the above

Tactics are identified through:
- consultation with experts
- literature review

Stakeholders may include:
- shareholders
- board of directors
- employees
- unions
- contractors
- suppliers
- insurance companies
- local community
- fire brigade
- police
- local emergency management organisations
- medical services
- relevant public authority

### Health, safety and environment (HSE)

All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria
RANGE STATEMENT

| Relationship to Major Hazard Facility Legislation | Organisations within the Chemical, Hydrocarbons and Oil Refining industries may find themselves falling under the provisions of various Major Hazard Facilities legislation. In developing this unit consideration has been given to the requirements of Sections 8 and 9 of the National Standard for the Control of Major Hazard Facilities [NOHSC:1014(2002)] and the National Code of Practice for the Control of Major Hazard Facilities [NOHSC:2016(1996)].

This unit will assist individuals to meet some of their obligations under the relevant State or Territory legislation. Responsibility for appropriate contextualisation and application of the unit to ensure compliance, however, remains with the individual organisation. |

PMAOPS202B Operate fluid mixing equipment

Modification History
Not applicable.

Unit Descriptor

<table>
<thead>
<tr>
<th>Unit descriptor</th>
</tr>
</thead>
<tbody>
<tr>
<td>This competency covers the operation of the range of fluid mixers found in fluid processing plants. This competency is typically performed by all operators using mixing equipment.</td>
</tr>
</tbody>
</table>

Application of the Unit

<table>
<thead>
<tr>
<th>Application of the unit</th>
</tr>
</thead>
<tbody>
<tr>
<td>In a typical scenario an operator uses a baffled mixing tank (or other mixer) to make a product to specification. This covers the loading of liquid and perhaps solid materials into the mixing equipment. In this example the operator monitors the mixing to ensure the components are dispersed appropriately and checks the resulting product to ensure it complies.</td>
</tr>
</tbody>
</table>

This unit does not cover mixing which is part of the preparation of materials (see PMAOPS105C Select and prepare materials) nor the incidental mixing which occurs in a reaction vessel (see PMAOPS220B Monitor chemical reactions in the process or PMAOPS302B Operate reactors and reactor systems) or in-line mixers (see PMAOPS201B Operate fluid flow equipment).3

The operator would:
- identify and report operational problems
- be aware of and contribute to a safe working environment
- contribute to the safe and productive operation of the equipment
- operate, monitor and maintain equipment using relevant procedures.

Generally the operator would be part of a team during start up and shut down procedures and would be expected to be capable of demonstrating competence in all parts of this unit. At all times they would be liaising and cooperating with other members of the team.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

- efficient and effective operation of plant/equipment
- hazard analysis
- completing plant records
- communication
- problem solving.

Required knowledge

Understanding of fluid mixing equipment and its integral equipment to a level needed to recognise and resolve operational problems. In particular it includes a knowledge of:

- all items on a schematic of the mixing system and the function of each
- fluid mixing principles, such as shear, viscosity and concepts of uniformity
- principles of operation of fluid mixing equipment
- physics of operation
- correct methods of starting, stopping, operating and controlling mixing equipment
- typical mixing problems, and their causes and remedy, within operator's scope of skill level and responsibility
- duty of care
- materials safety data sheets (MSDSs)
- HAZCHEM symbols and codes
- hazardous substances regulations
- spill containment and disposal procedures
- procedures related to this competency
- environmental requirements related to waste disposal
- workplace hazards and methods of controlling hazards.
- hierarchy of control
- communication protocols, eg radio, phone, computer, paper, permissions/authorities
- routine problems, faults and their resolution
- relevant alarms and actions
- plant process idiosyncrasies
- corrective action appropriate to the problem cause
- function and troubleshooting of major components and their problems (such as impellors, seals or bearings)
- types and causes of mixing problems within operator's scope of skill level and responsibility.
# Evidence Guide

## EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

### Overview of assessment
Assessment of this unit should include demonstrated competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations which will include disruptions to normal, smooth operation.

Simulation may be required to allow for assessment of parts of this unit. Simulation should be based on the actual plant and will include walk-throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios and role plays.

This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of what-if scenarios both on the plant (during demonstration of normal operations and walk-throughs of abnormal operations) and off the plant.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit
Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster.

Consistent performance should be demonstrated. In particular look to see that:

- early warning signs of equipment/processes needing attention or with potential problems are recognised
- the range of possible causes can be identified and analysed and the most likely cause determined
- appropriate action is taken to ensure a timely return to full performance
- obvious problems in related plant areas are recognised and an appropriate contribution made to their solution.

These aspects may be best assessed using a range of scenarios/case studies/what-ifs as the stimulus with a walk-through forming part of the response. These assessment activities should include a range of problems, including new, unusual and improbable situations which may have been generated from the past incident history of the plant, incidents on similar plants around the world,

<td></td>
<td>- start up and shut down to/from isolated, cold, empty</td>
</tr>
</tbody>
</table>
### RANGE STATEMENT

- all other conditions experienced on the plant.
  ie from any condition to any condition experienced on the plant.

### Appropriate action

Appropriate action includes:
- determining problems needing action
- determining possible fault causes
- rectifying problem using appropriate solution within area of responsibility
- following through items initiated until final resolution has occurred
- reporting problems outside area of responsibility to designated person.

### Procedures

Procedures may be written, verbal, computer-based or in some other form. They include:
- all work instructions
- standard operating procedures
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

For the purposes of this Training Package, 'procedures' also includes good operating practice as may be defined by industry codes of practice (eg Responsible Care) and government regulations.

### Health, safety and environment (HSE)

All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

### Unit Sector(s)

Co-requisite units
PMAOPS205B Operate heat exchangers

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This competency is typically performed by an operator and covers the operation of heat exchangers, including heat exchangers that form part of a heating, cooling or refrigeration system, and solving of heat exchanger problems. |

Application of the Unit

| Application of the unit | In this competency, an operator would typically start up and shut down heat exchangers in accordance with procedures, and make adjustments to flow rate, temperature and pressure, depending on the type of heat exchanger. Generally the operator would be part of a team during start up and shut down procedures and would be expected to be capable of demonstrating competence in all parts of this unit. At all times they would be liaising and cooperating with other members of the team. This competency does not cover super heaters or waste heat boilers, which are treated as part of steam generating equipment. |

### Required Skills and Knowledge

#### REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

#### Required skills

- efficient and effective operation of plant/equipment
- hazard analysis
- completing plant records
- communication
- problem solving.

Operation of heat exchanger and the ability to recognise and resolve operational problems. This could include any of the following remedial actions:

- making adjustments
- carrying out minor maintenance
- identifying and reporting problems outside operator's scope of responsibility
- identifying and controlling hazards related to heat exchangers and their integral equipment, including pressure vessels.

#### Required knowledge

Comprehensive understanding of heat exchanger principles to a level needed to control the operation. In particular, the operator needs to understand the factors affecting efficient operation of a heat exchanger in order to make appropriate adjustments or recognise when maintenance is required. These also includes a knowledge of:

- all items on a schematic of the heat exchanger system and the function of each
- principles of operation of heat exchangers
- correct methods of starting, operating and shutting down heat exchangers
- issues related to pressure vessels (regulations, requirements)
- physics and chemistry relevant to the process unit
- process parameters and limits, eg temperature, pressure, flow, pH
- duty of care obligations
- hierarchy of control
- communication protocols, eg radio, phone, computer, paper, permissions/authorities
- routine problems, faults and their resolution
- relevant alarms and actions
- plant process idiosyncrasies
- causes of head loss and change in heat transfer coefficient/rates
- corrective action appropriate to the problem cause
- function and troubleshooting of major internal components and their problems, such as tubes and baffles.
## Evidence Guide

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

Assessment of this unit should include demonstrated competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations which will include disruptions to normal, smooth operation.

Simulation may be required to allow for assessment of parts of this unit. Simulation should be based on the actual plant and will include walk-throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios and role plays.

This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of what-if scenarios both on the plant (during demonstration of normal operations and walk-throughs of abnormal operations) and off the plant.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster.

Consistent performance should be demonstrated. In particular look to see that:

- early warning signs of equipment/processes needing attention or with potential problems are recognised
- the range of possible causes can be identified and analysed and the most likely cause determined
- appropriate action is taken to ensure a timely return to full performance
- obvious problems in related plant areas are recognised and an appropriate contribution made to their solution.

These aspects may be best assessed using a range of scenarios/case studies/what-ifs as the stimulus with a walk-through forming part of the response. These assessment activities should include a range of problems, including new, unusual and improbable situations which may have been generated from the past incident history of the plant, incidents on similar plants around the world.
## EVIDENCE GUIDE

| **Context of and specific resources for assessment** | Assessment will require access to an operating plant over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions. |
| **Method of assessment** | In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units. For many plants, it might be appropriate for this unit to be assessed with units covering:  
  - fluid flow  
  - utilities and services  
  - communication.  
In a major hazard facility, it may be appropriate to assess this unit concurrently with:  
  - **MSAPMOHS200A Work safely.** |
| **Guidance information for assessment** | Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed. |

</table>

### Context

This competency includes all types of stand alone separation equipment for gaseous, liquid and solids separation where the separation process is physical and the separator is not powered or motor driven. Separation equipment covered by this competency includes:

- cyclones
- hydrocyclones
- scrubbers
- knockout drums
- demisters/drift eliminators
- filters (cartridge, basket, sand etc).

### Problems

Typical problems include:

- seal/gasket leaks
- pressure loss/low flow
- cartridge/filter change
- blockages/build-up/fouling
- erosion/wear.

### Start up shut down as required

Start up shut down as required includes:

- start up and shut down to/from normal operating conditions
- start up and shut down to/from isolated, cold, empty
- all other conditions experienced on the plant.

ie from any condition to any condition experienced on the plant.

### Appropriate action

Appropriate action includes:

- determining problems needing action
- determining possible fault causes
- rectifying problem using appropriate solution within area of responsibility
- following through items initiated until final resolution has occurred
- reporting problems outside area of responsibility to designated person.
RANGE STATEMENT

| Procedures                          | Procedures may be written, verbal, computer-based or in some other form. They include:
|                                   | • all work instructions
|                                   | • standard operating procedures
|                                   | • formulas/recipes
|                                   | • batch sheets
|                                   | • temporary instructions
|                                   | • any similar instructions provided for the smooth running of the plant.
|                                   | For the purposes of this Training Package, 'procedures' also includes good operating practice as may be defined by industry codes of practice (eg Responsible Care) and government regulations.
| Health, safety and environment (HSE) | All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

Unit Sector(s)

| Unit sector | Operational/technical |

Competency field

| Competency field |

Co-requisite units

| Co-requisite units |
PMAOPS207B Operate powered separation equipment

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This competency covers the operation of powered dual phase separation equipment including centrifuges, scraped filters, rotary vacuum filters and the like. This type of equipment is found in many process manufacturing plants. It also includes solving problems with separation processes and the equipment, including the driver powering the separation equipment (e.g., electric motor). |

Application of the Unit

| Application of the unit | This competency is typically performed by all operators. The operator would typically start up and shut down separation equipment to procedures, and make adjustments to flow rate and pressure, depending on the type of separation equipment. Generally the operator would be part of a team during start up and shut down procedures and would be expected to be capable of demonstrating competence in all parts of this unit. At all times they would be liaising and cooperating with other members of the team. This unit does not cover stand-alone, non-powered dual phase separation equipment or chemical separation equipment, which are covered by the following competencies:  
- PMAOPS206B Operate separation equipment  
- PMAOPS208B Operate chemical separation equipment |

Licensing/Regulatory Information

Employability Skills Information

Employability skills | This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for work. | 1.1. Identify work requirements  
1.2. Identify and control hazards  
1.3. Coordinate with appropriate personnel |
| 2. Operate powered separation equipment. | 2.1. Identify the type of powered separation equipment  
2.2. Start up and shut down separation equipment according to the separation equipment type and duty  
2.3. Monitor plant frequently and critically throughout shift using measured/indicated data and senses (sight, hearing etc) as appropriate  
2.4. Adjust flow and pressure as appropriate to type of separation equipment  
2.5. Complete routine checks, logs and paperwork, taking action on unexpected readings and trends. |
| 3. Operate drivers of separation equipment. | 3.1. Monitor critical variables such as amps, temperature, vibration  
3.2. Keep critical variables in range  
3.3. Recognise trends/patterns which indicate a potential or actual problem with the driver  
3.4. Take appropriate action to ensure driver is returned to full performance in a timely manner. |
| 4. Isolate and de-isolate plant. | 4.1. Isolate plant  
4.2. Make safe for required work  
4.3. Check plant is ready to be returned to service  
4.4. Prepare plant for return to service. |
Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

#### Required skills

- efficient and effective operation of plant/equipment
- hazard analysis
- completing plant records
- communication
- problem solving.

#### Required knowledge

A comprehensive understanding of separation equipment principles and typical problems to a level needed to control the operation, and recognise and resolve operational problems. In particular it includes a knowledge of:

- principles of operation of plant/equipment
- physics and chemistry relevant to the process unit, including kinetic energy effects
- process parameters and limits, e.g. temperature, pressure, flow, pH
- duty of care obligations
- hierarchy of control
- communication protocols, e.g. radio, phone, computer, paper, permissions/authorities
- routine problems, faults and their resolution
- relevant alarms and actions
- plant process idiosyncrasies
- correct methods of starting, stopping, operating and controlling flow
- causes of head loss in piping systems, including comparison of fittings using Le/d concept, fluid and pipe material properties, flow geometry etc
- corrective action appropriate to the problem cause
- types and causes of separator problems within operator's scope of skill level and responsibility.
- factors affecting efficient operation of the separation equipment
- behaviour of solids, liquids and gases
- function and troubleshooting of major internal components and their problems, such as internals, supports, nozzles, grids or scrapers
- typical problems with separation equipment and their remedy
- typical problems with drivers of separation equipment and their remedy.
# Evidence Guide

<table>
<thead>
<tr>
<th>EVIDENCE GUIDE</th>
</tr>
</thead>
</table>

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
</tr>
</thead>
</table>

Assessment of this unit should include demonstrated competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations which will include disruptions to normal, smooth operation.

Simulation may be required to allow for assessment of parts of this unit. Simulation should be based on the actual plant and will include walk-throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios and role plays.

This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of what-if scenarios both on the plant (during demonstration of normal operations and walk throughs of abnormal operations) and off the plant.

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
</table>

Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster.

Consistent performance should be demonstrated. In particular look to see that:

- early warning signs of equipment/processes needing attention or with potential problems are recognised
- the range of possible causes can be identified and analysed and the most likely cause determined
- appropriate action is taken to ensure a timely return to full performance
- obvious problems in related plant areas are recognised and an appropriate contribution made to their solution.

These aspects may be best assessed using a range of scenarios/case studies/what-ifs as the stimulus with a walk-through forming part of the response. These assessment activities should include a range of problems, including new, unusual and improbable situations which may have been generated from the past incident history of the plant, incidents on similar plants around the world.
<table>
<thead>
<tr>
<th><strong>EVIDENCE GUIDE</strong></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>hazard analysis activities and similar sources.</strong></td>
<td></td>
</tr>
<tr>
<td><strong>Context of and specific resources for assessment</strong></td>
<td>Assessment will require access to an operating plant over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.</td>
</tr>
</tbody>
</table>
| **Method of assessment** | In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units. For many plants, it might be appropriate for this unit to be assessed with units covering:  
  - fluid flow  
  - communication.  
In a major hazard facility, it may be appropriate to assess this unit concurrently with:  
  - MSAPMOHS200A Work safely. |
| **Guidance information for assessment** | Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed. |
# Range Statement

## RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. PMAOPS223B Operate and monitor valve systems

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | In a typical scenario an operator adjusts and monitors valves and ancillary equipment as part of controlling a process, eg hydrocarbons transport pipeline, gas distribution network. |

Application of the Unit

| Application of the unit | This unit may be required when PMAOPS222B Operate and monitor pumping systems and equipment is appropriate. It may only be counted towards a qualification where competence in PMAOPS201B Operate fluid flow equipment is unable to be obtained due to the nature of the job, but the operation of valves is relevant. The operations technician would: • identify and report operational problems • be aware of and contribute to a safe working environment • contribute to the safe and productive operation of the valve • operate, monitor and maintain equipment using relevant procedures Generally the operator would be part of a team and would be expected to be competent in all parts of this unit. At all times they would be liaising and cooperating with other members of the team/shift. |

Licensing/Regulatory Information

<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for work. | 1.1. Identify work requirements  
1.2. Identify and control hazards  
1.3. Coordinate with appropriate personnel |
| 2. Prepare valves for operation. | 2.1. Check operation of valves and valve systems by applying knowledge of valve operation and fundamental operating principles  
2.2. Check the valves required for operation against the site specific operating pressures, temperatures, volume, velocities and materials requirements where applicable  
2.3. Prepare or sequence valves required for operation, ensuring that they are either closed or opened as required, to regulate the flow of liquids and systems flow rates in a safe and efficient manner  
2.4. Check the valve operational integrity to minimise the risk of valve leakages and failures. |
| 3. Operate valve systems. | 3.1. Monitor valve operation to ensure it is functioning correctly and excludes such incidents as vibration, chatter, cycling, and sticking  
3.2. Take appropriate action  
3.3. Regulate or alter valve sequences to control the flow rates of fluid during the process to meet changing production conditions and demands. |
| 4. Conduct operational maintenance | 4.1. Clean and lubricate valve stems, threads and other operational parts to ensure the correct operational condition of the valve is maintained  
4.2. Evenly tighten valve bolting assemblies to prevent product leakage  
4.3. Identify valve and regulator faults and take appropriate action  
4.4. Isolate jammed or sticking valves from operation, and take appropriate action. |
| 5. Isolate and de-isolate valves. | 5.1. Isolate plant  
5.2. Make safe for required work  
5.3. Check plant is ready to be returned to service  
5.4. Prepare plant for return to service. |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

Competence includes the ability to isolate the causes of problems to an item of equipment within the valve system and distinguish between causes of problems/alarm/fault indications such as:

- instrument failure/malfunction
- electrical failure/malfunction
- mechanical failure/malfunction
- equipment design deficiencies, eg wrong valve type for service
- product parameters, eg temperature, viscosity, purity
- fouling or contamination
- erosion and corrosion.

Required knowledge

The knowledge referred to in the Evidence Guide for this unit includes:

- identify all items on a schematic of the valve system and describe the function of each
- physics related to the process
- valve equipment operating parameters
- process and product variables and reactions
- operating pressures
- operating temperatures
- flow volume calculations
- flow velocity calculations
- fluid corrosive properties
- fluid erosive properties.
- principles of operation of valves
- physics and chemistry relevant to the valves and the materials processed
- process parameters and limits, eg temperature, pressure, flow, pH
- duty of care obligations
- hierarchy of control
- communication protocols, eg radio, phone, computer, paper, permissions/authorities
- routine problems, faults and their resolution
- relevant alarms and actions
- plant process idiosyncrasies
- correct methods of, operating and controlling valves
- corrective action appropriate to the problem cause
- function and troubleshooting of major components and their problems
REQUIRED SKILLS AND KNOWLEDGE

- types and causes of problems within operator's scope of skill level and responsibility.
Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment of this unit should include demonstrated competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations, which will include disruptions to normal, smooth operation.

Simulation may be required to allow for assessment of parts of this unit. Simulation should be based on the actual plant and will include walk-throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios, role plays and 3D virtual reality interactive systems. In the case of evacuation training or of training for competencies practised in life threatening situations, simulation may be used for the bulk of the training.

This unit of competency requires an application of the knowledge contained in the use of valve systems and their integral equipment, to the level needed to maintain control and recognise and resolve problems. This can be assessed through questioning and the use of what-if scenarios both on the plant (during demonstration of normal operations and walk-throughs of abnormal operations) and off the plant.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster.

Consistent performance should be demonstrated. In particular look to see that:

- early warning signs of equipment/processes needing attention or with potential problems are recognised
- the range of possible causes can be identified and analysed and the most likely cause determined
- appropriate action is taken to ensure a timely return to full performance
- obvious problems in related plant areas are recognised and an appropriate contribution made to their solution.

These aspects may be best assessed using a range of
### EVIDENCE GUIDE

| Scenarios/case studies/what-ifs as the stimulus with a walk-through forming part of the response. These assessment activities should include a range of problems, including new, unusual and improbable situations, which may have been generated from the past incident history of valves, incidents with similar valves around the world, hazard analysis activities and similar sources. |
| Context of and specific resources for assessment |
| As a general rule assessment will require access to an operating plant over an extended period of time, or a suitable method of gathering evidence of operating competence over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions. |
| Method of assessment |
| In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units. It will frequently also be appropriate to assess this unit concurrently with: |
| - PMAOPS221B Operate and monitor pumping systems and equipment |
| Guidance information for assessment |
| Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed. |
## Range Statement

### RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.

<table>
<thead>
<tr>
<th>Codes of practice/ standards</th>
<th>Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.</th>
</tr>
</thead>
</table>

### Context

This unit of competency includes all such items of equipment and unit operations which form part of the valve system. For your plant this may include (select relevant items):

- globe, butterfly, ball and gate valves
- control valves
- isolation valves
- non-return or check valves
- pressure relief valves
- shutdown systems
- hydraulic power units.

Valve actuation may be:

- pneumatic
- hydraulic
- electrical
- manual.

### Typical problems

Typical problems for your plant may include:

- vibration/resonance
- blockages/hydrates
- valve seat wear
- valve seal leakage
- valve stem leakage
- mechanical failure, eg plug/gate
- valve sticking.

### Appropriate action

Appropriate action includes:

- determining problems needing action
- determining possible fault causes
- rectifying problem using appropriate solution within area of responsibility

### Competency field

| Competency field |

### Co-requisite units

| Co-requisite units |
PMAOPS230B Monitor, operate and maintain pipeline stations and equipment

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | In a typical scenario, an operator is responsible for the operation and monitoring of pipeline stations and associated equipment within the parameters established. The competence includes examining the station and its equipment for signs of damage and/or need of maintenance, maintaining general cleanliness and reporting against specific requirements. Pipeline stations can include:
|                | • maintenance bases
|                | • compressor stations
|                | • scraper stations
|                | • inlet and delivery stations
|                | • mainline block valve sites. |

Application of the Unit

| Application of the unit | The operator would:
|                        | • identify and rectify operational problems
|                        | • monitor station operating parameters
|                        | • maintain station equipment.
|                        | Generally the operator would work on an individual basis and be expected to be capable of performing all parts of this unit, but may be part of a team. At all times they would be liaising and cooperating with other members of the team.
|                        | This unit does not require the operation of a central control panel, however, it can be applied to a pipeline control centre if applicable.
|                        | AS 2885 Part 3 forms the principle reference standard for this competency. |

Licensing/Regulatory Information
Not applicable.

| 1. Prepare for work.                 | 1.1. Identify work requirements  
1.2. Identify and control hazards  
1.3. Coordinate with appropriate personnel                                                                                                                                   |
| 2. Plan and organise for activities. | 2.1. Review previous reports and check for outstanding work orders or notices  
2.2. Obtain tools, equipment and testing devices needed to carry out the work and check for correct operation and safety  
2.3. Check operational area to ensure that hazards are controlled  
2.4. Conduct required safety checks and pre-start checks of the equipment  
2.5. Determine status of the system through communication with relevant personnel prior to commencing start-up.                                                                 |
| 3. Start up/shut down the system.    | 3.1. Start up the system in accordance with procedures  
3.2. Shutdown in accordance with procedures and conditions  
3.3. Apply emergency shutdown procedures when appropriate  
3.4. Maintain records/reports to procedures.                                                                                                                                      |
| 4. Monitor the system                | 4.1. Monitor operating conditions of equipment through condition monitoring systems, gauge levels, temperatures and flow indicators in order to determine performance of equipment and system  
4.2. Adjust systems for the most efficient operation  
4.3. Identify equipment faults through inspection and testing of the operational equipment  
4.4. Take appropriate action  
4.5. Communicate pipeline system information to relevant personnel  
4.6. Select and apply emergency response when required.                                                                                                                                 |
| 5. Isolate and de-isolate plant.     | 5.1. Isolate plant  
5.2. Make safe for required work  
5.3. Check plant is ready to be returned to service  
5.4. Prepare plant for return to service.                                                                                                                                 |
| 6. Record and report results.       | 6.1. Document and record maintenance results to procedures  
6.2. Notify work completion to procedures  
6.3. Cancel where appropriate permit to work and sign off at completion of repair.                                                                                     |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

Competence includes the ability to isolate the causes of problems to an item of equipment within the pipeline system and to distinguish between causes of problems/alarm/fault indications such as:

- process gas variations
- instrument failure/wrong reading
- electrical failure
- mechanical failure
- operational problems.

Required knowledge

The knowledge referred to in the Evidence Guide for this unit includes:

- station instrumentation
- condition monitoring equipment
- station power supplies
- operations of metering equipment
- functions of process control equipment
- principles behind gas analysis equipment
- purpose of valves, actuators and flanges
- layout of piping systems
- sumps and drains
- station pressure vessels/filtration equipment
- principles of operation of plant/equipment
- physics and chemistry relevant to the process unit and the materials processed
- process parameters and limits, eg temperature, pressure, flow, pH
- duty of care obligations
- hierarchy of control
- communication protocols, eg radio, phone, computer, paper, permissions/authorities
- routine problems, faults and their resolution
- relevant alarms and actions
- plant process idiosyncrasies
- all items on a schematic of the plant item and the function of each
- correct methods of starting, stopping, operating and controlling process
- corrective action appropriate to the problem cause
- function and troubleshooting of major components and their problems
- types and causes of problems within operator's scope of skill level and responsibility.
Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

Assessment of this unit should include demonstrated competence on actual plant/pipeline and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations, which will include disruptions to normal, smooth operation.

Simulation may be required to allow for assessment of parts of this unit. Simulation should be based on the actual plant and will include walk-throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios, role plays and 3D virtual reality interactive systems. In the case of evacuation training or training for competencies practised in life-threatening situations, simulation may be used for the bulk of the training.

This unit of competency requires an application of the knowledge contained in the use of the pipeline and its integral equipment, to the level needed to maintain control and recognise and resolve problems. This can be assessed through questioning and the use of what-if scenarios both on the plant (during demonstration of normal operations and walk-throughs of abnormal operations) and off the plant.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster.

Consistent performance should be demonstrated. In particular look to see that:

- early warning signs of equipment/processes needing attention or with potential problems are recognised
- the range of possible causes can be identified and analysed and the most likely cause determined

### Context

This unit of competency includes all items of equipment and unit operations which form part of the pipeline system. For your plant this may include (select relevant items):

- compressor systems and equipment, including monitoring systems, anti surge systems, safety systems and compressor control systems
- prime movers, including turbine engines, reciprocating engines and electric motors,
- instrument and control systems
- valve systems.

### Typical problems

Typical problems for your plant may include:

- gas/product leaks
- incorrect valve positions
- electrical problems
- compressor or pump failure
- out of current inspection status
- gauge failure or hose rupture, leaks
- instruments out of calibration
- instruments and equipment requiring cleaning.

### Appropriate action

Appropriate action includes:

- determining problems needing action
- determining possible fault causes
- rectifying problem using appropriate solution within area of responsibility
- following through items initiated until final resolution has occurred
- reporting problems outside area of responsibility to designated person.

### Procedures

Procedures may be written, verbal, computer-based or in some other form. They include:

- all work instructions
### RANGE STATEMENT

| Co-requisite units |
PMAOPS307B Transfer bulk fluids into/out of storage facility

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | In a typical scenario involving land based tank farms or tankers at sea, the control room operator, from the main panel, will monitor and control the transfer of product into storage facilities including controlling product levels, flows, temperatures and pressures. The operations technician will also prepare and complete all necessary documentation for the control, transfer and calculation of product volumes. |

Application of the Unit

| Application of the unit | The storage facility or vessel will be monitored through the use of gas and fire detection equipment. Automatic sprinkler systems or deluges will be activated in the event of fire detection and emergency shutdown systems will operate. The equipment to be used in the transfer of product will be checked and tested before use. In some cases, before transferring, the circulation of product through pipelines, will commence. This is usually for the purpose of pipeline chilldown, and is required to minimise vapour pressure build-up in warm pipework. A comprehensive fire water supply main may encompass the facility and/or be located on the vessel, and a suitable fire pump would be able to provide fire water requirements in emergencies. |

Licensing/Regulatory Information

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

### Required skills

For the plant system/unit:

- efficient and effective operation of plant/equipment
- hazard analysis
- completing plant records
- communication
- problem solving

### Required knowledge

Demonstration of competence in this unit must include knowledge of the following:

- principles of operation of plant/equipment
- physics and chemistry relevant to the process unit
- process parameters and limits, eg temperature, pressure, flow, pH
- duty of care obligations
- hierarchy of control
- communication protocols, eg radio, phone, computer, paper, permissions/authorities
- routine problems, faults and their resolution
- relevant alarms and actions
- plant process idiosyncrasies
- all items on a schematic of the plant item and the function of each
- correct methods of starting, stopping, operating and controlling flow
- causes of head loss in piping systems, including comparison of fittings using Le/d concept, fluid and pipe material properties, flow geometry etc
- corrective action appropriate to the problem cause
- function and troubleshooting of major internal components and their problems, such as impellers, seals or bearings
- types and causes of problems within operator's scope of skill level and responsibility.
- testing techniques
- equipment isolation and purging
- use and operation of safety equipment, including breathing apparatus
- tank and product mixes
- flow rates and measures
- tank capacities and percentages
- static electricity principles.

Sound knowledge of storage and transfer techniques required to transport oil, gas or water is...
REQUIRED SKILLS AND KNOWLEDGE

expected.
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

| Overview of assessment | Assessment of this unit should include demonstrated competence on actual plant and equipment in a work environment. The unit will be assessed in a holistic manner as is practical and may be integrated with the assessment of other relevant units of competency. # RANGE STATEMENT

- product surging
- control of temperature and pressure
- variations in feed
- vibration
- tank capacities and space.

## Start up shut down as required

Start up shut down as required includes:
- start up and shut down to/from normal operating conditions
- start up and shut down to/from isolated, cold, empty
- all other conditions experienced on the plant.
  
  ie from any condition to any condition experienced on the plant.

## Appropriate action

Appropriate action includes:
- determining problems needing action
- determining possible fault causes
- rectifying problem using appropriate solution within area of responsibility
- following through items initiated until final resolution has occurred
- reporting problems outside area of responsibility to designated person.

## Procedures

Procedures may be written, verbal, computer-based or in some other form. They include:
- all work instructions
- standard operating procedures
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

For the purposes of this Training Package, 'procedures' also includes good operating practice as may be defined by industry codes of practice (eg Responsible Care) and government regulations.

## Health, safety and environment (HSE)

All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

## Unit Sector(s)
Unit sector | Operational/technical

Competency field

Co-requisite units
PMAOPS330B Communicate and monitor pipeline activities

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | In this scenario operations technicians maintain a watching brief over the pipeline from the pipeline control centre. The centre will be the hub for pipeline activities in order to achieve minimum risk to continued safe and efficient operation of the pipeline system. The pipeline control centre operations technician will communicate with field personnel to obtain information and direct field operators to check and maintain pipeline operations. |

Application of the Unit

| Application of the unit | The operations technician will:  
  • ensure the safety of the system and check operational equipment prior to start up  
  • maintain productivity through the monitoring of flows, pressures and temperatures in the field  
  • maintain communication with product suppliers and user customers to maintain the safe and efficient operation of the pipeline.  

Generally the pipeline control centre operations technician would be part of a team during pipeline startup and shutdown procedures. However, they will be expected to be capable of performing all parts of this unit on their own. At all times they would be liaising and cooperating with other members of the team and customers.  

AS 2885 Part 3 forms the principle reference standard for this competency. |

<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Gather information about pipeline operation needs. | 1.1. Respond to and record messages and information received from field operations and pipeline system stations  
1.2. Interpret and acknowledge alarm codes correctly to ensure the correct response strategy is selected and applied to the situation  
1.3. Clarify additional information needs and select an appropriate communication medium to deliver the information required  
1.4. Improve operational efficiency through adequate and timely application of information provided  
1.5. Interpret and action customer/shipper gas forecasts to ensure correct gas flow rates into the pipeline system are achieved. |
| 2. Communicate pipeline information. | 2.1. Monitor activities of pipeline personnel in the field and data from the control centre  
2.2. Evaluate internal messages and response communications concerning system alarms/incidents to establish the scope and severity of the alarm/incident  
2.3. Convey pipeline system operation information to relevant personnel in other work areas to ensure safe and efficient operation of the pipeline system  
2.4. Relay information to technicians and other services/parties so that fault finding or safety checks can be conducted to identify risks to product supply, pipeline equipment, environment and personnel  
2.5. Authorise, record and monitor permits to work to allow operational activities to be undertaken or cancelled. |
| 3. Coordinate pipeline systems operations. | 3.1. Monitor field and pipeline station operations data  
3.2. Monitor and observe equipment operating conditions, pressures and temperatures, and maintain correct equipment operating parameters  
3.3. Identify faults and initiate the required repair or reporting of the fault  
3.4. Isolate identified faults in the pipeline as appropriate  
3.5. Respond to system alarms and emergencies  
3.6. Determine the required course of action or emergency response to the identified system condition/emergency  
3.7. Complete and document pre-shutdown checks  
3.8. Shut down the pipeline system under either normal or emergency conditions in accordance with operating... |

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level, required for this unit.

#### Required skills

Competence includes the ability to isolate the causes of problems to an item of equipment within the compressor system and distinguish between causes of problems/alarm/fault indications such as:

- pipeline pressure variations
- instrument failure/wrong reading
- electrical failure
- mechanical failure
- operational problems.

#### Required knowledge

The knowledge referred to in the Evidence Guide for this unit includes:

- pipeline system functions within the design parameters and design philosophy
- process information schemata of the pipeline system and associated facilities
- pipeline operating principles, parameters and product specifications
- relevant workplace documentation
- SCADA systems
- alarm systems and emergency systems, including fire and shutdown
- the 'permit to work' system
- architecture of the pipeline system
- pipeline system operating parameters
- gas quality/analysis equipment operation
- MSDS information.
- physics and chemistry relevant to the process unit and the materials processed
- process parameters and limits, eg temperature, pressure, flow, pH
- duty of care obligations
- hierarchy of control
- communication protocols, eg radio, phone, computer, paper, permissions/authorities
- routine problems, faults and their resolution
- relevant alarms and actions
- plant process idiosyncrasies
- correct methods of starting, stopping, operating and controlling process
- corrective action appropriate to the problem cause
- function and troubleshooting of major components and their problems
- types and causes of problems within operator's scope of skill level and responsibility.
# Evidence Guide

<table>
<thead>
<tr>
<th>EVIDENCE GUIDE</th>
</tr>
</thead>
</table>

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

Assessment of this unit should include demonstrated competence on actual plant/pipeline and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations, which will include disruptions to normal, smooth operation.

Simulation may be required to allow for assessment of parts of this unit. Simulation should be based on the actual plant and will include walk-throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios, role plays and 3D virtual reality interactive systems. In the case of evacuation training or training for competencies practised in life-threatening situations, simulation may be used for the bulk of the training.

This unit of competency requires an application of the knowledge contained in the use of the systems in the pipeline control centre and its integral equipment, to the level needed to maintain control and recognise and resolve problems. This can be assessed through questioning and the use of what-if scenarios both on the plant (during demonstration of normal operations and walk-throughs of abnormal operations) and off the plant.

## Critical aspects for assessment and evidence required to demonstrate competency in this unit

Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster.

Consistent performance should be demonstrated. In particular look to see that:

- early warning signs of equipment/processes needing attention or with potential problems are recognised
- the range of possible causes can be identified and analysed and the most likely cause determined
- appropriate action is taken to ensure a timely return to full performance
- obvious problems in related plant areas are recognised and an appropriate contribution made to their solution.

These aspects may be best assessed using a range of scenarios/case
<table>
<thead>
<tr>
<th><strong>EVIDENCE GUIDE</strong></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>studies/what-ifs as the stimulus with a walk through forming part of the response. These assessment activities should include a range of problems, including new, unusual and improbable situations which may have been generated from the past incident history of the plant, incidents on similar plants around the world, hazard analysis activities and similar sources.</td>
<td></td>
</tr>
<tr>
<td><strong>Context of and specific resources for assessment</strong></td>
<td>Assessment will require access to an operating plant over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.</td>
</tr>
</tbody>
</table>
| **Method of assessment** | In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units. Consider co-assessment with:  
- *MSAPMPER202A Observe permit work*  
- *PMAOPS230B Monitor, operate and maintain pipeline stations and equipment.* |
| **Guidance information for assessment** | Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed. |
## Range Statement

### RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.

| 1. Prepare for work. | 1.1. Identify work requirements  
1.2. Identify and control hazards  
1.3. Coordinate with appropriate personnel |
| 2. Prepare the pipeline system for pigging (launching/receiving). | 2.1. Liaise with the relevant people to ensure correct flow conditions are in the pipeline system prior to launching  
2.2. Verify that all required permits have been issued  
2.3. Prepare specified pig in accordance with requirements  
2.4. Prepare pipeline for pigging operation in accordance procedures. |
| 3. Launch, monitor progress and/or receive pig | 3.1. Prepare launching and receiving scraper barrels and intermediate site for launching and receiving operations  
3.2. Load the pig into the scraper barrel and launch  
3.3. Calculate pig travel speed during the pig’s progress  
3.4. Monitor and track progress of the pig in the pipeline system  
3.5. Take appropriate actions  
3.6. Receive pig in accordance with legislative and enterprise procedural requirements |
| 4. Interpret pigging data | 4.1. Inspect the received pig to determine wear and/or other required information  
4.2. Inspect, measure and or sample the waste material gathered during pigging operations as required  
4.3. Take appropriate action  
4.4. Dispose of waste materials to procedure  
4.5. Record data accurately to assist with assessment of pipeline condition. |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

Competence includes the ability to isolate the causes of problems to an item of equipment within the pigging system and to distinguish between causes of problems/alarm/fault indications such as:

- instrument failure/wrong reading
- electrical failure
- mechanical failure
- operational problem.

Required knowledge

The knowledge referred to in the Evidence Guide for this unit includes:

- reasons for pipeline pigging and the type of pig used for each application
- prevention/mitigation measures for closure risks
- all items on a schematic of the pigging system and the function of each
- the nature/condition of materials/flows entering and leaving the scraper barrels during the launching and receiving operations
- correct valve sequences,
- expected system pressures for launching/receiving operations
- types of pigs and their purpose.
- principles of pigging
- physics and chemistry relevant to the pigs, pipes and materials
- process parameters and limits, eg temperature, pressure, flow, pH
- duty of care obligations
- hierarchy of control
- communication protocols, eg radio, phone, computer, paper, permissions/authorities
- routine problems, faults and their resolution
- relevant alarms and actions
- plant process idiosyncrasies
- correct methods of starting, stopping, operating and controlling process
- corrective action appropriate to the problem cause
- function and troubleshooting of major components and their problems
- types and causes of problems within operator's scope of skill level and responsibility.
Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

### Co-requisite units

| Co-requisite units |
PMAOPS411B Manage plant shutdown and restart

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit covers the co-ordination of the shutdown and restarting of a production process in a safe and efficient manner due to a planned or an unplanned shutdown or emergency situation. It does not apply to individual plant operators shutting down individual production units or following directions during a shutdown, as this is included in the normal unit of competency for operating that production unit. |

Application of the Unit

| Application of the unit | In a typical scenario, a complex and integrated plant (usually but not necessarily large and continuous) needs to be shut down for some reason. Shutting down is a complex process and is more than the simple turning off of a switch. This competency would typically be exercised by the leading plant technician on a shift. This unit requires the exercise of discretion as the plant technician's responses are governed by the cause of the shutdown and the plant's responses to that. They are required to adapt normal practice, within the overall guidelines, to the current situation to obtain the best outcome. This competency requires the coordination of all personnel involved in the shutdown to ensure it happens in as orderly a fashion as possible and that the plant is left in the best condition possible for a quick restart. The person exercising this competency needs to balance the varying requirements to ensure the shutdown occurs with maximum safety to personnel, plant, the environment and the business's productivity (in that order). |

</thead>
</table>
| 1. Manage shutdown sequence. | 1.1. Check and verify safety systems to ensure that the unit has been made safe  
1.2. Identify the reason for, or cause of the shutdown by troubleshooting the system and by utilising all available data and information systems  
1.3. Obtain confirmation of the identified shutdown from field based operators to verify both the nature and the reliability of the shutdown  
1.4. Rectify or initiate procedures to rectify the fault or shutdown cause through either repair of the operational fault or readjustment before returning the system to start-up status. |
| 2. Conduct start-up process. | 2.1. Satisfy all start-up permissives prior to start-up process being commenced  
2.2. Conduct start-up according to procedures and in a safe and efficient manner, ensuring a return to steady state operation is achieved. |
| 3. Document shutdown and start-up process. | 3.1. Complete all logs and workplace documentation relating to the shutdown/start-up process, ensuring all details, actions and responses are accurately recorded  
3.2. Record any further ongoing production problems and report to appropriate persons or authority. |
Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level, required for this unit.

**Required skills**

Competence includes:

- efficient and effective planning of shut down/start up
- hazard analysis
- completing plant records
- communication
- problem solving

**Required knowledge**

Demonstration of competence in this unit must include knowledge of the following:

- principles of operation of plant/equipment
- physics and chemistry relevant to the process unit and the materials processed
- process parameters and limits, eg temperature, pressure, flow, pH
- duty of care obligations
- hierarchy of control
- communication protocols, eg radio, phone, computer, paper, permissions/authorities
- routine problems, faults and their resolution
- relevant alarms and actions
- plant process idiosyncrasies
- all items on a schematic of the plant item and the function of each
- correct methods of starting, stopping, operating and controlling process
- corrective action appropriate to the problem cause
- function and troubleshooting of major components and their problems
- types and causes of problems within operator's scope of skill level and responsibility.
- architecture of the process/production systems
- the plant
- product specifications and tolerances
- systems operating parameters
- process control philosophies and strategies
- the process
- emergency shutdown procedures
- physics, chemistry and mathematics relevant to the process
- outside process knowledge and equipment operation

as is relevant to the practical operation of equipment at that job level.

This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of what-if scenarios both on the plant (during demonstration of normal operations and walk-throughs of abnormal operations) and off the plant.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster.

Consistent performance should be demonstrated. In particular look to see that:

- early warning signs of equipment/processes needing attention or with potential problems are recognised
- the range of possible causes can be identified and analysed and the most likely cause determined
- appropriate action is taken to ensure a timely return to full performance
- obvious problems in related plant areas are recognised and an appropriate contribution made to their solution.

These aspects may be best assessed using a range of scenarios/case studies/what-ifs as the stimulus with a walk-through forming part of the response. These assessment activities should include a range of problems, including new, unusual and improbable situations which may have been generated from the past incident history of the plant, incidents on similar plants around the world, hazard analysis activities and similar sources.
### EVIDENCE GUIDE

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th>Assessment will require access to an operating plant over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.</th>
</tr>
</thead>
</table>
| Method of assessment | In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units. In a major hazard facility, it may be appropriate to assess this unit concurrently with:  
  - MSAPMOHS200A Work safely.  
  
The person undertaking this competency is expected to be able to work under and manage situations of high pressure, in order to ensure the safe and efficient management of the control room production process and the safety of plant employees. |
| Guidance information for assessment | Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed. |
### RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

<table>
<thead>
<tr>
<th>Codes of practice/standards</th>
<th>Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.</th>
</tr>
</thead>
</table>

#### Context

Causes of shutdown may be:
- planned, eg for maintenance or other planned work
- unplanned, eg in response to a plant upset or equipment failure
- emergency, eg in response to an automatic shutdown sequence or plant trip.

The shutdown may be:
- shutdown 'to cold', eg complete plant shutdown and purging of all process materials from equipment
- short shutdown to allow minor work 'warm shutdown', eg partial shutdown, with retention of some or all of process materials
- managing a plant trip and restart 'hot shutdown', eg short duration shutdown in response to a plant upset or trip

This competency also includes:
- coordinating the shift team
- implementing emergency procedures
- using the permit to work system (for repairs required).

This competency may apply to:
- panel technicians
- outside technicians
- technicians seconded to a shut down role
- other relevant personnel

All operations are performed according to procedures.

<table>
<thead>
<tr>
<th>Appropriate action</th>
<th>Appropriate action includes:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>determining problems needing action</td>
</tr>
<tr>
<td></td>
<td>determining possible fault causes</td>
</tr>
<tr>
<td></td>
<td>rectifying problem using appropriate solution within area of responsibility</td>
</tr>
<tr>
<td></td>
<td>following through items initiated until final resolution has occurred</td>
</tr>
</tbody>
</table>
RANGE STATEMENT

- reporting problems outside area of responsibility to designated person.

Procedures

Procedures may be written, verbal, computer-based or in some other form. They include:
- all work instructions
- standard operating procedures
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

For the purposes of this Training Package, 'procedures' also includes good operating practice as may be defined by industry codes of practice (e.g. Responsible Care) and government regulations.

Health, safety and environment (HSE)

All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

Unit Sector(s)

Unit sector | Operational/technical

Competency field

Competency field

Co-requisite units

Co-requisite units
PMASUP236B Operate vehicles in the field

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | In a typical scenario an operations technician patrols areas of pipeline or follows pipelines across a variety of terrains looking for problems which require maintenance or reporting. During the course of their work they must check the vehicle for mechanical soundness before leaving base, ensure it is securely and adequately packed, make certain their communications equipment and contact schedule are in order and generally be prepared for long periods off-road. |

Application of the Unit

| Application of the unit | Generally the operations technician would be part of a team during field trips, though he/she may be required to undertake limited trips during which they would be expected to be capable of demonstrating competence in all parts of this unit. At all times they would be liaising and cooperating with their base station. The operations technician will:  
• check their vehicle daily for damage  
• ensure fuels and lubricant levels are maintained  
• effect minor repairs  
• communicate with their base station  
This unit has no prerequisites. However operators will have the appropriate class of driver's licence before taking charge of the vehicle. |

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare vehicle and secure load. | 1.1. Conduct vehicle familiarisation checks before starting journey  
1.2. Note and rectify any defects where possible or report vehicle for further attention/repair  
1.3. Ascertain that all required fuel, water and other supplies required for the journey are available and in useable order  
1.4. Inspect all ancillary equipment and operational accessories to ensure they have been attached or secured in a safe and agreed manner  
1.5. Secure load including external loads, rear tray, roof racks, and any loads within the vehicle, using appropriate securing equipment. |
| 2. Undertake journey | 2.1. Familiarise oneself with the route to ensure that an appropriate route has been determined  
2.2. Interpret access manuals and topographical maps in order to obtain required information for journey  
2.3. Obtain relevant authorisations/notifications and accesses before starting the journey  
2.4. Confirm and/or clarify or communicate journey details with relevant company personnel  
2.5. Monitor driving conditions and requirements constantly, to meet any changes in terrain, weather conditions and road conditions and requirements  
2.6. Monitor and maintain fluid levels and air pressures to ensure safe and efficient vehicle operations  
2.7. Monitor vehicle constantly for any malfunctions or factors that may affect vehicle performance  
2.8. Maintain vehicle speeds within all stated limits and road condition limitations to minimise the risk of personal injury, environmental damage and load damage  
2.9. Maintain communication as required with the relevant company personnel to advise of progress and journey status  
2.10. Ensure seatbelts are worn by all personnel while the vehicle is in motion. |
| 3. Operate vehicle | 3.1. Apply knowledge of vehicle differences to the driving requirements of four wheel drive and conventional vehicles  
3.2. Adhere to general principles of four wheel driving in negotiating a variety of terrains and driving conditions  
3.3. Use defensive driving techniques  
3.4. Observe additional precautions for night driving |
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 3.5. Drive to suit road conditions  
3.6. Observe rules prohibiting driving under the influence of alcohol and other performance inhibiting substances. | |
| 4. Finalise journey | 4.1. Communicate and confirm termination of journey with the relevant company personnel  
4.2. Visually inspect the vehicle to ensure that vehicle is in good repair and order  
4.3. Unsecure trailer loads and prepare for unloading utilising the agreed uncoupling process  
4.4. Report faults or damage to vehicle to appropriate personnel. |
| 5. Recover vehicle | 5.1. Identify and assess options for recovery of an immobilised vehicle  
5.2. Operate recovery equipment safely  
5.3. Perform a battery 'jump start' safely  
5.4. Observe safety precautions when rigging cables and chains  
5.5. Demonstrate various methods of vehicle recovery  
5.6. Change a wheel on a properly jacked vehicle. |
| 6. Maintain vehicle safety | 6.1. Observe appropriate speeds for the road conditions  
6.2. Ensure all personnel use a seat belt  
6.3. Observe site specific vehicle entry restrictions  
6.4. Follow appropriate search and rescue notification procedures  
6.5. Follow appropriate procedures for passing large or heavy vehicles. |
Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

#### Required skills

Competence includes the ability to distinguish between causes of vehicle problems/alarms/fault indications such as:

- instrument failure/malfunction
- electrical failure/malfunction
- mechanical failure/malfunction.

#### Required knowledge

The knowledge referred to in the Evidence Guide for this unit includes:

- local/company vehicle rules and regulations
- hazards and risks of off-road travel
- requirements for reporting and recording vehicle movements
- communications arrangements (backup methods need to be considered)
- site or area response plan to detail
- procedures to be followed when an incident is reported
- actions to be followed when a traveller is recorded as overdue
- responsibilities for monitoring vehicle journeys and determining immediate and follow-up actions under the system.
Evidence Guide

</tr>
</tbody>
</table>
These aspects may be best assessed using a range of scenarios/case studies/what ifs as the stimulus with a walk through forming part of the response. These assessment activities should include a range of problems, including new, unusual and improbable situations, which may have been generated from the past incident history of the vehicle, incidents on similar vehicles around the world, hazard analysis activities and similar sources.

**Context of and specific resources for assessment**

Assessment will require access to an operating well over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.

**Method of assessment**

In all organisations it may be appropriate to assess this unit concurrently with relevant teamwork and communication units. Consider co-assessment with:

- PMASUP241B Maintain pipeline easements
- PMASUP242B Monitor pipeline civil works
- PMASUP343B Monitor and maintain pipeline cathodic protection systems
- PMASUP344B Monitor and control repairs and modifications on operational pipe
- PMAOPS230B Monitor, operate and maintain pipeline stations and equipment.

**Guidance information for assessment**

Assessment process and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.
## RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.

</tr>
</thead>
</table>
| Context                    | This unit of competency includes all such vehicles and equipment which form part of the field operator's kit. For your organisation this may include (select relevant items):  
  - 4wd vehicles, eg utility, troop carrier or station wagon  
  - trucks  
  - communications equipment, ie 2 way radio, mobile or satellite phone, GPS  
  - recovery equipment, ie snatch straps, slings, chains and shackles  
  - trailers.  
  Typical problems for your operations may include:  
  - overheating (coolant, exhaust, driveline)  
  - low oil pressure  
  - electrical discharge/overcharge  
  - tyre punctures  
  - load shifts. |
| Health, safety and environment (HSE) | All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence. |

### Unit Sector(s)

| Unit sector | Support/generic |
Competency field

Co-requisite units
PMASUP441C Decommission plant

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This competency covers the decommissioning of an existing plant/pipeline or major plant area, and its associated equipment. Decommissioning refers to the removal from service of plant/pipeline and equipment and its storage/'mothballing' or disposal. This unit does not cover the shutdown of a plant/pipeline - use PMAOPS411B Manage plant shutdown and restart. |

Application of the Unit

| Application of the unit | In a typical scenario, an existing plant/pipeline or major plant area, and its associated equipment, are planned to be taken out of service. The experienced technician organizes the systematic shutdown, cleaning out and preparation for safe 'moth-balling' all of the plant and equipment. This competency is typically performed by experienced technicians, likely to be the leaders of an operational team, usually working in conjunction with a decommissioning team, for the purpose of decommissioning plant/pipelines. As decommissioning is usually a team activity, the technician will take a lead technical role, rather than undertake all aspects on an individual basis. Much of the activity of successful decommissioning is in planning the activity and then supervising the work to ensure it is done safely and efficiently with no environmental damage. The technician may have no 'hands-on' role at all. |

</table>
| 1. Contribute to decommissioning planning. | 1.1. Apply process understanding to the planning process  
1.2. Identify the role and purpose of the plant and equipment  
1.3. Ensure the work is coordinated effectively with others involved on the work site  
1.4. Identify process conditions and apply to hazard studies  
1.5. Undertake investigations following on from hazard studies  
1.6. Obtain materials necessary to complete the work and check against job requirements  
1.7. Obtain tools and equipment necessary to carry out the work and check for correct operation and safety  
1.8. Prepare plans to ensure that procedures are performed in the correct sequence  
1.9. Obtain approvals where necessary from appropriate authorities to ensure decommissioning process proceeds in accordance with the plan.  
1.10. Complete all appropriate documentation. |
| 2. Isolate and decontaminate equipment/unit. | 2.1. Interpret and apply decommissioning plan  
2.2. Identify and use appropriate safety equipment and materials  
2.3. Isolate and decontaminate equipment components as required  
2.4. Dispose of contaminated materials or components as required  
2.5. Complete required documentation. |
| 3. Inspect, test and notify completion of work. | 3.1. Select tools and equipment appropriate to the testing/inspection requirements and utilise in accordance with manufacturer specifications and legislative requirements  
3.2. Test/inspect in accordance with requirements  
3.3. Ensure compliance with OHS legislative requirements for risk assessment prior to disposal  
3.4. Ensure any required additional work is undertaken/initiated  
3.5. Notify work completion. |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

Demonstrated knowledge and ability to:

- plan the decommissioning process
- arrange resources as required
- coordinate own work and the work of others, including on-site contractors/operators
- interpret and solve operational problems as they arise and take appropriate action
- document the decommissioning and recommendations for safe storage/maintenance/disposal.

Required knowledge

Competence to include the ability to apply and explain:

- chemistry of materials involved
- principles of operation of the process
- principles of operation of the equipment involved
- all items on a schematic of the plant and the function of each
- correct methods of, stopping plant items
- function of major components
- HAZOP study process and the interpretation of findings
- results and impact of a HAZAN study
- hazardous substances legislation
- the process of hazard identification, risk assessment and control
- sources of hazard information (such as Material Safety Data Sheets)
- safe disposal methods of materials and equipment
- decontamination processes.
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

Assessment of this unit should include demonstrated competence on actual plant/pipeline and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency.

Simulation may be required to allow for assessment of parts of this unit. It is possible that a simulation will be required to ensure that the technician is competent before taking a significant role in a decommissioning activity. Decommissioning is an infrequent activity and so it may not be practical or equitable to wait for an actual decommissioning to occur to use this as the basis for assessment.

Simulation should be based on the actual plant and will include walkthroughs of the relevant competency components. Simulations may also include the use of case studies/scenarios and role plays.

This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of what-if scenarios both on the plant (during demonstration of normal operations and walk-throughs of abnormal operations) and off the plant.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster.

Consistent performance should be demonstrated. In particular look to see that:

- potential problems are recognised
- the range of possible causes can be identified and analysed and the most likely cause determined
- appropriate, timely action is taken
- obvious problems in related plant areas are recognised and an appropriate contribution made to their solution

These aspects may be best assessed using a range of scenarios/case studies/what ifs as the stimulus with a walk through forming part of the response. These assessment activities should include a range of problems, including new, unusual and improbable situations which may have been generated from the past incident history of the plant, incidents on similar plants around the world, hazard analysis activities and similar sources.
## EVIDENCE GUIDE

| Context of and specific resources for assessment | Assessment will require access to a plant over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required, as will a bank of questions which will be used to probe the reasoning behind the observable actions. |

PMLTEST300B Perform basic tests

Modification History

Unit Descriptor
This unit of competency covers the ability to perform tests using standard methods and with access to readily available advice. Personnel are required to demonstrate close attention to the accuracy and precision of measurements and the data obtained. In general, they do not calibrate equipment and make only limited adjustments to the controls. The unit of competency does not cover interpretation or analysis of results or troubleshooting equipment problems.
This unit competency has no prerequisites.
This unit of competency is applicable to laboratory/field assistants working in all industry sectors.
Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section This competency in practice.

5 Maintain a safe work environment

5.1 Use established safe work practices and personal protective equipment to ensure personal safety and that of other laboratory personnel

5.2 Minimise the generation of wastes and environmental impacts

5.3 Ensure safe disposal of laboratory and hazardous wastes

5.4 Clean, care for and store equipment and reagents as required.
Required Skills and Knowledge

Evidence Guide

The Evidence Guide describes the underpinning knowledge and skills that must be demonstrated to prove competence.

**Critical aspects of competency**

Competency must be demonstrated in the ability to perform consistently at the required standard. In particular, assessors should look to see that the candidate:

- interprets enterprise procedure or standard methods accurately
- uses safety information (for example, MSDSs) and performs procedures safely
- checks test equipment before use
- completes all tests within required timeline without sacrificing safety, accuracy or quality
- calculates, records and presents results accurately and legibly
- maintains security, integrity and traceability of all samples, data/results and documentation
- cleans and maintains equipment.

**Underpinning knowledge**

Competency includes the ability to apply and explain:

- purpose of test
- principles of the standard method
- pre-use equipment checks
- relevant standards/specifications and their interpretation
- sources of uncertainty in measurement and methods for control
- enterprise and/or legal traceability requirements
- interpretation and recording of test result, including simple calculations
- procedures for recognition/reporting of unexpected or unusual results
- relevant health, safety and environment requirements.

**Assessment context and methods**

This unit of competency is to be assessed in the workplace or simulated workplace environment.

The following assessment methods are suggested:

- review of the quality of test data/results achieved by the candidate over time
- inspection of records and workplace documentation completed by the candidate
- feedback from peers and supervisors
- observation of the candidate performing a range of basic tests
- oral or written questioning to check underpinning knowledge of test procedures.

In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Questioning techniques should suit the language and literacy levels of the candidate.

**Interdependent assessment of unit**

This unit of competency may be assessed with:

**PMLDATA200A Record and present data.**

**Resource implications**

Resources may include:

- standard laboratory equipped with appropriate equipment standards and materials
- enterprise procedures and standard methods, equipment manuals
- material safety data sheets (MSDSs).

**This competency in practice**
Manufacturing
Standard testing methods may be viewed as 'legal' requirements that must be followed to ensure that a product manufactured in a chemical plant meets the specification by which it is sold to the customer. Technical assistants perform tests in a quality control laboratory to ensure that material meets 'legal' requirements and the material is safe and effective in use. Peroxides may be present in ether as a result of light-catalysed air oxidation. Peroxides are toxic and can give rise to mixtures which are explosive when distilled. Technical assistants test ether to ensure that the level of peroxide is within acceptable limits. The test is done by shaking ether with a solution of potassium iodide. After standing for 30 minutes in the dark the yellow colour of the aqueous phase, due to the liberation of iodine, must not be more intense than a prepared standard solution. These tests ensure the quality and safety of the ether.

Food processing
A Snack Food Company produces a range of high quality, impulse purchase snack foods. Some of these products are moisture and/or oxygen sensitive and are therefore packaged in multi-layer flexible packaging to provide optimum shelf-life. The packaging must also be able to withstand the rigours of the production and distribution process. While the packaging is purchased to meet the shelf-life and distribution specifications, the quality assurance program requires the periodic evaluation of the packaging materials against these specifications. A laboratory assistant uses standard methods to test the tearing resistance, bursting strength, impact resistance and permeability and/or leakage of the snack food packaging. Tests are also conducted on aspects of the manufacturing process that can affect shelf-life. These tests involve the measuring of the heat-seam strength and the sealing performance of the closure process. The test results are recorded by the laboratory assistant to verify the conformance of the materials to the supplier specifications and of the process to the manufacturing specifications. The assistant reports any anomalies or non-conformances to the appropriate personnel.

Key Competencies
The seven key competencies represent generic skills considered for effective work participation. The bracketed numbering against each of the key competencies indicates the performance level required in this unit. These are stand-alone levels and do not correspond to levels in the Australian Qualifications Framework (AQF).
Level (1) represents the competence to undertake tasks effectively
Level (2) represents the competence to manage tasks
Level (3) represents the competence to use concepts for evaluating and reshaping tasks.

Collecting, analysing and organising information  Communicating ideas and information  Planning activities  Working with others and in teams  Using mathematical ideas and techniques  Solving problems  Using technology

Level 1  Level 1  Level 1  Level 1  Level 1  Level 1  Level 1
Range Statement

The range of variables relates to the unit of competency as a whole. It allows for different work environments and situations that will affect performance. Where reference is made to industry Codes of Practice, and/or Australian/international standards, it is expected the latest version will be used.

This unit of competency describes the work conducted by supervised laboratory assistants who perform a range of basic tests and measurements. All operations must comply with relevant standards, appropriate procedures and/or enterprise requirements. These procedures include or have been prepared from:

- Australian and international standards, such as:
  - AS ISO/IEC 17025 General requirements for the competence of testing and calibration laboratories
  - AS/NZS 2243.2 Chemical aspects
  - AS 2243.6 Mechanical aspects
  - AS 2243.10 Storage of chemicals
  - AS 2830 Good laboratory practice
- Codes of Practice (such as GLP and GMP)
- Material safety data sheets (MSDSs) and safety procedures
- Standard operating procedures (SOPs)
- Equipment manuals
- Equipment startup, operation and shutdown procedures
- Calibration and maintenance schedules
- Quality manuals
- Enterprise recording and reporting procedures
- Production and laboratory schedules
- Material, production and product specifications.

Codes of Practice.

Preparation of samples can include:

- Sub-sampling or splitting using procedures, such as: riffling, coning and quartering, manual and mechanical splitters
- Diluting samples
- Physical treatments, such as ashing, dissolving, filtration, sieving, centrifugation and comminution
- Moulding, casting or cutting specimens.

Typical tests carried out by laboratory/field assistants could include:

- Visual/optical tests of appearance, colour, texture, identity, turbidity, refractive index (alcohol content, Baume/Brix)
- Physical tests, such as:
  - Density, specific gravity, compacted density
  - Moisture content, water activity
  - Particle size, particle shape, size distribution
- Chemical tests, such as:
  - Gravimetric
  - Colorimetric
  - Electrical conductivity (EC), pH
  - Specific ions using dipsticks and kits
  - Nutrients (for example nitrates, orthophosphates) using basic kits
ashes, including sulphated ashes
biological/environmental tests, such as:
pH, oxygen reduction potential (ORP), dissolved oxygen (DO), electrical conductivity
E coli using test kits
surface hygiene/presence of microbes
packaging tests, such as:
tearing resistance, bursting strength, impact resistance
permeability and/or leakage
mechanical tests, such as:
Emerson class
crushing, entanglement, cuts associated with moving machinery or falling objects.
Enterprise controls to address hazards may include:
use of material safety data sheets (MSDS)
use of signage, barriers and service isolation tags
use of personal protective equipment, such as hard hats, hearing protection, sunscreen lotion,
gloves, safety glasses, goggles, face guards, coveralls, gown, body suits, respirators and safety boots
use of appropriate equipment, such as biohazard containers and cabinets, laminar flow cabinets
recognising and observing hazard warnings and safety signs
labelling of samples, reagents, aliquoted samples and hazardous materials
handling and storage of all hazardous materials and equipment in accordance with labelling, materials safety data sheets and manufacturer's instructions, enterprise procedures and regulations
cleaning and decontaminating equipment and work areas regularly using recommended procedures
following established manual handling procedures for tasks involving manual handling. Minimising environmental impacts may involve:
recycling of non-hazardous waste, such as chemicals, batteries, plastic, metals, glass
appropriate disposal of hazardous waste
correct disposal of excess sample/test material
correct storage and handling of hazardous chemicals.

Health, safety and environment
All operations to which this unit applies are subject to stringent health, safety and environmental (HSE) requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.
All operations assume the potentially hazardous nature of samples and require standard precautions to be applied. Users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council and State and Territory Departments of Health. All operations are performed in accordance with standard operating procedures.

Unit Sector(s)
PMLTEST307B Prepare trial batches for evaluation

Modification History

Unit Descriptor
This unit of competence covers the ability to prepare trial batches of materials for evaluation. Materials can include soil, minerals and manufactured products, such as concrete, asphalt, food, plastics, paint and other industrial chemicals. This unit of competency has no prerequisites. This unit of competency is applicable to laboratory assistants working in all industry sectors. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section This competency in practice.

</table>
1.3 Select and prepare tools, equipment and materials in accordance with job requirements

1.4 Confirm the properties and quantities of materials to be used

1.5 Confirm that the required materials are available and ready for use

2 Mix trial batch for evaluation
   2.1 Measure out quantities of materials ready for mixing
   2.2 Mix the materials according to established procedures
   2.3 Discharge the mixture ready for inspection and testing according to established procedures
   2.4 Record details of the mix and any observations according to established procedures

3 Evaluate properties of the mixture by inspection and standard test methods
   3.1 Obtain representative samples of the mix for testing
   3.2 Perform specified tests according to established procedures
   3.3 Handle and transport samples in accordance with established procedures
   3.4 Label samples and record details in accordance with established procedures

4 Clean equipment and dispose of materials
   4.1 Clean mixing, measuring, sampling and testing equipment after use
   4.2 Return unused materials to storage
   4.3 Dispose of excess materials safely and ethically

5 Maintain records
   5.1 Record data in accordance with established procedures
   5.2 Maintain equipment records in accordance with established procedures
   5.3 Maintain confidentiality of enterprise information
6 Maintain a safe work environment

6.1 Use established safe work practices and personal protective equipment to ensure personal safety and that of other laboratory personnel

6.2 Minimise the generation of wastes and environmental impacts

6.3 Ensure safe disposal of laboratory and hazardous wastes

6.4 Clean, care for and store equipment and reagents as required.
Required Skills and Knowledge

Evidence Guide
The Evidence Guide describes the underpinning knowledge and skills that must be demonstrated to prove competence.

Critical aspects of competency
Competency must be demonstrated in the ability to perform consistently at the required standard. In particular, assessors should look to see that the candidate:
- calculates batch quantities, concentrations and other relevant parameters
- follows standard operating procedures
- measures quantities accurately
- takes representative samples
- identifies and describes materials accurately
- handles and transports samples correctly
- records sampling and testing information
- uses tools and equipment effectively and efficiently
- observes, interprets and reports atypical situations
- communicates problems to appropriate personnel
- records and communicates work results
- works safely
- interprets information from materials safety data sheets.

Underpinning knowledge
Competency includes the ability to apply and explain:
- the properties of mixing materials and how they affect the properties of the final product
- hazards involved with materials and equipment involved
- measurement of mass and volume
- basic calculations involving SI units, proportion, ratio, and percentage
- representative sampling
- uses of various materials/enterprise products
- basic testing methods for relevant materials
- enterprise traceability requirements
- relevant health, safety and environment requirements.

Assessment context and methods
This unit of competency is to be assessed in the workplace or simulated workplace environment.
The following assessment methods are suggested:
- analysis of trial batches prepared by the candidate over a period of time to ensure accurate and consistent work is obtained within required timelines
- inspection of workplace documentation completed by the candidate
- feedback from peers and supervisors
- use of suitable simulation and/or a range of case studies/scenarios.
In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Questioning techniques should suit the language and literacy levels of the candidate.

Interdependent assessment of unit
This unit of competency may be assessed with:
PMLSAMP302A Handle and transport samples or equipment
PMLSAMP400B Prepare representative samples in accordance with a sampling plan
PMLTEST300B Perform basic tests.

Resource implications
Resources may include:
standard facility with appropriate tools, equipment and materials
enterprise procedures, MSDS, product formulation/specifications.

This competency in practice
Construction materials
A laboratory assistant works for a concrete manufacturer. A client requires concrete for a
specific project that cannot be supplied using existing standard mixes. The manufacturer must
use special aggregates and cement to meet the durability and strength specifications for the
project. The laboratory manager obtains quantities of the materials for evaluation purposes.
The assistant tests the aggregates to determine their grading properties. From these results,
he/she designs a mix to satisfy the project specifications using a standard design method. The
mix requires the use of pozzolanic materials and admixtures that were obtained from the
suppliers.

The manager provides the assistant with the batch quantities required to produce one cubic
metre of concrete. To test the mix design, the assistant will produce a 20-litre batch in the
laboratory. She/he calculates that this quantity will provide sufficient material for the required
tests, without undue waste. She/he calculates the quantity of each material required for the
trial batch. The assistant selects and prepares the tools and equipment she/he needs to mix,
sample and test the concrete. She/he wears overalls, safety boots and glasses, and uses a
barrier cream. She/he measures out the quantities required for the trial batch, charges the
mixer and allows it to mix for the specified time. She/he then discharges the concrete onto a
suitable surface. She/he checks its slump, cohesiveness and air content, recording the data on
standard enterprise forms. The manager inspects the concrete, and decides that it is
over-sanded and has excessive slump. She/he adjusts the batch quantities and draws up
amended values. She/he disposes of the excess concrete and cleans the equipment and tools.
She/he then mixes a new batch using the amended figures. This process continues until the
manager is satisfied with the concrete quality. She/he then mixes a larger batch so that she/he
can prepare specimens for testing its hardened-state properties.

Key Competencies
The seven key competencies represent generic skills considered for effective work
participation. The bracketed numbering against each of the key competencies indicates the
performance level required in this unit. These are stand-alone levels and do not correspond to
the Australian Qualifications Framework (AQF).

Level (1) represents the competence to undertake tasks effectively
Level (2) represents the competence to manage tasks
Level (3) represents the competence to use concepts for evaluating and reshaping tasks.

Range Statement

The range of variables relates to the unit of competency as a whole. It allows for different work environments and situations that will affect performance. Where reference is made to industry Codes of Practice, and/or Australian/international standards, it is expected the latest version will be used.

This unit of competence describes work conducted by laboratory assistants, generally working under the guidance of a senior technician, scientific officer, laboratory supervisor/manager. Operations are performed in accordance with laboratory and/or enterprise procedures, and appropriate legislative requirements. These procedures and requirements can include or be prepared from:

- industry Codes of Practice
- environmental legislation and regulations
- standard operating procedures (SOPs)
- equipment manuals
- equipment start-up, operation and shutdown procedures
- calibration and maintenance schedules
- quality manuals
- enterprise recording and reporting procedures
- production and laboratory schedules
- material, production and product specifications.

Materials, tools and equipment used may include:

- soils, concrete, asphalt, aggregates, polymers, ceramics, metals, foodstuffs, solvents
- ovens, sieves, balances, volumetric measures, mixers
- hand tools, including shovels, scoops, spatulas
- consumables, including sample bags, labels
- documentation, including specifications, manufacturers' handbooks, worksheets
- test equipment appropriate to the various materials.

Typical skills may include:

- working safely with equipment and hazardous materials
- working safely in laboratory conditions
- setting up and maintaining tools and equipment
- using tools and equipment to perform basic sampling techniques
- using tools and equipment to perform basic testing techniques
- basic calculations
- observing and recording information on testing and sampling
- making basic measurements of volume and mass
- handling and storing materials appropriately.

Typical problems may include:

- not following standard operating procedures
- measurement errors
- calculation errors
- materials of unreliable quality
- insufficient mixing
- poor sampling procedures
- equipment breakdown and breakage.

Hazards may include:

- electric shock
biohazards, such as microbiological organisms and agents associated with soil, air, water
solar radiation, dust, noise
chemicals
sharps, broken glassware and hand tools
flammable liquids and gases
fluids under pressure
manual handling heavy objects
crushing, entanglement, cuts associated with moving machinery or falling objects.
Safety procedures may include:
recognising hazard warnings and safety signs
use of personal protective equipment, such as hard hats, hearing protection, sunscreen lotion,
gloves, safety glasses, goggles, face guards, coveralls, safety boots
use of material safety data sheets (MSDS)
following established manual handling procedures
regular cleaning and/or decontaminating of equipment and work areas
ensuring access to service shut off points
identifying and reporting operating problems or equipment malfunctions.

Health, safety and environment
All operations to which this unit applies are subject to stringent health, safety and
environmental (HSE) requirements, which may be imposed through State or Federal
legislation, and these must not be compromised at any time. Where there is an apparent
conflict between performance criteria and HSE requirements, the HSE requirements take
precedence.
All operations assume the potentially hazardous nature of samples and require standard
precautions to be applied. Users should access and apply current industry understanding of
infection control issued by the National Health and Medical Research Council and State and
Territory Departments of Health. All operations are performed in accordance with standard
operating procedures.

Unit Sector(s)
PMLTEST403B Assist with geotechnical site investigations

Modification History

Unit Descriptor

This unit of competence covers the ability to assist with geotechnical site investigations. This competency is typically performed by laboratory technicians working under the guidance of a geotechnical (para)-professional or engineer. This unit of competency has no prerequisites. This unit of competency is applicable to laboratory technicians working in the construction, mining and drilling industry sectors. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section This competency in practice.

1.3 Record description of the job to be undertaken, compare with specification and report any variations

1.4 Select and prepare tools, equipment and materials in accordance with job requirements

1.5 Select suitable transport for site access

1.6 Ensure site access requirements, such as entry permits and safety inductions have been organised

2 Assist with excavation of boreholes, test pits and/or trenches

2.1 Identify the sampling/testing location

2.2 Excavate or supervise excavation to the sampling/testing depth, minimising disturbance and potential contamination of the site

2.3 Identify materials and record changes of strata, test results, and other relevant information

2.4 Ensure materials from different strata are kept separate

2.5 Terminate the excavation at the appropriate depth, recording the reason for termination

2.6 Clean up on completion, backfilling or sealing the excavation or ensuring that it is left in a safe and uncontaminated condition

3 Assist with sampling

3.1 Prepare sampling equipment and materials

3.2 Take disturbed and undisturbed samples in accordance with established practices

3.3 Label samples and record details in accordance with established practices

3.4 Handle and transport samples in accordance with established practices

3.5 Clean and maintain sampling equipment, avoiding environmental damage, including stormwater contamination

4 Assist with testing

4.1 Prepare test equipment and materials

4.2 Perform or assist in performing tests in accordance
4.3 Record test data in accordance with established practices

4.4 Clean and maintain testing equipment, avoiding environmental damage, including stormwater contamination

5 Maintain records

5.1 Record data in accordance with established practices

5.2 Maintain equipment records in accordance with established practices

5.3 Maintain confidentiality of enterprise information.
Required Skills and Knowledge

Evidence Guide

The Evidence Guide describes the underpinning knowledge and skills that must be demonstrated to prove competence.

Critical aspects of competency

Competency must be demonstrated in the ability to perform consistently at the required standard. In particular, assessors should look to see that the candidate:

- identifies and locates site services, sampling and testing sites
- identifies problems in siting (for example, services) immediately
- takes representative samples
- identifies and describes materials accurately
- handles and transports samples correctly
- records sampling and testing information
- uses tools and equipment effectively and efficiently
- observes, interprets and reports on the geotechnical conditions
- communicates problems to appropriate personnel
- records and communicates work results
- works safely.

Underpinning knowledge

Competency includes the ability to apply and explain:

- the basic concepts, purposes and principles of geotechnical site investigation
- identification and classification of materials
- engineering properties of soil and rock materials
- representative sampling and testing
- map and drawing interpretation
- uses of soil and rock materials in engineering and construction
- in-situ testing methods
- relevant health, safety and environment requirements.

Assessment context and methods

This unit of competency is to be assessed in the workplace or simulated workplace environment.

It is strongly recommended that assessment is conducted through observation over time. The timeframe must allow for adequate assessment of operation under all normal and a range of abnormal conditions. Where this is not practical, additional assessment techniques must be used.

The following assessment methods are suggested:

- review of work outputs over a period of time to ensure accurate and consistent work is obtained within required timelines
- examples of completed workplace documentation
- feedback from peers and supervisors
- oral or written questioning.

In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Questioning techniques should suit the language and literacy levels of the candidate.

Interdependent assessment of unit

This unit of competency may be assessed with:
PMLSAMP302A Handle and transport samples or equipment
PMLSAMP400B Obtain representative samples in accordance with a sampling plan
PMLTEST300B Perform basic tests.

Resource implications
Resources may include:
access to sites, tools, equipment
enterprise procedures, sampling plans, test methods and equipment manuals.

This competency in practice

Construction materials
A geotechnical consultancy company is carrying out the investigation for the construction of an industrial complex involving building pads and roadways. A contract drilling company has been hired to carry out auger drilling for the building pad foundations. The drill rig will be used to perform standard penetration tests in some boreholes to determine bearing capacities. Undisturbed sample tubes will be pushed to obtain samples for consolidation testing in the laboratory.

A senior technician is in charge of site activities, and arranges for a drill rig. She/he plans a program of drilling, sampling and testing. A laboratory assistant is allocated to carry out the majority of site activities. These include overseeing drilling, testing and sampling operations. He/she is provided with a marked-up plan of the site showing borehole locations so that he/she can direct where to drill. The senior technician makes site visits every second day to oversee the work.

The drilling contractor operates the drill rig, takes tube samples, performs the standard penetration tests and cases the hole if required, as directed by the senior technician. The assistant records and samples the soil profile, seals the sample tubes with wax and labels them. He/she also records the SPT readings and bags and labels the material from the split-spoon sampler. Each borehole is capped to prevent access by unauthorised persons so that the assistant can record standing water level 24 hours after the hole has been drilled. He/she wears a helmet, work boots and earmuffs while working near the rig. He/she covers up and wears sunscreen while working in the sun and drinks large quantities of water.

The assistant also excavates hand auger holes to a depth of one metre at regular intervals in the proposed roadways to obtain samples for California Bearing Ratio tests. Adjacent to each, he/she performs a dynamic cone penetrometer test to two metres to assess the in-situ material. He/she records the logs of the auger holes and the test results on the company's standard data sheets and backfills each auger hole immediately after sampling. He/she reports each day's activities to the senior technician using the company's standard summary form. He/she is confident to identify soil types thus minimising the need for laboratory testing of the samples taken. Based on the field logs, cross-sections of the site can be drawn so that the designer can assess its geotechnical characteristics and determine the extent of any further investigations.

Key Competencies
The seven key competencies represent generic skills considered for effective work participation. The bracketed numbering against each of the key competencies indicates the performance level required in this unit. These are stand-alone levels and do not correspond to the Australian Qualifications Framework (AQF).

Level (1) represents the competence to undertake tasks effectively

Range Statement

The range of variables relates to the unit of competency as a whole. It allows for different work environments and situations that will affect performance. Where reference is made to industry Codes of Practice, and/or Australian/international standards, it is expected the latest version will be used.

This unit of competence describes the work conducted by laboratory operators or technicians conducting sampling and testing at construction, mining or drilling sites. Operations are performed in accordance with laboratory and/or enterprise procedures, and appropriate legislative requirements. These procedures and requirements may include or have been prepared from:

- industry Codes of Practice
- environmental legislation and regulations
- standard operating procedures (SOPs)
- equipment manuals
- equipment start-up, operation and shutdown procedures
- calibration and maintenance schedules
- quality manuals
- enterprise recording and reporting procedures
- production and laboratory schedules
- material, production and product specifications.

Site hazards may include:
- solar radiation, dust and noise
- manual handling of heavy materials and equipment
- working in/on trenches, confined spaces, wet and uneven surfaces, heights, slopes
- vehicular and pedestrian traffic.

Safety procedures may include:
- location of site services before investigations commence
- use of material safety data sheets (MSDSs)
- use of personal protective equipment, such as hard hat, hearing protection, sunscreen, gloves, masks, goggles, coveralls, safety boots
- handling, and storage of (hazardous) materials and equipment in accordance with labels, MSDS, manufacturer's instructions, enterprise procedures and regulations
- regular cleaning of equipment and vehicles
- machinery guards
- signage, barriers, flashing lights, traffic control.

Tools and equipment may include:
- hand tools, including shovels, crowbars, scoops, spanners, wrenches, tape measure
- consumables, including sample bags, labels, sample tubes, wax
- documentation, including maps, plans, worksheets
- field test equipment, including DCP, SPT, shear vane, pocket penetrometer, water level indicator
- safety clothing and equipment, including helmet, boots, gloves, earmuffs, glasses
- excavation equipment, including hand and power augers.

Typical skills may include:
- working safely with equipment and around earthmoving plant
- driving safely on- and off-road
- working safely in field conditions
setting up and maintaining tools and equipment
using tools and equipment to perform basic sampling techniques
using tools and equipment to perform basic in-situ testing techniques
cleaning equipment before leaving site in compliance with environmental authority requirements
reading site plans and operating GPS equipment to locate sampling positions
identification of soil, rock and fill materials
observing and recording information on testing and sampling
making basic measurements of plan location and depth
handling and storing samples appropriately.

Typical problems include:
caving of the excavation
drilling difficulties
not knowing the requirements of the design engineer
not understanding the nature of the item being designed (for example, retaining wall, piled structure, earthworks)
sample loss during retrieval
knowing when to stop a hole, or what and when to test and sample
misidentification of samples and sampling locations
equipment breakdown and breakage
environmental problems and issues, including site access, inclement weather, traffic, wildlife, vegetation, construction activities.

Health, safety and environment
All operations to which this unit applies are subject to stringent health, safety and environmental (HSE) requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

All operations assume the potential hazardous nature of samples and require standard precautions to be applied. Users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council and State and Territory Departments of Health. All operations are performed in accordance with standard operating procedures.

# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare search plan | 1.1 Search and rescue *assets* and potential assets are identified and recorded in *databases*
| | 1.2 *Strategic* and *tactical objectives* are identified in accordance with unit plans
| | 1.3 Strategies to achieve objectives are identified in accordance with organisational policies and procedures
| | 1.4 Risk management strategies are identified and incorporated/conducted in accordance with policy guidelines
| | 1.5 *Information management strategies* are identified and applied in accordance with organisational policies and procedures
| | 1.6 Search and Rescue procedures and policies are communicated to interested and affected persons, groups and organisations in accordance with the needs of those people
| 2. Apply datum search planning principles | 2.1 A *last known/most probable position* is established from available data
| | 2.2 Initial search procedures are implemented in accordance with the National Search and Rescue manual
| | 2.3 *Calculations* are made to establish intended track/area/position in accordance with planned route
| | 2.4 Time frame for survival of the missing person(s) is calculated in accordance with *policies and procedures protocols*
| | 2.5 *Physiological* and *environmental factors* are determined as a basis for decision making
| | 2.6 A search area is calculated consistent with organisational policies and procedures
| | 2.7 *Search pattern and track spacing* is determined consistent with organisational policies and procedures
| | 2.8 A probability of detection factor is calculated consistent with organisational policies and procedures
| | 2.9 Acceptability of probability of detection factor is evaluated consistent with organisational policies and procedures
ELEMENT | PERFORMANCE CRITERIA
---|---

3. **Apply rescue-planning principles**

2.10 Search area is recalculated or redefined, determined by availability of assets, changing weather conditions and search time available

3.1 The **nature of problem/distress is determined** in accordance with the available information

3.2 Rescue resources are identified, mobilised and monitored consistent with organisational policies and procedures

3.3 Operational risks are assessed and minimised in accordance with policies, procedures and best practices

3.4 **Survivor delivery points** are identified in accordance with requirements and capability of the rescue platform

3.5 Physiological, geographic and medical factors are considered for rescue and delivery as per the situational requirements

3.6 **Time factors** are considered as per the situational requirements

3.7 The chosen solution is evaluated and reported against the determined criteria in accordance with organisational policies and procedures

4. **Evaluate operational direction**

4.1 The search and rescue plan is implemented and amended as dictated by the requirements of the situation

4.2 A process of continual evaluation is applied in accordance with policies and procedures protocol

4.3 Contingency planning is conducted in accordance with organisational policies and procedures

4.4 Regular briefings and debriefings are conducted in accordance with organisational policies and procedures
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required Skills

- The ability to:
- a knowledge of coaching and team building concepts
- collect and analyse information
- develop a compromised search area to suit available assets
- effectively communicate and consult with a range of individuals by a range of means including fax
- identify potential search patterns and their use pertaining to terrain
- plan for results
- telephone and face-to-face
- use initiative to achieve goals

Required Knowledge

- Evidence of:
- a knowledge of potential rescue platforms' capabilities and limitations
- an understanding of coronial requirements in relation to SAR
- an understanding of hypothermia/hyperthermia factors
- an understanding of Risk Management principles
- an understanding of the Personal Development Plan

Evidence Guide

EVIDENCE GUIDE
## EVIDENCE GUIDE

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Knowledge of defining the search area
- Preparing search and rescue plans and making recommendations to the Senior Search and Rescue Officer that are based on research

### Consistency in performance

Evidence should be gathered over a period of time in a range of actual or simulated workplace environments.

### Context of and specific resources for assessment

#### Context of assessment

Competence must be demonstrable for the relevant work situation by day or night. The assessment for this unit is most effectively undertaken on the job but may be undertaken in a simulation eg Search and Rescue Exercise - (SAREX)

#### Specific resources for assessment

On job assessment will not entail additional resources however, rosters may need to be amended in order for simulation eg Search and Rescue exercise (SAREX) to be effected.

### Guidance information for assessment

Information that will assist or guide assessment will be written during Phase II of the Review of the PUA00 Public Safety Training Package.
Range Statement

RANGE STATEMENT

The Range Statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording in the Performance Criteria is detailed below.

| Databases may include | contact names  
|                       | telephone numbers  
|                       | addresses (where appropriate)  
|                       | aircraft/vessel details  
|                       | aircraft/vessel requirements  
| Databases are maintained by updating details on a regular basis as determined by local policies and procedures |

| Assets may include | aircraft  
|                    | including helicopters  
|                    | Australian Defence Force aircraft  
|                    | vessels and personnel  
|                    | police equipment and personnel  
|                    | civilian vessels  
|                    | volunteer groups  
|                    | clubs and associations |

| Strategic objectives may include | the systematic planning for the provision of Search and Rescue services and includes identification of emerging issues |

| Tactical objectives may include | the management of specific operations and includes resourcing  
|                                | coordinating  
|                                | reporting  
|                                | etc |

| Policies and procedures protocols may include | National Search and Rescue manual  
|                                              | international search and rescue manuals and reference texts  
|                                              | legislation relevant to the operation/incident/response  
|                                              | legislation relevant to the organisation |
RANGE STATEMENT

- operational
- corporate and strategic plans
- operational Standing Operating Procedures
- operational performance standards
- organisational personnel practices and guidelines
- organisational quality standards

**Last known/most probable position may include**
- gathering intelligence to establish:
  - route taken
  - last verbal/radio or other contact
  - known patterns based on historical/routine data
  - navigation plan

**Physiological constraints may include**
- hypothermia
- hyperthermia
- physical condition
- age
- sex
- mental condition
- health

**Environmental factors may include**
- terrain
- weather conditions

**Technical manuals documentation or relevant publication may include**
- Search and Rescue manuals
- medical charts
- flight plans
- sail plans

**Information management strategies may include**
- communication flow
- use of technology
- compatibility
- audit trails
- standardised information reporting procedures and formats

**Calculations may include**
- using manual or computer systems
RANGE STATEMENT

utilising compasses
protractors
time/distance/speed calculators
rulers and formulae

Calculations include sweep width and track spacing
calculations for persons
vessels and aircraft
calculations in area - time - velocity - spacing
probability of detection factors
time/distance/speed calculations
time frame for survival and mobility calculations

Calculating a search area
may include

the intended track/splash point/last known position and
time
vectorial factors
wind
current
drift
leeway and other weather factors
positional error and safety factors

Determining a search
pattern and track spacing
may include

taking into account environmental factors including:
weather conditions
currents
terrain
target type including:
person
type of vessel/life raft; and physiological factors
including body mass
clothing
medical conditions and state of mind

Determining the nature of the problem may include

consideration of such factors as:
size of area
time of day
RANGE STATEMENT

number of lives at risk
location/accessibility
condition of survivors
capacity of available resources and speed of rescue platform(s)

Surviving delivery points may include
consideration of safe areas to alight survivor
hospital facilities
medical facilities

Time factors may include
time frame for survival
speed of rescue platform
time of mobilisation
transit times
rescue platform endurance

Continual evidence may include
reviewing available data
monitoring changing weather conditions
monitoring assets capabilities
reassessing requirements
assessing available daylight for search

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the Required Skills and Knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify workplace hazards and risks and advise others | 1.1 Procedures and practices are followed to identify workplace hazards and risks  
1.2 Appropriate procedures for dealing with hazards in the workplace are followed in accordance with Occupational Health and Safety (OH&S) guidelines and the organisation's procedures  
1.3 Contact is maintained at all times with other crew members and supervisor  
1.4 Hazards in the work area and warnings of hazardous situations are recognised and reported to designated personnel  
1.5 Stressful situations are recognised and support is sought or given to minimise effect |
| 2. Implement hazard control procedures | 2.1 Personal protective clothing and equipment is selected and donned in accordance with the organisation's procedures and within its limitations  
2.2 Appropriate procedures and work instructions for controlling risks and hazards are followed  
2.3 Personal health is protected in accordance with legislative and organisation's procedures  
2.4 Equipment appropriate to dealing with a hazard is used in accordance with standard operating procedures  
2.5 Controls are implemented to minimise damage to the environment  
2.6 Fluid and food intake and rest breaks are maintained in accordance with environmental and working conditions and the organisation's policy  
2.7 Assistance is given to crew members in danger while maintaining personal safety in accordance with the organisation's procedures |
| 3. Review effectiveness of hazard control procedures | 3.1 Hazard controls are monitored to ensure continued effectiveness  
3.2 Changes in incident behaviour and conditions are reported immediately to supervisor  
3.3 Factors which may create or increase risk to life, property or the environment are identified, reported and controlled in so far as possible |
| 4. Participate in the | 4.1 OH&S issues are raised with designated |
**ELEMENT**

**PERFORMANCE CRITERIA**

implementation of OH&S in the workplace

- personnel in accordance with procedures and OH&S legislation
- 4.2 Contributions to OH&S implementation in the workplace are made within organisation's procedures and scope of responsibilities and competencies
- 4.3 Activities/debriefings are undertaken which *alleviate occupational stress*

---

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level, required for this unit.

**Required Skills**

- identification of typical hazards in the workplace
- use of protective clothing and equipment

**Required Knowledge**

- Health and fitness requirements such as diet and nutrition, exercise, impact of smoking, alcohol and drugs on the body
- Occupational hazards encountered in the workplace such as structural collapse, electricity, chemicals, dust, wildfires, extreme temperatures, biological, radiation, hazardous atmospheres, flammable and combustible liquids and gases and manual handling
- Personal protection such as clothing and equipment requirements, survival in life threatening situations and health hazards
- Signs of occupational stress, limiting stress, dealing with stress and seeking assistance
- Signs of fatigue and dealing with fatigue
- Methods of hazard control and reporting in accordance with the organisation's procedures
- Procedures for participating in OH&S arrangements
Evidence Guide

EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential for this unit that competence be demonstrated in:

- correct identification of hazards in the workplace
- application of the organisation's procedures including the correct selection and use of PPE
- advising and reporting of workplace hazards in accordance with the organisation's requirements
- notification of risk to the team and supervisor in a timely manner

Consistency in performance

Evidence should be gathered over a period of time in a range of actual or simulated workplace environments

Context of assessment

A combination of oral or written presentations, observations, on the job and/or in a range of simulated environments

Specific resources for assessment

Availability of appropriate protective clothing, equipment and organisational procedures

Guidance information for assessment

Information that will assist or guide assessment will be written during Phase II of the Review of the PUA00 Public Safety Training Package.

# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. **Conduct pre-donning checks and tests on breathing apparatus** | 1.1 *Breathing apparatus* is inspected for immediate use in accordance with the organisation’s procedures  
1.2 Faulty or damaged equipment is reported and recorded in accordance with the organisation's procedures |
| 2. **Don and check breathing apparatus** | 2.1 Breathing apparatus is donned in accordance with the organisation's procedures  
2.2 Breathing apparatus is started and checked in accordance with organisational procedures  
2.3 Breathing apparatus control procedures are followed in accordance with the organisation's procedures  
2.4 Ancillary equipment required for the task is selected for use |
| 3. **Operate breathing apparatus** | 3.1 *Hazards* are identified, monitored and controlled in accordance with the organisation's procedures  
3.2 *Communication* is established and maintained with members and other appropriate personnel throughout the activity  
3.3 Activities are undertaken as a member of a team, demonstrating effective application of breathing apparatus in accordance with the organisation's procedures  
3.4 *Entrapment* procedures are implemented in accordance with the organisation's procedures  
3.5 Personal safety is maintained at all times |
| 4. **Conclude operations** | 4.1 Breathing apparatus set is closed down in accordance with organisational procedures  
4.2 Breathing apparatus set is removed in accordance with the organisation's procedures  
4.3 After use cleaning and maintenance of breathing apparatus is undertaken in accordance with the organisation's procedures  
4.4 Equipment is made ready for operational use in accordance with organisational procedures |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required Skills

Inspecting, donning, operating in, removal, cleaning, maintaining and returning to operational status of breathing apparatus

Required Knowledge

respiratory system, effects of irrespirable atmospheres on the body, protective equipment
characteristics, component parts, operation of compressed air breathing apparatus
operational testing, standard operating procedures and safe work practices when wearing breathing apparatus
operating breathing apparatus
use of the Distress Signal Unit
use of the breathing apparatus control equipment
use of procedures, personal lines and tallies

Evidence Guide

EVIDENCE GUIDE
EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential for this unit that competence be demonstrated in accordance with AS/NZ 1715-1716:

- appropriate conduct of pre-donning tests
- correct donning of breathing apparatus
- operation of breathing apparatus
- movement in conditions or reduced visibility
- breathing apparatus emergency procedures
- organisation's procedures are followed
- correct removal of breathing apparatus
- return of breathing apparatus to operational status

Consistency in performance

Evidence should be gathered over a period of time in a range of actual or simulated workplace environments

Context of and specific resources for assessment

Context of assessment

A combination of oral or written presentations, observations, on the job and/or in a range of simulated environments

Specific resources for assessment

access to a range of controlled or simulated scenarios

Breathing Apparatus and associated equipment

Guidance information for assessment

Information that will assist or guide assessment will be written during Phase II of the Review of the PUA00 Public Safety Training Package.
**Range Statement**

**RANGE STATEMENT**

The Range Statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording in the Performance Criteria is detailed below.

| Types of breathing apparatus must include | open circuit |
| and may also include                     | airline equipment |
|                                         | escape sets |
| Types of irrespirable atmospheres must include | heated atmospheres |
|                                          | asphyxiating atmosphere (oxygen deficient) |
|                                          | (non-skin absorption) toxic or poisonous atmosphere |
|                                          | smoke or suspended particles/fibres in atmosphere |
| Pre-use tests and checks must include    | serviceability of components |
|                                          | integrity of components |
|                                          | cylinder pressure |
|                                          | integrity of air flow system |
|                                          | ancillary equipment |
| Breathing apparatus control equipment must include | control boards |
|                                              | breathing apparatus set tallies |
|                                              | entry control officer identification |
|                                              | guideline and branch line tallies |
|                                              | procedures |
|                                              | personal lines |
| Breathing apparatus control must include   | principles of BA Control |
|                                              | organisation's procedures |
|                                              | Stage 1 (one entry point) |
|                                              | Stage 2 (multiple entry points) |
|                                              | entry/exit control point |
|                                              | entry/exit control officer |
|                                              | timing device |
| Entrapment procedures                      | cease all strenuous activity |
### RANGE STATEMENT

| include | activate the distress signal unit  
|         | remain calm  
|         | relocate to safest available place  
|         | call for assistance  

**Communications must include**
- distress signal unit  
- portable radio  

**and may also include**
- communications sets  
- signal lines  
- hand signals  

**Hazards must include**
- fire  
- failure to maintain a face seal  
- exhaustion of air supply  
- malfunction of equipment  
- disorientation in smoke/darkness or confinement  
- structural hazards and/or hazardous materials  
- entrapment

Unit Descriptor

This unit covers the competency required to safely combat incidents involving hazardous materials.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Application of the Unit

This unit applies to personnel who respond to an incident involving dangerous goods and hazardous substances and who have the skills and knowledge to identify and assess the hazards and risks and contribute to the development, implementation and review of the plan constructed to mitigate the risk they pose the public and environment.

‘Hazardous materials incident’ is a generic term used to refer to an incident involving any material such as dangerous goods and hazardous substances that poses an unreasonable risk to life, property and the environment.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Recognise a hazardous materials incident | 1.1 Pre-incident plans, site control and containment plan and directives from supervisor are identified and implemented.  
1.2 Incident is approached using care and caution, and a safe distance is maintained, in accordance with organisational procedures or guidelines, and/or advice from appropriate authorities.  
1.3 Hazardous materials are identified from a safe distance and using a range of sources and information is conveyed to supervisor in accordance with organisational guidelines. |
| 2. Identify and assess hazards | 2.1 Site hazards are identified in accordance with organisational guidelines.  
2.2 Hazards relating to the material/s and container/s are identified in accordance with organisational guidelines.  
2.3 Hazards are assessed in accordance with organisational guidelines and information is conveyed to supervisor. |
| 3. Assist with the development of a plan for the mitigation of a HAZMAT incident | 3.1 Incident objectives are identified in accordance with organisational policies.  
3.2 Risk control measures are identified and conveyed to supervisor.  
3.3 Entry objectives are identified and conveyed to supervisor.  
3.4 Entry plan is developed and documented in accordance with supervisor directives and organisational policies as required.  
3.5 Personal protective equipment (PPE) is considered in accordance with organisational policies. |
3.6 Decontamination methods are identified in accordance with organisational policies.

3.7 Requirement for *detection and confinement/containment strategies* are identified in accordance with organisational policies.

3.8 Organisations required to assist with operations are identified.

4. **Assist with the implementation of the plan for mitigation of a HAZMAT incident**

4.1 Individual responsibilities within the organisation’s action plan are identified and followed.

4.2 Scene is isolated and secured, and *hazard control zones* and *decontamination* corridor are established according to organisational guidelines.

4.3 Entry plan is implemented in accordance with organisational policies.

4.4 Response equipment is applied in accordance with organisational policies.

4.5 PPE is applied in accordance with organisational policies.

4.6 Decontamination procedures are applied as required in accordance with organisational procedures.

4.7 Requirement for detection and confinement/containment strategies are applied in accordance with organisational policies.

4.8 Results are recorded and reported in accordance with organisational policies.

5. **Assist with the review of the plan**

5.1 Plan is reviewed and safety of entry team is monitored in accordance with organisational guidelines.

5.2 Contamination incidents are recorded and reported to appropriate personnel in accordance with organisational guidelines.

5.3 Entry, decontamination, detection and mitigation effectiveness is reviewed in accordance with organisational guidelines.
Required Skills and Knowledge

This describes the essential skills and knowledge and their level, required for this unit.

Required Skills

- don, operate in, decontaminate and remove personal protective clothing and equipment
- follow instructions and procedures
- interpret safety and hazard information
- use response equipment
- work as member of a team

Required Knowledge

- decontamination principles and procedures
- legislation relevant to the organisation
- methods of identifying hazardous materials
- mitigation (confinement/containment) techniques
- nature and properties of hazardous materials
- organisational policies and procedures
- PPE procedures
- principles of incident control
- scene control and site isolation
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessment must confirm the ability to:

- implement appropriate standard operating guidelines
- comply with relevant legislation
- demonstrate safe working practices
- identify hazardous materials
- assist in the establishment of action plan
- undertake mitigation techniques
- undertake decontamination procedures

Consistency in performance

Competency should be demonstrated over a period of time across a range of situations appropriate to organisational role.

Context of assessment

Competency should be assessed in simulations or exercises and/or a series of tasks, which may involve setting scenarios to be completed either individually or as a member of a team.

Specific resources for assessment

Access is required to:

- relevant PPE, transport, communication
- response equipment

Method of assessment

This unit may be assessed with the following unit/s:

- PUA FIR308B Employ personal protection at a hazardous materials incident.

In a public safety environment assessment is usually conducted via direct observation in a training environment or in the workplace via subject matter supervision and/or mentoring, which is typically recorded in a competency workbook.

Assessment is completed using appropriately qualified assessors who select the most appropriate method of assessment.

Assessment may occur in an operational environment or in an agency-approved simulated work environment.

Forms of assessment that are typically used include:
- direct observation
- interviewing the candidate
- journals and workplace documentation
- third party reports from supervisors
- written or oral questions
## Range Statement

The Range Statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording in the Performance Criteria is detailed below.

| **Organisational procedures and guidelines** must include: | • government organisational procedures  
• organisational procedures  
• workplace health and safety practices and procedures |
| --- | --- |
| and may also include: | • Australian Standards and manufacturers’ guidelines  
• company organisational procedures  
• external organisation assistance |
| **Identification of hazardous materials** must include: | • awareness of physical, chemical, biological and radiological (CBR) properties and behaviour of hazardous materials including signs and symptoms of CBR agents  
• chemical names  
• dangerous goods class labels  
• definition of hazardous materials, hazardous substance, dangerous goods, non-dangerous goods, toxic substance, and goods too dangerous to be transported  
• emergency information panels/emergency information signs  
• HAZMAT information/initial information/site manager  
• identification and location of dangerous goods class labels  
• occupancies including site/use/manufacture location and transport  
• packing groups  
• placarding  
• product names or trade names  
• proper shipping names  
• United Nations numbers  
• visual signs and material indicators  
• storage manifests  
• transport documents |
| and may also include: | • containers including transport and storage  
• environment  
• fixed site or community emergency response plans  
• identification of the material/s and their properties through onsite analytical testing |
- physical, chemical, biological and radiological properties, behaviour and effects of hazardous materials including signs and symptoms of CBR agents
- prediction of hazardous material behaviour, for example hazard prediction modelling
- toxicology and entry routes of toxins

**Range of sources** must include

- CHEMDATA (HAZMAT Action Guides)
- emergency procedures guides
- emergency response guide books
- HAZCHEM Emergency Action Codes
- material safety data sheets (MSDSs) or safety data sheets (SDSs)
- technical specialist

and may also include:

- electronic databases
- European/Accord Dangereuse Routiers (ADR) hazard identification numbers
- external organisation assistance
- legislation/codes/standards – workplace health and safety, transport, storage and handling information, environment
- National Fire Protection Association Codes
- reference texts
- site and community emergency response plans

**Detection and confinement/containment strategies** must include:

- defensive and offensive strategies for example:
  - over-packing including recovery drums or original containers
  - rescue
  - retention, absorbent materials and neutralisation of acids/bases
  - vapour suppression/blanketing and diking/diversion
  - ventilation and dispersion

and may also include:

- damming – using booms, pads, overflow and underflow dams
- defensive and offensive strategies that may include:
  - external organisation assistance
  - field product transfer including gases/liquids using both closed and open loop methods
  - flaring
  - freeze (ice) patching
  - grounding and bonding
  - neutralisation of other materials, adsorption, gelation, emulsification and other chemical methods
- plugging and patching
- venting or vent and burn

### Organisations required to assist with operations may include:
- ambulance
- companies
- emergency services
- government departments
- local government
- police

### Hazard control zones must include:
- area of likely contamination (hot zone)
- area of operations (warm zone)
- controlled exits, entrances, refuges and emergency exits
- criteria applied to determine the extent of hazardous areas
- support zone (cold zone)

### Decontamination must include:
- decontamination plan and corridors
- emergency decontamination
- emergency mass decontamination
- technical decontamination

### Decontamination may include:
- alternative water decontamination techniques
- alternative wet decontamination techniques
- detection strategies applied for decontamination
- dry decontamination techniques
- external organisation assistance

### Unit Sector(s)

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required Skills

Don, operate in, decontaminate and remove personal protective clothing and equipment
Analyse and communicate results of sampling

Required Knowledge

use and limitations of protective clothing and equipment
risk assessment
applicable exemptions for emergency services
purging agents
common chemical asphyxiants including: hydrocarbons, carbon dioxide, carbon monoxide, hydrogen cyanide, and hydrogen sulphide
common irritants and corrosives including: chlorine, ammonia and acid bases
common flammable gases including: acetylene, petroleum, methane, ethane, propane and butane
narcotics
(explosive range, upper and lower explosive limits)
exposure standards (time weighted average, short term exposure limits, peak limitation values, examination of toxic effect at the level of a range of flammable gases
conditions under which atmospheres become hazardous
organisational procedures for entering hazardous atmospheres
toxic effects on humans exposed to commonly encountered combustion gases
units of measurement used to express concentration of atmospheric contaminants
(mg/cubic m. ppm, % v/v)

Evidence Guide

EVIDENCE GUIDE
EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential in this unit that competence be demonstrated in:
- applying personal safety principles
- interpreting atmospheric conditions using atmospheric monitoring equipment
- recommending appropriate action
- maintaining monitoring equipment

Consistency in performance

Evidence should be gathered over a range of variables, all using different types of monitoring equipment

Context of and specific resources for assessment

Context of assessment

A demonstration activity using workplaces/atmospheres with detectable but safe levels of contaminants should be used

Specific resources for assessment

For the demonstration of competence in this unit it will be necessary to provide a real life environment and/or simulations based on possible incidents. This should be done with access to a range of personal protective clothing and equipment, range of detection equipment as well as suitable simulation and/or sites.

Underpinning knowledge may be assessed through written assignments, and observation at simulated incidents

Guidance information for assessment

Information that will assist or guide assessment will be written during Phase II of the Review of the PUA00 Public Safety Training Package.
# RANGE STATEMENT

The Range Statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording in the Performance Criteria is detailed below.

| 1. Select and don protective clothing | 1.1 *Protective clothing* is selected and checked in accordance with identified hazards and the organisation's *procedures*  
1.2 Protective clothing is donned and tested, where required, in accordance with the organisation's safe work practices |
| 2. Don and test protective equipment | 2.1 *Protective equipment* is checked, donned and tested prior to entry into fire or hazardous atmosphere to ensure it is operational and meets the organisation's occupational health and safety guidelines |
| 3. Work in area of operations | 3.1 Protective equipment is operated to minimise the risk of injury to the wearer and others from *environmental health* hazards in accordance with the organisation's procedures  
3.2 Activities undertaken by the wearer in the area of operations are in accordance with the organisation's safe work practices and occupational health and safety guidelines |
| 4. Complete operations | 4.1 Decontamination procedures are undertaken, if required, upon leaving the area of operations in accordance with the organisation's procedures  
4.2 Protective clothing and equipment are removed without damage and in accordance with safe work practices  
4.3 Protective clothing and equipment are cleaned, maintained or serviced and stowed in accordance with the organisation's procedures |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required Skills

don various types of protective clothing using agency procedures
work in protective clothing and equipment at incidents
test and maintain protective clothing
identify appropriate protective clothing for a range of hazardous materials
operate breathing apparatus

Required Knowledge

protective clothing and equipment worn at dangerous goods and hazardous substances incidents
limitations of protective clothing
donning procedures for protective clothing
agency procedures
decontaminating protective clothing and equipment procedures
maintenance procedures for protective clothing and equipment
protective clothing and equipment selection procedures
main routes of entry of toxins into the human body
local and systemic effects of industrial toxins
use and limitations of exposure standards
purpose, component parts and operation of breathing apparatus
maintenance and testing procedures for breathing apparatus
safe working practices

Unit Descriptor

This unit covers the competency required to use specific equipment to detect airborne contaminants, liquids and solids. This unit replaces PUAFIR307B Monitor hazardous atmospheres. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Application of the Unit

This unit applies to personnel required to detect and identify contaminants at a hazardous materials incident using specialist equipment to identify the materials, assess the risk posed by the material identified and formulate a plan for their safe isolation and removal.

Licensing/Regulatory Information

Not applicable.
Pre-Requisites
PUAFIR207B Operate breathing apparatus open circuit

Employability Skills Information
This unit contains employability skills

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a Unit of Competency. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Assess hazardous materials incident | 1.1 Hazardous materials incident is approached using care and caution and a safe distance is maintained, in accordance with organisational procedures and/or advice from appropriate authorities  
1.2 Hazardous materials are identified from a safe distance and information is conveyed to the supervisor in accordance with organisational guidelines  
1.3 Information sources are accessed to determine the potential behaviour of hazardous materials, in accordance with organisational guidelines |
| 2. Identify and assess hazards at incident | 2.1 Site hazards are identified in accordance with organisational guidelines.  
2.2 Specific hazards relating to the material/s and container/s are identified in accordance with organisational guidelines.  
2.3 Relevant hazard information is incorporated into the detection strategy.  
2.4 Hazards are assessed according to organisational guidelines and information is conveyed to supervisor. |
3. **Develop an entry plan**

3.1 Entry objectives are identified and conveyed to supervisor.

3.2 *Entry plan* is developed in accordance with supervisor directives and organisational policies.

3.3 Appropriate *detection equipment* is assessed and selected in accordance with organisational policies.

3.4 Personal protective equipment is considered in accordance with organisational policies and *response situation*.

3.5 *Hazard control zones* are established in accordance with organisational policies.

3.6 *Decontamination methods* are identified in accordance with organisational policies.

3.7 *Organisations required to assist* with the operation are determined and documented.

3.8 Detection strategy is documented in accordance with organisational policies.

4. **Implement entry plan**

4.1 Entry plan is implemented in accordance with organisational policies.

4.2 Detection equipment is prepared for use in accordance with organisational policies.

4.3 Detection equipment is used and maintained in accordance with organisational policies.

4.4 Results are recorded and reported in accordance with organisational policies.

4.5 Upon leaving the area of operations, decontamination procedures are undertaken when required, in accordance with organisational procedures.

5. **Review entry plan**

5.1 Entry plan is reviewed and safety of entry team is monitored in accordance with organisational guidelines.

5.2 Contamination incidents are recorded and reported to appropriate personnel in accordance with organisational guidelines.

5.3 Entry is reviewed in accordance with organisational guidelines.
Required Skills and Knowledge

This describes the essential skills and knowledge and their level, required for this unit.

**Required Skills**

- analyse and communicate detection results
- don, operate in, decontaminate and remove personal protective clothing and equipment
- interpret safety and hazard information
- use detection equipment

**Required Knowledge**

- asphyxiants, which may include simple and chemical, flammable gases and liquids, corrosive gases and liquids
- conditions under which atmospheres become hazardous
- dynamics of toxicity, corrosivity, flammability
- flammable range, upper and lower flammable limits
- legislation relevant to the organisation
- odour threshold, exposure standards (time weighted average, short term exposure limits, peak limitation values), immediately dangerous to life and health (IDLH), and may include acute exposure guideline levels (AEGL)
- organisational policies and procedures
- physical chemistry concepts
- roles and responsibilities of agencies involved
- toxic effects on humans exposed to commonly encountered atmospheric contaminants such as reaction products or combustion products or variable oxygen concentrations
- units of measurement used to express concentration of atmospheric contaminants (mg/cubic m, ppm, %, v/v)
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessment must confirm the ability to:

- implement appropriate organisational standard operating guidelines
- comply with relevant legislation
- demonstrate safe working practices
- interpret hazardous conditions using detection equipment
- recommend appropriate action
- maintain monitoring equipment.

Consistency in performance

Competency should be demonstrated over a range of situations using different types of detection equipment.

Context of and specific resources for assessment

Context of assessment

Competency should be assessed in environments with detectable but safe levels of contaminants.

Specific resources for assessment

Access is required to:

- workplace and/or simulations based on possible incidents
- range of personal protective clothing and equipment
- range of detection equipment

Method of assessment

In a public safety environment assessment is usually conducted via direct observation in a training environment or in the workplace via subject matter supervision and/or mentoring, which is typically recorded in a competency workbook.

Assessment is completed using appropriately qualified assessors who select the most appropriate method of assessment.

Assessment may occur in an operational environment or in an agency-approved simulated work environment.

Forms of assessment that are typically used include:

- direct observation
- interviewing the candidate
- journals and workplace documentation
- third party reports from supervisors
- written or oral questions
-
## Range Statement

The Range Statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording in the Performance Criteria is detailed below.

| **Procedures** must include: | • government organisational procedures  
| | • organisational procedures including maintenance  
| | • work health and safety practices and procedures  |

and may also include:  
• Australian Standards and manufacturer’s guidelines  
• confined space procedures such as permit entry plan and entry testing procedures  
• dynamic risk assessment and planning procedures

| **Identification of hazardous materials** must include: | • HAZMAT information  
| | • initial information  
| | • placarding  
| | • product/trade names  
| | • site manager  
| | • visual signs and material indicators  |

| **Information sources** must include: | • chemdata  
| | • material safety data sheets (MSDSs) or safety data sheets (SDSs)  
| | • technical specialist  |

and may also include:  
• electronic databases  
• environment  
• reference texts

| **Potential behaviour of hazardous materials** must include: | • corrosivity  
| | • entry routes of toxins  
| | • flammability  
| | • toxicity  
| | • vapour density  
| | • vapour pressure  |

| **Hazards** must include: | • chemical, biological, radiological,  
| | • physical, electrical, mechanical, thermal, visual, environment and dangerous situations  
| | • pressure vessels and lines  |

| **Entry plan** may include: | • action levels  
| | • decontamination  
| | • detection strategy  
| | • personal protective equipment  
| | • safe approach entry and exit  |

| **Detection equipment** must | • carbon monoxide detector  |

Unit Descriptor
This unit covers the competency required to participate in rescue operations as a member of a rescue team.
This unit underpins specialist rescue operations.
No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Application of the Unit
The application of this unit in the workplace covers a wide range of rescue and environmental situations, which may include industrial, rural, bush and extreme environmental conditions.
The individual will work under supervision in a team but may be responsible for completing individual tasks relating to a rescue.
The unit is typically performed by personnel from emergency services and/or volunteer organisations.
Typically, people performing this role have completed induction or recruit training and are commencing work as a member of an operational team.

Licensing/Regulatory Information
Not applicable.

| 1. Prepare and respond to rescue | 1.1 *Rescue operation* and task information is received.  
1.2 *Rescue equipment* is identified and selected based on incident information, as directed by supervisor.  
1.3 *Personal protective equipment (PPE)* is selected based on the nature of the rescue operation.  
1.4 Any further details of the nature of the rescue are received en route.  
1.5 Anticipated *hazards* and associated risks are discussed with rescue team members while on approach. |
| 2. Contribute to a risk assessment at the scene | 2.1 Rescue scene reconnaissance is conducted and hazards and risks identified at the scene are reported to supervisor.  
2.2 *Communication* with other team members is maintained using appropriate *techniques* and terminology.  
2.3 Hazards and *environmental conditions* are minimised and/or controlled as directed.  
2.4 Health, safety and security procedures are followed in accordance with organisational policy and relevant legislation.  
2.5 *Personal capabilities* and limitations are recognised and referred to supervisor.  
2.6 Need for additional personnel and/or specialist equipment is reported to supervisor.  
2.7 Casualties at scene are identified, reported to supervisor and action is taken as directed. |
| 3. Perform rescue | 3.1 Access to incident and/or casualties is gained using techniques and equipment in accordance with organisational procedures.  
3.2 Rescue procedures are conducted in accordance with supervisor's instructions and organisational procedures.  
3.3 Casualties are prepared for removal and extricated safely using appropriate equipment rescue techniques and procedures, under the direction of *appropriately trained personnel*.  
3.4 Incident scene is constantly monitored for hazards to prevent injury to self and/or others and reports are provided to supervisor as required.  
3.5 *Hygiene precautions* are implemented in accordance |
### Element: Conclude rescue operations

#### Performance Criteria

1. Equipment is recovered, cleaned and maintained to organisational standards and manufacturers’ procedures, and is restowed to maintain operational readiness.

2. Where identified, signs and symptoms of operational stress are recognised in self and others and reported to relevant personnel.

3. Operational debriefing is participated in and **operational documentation** is completed to organisational standards.

### Required Skills and Knowledge

This describes the essential skills and knowledge and their level, required for this unit.

#### Required Skills

- identify and monitor hazards
- identify and use rescue equipment
- wear PPE in accordance with organisational requirements

#### Required Knowledge

- capabilities and limitations of rescue equipment
- casualty handling techniques
- environmental hazards
- manual handling techniques
- organisational policies and procedures (such as relevant legislation; operational, corporate and strategic plans; operational performance standards; operational policies and procedures; organisational personnel and occupational health and safety practices and guidelines; organisational quality standards; organisation’s approach to environmental management and sustainability)
- personal hygiene
- procedures for reporting injuries and accidents
- relevant legislative and regulatory requirements
- ropes and knots
- safety precautions
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessment must confirm the ability to:
- apply safe work practices in rescue operations
- use equipment in accordance with organisational procedures
- respond and react to instructions in a safe, correct and timely manner

#### Consistency in performance

Competency should be demonstrated over time in a range of actual and/or simulated workplace environments.

#### Context of and specific resources for assessment

**Context of assessment**

Competency should be assessed in an industry-approved simulated and/or workplace environment involving rescue scenarios.

**Specific resources for assessment**

Access is required to:
- PPE in accordance with organisational requirements
- rescue equipment

#### Method of assessment

This unit may be assessed with the following unit:
- PUATEA001B Work in a team

In a public safety environment assessment is usually conducted via direct observation in a training environment or in the workplace via subject matter supervision and/or mentoring, which is typically recorded in a competency workbook.

Assessment is completed using appropriately qualified assessors who select the most appropriate method of assessment.

Assessment may occur in an operational environment or in an industry-approved simulated work environment.

Forms of assessment that are typically used include:
- direct observation
- interviewing the candidate
- journals and workplace documentation
- third party reports from supervisors
• written or oral questions
Range Statement

The Range Statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording in the Performance Criteria is detailed below.

**Rescue operation** may include:
- confined spaces rescue
- flood rescue
- industrial rescue
- road crash rescue
- search and rescue
- swift water rescue
- trench rescue
- vertical rescue

**Rescue equipment** may include:
- fire extinguishers
- glass management kit
- hand tools
- ladders
- lighting equipment
- powered tools (battery, electric, fuel) such as:
  - air bags
  - chain saws
  - cutting tools
  - drills
  - excavating tools
  - hydraulic tools
  - pneumatic equipment
  - winches
- rescue vehicles
- ropes
- tarpaulins

**Personal protective equipment** may include:
- appropriate protective clothing
- boots
- ear protection
- helmets
- infection protection
- insect repellent
- reflective vests
- respiratory protection
- safety glasses
- safety gloves
- sunscreen
Hazards may include:
- adverse weather
- convergence
- dangerous goods and hazardous substances
- difficult terrain
- electricity
- gas
- heights
- insufficient light
- respiratory
- rubble and debris
- supplementary restraint systems
- traffic
- water
- wild farm or domestic animals

Communication techniques may include:
- non-verbal
- signals/signs
- verbal
- written

Environmental conditions may include:
- effects of weather:
  - excess or lack of light
  - extreme weather
  - flood
  - heat
  - humidity
  - mud slides
- limited access
- stability of rescue site

Personal capabilities may include:
- fatigue, stress, phobias
- self assessed level of skill or competence

Appropriately trained personnel may include:
- ambulance crew
- doctors
- first aiders
- nurses
- paramedics

Hygiene precautions may include:
- as per operational procedures
- avoiding contact with body fluids
- washing hands
- wearing appropriate protective clothing

Operational documentation may include:
- incident reports
- legislation
- notebooks, logbooks
organisational policies and procedures

Unit Sector(s)

Not applicable.
**PUASAR024A Undertake road crash rescue**

**Modification History**
Not applicable.

**Unit Descriptor**

**Unit Descriptor**
This unit covers the competency required to gain access to and extricate entrapped casualty/s from vehicles travelling on the road such as cars, motorcycles, buses, trucks and semi-trailers while minimising the potential for further injury and preserving the integrity of evidence.

This unit requires the responder to access entrapped casualty/s using a range of techniques and to operate specialist equipment to undertake the rescue.

**Application of the Unit**

**Application of the Unit**
This unit applies to a member of a rescue team.

This unit may be customised to suit a range of road crash rescue incidents based on an organisational risk profile.

**Licensing/Regulatory Information**
Not applicable.

**Pre-Requisites**
Not applicable.
Employability Skills Information

Employability Skills  This unit contains employability skills.

Pre-requisite Unit/s  PUAEME002C Manage injuries at emergency incident
OR
  HLTFA301B Apply first aid
  PUASAR022A Participate in a rescue operation

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.
Performance Criteria describe the required performance needed to demonstrate achievement of the element.
Where bold italicised text is used, further information is detailed in the Required Skills and Knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

<table>
<thead>
<tr>

| 5. Conclude road crash rescue operations | 5.1 Scene is *preserved* for investigating officer/s  
5.2 Equipment is recovered, cleaned and maintained in accordance with manufacturer's guidelines and organisational procedures  
5.3 Decontamination procedures are followed in accordance with organisational procedures  
5.4 Where identified, signs and symptoms of operational stress in self and others are recognised and reported to appropriate personnel  
5.5 Operational debrief is participated in and *operational documentation* is completed to organisational standards |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required Skills

- apply emergency care practices
- apply relevant road crash rescue techniques
- apply scene management procedures
- undertake initial (ongoing) scene assessment
- userescue equipment in a range of situations
- wear appropriate PPE
- work in a multi-agency environment
- work in teams

Required Knowledge

- dangers associated with vehicle safety devices
- documentation requirements
- emergency care
- equipment characteristics and safe working loads in rescue operations
- establishment and maintenance of safe working areas and minimisation of hazards
- hazards and environmental threats
- infection control procedures
- legal requirements for responders
- methods of access
- need to return equipment to operational readiness after use
- operating procedures and organisational standards
- operational briefing and debriefing procedures
- organisational procedures for cleaning and discarding equipment in terms of environmental management and sustainability
- personal hygiene protocols
- reconnaissance processes
- relevant occupational health and safety principles and practices
- rescue equipment and manufacturer's operational guidelines
- rescue techniques relevant to a range of vehicles
- road crash rescue techniques
- road crash rescue concepts as described in the Australian Emergency Manual *Road Crash Rescue*
- roles and responsibilities of, and relationship with, other emergency service/s
- use of PPE
- vehicle construction and dangers in cutting vehicle parts and panels
REQUIRED SKILLS AND KNOWLEDGE

Evidence Guide
Not applicable.
# Range Statement

## RANGE STATEMENT

The Range Statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording in the Performance Criteria is detailed below.

Preserving the incident scene must include

| Disturbing only to gain access or make scene safe |
| Not disturbing fatality scenes until police investigation activities are completed |
| Preserving integrity of evidence |
### RANGE STATEMENT

**Operational documentation may include**
- Exposure records
- Incident field notes
- Incident report
- Organisation's reporting system
- Post operational report

### Unit Sector(s)

Not applicable.
PUASAR025A Undertake confined space rescue

Modification History
Not applicable.

Unit Descriptor
This unit covers the competency required to undertake rescue in confined spaces as a member of a single agency or multi-disciplinary team.

Application of the Unit
Not applicable.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Pre-requisite Unit/s Nil - refer to the Application of the Unit

Application of the Unit
The application of this unit in the workplace covers a range of confined space rescue situations.

The unit is typically performed by personnel from emergency services and/or volunteer organisations or organisations where confined space work is undertaken.

In the context of the Fire Sector the following units are pre-requisite units:
- PUASAR022A Participate in a rescue operation
- PUAFIR307B Monitor hazardous atmospheres.
## Employability Skills Information

**Employability Skills**

This unit contains employability skills.

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the Required Skills and Knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. **Prepare for confined space rescue operation** | 1.1 Operation and task information is obtained from a variety of sources and analysed, and team roles are confirmed  
1.2 Appropriate *rescue equipment* is identified and selected based on incident information as directed by supervisor  
1.3 *Personal protective equipment* is selected relevant to the nature of the confined space rescue operation  
1.4 Any further details of the nature of the rescue are received *en route*  
1.5 Anticipated hazards and associated risks are discussed with rescue team members whilst on route |
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 2. Assess and manage confined space/trench rescue | 2.1 Confined space is assessed, hazards and risks are identified, and appropriate control and ongoing monitoring processes are put in place  
2.2 Physical features of confined space rescue scene are assessed before deploying rescue resources  
2.3 Rescue is managed to control access and to maintain a safe and effective operational environment  
2.4 *Situational and environmental hazards* are assessed, minimised and controlled  
2.5 Communication with other personnel on site is established and maintained |
| 3. Determine location and condition of casualties | 3.1 Assessment of incident scene is undertaken to determine possible location of casualties  
3.2 Appropriate equipment is used to assist in the location of casualties  
3.3 Evidence of location of casualties within confined space is collected and reported  
3.4 Condition of casualties and nature of entrapment is ascertained where possible  
3.5 Hygiene procedures are applied in accordance with organisational procedures |
| 4. Gain entry to confined space | 4.1 Entry permit is located and relevant information is obtained if available  
4.2 Atmosphere is monitored in accordance with AS 2865-2009 Confined spaces  
4.3 Appropriate ventilation procedures are implemented, where required  
4.4 Appropriate respiratory protection is used in irrespirable atmospheres, where required  
4.5 Techniques and equipment are employed to access the casualty  
4.6 Located casualties are treated in consultation with medical personnel and in accordance with organisational policies |
<table>
<thead>
<tr>

| 6. **Conclude rescue operations** | 6.1 Equipment is recovered, cleaned and serviced according to organisational standards and manufacturer's guidelines  
| | 6.2 Signs and symptoms of operational stress are recognised and promptly reported  
| | 6.3 *Operational documentation* is completed to organisational standards |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required Skills

- operate atmospheric monitoring equipment
- operate isolation systems
- operate lifting equipment
- operate lowering and hauling systems
- operate self contained breathing apparatus and airline equipment
- operate ventilation equipment

Required Knowledge

- Australian Standard (AS) 2865-2009 Confined spaces
- lock, tag out and isolation procedures
- organisational procedures for cleaning and discarding equipment in terms of environmental management and sustainability
- potential occupational hazards and control measures
- procedures for atmospheric monitoring
- purging and ventilation in accordance with national standards
- selection, use and maintenance of respiratory devices
- use of ropes and knots for accessing confined space
Evidence Guide
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessment must confirm the ability to:

- extricate casualty minimising further injury to casualty, injury to self and others.

Consistency in performance

Competency should be demonstrated over time in a range of actual and/or simulated workplace environments.

Context of and specific resources for assessment

Context of assessment

Competency should be assessed in an industry-approved simulated and/or workplace environment involving confined space rescues using a range of equipment.

Specific resources for assessment

Access is required to:

- appropriate venue
- organisational resource equipment
- personnel for team-based activities
- resources as specified in AS 2865-2009 Confined spaces.
EVIDENCE GUIDE

Method of assessment

In a public safety environment assessment is usually conducted via direct observation in a training environment or in the workplace via subject matter supervision and/or mentoring, which is typically recorded in a competency workbook.

Assessment is completed using appropriately qualified assessors who select the most appropriate method of assessment.

Assessment may occur in an operational environment or in an industry-approved simulated work environment. Forms of assessment that are typically used include:

- direct observation
- interviewing the candidate
- journals and workplace documentation
- third party reports from supervisors
- written or oral questions.

**ELEMENT** | **PERFORMANCE CRITERIA**
--- | ---
3. **Maintain search safety** | 3.1 *Survival techniques* are applied where required  
3.2 Search safety procedures are implemented in accordance with organisational policies and procedures  
3.3 Lost searcher procedures are implemented if required

4. **Preserve scene** | 4.1 Supervisor is immediately advised of located persons or findings in accordance with organisational procedures  
4.2 Initial preservation procedures are implemented to maintain the integrity of evidence  
4.3 Initial scene preservation is conducted in line with the organisational requirements

5. **Complete stand down procedures** | 5.1 Search equipment is recovered, cleaned and maintained in accordance with manufacturer's guidelines and organisational procedures  
5.2 Operational debriefing is participated in and *operational documentation* is completed to organisational standards  
5.3 *Symptoms of operational stress* are recognised and reported  
5.4 Decontamination procedures are followed in accordance with organisational procedures
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required Skills

- apply survival techniques
- deal appropriately with clues and location of objects and/or causalities
- implement lost searcher procedures
- implement spacing and boundary marking procedures
- maintain search information
- observation skills
- wear appropriate personal protective equipment (PPE) correctly
- work in a team

Required Knowledge

- local documentation requirements
- local hazards and environmental threats
- local operating procedures
- local operational briefing and debriefing procedures
- lost searcher procedures
- organisational policies and procedures (such as relevant legislation; operational, corporate and strategic plans; operational performance standards; operational policies and procedures; organisational personnel and occupational health and safety practices and guidelines; organisational quality standards; organisation's approach to environmental management and sustainability)
- procedures to locate person or object
- recall procedures
- relevant occupational health and safety principles and practices
- relevant state/territory search management arrangements
- requirements to preserve a crime scene and the preservation of evidence
- signs and symptoms of operational stress
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessment must confirm the ability to:

- comply with search orders and organisational requirements
- observe safety of self and others at all times during the search.

Consistency in performance

Competency should be demonstrated over time in a range of actual and/or simulated workplace environments.

Context of and specific resources for assessment

Context of assessment

Competency should be assessed in an industry-approved simulated and/or workplace environment involving land search rescues using a range of equipment.

Specific resources for assessment

Access is required to:

- appropriate environment to conduct the search operation
- other organisations.
EVIDENCE GUIDE

Method of assessment

In a public safety environment assessment is usually conducted via direct observation in a training environment or in the workplace via subject matter supervision and/or mentoring, which is typically recorded in a competency workbook.

Assessment is completed using appropriately qualified assessors who select the most appropriate method of assessment.

Assessment may occur in an operational environment or in an industry-approved simulated work environment. Forms of assessment that are typically used include:

- direct observation
- interviewing the candidate
- journals and workplace documentation
- third party reports from supervisors
- written or oral questions.
Range Statement
RANGE STATEMENT

The Range Statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording in the Performance Criteria is detailed below.

## RANGE STATEMENT

### Personal equipment may include
- Food
- Notebook and pencil
- Overnight sleeping equipment
- Personal first aid equipment
- Personal hygiene items
- PPE, especially wet weather gear, cold weather clothing, sun protection
- Water

### Search operations may include
- Operations are normally conducted in support of the police
- Searching for missing persons, objects or evidence
- Searching, most commonly, on foot - although searches may be undertaken from vehicles or on horseback, skis and snowshoes

### Equipment may include
- Boundary marking tapes
- Compass or other positioning equipment
- Map
- Radio communications equipment

### Terrain may include
- Forests
- Grassland
- Sand
- Snow
- Steep rock areas
  - Urban areas

### Conditions may include
- Hazardous environmental conditions including:
  - adverse weather
  - after dark operations
  - dangerous flora and fauna
  - difficult terrain
  - time pressure
- Operating as part of a multi-agency response
- Urban or rural environments

### Specified team roles may
- Be determined based on the selected search technique
### RANGE STATEMENT

(as per national land search operations manual) such as:

- line search
- feature search
- track search

#### Observation skills may include

- Day vision skills
- Night vision skills

#### Communication may include

- Calming and reassuring a casualty
- Feedback of information
- Modes of communication as per organisational requirements

#### Survival techniques may include

- Constructing fires
- Constructing temporary shelters
- Conserving water, food and energy
- Locating shelter
- Obtaining water
- Skills relevant to the local areas (such as cold, heat, terrain and forest)

#### Operational documentation may include

- Electronic recording devices
- Notes, sketches of findings or other relevant information required for potential coronial or other legal proceedings photos

#### Symptoms of operational stress may include

- Fatigue
- Headaches
- Illness
- Indecision
- Intolerance
- Lack of focus
- Nausea
Unit Sector(s)

PUASAR032A Undertake vertical rescue

Modification History
Not applicable.

Unit Descriptor
This unit covers the competency required to undertake vertical rescue in a range of emergency situations in natural and man-made environments.

Application of the Unit
The application of this unit in the workplace covers a range of vertical rescue situations.
The unit is typically performed by personnel from emergency services and/or volunteer organisations.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
- PUASAR022A Participate in a rescue operation

Employability Skills Information
This unit contains employability skills.
**Elements and Performance Criteria Pre-Content**

Elements describe the essential outcomes of a Unit of Competency. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the Required Skills and Knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.

---

**Elements and Performance Criteria**

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. **Prepare and respond to vertical rescue** | 1.1 *Operation and task information* is obtained from a variety of *sources* and analysed, and team roles are confirmed  
1.2 *Vertical rescue equipment* is selected based on incident information and is checked to ensure it is ready for use  
1.3 Personal protective equipment for vertical rescue is selected |
| 2. **Assess scene** | 2.1 Appropriate actions are taken to preserve incident scene  
2.2 Scene reconnaissance is conducted and results are reported  
2.3 *Scene management procedures* are followed in accordance with vertical rescue procedures and legal requirements  
2.4 *Physical and environmental features* of scene are assessed before deploying rescue resources  
2.5 Risk assessment is conducted and communicated as per organisational procedures  
2.6 Access is controlled and a safe and effective *operational environment* is maintained  
2.7 Communication with other personnel on site is established and maintained including team and safety briefings relevant to task  
2.8 Location and condition of casualty is determined |
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 3. Establish vertical rescue system | 3.1 Rescue **system** is constructed according to type of incident  
3.2 Anchors are established and monitored  
3.3 Equipment is prepared and techniques are used in accordance with manufacturer's guidelines and organisational procedures |
| 4. Perform vertical rescue | 4.1 Hygiene precautions are maintained in accordance with organisational requirements  
4.2 Access is gained to casualties or trapped persons using organisationally approved techniques and equipment  
4.3 Casualties or trapped persons are secured and prepared for removal in consultation with medical personnel  
4.4 Casualties are removed using **vertical rescue techniques** and equipment while preventing further injury  
4.5 Scene is **preserved** for investigating officers |
| 5. Terminate vertical rescue operations | 5.1 Equipment is recovered, cleaned and serviced in accordance with manufacturer's guidelines and organisational procedures  
5.2 Where identified, signs and symptoms of operational stress are recognised and reported  
5.3 Operational debrief is conducted and **operational documentation** is completed to organisational standards  
5.4 Decontamination procedures are followed in accordance with organisational procedures |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required Skills

- check, service and maintain vertical rescue equipment
- control infection
- escort stretchers in raising and lowering operations
- establish, maintain, monitor and use:
  - ascent and descent systems
  - safety systems
- stretcher rigging
- implement safe and effective scene management procedures
- manage edge protection
- treat and package casualties
- undertake scene assessment and reporting
- use personal protective and rescue equipment within its safe work limitations
- wear appropriate personal protective and rescue equipment correctly
- work in a team

Required Knowledge

- breaking strains
- casualty assessment and packaging
- emergency management and interagency arrangements
- equipment characteristics
- operation of high lines (span line, Tyrolean etc.)
- operational briefing and debriefing procedures
- organisational procedures for cleaning and discarding equipment in terms of environmental management and sustainability
- organisational procedures for operating vertical rescue equipment
- personal hygiene protocols
- principles of suspension trauma
- reconnaissance techniques
- relevant legislation
- relevant occupational health and safety (OH&S) principles and practices
- safe working loads of equipment
- safety factors and safe working loads
- signs and symptoms of operational stress
- vertical rescue concepts and practices
- voice, whistle and other communication systems
REQUIRED SKILLS AND KNOWLEDGE

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessment must confirm the ability to:

- establish safe systems to gain access to and recover casualties
- extricate casualty minimising further injury or discomfort while conducting rescue operation
- apply safe work practices.

### Consistency in performance

Competency should be demonstrated over time in a range of actual and/or simulated workplace environments.

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
</tr>
</thead>
</table>

### Context of assessment

Competency should be assessed in an industry-approved simulated and/or workplace environment involving vertical rescues using a range of equipment.

### Specific resources for assessment

Access is required to:

- an appropriate venue for vertical rescue activities
- organisational vertical rescue equipment and personnel for team-based activities.
EVIDENCE GUIDE

Method of assessment

This unit may be assessed with the following unit:
- PUATEA002B Work autonomously.

In a public safety environment assessment is usually conducted via direct observation in a training environment or in the workplace via subject matter supervision and/or mentoring, which is typically recorded in a competency workbook.

Assessment is completed using appropriately qualified assessors who select the most appropriate method of assessment.

Assessment may occur in an operational environment or in an industry-approved simulated work environment. Forms of assessment that are typically used include:
- direct observation
- interviewing the candidate
- journals and workplace documentation
- third party reports from supervisors
- written or oral questions.
Range Statement

Unit Descriptor

This unit covers competency in working with others and making a positive contribution to the effectiveness and efficiency of a team in a work environment when predominantly under direct supervision. Limited responsibility towards others is required.

Application of the Unit

This unit applies to all workers working in the Public Safety industry, but is particularly relevant to new workers in assisting integration with the organisational team culture of the agency.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Where *bold italicised* text is used, further information is detailed in the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Contribute to team activities | 1.1 Roles and responsibilities of team members are recognised.  
1.2 Contribution is made to identifying team goals and objectives.  
1.3 *Activities* are completed to required standard within timeframe and in accordance with organisation's policies and procedures.  
1.4 *Assistance* in the completion of tasks is requested from other team members where appropriate.  
1.5 Team members are assisted to ensure efficient and safe completion of tasks in accordance with organisation's policies and procedures.  
1.6 Participation by team members is encouraged and acknowledged.  
1.7 Changes in allocated role and responsibilities are implemented.  
1.8 Team meetings are attended regularly and punctually. |
| 2. Share knowledge and information | 2.1 Information relevant to work is communicated effectively with team members to enable efficient completion of tasks in accordance with the organisation's policies and procedures.  
2.2 Knowledge and skills are shared between team members. |
| 3. Give and receive support to/from team members | 3.1 *Feedback*/assistance is given to other team members in an appropriate manner.  
3.2 Team members are supported in achieving workplace goals.  
3.3 Feedback from other team members is acted upon appropriately. |
Required Skills and Knowledge

This describes the essential skills and knowledge and their level, required for this unit.

Required Skills

- encouraging others/team members
- following instructions
- interpersonal skills
- listening and using a variety of communication skills
- providing suggestions and information
- reporting information

Required Knowledge

- composition of workplace teams and roles and responsibilities of team members
- non operational and operational communication processes
- techniques for giving and receiving feedback in a constructive manner
- techniques for supporting others

Evidence Guide

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential for this unit that competence be demonstrated in the effective communication and contribution to the achievement of tasks consistent with agreed goals.

Consistency in performance

Evidence will need to be gathered over time in a variety of team situations including regular work group and occasional or one-off work group.

Context of and specific resources for assessment

Context of assessment

On the job or in a simulated workplace environment.

Specific resources for assessment

No special requirements.
Range Statement

The Range Statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording in the Performance Criteria is detailed below.

*Teams* comprise

- two or more people working towards a shared purpose

*Appropriate situation to request assistance* may include:

- difficulty meeting timelines
- to comply with occupational health and safety requirements
- unsure of best method to complete task
- to maximise efficiency

*Assisting other team members* may include:

- own tasks completed
- to comply with occupational health and safety requirements
- assistance requested
- actions of others do not comply with requirements
- other team member appears to be having difficulty completing task

*Contribute to workplace goals* may include:

- completion of task
- achievement of new competencies
- development of new skills
- attainment of new knowledge
- personal development

*Activities* may include:

- working with other members of a team in a work environment or responding in a combat or support role to natural emergencies technological/industrial emergencies
- civil/political emergencies and non emergency operations including community events
- public relations – activities
- sporting events
- parades
- festivals

*Conditions* under which this competency may be required include:

- hazardous conditions eg adverse weather
- after dark operations
- difficult terrain
- time pressure
- varying time frames from immediate/short term to long term response operations
- varying access to equipment/resources necessitating the use of improvised techniques
- single or multi organisation responses
• dealing with human behaviours that result from emergency situations
• non-emergency operations and events eg training and community education

**Appropriate feedback on performance** may include:
• acknowledging initiative
• aptitude
• ideas
• performance and assistance
• providing constructive criticism

**Organisation’s policy and procedures** may vary between sectors and organisations and may include:
• legislation relevant to the operation/incident/response
• legislation relevant to the organisation
• operational
• corporate and strategic plans
• operational procedures
• operational performance standards
• organisation’s personnel practices
• policy and procedures
• organisation’s quality standards
• organisation’s approach to environmental management and sustainability

**Communication processes** may include:
• established organisation’s procedures for recording and reporting
• the use of logs
• notebooks
• pagers
• radios and telephones
• team members may be geographically dispersed and require communication systems and technology to remain in contact

**Unit Sector(s)**
Not applicable.
SUGPOTB2A Operate a turbine

Modification History
Not applicable.

Unit Descriptor

Unit descriptor

This is a Specialist unit. It covers the skills and knowledge required to for continuous and short term operation of a turbine and for start up and shut down after a prolonged break.

This unit is based on the following Worksafe Australia Standards for Users and Operators of Industrial Equipment - NOHSC 1006 (2001):- Start steam turbine, Operate and monitor turbine, and Shut down turbine. Turbine operators holding a ticket from the relevant state regulatory authority will be granted equivalence in this unit SUGPOTB2A Operate a turbine for the purpose of issuing a qualification.

Application of the Unit
Not applicable.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
Not applicable.

Elements and Performance Criteria Pre-Content
Not applicable.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance criteria</th>
</tr>
</thead>
</table>
| 1. Prepare the turbine for operation | 1.1 Pre-operational checks are conducted  
1.2 Health and safety hazards / maintenance requirements are identified and reported to appropriate personnel according to workplace reporting procedures |
| 2. Start and monitor turbine operation | 2.1 The turbine is started and brought on line safely according to workplace procedures and manufacturer's recommendations  
2.2 Plant is operated within limits of manufacturer's specifications to meet workplace requirements  
2.3 Equipment is monitored to confirm operating condition  
2.4 The workplace meets housekeeping standards |
| 3. Analyse and respond to abnormal performance | 3.1 Operating data and plant operating conditions are analysed to identify causes of abnormal performance  
3.2 Corrective action is taken in accordance with workplace procedures in response to Hazards and abnormal plant performance  
3.3 Emergency procedures are implemented as required according to workplace procedures and manufacturer's recommendations |
| 4. Handover turbine operations | 4.1 Workplace records are maintained in accordance with statutory requirements and workplace procedures  
4.2 Handover is carried out according to workplace procedure  
4.3 Turbine operators are aware of turbine status and related equipment at completion of handover |
| 5. Shutdown the turbine | 5.1 The turbine is operationally shut down according to workplace procedures and manufacturer's recommendations  
5.2 Valves and fittings are removed in preparation for maintenance as required  
5.3 The turbine is stored in shut down mode  
5.4 Maintenance requirements are identified and reported according to workplace reporting procedure |
Required Skills and Knowledge

Not applicable.
Evidence Guide

Evidence guide
The assessment process must address all of the following items of evidence.

Ability to:
1. Access workplace information on operating requirements
2. Select, fit and use personal protective clothing and/or equipment
3. Handle chemicals safely. This includes following correct handling and storage procedures and use of appropriate protective clothing and equipment
4. Identify and report hazards and potential hazards in the work area
5. Confirm status of turbine and related services including availability of steam
6. Conduct pre-start checks. This typically include checking:
   - cooling water supply
   - overspeed trip
   - emergency stop
   - operation and position of valves, fittings, steam traps and steam line purge systems
   - lubrication system
   - drainage system
   - steam quality and pressure
   - heat input
   - free rotation of turbine
   - reticulation line pressure and system warm up
7. Liaise with other work areas to advise of turbine status
8. Demonstrate set up and start up procedures in both manual and automatic modes and for both a hot start and cold start
9. Monitor turbine operation. This typically includes monitoring:
   - bearing temperature
   - pressures
   - speeds
   - glands
   - water filters
   - oil levels
   - equipment condition including noise and vibration
   - steam reticulation line pressure
   - lubrication system
   - condenser operation (where fitted)
10. Take corrective action in response to abnormal or unacceptable performance
11. Report and/or record corrective action as required
12. Demonstrate shift handover procedure and confirm that replacement operators are aware of equipment status and operating requirements prior to completing handover
13. Demonstrate procedure to take turbine off line
14. Demonstrate procedure to prepare the turbine for a prolonged shut down. This includes removal of valves and fittings
15. Demonstrate emergency trip procedure and related re-start
16. Record operating information
17. Maintain work area to meet housekeeping standards

May include ability to:
18. Use process control systems

**Knowledge of:**

19. Relevant state OHS legislation, standards and codes of practice relating to work responsibilities
20. Safety features of the turbines. These include relief and over-speed trip valves
21. Safe work procedures including awareness of health and safety hazards related to turbine operation and associated control measures. Hazards typically include handling chemicals, working around hot surfaces, working around moving equipment, manual handling, fuel and steam leaks.
22. Hierarchy of hazard control measures
23. Duty of care of the turbine operator
24. Purpose and limitations of protective clothing and equipment
25. Purpose and basic principles of turbines. This includes properties of steam
26. Turbine system layout and steam cycle
27. Relationship to other processes. This includes suppliers and users of steam across the site
28. The effect of steam quality on turbine operation
29. The effect of low steam pressure on turbine operation
30. Methods used to render equipment safe to inspect, maintain and/or clean including lock-out, tag-out and isolation procedures
31. Equipment purpose and basic operating principles of turbine and related equipment
32. Operating requirements and parameters
33. Procedures for responding to emergency situations. This includes safe operational shutdown procedure
34. Handover and long term shut down and storage procedures
35. Environmental issues and controls
36. Housekeeping standards for the work area
37. Reporting and recording systems. This includes both statutory and workplace requirements

**May include knowledge of:**

38. Basic operating principles of process control where relevant. This includes the relationship between control panels and systems and the physical equipment

**Relationship with other standards**

**Pre-requisite units**
There are no pre-requisite units for this competency standard.

**Co-assessment of related units**
Other units of competency relevant to the work role should be assessed in conjunction with this unit. This may include:

- SUGZPCI2A Operate a process control interface

**Resources required for assessment**
Assessment must occur in a real or simulated workplace where the assessees has access to:

- Turbine and related equipment
- Relevant codes and standards
- Operating procedures and related advice on equipment operation
- Personal protective clothing and equipment
- Communication systems and equipment
- Housekeeping standards and procedures
- Workplace information recording systems, requirements and procedures

Assessment requirements
For assessment advice where the turbine operation is not a certified occupation, refer to the Assessment Guidelines for this Training Package. Where turbine operation is a certificated occupation, refer to the appropriate NOHSC competency standards, available from National Occupational Health and Safety Commission.

Range Statement

Range statement
The range statement indicates the context for demonstrating competence. This statement is a guide and unless otherwise indicated, items may or may not apply as required by the work context.

- Work is carried out in accordance with company policies and procedures, licensing requirements, manufacturer's recommendations, legislative requirements, codes of practice and industrial awards and agreements. Codes of practice include the Sugar Milling Operations Industry Code of Practice
- Workplace information can include Standard Operating Procedures (SOPs) and manufacturer's specifications
- Confirming equipment status involves conducting relevant pre-start checks, confirming that cleaning standards are met, all safety guards and manholes are in place and equipment is operational
- Turbines and related equipment may include turbines and pass-out turbines, condensers, oil coolers, vacuum pumps and filters
- Operation and monitoring of equipment and processes typically requires the use of control panels and systems
- Services may include steam, water, mill and instrumentation air and power
- Tests may include trip tests
- Work may require the ability to work within a team environment
- Information systems may be print or instrumentation based

Unit Sector(s)

TAEASS301B Contribute to assessment

Modification History

Version  Comments
TAEASS301B  Released with *TAE10 Training and Education Training Package version 2.0*

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to contribute to the assessment process.

Application of the Unit

This unit typically applies to a person with technical or vocational expertise who is in a supervisory or mentoring/coaching work role and for whom collecting evidence for assessment is an adjunct to principal work responsibilities. This unit is performed under the following conditions:

- the necessary assessment tools and assessment resources to guide the evidence collection process have been provided
- any adjustments to tools are determined by the qualified assessor (as defined by the Australian Quality Training Framework and the assessor requirements of the relevant training package), who provides guidance and supervision.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria Pre-Content

<table>

# Elements and Performance Criteria

| 1. Clarify role and responsibilities in the assessment process | 1.1 Discuss and confirm *purpose of assessment* with relevant people  
1.2 Discuss and confirm *benchmarks for assessment* with qualified assessor  
1.3 Access, read and clarify *assessment plan* with qualified assessor  
1.4 Discuss and agree with qualified assessor the specific responsibilities in gathering evidence and types of evidence to be gathered |
| --- | --- |
| 2. Confirm organisational arrangements for evidence gathering | 2.1 Access and confirm relevant *assessment system policies and procedures*; organisational, legal and ethical requirements; and other relevant advice on assessment  
2.2 Clarify nominated *assessment tools* and methods for collecting evidence with qualified assessor, to ensure that procedures to be followed and instruments to be used are clear  
2.3 Discuss and confirm with relevant people *assessment context*, including candidate’s characteristics and any need for *reasonable adjustments*  
2.4 Confirm and arrange *resource requirements* in consultation with relevant people |
| 3. Collect evidence in accordance with the assessment plan | 3.1 Explain assessment process to candidate, including the different responsibilities of the parties involved, and refer any candidate issues or concerns to qualified assessor prior to undertaking assessment activities  
3.2 Use *assessment instruments* to gather quality evidence within available time and resources, according to organisational, legal and ethical requirements |
| 4. Record and report findings | 4.1 Organise and provide evidence to the qualified assessor in a format suitable for analysis according to assessment system policies and procedures  
4.2 Actively seek feedback from the qualified assessor on whether evidence-gathering activities meet the principles of assessment and whether evidence collected meets the rules of evidence  
4.3 Document areas for improvement in collecting evidence, for future assessment activities |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- observation skills to observe candidate performance
- cognitive and interpretation skills to ensure collection of valid and reliable evidence
- organisational skills to collect evidence
- time-management skills to schedule assessment events and activities
- literacy skills to:
  - read and interpret relevant information
  - prepare required documentation and collate evidence in required format
- communication skills to:
  - discuss evidence-gathering processes with practitioners and candidates
  - provide constructive and supportive feedback
  - ask appropriate questions to clarify and confirm instructions for evidence gathering
  - provide clear and concrete options and advice.

Required knowledge

- competency-based assessment, including:
  - criterion referenced
  - competency standards as the benchmarks for assessment
  - competency-based reporting
- principles of assessment
- rules of quality evidence
- different purposes of assessment
- diversity of assessment contexts
- evidence, including different types of evidence
- evidence-gathering methods – what are assessment methods and different types of methods
- purpose and features of assessment tools and assessment plans
- potential barriers and processes relating to evidence-gathering procedures and assessment processes
- organisational assessment system policies and procedures relevant to this unit of competency
- technical or subject area being assessed
- cultural sensitivity and equity considerations
- relevant policy, legislation, codes of practice and national standards, including commonwealth and state or territory legislation, that may affect training and assessment in the vocational education and training sector
- OHS relating to the work role, and OHS considerations to be included in collecting evidence, including:
  - hazard identification and risk control measures
  - requirements for reporting hazards and incidents
• emergency procedures
• procedures for use of relevant personal protective equipment
• safe use of relevant equipment
• sources of OHS information
• role of key workplace personnel
• responsibilities of learners.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Overview of assessment | Evidence of the ability to:
|------------------------|--------------------------------------------------|
| Critical aspects for assessment and evidence required to demonstrate competency in this unit | • carry out a minimum of three evidence-gathering activities, with different candidates for each activity  
• present documentation of the evidence in a clear and concise manner  
• present documented feedback from others involved in the assessment. |

<table>
<thead>
<tr>

**Range Statement**

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

| **Purpose of assessment** may be: | • recognise current existing competency of candidates  
• determine if competency has been achieved following learning  
• establish candidate progress towards achievement of competence  
• determine language, literacy and numeracy needs of candidate  
• certify competence through a Statement of Attainment  
• establish progress towards a qualification  
• determine training gaps of candidate  
• measure work performance  
• classify employee and support career progression  
• meet organisational requirements for work, such as operating equipment or developing new skills  
• satisfy licensing or regulatory requirements. |
| --- | --- |
| **Relevant people** must include: | • qualified assessors  
• candidates. |
| **Benchmarks for assessment:** | • refer to criteria against which candidate is assessed  
• may be a competency standard/unit of competency, assessment criteria of course curricula, performance specifications, or product specifications. |
| **Assessment plan** must include: | • purpose and aims of assessment  
• context of assessment  
• relevant benchmarks for assessment  
• other assessment information and documentation identified as relevant. |
| **Assessment system policies and procedures** may include: | • candidate selection  
• rationale and purpose of competency-based assessment  
• assessment records, data management and information management  
• recognition of current competency, recognition of prior learning and credit arrangements. |
| **Assessment tools** include: | • the learning or competency unit(s) to be assessed  
• the target group, context and conditions for the assessment  
• the tasks to be administered to the candidate  
• an outline of the evidence to be gathered from the candidate  
• the evidence criteria used to judge the quality of performance (i.e. the assessment decision-making rules) |
| **Assessment context may include:** | • environment in which assessment will be carried out  
• relationship between units of competency and candidate’s workplace  
• time period over which assessment takes place. |
|---|---|
| **Reasonable adjustments may include:** | • taking into account candidate’s language, literacy and numeracy requirements  
• providing personal support services, such as arranging for:  
  • member of the community to accompany the candidate  
  • reader  
  • interpreter  
  • attendant carer  
  • scribe  
• using adaptive technology or special equipment  
• providing flexible assessment sessions to allow for such things as fatigue or administering of medication  
• format of assessment materials, such as:  
  • in Braille  
  • in first language  
  • use of audiotape or videotape  
• making adjustments to the physical environment  
• revising proposed assessment methods and instruments  
• considering age and gender  
• considering cultural beliefs, traditional practices and religious observances. |
| **Resource requirements may include:** | • resources specific to evidence-gathering activities  
• access to assessors  
• access to policy and procedures  
• access to subject and technical experts  
• OHS requirements  
• plant, equipment and technology. |
| **Assessment instruments may include:** | • instruments developed by an assessor as part of formative or summative assessment activities, including:  
  • profiles of acceptable performance measures  
  • templates and proformas  
  • specific questions or activities  
  • evidence and observation checklists  
  • checklists for the evaluation of work samples  
  • recognition portfolios |
• candidate self-assessment materials
• instruments developed elsewhere that have been modified by the assessor for use with a particular client group.

<td></td>
<td>1.4 Organise <em>specialist support</em> required for assessment</td>
</tr>
<tr>
<td></td>
<td>1.5 Explain, discuss and agree details of the assessment plan with candidate</td>
</tr>
<tr>
<td>2. Gather quality evidence</td>
<td>2.1 Use agreed <em>assessment methods</em> and instruments to gather, organise and document evidence in a format suitable for determining competence</td>
</tr>
<tr>
<td></td>
<td>2.2 Apply the principles of assessment and rules of evidence in gathering quality evidence</td>
</tr>
<tr>
<td></td>
<td>2.3 Determine opportunities for evidence gathering in actual or simulated activities through consultation with the candidate and relevant personnel</td>
</tr>
<tr>
<td></td>
<td>2.4 Determine opportunities for integrated assessment activities and document any changes to assessment instruments where required</td>
</tr>
<tr>
<td>3. Support the candidate</td>
<td>3.1 Guide candidates in gathering their own evidence to support recognition of prior learning (RPL)</td>
</tr>
<tr>
<td></td>
<td>3.2 Use appropriate communication and interpersonal skills to develop a professional relationship with the candidate that reflects sensitivity to <em>individual differences</em> and enables two-way <em>feedback</em></td>
</tr>
<tr>
<td></td>
<td>3.3 Make decisions on reasonable adjustments with the candidate, based on candidate’s needs and characteristics</td>
</tr>
<tr>
<td></td>
<td>3.4 Access required specialist support in accordance with the assessment plan</td>
</tr>
<tr>
<td></td>
<td>3.5 Address any OHS risk to person or equipment immediately</td>
</tr>
<tr>
<td>4. Make the assessment decision</td>
<td>4.1 Examine collected evidence and evaluate it to ensure that it reflects the evidence required to demonstrate competence</td>
</tr>
<tr>
<td></td>
<td>4.2 Use judgement to infer whether competence has been demonstrated, based on the available evidence</td>
</tr>
<tr>
<td></td>
<td>4.3 Make assessment decision in line with agreed assessment procedures and according to agreed assessment plan</td>
</tr>
<tr>
<td></td>
<td>4.4 Provide clear and constructive feedback to candidate regarding</td>
</tr>
</tbody>
</table>
5. Record and report the assessment decision

| 5.1 Record assessment outcomes promptly and accurately |
| 5.2 Complete and process an assessment report according to agreed assessment procedures |
| 5.3 Inform other relevant parties of the assessment decision according to confidentiality conventions |

6. Review the assessment process

| 6.1 Review the assessment process in consultation with relevant people to improve own future practice |
| 6.2 Document and record the review according to relevant assessment system policies and procedures |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analysis and interpretation skills to:
  - break down competency standards
  - interpret assessment tools and other assessment information, including those used in RPL
  - identify candidate needs
  - make judgements based on assessment of available evidence
- observation skills to:
  - recognise candidate’s prior learning
  - determine candidate’s performance
  - identify when candidate may need assistance during the assessment processes
- research and evaluation skills to:
  - access required human and material resources for assessment
  - access assessment system policies and procedures
  - access RPL policies and procedures
  - evaluate evidence
  - evaluate assessment process
- cognitive skills to:
  - weigh up the evidence and make a judgement
  - consider and recommend reasonable adjustments
- decision-making skills to:
  - recognise a candidate’s prior learning
  - make a decision on a candidate’s competence
- literacy skills to:
  - read and interpret relevant information to conduct assessment
  - prepare required documentation and records or reports of assessment outcomes in required format
- communication and interpersonal skills to:
  - explain the assessment, including RPL process
  - give clear and precise instructions
  - ask effective questions
  - provide clarification
  - discuss process with other relevant people
  - give appropriate feedback
  - discuss assessment outcome
  - use language appropriate to candidate and assessment environment
  - establish a working relationship with candidate.
Required knowledge

- competency-based assessment, including:
  - vocational education and training as a competency-based system
  - criterion-referenced assessment as distinct from norm-referenced assessment
  - competency standards as the basis of qualifications
  - structure and application of competency standards
  - principles of assessment and how they are applied
  - rules of evidence and how they are applied
  - range of assessment purposes and assessment contexts, including RPL
  - different assessment methods, including suitability for gathering various types of evidence, suitability for content of units, and resource requirements and associated costs
  - reasonable adjustments and when they are applicable
  - types and forms of evidence, including assessment instruments that are relevant to gathering different types of evidence used in competency-based assessment, including RPL
  - potential barriers and processes relating to assessment tools and methods
  - assessment system, including policies and procedures established by the industry, organisation or training authority
- RPL policies and procedures established by the organisation
- cultural sensitivity and equity considerations
- relevant policy, legislation, codes of practice and national standards, including commonwealth and state or territory legislation that may affect training and assessment in the vocational education and training sector, such as:
  - copyright and privacy laws in terms of electronic technology
  - security of information
  - plagiarism
  - training packages and competency standards
  - licensing requirements
  - industry and workplace requirements
  - duty of care under common law
  - recording information and confidentiality requirements
  - anti-discrimination, including equal employment opportunity, racial vilification and disability discrimination
  - workplace relations
  - industrial awards and enterprise agreements
- OHS responsibilities associated with assessing competence, such as:
  - requirements for reporting hazards and incidents
  - emergency procedures
  - procedures for use of relevant personal protective equipment
  - safe use and maintenance of relevant equipment
- sources of OHS information.

### Evidence Guide

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| **Assessment plan may include:** | • overall planning, describing:  
| | • what is to be assessed  
| | • when assessment is to take place  
| | • where assessment is to take place  
| | • how assessment is to take place. |

| **Benchmarks for assessment:** | • refer to a criterion against which the candidate is assessed  
| | • may be a competency standard/unit of competency, assessment criteria of course curricula, performance specifications, or product specifications. |

| **Assessment tools include:** | • the learning or competency unit(s) to be assessed  
| | • the target group, context and conditions for the assessment  
| | • the tasks to be administered to the candidate  
| | • an outline of the evidence to be gathered from the candidate  
| | • the evidence criteria used to judge the quality of performance (i.e. the assessment decision-making rules)  
| | • the administration, recording and reporting requirements  
| | • the evidence of how validity and reliability have been tested and built into the design and use of the tool. |

| **Specialist support may include:** | • assistance by third party, such as carer or interpreter  
| | • support from specialist educator  
| | • provision of developed online assessment activities  
| | • support for remote or isolated candidates and assessors  
| | • support from subject matter or safety experts  
| | • advice from regulatory authorities  
| | • assessment teams and panels  
| | • support from lead assessors  
| | • advice from policy development experts. |

| **Assessment methods include:** | • particular techniques used to gather different types of evidence, such as:  
| | • direct observation |
- structured activities
- oral or written questioning
- portfolios of evidence
- review of products
- third-party feedback.

**Individual differences** may include:
- English language, literacy and numeracy barriers
- physical impairment or disability
- intellectual impairment or disability
- medical condition that may impact on assessment, such as arthritis, epilepsy, diabetes and asthma
- learning difficulties
- mental or psychological disability
- religious and spiritual observances
- cultural images and perceptions
- age
- gender.

**Feedback** may include:
- ensuring assessment/RPL process is understood
- ensuring candidate concerns are addressed
- enabling questions and answers
- confirming outcomes
- identifying further evidence to be provided
- discussing action plans
- confirming gap training needed
- providing information regarding available appeal processes
- suggesting improvements in evidence gathering and presentation.

**Consultation** may involve:
- moderation with other assessors, or training and assessment coordinators
- discussions with client, team leaders, managers, RPL coordinators, supervisors, coaches and mentors
- technical and subject experts
- English language, literacy and numeracy experts.

</table>
## Elements and Performance Criteria

| 1. Prepare for validation | 1.1 Discuss and confirm the approach to validation according to defined purposes, context, and relevant *assessment system policies and procedures*  
1.2 Analyse relevant *benchmarks for assessment* and agree on the evidence needed to demonstrate competence  
1.3 Arrange *materials* for *validation activities* |
| --- | --- |
| 2. Contribute to validation process | 2.1 Demonstrate active *participation* in validation sessions and activities using appropriate communication skills  
2.2 Participate in validation sessions and activities by applying the principles of assessment and rules of evidence  
2.3 Check all documents used in the validation process for accuracy and version control |
| 3. Contribute to validation outcomes | 3.1 Collectively discuss validation findings to support improvements in the quality of assessment  
3.2 Discuss, agree and record recommendations to improve assessment practice  
3.3 Implement changes to own assessment practice, arising from validation |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- planning skills to participate in validation activities within agreed timeframes
- problem-solving skills to identify information that is inconsistent, ambiguous or contradictory
- evaluation skills to:
  - determine evidence requirements from competency standards
  - review assessment process, tools and methods
  - review collected evidence
- communication skills to share information in validation meetings.

Required knowledge

- how to interpret competency standards and other related assessment information to determine the evidence needed to demonstrate competence, including:
  - criterion-referenced assessment as distinct from norm-referenced assessment
  - various reasons for carrying out validation and the different approaches to validation that may be appropriate before, during and after assessment
  - critical aspects of validation, including validation of assessment processes, methods and products
  - relevant OHS legislation, codes of practice, standards and guidelines, impacting on assessment
  - legal and ethical requirements of assessors, particularly in relation to validation activities
- principles of assessment
- rules of evidence.
**Evidence Guide**

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Assessment system policies and procedures** may include:
- candidate selection
- rationale and purpose of competency-based assessment
- assessment records, and data and information management
- recognition of current competency, recognition of prior learning and credit arrangements
- assessment reporting procedures
- assessment appeals
- candidate grievances and complaints
- validation
- evaluation and internal audit
- costs and resourcing
- access and equity, and reasonable adjustment
- partnership arrangements
- links with human resource or industrial relations system
- links with overall quality management system.

**Benchmarks for assessment:**
- refers to criterion against which the candidate is assessed
- may be one or more units of competency or assessment criteria of course curricula.

**Materials** may include:
- assessment tools
- samples of collected evidence
- documentation outlining the basis of assessment decisions
- reports and records of assessment decisions
- samples of benchmarks of appropriate evidence
- Assessment Guidelines of the relevant training packages
- information from the evidence guide of the relevant units of competency.

**Validation activities** may include:
- analysing and reviewing:
  - assessment tools
  - collected evidence
  - assessment decisions and records of assessment outcomes
  - other aspects of assessment policies, processes and outcomes
  - recording evidence of validation processes and outcomes.

**Participation** may include comparison and
- assessment practices
- assessment plans
evaluation of:
  • interpretation of units of competency
  • assessment methods and instruments
  • assessment decisions
  • collected evidence.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to conduct individual and group instruction and demonstrate work skills, using existing learning resources in a safe and comfortable learning environment. The unit covers the skills and knowledge required to determine the success of both the training provided and one’s own personal training performance. It emphasises the training as being driven by the work process and context. |

Application of the Unit

| Application of the unit | This unit supports a wide range of applications across any workplace setting and so can be used by any organisation. Its use is not restricted to training organisations. |

</thead>
</table>
| • verbal and non-verbal communication techniques, such as:  
  - asking relevant and appropriate questions  
  - providing explanations  
  - demonstrating  
  - using listening skills  
  - providing information clearly  
| • safety skills to implement OHS requirements, by acting and responding safely in order to:  
  - identify hazards  
  - conduct prestart-up checks if required  
  - observe and interpret learner behaviour that may put people at risk  
| • time-management, skills to:  
  - ensure all learning objectives are covered  
  - pace learning  
| • reflection skills in order to:  
  - identify areas for improvement  
  - maintain personal skill development  
| • literacy skills to:  
  - complete and maintain documentation  
  - read and follow learning programs and plans  
  - read and analyse learner information  
| • technology skills to operate audio-visual and technical equipment  
| • interpersonal skills to:  
  - engage, motivate and connect with learners  
  - provide constructive feedback  
  - maintain appropriate relationships  
  - establish trust  
  - use appropriate body language  
  - maintain humour  
  - demonstrate tolerance  
  - manage a group  
  - recognise and be sensitive to individual difference and diversity  
| • observation skills to:  
  - monitor learner acquisition of new skills, knowledge and competency  

### REQUIRED SKILLS AND KNOWLEDGE

**requirements**
- assess learner communication and skills in interacting with others
- identify learner concerns
- recognise learner readiness to take on new skills and tasks

**Required knowledge**
- learner characteristics and needs
- content and requirements of the relevant learning program and/or delivery plan
- sources and availability of relevant learning resources and learning materials
- content of learning resources and learning materials
- training techniques that enhance learning and when to use them
- introductory knowledge of learning principles and learning styles
- key OHS issues in the learning environment, including:
  - roles and responsibilities of key personnel
  - responsibilities of learners
  - relevant policies and procedures, including hazard identification, risk assessment, reporting requirements, safe use of equipment and emergency procedures
  - risk controls for the specific learning environment
### Evidence Guide

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Assessment must address the scope of this unit and reflect all components of the unit. A range of appropriate assessment methods and evidence-gathering techniques must be used to determine competency. A judgement of competency should only be made when the assessor is confident that the required outcomes of the unit have been achieved and that consistent performance has been demonstrated.</th>
</tr>
</thead>
</table>
| Critical aspects for assessment and evidence required to demonstrate competency in this unit | Evidence of the ability to:  
- carry out a minimum of three training sessions, involving demonstrating and instructing particular work skills for different groups; with each session addressing:  
  - different learning objectives  
  - a range of techniques and effective communication skills appropriate to the audience. |
| Context of and specific resources for assessment | Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be provided. |
| Method of assessment |  |
| Guidance information for assessment | For further information about assessment of this and other TAE units, refer to relevant implementation guidance published on the IBSA website (www.ibsa.org.au). |

TAAASS401C Plan and organise assessment

Modification History
Not applicable.

Unit Descriptor
This unit specifies the competence required to plan and organise the assessment process, including recognition of prior learning (RPL), in a competency-based assessment system.

Application of the Unit
This unit addresses the competence of planning the assessment process and making the organisational arrangements which enable assessment to occur. It includes assessments carried out as part of a Recognition of Prior Learning Process (RPL) or as part of a learning and assessment pathway.

The critical focus of this unit is on developing an assessment plan that will be used to guide assessor/s in conducting competency-based assessments. The unit also covers contextualisation of the assessment benchmarks and assessment tools to address the environment in which assessment will take place and organising the human, material and physical resources needed to conduct the assessment.

This competence applies to planning and organising an assessment process, including RPL which may involve single or multiple candidates being assessed against individual or multiple unit/s of competency.

The planning function in assessment is distinguished as a discrete activity and may be undertaken by the assessor responsible for assessing the candidates reflected in the assessment plan or by another person in the organisation.

This competence is to be applied in the context of an existing assessment strategy which documents the overall framework for assessment at a qualification level. In this context, the assessment plan adds further detail relating to the specific organisational arrangements for assessment/s, including RPL against individual unit/s of competency.

The competence of developing an assessment strategy is separately addressed in two other units of the TAA04 Training and Assessment Training Package: TAADES501B Design and develop learning strategies (in a learning and assessment pathway) and TAAASS501B Lead and co-ordinate assessment systems and services (in an assessment only pathway).

The achievement of this unit includes interpretation of competency standards, (where competency standards are used as the benchmarks for assessment). TAADES401B Use Training Packages to meet client needs addresses this skill in depth.

The competence specified in this unit is typically required by assessors, workplace supervisors with assessment planning responsibilities, trainers or other assessors responsible for planning assessment, including RPL.
Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Determine approach for assessment</td>
</tr>
<tr>
<td>1.1</td>
<td>Candidate/s are identified/confirmed and the purpose/s and context of assessment/ RPL are established/ confirmed with relevant people in accordance with legal/organisational/ethical requirements</td>
</tr>
<tr>
<td>1.2</td>
<td>A decision is made whether assessment will be undertaken within an RPL, a learning and assessment pathway or a combined approach</td>
</tr>
<tr>
<td>1.3</td>
<td>The assessment strategy is accessed and used to guide the development of the assessment plan, where applicable</td>
</tr>
<tr>
<td>1.4</td>
<td>The benchmarks for assessment/ RPL are identified/confirmed and accessed</td>
</tr>
</tbody>
</table>
2 Prepare the assessment/ RPL plan

2.1 The assessment benchmarks are interpreted to determine the **evidence** and **types of evidence** needed to demonstrate competency in accordance with the **rules of evidence**

2.2 Where competency standards are used as benchmarks, **all component parts of the competency standards**, are addressed in defining and documenting the evidence to be collected

2.3 Any **related documentation** to support planning the assessment process is accessed and interpreted

2.4 **Assessment/RPL methods** and **assessment tools** are **selected/confirmed** which address the evidence to be collected in accordance with the **principles of assessment**

2.5 Specific **material and physical resources** required to collect evidence are identified and documented

2.6 Roles and responsibilities of all people involved in the assessment process are clarified, agreed and documented

2.7 Timelines and time periods for evidence collection are determined and all information to be included in the **assessment plan** is documented

2.8 The assessment/RPL plan is confirmed with **relevant personnel**

3 Contextualise and review assessment/ RPL plan

3.1 **Characteristics of the candidate/s** and any allowances for **reasonable adjustments and/or specific needs** are identified/clarified with relevant people and documented

3.2 Where required, competency standards are **contextualised**, to reflect the operating environment in which assessment will occur, in accordance with **contextualisation guidelines**

3.3 Selected assessment methods and assessment tools are examined and adjusted, where required, to ensure continuing applicability taking into account:
- any contextualisation of competency standards
- reasonable adjustment/s, where identified
- integration of assessment activities, where
appropriate and practical capacity to support recognition of prior learning

3.4 Adjusted assessment tools are reviewed to ensure the specifications of the competency standards are still addressed

3.5 The assessment plan is updated, as needed, to reflect ongoing contextualisation needs, any changes in organisational resource requirements or changes in response to the conduct of assessment

3.6 Assessment plan/s are stored and retrieved in accordance with assessment system policies and procedures and legal/organisational/ethical requirements

4 Organise assessment/ RPL arrangements

4.1 Identified material and physical resource requirements are arranged in accordance with assessment system policies and procedures and legal/organisational/ethical requirements

4.2 Any specialist support required for assessment/ RPL is organised and arranged in accordance with organisational/ethical/legal requirements, where required

4.3 Roles and responsibilities of all people involved in the assessment/ RPL process are organised

4.4 Effective communication strategies are established to encourage regular communication flow and feedback with relevant people involved in the assessment/RPL process

4.5 Assessment/ RPL record keeping and reporting arrangements are confirmed
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

cognitive interpretation skills to:
accurately interpret competency standards and other assessment documentation
identify opportunities for integrated competency assessment
contextualise competency standards to the operating assessment environment, including RPL
sort information
observation skills to:
assess the effectiveness of the organisation's assessment, including RPL operations
identify where improvement to the assessment process can be made
identify where improvement to RPL policy and procedures can be made
technology skills to:
use appropriate equipment and software to communicate effectively with others
research and evaluation skills to:
obtain competency standards and other assessment information, assessment tools and other relevant assessment resources
research candidate characteristics and any reasonable adjustment needs
identify and confirm required material and physical resources
evaluate feedback, and determine and implement improvements to processes
make recommendations
planning skills relating to formulation of the assessment plan
organisational skills relating to organising resources required
literacy skills to:
read and interpret relevant information to design and facilitate assessment and recognition processes
prepare required documentation and information for those involved in assessment processes
communication skills to:
discuss assessment, including RPL processes with clients and assessors
establish professional relationships and networks
sensitivity to access and equity considerations and candidate diversity
capacity to promote and implement equity, fairness, validity, reliability and flexibility in planning an assessment process

**Required knowledge**

- competency-based assessment: work focused, criterion referenced, standards-based, evidence-based
- the different purposes of assessment and different assessment contexts, including RPL.
- how to read and interpret the identified competency standards as the benchmarks for assessment
- how to contextualise competency standards within relevant guidelines
- the four principles of assessment and how they guide the assessment process
- what is evidence and different types of evidence used in competency-based assessments, including RPL
- the four rules of evidence and how they guide evidence collection
- different types of assessment methods, including suitability for collecting various types of evidence
- assessment tools and their purpose; different types of tools; relevance of different tools for specific evidence gathering opportunities
- different resource requirements for assessment and associated costs
- where to source other relevant assessment information and how to incorporate this into the plan
- the principles of inclusivity, and strategies for reasonable adjustment, without compromise to the competency standards
- sources and types of specialist support to candidates
- methodologies suitable for reviewing assessment tools
- the assessment system policies and procedures established by the industry and/or organisation
- the RPL policies and procedures established by the organisation
- risks and requirements associated with different assessment applications in various contexts, including:
  - capacities of assessors at higher AQF levels
  - when linked to licensing
  - legal implications of assessing competence
  - the relevant organisational/legal/ethical requirements impacting on the planning and organisation of assessment, as set out in the Range Statement of the relevant competency standards
- other relevant policy, legislation, codes of practice and national standards including national
Commonwealth and state/territory legislation for example:
copyright and privacy laws in terms of electronic technology
security of information
plagiarism
licensing requirements
anti-discrimination including equal opportunity, racial vilification and disability discrimination
workplace relations
industrial awards/enterprise agreements
OHS responsibilities associated with planning and organising assessment, such as:
hazards commonly found, and preferred risk controls for the specific assessment environment
OHS procedures to be observed in the assessment process
safe use and maintenance of relevant equipment
sources of OHS information
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of Assessment

To demonstrate competence against this unit, candidates must be able to provide evidence that they have developed an assessment plan and organised the material resources and personnel to support the assessment process.

The evidence provided must describe how the purpose of assessment was identified; contain structured plans that detail the selection/confirmation of assessment methods and tools, and assessment environments; include appropriate communication strategies with relevant people regarding the assessment process; outline resource requirements and special assistance required throughout the assessment process; and include recording and reporting requirements.

Products that could be used as evidence include:

- assessment plans
- modified/adjusted assessment tools to allow for specific needs
- contextualised competency standards
- documentation of consultations with clients and other stakeholders regarding the assessment purpose and context

Processes that could be used as evidence include:

- how competency standards and other documents were interpreted
- how assessment activities were scheduled
- how RPL is incorporated in the assessment process
- how resources were identified and obtained
- how communication systems were used to include relevant stakeholders in the planning process
- how assistance was sought from individuals
Resource implications for assessment include:

- access to relevant Training Package/s
- access to assessment materials and tools
- access to other relevant assessment information
- access to suitable assessment venue/equipment
- access to RPL policy and procedures
- workplace documentation
- cost/time considerations
- personnel requirements

The collection of quality evidence requires that:

- assessment must address the scope of this unit and reflect all components of the unit, i.e. the Elements, Performance Criteria, Range Statement, Evidence Guide, Employability Skills
- a range of appropriate assessment methods/evidence gathering techniques is used to determine competency, including RPL.
- evidence must be gathered in the workplace whenever possible. Where no workplace is available, a simulated workplace must be provided
- the evidence collected must relate to a number of performances assessed at different points in time and in a learning and assessment pathway these must be separated by further learning and practice
- evidence collected must relate to at least one RPL assessment
- assessment meets the rules of evidence
- a judgement of competence should only be made when the assessor is confident that the required outcomes of the unit have been achieved and that consistent performance has been demonstrated

Specific evidence requirements must

- evidence of planning and organising the assessment process on a minimum of two
include: occasions. The evidence collected must:
address the provision of documented assessment plans
cover a range of assessment events
cater for a number of candidates
relate to different competency standards or accredited curricula
address an RPL assessment
involve the contextualisation of competency standards and the selected assessment tools, where required
incorporate consideration of reasonable adjustment strategies
include organisational arrangements

Integrated assessment means that: this unit can be assessed alone or as part of an integrated assessment activity involving relevant units in the TAA04 Training and Assessment Training Package. Suggested units include but are not limited to:

TAAASS402C Assess competence
TAAASS403B Develop assessment tools
TAAASS404B Participate in assessment validation
TAADES401B Use Training Packages to meet client needs

Range Statement
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Purpose/s of assessment** may include:

- recognising current existing competence of candidate/s
- determining if competence has been achieved following learning
- establishing candidate/s progress towards achievement of competence
- determining language, literacy, numeracy needs of candidates/s
- certifying competence through a Statement of Attainment
- establishing progress towards a qualification
- determining training gaps of candidate/s
- measuring work performance
- classifying employees/support career progression
- meeting organisational requirements for work - operate equipment/develop new skills
- licensing or regulatory requirements

**Context of assessment/ RPL** may include:

- part of the enrolment process
- the environment in which the assessment/RPL will be carried out, including real work/simulation
- opportunities for collecting evidence in a number of situations
- relationships between competency standards and evidence to support recognition of prior learning
- who carries out the assessment/RPL
- relationships between competency standards and work activities in the candidate’s workplace
- relationships between competency standards and learning activities
auspicing and partnership arrangements
the period of time during which the assessment takes place
apportionment of costs/fees, if applicable
quality assurance mechanisms

**Relevant people** must include:

- the candidate/s
- the assessor/s responsible for conducting the assessment/RPL, which may be self or other assessors

**Relevant people** may include:

- the client, company or organisation
- team leaders, managers, supervisors
- delivery personnel
- technical/subject experts
- training and assessment coordinators
- RPL coordinators
- industry regulators
- employee and employer representatives
- members of professional associations
- Commonwealth department official/Centrelink personnel/caseworker
- Australian Apprenticeship Centre (AAC) personnel

**Legal/organisational/ethical requirements** may include:

- assessment system policies and procedures
- assessment strategy requirements
- reporting, recording and retrieval systems for assessment, including RPL
- quality assurance systems
- business and performance plans
- access and equity policies and procedures
- collaborative/partnership arrangements
- defined resource parameters
- mutual recognition arrangements
- industrial relations systems and processes, awards/enterprise agreements
- Australian Quality Training Framework
The **assessment strategy** is a documented framework to guide and structure assessment arrangements for a vocational education and training qualification. In a learning and assessment pathway it is addressed as part of the learning strategy. In an assessment only pathway it is a separate document. The assessment strategy may encompass:

(AQTF2007)

registration scope
human resources policies/procedures
legal requirements including anti-discrimination, equal employment, job role/responsibilities/conditions
relevant industry codes of practice
confidentiality and privacy requirements
OHS considerations, including:
ensuring OHS requirements are adhered to during the assessment process
identifying and reporting OHS hazards and concerns to relevant personnel

the identification of the competency standards forming the qualification and interpretation of the packaging rules of the qualification, where part of a Training Package
interpretation of the competency standards as the benchmarks for assessment
application of Training Package Assessment Guidelines, where part of a Training Package
arrangements for RPL, including provision of guidance and assistance to candidates in gathering and evaluating evidence
determination of assessment methods for identified competency standards
selection of assessment tools for identified competency standards
organisational arrangements for assessment, including physical and human resources, roles and responsibilities and partnership arrangements (where relevant)
nominated quality assurance mechanisms
identified risk management strategies

**Benchmark/s for assessment/ RPL** refers to:

the criterion against which the candidate is assessed or prior learning recognised which, may be a competency standard/unit of competency, assessment criteria of course
curricula, performance specifications, product specifications

**Evidence is:**
material collected which, when matched against the specifications in the competency standards, provides proof of competency achievement

**Types of evidence** may include:
direct, e.g. observation of work activities under real/simulated work conditions, examples of work products
indirect, e.g. third party reports from a range of sources
supplementary, e.g. question and answer, work records, training records, portfolios
candidate gathered evidence
assessor gathered evidence
current/recent/historical
combination of above

The **rules of evidence** guide the evidence collection process to ensure evidence is:
valid, for example:
address the elements and Performance Criteria
reflect the skills and knowledge described in the relevant unit/s of competency
show application in the context described in the Range Statement
demonstrate performance skills and knowledge are applied in real/simulated workplace situations

current, for example:
demonstrate the candidate's current skills and knowledge
comply with current standards

sufficient, for example:
demonstrate competence over a period of time
demonstrate repeatable competence
not inflate the language, literacy and numeracy requirements beyond those required in performing the work task

authentic, for example:
be the work of the candidate
be corroborated/verified

All component parts of the competency standards refers to:

Elements
Performance Criteria
Employability Skills
Range Statement including advice on:
range of contexts/conditions to be met in assessment
aspects of the Performance Criteria that can be contextualised
information which adds definition to support assessment
links to knowledge and skills
underpinning language, literacy and numeracy requirements

Evidence Guide requirements, including:
underpinning/required knowledge
underpinning/required skills and attributes
underpinning language, literacy and numeracy requirements
critical aspects of evidence to be considered/quality evidence requirements
concurrent assessment and interdependence of units
assessment methods/resources/context

dimensions of competency, which include:
task skills
task management skills
contingency management skills
job role/environment skills

requirements set out in the Assessment Guidelines of the relevant Training Package/s

Related documentation may include:

- information from the competency standards about the resources required for assessment, the assessment context, appropriate assessment methods
- assessment activities identified in accredited modules derived from the relevant competency standards
- assessment activities in Support Materials related to the relevant competency standards
- RPL policy and procedures
- any requirements of OHS, legislation, codes of practice, standards and guidelines
- indicators and levels of competence of the National Reporting System
- organisational requirements for demonstration of work performance
- product specifications
- direct observation, for example:
- real work/real time activities at the workplace
- work activities in a simulated workplace environment
Assessment/ RPL methods are the particular techniques used to gather different types of evidence and may include:

- structured assessment activities, for example:
  - simulation exercises/role-plays
  - projects
  - assignments
  - presentations
  - activity sheets
- questioning, for example:
  - written questions, e.g. on a computer
  - interviews
  - self-assessment
  - verbal questioning questionnaires
  - oral/written examinations (for higher AQF levels
- portfolios, for example:
  - collections of work samples by the candidate
  - product with supporting documentation
  - historical evidence
  - journal/log book
  - information about life experience
- review of products, for example:
  - products as a result of a project
  - work samples/products
- third party feedback, for example:
  - testimonials/reports from employers/supervisors
  - evidence of training
  - authenticated prior achievements
  - interview with employer, supervisor, peers

the instruments developed from the selected
assessessment methods to be used for gathering evidence such as:
- a profile of acceptable performance measures
- templates/proformas
- specific questions or activities
- evidence/observation checklists
- checklists for the evaluation of work samples
- candidate self-assessment materials

**Assessment tools** contain: the procedures, information and instructions for the assessor/candidate relating to the use of assessment instruments and assessment conditions

**Selected/confirmed** means: selected on the basis that they are suitable and effective in collecting the evidence in light of the purpose and context
confirmed in accordance with the assessment strategy, where appropriate

**Principles of assessment** are:
- fairness
- flexibility
- reliability
- validity

**Material and physical resources** may include:
- documents required for the assessors and candidates, including competency standards and assessment tools
- plant and equipment
- technology
- personal protective equipment
- venues for assessment
- adaptive technologies
- physical adjustments to assessment environment

**Assessment plan** is the overall planning document for the assessment process and may include:
- the purpose and aims of the assessment
- the context of assessment/RPL
- relevant competency standards to be used as the benchmarks for assessment/RPL
- other assessment information/documentation
identified as relevant
identified personnel
identified assessment methods and assessment tools
possibilities for clustering units of competency for assessment purposes
identified OHS hazards, including assessed risks and control strategies
material and/or physical resources required
organisational arrangements for conducting assessment/RPL
OHS reporting requirements
any special assessment needs, e.g. personal protective equipment requirements
outline of assessment milestones, time lines and target dates
candidate self-assessment procedures
connections to relevant organisational plans, polices and procedures
**Relevant personnel** may include:

- self in such contexts as one-person/small training and/or assessment organisation
- lead assessor
- training and/or assessment supervisor/coordinator
- training and/or assessment manager

**Characteristics of the candidate/s** may include:

- level of work experience
- level and experiences of previous learning and assessment
- motivation for assessment - personal/organisational
- English language, literacy and/or numeracy levels/needs
- physical impairment or disability involving hearing, vision, voice, mobility
- intellectual impairment or disability
- medical condition such as arthritis, epilepsy, diabetes, asthma that is not obvious but may impact on assessment
- differences in learning progress
- psychiatric or psychological disability
- religious and spiritual observances
- cultural background images/perceptions
- age
- gender

**Reasonable adjustments and/or specific needs** must not compromise the integrity of the competency standards and may include:

- adjustments to the assessment process taking into account candidate's language, literacy, numeracy requirements
- provision of personal support services, for example, reader, interpreter, attendant carer, scribe, member of community in attendance
- use of adaptive technology or special equipment
- flexible assessment sessions to allow for fatigue or administering of medication
- format of assessment materials, for example, in braille, first language, use of audiotape/
videotape
adjustments to the physical environment or venue
revising proposed assessment methods/tools
considerations relating to age and/or gender,
considerations relating to cultural beliefs,
traditional practices, religious observances

**Contextualised** means:
to change the wording of some component parts of the competency standard to reflect the immediate operating environment

**Contextualisation guidelines** relate to:
DEST Guidelines on Training Package Contextualisation
relevant Training Package contextualisation guidelines

**Recognition of prior learning** is defined as:
an assessment process that assesses an individual's non-formal and informal learning to determine the extent to which that individual has achieved the required learning outcomes, competency outcomes, or standards for entry to and/or partial or total completion of a qualification

**Assessment system policies and procedures** may include:
candidate selection
rationale and purpose of competency-based assessment
assessment records/data management/information management
recognition of current competency/recognition of prior learning/credit arrangements
assessors - needs, qualifications, maintaining currency
assessment reporting procedures
assessment appeals
candidate grievances/complaints
validation
evaluation/internal audit
costs/resourcing
access and equity(reasonable adjustment
partnership arrangements
links with human resource or industrial
relations systems
links with overall quality management
system

**Specialist support** may include:

- assistance by third party - carer, interpreter
- development of online assessment activities
- support for remote or isolated candidates
  and/or assessors
- support from subject matter or safety experts
- advice from regulatory authorities
- assessment teams/panels
- support from lead assessors
- advice from policy development experts

**Communication strategies** may include:

- interviews (face-to-face or telephone)
- email, memos and correspondence
- meetings
- video conferencing/e-based learning
- focus groups
- email, memos and correspondence
- meetings
- video conferencing/e-based learning
- focus groups

**Unit Sector(s)**

</table>
| 1. Determine assessment approach             | 1.1. Identify candidate and confirm *purposes and context of assessment/RPL* with relevant people according to *legal, organisational and ethical requirements*
|                                              | 1.2. Identify and access *benchmarks for assessment/RPL* and any specific assessment guidelines |
| 2. Prepare the assessment plan               | 2.1. Determine evidence and *types of evidence* needed to demonstrate competence, according to the *rules of evidence*
|                                              | 2.2. Select *assessment methods* which will support the collection of defined evidence, taking into account the context in which the assessment will take place |
|                                              | 2.3. Document all aspects of the *assessment plan* and confirm with relevant personnel |
| 3. Develop assessment instruments            | 3.1. Develop *simple assessment instruments* to meet target group needs |
|                                              | 3.2. Analyse *available assessment instruments* for their suitability for use and modify as required |
|                                              | 3.3. *Map assessment* instruments against unit or course requirements |
|                                              | 3.4. Write clear instructions for candidate about the use of the instruments |
|                                              | 3.5. Trial draft assessment instruments to validate content and applicability, and record outcomes |
### Required Skills and Knowledge

#### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

<table>
<thead>
<tr>
<th>Required skills</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Cognitive interpretation skills to:</td>
</tr>
<tr>
<td>- Interpret competency standards and other assessment documentation, including material relating to reasonable adjustment</td>
</tr>
<tr>
<td>- Identify opportunities for integrated competency assessment</td>
</tr>
<tr>
<td>- Contextualise competency standards to the operating assessment environment, including RPL</td>
</tr>
<tr>
<td>- Consider access and equity needs of diverse candidates</td>
</tr>
<tr>
<td>- Technology skills to use appropriate equipment and software to communicate effectively with others</td>
</tr>
<tr>
<td>- Research and evaluation skills to:</td>
</tr>
<tr>
<td>- Obtain competency standards, assessment tools and other relevant assessment resources</td>
</tr>
<tr>
<td>- Research candidate characteristics and any reasonable adjustment needs</td>
</tr>
<tr>
<td>- Evaluate feedback, and determine and implement improvements to processes</td>
</tr>
<tr>
<td>- Literacy skills to read and interpret relevant information to design and facilitate assessment and recognition processes</td>
</tr>
<tr>
<td>- Communication skills to discuss assessment, including RPL processes with clients and other assessors</td>
</tr>
<tr>
<td>- Interpersonal skills to:</td>
</tr>
<tr>
<td>- Demonstrate sensitivity to access and equity considerations and candidate diversity</td>
</tr>
<tr>
<td>- Promote and implement equity, fairness, validity, reliability and flexibility in planning an assessment processes</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Required knowledge</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Ethical and legal requirements of an assessor</td>
</tr>
<tr>
<td>- Competency-based assessment, including:</td>
</tr>
<tr>
<td>- Work-focused</td>
</tr>
<tr>
<td>- Criterion-referenced</td>
</tr>
<tr>
<td>- Standards-based</td>
</tr>
<tr>
<td>- Evidence-based</td>
</tr>
<tr>
<td>- Different purposes of assessment and different assessment contexts, including RPL</td>
</tr>
<tr>
<td>- How to read and interpret the identified competency standards as the benchmarks for assessment</td>
</tr>
<tr>
<td>- How to contextualise competency standards within relevant guidelines</td>
</tr>
<tr>
<td>- Four principles of assessment and how they guide the assessment process</td>
</tr>
</tbody>
</table>
### REQUIRED SKILLS AND KNOWLEDGE

- purpose and features of evidence, and different types of evidence used in competency-based assessments, including RPL
- rules of evidence and how they guide evidence collection
- different types of assessment methods, including suitability for collecting various types of evidence
- assessment tools and their purpose; different types of tools; relevance of different tools for specific evidence-gathering opportunities
Evidence Guide

<table>
<thead>
<tr>
<th>EVIDENCE GUIDE</th>
</tr>
</thead>
<tbody>
<tr>
<td>The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.</td>
</tr>
</tbody>
</table>

### Overview of assessment

Assessment must address the scope of this unit and reflect all components of the unit. A range of appropriate assessment methods and evidence-gathering techniques must be used to determine competency. A judgement of competency should only be made when the assessor is confident that the required outcomes of the unit have been achieved and that consistent performance has been demonstrated.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the ability to:

- plan and organise the assessment process on a minimum of two occasions
- collect evidence that demonstrates:
  - documented assessment plans
  - having covered a range of assessment events
  - catering for a number of candidates
  - different competency standards or accredited curricula
  - an RPL assessment
  - contextualisation of competency standards and the selected assessment tools, where required
  - incorporation of reasonable adjustment strategies
  - development of simple assessment instruments for use in the process
  - organisational arrangements.

### Context of and specific resources for assessment

Evidence must be gathered in the workplace wherever possible. Where no workplace is available, a simulated workplace must be provided.

Assessment must ensure access to training products, such as training packages and accredited course documentation.

### Method of assessment

### Guidance information for assessment

For further information about assessment of this and other TAE units, refer to relevant implementation guidance published on the IBSA website (www.ibsa.org.au).
Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Purposes of assessment/ RPL may include:

- recognising current existing competence of candidates
- determining if competence has been achieved following learning
- establishing candidate progress towards achievement of competence
- determining language, literacy and numeracy needs of candidates
- certifying competence through a qualification or Statement of Attainment
- licensing or regulatory requirements.

### Context of assessment/ RPL may include:

- environment in which the assessment/RPL will be carried out, including real or simulated workplace
- opportunities for collecting evidence in a number of situations
- relationships between competency standards and:
  - evidence to support RPL
  - work activities in the candidate's workplace
  - learning activities
  - who carries out the assessment/RPL.

### Organisational, legal and ethical requirements may include:

- assessment system policies and procedures
- assessment strategy requirements
- reporting, recording and retrieval systems for assessment, including RPL
- quality assurance systems
- business and performance plans
- access and equity policies and procedures
- collaborative and partnership arrangements
- defined resource parameters
- mutual recognition arrangements
- industrial relations systems and processes, awards, and enterprise agreements
- Australian Quality Training Framework
### RANGE STATEMENT

<table>
<thead>
<tr>
<th>• registration scope</th>
</tr>
</thead>
<tbody>
<tr>
<td>• human resources policies and procedures</td>
</tr>
<tr>
<td>• legal requirements, including:</td>
</tr>
<tr>
<td>• anti-discrimination</td>
</tr>
<tr>
<td>• equal employment opportunity</td>
</tr>
<tr>
<td>• job role, responsibilities and conditions</td>
</tr>
<tr>
<td>• relevant industry codes of practice</td>
</tr>
<tr>
<td>• confidentiality and privacy requirements</td>
</tr>
<tr>
<td>• OHS considerations, including:</td>
</tr>
<tr>
<td>• ensuring OHS requirements are adhered to during the assessment process</td>
</tr>
<tr>
<td>• identifying and reporting OHS hazards and concerns to relevant personnel.</td>
</tr>
</tbody>
</table>

**Benchmarks for assessment/RPL** may include:

<table>
<thead>
<tr>
<th>• criterion against which the candidate is assessed or prior learning recognised, which may be:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• competency standard/unit of competency</td>
</tr>
<tr>
<td>• assessment criteria of course curricula</td>
</tr>
<tr>
<td>• performance specifications of an enterprise or industry</td>
</tr>
<tr>
<td>• product specifications.</td>
</tr>
</tbody>
</table>

**Types of evidence** may include:

<table>
<thead>
<tr>
<th>• direct</th>
</tr>
</thead>
<tbody>
<tr>
<td>• indirect</td>
</tr>
<tr>
<td>• supplementary.</td>
</tr>
</tbody>
</table>

**Rules of evidence** ensure that evidence collected is:

<table>
<thead>
<tr>
<th>• valid</th>
</tr>
</thead>
<tbody>
<tr>
<td>• sufficient</td>
</tr>
<tr>
<td>• authentic</td>
</tr>
<tr>
<td>• reliable.</td>
</tr>
</tbody>
</table>

**Assessment methods** are the particular techniques used to gather evidence and may include:

<table>
<thead>
<tr>
<th>• direct observation, for example:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• real work/real time activities at the workplace</td>
</tr>
<tr>
<td>• work activities in a simulated workplace environment</td>
</tr>
<tr>
<td>• structured activities, for example:</td>
</tr>
<tr>
<td>• simulation exercises and role-plays</td>
</tr>
<tr>
<td>• projects</td>
</tr>
<tr>
<td>• presentations</td>
</tr>
<tr>
<td>• activity sheets</td>
</tr>
<tr>
<td>• questioning, for example:</td>
</tr>
<tr>
<td>• written questions, e.g. on a computer</td>
</tr>
<tr>
<td>• interviews</td>
</tr>
</tbody>
</table>
## RANGE STATEMENT

- self-assessment
- verbal questioning
- questionnaires
- oral or written examinations (applicable at higher AQF levels)
- portfolios of evidence, for example:
  - collection of work samples compiled by candidate
  - product with supporting documentation
  - historical evidence
  - journal or log book
  - information about life experience
- review of products, for example:
  - testimonials and reports from employers and supervisors
  - evidence of training
  - authenticated prior achievements
  - interview with employer, supervisor, or peer.

### Assessment plan may include:

- overall planning document describing:
  - what is to be assessed
  - when assessment is to take place
  - where assessment is to take place
  - how assessment is to take place.

### Simple assessment instruments may include:

- instruments developed by an assessor as part of formative or summative assessment activities, including:
  - profiles of acceptable performance measures
  - templates and proformas
  - specific questions or activities
  - evidence and observation checklists
  - checklists for the evaluation of work samples
  - recognition portfolios
  - candidate self-assessment materials
  - instruments developed elsewhere that have been modified by the assessor for use with a particular client group.

### Available assessment instruments may include:

- commercially available instruments
- those created by others inside the registered training organisation.
**RANGE STATEMENT**

*Map assessment* means:

- showing a clear relationship between the evidence and the requirements of the unit.

TLIA2009A Complete and check import/export documentation

Modification History
Not Applicable

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to complete and or evaluate import and export documentation, and check documentation in accordance with the requirements of Customs and related legislation and workplace procedures. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Work must be carried out in compliance with the relevant Customs and related legislation and workplace requirements concerning the completion and checking of import/export documentation.

Work is performed under some supervision generally within a team environment. Work is undertaken in a range of environments including small to large worksites in the customs broking and freight forwarding industries.

This unit is normally packaged at AQF II or above.

Licensing/Regulatory Information
Refer to Unit Descriptor

Pre-Requisites

</tr>
</tbody>
</table>
ELEMENT | PERFORMANCE CRITERIA
---|---
3.5 | Any revisions to documents are finalised and rechecked by self and supervisor, manager or more senior personnel prior to lodgement

4 | **Lodge documentation for processing**

4.1 | Documents are forwarded to relevant personnel in accordance with the requirements of Customs and related legislation and workplace procedures

4.2 | Documents are filed, stored and retained in accordance with the requirements of Customs and related legislation and workplace procedures

---

**Required Skills and Knowledge**

**REQUIRED KNOWLEDGE AND SKILLS**

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Australian and international standards, codes and regulations relevant to the import and export of cargo and freight
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the completion of import and export documentation
- Focus of operation of work systems, equipment, management and site operating systems for completing import/export cargo and freight documentation
- Problems that may occur when completing import and export documentation and appropriate action that can be taken to resolve the problems
- The Customs Act 1901 and related legislation
- Documentation requirements for the import and export of cargo and freight

**Required skills:**

- Communicate effectively with others when completing import and export documentation
- Read and comprehend simple statements in English
- Read and interpret instructions, procedures and labels relevant to the import and export of cargo and freight
- Complete and/or assess accuracy of import and export documentation
- Work collaboratively with others when completing import and export documentation
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems when completing and/or assessing
Required skills:

- Import and export documentation in accordance with regulatory requirements and workplace procedures
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use relevant communications, computing and office equipment when completing import and export documentation

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - Identifying procedures required for documentation for import/export of goods
  - Completing and checking documentation and records to meet relevant Customs legislation and related legislation and workplace requirements
  - Providing customer/client service and work effectively with others
  - Selecting and using appropriate workplace colloquial and technical language and communication technologies in the workplace context

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - A range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - Access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is
EVIDENCE GUIDE

required to:
• relevant and appropriate materials and equipment, and
• applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  • through activities in an appropriately simulated environment at the registered training organisation, and/or
  • in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted in:
• a range of work environments
• by day or night

Customers may be:
• internal or external

Workplaces may comprise:
• large, medium or small worksites

Work may be conducted in:
• limited or restricted spaces
• exposed conditions
• controlled or open environments

Cargo may include:
• goods with specialist requirements, including temperature controlled goods and dangerous goods
• personal effects
• consignments imported/exported by parcels post
• consignments imported/exported by air freight
• consignments imported/exported by sea freight
• wildlife or wildlife products (living or non-living)
• goods with specialist requirements, including temperature controlled goods and dangerous goods
RANGE STATEMENT

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods and materials

Consultative processes may involve:
- other employees and supervisors
- suppliers, customers and clients
- relevant authorities and institutions
- management and union representatives
- industrial relations and OH&S specialists
- other maintenance, professional or technical staff

Communication in the work area may include:
- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- radio
- oral, aural or signed communications

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- goods identification numbers and codes
- manifests, barcodes, and container identification/serial number
- relevant Customs legislation, related legislation including quarantine legislation, environment and conservation legislation and Australian and international codes of practice and regulations relevant to import/export of cargo
- Australian and international standards, regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- dangerous goods declarations and material safety data sheets (MSDSs) (where applicable)
- packing declaration
- timber treatment certificates
- cleanliness certificate
- handling instructions for cargo (especially for dangerous goods or temperature controlled goods)
- commercial invoices
- packing lists
- air waybill (AWB)
- certificates of origin
RANGE STATEMENT

- bills of lading (B/L) or sea waybills
- certificates of marine insurance, other insurance certificates
- quarantine treatment certificate
- transportation and warehousing instructions
- permits from regulatory bodies (Australian and international)
- financial documentation
- other documents specific to goods, country of origin/destination
- operations manuals, job specifications and induction documentation
- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian Standards and certification requirements
- quality assurance procedures
- emergency procedures
- relevant Customs and related legislation, including taxation legislation
- relevant standards and codes for the import/export of cargo
- quarantine legislation
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- workplace relations regulations
- equal opportunity legislation
- equal employment opportunity and affirmative action legislation

Applicable regulations and legislation may include:

- relevant Customs and related legislation, including taxation legislation
- relevant standards and codes for the import/export of cargo
- quarantine legislation
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- workplace relations regulations
- equal opportunity legislation
- equal employment opportunity and affirmative action legislation

</table>
| 1 Process container/cargo documentation | 1.1 Container/cargo documentation is processed in accordance with workplace procedures and statutory authority requirements  
  1.2 Movements of containers/cargo are recorded in accordance with workplace procedures and statutory authority requirements |
| 2 Maintain records of container/cargo movements | 2.1 Container/cargo records are updated each time containers/cargo are moved within the yard  
  2.2 Containers/cargo are checked using markings to ensure correct identification when updating records |
| 3 Monitor container/cargo and maintain records | 3.1 Containers/cargo are monitored on a daily basis and the specified information recorded  
  3.2 Problems with controlled systems on containers/cargo are reported on the appropriate forms and forwarded to the maintenance area  
  3.3 Log cards on containers/cargo with controlled systems are checked on completion of monitoring and all unit or system breakdowns and/or faults are logged in the breakdown log diary in accordance with workplace procedures  
  3.4 Movement of containers/cargo is monitored on a daily basis and the information recorded |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Australian and international standards, codes of practice and regulations relevant to the maintenance of container and cargo records including the Australian and International Dangerous Goods Codes
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the maintenance of container and cargo records
- Focus of operation of work systems, equipment, management and site operating systems for the maintenance of container and cargo records
- Problems that may occur when maintaining container and cargo records and appropriate action that can be taken to resolve the problems
- Relevant handling and safety codes
- Site layout and location of reefer units
REQUIRED KNOWLEDGE AND SKILLS

- The marking and numbering systems for cargo
- Relevant bond, quarantine or other legislative requirements

Required skills:

- Communicate effectively with others when maintaining container and cargo records
- Receive, acknowledge and send messages with available communications equipment
- Read and interpret instructions, procedures, information and labels relevant to the maintenance of container and cargo records
- Interpret and follow operational instructions and prioritise work when maintaining container and cargo records
- Identify cargo, container and goods, coding, ADG / IMDG markings and where applicable emergency information panels
- Work collaboratively with others when maintaining container and cargo records
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems when maintaining container and cargo records in accordance with regulatory requirements and workplace procedures
- Estimate size, shape and special requirements of loads
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
EVIDENCE GUIDE

- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- limited or restricted spaces
- exposed conditions
- controlled or open environments

Containers/cargo may include:
- goods with specialist requirements, including reefer units and containers/cargo containing temperature controlled
RANGE STATEMENT

Information recorded during daily monitoring of reefers may include:
- temperatures
- water meter readings
- any faults in the operation of the reefer

Hazards in the work area may include exposure to:
- chemicals
- dangerous or hazardous substances
- movements of equipment, goods, materials and vehicular traffic

Personnel in work area may include:
- workplace personnel
- site visitors
- contractors
- official representatives

Communication in the work area may include:
- phone
- fax
- email
- electronic data transfer (EDI)
- RF systems
- radio
- oral, aural or signed communications

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may include:
- goods identification numbers and codes
- manifests, bar codes, and container identification/serial number
- Australian and international codes of practice and regulations relevant to the maintenance of container/cargo records
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances
- operations manuals, job specifications and induction documentation
RANGE STATEMENT

- manufacturers specifications for equipment
- workplace procedures and policies
- supplier and/or client instructions
- dangerous goods declarations and material safety data sheets (where applicable)
- award, enterprise bargaining agreement, other industrial arrangements
- relevant Australian standards and certification requirements
- quality assurance procedures
- emergency procedures
- relevant codes and regulations for the maintenance of container/cargo records
- Australian and international regulations and codes of practice for the handling and transport of dangerous goods and hazardous substances, including:
  - Australian and International Dangerous Goods Codes
  - Australian Marine Orders and the International Maritime Dangerous Goods Code
  - IATA Dangerous Goods by Air regulations
  - Australian and International Explosives Codes
- licence, patent or copyright arrangements
- water and road use and licence arrangements
- export/import/quarantine/bond requirements
- marine orders
- relevant Australian standards and certification requirements
- relevant state/territory OH&S and environmental protection legislation
- workplace relations regulations
- workers compensation regulations

Unit Descriptor
This unit involves the skills and knowledge required to drive a heavy rigid vehicle safely including systematic and efficient control of all vehicle functions, monitoring of traffic and road conditions, management of vehicle condition and performance, and effective management of hazardous situations. Assessment of this unit may be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory Road Traffic Authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Driving must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority pertaining to heavy rigid vehicles.

Driving is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a commercial heavy rigid vehicle across a variety of driving contexts.

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1** Drive the heavy rigid vehicle | 1.1 The heavy rigid vehicle is started, steered, manoeuvred, positioned and stopped in accordance with traffic regulations and manufacturers instructions  
1.2 Engine power is managed to ensure efficiency and performance and to minimise engine and gear damage  
1.3 Engine operation is maintained within the manufacturer's specified torque range and temperature through effective gear selection and smooth transition in gear changes  
1.4 Braking system of heavy rigid vehicle is managed and operated to ensure effective control of the vehicle under all conditions  
1.5 Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving  
1.6 The heavy rigid vehicle is driven in reverse, maintaining visibility and achieving accurate positioning.  
1.7 The heavy rigid vehicle is parked, shut down and secured in accordance with manufacturer’s specifications, traffic regulations and workplace procedures  
1.8 Where required, overwidth and overweight permit applications are undertaken in accordance with relevant regulatory requirements  
1.9 Appropriate procedures are followed in the event of a driving emergency |
| **2** Monitor traffic and road conditions | 2.1 The most efficient route of travel is taken through monitoring and anticipation of traffic flows and conditions, road standards and other factors likely to cause delays or route deviations  
2.2 Traffic and road conditions are constantly monitored and acted upon to enable safe operation and ensure no injury to people or damage to property, equipment loads and facilities |
| **3** Monitor and maintain vehicle performance | 3.1 Vehicle performance is maintained through pre-operational inspections and checks of the vehicle  
3.2 Performance and efficiency of vehicle operation is monitored during use  
3.3 Defective or irregular performance or malfunctions are reported to the appropriate authority  
3.4 Vehicle records are maintained/updated and information is processed in accordance with workplace procedures |

## Required Skills and Knowledge
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

**Required knowledge:**

- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental procedures and regulations
- Heavy rigid vehicle controls, instruments and indicators and their use
- Heavy rigid vehicle handling procedures
- Procedures to be followed in the event of a driving emergency
- Engine power management and safe driving strategies
- Efficient driving techniques
- Pre-operational checks carried out on heavy rigid vehicle and related action
- Differences between transmission types
- Principles of operation of air brakes and procedures for their use
- Workplace driving and operational instructions
- Driving hazards and related defensive driving techniques
- Principles of stress management when driving a vehicle
- Factors which may cause traffic delays and diversions and related action that can be taken by a driver
- Causes and effects of fatigue on drivers
- Factors which increase fatigue-related accidents
- Fatigue management strategies and on-road techniques
- Lifestyles which promote the effective long-term management of fatigue

**Required skills:**

- Communicate effectively with others when driving a commercial heavy rigid vehicle
- Read and interpret instructions, procedures, information and signs relevant to when the driving of a commercial heavy rigid vehicle
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the driving of a commercial heavy rigid vehicle
- Work collaboratively with others when driving a commercial heavy rigid vehicle
- Operate electronic communication equipment to required protocol
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may occur when driving a commercial heavy rigid vehicle in accordance with regulatory requirements and workplace procedures
**Required skills:**

- Implement contingency plans for unexpected events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when driving a commercial heavy rigid vehicle
- Monitor and anticipate traffic hazards and take appropriate action
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor performance of the vehicle and its equipment and take appropriate action where required
- Carry out pre-operational checks in the course of work activities

**Evidence Guide**

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

**Context of and specific resources for assessment**

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational
EVIDENCE GUIDE

situations in the workplace
• In both real and simulated environments, access is required to:
  • relevant and appropriate materials and equipment, and
  • applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
• Assessment of this unit must be undertaken by a registered training organisation
• As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
• Practical assessment must occur:
  • through activities in an appropriately simulated environment at the registered training organisation, and/or
  • in an appropriate range of situations in the workplace

Range Statement
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle includes:
• all heavy rigid vehicles, for example any rigid vehicle with 3 or more axles, including trucks or buses, greater than 8 tonnes GVM

Driving may be carried out in typical road transport situations, including:
• operations conducted at day or night
• typical weather conditions
• on the open road
• on a private road
• while at a depot, base or warehouse
• while at a client's workplace or work site

Vehicle handling procedures may include:
• starting a vehicle
• steering and manoeuvring a vehicle
• accelerating and braking
• positioning and stopping a vehicle
• reversing a vehicle
• operating vehicle controls, instruments and indicators
RANGE STATEMENT

- using air brakes
- using defensive driving techniques
- managing engine performance

Pre-operational checks may include:
- visual check of vehicle
- checking and topping up of fluid levels
- checks of tyre pressures
- checks of operation of vehicle lights and indicators
- checks of brakes

Minor routine repairs may include:
- replacement of blown globes in vehicle lights
- replacement of broken fan belt
- replacement of blown fuse
- replacement of door mirrors
- repairs to rear tail-light lens
- changing of tyres
- repair of tyre punctures
- replacement of broken coolant hose

Driving hazards may include (examples only):
- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions
- work site hazards including power and service lines, buildings, structures, facilities, underground services, uneven or unstable ground and recently filled trenches, stationary and moving machinery and equipment, hazardous or dangerous materials, noise, light, energy sources, and obstructions

Factors that can cause traffic delays and diversions may include:
- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- emergency situations such as bushfires, building fires, etc.
RANGE STATEMENT

- road closures for special events such as marches, parades, sporting events, etc.
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Documentation/records may include:

- state/territory heavy rigid vehicle driving licence and permit requirements
- state/territory road rules
- workplace driving instructions and procedures
- vehicle manufacturers instructions, specifications and recommended driving procedures including preoperational checks of vehicle
- emergency procedures
- vehicle log book or record book (where required)
- relevant standards and certification requirements
- quality assurance procedures

Applicable procedures and codes may include:

- relevant state/territory roads and traffic authority driving regulations and licence/permit requirements pertaining to heavy rigid vehicles
- relevant state/territory road rules
- relevant state/territory permit regulations and requirements
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

Unit Descriptor

This unit involves the skills and knowledge required to conduct weighbridge operations in accordance with regulatory requirements and workplace procedures, including setting up for weighbridge operations, weighing loaded vehicles, weighing unloaded vehicles, finalising weighbridge operations, and completing required records and documentation. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Work must be carried out in accordance with regulations and workplace requirements relevant to weighbridge operations.

Work is performed under some supervision, generally within a team environment.

Work involves the application of regulatory requirements and workplace procedures when conducting weighbridge operations in the transport, warehousing, distribution and/or storage industries.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Set up for weighbridge operations          | 1.1 Weighbridge systems, including equipment, computer and recording arrangements are checked for operational status  
  1.2 Tests to confirm accuracy of weighbridge operation and related functions are conducted in accordance with workplace procedures, manufacturers instructions and relevant legislation  
  1.3 Accurate reporting of the results of the inspection and testing is kept in accordance with statutory requirements, workplace policy and industry guidelines  
  1.4 Faults/discrepancies in weighbridge operation are identified and action is undertaken in accordance with workplace procedures  |
| 2 Weigh loaded vehicles                       | 2.1 Vehicles likely to exceed weighbridge weight limit are turned away  
  2.2 Vehicles are directed onto platform to obtain accurate weight  
  2.3 Weight of loaded stationary vehicle is registered against vehicle and load identification  
  2.4 Vehicle and load information is entered into workplace recording system and driver is issued with receipt and/or statement  
  2.5 Areas of dispute are resolved or forwarded for further action undertaken in accordance with workplace procedures  |
| 3 Weigh unloaded vehicles                    | 3.1 Vehicles are directed onto platform to obtain accurate weight  
  3.2 Weight of unloaded stationary vehicle is registered against vehicle  
  3.3 Proposed load weight is assessed for conformance to statutory requirements  
  3.4 Where appropriate, loading operations are commenced in accordance with legal loading weight, customer requirements and workplace procedures with vehicle re-weighed to establish final load weight  
  3.5 Vehicle and load information is entered into workplace recording system and invoice is issued to driver where appropriate  
  3.6 Driver signatures on weighbridge documents, invoices or receipts are obtained in accordance with statutory and workplace requirements  
  3.7 Areas of dispute are resolved or forwarded for further action to be undertaken in accordance with workplace procedures  |
| 4 Complete weighbridge operations            | 4.1 Weighbridge systems, including equipment, computer and recording arrangements are secured or made ready for next shift  
  4.2 Record of operations is maintained and filed in accordance with  |
Required Skills and Knowledge

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Regulations relevant to the conduct of weighbridge operations including Australian Dangerous Goods Code where applicable
- Relevant OH&S and environmental protection procedures and guidelines
- Workplace procedures and policies for the conduct of weighbridge operations
- Problems that may occur when conducting weighbridge operations and appropriate action that can be taken to resolve the problems
- Equipment applications, capacities, configurations, safety hazards and control mechanisms
- Records and documentation requirements for weighbridge operations
- Classification procedures
- Despatch procedures
- Calculation method and approaches for both metric and imperial systems
- Correct weighing procedures including statutory and workplace requirements
- Emergency response procedures
- Site layout

Required skills:

- Communicate effectively with others when conducting weighbridge operations
- Read and interpret instructions, procedures and information relevant to the conduct of weighbridge operations
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the conduct of weighbridge operations
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when conducting weighbridge operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, errors or malfunctions that may occur when conducting weighbridge operations in accordance with regulatory requirements and workplace procedures
Required skills:

- Apply precautions and required action to minimise, control or eliminate hazards that may exist during the conduct of weighbridge operations
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Set up and maintain weighbridge equipment
- Identify, select and efficiently and effectively use weighbridge equipment
- Monitor performance of weighbridge equipment

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
EVIDENCE GUIDE

- relevant and appropriate materials and equipment, and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Workplace environment may include:
- movement of equipment, goods, products, materials and vehicular traffic

Weighbridge operations may be:
- inclusive of a single operation involving the loading of vehicles and despatch functions

Weighbridge operation may be:
- electro/mechanical
- electronic
- computerised

Vehicles may include
- trucks
- articulated road vehicles
- trailers
- wagons

Calibration and/or testing of
- required prior to and during operations
RANGE STATEMENT

equipment may be:

Hazards in the work area may include exposure to:
- chemicals and pesticides
- dangerous or hazardous substances
- stationary and moving equipment, parts and materials
- noise, light, energy sources
- electrical equipment
- humidity, air temperature, radiant heat
- faulty equipment

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- protective clothing
- respirators and fume/dust masks
- high visibility clothing

Requirements for work may include:
- site restrictions and procedures
- use of safety and personal protective equipment
- communications/recording equipment
- authorities and permits
- breakdown procedures
- emergency procedures

Communication in the work area may include:
- phone
- fax
- email/internet
- electronic data interchange (EDI)
- RF systems
- oral, aural or signed communications

Consultative processes may involve:
- workplace personnel
- supervisors and managers
- existing and potential customers/clients
- drivers
- suppliers and contractors
- union representatives
- industrial relations and OH&S specialists
- maintenance, professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- workplace procedures
- organisational procedures
- established or standard procedures
RANGE STATEMENT

Information/documents may include:

- operations manuals, job specifications and procedures
- induction documentation
- competency standards and training materials
- manufacturers specifications and instructions for the operation of weighbridge equipment
- material safety data sheets
- workplace operating procedures and policies
- supplier and/or client instructions
- Australian and international standards, criteria and certification requirements
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- relevant regulations including the ADG Code
- award, workplace bargaining agreement, other industrial arrangements
- OH&S procedures
- quality assurance procedures
- emergency procedures

Applicable regulations and legislation may include:

- relevant codes and regulations pertaining to weighbridge operations
- traffic acts and road transport mass and loading regulations
- ADG Code and regulations pertaining to the storage and handling of dangerous and hazardous goods
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation
- relevant Australian and international standards and certification requirements
- workplace relations regulations including equal opportunity, equal employment opportunity and affirmative action legislation
- workers compensation regulations

Unit Descriptor
This unit involves the skills and knowledge required to operate a forklift with specialised attachments or all-terrain equipment, including checking attachments and worksite for suitability, selecting the type of forklift and accessories for required load shifting tasks, and shifting load and completing work in accordance with operational requirements. Assessment of this unit will usually be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory OH&S authority. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Specialised operation of a forklift must be carried out in compliance with the licence requirements and regulations of the relevant state/territory authority.

Specialised operation of a forklift is performed under some supervision, generally within a team environment. It involves the application of equipment operation principles and procedures to maintain the safety and specialised operation of a forklift in a wide variety of operational contexts.

| 1 Check attachments and worksite for suitability | 1.1 Suitable work site is selected for operations  
1.2 Work area is checked for overhead obstructions and proximity to service delivery lines  
1.3 Barriers or warning signs are erected in areas subject to passing traffic  
1.4 Attachments and platforms are securely fixed to carriage or tines  
1.5 Personnel support platforms are inspected to ensure compliance with the relevant Australian Standard |
| 2 Select type of forklift and accessories for the required workplace task | 2.1 Special equipment, accessories or attachments are identified to match load characteristics and work requirements  
2.2 Appropriate specialised equipment is selected  
2.3 Existing attachments are removed and stored according to workplace procedures  
2.4 Specialised equipment is fitted according to manufacturers instructions and workplace procedures  
2.5 Designated staff are notified regarding specialist operations |
| 3 Shift load and complete work | 3.1 Equipment is operated within safe working limits and to maximise efficiency of operations  
3.2 Load is lifted, carried and set down in accordance with workplace and manufacturers procedures and regulatory requirements  
3.3 Documentation is completed reporting any damage or faults to goods or equipment  
3.4 Specialist equipment and forklift are returned to appropriate storage/parking area |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant duty of care requirements pertaining to the specialised operation of a forklift
- Relevant OH&S and environmental procedures and regulations
- Workplace operating procedures
REQUIRED KNOWLEDGE AND SKILLS

- Forklift controls, instruments and indicators and their use
- Types of forklift accessories and ancillary equipment, their purposes and procedures for their use
- Handling procedures for forklifts involved in specialised operations
- Procedures to be followed in the event of an operational emergency
- Operating hazards and related defensive driving and hazard control techniques
- Engine power management and safe operating strategies
- Efficient driving techniques
- Pre-operational checks carried out on forklift and accessories and related action
- Site layout and obstacles
- Principles of stress management when driving a forklift

Required skills:

- Communicate effectively with others when conducting specialised forklift operations
- Read and interpret instructions, procedures, information and signs relevant to specialised forklift operations
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to specialised forklift operations
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when conducting specialised forklift operations
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when conducting specialised forklift operations in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events that may occur when conducting specialised forklift operations
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during specialised forklift operations
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S
Required skills:

- Identify points of balance and safe lifting positions on a range of loads when operating a forklift (including accessories)
- Monitor performance of equipment
- Service equipment in terms of maintenance schedule and standard operating procedures
- Check and replenish fluids and carry out lubrication processes in the course of work activities

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be
EVIDENCE GUIDE

conducted through appropriate written/oral tests

- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Types of forklift may include:

- counterbalance trucks
- reach trucks
- pallet trucks
- container-handling heavy forklifts
- vacuum
- top frame

Specialised forklift operations may be carried out in typical forklift operational situations, including:

- operations conducted at day or night
- typical weather conditions
- on the open road
- on a private road or worksite
- while at a workplace
- internal or external

Customers may be:

- internal or external

Workplaces may comprise:

- large, medium or small worksites

Specialised forklift may be used to assist in a range of workplace tasks, including:

- stock/goods/container handling
- loading and unloading vehicles
- stacking stock and goods
- lifting and moving equipment
- transporting materials and goods in a workplace

Work may be conducted in:

- restricted spaces
- exposed conditions
- controlled or open environments

Loads to be shifted may require:

- special precautions

Specialised forklift operations

- spikes
RANGE STATEMENT

may involve the use of a range of attachments and accessories, including:

- drum carriers
- bale carriers
- tines
- personnel carriers
- high reaching
- pantograph
- jibs
- paper clamps
- hooks
- side lifters

Loads to be shifted may be:

- irregularly shaped
- packaged or unpackaged
- labelled or unlabelled
- palleted or unpalleted
- containerised

Personnel in the work area may include:

- workplace personnel
- site visitors
- contractors
- official representatives

Forklift operational procedures may include:

- starting a forklift (including pre-start checks)
- steering and manoeuvring a forklift
- accelerating and braking
- positioning and stopping a forklift
- reversing a forklift
- operating forklift controls, instruments and indicators
- using defensive driving techniques
- managing engine performance

Pre-operational checks may include but are not limited to:

- visual checking of forklift and its associated accessories and equipment
- checking and topping up of fluid levels
- checks of tyres
- checks of operation of forklift lights and indicators
- checks of brakes

Post-operational checks may include but are not limited to:

- parking in a safe place
- shutting down forklift
- lowering all equipment
- visually checking for faults or damage

Hazards may include (examples only):

- wet and iced operating surfaces
- oil on operating surface
- faulty brakes
RANGE STATEMENT

- workplace obstacles and other operational equipment and vehicles
- damaged loads and pallets
- other personnel in work area
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

Information/documents may include:

- goods identification numbers and codes, including IMDG markings and HAZCHEM signs
- manifests, bar codes, picking slips, merchandise transfers, stock requisitions, goods and container identification
- Australian Standard 2359 - Industrial Truck Code
- manufacturers specifications for forklift and associated accessories and equipment
- operations and service record book or log
- workplace procedures and policies for the operation of forklifts
- supplier and/or client instructions
- material safety data sheets
- regulatory requirements concerning the use of forklifts
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- emergency procedures

Applicable procedures and codes may include:

- relevant state/territory regulations pertaining to the operation of forklifts
- relevant codes and standards, including Australian Standard 2359 - Industrial Truck Code
- relevant state/territory OH&S legislation
- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

Competency Field
Competency Field D - Load Handling
UEGNSG202B Construct and lay distribution pipelines and services

Modification History
Not applicable.

Unit Descriptor
1) Scope:

1.1) Descriptor

This Competency Standard Unit covers the construction and laying of distribution pipelines. The competency standard unit also covers connecting and disconnecting services in a utilities industry workplace, handling, transporting and connecting meters and conducting appliance relights. This competency standard refers to the relevant services; appropriate persons; the relevant materials required to lay distribution pipelines; tools and equipment; safe working procedures and the relevant legislative requirements.

Application of the Unit
2)

This competency standard shall apply to any basic and safe work site where Gas Industry operations occur. It could also apply, where applicable to other workplaces in the electricity supply industry (transmission and distribution and generation), the electrotechnology industry and the water industry, subject to all Occupational Health and Safety and duty of care requirements being met for the workplace.
Licensing/Regulatory Information

License to practice 3)

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti discrimination and training. Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of those who can operate certain equipment.

Pre-Requisites

Prerequisite Unit(s) 4)

Competencies 4.1)

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:

Nil

Literacy and numeracy skills 4.2)

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 ‘Literacy and Numeracy’

</tbody>
</table>
ELEMENT | PERFORMANCE CRITERIA
--- | ---
 | reported to authorised persons in accordance with established procedures
3.3 | Work site is rehabilitated, cleaned up and made safe in accordance with given instructions and established procedures
3.4 | Tools, equipment and any surplus resources and materials are, where appropriate, cleaned, checked and returned to storage in accordance with established procedures
3.5 | Appropriate persons are notified of work completion according to established procedures
3.6 | Work completion records, report forms and data sheets are completed accurately in accordance with given instructions and established procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices for constructing and laying distribution pipelines.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-G202  Distribution pipeline construction and lay B

G 2.1.1  Work in the gas sector
Evidence shall show an understanding of how work is conducted in the Gas Industry, specifically:
- The Gas Industry in Australia
- Australian gas resources
- Types of gas and uses
- Combustion.

G 2.1.2 Identify roles of statutory authorities
Evidence shall show an understanding of the roles of statutory authorities (government agencies, both State and Federal) that operate in the Gas Industry, including identifying:
- Statutory bodies
- Roles of statutory bodies
- Employer and employee responsibilities to statutory bodies.

G 2.1.3 Identify employment roles and responsibilities
Evidence shall show an understanding of the roles of major groups in the Gas Industry, that is employers and employees, including:
- The role of the employer
- Industry associations
- Employer obligations to safety
- Identification of disadvantaged and minority groups in Australian society
- Employers obligations to persons from disadvantaged and minority groups
- Employers obligations to occupational health and safety
- The role of commonwealth and state training regulatory authorities and industry skills councils and state training advisory bodies
- Roles and responsibilities of gas industry employees
- The employment contract
- Working to safety requirements
- Work according to lawful commands
- Belonging to employee organisations
- How to work with people from disadvantaged and minority groups
- Understanding the employees obligations to occupational health and safety
- Sources of support.

G 2.1.4 Apply relevant OHS regulations, policies and procedures
Evidence shall show an understanding of the basic workplace health and safety legislation and how this applies to individuals in a Gas Industry workplace, indicated by the following:
- Employer's responsibilities to relevant OHS legislation
- Employee's responsibilities to OHS legislation and organisation's policies and procedures
- OHS policies and procedures at the worksite.
- Australian Standards, guidelines and codes of practice

G 2.1.5 Work safely in the gas industry by reducing risk and using correct PPE

Evidence shall show an understanding of how to work safely in the gas industry indicated by the ability to:

- Correctly interpret and comply with Safety Signs including workplace Hazards, Warnings and PPE requirements
- Correctly interpret gas markers
- Identify the correct PPE required for work in the Gas Industry
- Locate and comply with procedures for correctly checking, maintaining and storing PPE
- Apply the process of Hazard identification, Risk assessment and Control
- Complete Risk Assessment forms such as Work Permits and JHA’s, JSA’s, JSEA’s, SWM’s etc
- Report workplace hazards

G 2.1.6 Work safely with hazardous materials and equipment

Evidence shall show an understanding of what constitutes hazardous materials and the equipment and processes used to safely work with these indicated by the following:

- Identify hazardous materials and equipment
- Location and purpose of Material Safety Data Sheets (MSDS)
- Read, interpret and discuss MSDS
- Knowledge of methods for safe disposal of hazardous waste materials
- Read, interpret and discuss relevant manufacturer's specifications
- Use and dispose of hazardous materials and equipment safely
- Use of spill kits and PPE

G 2.1.7 Apply safe manual handling techniques in the workplace

Evidence shall show an understanding of manual handling and how to apply this knowledge to handling heavy and awkward objects in a Gas Industry workplace, specifically:

- Principles for managing manual handling
- Characteristics and types of safe manual handling
- Safe manual handling techniques
- Manual handling and risk management

G 2.1.8 Control traffic at the worksite
Evidence shall show knowledge and skills in coordinating traffic flow at a workplace where traffic control is required, that is, where work is conducted on or near a road, indicated by the following:
- Read and interpret relevant traffic authority regulations for traffic control at a worksite
- Identify signs and devices required to control pedestrians and traffic at a worksite depending on traffic flow volumes
- Apply techniques for controlling pedestrians and traffic at various worksites
- Use procedures for monitoring traffic controls
- Set up and monitor pedestrian and traffic controls

G 2.1.9 Respond to emergency and accident situations
Evidence shall show knowledge and skills in dealing with emergency or accident situations at a Gas Industry workplace, indicated by the following:
- Situations of accidents and emergency
- Comply with procedures for accidents and incidents
- Correct use of emergency equipment and procedures for a fire
- Correct use of breathing apparatus
- Correct use of gas detectors/oxygen monitoring devices
- Correct use of emergency equipment and procedures for a gas leak or vapour emission
- Report emergencies and accidents

G 2.1.14 Read and interpret Gas Industry documents
Evidence shall show an ability to read and interpret Gas Industry documents indicated by the following:
- Understand and use signs, symbols terminology and legends as used in gas industry procedures and documents
- Identify, locate and implement gas industry standards, policies and procedures
- Interpret and read basic drawings and diagrams

G 2.1.15 Complete workplace forms, and reports
Evidence shall show an ability to complete routine Gas Industry forms, memos and reports either written or
electronic, indicated by the following:

- Identify, locate, interpret and use workplace forms, and reports
- Enter the required information accurately on gas industry forms and reports

G 2.1.16 Identify requirements of work activity

Evidence shall show ability to:

- Clarify expected outcomes of a work activity in a Gas Industry workplace
- Receive, clarify and respond to verbal work instructions for work activity
- Interpret and discuss an organisation's policies, quality requirements and specifications for work activity

G 2.1.17 Apply basic planning skills

Evidence shall show a demonstrated ability to apply basic planning skills in a Gas Industry workplace, indicated by the following:

- Develop checklists of tasks
- Prioritise tasks
- Identify resources required to complete tasks safely and efficiently
- Identify resource or scheduling conflicts and apply solutions
- Develop time lines to complete tasks

G 2.1.18 Conduct tasks to complete work

Evidence shall show ability to organise the activities to complete a job in a Gas Industry workplace, indicated by the following:

- Locate and organise equipment, tools and machinery required to complete tasks safely and efficiently
- Complete tasks according to planned sequences and within appropriate timeframes
- Understand quality assurance and work according to established and standard operating procedures

G 2.1.19 Review work activities

Evidence shall show an ability to review work activities undertaken in a Gas Industry workplace, indicated by the following:

- Check work activities against a work plan
- Seek feedback on the outcome of work activities with
appropriate persons
- Report outcomes of work activities in writing or orally according to enterprise procedures

G 2.1.20 Customer relations
Evidence shall show an understanding of the requirements for providing good customer relations to Gas Industry stakeholders, indicated by the following:
- Notify stakeholders of activities
- Communicate with stakeholders within scope of responsibilities
- Refer stakeholders to appropriate parties
- Demonstrate understanding of ring fencing requirements (if applicable)
- Keep the customer informed on job progress
- Provide good customer relations

G 2.1.21 Undertake problem solving
Evidence shall show an understanding of the requirements to undertake basic problem solving in a Gas Industry workplace, indicated by the following:
- Demonstrate problem solving and diagnostics methodology
- Identify possible solutions
- Recommend probable solutions and
- Apply basic problem solving techniques

G 2.1.22 Operate in confined spaces
Evidence shall show an understanding of the requirements to recognise and operate in confined spaces in a Gas Industry workplace, indicated by the following:
- Knowledge of the requirements of Legislation, Regulations, Australian Standards and enterprise specific procedures for safe working in confined spaces
- Ability to recognise what a confined space is and the entry safety requirements
- Ability to understand and comply with manufacturers’ guidelines for the safe use of PPE used in confined spaces
- Understand how and when to use gas detectors for confined spaces entry
- Understand how and when to use breathing apparatus and rescue and recovery equipment
Note: A confined spaces entry ticket would satisfy and exceed the requirements of this EKAS clause

G 2.1.25 Protect the environment

Evidence shall show an understanding and ability to perform work in the gas industry in a manner that protects the environment indicated by the following:

- Understanding of the relevant Commonwealth/State/Territory environmental legislation, regulations and codes of practice
- Understanding of employee's and employer's responsibilities to relevant environmental legislation, regulations and codes
  - Understanding and compliance with enterprise procedures for flora control
  - Erosion control
  - Fauna control
  - The protection of indigenous and cultural heritage sites
- Understanding the role of regulatory bodies in monitoring environmental activities, risk and incident compliance
- Understanding community expectations for protecting the environment
- Correct use of environment protection procedures, records, inspections and incident reporting
- Identifying environmental hazards
- Assessing environmental risks
- Implementing environmental control measures
- Ability to respond to workplace environmental incidents

Note: Environmental damage can be caused by chemicals, oil, water contamination, carcinogenic agents, gases, dusts, waste contamination and noise

G 2.1.26 Communicate in the workplace

Evidence shall show an understanding and ability to communicate effectively in a Gas Industry work team indicated by the following:

- Effective use oral and written communications methods to achieve work related outcomes and solutions.
- Effectively receive, interpret and respond to workplace information and instructions
- Effectively convey and report work related information to fellow workers and customers
- Interact with fellow workers in a socially and culturally appropriate manner

AND one or more of the following depending on pipe type:

If undertaking the laying of nylon pipe and PE pipe

G 2.2.12 Identify nylon or PVC pipeline, fittings and accessories

Evidence shall show an ability to identify the pipeline, fittings and accessories for nylon pipelines on a Gas Industry workplace, including:

- Characteristics of nylon or PVC pipeline, fittings and accessories
- Nylon or PVC pipe sizes, range of fitting and accessories
- Situations in which a nylon or PVC pipeline is used
- Appropriate selection of transition fittings and adaptors to other materials
- Benefits of using a nylon or PVC pipeline
- Material cost versus installation savings
- Differentiate nylon or PVC from other materials
- Awareness of solvent properties and benefits of current solvent over earlier versions
- Read and interpret MSDS applying appropriate measures

G 2.2.13 Join nylon or PVC pipeline and fittings

Evidence shall show an ability to join nylon or PVC pipes and fittings for a nylon or PVC pipeline on a Gas Industry workplace, indicated by the following:

- Selection and use of equipment, tools and materials required for joining nylon or PVC pipe, pipeline and fittings
- Demonstrate function and use of equipment, tools and materials
- Follow safety requirements and procedures for cutting and joining nylon or PVC pipe
- Undertake cutting and tapping procedures for nylon or PVC pipe using a variety of methods
- Pressure testing procedures
- Understand jointing requirements under various conditions, inclement weather etc
- Demonstrate procedures and safety requirements for joining nylon or PVC pipe to other pipelines
G 2.2.15 Determine depth of nylon or PVC pipeline in ground

Evidence shall show an ability to determine the depth at which a pipe should be inserted in the ground for a gas distribution pipeline in a Gas Industry workplace, specifically:

- Identify depth of cover required for nylon or PVC pipeline in various locations
- Identify obstacles affecting minimum depth of cover for pipeline
- Develop solutions for dealing with obstacles affecting the depth of cover including transitioning to other approved materials and applying protection.

G 2.2.16 Install nylon or PVC pipe

Evidence shall show an understanding of the requirements to install nylon or PVC on Gas Industry pipelines, including:

- Application of Australian Standards and Gas Industry standards for installing nylon or PVC pipeline
- Conditions for direct installation or insertion of pipeline
- Procedures for installing nylon or PVC pipeline, trace wire and marker tape
- Procedures for terminating nylon or PVC pipeline
- Understand the procedures for installation of nylon or PVC pipeline under various conditions
- Static Electricity in gas pipes

G 2.2.17 Install PE pipeline, fittings and accessories

Evidence shall show an ability to install polyethylene pipelines, fittings and accessories in a Gas Industry workplace, including an understanding of:

- Differentiate PE from other materials
- Situations in which a PE pipeline is used
- Advantages and disadvantages of using a PE pipeline
- Suppliers specifications
- Appropriate selection of transition fittings and adaptors to other materials
- Various couplings & service connection tees
- Characteristics of PE HP, MP and LP pipeline, fittings and accessories
- Dimensions for series 2 pipe - Gas (SDR) from AS/NZS 4130
- PE pipe sizes, range of fitting and accessories eg differences between PE80 and PE100
- Allowable pipe damage
- Static Electricity in gas PE pipes
- Procedures for installing (including insertion, drilling and open cut method) PE pipeline, trace wire and marker tape
- Read and interpret MSDS applying appropriate measures

G 2.2.18 Join PE pipes and fittings

Evidence shall show an understanding of the requirements to join PE pipes and fittings for Gas Industry pipelines, indicated by the following:

- Identify environmental and safety hazards, assess risks and implement control measures
- Correct manual handling techniques
- Electrofusion safety requirements eg working in the rain
- Selection, purpose and use of equipment, tools and materials required for joining PE pipe, pipeline and fittings
- Pipe preparation
- Follow safety requirements and procedures for cutting and joining PE pipe
- Demonstrate function and use of equipment, tools and materials
  - Butt Fusion equipment small & Large
  - Saddle fusion equipment
  - Electro fusion equipment
  - Socket Fusion equipment
- Procedures for joining pipe of differing thickness
- Cooling time for moving pipe, tapping a saddle and pressure testing
- Identify the difference between a compliant and non-compliant joint
- Undertake cutting and tapping procedures for PE pipe using a variety of methods
- Pressure testing procedures
- Understand jointing procedures under various conditions, inclement weather and conditions
- Demonstrate procedures and safety requirements for joining PE pipe to other pipelines

If undertaking the laying of cast iron and steel pipe

G 2.2.20 Identify cast iron pipe and fittings

Evidence shall show an understanding of the knowledge required to install cast iron pipelines, fittings and accessories in a Gas Industry workplace, indicated by the following:
- Characteristics of cast iron pipeline, pipe sizes
- Situations in which a cast iron pipeline is used
- Range of fittings and accessories for cast iron
- Cast iron lead & hemp joints and how they are constructed
- Appropriate selection of transition fittings and adaptors to other materials
- Advantages/disadvantages in using cast iron pipe
- Read and interpret MSDS applying appropriate measures

G 2.2.21 Work with cast iron pipe and fittings
Evidence shall show an understanding of the requirements to work with cast iron pipelines and fittings on a Gas Industry pipeline, indicated by the following:
- Identify environmental and safety hazards, assess risks and implement control measures
- Dangers of working with live gas
- Equipment, tools and materials required for working with cast iron pipelines
- Purpose and function or equipment, tools and materials
- Requirements of Australian Standards and gas industry standards for working with cast iron pipe and fittings
- Safety requirements and procedures for using equipment, tools and materials
- Procedures for joining cast iron pipeline to other pipeline

G 2.2.23 Install steel pipeline, fittings and accessories
Evidence shall show an understanding of the requirements to install steel pipelines, fittings and accessories in a Gas Industry workplace (distribution), indicated by the following:
- Identify environmental and safety hazards, assess risks and implement control measures
- Dangers of working with live gas
- Safety considerations when working on steel such as bonding leads and voltage testers
- Characteristics of steel pipeline, fittings and accessories
- Benefits of using a steel pipeline
- Steel pipe sizes, range of fitting and accessories.
- Situations in which a steel pipeline is used in the distribution network
- Appropriate selection of transition fittings and adaptors to other materials
- Handling/Storage
- Cleaning internally
- Differentiate steel from other materials
- Corrosion mitigation
- Insulated joints
- Welding specifications
- Pressure testing
- Read and interpret MSDS applying appropriate measures
- Coating types and repair

G 2.2.24 Work with steel pipeline and fittings

Evidence shall show an understanding of the requirements to work with steel pipelines and fittings on a Gas Industry pipeline (distribution), indicated by the following:

- Identify environmental and safety hazards, assess risks and implement control measures
- Dangers of working with live gas
- Requirements of Australian Standards and Gas Industry standards for working with steel pipe and fittings
- Equipment, tools and materials required for working with steel pipelines
- Purpose and function of equipment, tools and materials
- Pipe cutting methods
- Stop off equipment for steel
- Safety requirements and procedures for using equipment, tools and materials
- Coating types and repair

G 2.2.26 Determine depth of steel pipeline in ground

Evidence shall show an ability to undertake the measurement of the depth that the pipeline should be buried on a Gas Industry pipeline (distribution), indicated by the following:

- Depth of cover requirements - AS1697
- Identify depth of cover required for steel pipeline in various locations
- Identify obstacles affecting minimum depth of cover for pipeline
- Develop solutions for dealing with obstacles affecting the depth of cover including transitioning to other approved materials and applying protection
- Trench widths
- Bedding requirements
- Support of steel pipe
- Backfilling requirements
- Reinstatement
If undertaking the laying of copper pipe

G 2.2.27 Identify copper pipeline, fittings and accessories

Evidence shall show an understanding of the processes required to identify copper pipeline, fittings and accessories on a Gas Industry pipeline, indicated by the following:

- Characteristics of copper pipeline, fittings and accessories
- Copper pipe sizes, range of fitting and accessories.
- Situations in which a copper pipeline is used
- Appropriate selection of transition fittings and adaptors to other materials
- Differentiate copper from other materials
- Read and interpret MSDS applying appropriate measures

G 2.2.28 Bend and join copper pipeline and fittings

Evidence shall show an ability to bend and join copper pipe and fittings for a Gas Industry pipeline, indicated by the following:

- Equipment, tools and materials required for joining copper pipeline and fittings
- Purpose and function of equipment, tools and materials
- Safety requirements and procedures for cutting and joining copper pipeline including mechanical and soldered or welded joints
- Procedures for cutting and tapping copper pipeline
- Procedures for pressure testing a pipeline
- Procedures and safety requirements for joining copper pipeline to other pipeline
- Procedures for joining copper pipeline

G 2.2.30 Determine depth of copper pipeline in ground

Evidence shall show an ability to determine the appropriate depth that copper pipe should be laid in a trench for a Gas Industry pipeline, indicated by the following:

- Depth of cover requirements - AS1697
- Identify depth of cover required for copper pipeline in various locations
- Identify obstacles affecting minimum depth of cover for pipeline
- Develop solutions for dealing with obstacles affecting the depth of cover including transitioning to other approved materials and applying protection
- Trench widths
- Bedding requirements
- Support of copper pipe
- Backfilling requirements
- Reinstatement

G 2.2.31 Install copper pipe
Evidence shall show an understanding of how to install copper pipe on a Gas Industry pipeline, indicated by the following:
- Requirements of Australian Standard and Gas Industry standards for installing copper pipeline
- Need to install or insert pipeline
- Procedures for installing copper pipeline
- Procedures for terminating copper pipeline

G 2.2.32 Comply with requirements for excavating and reinstating site
Evidence shall show an understanding of the requirements for preparing, conducting and completing an excavation indicated by the following:
- Identifying plans, codes, standards and drawings relevant to specific worksites
- Reading and interpreting relevant plans, codes, standards and drawings
- Regulatory requirements and procedures for excavating trenches and reinstating sites
- Apply shoring or benching requirements
- Notification of appropriate authorities and requirements for temporary or permanent restorations

G 2.2.33 Locate utilities and services
Evidence shall show an understanding and an ability to locate services, indicated by the following:
- Identification of relevant authorities or enterprises to contact regarding the location of other utilities services (gas, water, electricity, telecommunication, sewerage and stormwater)
- Read and interpret plans and drawings to identify the location of utilities and services
- Identification of utilities and services conduits and cables
- Correct use of electronic and manual service locators
- Apply hand excavation as required for the purposes of locating utilities and services

G 2.2.43 Appliance relighting within enterprise guidelines
Evidence shall show an understanding of Appliance
relighting indicated by the following:

- Customer liaison skills
- Identify environmental and safety hazards, assess risks and implement control measures
- Safety requirements for entering domestic and commercial customer sites
- Procedures for purging service lines
- Procedures for conducting appliance relights

G 2.2.44 Handling, Transporting and Installing Meters and Regulators for services within enterprise guidelines

Evidence shall show an understanding of handling, transporting and installing meters and regulators for a service, indicated by the following:

- Customer liaison skills
- Identify environmental and safety hazards, assess risks and implement control measures
- Knowledge of Australian Standards associated with the installation of gas meters and regulators
- Identify that the regulator is working correctly
- Replace faulty regulator with a comparable regulator
- Measuring and testing flow rates and lock ups
- Correct manual handling procedures
- Safety requirements for entering domestic and commercial customer sites
- Procedures for purging service lines
- Procedures for gas leak and gas flow testing
- Test the equipment to recognised gas industry standards
- Completion of necessary connection forms and processes

G 2.2.49 Connect and tie in a residential service

Evidence shall show an understanding and demonstration for connecting and tying in residential gas services, indicated by the following:

- Identify environmental and safety hazards, assess risks and implement control measures
- Safety requirements and procedures for connecting and tying in a residential gas service
- Equipment, tools and materials required for working on a residential gas services
- Purging requirements used for residential connections
- Gas leak testing procedures for residential services
- Pressure testing procedures for residential services
- Apply procedures for ensuring continuity of supply
including checking of network maps, gauging, fitting of bypasses and purging.

- Test the residential gas service to recognised gas industry standards
- Replace/Repair marker tape
- Apply appropriate procedures in the event of uncontrolled gas escapes
- Tie in and commission a residential service

G 2.2.50 Connect and tie in a commercial/industrial service and disconnect, reconnect gas industry services

Evidence shall show an understanding and demonstration for disconnecting, reconnecting and tying in a gas services, indicated by the following:

- Identify environmental and safety hazards, assess risks and implement control measures
- Safety requirements and procedures for disconnecting, reconnecting and tying in commercial and industrial gas services
- Equipment, tools and materials required for working with a range of commercial and industrial gas services
- Purging requirements used for residential, industrial and commercial connections
- Gas leak testing procedures
- Pressure testing procedures
- Apply procedures for ensuring continuity of supply including checking of network maps, gauging, fitting of bypasses and purging.
- Test the gas service to recognised gas industry standards
- Replace/Repair marker tape
- Apply appropriate procedures in the event of uncontrolled gas escapes
- Tie in and commission service
Evidence Guide

EVIDENCE GUIDE

9) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1) Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry’s preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be ‘rich’ in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.
Critical aspects of evidence required to demonstrate competency in this unit

9.2) Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the ‘Assessment Guidelines — UEG11’. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner’s performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant anti discrimination legislation, regulations, polices and workplace procedures
  - Demonstrate performance across a representative range of contexts from the prescribed items below. Complete Groups A and B. Complete 1 of the following Groups: Group C, D. Complete 2 of the following Groups: E, F, G, H. Complete Groups I and J.

Range of tools/equipment/procedures/workplace

**Context of and specific resources for assessment**

9.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:
- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in constructing and laying distribution pipelines.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the employability skills.

Method of assessment

9.4)

This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 ‘Assessment Guidelines’.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG102B Carry out work activities in a utilities industry work environment
Range Statement

RANGE STATEMENT

10) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Competency Standard Unit shall be demonstrated in relation to the construction and laying of distribution pipelines.

The following constants and variables included in the Element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

Services (2)

Appropriate persons (2)

Materials (2)

Tools and equipment (2)

Safe working procedures (2)

Legislative requirements (2)

Unit Sector(s)

Not applicable.
Competency Field

Distribution.
UEPOPS242B Operate and monitor dust collection plant

Modification History
Not applicable.

Unit Descriptor

Unit Descriptor

1) Scope:

1.1) Descriptor
This unit deals with the skills and knowledge required to operate, inspect and monitor dust collection plant associated with a power station.

Application of the Unit

Application of the Unit

2) This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training.

Licensing/Regulatory Information

Licensing/Regulatory Information

3) The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships and the like.
Pre-Requisites

Prerequisite Unit(s)  4)

Competencies  4.1)

Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

Where pre-requisite pathways have been identified. All competencies in the Common Unit Group must be have been completed.

There are no pre-requisite units.

Literacy and numeracy skills  4.2)

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following levels. A description of what each level entails is provided in Section 2.3.1 Language, Literacy and Numeracy.

Reading  2  Writing  2  Numeracy  2

Employability Skills Information

Employability Skills  5)

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.
Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a competency standard unit. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the Evidence Guide.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

8) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of operating and monitoring dust collection plants.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

The extent of the Essential Knowledge and Associated Skills required follows:

KS01-PO242B  Dust collection plant

Evidence shall show that knowledge has been acquired for safe working practices of:

T1 Relevant Environmental, Occupational Health and Safety legislation and regulations

T2 Enterprise procedures

T3 Plant drawings and manufacturers manuals

T4 Introduction to and typical arrangements of power production plant

T5 Relevant plant and equipment, its location and operating parameters

T6 Electric motor types and characteristics

T7 Pump and compressor types and characteristics

T8 Valve, damper and actuator types and characteristics

T9 Switchgear types and characteristics

T10 Electrical protection types and characteristics

T11 Plant status

T12 Enterprise recording procedures

T13 Control and data acquisition systems

T14 Properties of matter

T15 Lubrication and bearings

T16 Electrical principles

T17 Auxiliary supply systems

T18 Safe operating principles

KS02-PO242B  Dust collection plant

Specific skills needed to achieve the Performance Criteria:

T1 Interpret plant drawings and manufacturers manuals

T2 Apply enterprise recording procedures
REQUIRED SKILLS AND KNOWLEDGE
T3 Identify plant status
T4 Prepare plant/equipment for operation
T5 Organise resources
T6 Operate dust collection plant
T7 Apply diagnostic and testing techniques
T8 Identify and respond to abnormal plant operating conditions
T9 Plan and prioritise work
T10 Use relevant hand tools
T11 Communicate effectively
T12 Apply data analysis techniques and tools
Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the competency standard unit and must be read in conjunction with the Performance Criteria and the Range Statement of the competency standard unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this competency standard unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1) Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry’s preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be ‘rich’ in nature to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.
Critical aspects of evidence required to demonstrate competency in this unit

9.2) Before the critical aspects of evidence are considered all pre-requisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the “Assessment Guidelines – UEP12”. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
  - Demonstrate an understanding of the Essential Knowledge and Associated Skills as described in 6) Essential Knowledge and Associated Skills of this unit
  - Demonstrate an appropriate level of employability skills
  - Conduct work observing the relevant Anti-Discrimination legislation, regulations, polices and workplace procedures
  - Demonstrated performance across a representative range of contexts from the prescribed items below:
    - Knowledge and application of relevant sections of OH&S legislation, statutory legislation, enterprise/site safety procedures and enterprise/site emergency procedures
    - Preparation and planning of work, Operation of electrostatic dust collection plant, Operationally testing plant, Analysing plant faults, Monitoring plant operation
    - Dealing with an unplanned event by drawing on Essential Knowledge and Skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.
9.3) Context of and specific resources for assessment

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this competency standard unit

Competency Standards should be assessed in the workplace or simulated workplace and under the normal range of workplace conditions.

Assessment of this unit will be supported with documentary evidence, by means of endorsement stating type and application of work.

In addition to the resources listed above in Context of assessment’, evidence should show competency working, in limited spaces, with different types of plant and equipment as well as different structural/construction types and method and in a variety of environments.

9.4) Method of assessment

This unit shall be assessed by methods given in Section 1.3.00 Assessment Guidelines.

Note:
Competent performance with inherent safe working practices is expected in the Industry to which this competency standard unit applies. This requires that the specified Essential Knowledge and Associated Skills be assessed in a structured environment, which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the Essential Knowledge and Skills described in this unit.
Concurrent assessment and relationship with other units

9.5

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied competency standard units where listed.

Nil
Range Statement

RANGE STATEMENT

10) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

Systems, plant and or equipment may include electrical supply switchboard(s) and transformers; fans; electrical motors; valves, dampers and actuators (electric, hydraulic, manual and pneumatic); lubricating and oil conditioning systems; supervisory, alarm, protection and control equipment; dust ejectors; electrostatic precipitators; bag filters; hoppers and associated equipment; sluice water systems; and chemical injection systems.

Safety standards may include relevant sections of Occupational Health and Safety legislation, enterprise safety rules, relevant state and federal legislation, national standards for plant and Australian standards.

Information and documentation sources may include verbal or written communications; enterprise safety rules documentation; enterprise operating instructions; manufacturer’s operational and maintenance manuals; equipment and alarm manuals; dedicated computer equipment; enterprise standing instructions and plant notes; and enterprise log books.

Technical and operational indicators may include stimuli (audio, smell, touch, visual), remote or local indicators and recorders and alarms (visible and or audible).

Communications may be by means of telephone, two way radio, pager, computer (electronic mail), operating log (written or verbal) and public address system.

Tests may include motor direction checks, stand-by plant “cut-in” tests, performance tests and alarm initiation tests.

Appropriate personnel to consult, give or receive direction may include, supervisor/team leader or equivalent, power plant operations personnel, technical and engineering officers or equivalent, maintenance staff, contractor personnel and other production staff or equivalent.

Test, fault finding and operating tools may include high voltage testers, proving dead equipment, power or hand tools.

Operating environment may be during inclement or otherwise harsh weather conditions, in wet/noisy/dusty/hot areas and during continuous operation.

Faults and abnormal operating conditions may include motor/pump/actuator/valve/dampers failure/malfunctions, control equipment failure/ malfunction, loss of electrical supply to plant and equipment, excessive vibration of pumps/motors, loss/low ejector water flow, broken “wire” in cell, loss of chemical injection and chemical storage/delivery plant malfunctions, low/loss air pressure, loss of pump gland sealing water, blocked ejector strainers, blocked hoppers and rapper failure.

Generic terms are used throughout this Training Package for vocational standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms are given in Section 2.1 Preliminary Information.

REQUIRED SKILLS AND KNOWLEDGE
KS02-PO 316B  Boiler steam/water cycle

Specific skills needed to achieve the Performance Criteria:
T1 Interpret plant drawings and manufacturers manuals
T2 Apply relevant state and territory regulations
T3 Apply enterprise recording procedures
T4 Identify plant status
T5 Prepare plant/equipment for operation
T6 Organise resources
T7 Operate boiler water/steam cycle
T8 Apply diagnostic and testing techniques
T9 Identify and respond to abnormal plant operating conditions
T10 Plan and prioritise work
T11 Use relevant hand tools;
T12 Communicate effectively
T13 Apply data analysis techniques and tools

Evidence Guide

EVIDENCE GUIDE

9) This provides essential advice for assessment of the unit of competency and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitude competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry’s preferred model for apprenticeships. However, where summative (or final) assessment
is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be ‘rich’ in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

Before the critical aspects of evidence are considered all pre-requisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the “Assessment Guidelines – UEP12”. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace
procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement

- Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in 6) Essential Knowledge and Associated Skills of this unit
- Demonstrate an appropriate level of employability skills
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated performance across a representative range of contexts from the prescribed items below:
  - Knowledge and application of relevant sections of:
    Occupational Health and Safety legislation; Statutory legislation; Enterprise/site safety procedures; Enterprise/site emergency procedures
  - Preparation and planning of work
  - Operation of boiler water/steam cycle
  - Operationally testing plant
  - Analysing plant faults
  - Monitoring plant operation
  - Dealing with an unplanned event by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

**Context of and specific resources for assessment**

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

Competency Standards should be assessed in the workplace or simulated workplace and under the normal range of workplace conditions.

Assessment of this unit will be supported with documentary evidence, by means of endorsement stating type and application of
work.

In addition to the resources listed above in Context of assessment’, evidence should show competency working, in limited spaces, with different types of plant and equipment as well as different structural/construction types and methods and in a variety of environments.

Method of assessment

9.4)

This unit shall be assessed by methods given in Section 1.3.00 Assessment Guidelines.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5)

There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied competency standard units where listed.

Nil
Range Statement

RANGE STATEMENT

10) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

Systems, plant and/or equipment may include electrical supply switchboard(s) and transformers; electrical motors; valves and actuators (electric, hydraulic and pneumatic); supervisory, alarm, protection and control equipment; boiler circulation systems; boiler filling systems; boiler venting and draining systems; cooling water plant and equipment; filters; strainers; moisture removal devices; pressure control devices; safety devices; high and low pressure systems; and boiler water level indicators.

Safety standards may include relevant sections of Occupational Health and Safety legislation, enterprise safety rules, relevant state and federal legislation, national standards for plant and Australian standards.

Information and documentation sources may include verbal or written communications; enterprise safety rules documentation; equipment and alarm manuals; dedicated computer equipment; enterprise standing and operating instructions; and enterprise log books.

Technical and operational indicators may include stimuli (audio, smell, touch, visual), remote or local indicators and recorders and alarms (visible and or audible).

Communications may be by means of telephone, two way radio, pager, computer (electronic mail), operating log (written or verbal) and public address system.

Tests may include laboratory test for water quality and impurities, alarm testing, leak test and safety valve float.

Appropriate personnel to consult, give or receive direction may include; supervisor/team leader or equivalent, power plant operations personnel or equivalent, technical and engineering officers or equivalent, maintenance staff and contractor personnel.

Test, fault finding and operating tools may include power or hand tools.

Operating environment may be during inclement or otherwise harsh weather conditions, in wet/noisy/dusty/hot areas and during continuous operation.

Faults and abnormal operating conditions may include motor/pump/ actuator/valve failure/malfunctions, control equipment failure/malfunctions, loss of electrical supply to plant and equipment, excessive vibration pumps/motors, loss/low cooling water pressure, boiler tube leaks, low/high steam pressure/temperature, plant equipment failure and loss of control air supply.

Generic terms are used throughout this Training Package for vocational standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms are given in Section 2.1 Preliminary Information and Glossaries.

Unit Descriptor
This unit describes the performance outcomes, skills and knowledge required to facilitate all aspects of teamwork within the organisation. It involves taking a leadership role in the development of team plans, leading and facilitating teamwork and actively engaging with the management of the organisation. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Application of the Unit
This unit applies to managers and addresses the need for managers to facilitate work teams and to build a positive culture within work teams. The unit takes a systematic and planned approach to developing teams. It includes the soft skills as well as more structured approaches to the management of teams. At this level, work will normally be carried out within complex and diverse methods and procedures which require the exercise of considerable discretion and judgement, using a range of problem solving and decision making strategies.

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1.  Establish team performance plan | 1.1. *Consult* team members to establish a common understanding of team purpose, roles, responsibilities and *accountabilities* in accordance with organisational goals, plans and objectives.  
1.2. Develop *performance plans* to establish expected *outcomes*, *outputs*, *key performance indicators* and goals for work team.  
1.3. Support team members in meeting expected performance outcomes. |
| 2.  Develop and facilitate team cohesion | 2.1. Develop *strategies* to ensure team members have input into planning, decision making and operational aspects of work team.  
2.2. Develop *policies and procedures* to ensure team members take responsibility for own work and assist others to undertake required roles and responsibilities.  
2.3. Provide feedback to team members to encourage, value and reward individual and team efforts and contributions.  
2.4. Develop *processes* to ensure that issues, concerns and problems identified by team members are recognised and addressed. |
| 3.  Facilitate teamwork | 3.1. Encourage team members and individuals to participate in and to take responsibility for team activities, including communication processes.  
3.2. Support the team in identifying and resolving work performance problems.  
3.3. Ensure own contribution to work team serves as a role model for others and enhances the organisation's image for all *stakeholders*. |
| 4.  Liaise with stakeholders | 4.1. Establish and maintain open communication processes with all stakeholders.  
4.2. Communicate information from *line manager/management* to the team.  
4.3. Communicate unresolved issues, concerns and problems raised by team members and |
4.4. Evaluate and take necessary corrective action regarding unresolved issues, concerns and problems raised by internal or external stakeholders.

**Required Skills and Knowledge**

<tbody>
<tr>
<td>• group behaviour</td>
</tr>
<tr>
<td>• models for conflict resolution.</td>
</tr>
</tbody>
</table>
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>Evidence of the following is essential:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• range of techniques that can be used to build work teams, strengthen communications in the team and resolve conflict</td>
</tr>
<tr>
<td></td>
<td>• methods for engaging with stakeholders and obtaining advice from outside the work team, to ensure team is focussed and on track</td>
</tr>
<tr>
<td></td>
<td>• knowledge of group behaviour.</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

<table>
<thead>
<tr>
<th>Method of assessment</th>
<th>Assessment must ensure:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• access to appropriate documentation and resources normally used in the workplace.</td>
</tr>
</tbody>
</table>

### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies and scenarios
- assessment of written reports
- demonstration of team building techniques
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- observation of performance in role plays
- review of performance plans developed for work team
- review of policies and procedures developed to ensure team members take responsibility for own work.

### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units from the Diploma of Management.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| **Consultation** may refer to: | • conducting meetings, interviews, brainstorming sessions, email/intranet communications, newsletters or other processes and devices which ensure that all employees have the opportunity to contribute to team and individual performance plans  
| | • mechanisms used to provide feedback to the work team in relation to outcomes of consultation |
| **Accountabilities** may refer to: | • responsibilities as defined in position descriptions, codes of conduct/behaviour, duty statements or similar  
| | • statement of conduct outlining responsibilities/actions/performance |
| **Performance plans** may refer to: | • individual performance plans linked to team goals  
| | • team plans based on work assignments and responsibilities |
| **Outcomes, outputs, key performance indicators** may refer to agreed: | • changes in work roles and responsibilities  
| | • improved individual and team, performance and participation  
| | • improvements to systems, operations  
| | • measures for monitoring and evaluating the efficiency or effectiveness of systems or services  
| | • quality standards and expectations  
| | • targets for productivity improvements such as reduced downtime, higher production levels, decreases in absenteeism  
| | • targets for training and development |
| **Strategies** may refer to: | • clarification of roles and expectations  
| | • electronic communication devices and processes, such as intranet and email communication systems, to facilitate input  
| | • long-term or short-term plans factoring in |
opportunities for team input
- mentoring and 'buddy' systems to support team members in providing input
- newsletters and briefings
- training and development activities

**Policies and procedures** may refer to:
- organisational guidelines and systems that govern operational functions
- procedures that detail the activities that must be carried out for the completion of actions and tasks
- Standard Operating Procedures

**Processes** may refer to:
- brainstorming options with the team for addressing concerns
- creating a matrix of issues and concerns and distributing for comment
- discussions with individuals regarding their concerns
- distributing drafts for comment with a range of options for resolution of concerns
- training and development sessions

**Stakeholders** may include:
- Board members
- business or government contacts
- funding bodies
- union/employee groups and representatives
- work team

**Line manager/management** may refer to:
- chief executive officer
- direct superior
- other management representatives

**Unit Sector(s)**
Management and Leadership - Management
BSBWOR501A Manage personal work priorities and professional development

Modification History
Not Applicable

Unit Descriptor
This unit describes the performance outcomes, skills and knowledge required to manage own performance and professional development. Particular emphasis is on setting and meeting priorities, analysing information and using a range of strategies to develop further competence. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Application of the Unit
This unit applies to managers and focuses on the need for managers to be organised, focussed and skilled, in order to effectively manage the work of others. As such it is an important unit for most managers, particularly as managers serve as role models and have a significant influence on the work culture and patterns of behaviour.

Licensing/Regulatory Information
Not Applicable

Pre-Requisites
Not Applicable

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Establish personal work goals | 1.1. Serve as a positive role model in the workplace through personal work planning and organisation  
1.2. Ensure personal work goals, plans and activities reflect the organisation's plans, and **own responsibilities and accountabilities**  
1.3. Measure and maintain personal performance in varying work conditions, work contexts and contingencies |
| 2. Set and meet own work priorities | 2.1. Take initiative to prioritise and facilitate competing demands to achieve personal, team and organisational goals and objectives  
2.2. Use **technology** efficiently and effectively to manage work priorities and commitments  
2.3. Maintain appropriate work-life balance, and ensure stress is effectively managed and health is attended to |
| 3. Develop and maintain professional competence | 3.1. Assess personal knowledge and skills against **competency standards** to determine development needs, priorities and plans  
3.2. Seek feedback from employees, **clients and colleagues** and use this feedback to identify and develop ways to improve competence  
3.3. Identify, evaluate, select and use **development opportunities** suitable to personal learning style/s to develop competence  
3.4. Undertake participation in networks to enhance personal knowledge, skills and work relationships  
3.5. Identify and develop new skills to achieve and maintain a competitive edge |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

- communication skills to receive, analyse and report on feedback
- literacy skills to interpret written and verbal information about workplace requirements
- organisational skills to set and achieve priorities.

#### Required knowledge

- principles and techniques involved in the management and organisation of:
  - performance measurement
  - personal behaviour, self-awareness and personality traits identification
  - personal development plan
  - personal goal setting
  - time management
- management development opportunities and options for self
- organisation's policies, plans and procedures
- types of learning style/s and how they relate to the individual
- types of work methods and practices that can improve personal performance.
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</tr>
<tr>
<td>3. Monitor business performance</td>
<td>3.1. Regularly monitor/review the achievement of operational targets to ensure optimum business performance, in accordance with the business plan goals and objectives&lt;br&gt;3.2. Review systems and structures, with a view to more effectively supporting business performance&lt;br&gt;3.3. Investigate and analyse operating problems to establish causes and implement changes as required as part of the business quality system</td>
</tr>
</tbody>
</table>
### ELEMENT | PERFORMANCE CRITERIA
--- | ---
3.4. | Amend operational policies and procedures to incorporate corrective action
4. | Review business operations
4.1. | Review and adjust business plan, as required, to maintain business viability, in accordance with business goals and objectives
4.2. | Clearly record proposed changes to aid future planning and evaluation
4.3. | Undertake ongoing research into new business opportunities and adjust business goals and objectives as new business opportunities arise

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- analytical skills to develop criteria and targets for the business plan
- communication skills to question, clarify and report
- literacy skills to interpret legal requirements, company policies and procedures
- numeracy skills to manage performance information and to control the finances
- technology skills to use relevant business equipment.

### Required knowledge

- methods for developing and maintaining networks
- methods for implementing operation and revenue control systems
- methods for monitoring performance and implementing improvements
- OHS responsibilities and procedures for managing hazards
- principles of risk management relevant to the business, including risk assessment
- quality system principles and methods
- relevant industry codes of practice
- relevant marketing, sales and financial concepts
- relevant performance measures
- role of innovation
- systems to manage staff, stock, expenditure, services and customer service
- technical or specialist skills relevant to the business operation.
# Evidence Guide

## EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the following is essential:

- developing strategies and procedures to successfully manage the operation of the business
- making appropriate adjustments to the business operations as required
- knowledge of quality system principles and methods.

### Context of and specific resources for assessment

Assessment must ensure:

- access to relevant documentation
- candidate's individual circumstances and work in the context of running a small business, are the basis for assessment.

### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- portfolio of evidence including operational strategies and procedures
- oral or written questioning to assess knowledge of principles of risk management relevant to the business, including risk assessment
- review of analysis of operating problems (establishing causes and implementing changes as required as part of the business quality system)
- review of records proposing changes to the business operations.

### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- BSBSMB406A Manage small business finances
- BSBSMB407A Manage a small team.
Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Operational strategies and procedures** may be determined by:

- business premises (size, location, layout)
- financial control systems and procedures
- management and administrative systems and procedures
- methods/techniques/technology
- physical and natural resources
- plant and equipment, including OHS requirements
- premises, plant and equipment, which may be new or previously owned
- purchase (sole or shared ownership) or leasing
- raw materials
- requirements, which may be one-off requirements or recurrent requirements (such as equipment maintenance) specific to the nature of the business
- technology
- use of existing, new and emerging technologies including e-commerce

**Business goals and objectives** may include:

- customer needs/marketing projections
- family or community benefits
- financial projections
- goals, objectives, plans, systems and processes
- lifestyle issues
- proposed size and scale of the business, market focus of the business
- short-, medium- or long-term goals
- social responsibility

**Occupational health and safety and environmental issues** must include:

- controls, which may include instructions to workplace personnel concerning site hazards and controls, material safety data sheets, use of personal protective equipment, vehicle access, signs and barricades, traffic control, outside contractors
### RANGE STATEMENT

- establishment and maintenance of procedures for assessing and controlling risks
- establishment and maintenance of procedures for identifying risks to health and safety
- waste and by-products

**Quality system** may include:

- manual or computer quality control systems
- quality assurance/management approaches
- random inspections and assessments of goods and services against predetermined standards
- random inspections and assessments of processes against predetermined standards
- random sampling and follow-up of customers

**Operational targets** may include:

- external targets, which may relate to market share and positioning and may involve exploring new markets, building national or international trade links
- internal targets, which may relate to size, quality, quantity and diversity, wages to sales, sales to area/stock levels/stock turnover/average debtor payment periods and levels
- staffing level and skills mix
- targets, which may be short-, medium- or long-term

**Technical standards** may include:

- current and generally agreed descriptions of what the product/service is, how it should be produced/delivered and the quality, safety, efficiency or other measures to determine the activity is done effectively

BSBRKG403B Set up a business or records system for a small business

Modification History

Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to research, develop and implement business or records systems for a small office. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to individuals who are required to demonstrate understanding of a broad knowledge base incorporating some theoretical recordkeeping concepts. The application is in relation to individuals working in a range of 'small' office environments where, in most cases, recordkeeping is only part of the individual's responsibilities; the unit addresses the less formal recordkeeping requirements of micro or small businesses or branches and technical operations centres of larger organisations. Typically, the individual would report to a supervisor or manager within the organisation and be solely responsible for the development and implementation of business or records systems, including training users of the system. |

Licensing/Regulatory Information

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to explain and clarify procedures, and to consult with users of a records or business system
- literacy skills to read and interpret record content, functions and problems
- problem-solving and analysis skills to identify requirements of business or records system.

**Required knowledge**

- key provisions of relevant legislation from all forms of government, regulations, standards and documentation that may affect aspects of business operations, such as:
  - AS 5044.1:2002 AGLS Metadata element set
  - AS 5090:2003 Work process analysis for recordkeeping
  - AS ISO 15489:2004 Records management
  - AS ISO 23081.1:2006 Information and documentation - Records management processes - Metadata for records - Principles
  - Australian Stock Exchange (ASX) Principles of Good Corporate Governance
  - ethical principles
  - codes of practice
  - privacy and freedom of information
  - archives and records legislation
  - occupational health and safety
- general principles and processes of records management and records management systems, such as:
  - systems of control
  - records continuum theory
  - mandate and ownership of business process
  - environmental context
  - records characteristics
- internal controls
- organisational functions, structure and culture
- organisational policies and strategies
- organisational technological base.
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>Evidence of the following is essential:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• translating business functions and reporting requirements into a brief that describes the requirements of a business or records system</td>
</tr>
<tr>
<td></td>
<td>• developing a business or records system, including rules and procedures</td>
</tr>
<tr>
<td></td>
<td>• knowledge of organisational functions, structure and culture.</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

Assessment must ensure:

- access to examples of records, recordkeeping systems and policies
- access to workplace reference materials such as procedural manuals and company policies.

### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies and scenarios
- demonstration of techniques
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- review of documentation outlining procedures developed for the use of the system
- oral or written questioning to assess knowledge of general principles and processes of recordkeeping systems.

### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- administration units
- other knowledge management units.
### Range Statement

#### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Documenting** core business may involve identifying:
- authenticity, integrity, reliability and useability of records or other documents
- diagrammatic representations
- formal documents
- hand written documents
- informal communications
- online instructions or computer-based format instructions that can be updated
- paper-based manuals
- other text

**Resources** may include:
- human resources and their availability
- location of resources currently in operation
- physical resources
- organisational policies and procedures
- technological resources
- those available for purchase or development

**Business and social context** may include:
- clients or customers and their expectations
- codes of ethics and codes of professional conduct specific to industry sector
- community expectations
- governance frameworks
- industry sector characteristics and reporting requirements of that sector
- internal and external accountability requirements
- internal and external stakeholders whose interests must be taken into account
- other relevant legislation and regulations, including those covering:
  - business activity reporting
  - business and income (PAYE) taxation
  - corporation law reporting requirements
  - environmental protection and waste
### RANGE STATEMENT

| **management** | • goods and services tax collection  
|                | • industrial relations  
|                | • occupational health and safety

**Records** may include:

- different stages of use:
  - active
  - archival
- digital:
  - remote drives
  - servers
  - CDs
  - DVDs
  - imaging systems
  - PC-based applications
  - mainframe
- physical:
  - audio-visual or multimedia
  - graphic
  - microform
  - paper-based (acid free or multiple copies)
- variety of sources:
  - already in the custody of the organisation
  - in the process of being transferred between organisations

**Metadata** are those records which are maintained about the records themselves and may include:

- activity classification terms
- date, time, and location of record creation or registration into the system
- identity of record creator
- indexing and descriptive terms
- record format
- security and access information
- unique identifiers for each record

**Procedures for the use of the system** may include:

- how to use the business or records system
- considering format and style
- considering appropriateness for scale, nature, culture and number of operators who use the system

CPPSIS5006A Integrate spatial datasets

Modification History
Not Applicable

Unit Descriptor
Unit descriptor
This unit of competency specifies the outcomes required to integrate spatial datasets including linking spatial, aspatial and attribute data for the purpose of providing spatially referenced information. It requires the ability to apply theoretical spatial concepts to a range of situations in order to correctly identify and integrate the appropriate information. Functions would be carried out within organisational guidelines.

Application of the Unit
Application of the unit
This unit of competency supports the application of self-management skills, planning and organising within data management and data manipulation, and the use of technology. The skills and knowledge acquired upon completion of this unit would support the needs of employees in surveying, cartography, town planning, mapping or geographic information systems.

While no licensing, legislative, regulatory or certification requirements apply holistically to this unit at the time of publication, relevant federal, and state or territory legislation, regulations and codes of practice impact upon this unit (see unit performance criteria and range statement).

Licensing/Regulatory Information
Refer to Application of the Unit
Pre-Requisites

Prerequisite units  Nil

Employability Skills Information

Employability skills  The required outcomes described in this unit of competency contain applicable facets of employability skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged, will assist in identifying employability skills requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1 Confirm task.** | 1.1 *Client specifications* are analysed to determine specific needs and required outcomes.  
1.2 Requirements for spatial data and *constraints* are identified through further consultation with *client* or *relevant personnel* and outcomes are recorded according to *organisational guidelines*. |
| **2 Obtain spatial and attribute data.** | 2.1 Sources are determined consistent with specifications using relevant *metadata*.  
2.2 Data is obtained according to organisational guidelines.  
2.3 Data is checked for integrity and quality.  
2.4 Geographic coverage is assessed for completeness.  
2.5 A metadata set is compiled based on sourced spatial data.  
2.6 *Exception reports* are referred to relevant personnel.  
2.7 Skills and knowledge are updated to accommodate changes in spatial dataset requirements.  
2.8 *OHS* requirements are planned for and adhered to. |
| **3 Create resultant spatial dataset.** | 3.1 *Filtering parameters* are established in line with scientific accuracy, redundancy, and client and organisational requirements.  
3.2 Spatial and *aspatial* data is translated into a format which satisfies specifications.  
3.3 *Spatial datasets* are populated with edited spatial data according to *organisational spatial requirements*.  
3.4 Spatial and *attribute* data are linked according to specifications and industry standards. |
| **4 Link spatial and attribute data.** | 4.1 Method required for referencing the location of the attribute data is identified.  
4.2 Linking of the spatial and attribute data is completed according to the specifications.  
4.3 Spatial queries are carried out via the spatial data to access the attribute data. |
| **5 Test and validate spatial datasets.** | 5.1 *Test queries* are determined and implemented to ensure spatial datasets meet specifications.  
5.2 Spatial data is checked to ensure correctness of links.  
5.3 An exception report is developed according to organisational guidelines and reported back to relevant personnel. |
ELEMENT PERFORMANCE CRITERIA

5.4 All *relevant documentation* is completed according to organisational guidelines.

5.5 Quality and useability of datasets are ensured according to organisational guidelines.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

**Required skills:**

- ability to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities
- ability to translate requirements into design
- analytical skills, including systems analysis
- communication skills to:
  - consult effectively with clients and colleagues
  - impart knowledge and ideas through oral, written and visual means
- computer skills (high technical user level) to complete business documentation and apply software and hardware
- information management
- literacy skills to:
  - assess and use workplace information
  - locate and interpret legislation and other written documentation
  - prepare and manage documentation
  - read and write technical reports
  - research and evaluate in order to assess sources of spatial data
- negotiation skills
- numeracy skills to:
  - analyse errors
  - conduct image analysis
  - perform mental calculations
  - interpret and analyse statistics
  - record with accuracy and precision
  - undertake computations
- organisational skills to:
REQUIRED SKILLS AND KNOWLEDGE

- coordinate technical and human resource inputs to research activities
- prioritise activities to meet contractual requirements
- spatial skills to:
  - exercise precision and accuracy in relation to spatial and aspatial data integration
  - perform spatial data archival and retrieval and train others in this task
  - perform spatial data management and manipulation and train others in this task
  - perform file management and train others in this task
  - solve problems relating to height, depth, breadth, dimension, direction and position in actual operational activity and virtual representation
  - understand implications of height, depth, breadth, dimension and position to actual operational activity and virtual representation.

Required knowledge and understanding:

- classification systems, processes and products
- coordinating reference systems
- high-level computer knowledge
- industry standards
- organisational policies and guidelines, such as OHS guidelines
- precision and accuracy in relation to spatial information
- principles of data acquisition (e.g. photogrammetry, remote sensing, terrestrial survey and hydrography)
- quality guidelines
- reference systems and their relationship to each other
- relevant spatial database design tools
- risk management
- security management guidelines
- spatial and aspatial data
- spatial and attribute dataset structure
- spatial database operation
- spatial database structure requirements
- spatial data handling
- spatial data management practices
- spatial dataset integration, including the role of scale in dataset integration
- spatial data storage technology
- spatial data structure requirements.

Evidence Guide
EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Overview of assessment
This unit of competency could be assessed on its own or in combination with other units relevant to the job function, for example units CPPSIS5001A Plan spatial data collection and validation, CPPSIS5002A Capture new spatial data, CPPSIS5005A Obtain and validate existing spatial data, CPPSIS5007A Maintain complex spatial data systems, CPPSIS5008A Develop a complex spatial and aspatial database, and CPPSIS5029A Determine suitable information sources to create new spatial datasets.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
A person who demonstrates competency in this unit must be able to provide evidence of:
- accurate record keeping
- applying solutions to a range of problems
- devising and implementing a cost-effective, functional solution
- examining suitability of existing arrangements
- measuring outcomes against specifications
- operational knowledge in a broad range of areas relating to linking datasets and knowledge management
- organising and prioritising activity
- performing a range of tasks where choice between a substantial range of options is required
- taking responsibility for own outputs in work and learning.

Specific resources for assessment
Resource implications for assessment include access to:
- assessment instruments, including personal planner and assessment record book
- assignment instructions, work plans and schedules, policy documents and duty statements
- registered training provider of assessment services
- relevant guidelines, regulations and codes of practice
- suitable venue and equipment.

Access must be provided to appropriate learning and assessment support when required.

Where applicable, physical resources should include equipment modified for people with disabilities.
Context of assessment

Holistic: based on the performance criteria, evidence guide, range statement, and required skills and knowledge.

Method of assessment

Demonstrated over a period of time and observed by the assessor (or assessment team working together to conduct the assessment).

Demonstrated competency in a range of situations, that may include customer/workplace interruptions and involvement in related activities normally experienced in the workplace.

Obtained by observing activities in the field and reviewing induction information. If this is not practicable, observation in realistic simulated environments may be substituted.

Guidance information for assessment

Assessment requires that the clients' objectives and industry expectations are met. If the clients' objectives are narrowly defined or not representative of industry needs, it may be necessary to refer to portfolio case studies of a variety of spatial information services requirements to assess competency.

Oral questioning or written assessment and hypothetical situations (scenarios) may be used to assess underpinning knowledge (in assessment situations where the candidate is offered a preference between oral questioning or written assessment, questions are to be identical).

Supplementary evidence may be obtained from relevant authenticated correspondence from existing supervisors, team leaders or specialist training staff.

All practical demonstration must adhere to the safety and environmental regulations relevant to each State or Territory.

Where assessment is for the purpose of recognition (recognition of current competencies [RCC] or recognition of prior learning [RPL]), the evidence provided will need to be authenticated and show that it represents competency demonstrated over a period of time.

In all cases where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge.

Assessment processes will be appropriate to the language and literacy levels of the candidate and any
cultural issues that may affect responses to the questions, and will reflect the requirements of the competency and the work being performed.

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording in the performance criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

**Client specifications** refer to description of outputs and may be contained in:
- contracts
- memos
- tender briefs
- verbal instructions
- written instructions.

**Constraints** may include:
- coverage
- datum
- environmental factors
- industry requirements
- legal and statutory
- financial
- resource availability
- time.

**Client** may include:
- customers with routine or special request
- external to organisation
- internal to organisation
- regular and new customers, including:
  - business enterprises
  - government agencies
  - members of the public
  - suppliers.

**Relevant personnel** may include:
- colleagues
- staff or employee representatives
- supervisors or line managers
- suppliers
- users.

**Organisational guidelines** may include:
- code of ethics
- company policy
• legislation relevant to the work or service function, including equal employment opportunity (EEO)
• manuals
• OHS policies and procedures
• personnel practices and guidelines outlining work roles and responsibilities.

**Metadata** may include:
• summarised information about a spatial dataset that describes the characteristics of the dataset, including:
  • availability
  • conditions of use
  • coordinate system
  • currency
  • date of acquisition
  • quality
  • source
  • spatial data acquisition methodologies
  • version control.

**Exception reports** may include:
• information on non-conforming items that require attention by other functions.

**OHS** may include:
• Australian standards
• development of site safety plan
• identification of potential hazards
• inspection of work sites
• training staff in OHS requirements
• use of personal protective clothing
• use of safety equipment and signage.

**Filtering parameters** may include:
• attribute range accuracy
• geographic location.

**Aspatial** data refers to:
• data without a spatial component.

**Spatial datasets** may include:
• digital
• hard copy
• image
• propriety standards
• text or vector.

**Organisational spatial requirements** may include:
• administration (e.g. postcodes, suburbs, and federal and state electoral counties)
• analysis of environmental, land and geographic information
• asset management
• cartographic services
• civil engineering
• digital imagery
• electricity
• emergency services management
• environmental datasets
• geographic information systems
• hydrography
• integrated services - environmental, land and geographic related datasets
• land ownership tenure system
• local government
• location-based services
• global positioning
• mapping facilities
• photogrammetry
• remote sensing
• site analysis
• survey marks
• sewerage
• telecommunications
• terrestrial survey
• town planning
• utility services such as water
• water catchment.

**Attributes** are properties associated with an entity and may include:
• colour
• layer
• level
• line type and width
• text.

**Test queries** refer to:
• model set of questions with known answers.

**Relevant documentation** may include:
• electronic or paper-based correspondence with client
• final report
• records of conversation
• organisational work activity sheets.

**Unit Sector(s)**

**Unit sector** Spatial information services
CPPSIS5005A Obtain and validate existing spatial data

Modification History

Unit Descriptor
Unit descriptor This unit of competency specifies the outcomes required to obtain and validate existing spatial datasets. It requires the ability to plan and execute the data validation process, often in a supervisory capacity, incorporating technical problems and management requirements. Functions would be carried out within organisational guidelines.

Application of the Unit
Application of the unit This unit of competency supports the application of organisational, sound communication, negotiation and problem-solving skills; the ability to demonstrate initiative and enterprise; and an understanding of technology. The skills and knowledge acquired upon completion of this unit would support the needs of employees in surveying, cartography, town planning, mapping or geographic information systems.

While no licensing, legislative, regulatory or certification requirements apply holistically to this unit at the time of publication, relevant federal, and state or territory legislation, regulations and codes of practice impact upon this unit (see unit performance criteria and range statement).

Licensing/Regulatory Information

Employability Skills Information

Employability skills    The required outcomes described in this unit of competency contain applicable facets of employability skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged, will assist in identifying employability skills requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**ELEMENT**                  **PERFORMANCE CRITERIA**

1 Obtain data.                  1.1 *Client instructions* are analysed to determine specific needs and *spatial data requirements*.
                                       1.2 Data requirements are based on *specifications* and confirmed with *relevant personnel*.
                                       1.3 Protocols for communication between *spatial data providers* and the organisation are followed.
                                       1.4 Work is allocated to relevant personnel.
                                       1.5 *Advice* is sought from relevant personnel to assess the viability of the providers’ service *agreement*.
                                       1.6 *Collection options* are determined according to organisational guidelines.
                                       1.7 Data is received and processed according to *organisational guidelines*.
                                       1.8 Skills and knowledge are updated to accommodate changes in data.

2 Validate data supplied.        2.1 Data is assessed for *validity* and *integrity* according to specifications.
                                       2.2 Omissions and gaps in the spatial data are communicated and followed through to resolution with relevant personnel.
                                       2.3 *OHS* issues are considered at all times.

3 Complete documentation.       3.1 *Metadata* is recorded according to industry standards.
                                       3.2 All *required documentation* is stored according to organisational requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

**Required skills:**

- ability to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities
- analytical skills
- business negotiation
- communication skills to:
REQUIRED SKILLS AND KNOWLEDGE

- consult effectively with clients and colleagues
- impart knowledge and ideas through oral, written and visual means
- computer skills (high technical user level) to complete business documentation
- day-to-day human resource management
- delegation of duties
- literacy skills to:
  - assess and use workplace information
  - locate and interpret legislation and other written documentation
  - prepare and manage documentation
  - read and write technical reports
  - research and evaluate
- numeracy skills to:
  - analyse errors
  - conduct image analysis
  - perform mental calculations
  - interpret and analyse statistics
  - record with accuracy and precision
  - undertake computations
- organisational skills to:
  - coordinate technical and human resource inputs to research activities
  - prioritise activities to meet contractual requirements
- quality assurance
- spatial skills to:
  - display proficiency in the operation of spatial data capture equipment
  - exercise precision and accuracy in relation to spatial and aspatial data acquisition using electronic equipment
  - perform spatial data archival and retrieval and train others in this task
  - perform spatial data management and manipulation and train others in this task
  - perform file management and train others in this task
  - solve problems relating to height, depth, breadth, dimension, direction and position in actual operational activity and virtual representation
  - understand implications of height, depth, breadth, dimension and position to actual operational activity and virtual representation
- time management skills.

Required knowledge and understanding:

- classification systems, processes and products linked to specification
- industry standards
- information management
REQUIRED SKILLS AND KNOWLEDGE

- legislation as it applies to the spatial industry sector
- methods of assessing existing spatial datasets and dataset sources
- need for precision and accuracy in relation to spatial data acquisition
- organisational policies and guidelines, such as pricing
- quality assurance principles
- performance evaluation procedures
- safe work practices
- spatial data capture methodologies
- spatial data management practices
- spatial data formats and structure
- spatial information principles and their application
- spatial referencing systems
- spatial technologies
- working within budgetary constraints.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Overview of assessment

This unit of competency could be assessed on its own or in combination with other units relevant to the job function, for example units CPPSIS5001A Plan spatial data collection and validation, CPPSIS5002A Capture new spatial data, CPPSIS5006A Integrate spatial datasets, CPPSIS5007A Maintain complex spatial data systems, and CPPSIS5008A Develop a complex spatial and aspatial database.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- ensuring data is sourced according to agreed processes and protocols and that it satisfies requirements
- applying cost considerations
- assessing and acting upon contingencies
- communication and negotiation skills
- managing risks and contingencies
- working towards set targets
- understanding spatial project deliverables
Specific resources for assessment

- taking responsibility for team output.

Resource implications for assessment include access to:

- assessment instruments, including personal planner and assessment record book
- assignment instructions, work plans and schedules, policy documents and duty statements
- registered training provider of assessment services
- relevant guidelines, regulations and codes of practice
- suitable venue and equipment.

Access must be provided to appropriate learning and assessment support when required.

Where applicable, physical resources should include equipment modified for people with disabilities.

Context of assessment

Holistic: based on the performance criteria, evidence guide, range statement, and required skills and knowledge.

Method of assessment

Demonstrated over a period of time and observed by the assessor (or assessment team working together to conduct the assessment).

Demonstrated competency in a range of situations, that may include customer/workplace interruptions and involvement in related activities normally experienced in the workplace.

Obtained by observing activities in the field and reviewing induction information. If this is not practicable, observation in realistic simulated environments may be substituted.

Guidance information for assessment

Assessment requires that the clients' objectives and industry expectations are met. If the clients' objectives are narrowly defined or not representative of industry needs, it may be necessary to refer to portfolio case studies of a variety of spatial information services requirements to assess competency.

Oral questioning or written assessment and hypothetical situations (scenarios) may be used to assess underpinning knowledge (in assessment situations where the candidate is offered a preference between oral questioning or written assessment, questions are to be identical).

Supplementary evidence may be obtained from relevant authenticated correspondence from existing supervisors, team leaders or specialist training staff.

All practical demonstration must adhere to the safety and
environmental regulations relevant to each State or Territory.

Where assessment is for the purpose of recognition (recognition of current competencies [RCC] or recognition of prior learning [RPL]), the evidence provided will need to be authenticated and show that it represents competency demonstrated over a period of time.

In all cases where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge.

Assessment processes will be appropriate to the language and literacy levels of the candidate and any cultural issues that may affect responses to the questions, and will reflect the requirements of the competency and the work being performed.
Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording in the performance criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

**Client instructions** refer to description of outputs and may be contained in:
- contracts
- memos
- tender briefs
- verbal instructions
- written instructions.

**Determine specific need** may be conducted via:
- response to a direction regarding scope and needs
- independent assessment.

**Spatial data requirements** may include:
- administration (e.g. postcodes, suburbs, and federal and state electoral counties)
- analysis of environmental, land and geographic information
- asset management
- cartographic services
- civil engineering
- digital imagery
- electricity
- emergency services management
- environmental datasets
- geographic information systems
- integrated services - environmental, land and geographic related datasets
- land ownership tenure system
- local government
- location-based services
- global positioning
- mapping facilities
- site analysis
- survey marks
- sewerage
- telecommunications
- town planning
- utility services such as water.
Specifications refer to:
- detailed technical description of the spatial data and its qualifiers.

Relevant personnel may include:
- colleagues
- registered surveyors
- company personnel
- staff or employee representatives
- supervisors or line managers
- suppliers
- users.

Spatial data providers may include:
- associations
- clearing houses
- educational institutions
- government
- internal sources
- non-government agencies
- online services
- software providers
- specialist companies.

Advice may include information from:
- financial or legal specialists
- internal and external personnel
- management
- registered surveyors
- town planners.

Agreement may include:
- contract
- copyright
- licence
- royalty contract
- memorandum of understanding.

Collection options may include:
- data logging
- digitising theodolite
- global position system
- photogrammetry
- remote sensing
- scanning
- sonar
- survey
- total station.

Organisational guidelines may include:
- code of ethics
- company policy
- legislation relevant to the work or service function, including equal employment opportunity (EEO)
- manuals
- OHS policies and procedures
- personnel practices and guidelines outlining work roles and responsibilities.

**Validity** means reflecting the true state of a test result, including tests for systematic distortions such as:
- confounding bias
- information/data bias
- observational bias
- recall bias
- selection bias.

**Integrity** may include:
- authenticity
- relevance to the project.

**OHS** may include:
- Australian standards
- development of site safety plan
- identification of potential hazards
- inspection of work sites
- training staff in OHS requirements
- use of equipment and signage.

**Metadata** may include:
- summarised information about a spatial dataset that describes the characteristics of the dataset, including:
  - availability
  - conditions of use
  - coordinate system datum
  - currency
  - date of acquisition
  - quality
  - source
  - spatial data acquisition methodologies
  - version control.

**Required documentation** may include:
- electronic or paper-based correspondence with client
- field records
- final report
- records of conversation
- survey plots
- organisational work activity sheets.

**Stored** may include:
- activity and sequence of activity determined to be appropriate in order to meet project objectives.

Unit Descriptor

Unit descriptor
This unit of competency specifies the outcomes required to capture new data using a variety of methods. It requires the ability to plan and execute the data capture process in a supervisory capacity, incorporating technical problems and management requirements and applying appropriate solutions to a range of data collection situations. Functions would be carried out within organisational guidelines.

Application of the Unit

Application of the unit
This unit of competency supports the application of theoretical and practical analysis; organisational, team leadership and sound problem-solving skills; the ability to demonstrate initiative and enterprise; and a sound understanding of technology. The skills and knowledge acquired upon completion of this unit would support the needs of employees in surveying, cartography, town planning, mapping or geographic information systems.

Licensing, legislative, regulatory and certification requirements may impact on this unit. Incorporate these requirements according to state, territory and federal legislation.

Licensing/Regulatory Information

process.  
4.4 Tools and equipment are stored safely in appropriate locations and according to manufacturer specifications.  
5.1 Attributes and topological structures are added to spatial data according to specifications.  
5.2 All data is recorded correctly and required documentation is completed according to specifications and organisational requirements.  
5.3 All data and documentation are stored according to organisational requirements.  
5.4 Data integrity is checked according to the validation plan.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

Required skills:
- ability to analyse theory, concepts and statistics (high level)  
- ability to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities  
- change management  
- communication skills to:  
  - consult effectively with clients and colleagues  
  - impart knowledge and ideas through oral, written and visual means  
  - provide customer service  
- computer skills (high technical user level) to complete business documentation  
- functional application of data capture techniques  
- literacy skills to:  
  - assess and use workplace information  
  - locate and interpret legislation and other written documentation  
  - prepare and manage documentation  
  - read and write technical reports  
  - research and evaluate  
- negotiation skills  
- numeracy skills to:
REQUIRED SKILLS AND KNOWLEDGE

- analyse errors
- conduct image analysis
- perform mental calculations
- interpret and analyse statistics
- record with accuracy and precision
- undertake computations
- organisational skills to:
  - coordinate technical and human resource inputs to research activities
  - prioritise activities to meet contractual requirements
- planning
- project management skills
- spatial skills to:
  - display proficiency in the operation of spatial data capture equipment
  - exercise precision and accuracy in relation to spatial and aspatial data acquisition and the use of electronic equipment
  - perform spatial data archival and retrieval and train others in this task
  - perform spatial data management and manipulation and train others in this task
  - perform file management and train others in this task
  - solve problems relating to height, depth, breadth, dimension, direction and position in actual operational activity and virtual representation
  - understand implications of height, depth, breadth, dimension and position to actual operational activity and virtual representation
- team leadership
- work effectively as part of a team.

Required knowledge and understanding:

- characteristics, capabilities and limitations of tools, technology and equipment used
- customer relations guidelines
- data collection methods using electronic equipment
- information management
- legislation as it applies to the spatial industry sector
- OHS requirements
- organisational policies and guidelines
- performance evaluation
- process improvement methods
- quality assurance principles
- quality improvement tools
- reference systems and their relationship to each other
- relevant federal, state and local government laws which are applicable to the
REQUIRED SKILLS AND KNOWLEDGE

- spatial data capture methodology used
- risk assessment principles
- safe work practices
- spatial data formats, handling and structure
- spatial information principles and their application
- SIS project contingencies
- spatial technologies.

Evidence Guide

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Overview of assessment
This unit of competency could be assessed on its own or in combination with other units relevant to the job function, for example units CPPSIS5001A Plan spatial data collection and validation, CPPSIS5005A Obtain and validate existing spatial data, CPPSIS5006A Integrate spatial datasets, CPPSIS5007A Maintain complex spatial data systems, and CPPSIS5008A Develop a complex spatial and aspatial database.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
A person who demonstrates competency in this unit must be able to provide evidence of:
- applying a defined range of skills
- applying known solutions to a range of problems
- assessing and recording information from varied sources
- demonstrating operational knowledge in relevant data capture and validation methodologies
- performing a range of tasks where choice between a range of options is required
- taking responsibility for own and team outputs in work and learning.

Specific resources for assessment
Resource implications for assessment include access to:
- assessment instruments, including personal planner and assessment record book
- assignment instructions, work plans and schedules, policy documents and duty statements
• registered training provider of assessment services
• relevant guidelines, regulations and codes of practice
• suitable venue and equipment.

Access must be provided to appropriate learning and assessment support when required.

Where applicable, physical resources should include equipment modified for people with disabilities.

**Context of assessment**
Holistic: based on the performance criteria, evidence guide, range statement, and required skills and knowledge.

**Method of assessment**
Demonstrated over a period of time and observed by the assessor (or assessment team working together to conduct the assessment).

Demonstrated competency in a range of situations, which may include customer/workplace interruptions and involvement in related activities normally experienced in the workplace.

Obtained by observing activities in the field and reviewing induction information. If this is not practicable, observation in realistic simulated environments may be substituted.

**Guidance information for assessment**
Assessment requires that the clients' objectives and industry expectations are met. If the clients' objectives are narrowly defined or not representative of industry needs, it may be necessary to refer to portfolio case studies of a variety of SIS requirements to assess competency.

Oral questioning or written assessment and hypothetical situations (scenarios) may be used to assess underpinning knowledge (in assessment situations where the candidate is offered a preference between oral questioning or written assessment, questions are to be identical).

Supplementary evidence may be obtained from relevant authenticated correspondence from existing supervisors, team leaders or specialist training staff.

All practical demonstration must adhere to the safety and environmental regulations relevant to each State or Territory.

Where assessment is for the purpose of recognition
(recognition of current competencies [RCC] or recognition of prior learning [RPL]), the evidence provided will need to be authenticated and show that it represents competency demonstrated over a period of time.

In all cases where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge.

Assessment processes will be appropriate to the language and literacy levels of the candidate and any cultural issues that may affect responses to the questions, and will reflect the requirements of the competency and the work being performed.
Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording in the performance criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

**Administrative and legal requirements** may include:
- access protocols and obligations
- Australian standards, quality assurance and certification requirements
- award and enterprise agreements
- company OHS guidelines
- licensing arrangements
- organisational protocols for accessing physical, financial and human resources
- reimbursements
- Indigenous considerations
- relevant codes of practice
- relevant state, territory or federal legislation that affects organisational operations, including:
  - anti-discrimination and diversity
  - copyright and digital copyright
  - equal employment opportunity (EEO)
  - industrial relations
  - royalty obligations
- title search processes.

**Appropriate persons or relevant personnel** may include:
- administrative staff
- assessors
- colleagues
- contractors
- field survey staff
- land occupiers
- land owners
- managers
- supervisors
- technicians
- trainers.

**Equipment, supplies and SIS technologies** may
- data logger or other mobile computing device
- data recording equipment
include:

- digital imagery
- electronic theodolites
- handheld global positioning system (GPS)
- levels
- maps (digital or hard copy)
- measuring instruments
- non-navigational aids relevant to duties, including:
  - compass
  - clinometer
  - distance measuring wheel
- personal digital assistant
- personal computer-based digitising boards
- sonar
- tide gauge
- tools
- total station
- ultra high frequency (UHF) radio
- vehicles.

**Manufacturer specifications** may be found in:

- electronic format
- equipment specifications
- operator manuals
- printed product instructions and information
- spatial database
- warranty documents.

**Entities** may include:

- event
- object.

**Reference system** may include coordinate systems that are:

- global
- local
- regional.

**Attributes** are properties associated with a dataset and may include:

- condition
- date
- size
- type.

**Data capture methodology** may include:

- conversion or translation from existing information (hard copy or digital)
- data dogging
- digitising theodolite
- direct or indirect
- field
- GPS scanning
• manual entry
• photogrammetry
• remote sensing
• sonar
• survey
• total station.

**Metadata** may include:
• summarised information about a spatial dataset that describes the characteristics of the dataset, including:
  • availability
  • conditions of use
  • coordinate system
  • currency
  • date of acquisition
  • quality
  • source
  • spatial data acquisition methodologies
  • version control.

**OHS requirements** may include:
• Australian standards
• development of site safety plan
• identification of potential hazards
• inspection of work sites
• training staff in OHS requirements
• use of personal protective clothing
• use of safety equipment and signage.

**Operational maintenance tasks** may include:
• adjusting
• cleaning
• lubricating
• maintaining battery
• simple repairs
• tightening.

**Contingencies** may include:
• adverse weather
• equipment failure.

**Topological structures** may include:
• relationship between entities.

**Required documentation** may include:
• accident and injury reports
• authority/approval documentation
• meeting reports
• records and reports of communication
• reimbursement documentation.
Unit Sector(s)

Unit sector Spatial information services
CPPSIS3005A Collect basic spatial data

Modification History
Not Applicable

Unit Descriptor

Unit descriptor
This unit of competency specifies the outcomes required to collect basic data through a range of methods. It requires the ability to work with others in performing set task requirements within deadlines. It also requires the ability to perform a range of basic activities in the use of information technology and equipment within a spatial information handling framework. Functions would be carried out under supervision, often in a team environment, and within organisational guidelines.

Application of the Unit

Application of the unit
This unit of competency supports the application of teamwork, verbal and written workplace communication skills, and the use of technology. The skills and knowledge acquired upon completion of this unit would support the needs of employees in the spatial information services (SIS) industry sector in positions such as field coordination, data collection and administration.

While no licensing, legislative, regulatory or certification requirements apply holistically to this unit at the time of publication, relevant federal, and state or territory legislation, regulations and codes of practice impact upon this unit (see unit performance criteria and range statement).

Licensing/Regulatory Information
Refer to Application of the Unit
Pre-Requisites

Prerequisite units  Nil

Employability Skills Information

Employability skills  The required outcomes described in this unit of competency contain applicable facets of employability skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged, will assist in identifying employability skills requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

**ELEMENT** | **PERFORMANCE CRITERIA**
--- | ---
1 Prepare for the task. | 1.1 Requirements for the task are clarified with appropriate persons.
1.2 Equipment, supplies and SIS technologies are selected according to task requirements.
1.3 Equipment is checked to ensure it is in safe working order.
1.4 Skills and knowledge are updated to accommodate changes in data collection techniques.
2 Gather basic data. | 2.1 Data and attributes are collected using methodologies detailed in a data collection plan.
2.2 Metadata is documented according to accepted industry standards.
2.3 Any discrepancies between specifications and actual activities are identified, recorded and reported.
2.4 Administrative and legal requirements for data collection are complied with and recorded.
2.5 Assistance is given to relevant personnel assisting in the data collection process.
2.6 OHS requirements are planned for and adhered to.
3 Use equipment. | 3.1 Supervisor guidance is sought on the selection of appropriate equipment.
3.2 Appropriate equipment is operated according to the task requirements and manufacturer specifications.
3.3 All safety requirements are adhered to at all times.
3.4 Data is recorded correctly and according to specifications.
4 Maintain equipment. | 4.1 Supervisor guidance is sought on the manner in which equipment is to be maintained.
4.2 Operational maintenance of equipment is undertaken according to organisational guidelines.
4.3 Contingencies that may affect equipment usage are reported.
4.4 Unsafe or faulty equipment is reported and referred for repair.
4.5 Tools and equipment are stored safely in appropriate locations and according to manufacturer specifications.
5 Contribute to finalising the collection process. | 5.1 All required documentation is completed according to organisational requirements.
5.2 All data and documentation are stored according to
Required Skills and Knowledge

This section describes the essential skills and knowledge and their level, required for this unit.

Required skills:

- ability to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities
- communication skills to:
  - discuss vocational issues effectively with colleagues
  - impart knowledge and ideas through oral, written and visual means
- computer skills (technical user level)
- literacy skills to:
  - assess and use workplace information
  - interpret and understand legal, financial and procedural requirements
  - process workplace documentation
  - read and record data
- numeracy skills to:
  - accurately record and collate
  - undertake basic computations
- organisational skills to prioritise daily activities
- spatial skills to:
  - apply understanding of height, depth, breadth, dimension and position to actual operational activity and virtual representation
  - perform basic spatial and aspatial data collection in an accurate manner
  - use spatial information technology to perform basic data collection
- work effectively as part of a team
- use a range of equipment in the field safely, accurately and as required for the task.

Required knowledge and understanding:

- basic data collection methods using electronic equipment
- spatial and aspatial data acquisition using electronic equipment
- equipment capabilities, limitations and potential problems
- basic organisational policies and guidelines, such as OHS guidelines
- basic characteristics, capabilities and limitations of tools, technology and
REQUIRED SKILLS AND KNOWLEDGE

equipment used.

Evidence Guide

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Overview of assessment
This unit of competency could be assessed on its own or in combination with other units relevant to the job function, for example unit CPPSIS3002A Store and retrieve basic spatial data.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
A person who demonstrates competency in this unit must be able to provide evidence of:

- applying a defined range of skills
- applying known solutions to a range of predictable problems
- assessing and recording information from varied sources
- demonstrating operational knowledge in a moderate range of areas
- performing a range of tasks where choice between a limited range of options is required
- taking responsibility for own outputs in work and learning.

Specific resources for assessment
Resource implications for assessment include access to:

- assessment instruments, including personal planner and assessment record book
- assignment instructions, work plans and schedules, policy documents and duty statements
- registered training provider of assessment services
- relevant guidelines, regulations and codes of practice
- suitable venue and equipment.

Access must be provided to appropriate learning and assessment support when required.

Where applicable, physical resources should include equipment modified for people with disabilities.

- simple repairs.

Contingencies may include:

- adverse weather
- equipment failure.

Required documentation may include:

- accident and injury reports
- authority/approval documentation
- meeting reports
- records and reports of communication
- reimbursements.

Organisational guidelines may include:

- code of ethics
- company policy
- legislation relevant to the work or service function
- manuals
- OHS policies and procedures
- personnel practices and guidelines outlining work roles and responsibilities.

Unit Sector(s)

Unit sector: Spatial information services
BSBCUS401A Coordinate implementation of customer service strategies

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to advise on, carry out and evaluate customer service strategies, including the design of improvement strategies based on feedback. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to individuals with a broad knowledge of customer service strategies who contribute well developed skills in addressing customer needs and problems. They may have responsibility to provide guidance or to delegate aspects of these tasks to others. |

Licensing/Regulatory Information
Not applicable.

UEGNSG202A Construct and lay distribution pipelines

Modification History
Not Applicable

Unit Descriptor

Unit Descriptor 1)

This Competency Standard Unit covers the construction and laying of pipelines in a utilities industry workplace. This competency standard refers to the relevant services; appropriate persons; the relevant materials required to lay distribution pipelines; tools and equipment; safe working procedures and the relevant legislative requirements.

Application of the Unit

Application of the Unit 3)

This competency standard shall apply to any basic and safe work site where Gas Industry operations occur. It could also apply, where applicable to other workplaces in the electricity supply industry (transmission and distribution and generation), the electrotechnology industry and the water industry, subject to all Occupational Health and Safety and duty of care requirements being met for the workplace.

Licensing/Regulatory Information

License to practice 3.1)

The skills and knowledge described in this unit are not subject to licence regulation other than those directly related to Occupational Health and Safety, gas/electricity/water industry safety and compliance, industrial relations, environmental protection, telecommunications, anti discrimination and training.
License to practice 3.1)
Commonwealth, State/Territory or Local Government legislation and regulations may exist that limits the age of those who can operate certain equipment.

Pre-Requisites
Prerequisite Unit(s) 2)
Competencies 2.1)
Granting of competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed:
Nil

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices for constructing and laying distribution pipelines. The extent of the essential knowledge and associated skills (EKAS) required is given in Volume 2 - Part 2.2 EKAS. It forms an integral part of this unit.

- G 2.1.1 Working in the gas sector
- G 2.1.2 Identify roles of statutory authorities
- G 2.1.3 Identify employment roles and responsibilities
REQUIRED SKILLS AND KNOWLEDGE

G 2.1.4 Apply relevant OHS regulations, policies and procedures
G 2.1.5 Maintain safe, clean and healthy workplace
G 2.1.6 Work safely with hazardous materials and equipment
G 2.1.7 Apply safe manual handling techniques in the workplace
G 2.1.8 Control traffic at the work-site
G 2.1.9 Respond to emergency and accident situations
G 2.1.10 Apply relevant environmental legislation, regulations and codes of practice
G 2.1.11 Protect and maintain the environment
G 2.1.12 Communicate in the workplace
G 2.1.13 Communicate effectively in a team
G 2.1.14 Read and interpret workplace documents
G 2.1.15 Complete routine workplace forms, memos and reports
G 2.1.16 Identify requirements of work activity
G 2.1.17 Apply basic planning skills
G 2.1.18 Conduct tasks to complete work activity
G 2.1.19 Review work activity
G 2.1.20 Customer relations
G 2.1.21 Problem solving
G 2.1.22 Confined spaces
G 2.1.23 Work site environmental compliance
G 2.1.24 Work site environmental impact

AND one or more of the following depending on pipe
REQUIRED SKILLS AND KNOWLEDGE

type:

If undertaking the laying of nylon pipe and PE pipe

G 2.2.12 Identify nylon pipeline, fittings and accessories
G 2.2.13 Join nylon pipeline and fittings
G 2.2.14 Repair damaged nylon pipe
G 2.2.15 Determine depth of pipeline in ground
G 2.2.16 Install nylon pipe
G 2.2.17 Identify polyethylene pipeline, fittings and accessories
G 2.2.18 Join PE pipes and fittings
G 2.2.19 Repair damaged PE pipeline

If undertaking the laying of cast iron and steel pipe

G 2.2.20 Identify cast iron pipe and fittings
G 2.2.21 Work with cast iron pipe and fittings
G 2.2.22 Repair or replace cast iron pipeline
G 2.2.23 Identify steel pipeline, fittings and accessories
G 2.2.24 Work with steel pipeline and fittings
G 2.2.25 Cut out, repair and replace steel pipeline
G 2.2.26 Determine depth of pipeline in ground

If undertaking the laying of copper pipe

G 2.2.27 Identify copper pipeline, fittings and accessories
G 2.2.28 Bend and join copper pipeline and fittings
G 2.2.29 Repair damaged copper pipe
G 2.2.30 Determine depth of pipeline in the ground
G 2.2.31 Install copper pipe
Evidence Guide

EVIDENCE GUIDE

8) The Evidence Guide forms an integral part of this Unit and shall be used in conjunction with all components parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

8.1) Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry’s preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be ‘rich’ in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its ‘richness’. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practiced. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.
EVIDENCE GUIDE

Critical aspects of evidence required to demonstrate competency in this unit

Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines UEG06'. Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and range
  - Apply sustainable energy principles and practices as specified in the Performance Criteria and range
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit to such an extent that the learner's performance outcome is reported in accordance with the preferred approach; namely a percentile graded result, where required by the regulated environment
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant anti discrimination legislation, regulations, polices and workplace procedures
  - Demonstrate performance across a representative range of contexts from the prescribed items below.

| Range of tools/equipment/materials/procedures/workplaces/other variables |
|-----------------------------|----------------------|------------------|
| Group No | The minimum number of items on which skill is to be demonstrated | Item List |

EVIDENCE GUIDE

| I          | At least one occasion | Deal with an unplanned event by drawing on essential knowledge and associated skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items |

Context of and specific resources for assessment

8.3) This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this Competency Standard Unit.
- Appropriate environmental regulation and work practices.
- Appropriate organisational requirements.
- Appropriate work environment, equipment and tools.

In addition to the resources listed above, in Context of and specific resources for assessment, evidence should show demonstrated competency in constructing and laying distribution pipelines.

Assessment of this competency must also be undertaken in either an actual workplace or under a simulated work environment. Assessment must also integrate the key competencies.
EVIDENCE GUIDE

Method of assessment 8.4)
This Competency Standard Unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:
Competent performance with inherent safe working practices is expected in the Industry to which this Competency Standard Unit applies. This requires that the specified Essential Knowledge and Associated Skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and associated skills described in this unit.

Concurrent assessment and relationship with other units 8.5)
There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied Competency Standard Units where listed.

UEGNSG102A Carry out work activities in a utilities industry work environment
UEGNSG103A Comply with workplace OHS procedures and practices
UEGNSG104A Comply with environmental policies and procedures
UEGNSG105A Establish the work site

Key Competencies 8.6)
Evidence that particular key competencies have been achieved within this Competency Standard Unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key Competencies and levels of this Training Package.

Range Statement

RANGE STATEMENT

7) This relates to the competency standard unit as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

This Competency Standard Unit shall/may be demonstrated in relation to the construction and laying of distribution pipelines.

The following constants and variables included in the Element/Performance Criteria in this unit are fully described in the Definitions Section of this volume and form an integral part of the Range Statement of this unit:

- Services (2)
- Appropriate persons (2)
- Materials (2)
- Tools and equipment (2)
- Safe working procedures (2)
- Legislative requirements (2)

Unit Sector(s)

Literacy and numeracy skills

Literacy and numeracy skills 2.2)

Participants are best equipped to achieve this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3 Writing 3 Numeracy 3
Competency Field

Distribution.
TLID1107C Conduct specialised forklift operations

Modification History
Not applicable.

Unit Descriptor
This unit involves the skills and knowledge required to operate a forklift with specialised attachments or all-terrain equipment, including checking attachments and worksite for suitability, selecting the type of forklift and accessories for required load shifting tasks, and shifting load and completing work in accordance with operational requirements. Assessment of this unit will usually be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory OH&S authority.

Application of the Unit
Specialised operation of a forklift must be carried out in compliance with the licence requirements and regulations of the relevant state/territory authority. Specialised operation of a forklift is performed under some supervision, generally within a team environment. It involves the application of equipment operation principles and procedures to maintain the safety and specialised operation of a forklift in a wide variety of operational contexts.

Licensing/Regulatory Information
Refer to Unit Descriptor

Pre-Requisites
Not applicable.

Employability Skills Information
The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this competency is packaged will assist in identifying employability skill requirements.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

#### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance Criteria</th>
</tr>
</thead>
</table>
| 1 Check attachments and worksite for suitability | 1.1 Suitable work site is selected for operations  
1.2 Work area is checked for overhead obstructions and proximity to service delivery lines  
1.3 Barriers or warning signs are erected in areas subject to passing traffic  
1.4 Attachments and platforms are securely fixed to carriage or tines  
1.5 Personnel support platforms are inspected to ensure compliance with the relevant Australian Standard |
| 2 Select type of forklift and accessories for the required workplace task | 2.1 Special equipment, accessories or attachments are identified to match load characteristics and work requirements  
2.2 Appropriate specialised equipment is selected  
2.3 Existing attachments are removed and stored according to workplace procedures  
2.4 Specialised equipment is fitted according to manufacturers instructions and workplace procedures  
2.5 Designated staff are notified regarding specialist operations |
| 3 Shift load and complete work | 3.1 Equipment is operated within safe working limits and to maximise efficiency of operations  
3.2 Load is lifted, carried and set down in accordance with workplace and manufacturers procedures and regulatory requirements  
3.3 Documentation is completed reporting any damage or faults to goods or equipment  
3.4 Specialist equipment and forklift are returned to appropriate storage/parking area |
Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

Relevant duty of care requirements pertaining to the specialised operation of a forklift

Relevant OH&S and environmental procedures and regulations

Workplace operating procedures

Forklift controls, instruments and indicators and their use

Types of forklift accessories and ancillary equipment, their purposes and procedures for their use

Handling procedures for forklifts involved in specialised operations

Procedures to be followed in the event of an operational emergency

Operating hazards and related defensive driving and hazard control techniques

Engine power management and safe operating strategies

Efficient driving techniques

Pre-operational checks carried out on forklift and accessories and related action

Site layout and obstacles

Principles of stress management when driving a forklift

Required skills:

Communicate effectively with others when conducting specialised forklift operations

Read and interpret instructions, procedures, information and signs relevant to specialised forklift operations

Interpret and follow operational instructions and prioritise work

Complete documentation related to specialised forklift operations

Operate electronic communication equipment to required protocol

Work collaboratively with others when conducting specialised forklift operations
Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others

Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when conducting specialised forklift operations in accordance with regulatory requirements and workplace procedures

Implement contingency plans for unexpected events that may occur when conducting specialised forklift operations

Apply precautions and required action to minimise, control or eliminate hazards that may exist during specialised forklift operations

Monitor work activities in terms of planned schedule

Modify activities depending on differing operational contingencies, risk situations and environments

Apply fatigue management knowledge and techniques

Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment

Operate and adapt to differences in equipment in accordance with standard operating procedures

Select and use required personal protective equipment conforming to industry and OH&S standards

Identify points of balance and safe lifting positions on a range of loads when operating a forklift (including accessories)

Monitor performance of equipment

Service equipment in terms of maintenance schedule and standard operating procedures

Check and replenish fluids and carry out lubrication processes in the course of work activities

**Evidence Guide**
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
- the underpinning knowledge and skills
- relevant legislation and workplace procedures
- other relevant aspects of the range statement

### Context of and specific resources for assessment

Performance is demonstrated consistently over a period of time and in a suitable range of contexts.

Resources for assessment include:
- a range of relevant exercises, case studies and other simulated practical and knowledge assessment, and/or
- access to an appropriate range of relevant operational situations in the workplace

In both real and simulated environments, access is required to:
- relevant and appropriate materials and/or equipment, and/or
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

### Method of assessment

Assessment of this unit must be undertaken by a registered training organisation.

As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests.

Practical assessment must occur:
- through appropriately simulated activities at the registered training organisation, and/or
- in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Types of forklift may include:
- counterbalance trucks
- reach trucks
- pallet trucks
- container-handling heavy forklifts
- vacuum
- top frame

Specialised forklift operations may be carried out in typical forklift operational situations, including:
- operations conducted at day or night
- typical weather conditions
- on the open road
- on a private road or worksite
- while at a workplace

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Specialised forklift may be used to assist in a range of workplace tasks, including:
- stock/goods/container handling
- loading and unloading vehicles
- stacking stock and goods
- lifting and moving equipment
- transporting materials and goods in a workplace

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Loads to be shifted may require:
- special precautions

Specialised forklift operations may involve the use of a range of attachments and accessories, including:
- spikes
- drum carriers
- bale carriers
- tines
personnel carriers
high reaching
pantograph
jibs
paper clamps
hooks
side lifters

Loads to be shifted may be:
irregularly shaped
packaged or unpackaged
labelled or unlabelled
palleted or unpalleted
containerised

Personnel in the work area may include:
workplace personnel
site visitors
contractors
official representatives

Forklift operational procedures may include:
starting a forklift (including pre-start checks)
steering and manoeuvring a forklift
accelerating and braking
positioning and stopping a forklift
reversing a forklift
operating forklift controls, instruments and indicators
using defensive driving techniques
managing engine performance

Pre-operational checks may include but are not limited to:
visual checking of forklift and its associated accessories and equipment
checking and topping up of fluid levels
checks of tyres
checks of operation of forklift lights and indicators
checks of brakes

Post-operational checks may include but are
parking in a safe place
not limited to: shutting down forklift
lowering all equipment
visually checking for faults or damage

Hazards may include (examples only):
- wet and iced operating surfaces
- oil on operating surface
- faulty brakes
- workplace obstacles and other operational equipment and vehicles
- damaged loads and pallets
- other personnel in work area

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Information/documents may include:
- goods identification numbers and codes, including IMDG markings and HAZCHEM signs
- manifests, bar codes, picking slips, merchandise transfers, stock requisitions, goods and container identification
- Australian Standard 2359 - Industrial Truck Code
- manufacturers specifications for forklift and associated accessories and equipment
- operations and service record book or log workplace procedures and policies for the operation of forklifts
- supplier and/or client instructions
- material safety data sheets
- regulatory requirements concerning the use
of forklifts
award, enterprise bargaining agreement, other industrial arrangements
standards and certification requirements
quality assurance procedures
emergency procedures

Applicable procedures and codes may include:
relevant state/territory regulations pertaining to the operation of forklifts
relevant codes and standards, including Australian Standard 2359 - Industrial Truck Code
relevant state/territory OH&S legislation
relevant state/territory fatigue management regulations
relevant state/territory environmental protection legislation

Unit Sector(s)

Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- literacy skills to read and understand a variety of texts; to prepare general information and papers according to target audience; and to edit and proofread texts to ensure clarity of meaning and accuracy of grammar and punctuation
- technology skills to select and use technology appropriate to a task
- communication skills to monitor and advise on customer service strategies
- problem-solving skills to deal with customer enquiries or complaints
- analytical skills to identify trends and positions of products and services.

**Required knowledge**

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
  - anti-discrimination legislation
  - ethical principles
  - codes of practice
  - privacy laws
  - financial legislation
  - occupational health and safety (OHS)
- organisational policy and procedures for customer service including handling customer complaints
- service standards and best practice models
- public relations and product promotion
- techniques for dealing with customers, including customers with specific needs.
Evidence Guide

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Evidence of the following is essential:</th>
</tr>
</thead>
</table>
| **Critical aspects for assessment and evidence required to demonstrate competency in this unit** | • identifying needs and priorities of customers  
• distinguishing between different levels of customer satisfaction  
• treating customers with courtesy and respect  
• responding to and reporting on, customer feedback  
• knowledge of organisational policy and procedures for customer service. |

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th>Assessment must ensure:</th>
</tr>
</thead>
</table>
| **Method of assessment** | • access to an actual workplace or simulated environment  
• access to office equipment and resources  
• examples of customer complaints  
• examples of documents relating to customer service standards and policies. |

<table>
<thead>
<tr>
<th>Method of assessment</th>
<th>A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:</th>
</tr>
</thead>
</table>
| **Guidance information for assessment** | • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate  
• review of reports on customer service delivery  
• analysis of responses to case studies and scenarios  
• demonstration of techniques  
• oral or written questioning to assess knowledge of customer service strategies. |

<table>
<thead>
<tr>
<th>Guidance information for assessment</th>
<th>Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:</th>
</tr>
</thead>
</table>
| **Guidance information for assessment** | • sales units  
• other customer service units. |
**Range Statement**

<table>
<thead>
<tr>
<th><strong>RANGE STATEMENT</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.</td>
</tr>
</tbody>
</table>

| **Appropriate interpersonal skills** may include: | • listening actively to what the customer is communicating  
• providing an opportunity for the customer to confirm their request  
• questioning to clarify and confirm customer needs  
• seeking feedback from the customer to confirm understanding of needs  
• summarising and paraphrasing to check understanding of customer message  
• using appropriate body language |
| **Customers** may include: | • corporate customers  
• individual members of the organisation  
• individual members of the public  
• internal or external  
• other agencies |
| **Customer needs and expectations** may include: | • accuracy of information  
• advice or general information  
• complaints  
• fairness/politeness  
• further information  
• making an appointment  
• prices/value  
• purchasing organisation's products and services  
• returning organisation's products and services  
• specific information |
| **Organisational requirements** may include: | • access and equity principles and practice  
• anti-discrimination and related policy  
• defined resource parameters  
• goals, objectives, plans, systems and processes  
• legal and organisational policies, guidelines and requirements  
• OHS policies, procedures and programs |
**RANGE STATEMENT**

- payment and delivery options
- pricing and discount policies
- quality and continuous improvement processes and standards
- quality assurance and/or procedures manuals
- replacement and refund policy and procedures
- who is responsible for products or services

**Effective communication** may include:

- giving customers full attention
- maintaining eye contact, except where eye contact may be culturally inappropriate
- speaking clearly and concisely
- using active listening techniques
- using appropriate language and tone of voice
- using clear written information/communication
- using non-verbal communication e.g. body language, personal presentation (for face-to-face interactions)
- using open and/or closed questions

**Designated individuals** may include:

- colleagues
- customers
- line management
- supervisor

**Customer complaints** may include:

- administrative errors such as incorrect invoices or prices
- customer satisfaction with service quality
- damaged goods or goods not delivered
- delivery errors
- product not delivered on time
- service errors
- warehouse or store room errors such as incorrect product delivered

**Specific needs** of customers may relate to:

- age
- beliefs/values
- culture
- disability
- gender
- language
- religious/spiritual observances

**Opportunities** to promote and enhance services and products

- extending time lines
- packaging procedures
## RANGE STATEMENT

**may include:**
- procedures for delivery of goods
- returns policy
- system for recording complaints
- updating customer service charter

**Verifiable evidence** may include:
- customer satisfaction questionnaires
- audit documentation and reports
- quality assurance data
- returned goods
- lapsed customers
- service calls
- complaints

PUAFIR306B Render hazardous materials incidents safe

Modification History
Not applicable.

Unit Descriptor
Unit Descriptor
This unit covers the competency required to safely combat incidents involving hazardous materials. 'Hazardous Materials' is a generic term used to refer to an incident involving dangerous goods and hazardous substances.

Application of the Unit
Application of the Unit
The application of this unit in the workplace - the environments, complexities and situations involved - will be written during Phase II of the Review of the PUA00 Public Safety Training Package.

This text will be useful for the purposes of job descriptions, recruitment advice or job analysis; where possible, it will not be too job specific to allow other industries to import it into other Training Packages, where feasible.

Licensing/Regulatory Information
Not applicable.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency.

Performance Criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the Required Skills and Knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1. Identify and handle hazardous materials** | 1. Pre-incident plans, site control and containment plan and directives from supervisor are identified and implemented  
1.2 Personal protective clothing and equipment appropriate to the types of hazards reported, are selected and worn  
1.3 The incident is approached using care and caution and a safe distance is maintained in accordance with the organisation's procedures and/or advice from appropriate authorities  
1.4 Dangerous goods and hazardous substances are identified from a safe distance and information conveyed to the supervisor in accordance with the organisation's procedures  
1.5 Information on hazards and handling procedures for the identified substance is obtained in accordance with the organisation's procedures  
1.6 Suitability of personal protective clothing and equipment is re-assessed in accordance with information received  
1.7 Dangerous goods and hazardous substances are handled according to the organisation's procedures  
1.8 Assistance is provided in obtaining samples according to procedures and/or advice from other authorities |
| **2. Assist with establishing hazard control and decontamination zones** | 2.1 Individual's responsibilities within the organisation's control plan are identified and followed  
2.2 The scene is secured and hazard control and decontamination zones are established according to the organisation's procedures  
2.3 Evacuation procedures are implemented, if directed, to protect life in accordance with the organisation's procedures  
2.4 Assistance is provided to control personnel and equipment entering and leaving hazard control and decontamination zones in accordance with the organisation's procedures  
2.5 Records are kept of personnel and equipment as they enter and leave hazard control and decontamination zones |
<table>
<thead>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required Skills

follow instructions and procedures
use relevant equipment
record information
work as member of a team
hazard assessments
appropriate control techniques
breathing apparatus procedures

Required Knowledge

organisation policies and procedures
legislation relevant to the organisation
roles and responsibilities of agencies involved
types of hazards and safe handling techniques
methods of identifying hazardous materials
principles of incident control
dercontamination principles and procedures
containment techniques
breathing apparatus procedures
the nature and properties of hazardous materials

Evidence Guide

EVIDENCE GUIDE
EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential for this unit that competence be demonstrated in:
- hazardous materials identification
- implementing appropriate standard operating procedures
- compliance with relevant legislation
- demonstration of safe working practices
- assisting in the establishment of incident control
- containing and recovering hazardous materials
- undertaking decontamination procedures

Consistency in performance

Evidence will need to be gathered over a period of time across a range of variables appropriate to organisation roles

Context of and specific resources for assessment

Context of assessment

Simulations or exercises and/or a series of tasks are required to demonstrate competence in this unit. This may involve setting scenarios to be completed either individually or as a member of a team. Written or verbal questions should be used to support gathering of evidence

Specific resources for assessment

Assessment of this competency will require access to relevant transport, communication and Hazmat equipment

Guidance information for assessment

Information that will assist or guide assessment will be written during Phase II of the Review of the PUA00 Public Safety Training Package.
Range Statement

RANGE STATEMENT

The Range Statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording in the Performance Criteria is detailed below.

### Identification of hazardous materials must include
- Hazmat information
- United Nations numbers
- Proper shipping names
- Product names or trade names
- Chemical names and chemical abstract service numbers
- Dangerous goods class labels
- Packing groups
- Emergency information panels
- Placarding
- Storage manifests
- Transport documents
- Visual signs and chemical indicators
- Colour coding (e.g., gas cylinders)

### Hazardous materials information sources must include
- HAZCHEM Emergency Action Codes
- Emergency procedures guides
- Material safety data sheets
- Technical specialist

**and may also include**
- Emergency response guide books
- National Fire Protection Association Codes
- European Marking ADR hazard identification numbers
- Electronic databases
- HAZMAT Action Guides
- Safe storage and information handling

### Control zones must include
- Area of likely contamination (hot zone)
- Area of operations (warm zone)
- Support zone (cold zone)

### Procedures must include
- Organisation procedures
### RANGE STATEMENT

| and may also include | OH&S practices and procedures  
|                      | government organisational procedures  
|                      | company or organisational procedures  
|                      | emergency management  
|                      | evacuation  
|                      | environmental  
|                      | gas plume modelling  

| Equipment for containment and recovery may include | Hazbins - hazardous materials recovery bins  
|                                                   | sealable drums  
|                                                   | original containers  
|                                                   | shipping containers  
|                                                   | absorbent materials  
|                                                   | protective clothing and equipment  
|                                                   | plugs and patches  
|                                                   | booms  
|                                                   | pipes  
|                                                   | extraction equipment and machinery  
|                                                   | hand implements  
|                                                   | earth moving equipment  
|                                                   | spraying equipment  
|                                                   | pumps  
|                                                   | non-sparking tools  
|                                                   | intrinsically safe tools  

| Neutralising and diluting agents may include | water  
|                                            | acids and bases  
|                                            | bicarbonate of soda  
|                                            | lime  

| Decontamination must include | wet decontamination techniques  
|                             | combination of wet and dry  
|                             | dry decontamination techniques  
|                             | decontamination techniques  

RANGE STATEMENT

**Decontamination areas must include**
- holding area
- wash area
- disrobing and rest area

**Sampling may include**
- gaseous samples
- liquid samples
- solid samples

**Analysis may include**
- sampling equipment
- external organisation assistance

**Organisations that assist operations may include**
- police
- ambulance
- local government
- chemical companies
- emergency services
- government departments

**Unit Sector(s)**
Not applicable.

**Corequisite Unit/s**
**Co-requisite Unit/s**
- PUA FIR308B Employ personal protection at a hazardous material incident
UEPOPS316A Operate and Monitor Boiler Steam/Water Cycle

Modification History
Not Applicable

Unit Descriptor

1) This unit deals with the skills and knowledge required to operate, inspect and monitor boiler steam / water cycle.

Application of the Unit

3) This unit is intended to augment formally acquired competencies. It is suitable for employment-based programs under an approved contract of training.

License to practise

3.1) The skills and knowledge described in this unit do not require a licence to practise in the workplace. However, practice in this unit is subject to regulations directly related to Occupational Health and Safety and where applicable contracts of training such as apprenticeships.

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

2) There are no prerequisites units
Employability Skills Information
Refer to the Evidence Guide

Elements and Performance Criteria Pre-Content
5) Elements describe the essential outcomes of a unit of competency. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

<tr>
<td></td>
<td>4.3 Plant integrity and personnel safety are maintained through consultation with appropriate personnel, and with reference to plant, technical and operational documentation</td>
</tr>
</tbody>
</table>
ELEMENT | PERFORMANCE CRITERIA
--- | ---
5 | Monitor and inspect plant
5.1 | Plant to be monitored/inspected is physically identified
5.2 | Plant is monitored/inspected for normal operation or to detect deviations
5.3 | Corrective action taken is in accordance with enterprise/site procedures
5.4 | Appropriate personnel are notified when defects are detected
6 | Complete documentation
6.1 | Documentation is updated and plant problems, movements, and abnormalities and status are reported and logged in accordance with enterprise/site procedures

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

6) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of operating and monitoring boiler steam/water cycles for a permit to work.

The extent of the Essential Knowledge and Associated Skills required follows:

Evidence shall show that knowledge has been acquired for safe working practices of:

- Relevant Occupational Health and Safety regulations
- Relevant statutory legislation
- Relevant enterprise/site safety procedures
- Enterprise/site emergency procedures and techniques
- Relevant plant and equipment, its location and operating parameters
- Plant status
- Environmental legislation
- Enterprise recording procedures
- Communication principles
- Control and data acquisition systems
REQUIRED SKILLS AND KNOWLEDGE

- Computers and software
- Supervisory, alarm, protection and control equipment
- Emergency procedures
- Basic motor performance
- Basic pump and compressor performance
- Valve, damper and actuator types and characteristics
- Principles of venting/draining steam or water under extremely high temperature and pressure
- Thermodynamics
- The process

Specific skills needed to achieve the Performance Criteria:

- Apply relevant Occupational Health and Safety regulations
- Apply relevant statutory legislation
- Apply relevant enterprise/site safety procedures
- Apply enterprise/site emergency procedures and techniques
- Apply enterprise recording procedures
- Identify plant status
- Prepare plant/equipment for operation
- Organise resources
- Operate boiler water/steam cycle
- Apply diagnostic and testing techniques
- Identify and respond to abnormal plant operating conditions
- Plan and prioritise work
- Use relevant hand tools; Communicate effectively
- Apply data analysis techniques and tools
- Use diagrams, drawings and symbols.
Evidence Guide

EVIDENCE GUIDE

8) This provides essential advice for assessment of the unit of competency and must be read in conjunction with the Performance Criteria and the Range Statement of the unit and the Training Package Assessment Guidelines.

The Evidence Guide forms an integral part of this Competency Standard Unit and shall be used in conjunction with all components parts of this unit and, performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

8.1) Longitude competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the Industry's preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accord with Industry and, Regulatory policy in this regard.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Hence, sources of evidence need to be 'rich' in nature so as to minimise error in judgment.

Activities associated with normal every day work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments.
Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

**Critical aspects of evidence required to demonstrate competency in this unit**

8.2) Before the critical aspects of evidence are considered all prerequisites shall be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated Performance Criteria shall be demonstrated on at least two occasions in accordance with the "Assessment Guidelines - UEP06". Evidence shall also comprise:

- A representative body of Performance Criteria demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
• Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the Performance Criteria and Range Statement

• Apply sustainable energy principles and practices as specified in the Performance Criteria and Range Statement

• Demonstrate an understanding of the essential knowledge and associated skills as described in 6) Essential Knowledge and Associated Skills of this unit

• Demonstrate an appropriate level of skills enabling employment

• Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

• Demonstrated performance across a representative range of contexts from the prescribed items below:

  - Knowledge and application of relevant sections of: Occupational Health and Safety legislation; Statutory legislation; Enterprise/site safety procedures; Enterprise/site emergency procedures

  - Preparation and planning of work

  - Operation of boiler water/steam cycle

  - Operationally testing plant

  - Analysing plant faults

  - Monitoring plant operation

  - Dealing with an unplanned event by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

**Context of and specific resources for assessment**

8.3)

This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

• OHS policy and work procedures and instructions.

• Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

Competency Standards should be assessed in the workplace or simulated workplace and under the normal range of workplace conditions.

Assessment of this unit will be supported with documentary evidence, by means of endorsement stating type and application
of work.

In addition to the resources listed above in Context of assessment, evidence should show competency working, in limited spaces, with different types of plant and equipment as well as different structural/construction types and methods and in a variety of environments.

**Method of assessment**

8.4) This unit shall be assessed by methods given in Volume 1, Part 3 Assessment Guidelines.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

**Concurrent assessment and relationship with other units**

8.5) There are no recommended concurrent assessments with this unit, however in some cases efficiencies may be gained in terms of learning and assessment effort being concurrently managed with allied competency standard units where listed.

Nil

**Key competencies**

8.6) Evidence that particular key competencies have been achieved within this unit is in the context of the following Performance Criteria of evidence. See Volume 2, Part 4 for an explanation of Key competencies and levels of this Training Package.

<table>
<thead>
<tr>
<th>Key competencies</th>
<th>Example of Application</th>
<th>Performance Level</th>
</tr>
</thead>
<tbody>
<tr>
<td>How are ideas and information communicated within this competency?</td>
<td>Refer to the following example of application: Explain ideas and actions, make suggestions for alternative actions and deal with contingencies and non-routine situations.</td>
<td>2</td>
</tr>
<tr>
<td>How can information be collected, analysed and organised?</td>
<td>Refer to the following example of application: Information with regard to operations, faults and maintenance may be observed and monitored for analysis and organised into records and reports.</td>
<td>2</td>
</tr>
<tr>
<td>---</td>
<td>---</td>
<td>---</td>
</tr>
<tr>
<td>How are activities planned and organised?</td>
<td>Refer to the following example of application: Planning the required activity, to include co-ordination and use of equipment, materials and tools to avoid backtracking and rework.</td>
<td>1</td>
</tr>
<tr>
<td>How is team work used within this competency?</td>
<td>Refer to the following example of application: Share tasks and provide appropriate support to other team members in completion of work tasks to meet the team's goals.</td>
<td>2</td>
</tr>
<tr>
<td>How are mathematical ideas and techniques used?</td>
<td>Refer to the following example of application: Calculation of time to complete tasks, estimation of distances, levels, loads and material requirements.</td>
<td>1</td>
</tr>
<tr>
<td>How are problem solving skills applied?</td>
<td>Refer to the following example of application: Determine solutions which focus on long and short-term resolution of work task problems.</td>
<td>2</td>
</tr>
<tr>
<td>How is use of technology applied?</td>
<td>Refer to the following example of application: Access, communicate, measure and record information with regard to operations and performance of plant and equipment.</td>
<td>1</td>
</tr>
</tbody>
</table>
## Skills Enabling Employment

**8.7)** Evidence that competency in this unit incorporates skills enabling employment is in the context of the following performance. See Volume 2, Part 5 for definitions and an explanation of skills enabling employment.

<table>
<thead>
<tr>
<th>Skills for Employment</th>
<th>Example of Application</th>
</tr>
</thead>

Range Statement

RANGE STATEMENT

7) This relates to the unit of competency as a whole providing the range of contexts and conditions to which the Performance Criteria apply. It allows for different work environments and situations that will affect performance.

Systems, plant and/or equipment may include electrical supply switchboard(s) and transformers; electrical motors; valves and actuators (electric, hydraulic and pneumatic); supervisory, alarm, protection and control equipment; boiler circulation systems; boiler filling systems; boiler venting and draining systems; cooling water plant and equipment; filters; strainers; moisture removal devices; pressure control devices; safety devices; high and low pressure systems; and boiler water level indicators.

Safety standards may include relevant sections of Occupational Health and Safety legislation, enterprise safety rules, relevant state and federal legislation, national standards for plant and Australian standards.

Information and documentation sources may include verbal or written communications; enterprise safety rules documentation; equipment and alarm manuals; dedicated computer equipment; enterprise standing and operating instructions; and enterprise log books.

Technical and operational indicators may include stimuli (audio, smell, touch, visual), remote or local indicators and recorders and alarms (visible and or audible).

Communications may be by means of telephone, two way radio, pager, computer (electronic mail), operating log (written or verbal) and public address system.

Tests may include laboratory test for water quality and impurities, alarm testing, leak test and safety valve float.

Appropriate personnel to consult, give or receive direction may include, supervisor/team leader or equivalent, power plant operations personnel or equivalent, technical and engineering officers or equivalent, maintenance staff and contractor personnel.

Test, fault finding and operating tools may include power or hand tools.

Operating environment may be during inclement or otherwise harsh weather conditions, in wet/noisy/dusty/hot areas and during continuous operation.

Faults and abnormal operating conditions may include motor/pump/ actuator/valve failure/malfunctions, control equipment failure/malfunctions, loss of electrical supply to plant and equipment, excessive vibration pumps/motors, loss/low cooling water pressure, boiler tube leaks, low/high steam pressure/temperature, plant equipment failure and loss of control air supply.

Generic terms are used throughout this Training Package for vocational standard shall
RANGE STATEMENT
be regarded as part of the Range Statement in which competency is demonstrated. The
definition of these and other terms are given in Volume 2, Part 1.

Operations.
PMLORG301A Plan and conduct laboratory/field work

Modification History

Unit Descriptor
This unit of competency covers the ability to plan and complete tasks individually or in a team context. The tasks involve established routines and procedures using allocated resources with access to readily available guidelines and advice. Work plans may need to be modified with supervisor agreement to suit changing conditions and priorities. This unit of competency is based on, and equivalent to, the units PMLORG300A Follow established work plan and PMLTEAM300A Work efficiently as part of a team in PML99. This unit of competency has no prerequisites. This unit of competency is applicable to laboratory or technical assistants/officers and instrument operators working in all industry sectors covered by this Training Package. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section This competency in practice.

Application of the Unit

Pre-Requisites

Employability Skills Information

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance Criteria describe the level of performance required to demonstrate achievement of the element.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance Criteria</th>
</tr>
</thead>
</table>
| 1 Plan and organise daily work activities | 1.1 Clarify allocated work activities and required resources if necessary  
1.2 Prioritise work activities as directed  
1.3 Break down work activities into small achievable components and efficient sequences  
1.4 Review work plan in response to new information, urgent requests, changed situations or instructions from appropriate personnel  
1.5 Update work plan and communicate changes to appropriate personnel |
| 2 Complete allocated work | 2.1 Locate relevant workplace procedures for required tasks  
2.2 Undertake task(s) following prescribed and routine work related sequences  
2.3 Seek assistance from relevant personnel when difficulties cannot be handled  
2.4 Record completion of activities to confirm outputs in accordance with plan |
| 3 Identify and resolve work problems | 3.1 Recognise problems or opportunities for improved work performance  
3.2 Apply agreed problem solving strategies to consider possible causes and solutions  
3.3 Identify and access appropriate sources of help  
3.4 Consider available alternatives and keep them open before agreeing on the most appropriate action. |
| 4 Work in a team environment | 4.1 Cooperate with team members to negotiate and achieve agreed outcomes, timelines and priorities  
4.2 Recognise personal abilities and limitations when undertaking team tasks |
4.3 Confirm personal role and responsibility within the team for particular outputs

4.4 Demonstrate sensitivity to the diversity of other team members' backgrounds and beliefs

5 Update knowledge and skills as required

5.1 Recognise own strengths and weaknesses and take advantage of skill development opportunities.
Required Skills and Knowledge

Evidence Guide

The Evidence Guide describes the underpinning knowledge and skills that must be demonstrated to prove competence.

Critical aspects of competency
Competency must be demonstrated in the ability to perform consistently at the required standard. In particular, assessors should look to see that the candidate:
- conducts work based on ethical values and principles
- clarifies tasks and recognises resource needs
- follows relevant procedures
- recognises potential disruptions or changed circumstances and modifies work plan in conjunction with relevant personnel
- compensates for a variety of working environments (indoor, outdoor and night)
- seeks assistance from relevant personnel when difficulties arise
- achieves quality outcomes within timelines
- works effectively with team members who may have diverse work styles, cultures and perspectives
- promotes cooperation and good relations in the team.

Underpinning knowledge
Competency includes the ability to apply and explain:
- enterprise procedures covering:
  - customer service
  - quality
  - OHS and environmental legislative requirements
  - technical work that the candidate routinely performs
  - workplace agreements and employment conditions, such as:
    - workers compensation
    - industrial awards enterprise agreements
    - equal employment opportunity
    - anti discrimination and anti-harassment
    - ethical background relevant to the nature of the work, such as:
      - use of animals for research
      - genetic modification, gene therapy, cloning, stem cells
      - in vitro fertilisation
      - forensic testing of populations
      - importance of commercial confidentiality
      - problem solving strategies
      - interpersonal communication and conflict resolution techniques
      - relevant health, safety and environment requirements.

Assessment context and methods
This unit of competency is to be assessed in the workplace or simulated workplace environment.

The following assessment methods are suggested:
- review of a flowchart prepared by the candidate to show efficient sequencing of tasks
- observation of the candidate performing a range of technical tasks over sufficient time to demonstrate their handling of a variety of contingencies
review of documents detailing completed tasks, such as completed job cards, a report or suggestions for quality improvement
feedback from peers and team members
feedback from supervisors
written or oral questions to partly assess the candidate's ability to handle a range of contingencies and working in a team environment.
In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Questioning techniques should suit the language and literacy levels of the candidate.

**Interdependent assessment of unit**

This unit of competency may be assessed with:

- **PMLOHS302A Participate in laboratory/field workplace safety**
- **PMLCOM300B Communicate with other people**

**Technical units related to the tasks undertaken.**

**Resource implications**

Resources may include:

- enterprise procedures, equipment and materials for relevant technical tasks.

**This competency in practice**

**Manufacturing**

A plastic processing plant had to halt production because of a suspect raw material. The plant manager immediately requested the polymer testing laboratory to test and identify all batches of polypropylene additives and colouring agents. The laboratory team of three assistants and one technical officer allocated the workload amongst themselves to conduct the twelve different tests within a period of four hours to identify the 'out of specification' materials and report them to the production supervisor. All laboratory assistants had to reschedule their workplan, perform the required tests and assist each other to solve the production problem.

**Biomedical**

As part of a routine sequence, a technical officer is required to perform a series of tasks, including the calibration of instruments required for testing of blood samples. These tasks are to be completed within a specified timeframe to meet the output requirements of the enterprise. During the calibration of one of the instruments, the technician experiences difficulties that required expert technical assistance. The problem is referred to the appropriate person and is quickly resolved. Consequently, the officer is able to complete all necessary tasks within the prescribed timeframe and the required output is maintained.

**Food processing**

Each of the technical assistants working in the laboratory of a food processing company was dedicated to performing specific analyses. As a result, they often alternated between periods of inactivity and excessive workload (the latter case had the potential to compromise their health and safety and the accuracy of their food analyses). One of the contributing factors to the periods of intense activity was the need to quickly prepare standard solutions and reagents. The team discussed this problem and agreed that while it was not appropriate for each assistant to become competent to perform every analytical procedure, it was feasible for each person to be able to prepare solutions and reagents used by others. The team developed a central register in which impending shortages of these materials was noted. Each assistant referred to this register when no other work was due and prepared the materials on a 'first in, first out' basis unless a task was given a priority rating. The team found that this strategy more evenly distributed the workload over their shift, improved safety in the laboratory and reduced the risk of error.
Key Competencies
The seven key competencies represent generic skills considered for effective work participation. The bracketed numbering against each of the key competencies indicates the performance level required in this unit. These are stand-alone levels and do not correspond to levels in the Australian Qualifications Framework (AQF).
Level (1) represents the competence to undertake tasks effectively
Level (2) represents the competence to manage tasks
Level (3) represents the competence to use concepts for evaluating and reshaping tasks.

<tr>
<td>Level 1</td>
<td>Level 1</td>
<td>Level 2</td>
<td>Level 2</td>
<td>Level 1</td>
<td>Level 1</td>
<td>Level 1</td>
</tr>
</tbody>
</table>
Range Statement

The range of variables relates to the unit of competency as a whole. It allows for different work environments and situations that will affect performance. Where reference is made to industry Codes of Practice, and/or Australian/international standards, it is expected the latest version will be used. All work is performed ethically and professionally and includes:

- following enterprise policy and procedures, regulations and legislation
- behaving honestly and openly
- respecting others and treating them with courtesy and impartiality
- working diligently and responsibly
- ensuring confidentiality of information, including client identification and test results
- ensuring proprietary rights, intellectual property and copyright are protected
- clarifying personal values and ethics and analysing how they impinge on actions in the workplace.

Workplace activities may include but are not limited to performing:

- set up and pre-use checks of laboratory equipment
- calibration status checks
- sampling and testing following standard procedures
- maintenance and cleaning tasks.

Workplace procedures may include:

- standard operating procedures SOPs
- job cards, batch cards, production schedules
- job descriptions
- methods, recipes, procedures and protocols.

Problem solving may include:

- accessing relevant documentation
- identifying inputs and outputs
- sequencing a process
- identifying and rectifying a problem step
- obtaining timely help
- implementing preventative strategies wherever possible.

Each team member assists the rest of the team to organise and manage its workload. The team may:

- be ongoing with responsibility for particular services or functions, or project based
- have a mixture of full and part-time employees and contractors, laboratory, construction and production personnel
- be separated by distance and work at sites outside laboratory facilities.

The team operate within:

- small, medium and large contexts
- internal and external environments
- enterprise guidelines covering access and equity principles and practices, licensing requirements, industrial awards, enterprise bargaining agreements, Codes of Practice
- agreed responsibility and accountability requirements
- appropriate goals, objectives
- given resource parameters.

The work tasks of individual team members will vary according to the size of enterprise, the scope of the laboratory and their level of responsibility.
The team may use a variety of strategies to maintain work flow:
communicating critical events on shift
recognising shortages in reagents and problems with equipment
communicating quality breakdowns
recognising urgent and abnormal results to be processed
communicating and behaving in a courteous manner
being punctual.

**Health, safety and environment**
All operations to which this unit applies are subject to stringent health, safety and environmental (HSE) requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.
All operations assume the potentially hazardous nature of samples and require standard precautions to be applied. Users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council and State and Territory Departments of Health. All operations are performed in accordance with standard operating procedures.

**Unit Sector(s)**
PMLOHS301B Work safely with instruments that emit ionising radiation

Modification History

Unit Descriptor
This unit of competency covers the ability to safely store, transport and operate instruments that emit ionising radiation following established safe work practices and in accordance with licensing requirements. Examples include use of process control instrumentation, such as fluid level gauges using radioactive sources, on-site non-destructive testing of weldments using X-ray and gamma ray sources and density testing of asphaltic concrete.

This unit of competency has no prerequisites.

This unit of competency is applicable to laboratory or field operators working under supervision or direction of para-professionals, commonly in a construction materials testing or similar environment.

Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section This competency in practice.

5 Maintain records

5.1 Record observations, data and results in accordance with enterprise procedures

5.2 Maintain confidentiality of enterprise information

6 Perform emergency procedures

6.1 Identify potential emergency situations

6.2 Respond to emergencies in accordance with documented procedures

6.3 Report emergency situations to appropriate personnel.
Required Skills and Knowledge

Evidence Guide

The Evidence Guide describes the underpinning knowledge and skills that must be demonstrated to prove competence.

Critical aspects of competency

Competency must be demonstrated in the ability to perform consistently at the required standard. In particular, assessors should look to see that the candidate:
- keeps other personnel clear of radiation sources
- demonstrates emergency procedures
- performs and documents radiation surveys
- places the instrument into storage
- safely transports the instrument in a motor vehicle
- safely handles and uses the instrument
- observes, interprets and reports atypical situations
- communicates problems to appropriate personnel promptly.

Underpinning knowledge

Competency includes the ability to apply and explain:
- health, safety and emergency procedures relevant to radioactive devices
- factors affecting radiation intensity
- principles of external radiation protection and practical methods of minimising radiation exposure
- methods of measuring and detecting ionising radiation
- nature of radiation, different types of radiation, their characteristics, sources and shielding methods
- physiological effects of ionising radiation
- State or Territory licensing requirements
- national Codes of Practice
- general guidelines for safe handling of radiation sources.

Assessment context and methods

This unit of competency is to be assessed in the workplace or simulated workplace environment.

The following assessment methods are suggested:
- analysis of work completed by the candidate over a period of time to ensure accuracy, consistency and timeliness
- observation of candidate using the instruments in a range of work contexts
- review of enterprise documentation completed by the candidate
- feedback from peers and supervisors
- use of suitable simulation and/or a range of case studies/scenarios.

In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Questioning techniques should suit the language and literacy levels of the candidate.

Interdependent assessment of unit

This unit of competency may be assessed with:
- PMLOHS302A Participate in laboratory/field workplace safety
- PMLTEST411A Perform mechanical tests
- PMLDATA400A Process and interpret data.
Resource implications
Resources may include:
appropriate tools, instruments, equipment and materials
enterprise procedures, test methods, equipment manuals.

This competency in practice

Construction materials
Soil moisture density gauges are used extensively for measuring the density of soils, cement treated roadbase, roller compacted concrete and asphalt. They provide a non-destructive means of monitoring compaction operations during construction, so that additional rolling can be provided before the material sets or is covered with another layer. National and State Codes of Practice regulate the use of equipment that emits ionising radiation. States and Territories also have licensing and registration requirements for people involved in owning, storing, transporting or using such equipment.

Soil moisture density gauges are used on construction sites, so they are transported to the test site in motor vehicles. They must be protected from damage and stored safely and securely while not in use. The operator must ensure that bystanders are kept clear to minimise radiation exposure. Owners of gauges are required to have documented procedures and ensure that operators are adequately trained. To ensure the safety and integrity of the gauge, radiation surveys are required at regular intervals. A handheld radiation meter is used, and the results recorded.

Key Competencies
The seven key competencies represent generic skills considered for effective work participation. The bracketed numbering against each of the key competencies indicates the performance level required in this unit. These are stand-alone levels and do not correspond to levels in the Australian Qualifications Framework (AQF).

Level (1) represents the competence to undertake tasks effectively
Level (2) represents the competence to manage tasks
Level (3) represents the competence to use concepts for evaluating and reshaping tasks.

Range Statement

The range of variables relates to the unit of competency as a whole. It allows for different work environments and situations that will affect performance.
Where reference is made to industry Codes of Practice, and/or Australian/international standards, it is expected the latest version will be used.
Operations are performed in accordance with laboratory and/or enterprise procedures, and appropriate legislative requirements. These procedures and requirements include or have been prepared from:
Australian and international standards, such as:
AS2243 Safety in laboratories, Part 4 Ionising radiation and Part 5 Non-ionising radiation
Codes of Practice prepared by
Australian Radiation Protection and Nuclear Safety Agency (ARPANSA)
National Health and Medical Research Council (NHMRC)
State and territory legislation dealing with health and environmental protection
standard operating procedures (SOPs)
equipment manuals
equipment start-up, operation and shutdown procedures
calibration and maintenance schedules
quality manuals
enterprise recording and reporting procedures
production and laboratory schedules
material, production and product specifications
licensing requirements.

Instruments and equipment used may include:
soil moisture/density gauges
borehole logging probes
fluid density/level detectors
battery chargers
radiation monitors/doimeters
motor vehicles
storage areas for nuclear sources
documentation, including user manuals, enterprise safety manuals
radiation warning signs.
Typical skills may include:
performing radiation surveys using radiation monitors
using radiation dosimeters
transporting instruments containing radioactive materials
storing instruments containing radioactive materials
using instruments containing radioactive materials
maintaining instruments containing radioactive materials.
Hazards and problems may include:
jamming of the source rod in the exposed position
incidents during transportation
fire
theft of equipment containing radioactive sources
on-site accidents
keeping other personnel clear of instrument.
instrument breakdown. Safe working practices include the critical elements for radiation safety:
time (reduce the exposure time)
distance (maintain greatest distance possible at all times)
shielding (interpose as much radiation shielding between yourself and the radiation source as possible).

Health, safety and environment
All operations to which this unit applies are subject to stringent health, safety and environmental (HSE) requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.
All operations assume the potentially hazardous nature of samples and require standard precautions to be applied. Users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council and State and Territory Departments of Health. All operations are performed in accordance with standard operating procedures.

Unit Sector(s)
MSAPMPER200B Work in accordance with an issued permit

Modification History
Not applicable.

Unit Descriptor
This unit aims to ensure that people working under a permit to work understand the system, know the limitations of the permit under which they are working and comply with all the requirements of the permit. The people to whom this unit applies may be called ‘permit recipients’ or ‘permit holders’ by some organisations. Some organisations call ‘permits’ ‘clearances’

This unit covers the basic competency of working under a permit. Where entry to a confined space is required, then MSAPMPER205B Enter confined space is also required. The safety observer (standby person) competencies are covered by MSAPMPER202A Observe permit work. The issuing of permits is covered by MSAPMPER300B Issue work permits.

Application of the Unit
This competency applies to persons who are required to conduct work activities under the authority of an issued permit to work and within the context and requirements of that permit. This typically applies to all work done by maintenance staff and contractors, and also to any other non-process work performed on the plant. It includes:

- identifying the range and scope of work covered by the permit
- checking that the right type of permit has been issued for the type of work
- adequately preparing to undertake the work, including obtaining all necessary safety equipment and PPE
- undertaking the work strictly in accordance with the provisions of the permit
- maintaining correct housekeeping with permit activities
- completing work in accordance with the permit requirements
- querying or raising matters about the permit if the scope of work/nature of the tools to be used varies from that covered by the permit
- handing back the permit in accordance with procedures and obtaining appropriate sign off as required.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.
Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| 1. Apply for permit(s)                       | 1.1. Confirm the scope and location of the work to be done  
1.2. Identify the need for a work permit(s) for the work to be carried out.  
1.3. Identify the type of work permit required.  
1.4. Collate information required for the issue of the permit  
1.5. Apply for the permit following the organisations requirements |
| 2. Identify the scope of the permit.         | 2.1. Check that work to be done complies with the permit type.  
2.2. Check that the scope and location of work comply with the permit issued  
2.3. Check that the hazard controls specified on the permit are consistent with the hazard analysis  
2.4. Check that preparations specified on the permit have been completed  
2.5. Sign onto/receive the permit.             |
| 3. Prepare for permitted work.               | 3.1. Maintain safe working conditions and environment by using available isolation procedures, safety equipment and emergency procedures.  
3.2. Monitor plant conditions and hazards to ensure work under the permit remains safe.  
3.3. Ensure that appropriate safety equipment and clothing are selected and worn as required by the permit and relevant procedures.  
3.4. Inspect work area to ensure safety and compliance with permit requirements and procedures. |
| 4. Work in accordance with an issued permit. | 4.1. Use required hazard reduction/control measures.  
4.2. Comply with requirements of the permit including safety observer if required.  
4.3. Ensure compliance with scope, location and timeframe specified in the permit or seek re-authorisation as required  
4.4. Suspend job and make work site safe before leaving job.  
4.5. Formally seek and receive authorised extensions to the permit when required.  
4.6. Give end of day status report to permit issuer. |
| 5. Complete permit(s) to work.               | 5.1. Obtain new permit(s) or have existing permit(s) revalidated before work is recommenced.  
5.2. Check the work conducted against the issued permit(s) to ensure that all the nominated work requirements have been satisfied.  
5.3. Monitor general housekeeping to ensure that the site has been cleaned and restored. |
left in a clean and safe condition.

5.4. Ensure personal lockouts/tag outs/isolations are removed in accordance with procedures

5.5. Communicate status of the work conducted and the results of the permit to relevant personnel.

5.6. Complete documentation as required and have permit signed off when job is completed.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level, required for this unit.

Required skills:

Competence includes the ability to:

- access and interpret information relevant to specific tasks (eg labels, MSDSs hazchem signs)
- identify changes to conditions which may lead to the permit being revoked before the job is completed
- describe and/or explain hazards associated with tasks covered by the permit, types of tests required for the issue of work permits – the types of tests to include, atmospheric/oxygen/breathability, flammability/explosivity, toxicity/TWA, temperature, humidity
- the impact of the regulatory framework and organisation procedures under which the permit operates upon the particular job(s) requiring the permit.

Language, literacy and numeracy requirements

- This unit may require the ability to read and correctly interpret complex P&ID’s; speak clearly and unambiguously in English; and to explain, describe and verify sometimes complex needs and issues.
- Writing is required to the level of completing workplace forms.
- Numeracy is required to the level of being able to correctly differentiate between high and low pressures and temperatures, voltages or masses.

Required knowledge:

Knowledge and understanding of the relevant OHS and environmental requirements, in particular those relating to various situations requiring work permits, with an ability to implement the requirements in a manner that is relevant to the job. Knowledge of the organisation’s standard procedures and work instructions and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and in a manner relevant to the job.
Sufficient knowledge of all types of permits is required to ensure work is not carried out without the correct permit. This includes recognizing hot work and confined spaces.

Knowledge of regulatory frameworks should include:

- licence requirements for the job,
- company policy and procedures
- permit control systems
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

Assessment of this unit should demonstrate competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency.

Simulation may be required to allow for assessment of parts of this unit. Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

## Critical aspects for assessment and evidence required to demonstrate competency in this unit

Competence must be demonstrated in the ability to distinguish between situations requiring the major types of permit and to list the major requirements of each type of permit. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster.

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- provide reasons for a permit system
- recognise the importance of different work permits
- comply with permit conditions including the wearing of appropriate personal protective equipment (PPE)
- take appropriate action to resolve faults or report faults to appropriate personnel
- explain and implement incident response procedures.

Consistent performance should be demonstrated, e.g. look to see that:

- communications are timely and effective
- deviations from permit conditions are recognised, reported, corrected and re-authorization arranged
- actions specified in the permit/standard procedures are carried out
- all safety procedures are followed.

## Context of and specific resources for assessment

A holistic approach should be taken to the assessment.

Assessment will occur over a range of situations which may include disruptions to normal, smooth operation.
Competence in this unit may be assessed:

- on a plant/in the work place/a work situation
- by using a suitable simulation based on the actual plant and including walk throughs of the relevant competency components and/or a range of case studies/scenarios and role plays
- by questioning and using ‘what if’ scenarios both on the plant (during demonstration of normal operations and walk throughs of abnormal operations) and off the plant
- through a combination of these techniques.

These aspects may be best assessed using a range of simulations/scenarios/case studies and ‘what ifs’ as the stimulus with a walk through forming part of the response. These assessment activities should cover a range of problems, including new or unusual situations which may have been generated from the past incident history of the plant, incidents on similar plants around the world, hazard analysis activities and similar sources.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed. In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units.

While oral assessments may be appropriate there needs to be a written record for audit purposes.

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions which will be used to probe the reasoning behind the observable actions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Method of assessment

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources
<table>
<thead>

</tr>
</thead>
<tbody>
<tr>
<td>Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.</td>
<td></td>
</tr>
</tbody>
</table>
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

<table>
<thead>
<tr>
<th>Codes of practice/standards</th>
<th>Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.</th>
</tr>
</thead>
</table>

| Context                     | This unit typically applies to all work done by maintenance staff and contractors, and also to any other non-process work performed on the plant. All work is to be conducted using the appropriate personal protective equipment. The types of work permits may include:  
  - cold work/general permit to work  
  - excavation  
  - hot work  
  - vehicle entry  
  - minor repairs  
  - working at heights  
  - other special permits.  
  Note that entry to a **confined space** is covered by **PMPPER205B Enter confined space**. The Australian Standard (AS2865) definition given for confined space entry is used in this Training Package.  
  All operations are performed in accordance with standard operating procedures (SOPs).  
  Checks to ensure a workplace is safe may include:  
    - process isolations complete  
    - mechanical and electrical isolations in place  
    - atmospheric testing complete and atmosphere safe. If it is not safe and cannot be made safe, then appropriate measures are implemented as per SOPs.  
    - relevant personnel informed of work and agree that it is safe and appropriate to proceed. |

| Procedures                   | All operations are performed in accordance with procedures. Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards. These may include: |
• legislation/codes
• OHS legislation, codes of practice and guidance material
• EPA
• National and Australian standards
• licence and certification requirements
• internal permit control system.
• process isolations complete
• mechanical and electrical isolations in place
• atmospheric testing complete and atmosphere safe. If it is not safe and cannot be made safe, then appropriate measures are implemented as per SOPs.
• relevant personnel informed of work and agree that it is safe and appropriate to proceed.

### Information required for permit
Information required for a permit includes:
- work description
- tools to be used
- process/methods of work/SOPs
- MSDSs
- JHA/JSA/SWMSs

### Tools and equipment
This competency includes use of safety equipment and tools such as:
- eye protection (eg goggles)
- ear protection
- gloves
- clothing
- respirators and masks
- helmets
- safety footwear.

### Hazards
Typical hazards include:
- heat, smoke, dust or other atmospheric hazards
- sharp edges, protrusions or obstructions
- limited head spaces or overhangs
- equipment or product mass
- slippery surfaces, spills or leaks
- noise, rotational equipment or vibration.
### Problems

‘Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical problems may include:

- provision of the wrong permit
- incorrect information being supplied with the permit
- errors being made in the understanding of permit data
- failure to correctly correspond to the requirements of the permit
- failure to seek clarification when anomalies occur.

### Variables

Key variables to be monitored include:

- sites under which permit activities must be applied
- type of permit to be executed
- types of tools and equipment to be employed
- size of work team
- scope and urgency of work.

### Health, safety and environment (HSE)

All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

### Unit Sector(s)

HSE
FPIFGM3204A Fall trees manually (intermediate)

Modification History
Not Applicable

Unit Descriptor

Unit Descriptor
This unit specifies the outcomes required to assess, plan and safely carry out intermediate manual tree falling operations. This unit is intended for use in situations where the production of timber is not the primary focus of the activity. Compliance with licensing, legislative, regulatory or certification requirements may be required in various jurisdictions

This unit replaces FPIFGM111A Fall trees manually - intermediate (non-commercial/non-production)

Application of the Unit

Application of the Unit
This unit supports the attainment of skills and knowledge required for competent workplace performance in forest and forest products operations of all sizes. The unit applies to a forest environment and involves application of skills and knowledge at a tradesperson level. These skills and knowledge are to be used within the scope of the person's job and authority

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance Criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the Required Skills and Knowledge and/or the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1** Prepare and maintain falling equipment | 1.1 Applicable *Occupational Health and Safety (OHS)*, legislative and organisational requirements relevant to falling trees are identified and complied with  
1.2 Site environmental protection measures are adhered to in accordance with relevant legislation and regulations  
1.3 Work plan is reviewed and checked as required with appropriate personnel  
1.4 Tools and equipment are selected appropriate to work requirements and checked for operational effectiveness in accordance with manufacturer's recommendations  
1.5 Blunt or damaged chainsaw is detected, rectified and reported in accordance with workplace procedures  
1.6 Operational effectiveness of chainsaw is monitored to maintain falling safety and productivity  
1.7 Communication with others is established and maintained in accordance with OHS requirements |
| **2** Assess conditions and surroundings | 2.1 Site environmental concerns are identified and complied with in accordance with relevant national, state, and local legislation and/or regulations  
2.2 Environmental conditions are identified and assessed in accordance with work order requirements  
2.3 Awareness of environmental conditions and other personnel activity in the work area is maintained and falling activity modified  
2.4 General factors affecting falling requirements are determined and specific forest or site risks and hazards are assessed and controlled |
| **3** Assess tree and plan falling | 3.1 Tree falling sequence for individual trees is assessed and progressively planned  
3.2 Tree to be felled is located and growth is cleared to enable a visual assessment of falling characteristics  
3.3 Required falling direction is assessed and checked in accordance with planned falling  
3.4 Sequence of cuts to fall tree is planned in accordance with standard falling procedures  
3.5 Suitable escape route is selected and cleared of growth and other obstacles in accordance with environmental care principles and statutory requirements  
3.6 Personal limitations in safely falling trees with own |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
skills are assessed and assistance sought from appropriate personnel
3.7 Location and activity of other personnel in the work area is noted and monitored
4 Fall tree
4.1 All work is conducted using established safe operating practices and in accordance with workplace procedures
4.2 Tree falling operations are safely undertaken appropriate to site conditions and at a safe distance from other personnel in the work area
4.3 Unexpected characteristics of tree and other problems are identified, assistance sought and planning reviewed
4.4 Planned escape route is used when tree starts to fall and the fall and movement of tree on ground is monitored until stability is determined
4.5 Chainsaw is monitored for operational effectiveness and any faults, malfunctions or problems are reported in accordance with workplace procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit

Required skills include:
- comply with legislation, regulations, standards, codes of practice and established safe practices and procedures relating to intermediate manual tree falling operations
- use and maintain relevant tools, machinery and equipment
- identify problems and equipment faults and demonstrate appropriate response procedures
- use appropriate communication and interpersonal techniques and methods with colleagues and others
- accurately record and report workplace information, and maintain documentation
- use hand signals with other operators to maintain effective and safe tree falling
- recognise own limitations in assessing conditions and
trees for falling
- contribute to a tree assessment and plan and fall trees within the range of variables for trees and conditions
- recognise common diseases, pests and nutrition deficiencies
- calculate slopes and weights in the metric system
- applicable Commonwealth, State or Territory licensing, legislative, regulatory or certification requirements and codes of practice relevant to intermediate manual tree falling operations
- organisational and site standards, requirements, policies and procedures relating to intermediate manual tree falling operations
- principles of cultural diversity and access and equity
- environmental protection requirements, including the safe disposal of waste material
- established communication channels and protocols
- problem identification and resolution
- types of tools and equipment and procedures for their safe use, operation and maintenance
- identification and evaluation of structural defects in trees
- types and purposes of a range of cuts to fall trees
- hazards of operating a chainsaw and falling trees
- operational principles and limitations of a chainsaw
- procedures for recording, reporting and maintaining workplace records and information
- appropriate mathematical procedures for estimation and measurement

**KEY COMPETENCIES**

The seven key competencies represent generic skills considered necessary for effective participation by an individual in the workplace

Performance Level 1 - at this level, the candidate is required to undertake tasks effectively

Performance Level 2 - at this level, the candidate is required to manage tasks

Performance Level 3 - at this level, the candidate is required to use concepts for evaluating and reshaping tasks

<table>

### Evidence Guide

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

**Overview of assessment**

- A person who demonstrates competency in this unit must be able to provide evidence that they can safely and efficiently assess, plan and conduct tree falling operations in accordance with environmental and organisational requirements.

**Critical aspects for assessment and evidence required to demonstrate**

- Comply with applicable Commonwealth, State or Territory legislative and regulatory requirements and codes of practice, including OHS, environmental and organisational...
EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

**Competency in this unit**
- Comply with applicable licensing or certification requirements
- Communicate effectively and work safely with others including maintaining an awareness of other personnel activity in the work area
- Contribute to a tree assessment, plan and fall trees within the range of variables for trees and conditions
- Visually assess trees and determine falling characteristics
- Select, use and maintain appropriate tools and equipment and recognise faults, problems or malfunctions
- Safely operate and maintain a chainsaw

**Context of and specific resources for assessment**
- Competency is to be assessed in the workplace or realistically simulated workplace
- Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints
- Assessment of essential underpinning knowledge, other than confirmatory questions, will usually be conducted in an off-site context
- Assessment is to comply with relevant regulatory or Australian Standards requirements
- The following resources should be made available:
  - workplace location or simulated workplace
  - materials and equipment relevant to manual falling of trees (intermediate)
  - specifications and work instructions

**Method of assessment**
- Assessment must satisfy the endorsed Assessment Guidelines of the FPI05 Training Package
- Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge
- Assessment must be by direct observation of tasks, with questioning on underpinning knowledge and it must also reinforce the integration of key competencies
- Assessment methods must confirm the ability to access and correctly interpret and apply the essential underpinning knowledge
EVIDENCE GUIDE
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package

- Assessment may be applied under project-related conditions (real or simulated) and require evidence of process
- Assessment must confirm a reasonable inference that competency is able not only to be satisfied under the particular circumstance, but is able to be transferred to other circumstances
- Assessment may be in conjunction with assessment of other units of competency
- The assessment environment should not disadvantage the candidate
- Assessment practices should take into account any relevant language or cultural issues related to Aboriginality, gender or language backgrounds other than English
- Where the participant has a disability, reasonable adjustment may be applied during assessment
- Language and literacy demands of the assessment task should not be higher than those of the work role

Range Statement
RANGE STATEMENT
The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below

OHS requirements are to be in accordance with Commonwealth, State or Territory legislation and regulations, and organisational safety policies and procedures. Requirements may include:

- the use of personal protective equipment and clothing
- safety equipment
- first aid equipment
- fire fighting equipment
- hazard and risk control
- elimination of hazardous materials and substances
- safe forest practices including required actions relating to forest fire
- manual handling including shifting, lifting and carrying

Legislative requirements are to be in accordance

- award and enterprise agreements
- industrial relations
RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below

with applicable legislation from all levels of government that affect organisational operation. Requirements may include:

- Australian Standards
- confidentiality and privacy
- OHS
- the environment
- equal opportunity
- anti-discrimination
- relevant industry codes of practice
- duty of care
- heritage and traditional land owner issues

Organisational requirements may include legal, organisational and site guidelines, policies and procedures relating to own role and responsibility, quality assurance, procedural manuals, quality and continuous improvement processes and standards, OHS, emergency and evacuation, ethical standards, recording and reporting, access and equity principles and practices, equipment use, maintenance and storage, environmental management (waste disposal, recycling and re-use guidelines)

Falling may require the use of multiple back-cuts

Trees for falling will have the following characteristics: height not more than 40 metres, lean and weight distribution which can be adapted to falling direction with the use of wedges and or control with hinge wood, single leader, sound wood condition in barrel

Environmental protection measures may include noise, ground growth, canopy, general forest lean, wind speed and direction, fallen trees, density of trees, ground slope, soil and water protection, ground hazards, obstacles. Measures may also include contingencies for modifying operations during wet or other adverse weather conditions

Work plan is to include information and instructions relevant to tree falling operations including processing location details and trees to be felled and retained. Information may also include general environmental requirements, site plan and environmental features

Appropriate personnel may include supervisors, clients, colleagues, line management

Tools and equipment may include warning signs, chainsaw and components, personal protective equipment and
RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording in the Performance Criteria is detailed below.

- clothing, first aid equipment, maintenance requirements, fuel

**Maintenance**
- of chainsaw and components may include sharpening and making adjustments as required

**Communication**
- may include verbal and non-verbal language, constructive feedback, active listening, questioning to clarify and confirm understanding, use of positive, confident and cooperative language, use of language and concepts appropriate to individual social and cultural differences, control of tone of voice and body language, hand signals

**Environmental conditions**
- may relate to ground growth, canopy, general forest lean, ground slope, ground hazards, wind speed and direction, wet weather including ice and snow

**Conditions**
- in which falling will be undertaken include ground slope not more than 15 degrees, moderate wind speed, absence in growth of fallen trees preventing complete fall, works with general supervision available to provide assistance related to planning, falling

**Limitations**
- may relate to job role and responsibilities, own competency level, industry requirements, own understanding of risk identification processes, own interpretation of legislation, regulations and procedures, complying with OHS requirements

**Assistance**
- may be required in situations where cuts made may lead to loss of control of tree in falling, to confirm and adjust cutting techniques in response to movement and condition of tree, to help clear trees that hang up during falling

**Visual assessment**
- may cover size, weight distribution, lean, species, multi leaders, soundness of timber, growth characteristics and stresses

Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.
REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
      - report faults
      - use language and concepts appropriate to cultural differences
      - use and interpret non-verbal communication, such as hand signals
      - written skills to record maintenance in logbook
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - numeracy skills to apply measurements and make calculations
  - organisational skills, including the ability to plan and set out work
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction terminology
- EPT materials
- EPT charges and fasteners
- equipment safety manuals and instructions
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- processes for the calculation of material requirements
- quality requirements
- relevant Acts, regulations and codes of practice
REQUIRED SKILLS AND KNOWLEDGE

- security and storage procedures for equipment and charges
- types, characteristics, uses and limitations of plant, tools and equipment
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- fix metal or timber to a steel, concrete or masonry base on one project of each to job specifications, including:
  - completion of stripping and assembly of the tool
  - completing log of serviceability
  - maintaining and cleaning
  - selecting charges and fasteners applicable to base material and material being fixed
  - misfire procedures
  - using attachments
  - complying with storage and security regulations and OHS requirements for the working environment
  - selecting signage
  - test fire.

Context of and specific

This competency is to be assessed using standard
EVIDENCE GUIDE

resources for assessment

and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.
EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised
RANGE STATEMENT

organisational or external personnel

- manufacturer specifications and instructions where specified
- memos
- MSDS
- organisation work specifications and requirements
- plans and specifications
- regulatory and legislative requirements pertaining to using EPT
- relevant Australian standards
- safe work procedures related to using EPT
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules.

Planning and preparation include:

- work site inspection
- equipment defect identification
- assessment of conditions and hazards
- determination of work requirements.

Safety (OHS) is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling of materials
- hazard control
- hazardous materials and substances
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
RANGE STATEMENT

- working in proximity to others
- working with dangerous materials
- organisational first aid
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of tools and equipment
- workplace environment and safety.

**Tools and equipment** include:
- direct action EPT
- indirect action EPT
- clamps and levels.

**Materials** include:
- timber
- metals
- patented fasteners.

**Environmental requirements** include:
- clean-up management
- noise and dust
- vibration
- waste management.

**Statutory and regulatory authorities** include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Minimum distance for set out of fasteners** is to be in accordance with:
- regulated minimum distances
- bases, including concrete, masonry or steel.

**Use of EPT** includes:
- stripping and assembling tools
- completing log of serviceability
- maintaining and cleaning tools
- selecting charges and fasteners applicable to the base material and material being fixed
- misfire procedures
- using attachments
- complying with storage and security regulations and OHS requirements for the working environment
- selecting signage
- test fire.

**Attachments** include:
- channel, rebate and other manufacturer attachments.
RANGE STATEMENT

*Fastener and charge* include:

- firing a test shot with misfire procedures, complying with the regulated safety procedure for misfire.

Unit Sector(s)

Unit sector

Functional area

REQUISITE UNITS

Co-requisite units

Co-requisite units

Nil

Functional area

Nil

Functional area
HLTFA402B Apply advanced first aid

Modification History

Unit Descriptor
This unit deals with the provision of advanced first aid response, life support, management of casualty(s), the incident and other first aiders, until the arrival of medical or other assistance, and provision of support to other providers
This unit builds on HLTFA301B: Apply first aid to include additional skills and use of a range of equipment

Application of the Unit
Training Package users should ensure implementation is consistent with any specific workplace and/or relevant legislative requirements in relation to first aid, including State/Territory requirements for currency
Application of these skills and knowledge should be contextualised as required to address specific industry, enterprise or workplace requirements and to address specific risks and hazards and associated injuries

Licensing/Regulatory Information

Pre-Requisites

Employability Skills Information
The required outcomes described in this unit of competency contain applicable facets of Employability Skills
The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements

Elements and Performance Criteria Pre-Content
Elements define the essential outcomes of a unit of competency.
The Performance Criteria specify the level of performance required to demonstrate achievement of the Element. Terms in italics are elaborated in the Range Statement.
# Elements and Performance Criteria

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td><strong>Assess the situation</strong></td>
</tr>
<tr>
<td></td>
<td>1.1 Identify, assess and minimise <strong>hazards</strong> that may pose a risk of injury or illness to self and others</td>
</tr>
<tr>
<td></td>
<td>1.2 Assess <strong>risks</strong> to first aider and others and determine appropriate response to ensure prompt control of situation</td>
</tr>
<tr>
<td></td>
<td>1.3 Ascertain and prioritise need(s) for emergency services/medical assistance and undertake triage where required</td>
</tr>
<tr>
<td></td>
<td>1.4 Deploy <strong>resources</strong> to appropriate locations as required in line with workplace procedures</td>
</tr>
<tr>
<td>2</td>
<td><strong>Manage the casualty(s)</strong></td>
</tr>
<tr>
<td></td>
<td>2.1 Determine and explain the nature of <strong>casualty’s injury/condition</strong> and relevant first aid procedures to provide comfort</td>
</tr>
<tr>
<td></td>
<td>2.2 Respond to the casualty in a culturally aware, sensitive and respectful manner</td>
</tr>
<tr>
<td></td>
<td>2.3 Seek consent for <strong>management</strong> of the casualty's injury/illness from person(s) where relevant</td>
</tr>
<tr>
<td></td>
<td>2.4 Determine and implement welfare procedure according to casualty(s) needs</td>
</tr>
<tr>
<td></td>
<td>2.5 Control effects of injury and determine and apply appropriate <strong>first aid management</strong> to meet the needs of the casualty and situation</td>
</tr>
<tr>
<td></td>
<td>2.6 Assist with <strong>self-medication</strong> in accordance with State/Territory regulations, legislation and policies and manufacturer's/supplier's instructions and subject to casualty's regime</td>
</tr>
<tr>
<td></td>
<td>2.7 Monitor <strong>casualty's condition</strong> and respond in a timely manner in accordance with effective first aid principles</td>
</tr>
<tr>
<td></td>
<td>2.8 Correctly operate basic life support <strong>equipment</strong> where appropriate according to relevant legislation and manufacturer's/supplier's instructions</td>
</tr>
</tbody>
</table>
2.9 Apply safety procedures for operation of pressurised gases

2.1 Use safe manual handling techniques

2.1 Finalise management according to casualty's needs and first aid principles

3 Coordinate first aid activities until arrival of medical assistance

3.1 Identify available resources required and establish communication links with appropriate personnel, emergency management services and medical assistance as appropriate

3.2 Deploy correct amount of resources to appropriate locations in an effective manner to ensure timely arrival of required resources

3.3 Document the provision of resources and recommend modifications as required

3.4 Monitor the condition of casualties in accordance with first aid principles and workplace procedures

3.5 Coordinate evacuation of casualties according to relevant evacuation procedures

3.6 Arrange support services for personnel involved in the incident in accordance with relevant principles and procedures

4 Communicate essential incident details

4.1 Maintain communication with relevant personnel using appropriate media and equipment

4.2 Communicate first aid information with other providers/carers as appropriate to meet their needs and in accordance with workplace procedures

4.3 Calmly provide information to reassure casualty, adopting a communication style to match the casualty's level of consciousness

4.4 Prepare an incident report in line with organisation requirements

4.5 Maintain confidentiality of records and information in line with privacy principles and statutory and/or organisation policies
5 Evaluate the incident

5.1 Evaluate management of the incident and where required develop an action plan in consultation with relevant parties

5.2 Participate in debriefing/evaluation in order to improve future operations and address individual's needs

5.3 Formulate and review contingency planning to identify and select alternative management principles and procedures as required
Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Essential knowledge:

Working knowledge of:
legal responsibilities and duty of care, including confidentiality
basic anatomy (skeleton, muscles, joints, bones), physiology and toxicology
ARC Guidelines and/or State/Territory regulations, legislation and policies relating to provision of first aid
procedures for dealing with major and minor accidents in the workplace
infection control principles and procedures, including using standard precautions
how to gain access to and interpret material safety data sheets (MSDSs)
company/organisation standard operating procedures (SOPs)
priorities of management in first aid
occupational health and safety requirements in the provision of first aid.
capabilities of emergency management services
first aiders' skills and limitations
safe storage and handling procedures for pressurised gases
advanced resuscitation techniques as per HLTFA404A Apply advanced resuscitation techniques

First aid management procedures in accordance with ARC Guidelines, state/territory regulations, legislation and policies and organisation requirements for conditions identified in the Range Statement and including:
use of AED, oxygen, bronchodilator
spinal care
management of anaphylactic shock reaction
use of analgesic gases

Incident management procedures:
manual handling, hazardous substances, dangerous goods or chemicals
basic triage for a multiple casualty incident
safe access to the casualty
awareness of confined spaces and dangerous places
removal of casualty to safe area, if appropriate
coordinate activities of other first aiders, if applicable

First aid management procedures may also relate to emergency childbirth
Complications and associated methods of management for conditions identified in the Range Statement
State and territory regulatory requirements relating to currency of skill and knowledge
Social issues, especially in particular workplace or community context(s) in which first aid is to be applied, including:
importance of debriefing
need to be culturally aware, sensitive and respectful
confidentiality
own skills and limitations

Awareness of stress management techniques and available support
Safety procedures for the operation of pressurised gases

**Essential skills:**

Ability to:
Manage specific injuries/illnesses and conditions as identified in the Range Statement for this competency unit
Conduct an initial casualty assessment
Plan an appropriate first aid response in line with established first aid principles, policies and procedures, ARC Guidelines and/or State/Territory regulations, legislation and policies and industry requirements and respond appropriately to contingencies in line with own skills
Apply advanced resuscitation techniques as per HLTFA404A Apply advanced resuscitation techniques
Use a range of first aid equipment as outlined in the Range Statement
Demonstrate the application of first aid principles
Comply with OHS legislation
Provide assistance with self-medication as per subject's own medication regime and in line with State/Territory legislation, regulations and policies and any available
medical/pharmaceutical instructions

Administer medication in line with State/Territory regulations, legislation and policies and any available medical/pharmaceutical instructions

Demonstrate:
safe manual handling
adequate infection control procedures
consideration of the welfare of the casualty
safe storage and handling procedures for pressurised gases

Prepare a written incident report or provide information to enable preparation of an incident report

Interpret and use listed documents

Communicate effectively and assertively and show leadership in an incident

Make prompt and appropriate decisions relating to managing an incident in the workplace

Use literacy and numeracy skills as required to read, interpret and apply guidelines and protocols

Call an ambulance and/or medical assistance according to relevant circumstances and report casualty's condition

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.
Critical aspects of assessment:

Assessment must include demonstrated evidence of specified Essential Knowledge and Essential Skills identified in this competency unit.

Competence should be demonstrated working individually and, where appropriate, as part of a first aid team.

Consistency of performance should be demonstrated over the required range of situations relevant to the workplace or community setting.

Currency of first aid knowledge and skills is to be demonstrated in line with state/territory regulations, legislation and policies, ARC and industry guidelines.

Method of assessment may include:

Skills in performing first aid procedures are to be assessed through demonstration, with questioning to confirm essential knowledge.

Skills may be assessed through simulations, using anatomical models, manikins or in a high fidelity simulation centre.

For assessment purposes, demonstration of skills in CPR procedures requires using a model of the human body (resuscitation manikin) in line with ARC Guidelines.
Access and equity considerations:

All workers in the health industry should be aware of access and equity issues in relation to their own area of work.

All workers should develop their ability to work in a culturally diverse environment.

In recognition of particular health issues facing Aboriginal and Torres Strait Islander communities, workers should be aware of cultural, historical and current issues impacting on health of Aboriginal and Torres Strait Islander people.

Assessors and trainers must take into account relevant access and equity issues, in particular relating to factors impacting on health of Aboriginal and/or Torres Strait Islander clients and communities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Contextualisation to address specific requirements may include:

Focus on first aid management of specific types of injury.

First aid provision under specific constraints or circumstances (eg. in confined spaces, in maritime work environment or in work environment involving identified risks/hazards).
First aid management must take into account:

- Workplace policies and procedures
- Industry/site specific regulations, codes etc.
- OHS requirements
- State and territory workplace health and safety requirements

A hazard is:

- A source or situation with the potential for harm in terms of human injury or ill-health, damage to property, the environment, or a combination of these

Hazards may include:

- Physical hazards
- Biological hazards
- Chemical hazards
- Hazards associated with manual handling

Risks may include:

- Risks from worksite equipment, machinery and substances
- Risks from first aid equipment (oxygen cylinders, AED)
- Environmental risks
- Exposure to blood and other body substances
- Risk of further injury to the casualty
- Risks associated with the proximity of other workers and bystanders
- Risks from vehicles
- Fallen power lines, step and touch potential
Casualty's condition is managed for:

- Abdominal injuries
- Airway obstruction
- Allergic reactions
- Altered and loss of consciousness
- Bleeding
- Burns - thermal, chemical, friction, electrical
- Chest pain
- Injuries: cold and crush injuries; eye and ear injuries; head, neck and spinal injuries; minor skin injuries; needle stick injuries; soft tissue injuries including sprains, strains, dislocations
- Near drowning
- Envenomation - snake, spider, insect and marine bites
- Environmental conditions such as hypothermia, hyperthermia, dehydration, heat stroke
- Fractures
- Medical conditions, including cardiac conditions, epilepsy, diabetes, asthma and other respiratory conditions
- No signs of life
- Pain relief
- Poisoning and toxic substances (including chemical contamination)
- Respiratory distress
- Shock
- Seizures
- Stroke
- Substance misuse - all drugs and alcohol, including illicit drugs
First Aid management skills must include in accordance with ARC Guidelines, State/Territory regulations, legislation and policies and industry requirements:

- Administration of analgesia
- CPR
- Infection control
- AED
- Identification and management of anaphylactic shock reaction in accordance with ARC Guidelines, State/Territory regulations, legislation and policies and industry requirements
- Oxygen administration

First aid management must account for:

- Location and nature of the workplace
- Environmental conditions eg electricity (high or low voltage), biological risks, weather, motor vehicle accidents
- Location of emergency services personnel
- Number of casualties and potential casualties
- Use and availability of first aid equipment, resources and pharmaceuticals
- Types of dangers/risks to the casualty and any others in the vicinity of the situation
- Confined spaces, subject to industry need

Medications may include in accordance with ARC Guidelines, State/Territory regulations, legislation and policies and industry requirements:

- Oxygen
- Analgesics
- Bronchodilators
- Casualty's own medications
- Auto-injectors
Resources and equipment are used appropriate to the risk to be met and may include:

- Oxygen resuscitation/cylinders
- AED
- Thermometers
- Auto-injectors
- Back boards
- Stretchers
- Soft bag resuscitator
- First aid kit
- Casualty's medication
- Analgesic inhalers
- Analgesic gas equipment
- Resuscitation mask or barrier
- Spacer device
- Cervical collars
Information to be documented may include:

- Time
- Location
- Description of injury
- First aid management
- Fluid intake/output, including fluid loss via:
  - blood
  - vomit
  - faeces
  - urine
- Administration of medication including:
  - time
  - date
  - person administering
  - dose
- Vital signs

Established first aid principles include:

- Checking the site for danger to self, the casualty and others and minimising the danger
- Checking and maintaining the casualty's airway, breathing and circulation

Unit Sector(s)
CPPSIS3006A Provide field support services

Modification History
Not Applicable

Unit Descriptor
Unit descriptor This unit of competency specifies the outcomes required to provide field support services. It requires the ability to work with others on site to perform key organisational requirements within a spatial information services framework, working from site drawings and specifications. Functions would be carried out under supervision, often in a team environment, and within organisational guidelines.

Application of the Unit
Application of the unit This unit of competency supports the application of communication, interpersonal and teamwork skills, and the use of technology. The skills and knowledge acquired upon completion of this unit would support the needs of employees in the spatial information services industry sector in positions such as field coordination and data collection.

While no licensing, legislative, regulatory or certification requirements apply holistically to this unit at the time of publication, relevant federal, and state or territory legislation, regulations and codes of practice impact upon this unit (see unit performance criteria and range statement).

Licensing/Regulatory Information
Refer to Application of the Unit
Pre-Requisites

Prerequisite units Nil

Employability Skills Information

Employability skills The required outcomes described in this unit of competency contain applicable facets of employability skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged, will assist in identifying employability skills requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Plan and prepare for support task. | 1.1 Requirements of the job are clarified with relevant personnel according to organisational guidelines.  
1.2 Tools, equipment and supplies appropriate to the environment are selected and prepared according to specifications.  
1.3 Safety requirements for the protection of site personnel, the public and the environment are determined.  
1.4 Plans are examined to determine the location of services.  
1.5 Personal protective equipment is used according to OHS guidelines.  
1.6 Skills and knowledge are updated to accommodate changes in field support services. |
| 2 Execute support tasks. | 2.1 Barricades, protective works and signs are erected, when required according to organisational guidelines.  
2.2 Surface positions are determined and marked according to accepted standards using information available from site drawings and references, and relevant personnel.  
2.3 Support tasks are carried out under direction and according to specifications.  
2.4 Skills and knowledge are updated to accommodate changes in equipment and operating procedures. |
| 3 Finalise the task. | 3.1 Site is restored as near as practicable to original condition.  
3.2 Tools and equipment are cleaned and stored in a secure location.  
3.3 Repair work is organised for unsafe or faulty tools and equipment.  
3.4 All required spatial business documentation is completed accurately and promptly according to organisational guidelines. |

## Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the essential skills and knowledge and their level, required for
REQUIRED SKILLS AND KNOWLEDGE

this unit.

Required skills:

- ability to relate to people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities
- ability to select and use tools appropriately
- communication skills to:
  - discuss vocational issues effectively with colleagues
  - impart knowledge and ideas through oral, written and visual means
- computer skills
- first aid (basic)
- interpersonal skills e.g. cooperation and flexibility
- literacy skills to:
  - assess and use workplace information
  - interpret and understand legal, financial and procedural requirements
  - process workplace documentation
  - read and record data
- numeracy skills to:
  - accurately record and collate
  - undertake basic computations
- organisational skills to prioritise daily activities
- spatial skills to apply understanding of height, depth, breadth, dimension and position to actual operational activity and virtual representation
- technological skills (basic)
- time management skills.

Required knowledge and understanding:

- industry ethics and practices
- legislation as it applies to the spatial information services industry sector (basic)
- OHS requirements
- safe work practices
- spatial data measuring and recording
- work allocation procedures.

Evidence Guide

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

**Overview of assessment**

This unit of competency could be assessed on its own or in combination with other units relevant to the job function, for example units CPPSIS3007A Select, operate and maintain equipment and supplies, and CPPSIS3008A Transfer personnel and loads.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

A person who demonstrates competency in this unit must be able to provide evidence of:

- carrying out task instructions
- demonstrating critical aspects of working safely
- managing basic risk
- providing support in determining and marking positions
- understanding the nature of spatial projects.

**Specific resources for assessment**

Resource implications for assessment include access to:

- assessment instruments, including personal planner and assessment record book
- assignment instructions, work plans and schedules, policy documents and duty statements
- registered training provider of assessment services
- relevant guidelines, regulations and codes of practice
- suitable venue and equipment.

Access must be provided to appropriate learning and assessment support when required.

Where applicable, physical resources should include equipment modified for people with disabilities.

**Context of assessment**

Holistic: based on the performance criteria, evidence guide, range statement, and required skills and knowledge.

**Method of assessment**

Demonstrated over a period of time and observed by the assessor (or assessment team working together to conduct the assessment).

Demonstrated competency in a range of situations, that may include customer/workplace interruptions and involvement in related activities normally experienced in the workplace.

Obtained by observing activities in the field and reviewing induction information. If this is not practicable, observation in realistic simulated environments may be
substituted.

**Guidance information for assessment**

Assessment requires that the clients' objectives and industry expectations are met. If the clients’ objectives are narrowly defined or not representative of industry needs, it may be necessary to refer to portfolio case studies of a variety of spatial information services requirements to assess competency.

Oral questioning or written assessment and hypothetical situations (scenarios) may be used to assess underpinning knowledge (in assessment situations where the candidate is offered a preference between oral questioning or written assessment, questions are to be identical).

Supplementary evidence may be obtained from relevant authenticated correspondence from existing supervisors, team leaders or specialist training staff.

All practical demonstration must adhere to the safety and environmental regulations relevant to each State or Territory.

Where assessment is for the purpose of recognition (recognition of current competencies [RCC] or recognition of prior learning [RPL]), the evidence provided will need to be authenticated and show that it represents competency demonstrated over a period of time.

In all cases where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge.

Assessment processes will be appropriate to the language and literacy levels of the candidate and any cultural issues that may affect responses to the questions, and will reflect the requirements of the competency and the work being performed.
Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording in the performance criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

### Relevant personnel
relevant personnel may include:
- colleagues
- staff or employee representatives
- supervisors or line managers
- suppliers
- users.

### Organisational guidelines
organisational guidelines may include:
- code of ethics
- company guidelines
- legislation relevant to the work or service function, including equal employment opportunity (EEO)
- manuals
- OHS policies and procedures
- personnel practices and guidelines outlining work roles and responsibilities.

### Equipment and supplies
equipment and supplies may include:
- data recording equipment
- measuring instruments
- personal computer-based digitising boards
- tools
- vehicles.

### Specifications
specifications may include:
- budget
- data capture methods
- personnel required
- project deliverables
- resources needed
- timelines.

### Personal protective equipment
personal protective equipment may include:
- breathing apparatus
- gloves
- helmets
- overalls
- masks and respirators
- safety boots
- safety glasses
- safety vests
• sun protection equipment.
• Australian standards
• development of site safety plan
• identification of potential hazards
• inspection of work sites
• training staff in OHS requirements
• use of equipment and signage.

**OHS may include:**

**Accepted standards may include:**

- Environment Protection Authority (EPA) recommendations
- state, territory and federal legislative requirements
- manufacturer instructions and specifications
- OHS standards
- organisational guidelines
- relevant industry codes of practice.

**Support tasks may include:**

- equipment maintenance
- identifying, determining and marking positions
- obtaining supplies
- recording data
- driving.

**Spatial business documentation may include:**

- databases
- detailed technical description of the spatial data and its qualifiers
- emails and faxes
- quotations and estimates
- standard letters
- tax invoices
- statements.

**Unit Sector(s)**

**Unit sector**

Spatial information services
BSBWOR203A Work effectively with others

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to work in a group environment promoting team commitment and cooperation, supporting team members and dealing effectively with issues, problems and conflict. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to individuals who perform a range of routine tasks using a limited range of practical skills and fundamental knowledge of teamwork in a defined context under direct supervision or with limited individual responsibility. |

Licensing/Regulatory Information

Not applicable.

## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Develop effective workplace relationships | 1.1. Identify own **responsibilities and duties** in relation to **workgroup members** and undertake activities in a manner that promotes cooperation and good relationships  
1.2. Take time and resource constraints into account in fulfilling work requirements of self and others  
1.3. Encourage, acknowledge and act upon constructive **feedback** provided by others in the workgroup |
| 2. Contribute to workgroup activities | 2.1. Provide **support to team members** to ensure workgroup goals are met  
2.2. Contribute constructively to workgroup goals and tasks according to organisational requirements  
2.3. Share **information** relevant to work with workgroup to ensure designated goals are met  
2.4. Identify and plan **strategies/opportunities for improvement** of workgroup in liaison with workgroup |
| 3. Deal effectively with issues, problems and conflict | 3.1. Respect differences in personal values and beliefs and their importance in the development of relationships  
3.2. Identify any linguistic and cultural differences in communication styles and respond appropriately  
3.3. Identify issues, problems and conflict encountered in the workplace  
3.4. Seek assistance from workgroup members when issues, problems and conflict arise and suggest possible ways of dealing with them as appropriate or refer them to the appropriate person |
### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

#### Required skills

- literacy skills to read and understand the organisation's policies and work procedures, to write simple instructions for particular routine tasks and to interpret information gained from correspondence
- communication skills to request advice, to receive feedback and to work with a team
- technology skills to select and use technology appropriate to a task
- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities.

#### Required knowledge

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
  - anti-discrimination legislation
  - ethical principles
  - codes of practice
  - privacy laws
  - occupational health and safety (OHS)
- organisational policies, plans and procedures
- workgroup member responsibilities and duties, and relationship to individual responsibilities and duties.
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>

</table>
| **Evidence of the following is essential:** | • direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate  
• analysis of responses to case studies and scenarios  
• demonstration of techniques  
• observation of demonstrated techniques in resolving conflict  
• observation of presentations  
• review of documentation identifying and planning strategies/opportunities for workgroup improvement. |
# Range Statement

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Responsibilities and duties may include: | Code of Conduct  
job description and employment arrangements  
organisation's policy relevant to work role  
skills, training and competencies  
supervision and accountability requirements including OHS  
team structures |
| --- | --- |
| Workgroup members may include: | coach/mentor  
other members of the organisation  
peers/work colleagues/team/enterprise  
supervisor or manager |
| Feedback on performance may include: | formal/informal performance appraisals  
obtaining feedback from clients  
obtaining feedback from supervisors and colleagues  
personal, reflective behaviour strategies  
routine organisational methods for monitoring service delivery |
| Support to team members may include: | explaining/clarifying  
helping colleagues  
problem-solving  
providing encouragement  
providing feedback to a team member  
undertaking extra tasks if necessary |
| Information to be shared may include: | acknowledging satisfactory performance  
acknowledging unsatisfactory performance  
assisting a colleague  
clarifying the organisation's preferred task completion methods  
encouraging colleagues  
open communication channels  
workplace hazards, risks and controls |
**RANGE STATEMENT**

*Strategies/opportunities for improvement* may include:

- career planning/development
- coaching, mentoring and/or supervision
- formal/informal learning programs
- internal/external training provision
- performance appraisals
- personal study
- recognition of current competence (RCC)/skills recognition/initial assessment
- work experience/exchange/opportunities
- workplace skills assessment

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Manipulate data | 1.1. Employ advanced features of *applications* in the preparation and presentation of data  
1.2. Efficiently transfer data between *applications*, linking and embedding related data files as required  
1.3. Create and employ *objects*, macros and templates for routine activities  
1.4. Use shortcuts and features to increase personal productivity |
| 2. Access and use support resources | 2.1. Solve routine problems using support resources  
2.2. Use on-line help to overcome difficulties with *applications*  
2.3. Solve problems with manuals and training booklets  
2.4. Access and apply technical support for *system* problems, utilising troubleshooting results and alert messages |

Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- Basic analysis skills in relation to normal routine work processes  
- Detailed skills in using applications features  
- Basic skills in interpreting technical information  
- Problem solving skills in known areas during normal routine work processes  
- Plain English literacy and communication skills in relation to dealing with clients and team members

**Required knowledge**

- Basic understanding of operating systems software and system tools  
- Broad knowledge of vendor product directions  
- Broad knowledge of vendor applications and their features
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- Assessment must confirm the ability to use at least three computer applications to their full capacity employing all advanced features and import/export capacities for efficiency and productivity purposes, using at least two industry-recognised application packages.

To demonstrate competency in this unit the person will require access to:

- Personal computer
- Documents or information containing data suitable for use with multiple computing packages

Context of and specific resources for assessment

The use of advanced features of computer applications is increasing as workplaces recognise the full potential and functionality of contemporary commercial applications. Individuals demonstrating this competency would be considered user experts or advanced users and would be capable of tutoring colleagues in the use of commercial applications.

The breadth, depth and complexity of knowledge and skills in this competency would cover selecting, adapting and transferring skills and knowledge to new environments and providing technical advice and some leadership in resolution of specified problems. This would be applied across a range of roles in a variety of contexts with some complexity in the extent and choice of options available.

Assessment must ensure:

- Performance of a defined range of skilled operations, usually within a range of broader related activities involving known routines, methods and procedures,
**EVIDENCE GUIDE**

<table>
<thead>
<tr>
<th>Description</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>where some discretion and judgement is required in the section of equipment, services or contingency measures and within known time constraints would be characteristic.</td>
<td></td>
</tr>
<tr>
<td>• Applications may involve some responsibility for others. Participation in teams including group or team coordination may be involved.</td>
<td></td>
</tr>
</tbody>
</table>

**Method of assessment**

The purpose of this unit is to define the standard of performance to be achieved in the workplace. In undertaking training and assessment activities related to this unit, consideration should be given to the implementation of appropriate diversity and accessibility practices in order to accommodate people who may have special needs. Additional guidance on these and related matters is provided in ICA05 Section 1.

- Competency in this unit should be assessed using summative assessment to ensure consistency of performance in a range of contexts. This unit can be assessed either in the workplace or in a simulated environment. However, simulated activities must closely reflect the workplace to enable full demonstration of competency.

- Assessment will usually include observation of real or simulated work processes and procedures and/or performance in a project context as well as questioning on underpinning knowledge and skills. The questioning of team members, supervisors, subordinates, peers and clients where appropriate may provide valuable input to the assessment process. The interdependence of units for assessment purposes may vary with the particular project or scenario.

**Guidance information for assessment**

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- ICAB3018B Develop macros and templates for clients using standard products
EVIDENCE GUIDE

An individual demonstrating this competency would be able to:

- Demonstrate some relevant theoretical knowledge
- Apply a range of well-developed skills
- Apply known solutions to a variety of predictable problems
- Perform processes that require a range of well-developed skills where some discretion and judgement is required
- Interpret available information, using discretion and judgement
- Take responsibility for own outputs in work and learning
- Take limited responsibility for the output of others
- Maintain knowledge of industry products and services

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Applications

- May include but are not limited to commercial software applications; organisation-specific software; word processing, spreadsheet, database, graphic, communication packages and presentation functionalities.
- May include presentation applications contained in: Microsoft Office, Lotus Suite, Claris Works, Star Office or other similar applications.

Objects may include:

- buttons
- checkboxes
- option buttons
- text boxes

HLTFA301B Apply first aid

Modification History

Unit Descriptor
This unit of competency describes the skills and knowledge required to provide first aid response, life support, management of casualty(s), the incident and other first aiders, until the arrival of medical or other assistance

Application of the Unit
These skills and knowledge may be applied in a range of situations, including community and workplace settings
Training Package users should ensure implementation is consistent with any specific workplace and/or relevant legislative requirements in relation to first aid, including State/Territory requirements for currency
Application of these skills and knowledge should be contextualised as required to address specific industry, enterprise or workplace requirements and to address specific risks and hazards and associated injuries
A current Senior First Aid, Workplace Level 2 or Level 2 qualification may provide evidence of skills and knowledge required by this competency unit. However, as with all evidence of competence, evidence must be assessed against the requirements specified in the competency unit

Licensing/Regulatory Information

Pre-Requisites

Employability Skills Information
The required outcomes described in this unit of competency contain applicable facets of Employability Skills
The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements

Elements and Performance Criteria Pre-Content
Elements define the essential outcomes of a unit of competency.
The Performance Criteria specify the level of performance required to demonstrate achievement of the Element. Terms in italics are elaborated in the Range Statement.
## Elements and Performance Criteria

### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Assess the situation</td>
</tr>
<tr>
<td>1.1</td>
<td>Identify assess and minimise hazards in the situation that may pose a risk of injury or illness to self and others</td>
</tr>
<tr>
<td>1.2</td>
<td>Minimise immediate risk to self and casualty's health and safety by controlling any hazard in accordance with occupational health and safety requirements</td>
</tr>
<tr>
<td>1.3</td>
<td>Assess casualty and identify injuries, illnesses and conditions</td>
</tr>
<tr>
<td>2</td>
<td>Apply first aid procedures</td>
</tr>
<tr>
<td>2.1</td>
<td>Calmly provide information to reassure casualty, adopting a communication style to match the casualty's level of consciousness</td>
</tr>
<tr>
<td>2.2</td>
<td>Use available resources and equipment to make the casualty as comfortable as possible</td>
</tr>
<tr>
<td>2.3</td>
<td>Respond to the casualty in a culturally aware, sensitive and respectful manner</td>
</tr>
<tr>
<td>2.4</td>
<td>Determine and explain the nature of casualty's injury/condition and relevant first aid procedures to provide comfort</td>
</tr>
<tr>
<td>2.5</td>
<td>Seek consent from casualty prior to applying first aid management</td>
</tr>
<tr>
<td>2.6</td>
<td>Provide first aid management in accordance with established first aid principles and Australian Resuscitation Council (ARC) Guidelines and/or State/Territory regulations, legislation and policies and industry requirements</td>
</tr>
<tr>
<td>2.7</td>
<td>Seek first aid assistance from others in a timely manner and as appropriate</td>
</tr>
<tr>
<td>2.8</td>
<td>Correctly operate first aid equipment as required for first aid management according to manufacturer/supplier's instructions and local policies and/or procedures</td>
</tr>
</tbody>
</table>
2.9 Use safe manual handling techniques as required

2.1 Monitor **casualty's condition** and respond in accordance with effective first aid principles and procedures

2.1 Finalise casualty management according to casualty's needs and first aid principles

3 Communicate details of the incident

3.1 Request ambulance support and/or appropriate medical assistance according to relevant circumstances using relevant **communication media and equipment**

3.2 Accurately convey assessment of casualty's condition and management activities to ambulance services /other emergency services/relieving personnel

3.3 Prepare reports as appropriate in a timely manner, presenting all relevant facts according to established procedures

3.4 Accurately record details of casualty's physical condition, changes in conditions, management and response to management in line with established procedures

3.5 Maintain confidentiality of records and information in line with privacy principles and statutory and/or organisation policies

4 Evaluate own performance

4.1 Seek feedback from **appropriate clinical expert**

4.2 Recognise the possible psychological impacts on rescuers of involvement in critical incidents

4.3 Participate in debriefing/evaluation as appropriate to improve future response and address individual needs
Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

**Essential knowledge:**

ARC Guidelines relating to provision of first aid as outlined
Working knowledge of:
- basic principles and concepts underlying the practice of first aid
- procedures for dealing with major and minor injury and illness
- priorities of management in first aid when dealing with life threatening conditions
- basic occupational health and safety requirements in the provision of first aid
- infection control principles and procedures, including use of standard precautions
- chain of survival
- first Aiders' skills and limitations

Understanding of the use of an Automated External Defibrillator (AED), including when to use and when not to
First aid management of:
- abdominal injuries
- allergic reactions
- altered and loss of consciousness
- bleeding
- burns - thermal, chemical, friction, electrical
- cardiac arrest
- casualty with no signs of life
- chest pain
- choking/airway obstruction
- injuries: cold and crush injuries; eye and ear injuries; head, neck and spinal injuries; minor skin injuries; needle stick injuries; soft tissue injuries including sprains, strains, dislocations
- envenomation - snake, spider, insect and marine bites
- environmental impact such as hypothermia, hyperthermia, dehydration, heat stroke
fractures
medical conditions, including cardiac conditions, epilepsy, diabetes, asthma and other respiratory conditions
near drowning
poisoning and toxic substances (including chemical contamination)
respiratory distress
seizures
shock
stroke
substance misuse - common drugs and alcohol, including illicit drugs

Awareness of stress management techniques and available support
Social/legal issues:
duty of care
need to be culturally aware, sensitive and respectful
importance of debriefing
confidentiality
own skills and limitations

**Essential skills:**

Ability to:
Conduct an initial casualty assessment
Plan an appropriate first aid response in line with established first aid principles, policies and procedures, ARC Guidelines and/or State/Territory regulations, legislation and policies and industry requirements and respond appropriately to contingencies in line with own skills
Demonstrate correct procedures for performing CPR using a manikin, including standard precautions (i.e. as per unit HLT CPR201A Perform CPR)
Apply first aid principles
Infection control, including use of standard precautions
Follow OH&S guidelines
Demonstrate:
safe manual handling
consideration of the welfare of the casualty
ability to call an ambulance

site management to prevent further injury

Provide assistance with self-medication as per subject's own medication regime and in line with State/Territory legislation, regulations and policies and any available medical/pharmaceutical instructions

Administer medication in line with state/territory regulations, legislation and policies

Prepare a written incident report or provide information to enable preparation of an incident report

Communicate effectively and assertively in an incident

Make prompt and appropriate decisions relating to managing an incident in the workplace

Call an ambulance and/or medical assistance according to relevant circumstances and report casualty's condition

Use literacy and numeracy skills as required to read, interpret and apply guidelines and protocols

Evaluate own response and identify appropriate improvements where required

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package. The evidence guide supplements assessment requirements that apply to all units in this Training Package. Users of this evidence guide should first read the package's assessment guidelines.
Critical aspects of assessment: Assessment must include demonstrated evidence of specified Essential Knowledge and Essential Skills identified in this competency unit

Competence should be demonstrated working individually and, where appropriate, as part of a first aid team

Consistency of performance should be demonstrated over the required range of situations relevant to the workplace or community setting

Currency of first aid knowledge and skills is to be demonstrated in line with State/Territory regulations, legislation and policies, ARC and industry guidelines

Context and resources required for assessment: Skills in performing first aid procedures are to be assessed through demonstration, with questioning to confirm essential knowledge

For assessment purposes, demonstration of skills in CPR procedures requires using a model of the human body (resuscitation manikin) in line with Australian Resuscitation Council Guidelines
Access and equity considerations:

All workers in the health industry should be aware of access and equity issues in relation to their own area of work.

All workers should develop their ability to work in a culturally diverse environment.

In recognition of particular health issues facing Aboriginal and Torres Strait Islander communities, workers should be aware of cultural, historical and current issues impacting on health of Aboriginal and Torres Strait Islander people.

Assessors and trainers must take into account relevant access and equity issues, in particular relating to factors impacting on health of Aboriginal and/or Torres Strait Islander clients and communities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Contextualisation to address specific requirements may include:

Focus on first aid management of specific types of injury.

First aid provision under specific constraints or circumstances (e.g. in confined spaces, in maritime work environment or in work environment involving identified risks/hazards).
| Established first aid principles include: | Preserve life |
|                                         | Prevent illness, injury and condition(s) becoming worse |
|                                         | Promote recovery |
|                                         | Protect the unconscious casualty |

| Vital signs include: | Consciousness |
|                     | Breathing |
|                     | Circulation |

| A hazard is: | A source or situation with the potential for harm in terms of human injury or ill-health, damage to property, the environment, or a combination of these |

| Hazards may include: | Physical hazards |
|                     | Biological hazards |
|                     | Chemical hazards |
|                     | Hazards associated with manual handling |

| Risks may include: | Risks from equipment, machinery and substances |
|                   | Risks from first aid equipment |
|                   | Environmental risks |
|                   | Exposure to blood and other body substances |
|                   | Risk of further injury to the casualty |
|                   | Risks associated with the proximity of other workers and bystanders |
|                   | Risks from vehicles |
Casualty's condition is managed for:

- Abdominal injuries
- Airway obstruction
- Allergic reactions
- Altered and loss of consciousness
- Bleeding
- Burns - thermal, chemical, friction, electrical
- Chest pain/cardiac arrest
- Injuries: cold and crush injuries; eye and ear injuries; head, neck and spinal injuries; minor skin injuries; needle stick injuries; soft tissue injuries including sprains, strains, dislocations
- Near drowning
- Envenomation - snake, spider, insect and marine bites
- Environmental conditions such as hypothermia, hyperthermia, dehydration, heat stroke
- Fractures
- Medical conditions, including cardiac conditions, epilepsy, diabetes, asthma and other respiratory conditions
- No signs of life
- Poisoning and toxic substances (including chemical contamination)
- Respiratory distress/arrest
- Seizures
- Shock
- Stroke
- Substance misuse - common drugs and alcohol, including illicit drugs.
First aid management must take into account applicable aspects of:

The setting in which first aid is provided, including:
- workplace policies and procedures
- industry/site specific regulations, codes etc.
- OHS requirements
- state and territory workplace health and safety legislative requirements
- location and nature of the incident
- situational risks associated with, for example, electrical and biological hazards, weather, motor vehicle accidents
- location of emergency services personnel.

The use and availability of first aid equipment and resources
- Infection control
- Legal and social responsibilities of first aider

Resources and equipment are used appropriate to the risk to be met and may include:
- AED
- First aid kit
- Auto-injector
- Puffer/inhaler
- Resuscitation mask or barrier
- Spacer device
Communication media and equipment may include but are not limited to:

- Telephones, including landline, mobile and satellite phones
- HF/VHF radio
- Flags
- Flares
- Two way radio
- Email
- Electronic equipment
- Hand signals

Appropriate clinical expert may include:

- Supervisor/manager
- Ambulance officer/paramedic
- Other medical/health worker

Documentation may include:

- Injury report forms
- Workplace documents as per organisation requirements
Documentation may include recording:

- Time
- Location
- Description of injury
- First aid management
- Fluid intake/output, including fluid loss via:
  - blood
  - vomit
  - faeces
  - urine

- Administration of medication including:
  - time
  - date
  - person administering
  - dose

- Vital signs

Unit Sector(s)
