### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
- consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to plan, prepare and conduct of underground in-seam directional drilling operations
  - provision of clear and timely instruction and supervision by the individual of those involved in the conduct of underground in-seam directional drilling operations

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:
- legislative, organisational and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Underground in-seam directional drilling methods** may include:
- underground in-seam directional drilling
- reaming
- conventional core drilling
- wire-line core drilling
- rib consolidation
- installation of standpipes
- calibration of survey tools
- drilling of holes

**Specific task information and requirements** may include:
- site geological data
- site geotechnical data
- site hydrological data
- site engineering survey data
- known and potential site hazards, constraints and conditions
- site cultural and heritage information
- task specifications and drawings
- sources of materials
- other organisations and contractors involved in the task or related tasks
- coordination, timing and budgeting requirements
- waste management requirements

**Operational plan** may include:
- human resource requirements
- plant and machinery requirements
- construction materials requirements
- sub-contractor support requirements
### Resources may include:
- labour
- plant, equipment and tools
- highway haulage vehicles
- construction materials
- sub-contractor services

### Instructions may include:
- briefings
- handovers
- work orders
- toolbox meetings
- site meetings

### Teams members may include:
- other members of the organisations management team
- members of the team directly involved in the task
- suppliers representatives
- sub-contractors representatives
- supervisors or managers of other organisations who are involved in related tasks

### Monitor may include:
- ongoing risk assessment
- engineering survey
- sampling and testing
- observation and recording
- general supervision

### Initiate may include:
- written communication
- oral communications

**Underground in-seam directional drilling operations**
- rib consolidation
- installation of standpipes
may include:

- calibration of survey tools
- holes drilling techniques
- identification of and responding to operational problems
- installation of de-watering conduits and monitoring of water drainage
- installation of gas drainage equipment and monitoring of gas drainage
- installation and operation of stuffing boxes
- equipment maintenance

**Operational problems** may include:

- changing geological formations, particularly clay, rock or unstable or porous formations
- loss of air or water volume or pressure
- equipment failure
- bogging or parting of rod string
- loss of signal from down-hole survey tool
- reliability of communications

**Unit Sector(s)**

Drilling (General)

**Competency field**

Refer to Unit Sector(s).

RIINHB501A Plan drilling

Modification History
Not applicable.

Unit Descriptor
This unit covers the planning of drilling programs in the drilling industry. It includes: liaising with clients and other relevant parties; inspect and researching site for accessibility, services, hazards, legal and environmental problems; selecting appropriate drilling methods, preparing cost estimates, quotes and tenders; arranging permits and licences; designing and organising drilling programs; and preparing occupational health and safety plans for sites.

Application of the Unit
This unit is appropriate for those working in management or technical specialist roles within:
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Liaise with clients and other relevant parties | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Define precise *scope of work* expected by client and other relevant parties  
1.3. *Communicate* with all parties clearly and concisely to ensure that priorities and special requirements are understood and acted upon  
1.4. Negotiate an achievable and acceptable contract with the client within the scope of the driller's *legal requirements and legal responsibilities*  
1.5. Achieve and document agreement on the drilling plan, by communicating and clarifying intended objectives and contract requirements with all relevant parties  
1.6. Develop a time schedule for all operations |
| 2. Inspect/research site for accessibility, services, hazards, legal and environmental problems | 2.1. Establish size and nature of intended drill sites and designated routes to reach them  
2.2. Assess *topographical and geological features* and identify preferred drilling sites  
2.3. Locate and interpret specific *relevant information* from maps, diagrams or from other data  
2.4. Identify legal and environmental limitations, and *hazards* applying to site and take appropriate action  
2.5. Identify and honour locations of socially or environmentally sensitive areas according to the site agreement  
2.6. Check availability and distance of water and/or other local supplies |
| 3. Select appropriate drilling method | 3.1. Read and evaluate available data relevant to ground conditions  
3.2. Select optimum *method of drilling and down hole tools*, in consultation with other personnel |
<p>| 4. Prepare cost estimates, quotes and tenders | 4.1. Prepare <em>data</em> for quote listing all necessary activities, materials and sub-contracting services needed |</p>
<table>
<thead>

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to plan drilling programs:

- apply legislative, organisation and site requirements and procedures
- work in a team
- apply negotiation skills with clients and other parties
- prepare costing, estimations and tenders
- apply metric and imperial conversions
- apply mathematical skills, including: addition, subtraction, multiplication and division
- use project management tools and programs

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to plan drilling programs:

- equipment and characteristics, technical capabilities and limitations
- inspection/research techniques for collection of data:
  - linear measurement
  - angular measurement
  - by manual/electronic means
- communication systems, processes and procedures
- communication documents including maps, geological and topographical data, diagrams
- graphical representation (e.g. maps, diagrams and its uses for interpretation and prediction)
- understanding of special requirements for seam gas drilling
- environmental requirements for drill sites
- OHS planning principles and application

| 7.5. Obtain sign-off on commitment to occupational health and safety (OHS) plan from crew | |

| Topographical and geological features may be determined by various methods, including: | geological and topographical maps  
| air photos, photogrammetric methods  
| site inspection (foot, 2- or all wheel drive) |
| Relevant information may include: | maps (e.g. road, geological and topographical maps, site mud maps)  
| surveys  
| written instructions  
| drawings  
| reports (e.g. mines reports, geological reports, logs from previous drilling) |
| Hazards may include: | electricity wires (underground and overhead)  
| (pressured) water pipes  
| telephone lines/cables, fibre optic cables  
| gas pipes  
| pipes containing 'other' fluids (e.g. petroleum, stormwater, sewers)  
| predominant wind direction |
| Methods of drilling and down hole tools may include: | cable tool  
| auger:  
| solid flight  
| hollow flight  
| bucket  
| short flight  
| rotary mud  
| rotary air:  
| rotary air blast  
| down hole hammer  
| reverse circulation hammer  
| air core  
| vibro core  
| directional drilling  
| coal seam drilling  
| sampling tools - push tubes, core barrels, bits and reamers |
| Data may include: | checklists of all activities and material  
| wastage factors  
| contingency allowances  
| schedules of quantities and rates  
| organisation's procedures for calculating and |
presenting estimates
- inspection of cores or chip samples from earlier drilling programs
- bore logs and geological/geotechnical reports

| Mathematical calculations may include: | carrying out addition, subtraction, multiplication, division length
| | using appropriate instruments to measure:
| | - width
| | - height
| | - diameter
| | - weight
| | - angle
| | - temperature
| | - using calculator
| | - using estimating skills (e.g. mental arithmetic, visualisation of size and quantity)

| Permits and licences may include: | Drillers licence (water well and environmental sectors)
| | Breathing Apparatus (BA) Certificate
| | proof of attendance at occupational health and safety course
| | Bore licence
| | Exploration licence
| | Hot work permit
| | Confined space permit
| | Permit To Work authority
| | well control certification

| Application for permits and licences may be made with: | State and Territory governments
| | Water authorities
| | Fire department, Mines Rescue Organisations (BA Training)
| | Environment Protection Authorities (EPAs)
| | various groundwater consultants
| | industrial complex on which work is being conducted

| Occupational Health and Safety (OHS) plan may include information, legislation and code of practice including: | duties and responsibilities
| | materials safety data sheets (MSDS)
| | Hazchem registers
| | maintenance of records of occupational injury and disease
| | provision of information and training
| | setting up/working with occupational health
and safety committees
- emergency response plan

</table>
|   | hoses and nozzles) according to manufacturer's and site procedures  
3.4. Identify and comply with fire team responsibilities and assigned fire station  
3.5. Apply boundary cooling procedures and emergency ventilation shutdown procedures, where appropriate  
3.6. Follow emergency muster and evacuation procedures if required |
| 4. Demonstrate safe working procedures | 4.1. Obtain and wear personal protective equipment, appropriate to task  
4.2. Set and pull manual slips correctly  
4.3. Operate make-up and break-out manual tongs correctly  
4.4. Move drill floor drilling tools and equipment in accordance with company and statutory operating procedures |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to assist in maintaining rig safety and emergency procedures:

- apply legislative, organisation and site requirements and procedures for assisting in maintaining rig safety and emergency procedures
- set and pull manual slips
- operate manual make-up tongs
- operate manual break-out tongs
- operate portable extinguishing equipment
- move drills, tools and equipment around drill floor
- wear correct protective clothing for the execution of duties and tasks
- assist in the risk assessment of a manual handling task
- demonstrate correct manual handling technique
- correctly apply and use the permit to work and lock out procedure
- act as chairman of safety meeting
- report regularly to derrickman on equipment condition
- activate alarms
- make announcement on the public address system (PA)
- proceed to muster point
- don emergency gear (e.g. fire suit, life jacket)
- operate specific pieces of fire fighting, life saving and emergency equipment
- follow instructions
- determine wind direction
- assist carrying injured person in stretcher

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to assist in maintaining rig safety and emergency procedures:

- occupational health and safety obligations
- company and statutory guidelines, procedures and practices
- emergency procedures
- permit to work system
- bop, gas and fire alarm signals
- assigned fire station
- location and use of safety equipment, including fire protection and First Aid
- types of spillages, including flammable, toxic and pollution, and appropriate responses
- types of discharges, including liquids, gases and solids
- types of material, including flammable, toxic, corrosive, explosive and radioactive
- normal drilling operations
- non-routine drilling operations
- man management/rig management
- rig emergency procedures as per station drill
- emergency duties
- location of alarm stations
- identify alarm signals
- life raft launching procedure (where appropriate)
- fire team procedures
- fire, emergency and lifesaving equipment appropriate to the incident
- survival craft boarding procedures (where appropriate)
- location of muster points
- means of evacuation
## Evidence Guide

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the maintenance of rig safety and emergency procedures

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Work instructions** may come from briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include:
- nature and scope of tasks
- specifications
- quality of finished works
- achieved targets
- operational conditions
- obtaining of required permits
- site layout
- out of bounds areas
- worksite inspection requirements
- lighting conditions
- plant of equipment defects
- coordination requirements or issues
- contamination control requirements
- environmental control requirements
- barricade and signage requirements

**Report** potential hazards may include:
- oral
- written
- hazard observation reports
- rig safety audits

**Hazards** may include:
- working in proximity to drilling rig
- working in different weather conditions including:
  - extreme heat
  - extreme cold
  - wet weather - muddy conditions

### Unit Sector(s)

Drilling (Oil and Gas)

### Competency field

Refer to Unit Sector(s).

### Co-requisite units

Not applicable.
RIIOGD202A Carry out equipment and basic rig maintenance

Modification History
Not applicable.

Unit Descriptor
This unit covers the carrying out of equipment and basic rig maintenance in the drilling industry. It includes planning and preparing for operations, preparing and painting metal surfaces, assisting in the maintenance of materials handling equipment, and preparing and using solvent solutions and rig washes to clean and maintain work areas in non-slippery conditions. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for operations           | 1.1. Access, interpret and apply **compliance documentation** relevant to the work activity  
1.2. Obtain, confirm and apply **work instructions** for the allocated task  
1.3. Clarify difficulties in carrying out the instructions with the relevant personnel  
1.4. Identify, manage and report all potential **hazards**  
1.5. Resolve **coordination requirements** with others at the site prior to commencing and during work activities and ensure **briefings/handover details** are read/passed on  
1.6. Conform to safe working practices and operational requirements  
1.7. Confirm availability of necessary auxiliary equipment in accordance with operational requirements |
| 2. Prepare and paint metal surface           | 2.1. Identify, locate and apply **personal protective equipment**                      
2.2. **Prepare surface** using correct **equipment**  
2.3. Apply rust remover, rust converter and undercoat in accordance with manufacturer’s specifications  
2.4. Mix epoxy, paracryl or other paints in correct proportions in accordance with manufacturer’s specification  
2.5. Mask and protect equipment against overspray, where necessary  
2.6. Apply finishing coat using brush, roller and spray gun  
2.7. Clean equipment in accordance with site requirements |
| 3. Assist in maintenance of materials handling equipment | 3.1. Identify faults/potential faults and report immediately  
3.2. Identify, record and/or report requirement for repair or **maintenance**  
3.3. Perform **periodical maintenance** on chain blocks and comealongs (where fitted), ensuring equipment is corrosion free, |
| 3.4. Assist with periodical examination of hooks, shackles, slings and strops for defects, correct marking of SWL and ease of operation |
| 3.5. Maintain equipment as directed and in accordance with company and/or manufacturer's specification |

| 4. Prepare and use solvent solutions and rig wash to clean and maintain work areas in non-slippery condition |
| 4.1. Use protective clothing and equipment correctly during handling of solvents |
| 4.2. Apply approved instructions and occupational health and safety requirements on the use of hazardous chemicals for cleaning |
| 4.3. Isolate area being washed or provide warning signs to indicate slippery decks |
| 4.4. Prepare and apply solvent solutions and rig wash in accordance with company and/or manufacturer's specifications to maintain work areas in non-slippery conditions |
| 4.5. Clean equipment correctly and stow on completion |
| 4.6. Clean, preserve and reassess painting equipment in accordance with manufacturer's recommendations |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to carry out equipment and basic rig maintenance:

- apply legislative, organisation and site requirements and procedures for carrying out equipment and basic rig maintenance
- report regularly to and work as directed by the driller/derrickman timely and efficiently
- assemble rust scaling equipment
- fit safety pins, where applicable
- wear appropriate protective clothing and equipment
- apply rust treatment undercoat/final coat correctly
- clean and preserve equipment on completion
- conduct pre-operating checks on forklift
- conduct periodic maintenance on chain blocks, comealongs and crane hoists
- examine hooks, shackles, slings, straps and baskets
- keep work area clean
- work within the company safety guidelines, procedures and practices
- use safe operational practices when handling equipment
- assemble surface preparation equipment correctly
- ensure safety pins are in air hose fittings
- wear appropriate protective clothing/equipment
- prepare and paint surfaces
- check, identify and report defects on rigging equipment
- clean decks correctly
- report immediately any malfunction or equipment failure

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to carry out equipment and basic rig maintenance:

- occupational health and safety obligations
- communication methods, including:
  - two-way radio
  - intercom
  - verbal
• hand signals
• telephone
• public address system
• written work instructions, company and statutory guidelines, procedures and practices
• maintenance procedures
• rig maintenance
• normal drilling operations
• non-routine drilling operations
• numerical skills, to calculate measurements, mass, load dimensions and safety working loads
• company equipment maintenance procedures
• surface preparation equipment
• safety pins and air hose fittings
• safe operating procedures and practices
• paint types and applications
• rust treatment
• equipment cleaning and preservation techniques
• chain blocks, comealongs and crane hoist maintenance procedures
• platform cleaning procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to prepare and operate drilling fluid systems:

- apply legislative, organisation and site requirements and procedures for preparation and operation of drilling fluid systems
- maintain and operate mud mixers, dump valves and equalising valves in the mud pits system
- safely add mud materials to the mud systems under the mud engineer's instructions
- operate and maintain all the mud treatment units
- accurately take mud properties readings and legibly record them
- interpret and act on additional flow in the mud returns or an increase in mud pit volume
- operate pipe in derrick as directed either manually or using hydraulic racking system where fitted
- assess need and action greasing of crown block and hanging sheaves

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to prepare and operate drilling fluid systems:

- occupational health and safety obligations
- company and statutory guidelines, procedures and practices
- chemical handling procedures
- operating principles of the systems, equipment and their relationship to other plant
- fluid types and composition
- rig safety and emergency procedures
- safe operating procedures when operating equipment
- layout of mud circulating, mixing and suction systems
- geography of active, reserve and slug pits
- layout of shaker, degasser and settling pits, and sand traps
- materials safety data sheets (MSDS)
- rig maintenance
- non-routine drilling operations
- man management/rig management
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>

</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those
| **required on the job.** | • Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.  
• Aboriginal people and other people from a non English speaking background may have second language issues.  
• Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.  
• Aboriginal people and other people from a non English speaking background may have second language issues.  
• Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required. |
|---|---|
| **Method of assessment** | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:  
• written and/or oral assessment of the candidate's required knowledge  
• observed, documented and/or first hand testimonial evidence of the candidate's:  
  • implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes  
  • consistent achievement of required outcomes  
  • first hand testimonial evidence of the candidate's:  
    • working with others to undertake and complete the preparation and operation of drilling fluid systems |
| **Guidance information for assessment** | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

May include:

- legislative, organisation and site requirements and procedures including:
  - protective clothing
  - safe use of hazardous chemicals
  - (PSLA) Petroleum Submerged Lands Act (where relevant)
  - duty of care
  - petroleum regulations
  - manufacturer's guidelines and specifications
  - Australian standards
  - code of practice
  - Employment and workplace relations legislation
  - Equal Employment Opportunity and Disability Discrimination legislation

### Work instructions

May come from briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include:

- pre-tour meeting
- safety meeting
- use of hazardous chemicals
- safety briefing/induction
- weekly safety meetings
- Job Safety Analysis (JSA)
- toolbox
- permit to work
- communication through a range of channels including:
  - 2-way radio
  - hand signals
  - Telephone
  - public address system
  - written work instructions
  - geographic layout of the active, reserve and slug pits
  - operation of mud mixers, dump valves and equalising valves
  - mud pump and discharge system
### Hazards may include:
- working in proximity to drilling rig
- working in different conditions including:
  - wind
  - rain
  - snow
  - dust
  - hot and cold
  - calm to severe weather conditions
  - 24 hour operation

### Safe working practices may include:
- use of personal protective equipment
- consideration of toxic substances (e.g. H2S)
- continuous communication maintained
- reacting to on-site emergencies
- dealing with contamination

### Coordination requirements may include:
- other equipment operators
- maintenance personnel
- supervisors
- site personnel

### Remedial action taken to deal with errors, omissions and shortages may include:
- report
- record
- adjust
- repair
- isolate

### Equipment may include:
- pumps
- lines
- hoppers
- manifolds
- shale shakers
- degasser
- centrifugers
- desanders/desilters

### Fluids may include:
- Fluid systems including:
  - mixing
  - transfer
  - bulk
  - circulating
Mix may include:

- Fluid mix specifications including:
  - volume
  - density
  - viscosity
  - mud properties

Parameters may include:

- flow rate
- pressure
- density

**Unit Sector(s)**
Drilling (Oil and Gas)

**Competency field**
Refer to Unit Sector(s).

**Co-requisite units**
Not applicable.
RIIOGD204A Perform rig floor operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the performance of rig floor operations in the drilling industry. It includes: planning and preparing for rig floor operations, selecting handling equipment, handling tubulars and equipment, preparing and running drill string, preparing, running and cementing casing, preparing, running and cementing casing, running cement stinger assembly (non standard), assisting in preparation and running of blow out prevention (BOP), examining and servicing drill floor equipment, and maintaining a high standard of rig husbandry. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an assistant role at worksites within:

- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare equipment | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, confirm and apply *work instructions* for the allocated task  
1.3. Identify, manage and report all potential *hazards*  
1.4. Conform to safe working practices and current legislative and operational requirements  
1.5. Resolve *coordination requirements* with others at the site prior to commencing and during work activities  
1.6. Confirm availability of required quantities and type of consumables  
1.7. Identify errors, omissions and shortages and take appropriate *remedial action* within functional responsibility |
| 2. Select handling equipment | 2.1. Identify and select *equipment* appropriate for the work to be performed and conforming to operational requirements  
2.2. Confirm equipment is functional and fit for the purpose and the environment in which it will be used  
2.3. Identify faults in the equipment and take appropriate remedial action taken within functional responsibility |
| 3. Handle tubulars and equipment | 3.1. Position *tubulars* and equipment according to operational requirements  
3.2. Make and break connections safely  
3.3. Identify faults and defects accurately and take appropriate remedial action within functional responsibility  
3.4. Handle equipment using safe lifting and handling techniques  
3.5. *Record* data accurately at appropriate times and frequencies |
| 4. Prepare and run drill | 4.1. Obtain and wear personal protective equipment, appropriate to task  
4.2. Measure and record all down hole tools and pipe to assist driller |
| 4.3. Convey pipe and tools to drill floor with protectors fitted and in accordance with company safety operating procedures |
| 4.4. Check tongs and slip dies for cleanliness and sharpness and secure long lines |
| 4.5. Inspect, service and operate manual slips correctly |
| 4.6. Operate make-up and break-out manual tongs correctly |
| 4.7. Move drill floor drilling tools and equipment in accordance with operating procedures |
| 4.8. Apply correct manual handling techniques |
| 4.9. Conduct thread cleaning, inspection and lubrication safely |
| 4.10. Make up and run drill string, applying correct use of chain tongs, safety clamps, rig tongs, slips and elevators |

<p>| 5. Prepare, run and cement casing |
| 5.1. Prepare casing in accordance with rig operating procedures |
| 5.2. Prepare shoe joints in accordance with company and manufacturer’s requirements |
| 5.3. Prepare well heads/casing hangers |
| 5.4. Prepare running tools and cementing equipment |
| 5.5. Check lifting appliances, identify and report faults |
| 5.6. Check and prepare handling equipment |
| 5.7. Prepare casing centralisers correctly |
| 5.8. Prepare and install guide frames as required |
| 5.9. Prepare appropriate well control equipment and mitigation control equipment in accordance with site requirements |
| 5.10. Run casing in correct sequence |
| 5.11. Fill casing safely |
| 5.12. Connect appropriate cement line as per company procedure |
| 5.13. Carry out cementing room duties while mixing |
| 5.14. Assist as directed in preparing, running and cementing of cementing casings |</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to perform rig floor operations:

- apply legislative, organisation and site requirements and procedures for performing rig floor operations
- prepare and run the temporary guide base:
  - correctly babbitt the wire line sockets
  - install the correct shear pins in the wire line sockets and their anchor pins correctly
  - paint and mark the guidelines, the temporary guide base running tool assembly and the temporary guide base guide cone correctly
  - check the temporary guide base running string to ensure that the guide base does not rotate
  - install and run the drill pipe guide frame above the temporary guide base on the running string
- prepare and run drill string:
  - measure and record pipe, sub and tools correctly
  - check the rig tongs and slips
  - check and use a safety clamp
  - service after use hole openers and large size non-sealed bearing bits
- assist as directed in preparing, running and cementing of casing:
  - check the slips, 350 ton elevator slips, elevator and tongs, including power tongs
  - assemble the casing centralisers correctly
  - make up the casing hanger and float or baffle collar correctly
  - make up the cement head sub
  - fill the casing safely and with the required frequency
  - thoroughly clean one mud pit and pre-mix any required mud materials
  - carry out the duties required in the cement room whilst mixing ie. manipulate the cement bulk pod, assist with any required additives, weigh the cement slurry
  - drop the trip dart or, if used, insert the second cement plug
  - switch from cementing unit displacement, e.g. which valves to manipulate when ordered
- prepare and operate pipe handling equipment:
  - check and overhaul the rig tongs and slips
- check the catheads and chains and operated pipe spinner correctly
- assist in making a conventional drilling connection using correct procedures
- know the additional safety regulations in force whilst flow testing a well
- assist in rigging up the electro-logging sheave cable, and know the patterns and positions of its hanging points
- know the safe practices to be observed when Well Loggers are handling explosives or radioactive materials

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to perform rig floor operations:

- rig safety and emergency procedures
- company and statutory safety guidelines, procedures and practices
- equipment safe operating procedures
- equipment condition and reporting mechanisms
- function of the triangular mark stamped just above the casing
- what steps are taken if the well kicks whilst running casing
- lubrication techniques
- rig maintenance
- normal drilling operations
- non-routine drilling operations
- man management/rig management
- conversion between metric and imperial
- range of numerical calculations and measurements including:
  - length
  - quantities
  - volumes
  - conversion rates
- well control
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
</tbody>
</table>
|  | • knowledge of the requirements, procedures and instructions for performing rig floor operations
|  | • implementation of requirements, procedures and techniques for the safe, effective and efficient completion of rig floor operations
|  | • working with others to undertake and complete rig floor operations that meets all of the required outcomes
|  | • consistent timely completion of rig floor operations that safely, effectively and efficiently meets the required outcomes

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate
cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete rig floor operations |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

- legislative, organisational and site requirements and procedures including:
  - Occupational Health and Safety Acts and Regulations
  - Duty of care
  - Petroleum Act and regulations
  - PSLA Petroleum Submerged Lands Act (where relevant)
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation
- relevant permits

### Work instructions

- re-tour safety meetings
- work inspection
- task specific - Job Safety Analysis (JSA)
- permit to work prepared if necessary
- safety briefing/induction
- weekly safety meetings
- toolbox
- permit to work
- communication through a range of channels including:
  - 2-way radio
  - intercom
  - hand signals
  - oral instruction
  - telephone
  - public address system
  - written work instructions
- reviewing data including:
  - job instructions
| **Hazards** may include:         | • working in proximity to drilling rig  
|                                 | • working in a range of weather conditions  
|                                 |    including:  
|                                 |    • day/night  
|                                 |    • dry/wet  
|                                 |    • hot/cold  
|                                 |    • storms/lightning (dust storms/wind)  
| **company/manufacturer's safe operating procedures** |

RIIOGD205A Support blow out prevention operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the supporting of blow out prevention operations in the drilling industry. It includes planning and preparing for operations, assisting with well BOP operations, monitoring and reporting safety issues.

Application of the Unit
This unit is appropriate for those working in operational support roles in coal-seam methane gas drilling operations, at worksites within:
- Coal Mining
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

## Elements and Performance Criteria

<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, confirm and apply *work instructions* for the allocated task  
1.3. Resolve *coordination requirements* with others at the site prior to commencing and during work activities |
| 2. Assist with well BOP operations | 2.1. Assist with *well kill activities*  
2.2. Monitor and report BOP equipment status  
2.3. Isolate BOP system accumulator  
2.4. Monitor and adjust chokes and manifolds as directed  
2.5. Assist with emergency shutdown procedures  
2.6. Participate in emergency *drills and exercises*  
2.7. *Communicate* operational activities and information to other crew during BOP operations |
| 3. Monitor and report safety issues | 3.1. Identify, address and report *hazards* associated with blow out prevention  
3.2. Recognise *kick indicators* and advise Driller during operations  
3.3. Identify and report *ignition sources*  
3.4. Identify and report sources and presence of *flammable gases and emissions*  
3.5. Identify and report BOP malfunctions |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to support blow out prevention operations:

- apply legislative, organisation and site requirements and procedures
- working in a team
- apply kick warning signs and indicators detecting procedures
- apply work instruction and procedure interpretation skills
- apply process status recording and reporting processes

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to support blow out prevention operations:

- the principles and practices of coal seam gas control
- coal seam gas control procedures
- risks and their controls related to coal seam gas control
- BOP annular equipment operating principles
- BOP control system principles
- operating principles of chokes and manifolds
- kill principles and methods
- sources of ignition and their dangers and controls
- sources of flammable gases and emissions and their dangers and controls
- kick detection warnings and indications and the responses to them
- purpose, type and conduct of coal seam gas control emergency drills and exercises
- communication methods and protocols
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</table>

Work instructions may come from briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include:

- nature and scope of tasks
- specifications
- quality of finished works
- achievement targets
- operational conditions
- obtaining of permits required
- site layout
- out of bounds areas
- worksite inspection requirements
- lighting conditions
- plant or equipment defects
- hazards and potential hazards
- coordination requirements or issues
- contamination control requirements
- environmental control requirements
- barricade and signage requirements

Coordination requirements may include:

- drill team
- other equipment operators
- maintenance personnel
- supervisors
- worksite personnel

Well kill methods may include:

- bringing pump up to kill speed
- maintaining constant bottom hole pressure
- shutting down the kill operation while maintaining a constant bottom hole pressure
| **Drills and exercises** may include: | • controlling the influx using the Driller's Method |
| **Communications** may include: | • pit drill |
|  | • trip drill |
|  | • abandonment drill |
|  | • evacuation |
| **Hazard**s may include: | • 2-way radio |
|  | • hand signals |
|  | • telephone |
|  | • public address system |
|  | • written work instructions |
| **Kick indicators** may include: | • blow out gas to surface |
|  | • ignition of gas |
|  | • toxic gases |
|  | • pressurised coal seam gas system |
| **Ignition sources** may include: | • flow from wells (pump off) |
|  | • increase in flow from well (pumps on) |
|  | • pit volume gain |
|  | • non-explosion protected devices such as: |
|  | • electrical connections/leads |
|  | • rig lights and wiring |
|  | • flashlights |
|  | • computers |
|  | • mobile phones |
|  | • electronic car keys |

| 1. Plan and prepare for assisting with coal seam gas control | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, confirm and apply *work instructions* for the allocated task  
1.3. Resolve *coordination requirements* with others at the site prior to commencing and during work activities |
| 2. Assist with coal seam gas control activities | 2.1. Monitor flows and returns for correct volumes and rates, and report inconsistencies to Driller  
2.2. Assist in operation of coal seam gas control pumps  
2.3. Read and interpret *measuring devices* to monitor correct operation of coal seam gas control process and equipment  
2.4. *Communicate* operational activities and information to other crew during coal seam gas control operations  
2.5. Assist in installation and maintenance of equipment  
2.6. Participate in emergency *drills and exercises* |
| 3. Monitor and report safety issues | 3.1. Identify, address and report *hazards* associated with coal seam gas control under varying *working conditions*  
3.2. Recognise *kick indicators* and advise Driller during coal seam gas control operations  
3.3. Identify and report *ignition sources*  
3.4. Identify and report sources and presence of *flammable gases and emissions*  
3.5. Identify and report running *coal seam gas control equipment* malfunctions |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to assist with coal seam gas control:

- apply legislative, organisation and site requirements and procedures
- work in a team
- apply gauge and graph interpreting skills
- apply work instruction and procedures interpreting skills
- apply process status recording and reporting procedures
- use hand and power tools

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to assist with coal seam gas control:

- the principles and practices of coal seam gas control
- control procedures
- risks and their controls
- sources of ignition and their dangers and controls
- sources of flammable gases and emissions and their dangers and controls
- pumping systems principles
- purpose, operation and interpretation of measuring and testing devices
- kick detection warnings and indications and the responses to them
- purpose, type and conduct of emergency drills and exercises
- communication methods and protocols
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for assisting with coal seam gas control
- implementation of requirements, procedures and techniques for the safe, effective and efficient assisting with coal seam gas control
- working with others to undertake and complete coal seam gas control that meets all of the required outcomes
- consistent timely provision of assistance with coal seam gas control that safely, effectively and efficiently meets the required outcomes

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second
| **language issues.** |
| **Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.** |
| **Where applicable, physical resources should include equipment modified for people with disabilities.** |
| **Access must be provided to appropriate learning and/or assessment support when required.** |

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the coal seam gas control

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

## Relevant compliance documentation

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

## Work instructions

- nature and scope of tasks
- specifications
- quality of finished works
- achievement targets
- operational conditions
- obtaining of permits required
- site layout
- out of bounds areas
- worksite inspection requirements
- lighting conditions
- plant or equipment defects
- hazards and potential hazards
- coordination requirements or issues
- contamination control requirements
- environmental control requirements
- barricade and signage requirements

## Coordination requirements

- drill team
- other equipment operators
- maintenance personnel
- supervisors
- worksite personnel

## Measuring devices

- 2-way radio
- hand signals
- telephone
- public address system
### Drills and exercises may include:
- pit drill
- trip drill
- abandonment drill
- evacuation

### Hazards may include:
- blow out gas to surface
- ignition of gas
- toxic gases
- pressurised coal seam gas system

### Working conditions may include:
- night time operations
- day time operations
- hot climates
- cold climates
- snow
- wet weather conditions
- high wind

### Kick indicators may include:
- flow from wells (pump off)
- increase in flow from well (pumps on)
- pit volume gain

### Ignition sources may include:
- non-explosion protected devices such as:
  - electrical connections/leads
  - rig lights and wiring
  - flashlights
  - computers
  - mobile phones
  - electronic car keys
  - charging circuits from solar panels
  - charging and starting circuits from vehicles
  - drill rigs
  - mud pumps
  - lighting plants
  - auxiliary equipment
  - static discharge - lightning
  - flare stacks
  - engine exhausts from vehicles, drill rigs, auxiliary equipment

### Flammable gases and emissions may include:
- methane ($\text{CH}_4$)
- hydrogen sulphide ($\text{H}_2\text{S}$)
- carbon dioxide ($\text{CO}_2$)
- carbon monoxide (CO)
Coal seam gas control equipment may include:

- mud system
- blooie diverter lines
- auxiliary equipment
- pressure measuring devices
- gas detection equipment and devices
- diverters

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to operate and maintain ancillary equipment:

- apply legislative, organisation and site requirements and procedures for operating and maintaining ancillary equipment
- recognise and report equipment malfunction or failure
- supervise and train subordinates to provided standards
- work as directed by driller timely and efficiently
- maintain pumps in pump room
- align, open and close valves as appropriate
- use safety equipment, including fire protection, First Aid and vessel entry equipment
- lubricate valve stems
- replace defective parts in valves
- operate and maintain chemical mixing pumps and equipment
- clean and inspect mixing hopper and mixing area
- isolate and look out equipment as required

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to operate and maintain ancillary equipment:

- mud system ancillary equipment
- company and statutory safety guidelines, procedures and practices
- safe operating procedures when operating equipment
- rig maintenance
- normal drilling operations
- use of communication methods, including:
  - 2-way radio
  - intercom
  - telephone
  - oral instruction
  - written instruction
  - hand signals
  - telephone
• public address system
• weather conditions, including:
  • day/night
  • storm/lightning
  • hot/cold
  • wet/dry
• non-routine drilling operations
• discharge types and characteristics, including liquids, gases and solids
• material characteristics, including flammable, toxic, corrosive and explosive
• man management/rig management
• company maintenance system
• permit to work system
• equipment isolation procedures
• specialised hand tools
 Evidence Guide

| 10.2. Repair equipment in accordance with company and manufacturer's instructions   
| 10.3. Store equipment safely and in accordance with company procedures |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct and maintain derrick operations:

- apply legislative, organisation and site requirements and procedures for conducting and maintaining derrick operations
- interpret and apply occupational health and safety requirements and procedures
- accept constructive criticism
- apply numeracy skills to calculate:
  - fractions, decimals, percentages
  - volume
  - quantities
  - weight
  - length
  - density/specific gravity
  - temperature
  - pH
  - basic geometry, e.g. interpreting depth, direction and azimuth and dip of hole
- developed written and verbal communications skills, including use of:
  - 2-way radio
  - intercom
  - telephone
  - written instruction
  - oral instruction
  - hand signals
  - telephone
  - public address system
- prepare and complete understandable reports
- communicate tactfully with mud engineer and operator's representative and inform driller of problems if they arise

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct and maintain derrick operations:
- recognise and report equipment malfunction or failure
- supervise and train subordinates to provided standards
- work as directed by driller timely and efficiently
- conduct routine maintenance of derrick
- prepare for drilling operations
- prepare for the tripping of tubulars
- assist in running and cementing of casing
- assist driller in handling and nipple up of bop stack
- act as assistant to driller on drill floor
- keep circulation system clean and operating well
- look after equipment and dispose of waste properly
- follow instructions conscientiously
- be aware of position of crew members on floor during handling of drillstem
- safe operating procedures when operating equipment
- conversion between metric and imperial
- rig maintenance
- normal drilling operations
- non-routine drilling operations
- man management/rig management
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
</tr>
</thead>
</table>
| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for conducting and maintaining derrick operations
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of derrick operations and maintenance
- working with others to undertake and complete the conduct and maintenance of derrick operations that meets all of the required outcomes
- consistent timely completion of derrick operations and maintenance that safely, effectively and efficiently meets the required outcomes |

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
</tr>
<tr>
<td>- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
</tr>
<tr>
<td>- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of</td>
</tr>
</tbody>
</table>
assessment should not be greater than those required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the conduct and maintenance of derrick operations

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- safe working practices
- manufacturer’s guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation
- Petroleum Submerged Lands Act (PSLA)
- petroleum regulations

### Work instructions may come from briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include:
- nature and scope of tasks
- specifications
- quality of finished works
- achieved targets
- operational conditions
- obtaining of required permits
- site layout
- out of bounds areas
- worksite inspection requirements
- lighting conditions
- plant of equipment defects
- coordination requirements or issues
- contamination control requirements
- environmental control requirements
- barricade and signage requirements
- job instructions
- technical information
- mud engineer’s program
- manufacturer’s instructions
- Job Safety Analysis (JSA)
- training materials
- consideration of substances
- continuous communication

RIIOGD302A Trip casing

Modification History
Not applicable.

Unit Descriptor
This unit covers the tripping of casing in the drilling industry. It includes planning and preparing for operations, preparing to trip casing, and operating derricks during tripping of casing. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for operations | 1.1. Access, interpret and apply **compliance documentation** relevant to the work activity  
1.2. Obtain, confirm and apply **work instructions** for the allocated task  
1.3. Identify, manage and report all potential **hazards**  
1.4. Identify, locate and apply **personal protective equipment**  
1.5. Resolve **coordination requirements** with others at the site prior to commencing and during work activities and ensure **briefings/handover details** are read/passed on  
1.6. Confirm availability and status of necessary permits to work in accordance with operational and legislative requirements  
1.7. Confirm availability of necessary third party utilities in accordance with operational requirements |
| 2. Prepare to trip casing | 2.1. Check grade or grades of casing  
2.2. Supervise crew in correctly positioning casing on racks  
2.3. Measure and record casing  
2.4. Identify joint by the numerical order in which it will be run in the hole and its measured length  
2.5. Supervise crew to remove thread protectors, rabbit casing, clean and lubricate threads in accordance with good oilfield practice  
2.6. Check casing shoe and hanger joints for damage to threads, sealing surfaces and flapper valves where fitted  
2.7. Assemble and check operating conditions of casing running equipment, including slips, tongs, elevators, rubber clamp, protectors and tailing ropes  
2.8. Line up pumps to fill casing during running operation |
| 3. Operate derrick during tripping of casing | 3.1. Steady casing during stabbing  
3.2. Release pick-up elevators  
3.3. Correctly align casing for make-up  
3.4. Latch side door or slip type elevators  
3.5. Relieve casing stabber during casing running operations |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to trip casing:

- apply legislative, organisation and site requirements and procedures for conducting trip casing
- recognise and report equipment malfunction or failure
- supervise and train subordinates to provided standards
- work as directed by driller timely and efficiently
- supervise deck crew in correctly positioning casing in pipe bays
- remove thread protectors, rabbit casing, clean and lubricate threads
- check casing shoe and hanger joints for damage to threads, sealing surfaces and flapper valves where fitted
- assemble and check operating condition of casing running equipment, including slips, tongs, elevators, rubber clamp, protectors and tailing rope
- line up pumps to fill casing during running operations
- work derrick correctly during tripping of casing
- steady casing during stabbing
- release pick-up elevators when directed
- correctly align casing for make-up
- correctly latch side door or slip type elevators
- check grades of casing and supervise deck crew in correctly positioning casing in pipe bays
- measure and record casing in the numerical order in which it will be run into the hole

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to trip casing:

- legislative, site and manufacturer's requirements and procedures
- company and statutory safety guidelines, procedures and practices
- safe operating procedures when operating equipment
- rig maintenance
- types and characteristics of discharges including liquids, gases and solids
- types and characteristics of materials including flammable, toxic, corrosive, explosive and radioactive
- inspection, fault finding and reporting requirements and procedures
- dust suppression techniques
- drill system characteristics, technical capability and limitations
- normal drilling operations
- non-routine drilling operations
- man management/rig management
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:

- legislative, organisational and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation
- Petroleum Submerged Lands Act (PSLA)
- petroleum regulations
- environmental protection requirements

Work instructions may come from briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include:

- nature and scope of tasks
- specifications
- quality of finished works
- achieved targets
- operational conditions
- obtaining of required permits
- site layout
- out of bounds areas
- worksite inspection requirements
- lighting conditions
- plant of equipment defects
- coordination requirements or issues
- contamination control requirements
- safety equipment including fire protection and First Aid
- environmental control requirements
- barricade and signage requirements
- information received through communication methods including:
  - 2-way radio
  - intercom
  - telephone
  - written instruction
### Hazards may include:
- working in proximity to drilling rig
- working in a variety of weather conditions including:
  - day/night
  - storms - high winds and lightning
  - hot/cold
  - wet/dry (dusty)

### Personal protective equipment may include:
- eye protection
- hearing protection
- gloves
- footwear
- hard hats
- respirators

### Coordination requirements may include:
- other equipment operators
- maintenance personnel
- supervisors
- site personnel

### Briefings/handover details may include:
- pipe and/or casing tally
- preparation of casing running equipment (tongs/stabbing board)
- location of potential hazards
- review of job safety analysis (JSA)
- pre-tour safety meeting
- inspection and use of safety harness and lanyard and other safety equipment
- inspection and use of hydraulic power tongs, slips, elevators
- safety briefing/induction
- weekly safety meetings
- agreed procedures may include:
  - company
  - facility
  - client
  - permit to work

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to trip pipes:

- apply legislative, organisation and site requirements and procedures for tripping pipes
- interpret site requirements and procedures
- interpret work requirements
- prepare pill
- put trip tank on line and fill
- check safety lines, ropes and air hoists
- stand back, run in, lay down and pick up pipecracker
- release pipe from elevators
- latch elevators on drill string and stabilise
- operate air hoists
- operation of a manual or automated racking system

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to trip pipes:

- legislative, site and manufacturer's requirements and procedures
- drilling operation
- company and statutory safety guidelines, procedures and practices
- safe operating procedures when operating equipment
- hand signals
- working knots
- rig maintenance
- types and characteristics of discharges including liquids, gases and solids
- types and characteristics of materials including flammable, toxic, corrosive, explosive and radioactive
- normal drilling operations
- non-routine drilling operations
- man management/rig management

- barricade and signage requirements
- information received through communication methods including:
  - 2-way radio
  - intercom
  - telephone
| **Hazards may include:** | • working in proximity to drilling rig  
• weather conditions including:  
  • day/night  
  • storms - high winds and lightning  
  • hot/cold  
  • wet/dry (dusty) |
|---------------------------|--------------------------------------------------|
| **Personal protective equipment may include:** | • eye protection  
• hearing protection  
• gloves  
• footwear  
• hard hats  
• respirators  
• fall arrester |
| **Coordination requirements may include:** | • other equipment operators  
• maintenance personnel  
• supervisors  
• site personnel |
| **Briefings/handover details may include:** | • maintain and check pipe tally  
• preparation of derrick/floor equipment  
• line up trip tank/preparation of mud system  
• review of PTW requirements  
• pre-tour safety meeting  
• review of Job Safety Analysis (JSA)  
• safety briefing/induction  
• weekly safety meetings  
• agreed procedures may include:  
  • company  
  • facility  
  • client  
  • toolbox  
  • permit to work |
| **Record may include logging:** | • pipe tally sheets |
Unit Sector(s)
Drilling (Oil and Gas)

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIOGD304A Apply effective coal seam gas control practices

Modification History
Not applicable.

Unit Descriptor
This unit covers the application of effective coal seam gas control practices in the drilling industry. It includes planning and preparing for operations, applying coal seam gas control strategies, coordinating coal seam gas control crew activities, operating and monitoring coal seam gas control equipment and processes, and applying coal seam gas kill procedures.

Application of the Unit
This unit is appropriate for those working in operational roles in coal-seam methane gas drilling operations, at worksites within:

- Coal mines
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>
</thead>
</table>
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1. Plan and prepare for operations** | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, confirm and apply *work instructions* for the allocated task  
1.3. Resolve *coordination requirements* with others at the site prior to commencing and during work activities |
| **2. Apply coal seam gas control strategies** | 2.1. Apply approved methods to control identified *hazards* associated with coal seam gas control under varying *working conditions*  
2.2. Recognise and respond to *early warning signs* of kicks and coal seam gas going under-balanced while drilling  
2.3. Recognise *kick indicators* and apply kick detection methods and responses during coal seam gas control operations  
2.4. Operate equipment to minimise *swabbing and surging*  
2.5. Apply tripping methods in accordance with operating requirements  
2.6. Apply relevant components of industry requirements and government regulations related to coal seam gas control and influx prevention during operations  
2.7. Prepare *records and reports* according to requirements |
| **3. Coordinate coal seam gas control crew activities** | 3.1. Inform assistants of their roles and responsibilities in a coal seam gas control situation and monitor their application  
3.2. *Communicate* operational activities and information to other crew during coal seam gas control operations  
3.3. Conduct coal seam gas control *drills and exercises* to ensure crew readiness for emergency situations |
| **4. Operate and monitor coal seam gas control equipment and processes** | 4.1. Verify availability and set up of coal seam gas control equipment  
4.2. Inspect *coal seam gas control equipment* for safety and fitness-for-purpose and |

SkillsDMC
| 4.3. | Install, test and operate coal seam gas control equipment to manufacturer’s and operational requirements |
| 4.4. | *Monitor, read and interpret* measuring and testing equipment and devices to ensure planned, safe, effective coal seam gas control |
| 4.5. | Assist in installation, maintenance and replacement of equipment |

| 5. | Apply coal seam gas kill procedures |
| 5.1. | Confirm *coal seam gas control procedures and activities* with crew members |
| 5.2. | Apply *operational instructions* |
| 5.3. | Apply coal seam gas control working practices |
| 5.4. | Apply *coal seam gas kill methods* according to requirements |
| 5.5. | Carry out emergency shutdown procedures |
| 5.6. | Communicate incident information to other crew members |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following, as required to apply effective coal seam gas control practices:

- apply legislative, organisation and site requirements and procedures
- work in a team
- take measurements
- make calculations and estimations relevant to activities
- interpret gauges
- apply kick warning signs and indicators detection procedures
- interpret work instructions and procedures
- supervise drill assistant
- conduct and evaluate drills and exercises
- use hand and power tools

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to apply effective coal seam gas control practices:

- the principles and practices of coal seam gas control
- coal seam gas control procedures and their application
- risks and their controls related to coal seam gas control
- kill principles and methods
- effects of hydrostatic pressure when drilling through gas bearing formations
- sources of ignition and their dangers and controls
- function, installation, operation, maintenance and use of coal seam gas control and auxiliary equipment
- causes, effects and response to equipment failures
- drilling parameters and their interpretation
- purpose, operation and interpretation of measuring and testing devices
- kick detection warnings and indications and the responses to them
- purpose, type and conduct of coal seam gas control emergency drills and exercises
- causes and effects of swabbing and surging
- pressure concepts and effects
- communication methods and protocols during coal seam gas control operations
- influx parameters
• tripping requirements and techniques
• emergency shutdown methods
• type, format and implementation of coal seam gas control documents
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the application of effective coal seam gas control practices</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient application of effective coal seam gas control practices</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete effective coal seam gas control practices that meet all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely application of effective coal seam gas control practices that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
|  | • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. |
|  | • Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site |
circumstances.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete effective coal seam gas control practices

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisational and site requirements and procedures |
| | manufacturer’s guidelines and specifications |
| | Australian standards |
| | code of practice |
| | Employment and workplace relations legislation |
| | Equal Employment Opportunity and Disability Discrimination legislation |

| Work instructions may come from briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include: | nature and scope of tasks |
| | specifications |
| | quality of finished works |
| | achievement targets |
| | operational conditions |
| | obtaining of permits required |
| | site layout |
| | out of bounds areas |
| | worksite inspection requirements |
| | lighting conditions |
| | plant or equipment defects |
| | hazards and potential hazards |
| | coordination requirements or issues |
| | contamination control requirements |
| | environmental control requirements |
| | barricade and signage requirements |

| Coordination requirements may include: | drill team |
| | other equipment operators |
| | maintenance personnel |
| | supervisors |
| | worksite personnel |

| Hazards may include: | blow out gas to surface |
| | ignition of gas |
| | toxic gases |
| | pressurised coal seam gas system |
| **Working conditions** may include: | • night time operations  
• day time operations  
• hot climates  
• cold climates  
• snow  
• wet weather conditions  
• high wind |
|-------------------------------|---------------------------------------------------------------|
| **Early warning signs** may be: | • rate of penetration trends  
• trends shown in torque/drag |
| **Kick indicators** may include: | • flow from coal seam gas (pump off)  
• increase in flow from coal seam gas (pumps on)  
• pit volume gain |
| **Swabbing and surging** may be affected by: | • coal seam gas and pipe geometry  
• coal seam gas depth  
• fluid characteristics  
• coal seam gas conditions and formation properties  
• tool pulling and running speeds  
• BHA configuration |
| **Records and reports** may include: | • specifications  
• operator's instructions  
• drilling program  
• technical information  
• daily pre-tour checklist  
• daily pre-drilling checklist  
• AP RP 53  
• tour sheet  
• tour reports and drilling logs  
• kill sheet  
• incident report form  
• drilling line record sheet  
• shut-in procedures  
• equipment damage report |
| **Communications** may include: | • 2-way radio  
• hand signals  
• telephone  
• public address system  
• written work instructions |
| **Drills and exercises** may include: | • pit drill  
• trip drill |
| **Coal seam gas control equipment** may include: | • abandonment drill  
• evacuation  
• mud system  
• diverters  
• auxiliary equipment  
• pressure measuring devices  
• gas detection equipment and devices  
• diverters |
|---|---|
| **Monitoring, reading and interpreting** may apply to: | • drilling fluid gain or loss  
• drilling parameters  
• pressure gauges  
• mud balance values  
• pump stroke counters  
• gas readings  
• amount of fluid added to coal seam gas  
• kick warnings and indicators  
• circulation rate |
| **Coal seam gas control procedures and activities** may include: | • time of coal seam gas shut-in  
• initial shut-in pressures  
• stage of kill  
• type of kill procedure employed  
• status of coal seam gas control equipment  
• flow path for coal seam gas control method  
• agreed procedures |
| **Operational instructions** may include: | • type of kill procedure to use  
• type of shut-in procedure to use  
• action to be taken in the event of approaching MAASP  
• monitoring pit levels |
| **Working practices** may include: | • confirmation of shut-in  
• monitoring of shut-in pressures  
• monitoring of accumulator pressures  
• correct SPM to be maintained during kill  
• monitoring pump efficiency  
• individual operation  
• team operation  
• use of personal protective equipment  
• consideration of H₂S and other toxic substances  
• consideration of flammables and ignition sources |
Coal seam gas kill methods may include:

- bringing pump up to kill speed
- maintaining constant bottom coal seam gas pressure
- shutting down the kill operation while maintaining a constant bottom coal seam gas pressure
- controlling the influx using the Driller's Method

**Unit Sector(s)**

Drilling (Oil and Gas)

**Competency field**

Refer to Unit Sector(s).

**Co-requisite units**

Not applicable.
RIIOGD305A Apply blow out prevention operational procedures

Modification History
Not applicable.

Unit Descriptor
This unit covers the applying of blow out prevention operational procedures in the drilling industry. It includes: planning and preparing for applying of blow out prevention operational procedures; applying coal seam gas control strategies; coordinating coal seam gas control crew activities; operating and monitoring coal seam gas control equipment and processes; and applying coal seam gas kill procedures.

Application of the Unit
This unit is appropriate for those working in a operational roles in coal-seam methane gas drilling operations, at worksites within:
- Coal mining
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to apply blow out prevention operational procedures:

- apply legislative, organisation and site requirements and procedures
- work in a team
- take measurements
- carryout calculations and estimations relevant to activities
- interpret gauges
- apply kick warning signs and indicators detection procedures
- complete trip sheets
- complete kill sheets
- interpret work instructions and procedures
- supervise drill assistant
- conduct and evaluate drills and exercises
- use hand and power tools

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to apply blow out prevention operational procedures:

- the principles and practices of coal seam gas control
- coal seam gas control procedures and their application
- risks and their controls related to coal seam gas control
- BOP annular equipment - types and operating principles
- BOP control system principles
- operating principles of chokes and manifolds
- kill principles and methods
- effects of hydrostatic pressure when drilling through gas bearing formations
- sources of ignition and their dangers and controls
- function, installation, operation, maintenance and use of coal seam gas control and auxiliary equipment
- causes, effects and response to equipment failures
- drilling parameters and their interpretation
- purpose, operation and interpretation of measuring and testing devices
- kick detection warnings and indications and the responses to them
• purpose, type and conduct of coal seam gas control emergency drills and exercises
• causes and effects of swabbing and surging
• pressure concepts and effects
• communication methods and protocols during coal seam gas control operations
• influx parameters
• safe coal seam gas shut-in requirements and procedures
• tripping requirements and techniques
• constant bottom coal seam gas pressure method
• emergency shutdown methods
• type, format and implementation of coal seam gas control documents
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

|                                                                          | • hand signals  
|                                                                          | • telephone  
|                                                                          | • public address system  
|                                                                          | • written work instructions  |
**Drills and exercises** may include:
- pit drill
- trip drill
- abandonment drill
- evacuation

**Coal seam gas control equipment** may include:
- mud system
- blow out preventer
- manifolds and chokes
- accumulator
- degassers
- monitors
- diverters
- auxiliary equipment
- pressure measuring devices
- gas detection equipment and devices
- Washington-type diverters

**Monitoring, reading and interpreting** may apply to:
- drilling fluid gain or loss
- drilling parameters
- pressure gauges
- mud balance values
- pump stroke counters
- gas readings
- amount of fluid added to coal seam gas
- kick warnings and indicators
- circulation rate

**Coal seam gas control procedures and activities** may include:
- time of coal seam gas shut-in
- initial shut-in pressures
- stage of kill
- type of kill procedure employed
- status of coal seam gas control equipment
- flow path for coal seam gas control method
- agreed procedures

**Corrective actions** may include:
- changing over pumps in the event of primary failure
- using secondary choke in the event of primary failure
- using alternate preventer in the event of primary failure
- running accumulator emergency backup in case of primary failure

**Operational instructions** may include:
- type of kill procedure to use
- type of shut-in procedure to use
- action to be taken in the event of approaching...

**Unit Sector(s)**

Drilling (Oil and Gas)
Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIOGD401A Rig up, conduct pre-spud operations and rig down

Modification History
Not applicable.

Unit Descriptor
This unit covers the conducting of rig up, pre-spud and rig down operations in the drilling industry. It includes: planning and preparing for rig up operations; rigging up to spud; preparing for drilling of surface hole/subsea hole; preparing for pre-spud operations; conducting operations as per drilling program; and carrying out rig down operations. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, at worksites within:
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, confirm and apply *work instructions* for the allocated task  
1.3. Identify, manage and report all potential *hazards*  
1.4. Resolve *coordination requirements* with others at the site prior to commencing and during work activities  
1.5. Carry out pre rig-up procedure inspections (by rig manager, operator and crew) in accordance with standards for individual rigs  
1.6. Coordinate movement of load and sequence of installation and location in accordance with rig movement plan  
1.7. Check *equipment* for damage and/or loss by moving contractor and report and BI in accordance with requirements |
| 2. Rig up to spud | 2.1. Receive and action rig manager authorisation to commence rig-up to spud operations  
2.2. Receive detailed *instructions* on use and type of mud from the operator and distribute as appropriate and to required specifications  
2.3. Identify potential rig-up problems and take *corrective action*  
2.4. Keep rig manager informed of operations in accordance with legislative and company requirements |
| 3. Prepare for drilling of surface hole/subsea hole | 3.1. Check drilling and hoist equipment, report damage to rig manager and *record* in accordance with company policies and procedures  
3.2. Conduct equipment checks for nippling-up or cross-checked with relevant procedures  
3.3. Check handling equipment for correct sizing and if fit for purpose  
3.4. Confirm availability of and inspect, clean, calibrate and record tubulars in accordance |
3.5. Check well control equipment against work program requirements
3.6. Identify special tool requirements and check if fit for purpose and approved for use

4. Prepare for pre-spud operations
   4.1. Lock pipe racks with drill pipe and position drill collars for immediate use
   4.2. Inspect casing running tools and prepare for operation
   4.3. Record casing tallies and report to appropriate company officer

5. Conduct operations as per drilling program
   5.1. Determine optimum circulating and penetration rates and check deviations are in accordance with operators drilling program
   5.2. Continually check mud cleaning equipment and screens for integrity and correct operation
   5.3. Check drilling fluid quantities against program requirements with sufficient being in reserve to kill well and keep hole on full trip
   5.4. Record correct mud properties on tour report
   5.5. Operate all equipment in accordance with manufacturer regulations and company procedures
   5.6. Maintain a sound working relationship with third party contractors

6. Rig down
   6.1. Receive and action rig manager authorisation to commence rig-down operations
   6.2. Identify potential rig-down problems and take corrective action
   6.3. Keep rig manager informed of operations in accordance with legislative and company requirements
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to rig up, conduct pre-spud operations and rig down:

- apply legislative, organisation and site requirements and procedures
- oversee rigging
- manage and maintain pre-spud operations
- participate in inspections
- develop crew schedules and allocate jobs
- oversee mud-mixing operations
- check equipment/tools and record, report and rectify faults
- delegate
- problem solve
- plan for all circumstances
- operate forklift in line with licensing requirements
- read, interpret and apply regulations/company procedures
- convert from metric to imperial measurement
- carrying out calculations including:
  - quantities
  - up-hole velocity
  - specific gravity
  - volume
  - hydrostatic pressures
- operate machinery in a safe manner
- communicate effectively with management, crew and contractors
- meeting skills
- negotiation skills
- troubleshoot during drilling program
- read documents including:
  - load schedules
  - operating procedures
  - forms
  - government specifications

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit,
particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to rig up, conduct pre-spud operations and rig down:

- rigging and slinging
- forklift operations
- local authorities
- rig specifications and measurements
- metric-imperial conversion
- marine operations
- drilling program to pre-spud operations
- drilling equipment
- rig up procedures
- casing
- mud systems
- routine drilling operations
- Job Safety Analysis (JSA)
- marine operations
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for rig up, pre-spud and rig down operations</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of rig up, pre-spud and rig down operations</td>
</tr>
<tr>
<td></td>
<td>• working with others to plan, prepare and conduct rig up, pre-spud and rig down operations</td>
</tr>
<tr>
<td></td>
<td>• evidence of the consistent successful rig up, pre-spud and rig down operations</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
<td></td>
</tr>
<tr>
<td>• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
<td></td>
</tr>
<tr>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
<td></td>
</tr>
<tr>
<td>• Customisation of assessment and delivery</td>
<td></td>
</tr>
<tr>
<td>Guidance information for assessment</td>
<td>Method of assessment</td>
</tr>
<tr>
<td>------------------------------------</td>
<td>----------------------</td>
</tr>
<tr>
<td>Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.</td>
<td>This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:</td>
</tr>
<tr>
<td>- written and/or oral assessment of the candidate's required knowledge</td>
<td>- observed, documented and/or first hand testimonial evidence of the candidate's:</td>
</tr>
<tr>
<td>- observed, documented and/or first hand testimonial evidence of the candidate's:</td>
<td></td>
</tr>
<tr>
<td>- implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes</td>
<td>- consistent achievement of required outcomes</td>
</tr>
<tr>
<td>- consistent achievement of required outcomes</td>
<td>- first hand testimonial evidence of the candidate's:</td>
</tr>
<tr>
<td>- first hand testimonial evidence of the candidate's:</td>
<td>- working with others to undertake and complete rig up, pre-spud and rig down operations</td>
</tr>
<tr>
<td>- working with others to undertake and complete rig up, pre-spud and rig down operations</td>
<td>- provision of clear and timely instruction and supervision by the individual of those involved in the conduct of rig up, pre-spud and rig down operations</td>
</tr>
<tr>
<td>- provision of clear and timely instruction and supervision by the individual of those involved in the conduct of rig up, pre-spud and rig down operations</td>
<td></td>
</tr>
<tr>
<td>- Aboriginal people and other people from a non English speaking background may have second language issues.</td>
<td></td>
</tr>
<tr>
<td>- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.</td>
<td></td>
</tr>
</tbody>
</table>
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| 1. Plan and prepare for nippling-up and pressure testing | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, confirm and apply *work instructions* for the allocated task and identify required *equipment*  
1.3. Identify, manage and report all potential *hazards*  
1.4. Resolve *coordination requirements* with others at the site prior to commencing and during work activities  
1.5. Check and adjust casing bowl and position level as required  
1.6. Perform BOP test as per operator's written instructions  
1.7. Carry out rig-up to drill-out operations in accordance with parameters and specifications  
1.8. Carry out pressure tests prior to drilling out and *record* in tour book |
| 2. Pressure testing during intermediate and/or main holes | 2.1. Confirm pressure test program/timing and comply with procedures  
2.2. Check cup testers and plugs for sizing and integrity  
2.3. Monitor and maintain stack within deviation limit  
2.4. Adhere to safety practices during pressure test operations. |
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to participate in nippling-up and pressure testing:

- apply legislative, organisation and site requirements and procedures for nippling-up and pressure testing
- manage and monitor rippling up and pressure testing within a team environment
- delegate
- administer good communication skills
- problem solve
- plan for all circumstances
- use hand tools correctly
- perform a range of numerical calculations including:
  - volume
  - quantities
  - mass
  - weight
  - length
  - pressure
  - using calculator if required
  - using estimating skills (e.g. mental arithmetic, visualisation of size and quantity)
  - basic geometry (e.g. interpreting depth, direction, angles)
  - use of metric and imperial and conversion between the two

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to participate in nippling-up and pressure testing:

- high pressure lines requiring pressure testing
- understanding of test equipment
- testing procedures
- operations of a hydraulic torque wrench
- rig maintenance procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</tbody>
</table>

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
|                                                 | • Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances. |
|                                                 | • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. |
|                                                 | • Customisation of assessment and delivery |
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete nippling-up and pressure testing
  - provision of clear and timely instruction and supervision by the individual of those involved in participation in nippling-up and pressure testing

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:

- legislative, organisational and site requirements and procedures including:
  - Petroleum Submerged Lands Act (PSLA)
  - Duty of Care
  - environmental guidelines
  - operator's instructions
  - specifications
  - drilling program
  - occupational health and safety documents
  - materials safety data sheets (MSDS)
  - Job Safety Analysis (JSA)
  - relevant safety alerts
  - manufacturer's guidelines and specifications
  - Australian standards
  - code of practice
  - Employment and workplace relations legislation
  - Equal Employment Opportunity and Disability Discrimination legislation

**Work instructions** may come from briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include:

- communication through:
  - pre-job
  - pre-tour
  - safety meeting
  - handover with oncoming driller
  - 2-way radio
  - hand signals
  - telephone
  - public address system
  - written work instructions
  - internet and intranet
  - nature and scope of tasks
  - specifications
  - quality of finished works

Co-requisite units

Not applicable.
RIIOGD403A Conduct drilling operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of drilling operations in the drilling industry. It includes planning and preparing for drilling operations, commencing drilling operations, maintaining drilling operations, drilling intermediate and/or main holes, and preparing for hole abandonment. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, at worksites within:

- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites

| 1. Plan and prepare for drilling operations | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Obtain, confirm and apply work instructions for the allocated task  
1.3. Identify, manage and report all potential hazards  
1.4. Communicate emergency response and occupational health and safety requirements, including the possibility of wellbore influx and well control, to crew members  
1.5. Resolve and maintain coordination requirements with others at the site prior to commencing and during work activities  
1.6. Check, clean and lubricate equipment, including mud riser/conductor/connections and rectify and report faults  
1.7. Check tool requirements and assembled in wellhead area |
| 2. Commence drilling operations | 2.1. Double-check drilling program requirements to ensure safe operations  
2.2. Undertake surface hole drilling in accordance with Job Safety Analysis (JSA) and drilling program, and confirm with operator's representative  
2.3. Commence intermediate and main hole drilling operations  
2.4. Monitor, maintain and record drilling parameters in line with drilling program  
2.5. Calculate and maintain kill sheet requirements and carry out and record integrity tests in line with drilling program  
2.6. Maintain accurate tubular tallies  
2.7. Inspect and prepare casing running tools and casing for operation |
| 3. Maintain drilling operations | 3.1. Undertake cementing preparations in accordance with operator's instructions and company procedures  
3.2. Run casing and prepare for cementing in accordance with job safety analysis, and cement in accordance with well engineering |

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct drilling operations:

- apply legislative, organisation and site requirements and procedures for conducting drilling operations
- operate rig in a safe and productive manner
- delegate work to individuals according to established levels of skill
- administer effective communication skills - oral and written
- troubleshoot and problem solve, including rise in rotary torque and mud pressure
- forward planning in preparation of changing circumstances/contingencies
- use a calculator and convert from metric to imperial measurements
- shutdown the rig in an emergency and coordinate an orderly evacuation if necessary
- perform calculations including:
  - quantities
  - up-hole velocity
  - specific gravity
  - volumes and capacities
  - pressure calculations

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct drilling operations:

- rig components
- rig specifications
- hole recovery procedures, including fishing, assembly service maintenance and tools
- potential problems
- down hole conditions
- types of mud available
- rigging and slinging
- rig maintenance procedures
- evacuation procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to coordinate air drilling operations:

- apply legislative, organisation and site requirements and procedures for coordination of air drilling operations
- discuss and apply drilling concepts and methods
- apply air drilling procedures
- explain and describe the uses of air drilling package components
- apply emergency response procedures
- apply Job Safety Analysis (JSA)
- perform calculations including:
  - annular velocity
  - sinking/slipping velocity
  - pressure
  - flow test procedure
  - volume
  - conversion between metric and imperial
  - use of a calculator

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to coordinate air drilling operations:

- air drilling concepts and methods, advantages and disadvantages
- conventional mud drilling concepts and methods, advantages and disadvantages
- emergency response plan for air drilling operations
- pressure volume requirements
- air requirements
- dust drilling
- mist drilling
- stiff foam drilling
- aerated mud
- air drilling procedures
- emergency response
- Job Safety Analysis (JSA)
**Evidence Guide**

1.4. Identify and respond to the *early warning signs* of kicks and well going under-balance while drilling  
1.5. Recognise *kick indicators* and apply kick detection methods and responses during well control operations |
| 2. Assess well control equipment and report and record faults | 2.1. Identify the purpose, use and relationship between *equipment*, indicators, counters and detection systems to determine fitness of equipment for well control.  
2.2. Identify flow paths for normal drilling operations and well control from appropriate sources  
2.3. Identify and apply *well-control testing procedures* and principles in accordance with company/regulatory requirements  
2.4. Perform primary equipment failure well shut-in procedures in accordance with company/regulatory requirements  
2.5. Conform to safe *working practices* and operational requirements |
| 3 Carry out well kill operations | 2.6. *Brief* crew on well control procedures  
2.7. Identify and apply appropriate pre-recorded information.  
2.8. Check, read, interpret and record pressures and gauges and undertake *corrective action*  
2.9. Determine and apply well kill procedures  
2.10. Demonstrate correct application of trip kill sheet data and well-closure procedure when dealing with influx and shutting in a well  
2.11. Calculate hydrostatic head at |
<p>| | |</p>

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following, as required, to carry out well control and blow out prevention:

- apply legislative, organisation and site requirements and procedures
- work in a team
- take measurements such as:
  - penetration rate
  - circulating pressure
  - rotary torque
  - active surface volume
  - frequency
  - pump pressure
- make calculations and estimations such as:
  - pressure
  - density
  - volume
  - height
  - velocity
  - length
  - weight
- interpret gauges, graphs
- detect kick warning signs and indicators
- complete trip sheets
- complete kill sheets

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to carry out well control and blow out prevention:

- risk management related to well control
- well control procedures and their application
- function, operation, maintenance and use of well control and auxiliary equipment
- causes, effects and response to equipment failures
- drilling parameters and their interpretation
• measuring and testing device purpose and operation
• calculations necessary for well control procedures
• kick detection warnings and indications and the responses to them
• kill methods and procedures
• managing well control crew requirements
• well control emergency drills
• effects of swabbing and surging
• pressure concepts and effects
• formation integrity
• influx parameters
• safe well shut-in procedures
• tripping requirements and techniques
• constant bottom hole pressure method
• accumulator
• type, format and implementation of well control documentation
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the carrying out of well control and blow out prevention</td>
</tr>
<tr>
<td></td>
<td>• implementation of appropriate procedures and techniques for the safe, effective and efficient well control and blow out prevention</td>
</tr>
<tr>
<td></td>
<td>• working with others to plan, prepare and conduct well control and blow out prevention</td>
</tr>
<tr>
<td></td>
<td>• provision of clear and timely instruction and supervision by the individual of those involved in carrying out of well control and blow out prevention</td>
</tr>
<tr>
<td></td>
<td>• evidence of the consistent successful well control and blow out prevention</td>
</tr>
</tbody>
</table>

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
• Aboriginal people and other people from a non English speaking background may have second language issues.
• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
• Where applicable, physical resources should include equipment modified for people with disabilities.
• Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to plan, prepare and conduct well control and blow out prevention
  - provision of clear and timely instruction and supervision by the individual of those involved in the conduct of the well control and blow out prevention

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation | legislative, organisation and site requirements and procedures |
| - | manufacturer’s guidelines and specifications |
| - | Australian standards |
| - | code of practice |
| - | Employment and workplace relations legislation |
| - | Equal Employment Opportunity and Disability Discrimination legislation |

| Hazards | blow out gas to surface |
| - | ignition of gas |
| - | toxic gases |
| - | pressurised coal seam gas system |

| Working conditions | night time operations |
| - | day time operations |
| - | hot climates |
| - | cold climates |
| - | snow |
| - | wet weather conditions |
| - | high wind |

| Early warning signs | rate of penetration trends |
| - | drilling break |
| - | trends shown in torque/drag |

| Kick indicators | flow from wells (pump off) |
| - | increase in flow from well (pumps on) |
| - | pit volume gain |

| Equipment | mud system |
| - | blow out preventer |
| - | manifolds and chokes |
| - | accumulator |
| - | degassers |
| - | monitors |
| - | diverters |

| Well-control testing procedures | to be identified |
## Working practices

<table>
<thead>
<tr>
<th>May include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>- industry best practice</td>
</tr>
<tr>
<td>- confirmation of shut-in</td>
</tr>
<tr>
<td>- monitoring of shut-in pressures</td>
</tr>
<tr>
<td>- monitoring of accumulator pressures</td>
</tr>
<tr>
<td>- correct SPM to be maintained during kill</td>
</tr>
<tr>
<td>- monitoring pump efficiency</td>
</tr>
<tr>
<td>- individual operation</td>
</tr>
<tr>
<td>- team operation</td>
</tr>
<tr>
<td>- use of personal protective equipment</td>
</tr>
<tr>
<td>- consideration of H₂S and other toxic substances</td>
</tr>
<tr>
<td>- consideration of flammables and ignition sources</td>
</tr>
<tr>
<td>- maintaining continuous communication</td>
</tr>
<tr>
<td>- reacting to on-site emergencies</td>
</tr>
</tbody>
</table>

## Briefing of crew

<table>
<thead>

<tr>
<td>- safety briefing/induction</td>
</tr>
<tr>
<td>- pre-tour safety meeting</td>
</tr>
<tr>
<td>- weekly safety meetings</td>
</tr>
<tr>
<td>- job safety analysis (JSA)</td>
</tr>
<tr>
<td>- agreed procedures including:</td>
</tr>
<tr>
<td>- company</td>
</tr>
<tr>
<td>- facility</td>
</tr>
<tr>
<td>- client</td>
</tr>
</tbody>
</table>

## Corrective action

<table>
<thead>
<tr>
<th>May include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>- changing over pumps in the event of primary failure</td>
</tr>
<tr>
<td>- using secondary choke in the event of primary failure</td>
</tr>
<tr>
<td>- using alternate preventer in the event of primary failure</td>
</tr>
<tr>
<td>- running accumulator emergency backup in case of primary failure</td>
</tr>
</tbody>
</table>

## Operational instructions

<table>
<thead>
<tr>
<th>May include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>- type of kill procedure to use</td>
</tr>
<tr>
<td>- type of shut-in procedure to use</td>
</tr>
<tr>
<td>- action to be taken in the event of approaching</td>
</tr>
</tbody>
</table>
### MAASP
- monitoring pit levels

### Recording and reporting documents may include:
- specifications
- operator's instructions
- drilling program
- technical information
- relevant legislation
- industry regulations
- government requirements
- daily pre-tour checklist
- daily pre-drilling checklist
- AP RP 53
tour sheet
tour reports and drilling logs
kill sheet
incident report form
drilling line record sheet
shut-in procedures
weekly safety meeting report
equipment damage report

### Managing crew during well control incident may include:
- informing subordinates of their roles and responsibilities in a well control situation
- observing and reacting on the performance of subordinates that falls below acceptable levels
- assessing crew performance to ensure competent handling of well control situations
- communicating potential problems to the crew and taking necessary actions
- instructing the crew to take up their assigned positions during well kill
- allocating personnel assignments to increase the fluid density and handle the resulting increased volumes during the well kill

### Communication channels may include:
- 2-way radio
- hand signals
- telephone
- public address system
- written work instructions
- internet and intranet
Unit Sector(s)
Drilling (Oil and Gas)

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIOGD406A Shut down rig

Modification History
Not applicable.

Unit Descriptor
This unit covers shutting down the rig in the drilling industry. It includes planning and preparing to shutdown rig, and rig-out to stack. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, at worksites within:

- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to shutdown the rig:

- apply legislative, organisation and site requirements and procedures for shutting down the rig
- apply delegation techniques
- apply effective communication skills
- apply problem solving techniques
- apply contingency planning requirements and procedures
- oversee rigging operations

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to shutdown the rig:

- truck weight restrictions
- rig specifications
- forklift operations and limitations when supervising operations
- permit requirements
# Evidence Guide

  - relevant safety alerts
  - manufacturer's guidelines and specifications
  - Australian standards
  - code of practice
  - Employment and workplace relations legislation
  - Equal Employment Opportunity and Disability Discrimination legislation
  - local authorities permits and guidelines

**Work instructions** may come from briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include:

- communication through
  - 2-way radio
  - hand signals
  - telephone
  - public address system
  - written work instructions
  - internet and intranet
  - handover with oncoming driller
  - safety briefing/induction
  - pre-tour safety meeting
  - weekly safety meetings
  - Job Safety Analysis (JSA)
agreed procedures including:
- company
- facility
- client
- rig manager’s shutdown instructions, including preparations for return of rental equipment

**Hazards** may include:
- working in proximity to drilling rig
- working in different conditions including:
  - night time operations
  - day time operations
  - hot climates
  - cold climates
  - wet weather conditions
  - high wind

**Coordination requirements** may include:
- other equipment operators
- maintenance personnel
- supervisors
- site personnel

**Equipment**, including rental equipment, may include:
- non-magnetic drill collars
- string stabilisers
- stabiliser inserts
- drill bits
- accommodation and/or office facilities
- personnel entertainment equipment

<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for planning and evaluating rig operations | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Obtain, confirm and apply work instructions for the allocated task  
1.3. Identify, manage and report all potential hazards  
1.4. Resolve coordination requirements with others at the site prior to commencing and during work activities  
1.5. Identify financial/insurance implications of non-conformance and notify appropriate personnel/authorities |
| 2. Establish risk management strategies           | 2.1. Identify role and legal responsibilities of rig managers, supervisors and personnel and put appropriate measures in place to manage such responsibilities  
2.2. Examine use of regulations, code of practice and specific site manuals and implement appropriate processes  
2.3. Make arrangements to provide information in a language, style and format which is understood by all parties  
2.4. Understand audit of potential workplace hazards, evaluate findings and implement correct control measures and communicate to personnel and appropriate authorities  
2.5. Establish communication and on-site meeting processes for resolving safety issues and communicate to personnel and appropriate authorities  
2.6. Evaluate rig performance and discuss with client and review operational requirements and implement changes if required  
2.7. Identify and implement coaching and mentoring arrangements and design appropriate training strategies to rectify performance issues |
| 3. Implement rig safety compliance system         | 3.1. Identify and implement communication requirements and communicate to all parties  
3.2. Identify and demonstrate radio                                                                                                                                                                                 |
| Communication strategies and reporting techniques to all parties | 3.3. Monitor, adjust and report health, safety and environmental performance to appropriate personnel/authorities |
| 3.4. Maintain systems, records and reporting procedures | 3.5. Investigate non-conformances and report and deal with according to company and/or legislative requirements |
| 3.6. Implement workplace measures to ensure that non-conformance is not repeated |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to plan and evaluate rig operations:

- apply legislative, organisation and site requirements and procedures for planning and evaluating rig operations
- apply and monitor rig performance in line with regulatory requirements
- communicate verbal and written instructions/outcomes at all operating levels
- apply appropriate software applications
- identify, assess, control and report hazards/situations
- maintain monitoring systems
- counsel personnel

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to plan and evaluate rig operations:

- Petroleum Act
- Environmental Protection Act
- Occupational Health and Safety Act
- confined space entry
- investigation procedures
- evaluation techniques
- reporting techniques
- monitoring systems
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

RIIOGD503A Oversee drilling operations

Modification History
Not applicable.

Unit Descriptor
This unit covers overseeing drilling operations in the drilling industry. It includes planning and preparing to oversee drilling operations, organising drilling of surface hole, supervising and participating in nipping up and pressure testing, organising rig up and rig up to spud, and completing and abandoning well. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a management or supervisory role at worksites within:
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

| 1. Plan and prepare for overseeing drilling operations | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Obtain, confirm and apply work instructions for the allocated task  
1.3. Identify, manage and report all potential hazards  
1.4. Resolve coordination requirements with others at the site prior to commencing and during work activities |
| 2. Organise drilling of surface hole | 2.1. Obtain copies of contract and well program, check and implement strategies designed and communicate to all parties  
2.2. Obtain and check correct equipment and tools are on hand for surface hole operations  
2.3. Check integrity of equipment and prepare/inspect casing and joints for damage  
2.4. Maintain records and liaise with service companies to rectify faults  
2.5. Ensure that appropriate equipment and personnel are on hand for casing |
| 3. Supervise and participate in nipping up and pressure testing | 3.1. Organise equipment and nipping-up requirements for drilling out  
3.2. Ensure pressure testing of all BOP equipment is carried out  
3.3. Ensure rig up to drill out is carried out in accordance with procedure  
3.4. Monitor drill out safety processes and test gauge leak off as required |
| 4. Organise rig up and rig up to spud | 4.1. Assign crews to specific jobs and implement performance measures to monitor operations  
4.2. Put appropriate monitoring strategies and checks in place to ensure integrity of operations  
4.3. Check all specific instructions with operator's representative for drilling hole  
4.4. Conduct crew meetings on total rig safety requirements |
<p>| | |</p>
<table>

</table>
| **4.** | **4.5.** Report/rectify damage as required  
**4.6.** Ensure mud is mixed in accordance with procedures and properties defined in the drilling program  
**4.7.** Carry out pre-spud safety inspections with circulation and spud-in established  
**4.8.** Undertake surveys and report any deviations to operator's representative and record on appropriate documentation  
**4.9.** Supervise running in and cementing of casing with operator's written instructions being followed |
| **5.** Complete and abandon well | **5.1.** Supervise completion and well abandonment with operator's representative  
**5.2.** Make preparations to release rig and arrange shutdown preparation list  
**5.3.** Arrange servicing, repair and/or return of equipment through appropriate channels  
**5.4.** Abandon well in accordance with legislative, operator and company requirements |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to oversee drilling operations:

- apply legislative, organisation and site requirements and procedures for overseeing drilling operations
- apply BOP specifications
- select and utilise correct drilling equipment
- apply drilling specifications
- apply legislation and acts
- nipple-up and pressure test within specifications
- rig up to spud
- coordinate drill team
- carry out numerical calculations including:
  - addition, subtraction, multiplication, division
- relate normal pressure to temperature
- using calculator if required
- using estimated skills (e.g. mental arithmetic, visualisation of size and quantity)
- basic geometry (e.g. interpreting depth, direction)
- use of metric and imperials and conversion between the two
- interpreting of gauges, graphs etc
- calculations relating to pressure (hydrostatic, surface, downhole, circulating), density, volume (fluid, air, gas), height, velocity, length, weight
- measurements (penetration rate, rotary torque, rpm, pump pressure
- drill out of hole in accordance with procedures
- abandon well activity to procedures

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to oversee drilling operations:

- BOP specifications
- casing tools and their applications
- inspection and reporting procedures and practices
- equipment types and uses
- occupational health and safety/environmental obligations
- nippling-up and pressure testing techniques
- pressures
- drill out procedures
- testing
- rig up to spud procedure
- drilling programs
- run in and cementing procedures
- well abandonment and procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Unit Sector(s)
Drilling (Oil and Gas)

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIOGD505A Manage drilling induction and orientation

Modification History
Not applicable.

Unit Descriptor
This unit covers the management of drilling induction and orientation in the drilling industry. It includes planning and preparing to manage drilling induction and orientation, examining general safety practices, communicating first aid/emergency response arrangements, and examining general safety practices. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a management or supervisory role at worksites within:
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
**Elements and Performance Criteria Pre-Content**

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare to manage drilling induction and orientation | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, confirm and apply *work instructions* for the allocated task  
1.3. Identify, manage and report all potential *hazards*  
1.4. Resolve *coordination requirements* with others at the site prior to commencing and during work activities |
| 2. Examine general safety practices | 2.1. Obtain and review policies/procedures in relation to alcohol, drugs and firearms/weapons and *communicate* to all parties  
2.2. Develop chain of command and *communication* strategies and communicate to all parties  
2.3. Put hazard identification, reporting and *recording mechanisms* in place and communicate requirements to all parties  
2.4. Assess personal protective equipment and procedures and put procedures in place to communicate and monitor adherence to legislative/company requirements  
2.5. Identify hazardous materials handling and transport arrangements and establish and communicate procedures to manage and prevent uncontrolled/unauthorised release  
2.6. Put hazardous energy control and fire safety procedures in place and communicate responsibilities to all parties  
2.7. Identify mechanical equipment and manual handling hazard control measures and establish and communicate procedures to avoid non-conformance  
2.8. Discuss rig working and living conditions including work rosters and camp rules |
| 3. Communicate first aid/emergency response arrangements | 3.1. Identify first aid requirements and discuss with all parties  
3.2. Identify and highlight dangers associated with the use of first aid applications  
3.3. Identify blood borne pathogens and |
|   | precautions to identify contamination and convey to all parties  
3.4. Identify different types of alarms, their uses and authorisations and communicate to all parties |
|---|---|
| 4. Examine general safety practices | 4.1. Obtain and review policies/procedures in relation to alcohol, drugs and firearms/weapons and communicate to all parties  
4.2. Develop chain of command and communication strategies and communicate to all parties  
4.3. Put hazard identification, reporting and recording mechanisms in place and communicate requirements to all parties  
4.4. Assess personal protective equipment and procedures and put procedures in place to communicate and monitor adherence to legislative/company requirements  
4.5. Identify hazardous materials handling and transport arrangements and establish and communicate procedures to manage and prevent uncontrolled/unauthorised release  
4.6. Put hazardous energy control and fire safety procedures in place and communicate responsibilities to all parties  
4.7. Identify mechanical equipment and manual handling hazard control measures and establish and communicate procedures to avoid non-conformance  
4.8. Discuss rig working and living conditions including work rosters and camp rules |
Required Skills and Knowledge

</tbody>
</table>

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
| | • Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances. |
| | • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. |
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate’s required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate’s:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate’s:
  - working with others to undertake and complete the management of drilling induction and orientation
  - provision of clear and timely instruction and supervision by the individual of those involved in the management of drilling induction and orientation

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• code of practice  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation  
• Petroleum Submerged Lands Act (PSLA)  
• duty of care |
| Work instructions may come from briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include: | • names of inductees  
• level of induction (e.g. experienced or green hands)  
• presentation aids:  
  • signs  
  • schematics  
  • videos etc  
• safety briefing/induction  
• pre-tour safety meeting  
• weekly safety meetings  
• where to go in an emergency - muster points  
• acceptable smoking area  
• out of bounds areas (e.g. SCR shack)  
• safe practice  
• 12 hour shifts  
• 14 day/21 day roster  
• individual operation  
• team operation  
• use of personal protective equipment  
• consideration of H2S and other toxic substances  
• continuous communication maintained  
• reacting to on-site emergencies |
| **Hazards** may include:                                                                 | working in proximity to drilling rig |
|                                                                 | working in different conditions including: |
|                                                                 | night time operations                  |
|                                                                 | day time operations                    |
|                                                                 | hot climates                           |
|                                                                 | cold climates                          |
|                                                                 | wet weather conditions                  |
|                                                                 | high wind                              |

| **Coordination requirements** may include:                                                   | other equipment operators             |
|                                                                 | maintenance personnel                  |
|                                                                 | supervisors                            |
|                                                                 | site personnel                         |

| **Communicate** may be via:                                                                        | 2-way radio                            |
|                                                                 | hand signals                           |
|                                                                 | telephone                              |
|                                                                 | public address system                   |
|                                                                 | written work instructions              |
|                                                                 | internet and intranet                  |

| **Communication** may be between:                                                                 | crew                                    |
|                                                                 | service companies                       |
|                                                                 | operator's representative               |

| **Reporting mechanisms** may include:                                                               | location arrival procedures            |
|                                                                 | work permits                           |
|                                                                 | trip (vehicle) report                  |
RIIOGD506A Manage rig move and camp move

Modification History
Not applicable.

Unit Descriptor
This unit covers managing the rig out and camp move in the drilling industry. It includes planning and preparing for managing rig move and camp move, establishing rig removal arrangements, loading out and moving. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a management or supervisory role at worksites within:
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for managing rig move and camp move | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Obtain, confirm and apply work instructions for the allocated task  
1.3. Identify, manage and report all potential hazards  
1.4. Resolve coordination requirements with others at the site prior to commencing and during work activities |
| 2. Establish rig removal arrangements | 2.1. Check, confirm and communicate drill rig movement and new location arrangements with company officers  
2.2. Make arrangements to gain statutory/local authority permission to move site and equipment  
2.3. Establish and follow a checklist of removal arrangements  
2.4. Make arrangements with transport company for rig removal  
2.5. Check right-of-way to new lease and confirm with appropriate parties  
2.6. Conduct pre-rig move safety meetings to ensure safe operation |
| 3. Load out and move | 3.1. Confirm transport arrangements and directions to new lease  
3.2. Apply correct rigging practices for rig removal and loading  
3.3. Brief crews, assign specific tasks and monitor operations  
3.4. Monitor rig/camp move and complete and forward reports to appropriate parties |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to manage rig move and camp move:

- apply legislative, organisation and site requirements and procedures for managing rig move and camp move
- interact at all levels
- prioritise
- plan
- problem solve
- time management
- read a map

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to manage rig move and camp move:

- work safe practices
- rigging and slinging
- rig and camp layouts
- environmental concerns
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation
- occupational health and safety (OHS)
- oversize permits
- state road rules and regulations
- weight loading
- environment
- Petroleum Submerged Lands Act (PSLA)
- duty of care

#### Work instructions may come from briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include:
- rig and camp load lists
- order of rig move
- distance and road conditions
- issues of concern if power line, bridges
- weather conditions
- time frames
- securing of loads
- safety briefing/induction
- pre-tour safety meeting
- weekly safety meetings
- pre-job safety meeting
- check of lifting equipment
- wearing of personal protective equipment
- sequence of loads
- team operations

#### Hazards may include:
- working in proximity to drilling rig
- working in different conditions including:
  - night time operations
- day time operations
- hot climates
- cold climates
- wet weather conditions
- high wind

**Coordination requirements** may include:
- other equipment operators
- maintenance personnel
- supervisors
- site personnel

**Equipment** may include:
- mounted trailers
- cranes
- forklifts
- water/fuel trucks
- waste disposal trucks
- maps
- signage

**Communicate** may be via:
- 2-way radio
- hand signals
- telephone
- public address system
- written work instructions
- internet and intranet

*May be between:*
- crew
- transport companies
- relevant statutory or local authorities
- company personnel

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to manage and monitor rig-up and rig-up to spud operations:

- apply legislative, organisation and site requirements and procedures for managing and maintaining rig-up and rig-up to spud operations
- operate rig components
- oversee forklift operations
- use satellite or ground communication
- issue permits and work orders
- organise work teams into efficient working units
- dog a crane and secure rigging
- troubleshoot breakdowns

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to manage and monitor rig-up and rig-up to spud operations:

- rig up procedures
- rigging and dogging practices
- auxiliary equipment functions and service requirements
- specific auxiliary rig up sequence
- safety and environmental issues
- communication equipment
- emergency procedures
- preventative maintenance
- workplace relations and award conditions
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for managing and monitoring rig-up and rig-up to spud operations</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of management and monitoring of rig-up and rig-up to spud operations</td>
</tr>
<tr>
<td></td>
<td>• working with others to plan, prepare manage and monitor rig-up and rig-up to spud operations</td>

Approved

SkillsDMC
required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the management and monitoring of rig-up and rig-up to spud operations
    - provision of clear and timely instruction and supervision by the individual of those involved in the management and monitoring of rig-up and rig-up to spud operations

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:

- legislative, organisational and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation
- occupational health and safety (OHS)
- environmental protection
- permit to work
- Petroleum Submerged Lands Act (PSLA)
- duty of care

**Work instructions** may come from briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include:

- pre-start safety meetings prior to commencement of each work day
- delegation of work responsibilities to various teams
- priority given to tasks if necessary
- emergency services contacted to inform of new location and approximate period of occupancy
- drilling program
- safety procedures
- environmental considerations
- completion sequence
- well head preparation
- preparation and inspection of loading slings and chains
- material availability if maintenance, servicing or repair is to occur
- smoking restrictions
- safety briefing/induction
- Job Safety Analysis (JSA)
- pre-tour safety meeting
- weekly safety meetings
- nature and scope of tasks
- specifications
- quality of finished works
- achieved targets
- operational conditions
- obtaining of required permits
- site layout
- out of bounds areas
- worksite inspection requirements
- lighting conditions
- plant of equipment defects
- coordination requirements or issues
- contamination control requirements
- environmental control requirements
- barricade and signage requirements

</table>
| **1. Plan and prepare for managing well completion and abandonment** | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, confirm and apply *work instructions* for the allocated task  
1.3. Identify, manage and report all potential *hazards*  
1.4. Resolve *coordination requirements* with others at the site prior to commencing and during work activities |
| **2. Organise completion schedule** | 2.1. Develop completion schedule in line with drilling contract and well prognosis  
2.2. Review and confirm lease details, as necessary notifications are forwarded to statutory, company, owner and contractor representatives  
2.3. Make preparations for release of rig and complete tour book records in accordance with statutory and company requirements  
2.4. Ensure that prior to rig move, arrangements are in place for work orders and invoicing in line with contract requirements and servicing/maintenance repairs of *equipment* |
| **3. Complete well abandonment** | 3.1. Make preparations to stack and move and *communicate* to all parties  
3.2. Assess environmental plan and that mud drilling fluids and waste storage/disposal requirements and correct *records* are completed and processed  
3.3. Prepare shutdown list in accordance with statutory/company requirements and distribute to crew for actioning  
3.4. Rig down in accordance with statutory/company requirements and distribute to crew for actioning  
3.5. Rig down ensuring that equipment, camp and rig are secured for removal  
3.6. Review contract requirements, complete records and forward to appropriate officers |
### Required Skills and Knowledge

1.4. Resolve *coordination requirements* with others at the site prior to commencing and during work activities |
| 2. Coordinate resource use to achieve profit productivity targets | 2.1. Collect, analyse and organise resource information for use in operational plans in consultation with colleagues and specialist resource managers  
2.2. Ensure operational plans contribute to the achievement of the organisation's performance/business plan  
2.3. Ensure operational plans identify available *resources*, taking into account customer needs and the organisation's plans  
2.4. Ensure plans maximise value gained from the diversity of the organisation's resources  
2.5. Prepare contingency plans in the event that initial plans need to be varied |
| 3. Acquire resources to achieve operational plan | 3.1. Recruit and induct employees within the organisation's human resource management policies and practices  
3.2. Acquire physical resources and services in accordance with the organisation's practices and procedures |
| 4. Monitor operational performance of drill supervisors and drilling operations | 4.1. Monitored systems and processes to establish whether resources are being used as planned  
4.2. Investigate problems with resource usage and rectify and/or report to designated persons/groups  
4.3. Mentor and coach individuals/teams who have difficulties in using resources to the required standard  
4.4. Manage systems, procedures and records associated with documenting resource acquisition and usage in accordance with |
the organisation's requirements
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to manage multiple drilling operations:

- apply legislative, organisation and site requirements and procedures for managing multiple drilling operations
- legal rights and responsibilities
- all relevant statutory and regulatory requirements which affect multiple sites
- inspection/research techniques for collection of data
- analysis and problem solving techniques
- contractual rights and responsibilities
- planning control systems (sales, advertising and promotion, logistics)
- record keeping systems for multiple sites
- communication systems, processes and procedures
- operate in varied or highly specific contexts
- use competencies independently for routine and non-routine purposes
- use judgement of self and others in planning and using resources, services and processes to achieve outcomes within time constraints
- plan and manage the work of others
- guide teams
- work autonomously, under broad guidance
- negotiation
- computer operations
- research
- implement learning strategies such as:
  - mentoring
  - coaching
  - exchange/rotation
  - action learning
  - structured training programs

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to manage multiple drilling operations:

- legal rights and responsibilities
- all relevant statutory and regulatory requirements which affect multiple sites
- inspection/research techniques for collection of data
- analysis and problem solving techniques
- contractual rights and responsibilities
- planning control systems (sales, advertising and promotion, logistics)
- record keeping systems for multiple sites
- communication systems, processes and procedures
- goals, objectives, plans, systems and processes
- business and performance plans
- ethical standards
- quality and continuous improvement processes and standards

RIIOGF201A Carry out deck operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the carrying out of deck operations in the drilling industry. It includes planning and preparing for deck operations, carrying out deck operations, assisting drill crew as directed, operating pneumatic and electric power tools, providing labour for loading and discharging helicopters as directed, providing labour for making up drilling mud, and carrying out post-job operations. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:

- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
### Elements and Performance Criteria

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to carry out deck operations:

- apply legislative, organisation and site requirements and procedures for carrying out deck operations
- carry out duties of a crane chaser/dogger according to company and statutory requirements
- select and fit correct stinger/slings appropriate for crane load
- effect the transfer of personnel by crane
- place, measure, label and record details of tubulars
- operate power tools
- wear appropriate personal protective clothing and equipment during operation of power tools
- assist in running/recovery of bop stack
- operate air tugger winch correctly
- assist in supply of marine riser and equipment to drill floor
- assist in loading/discharge and fuelling of helicopter
- use safety equipment, including fire protection, First Aid and vessel entry equipment
- assist derrickman in making up drilling mud
- identify and report faults
- communicate and report in accordance with company and statutory requirements, using standard communication methods, including:
  - 2-way radio
  - hand signals
  - telephone
  - public address system
  - written work instructions
- read and interpret standard operating procedures, work instructions and data sheets
- apply correct lifting techniques
- fuel aircraft under direction and in accordance with approved fuelling procedures

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to carry out deck operations:
• deck operations
• company and statutory safety guidelines, procedures and practices
• safe operating procedures
• equipment operations
• reporting procedures
• reasons for identification and care of samples including storage and transport
• occupational health, safety and environment requirements and procedures
• use of materials safety data sheet (MSDS)
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• knowledge of the requirements, procedures and instructions for carrying out deck operations</td>
<td></td>
</tr>
<tr>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of deck operations</td>
<td></td>
</tr>
<tr>
<td>• working with others to undertake and complete the carrying out of deck operations that meets all of the required outcomes</td>
<td></td>
</tr>
<tr>
<td>• consistent timely completion of deck operations that safely, effectively and efficiently meets the required outcomes</td>
<td></td>
</tr>
</tbody>
</table>

#### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery
environment to sensitively accommodate cultural diversity.

- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
|                      | - written and/or oral assessment of the candidate's required knowledge
|                      | - observed, documented and/or first hand testimonial evidence of the candidate's:
|                      |   - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
|                      |   - consistent achievement of required outcomes
|                      |   - first hand testimonial evidence of the candidate's:
|                      |     - working with others to undertake and complete the carrying out of deck operations

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

</table>
### Coordination requirements
May include:
- other equipment operators
- maintenance personnel
- supervisors
- site personnel

### Briefings/handover details
May include:
- safety briefing/induction
- pre-tour safety meeting
- weekly safety meetings
- Job Safety Analysis (JSA)
- agreed procedures may include:
  - company
  - facility
  - client
  - permit to work

### Remedial action
May include:
- report
- rectify
- record

### Spillages
May include:
- hazardous
- non-hazardous

### Equipment maintenance and preparation
May include:
- chipping and painting
- cleaning
- lubricating
- basic maintenance
- equipment handling

### Unit Sector(s)
Drilling (Oil and Gas)

### Competency field
Refer to Unit Sector(s).

### Co-requisite units
Not applicable.
RIIOGF202A Assist in the transfer of passengers and freight during helicopter operations

Modification History
Not applicable.

Unit Descriptor
This unit covers assisting in the transfer of passengers and freight during helicopter operations in the drilling industry. It includes planning and preparing for the transfer of passengers and freight during helicopter operations, preparing for helicopter loading, loading and unloading helicopters, refuelling, carrying out helicopter 'standby' duties, and preparing for helicopter departure. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an assistant role at worksites within:
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

| 6. Prepare for helicopter departure | 6.1. Store equipment safely and securely in designated location in accordance with operational requirements  
6.2. Identify and report faults and take appropriate *remedial action*  
5.4. Report faults and take appropriate action within functional responsibility |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to assist in the transfer of passengers and freight during helicopter operations:

- apply legislative, organisation and site requirements and procedures for assisting in the transfer of passengers and freight during helicopter operations
- understand effects of environmental conditions
- implement cargo handling/weight distribution requirements
- understand air regulations covering carriage of dangerous goods
- understand reasons for clearing away equipment
- apply refuelling procedures for vehicles, drill rigs and ancillary equipment
- apply workplace communication procedures, using:
  - 2-way radio
  - hand signals
  - telephone
  - public address system
  - written work instructions
- apply good housekeeping principals

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to assist in the transfer of passengers and freight during helicopter operations:

- occupational health, safety and environment requirements and procedures
- company and statutory guidelines, procedures and practices
- safe lifting and handling techniques
- safe handling of passengers
- safe boarding methods
- hazards associated with approaching the aircraft
- cargo handling/weight distribution requirements
- rig maintenance
- normal drilling operations
- non-routine drilling operations
- man management/rig management
- offshore technology

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to contribute to the control of offshore emergencies:

- apply legislative, organisation and site requirements and procedures for contributing to the control of offshore emergencies
- implement personal protection requirements appropriate to the environment
- recognise effects of changes of ambient conditions on operations
- locate sources of information and interpret drawings and manuals
- operate equipment
- apply good housekeeping principals
- apply workplace communication procedures, using:
  - 2-way radio
  - hand signals
  - telephone
  - public address system
  - written work instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to contribute to the control of offshore emergencies:

- occupational health, safety and environment requirements and procedures
- company and statutory guidelines, procedures and practices
- emergency procedures
- fire and gas control system
- emergency shutdown control system
- effects of loss of any utility and its reinstatement
- functioning of process control, including instrumentation
- equipment layout and its connection with other systems
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation
- Petroleum Submerged Lands Act (PSLA)
- petroleum regulations
- duty of care

### Work instructions may come from briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include:
- nature and scope of tasks
- specifications
- quality of finished works
- achieved targets
- operational conditions
- obtaining of required permits
- site layout
- out of bounds areas
- worksite inspection requirements
- lighting conditions
- plant of equipment defects
- coordination requirements or issues
- contamination control requirements
- environmental control requirements
- barricade and signage requirements
- work practices covering:
  - individual operation
  - team operation
  - use of personal protective equipment
  - consideration of toxic substances
  - continuous communication maintained
  - reacting to on-site emergencies
| **Relevant actions** may include: | • make safe  
• isolate  
• shutdown  
• evacuate work area  
• report  
• record  
• contain  
• rectify |
| --- | --- |
| **Report** may include: | • oral  
• written |
| **Hazards** may include: | • working in proximity to drilling rig  
• working in different weather conditions, including:  
  • sun, rain, wind, storms  
  • hot and cold  
  • calm to severe weather conditions  
  • 24 hour operation  
• critical situations including:  
  • operational difficulties  
  • equipment failure  
  • leaks  
  • fires  
  • kicks |
| **Coordination requirements** may include: | • other equipment operators  
• maintenance personnel  
• supervisors  
• site personnel |
| **Briefings/handover details** may include: | • safety briefing/induction  
• pre-tour safety meeting  
• weekly safety meetings  
• job safety analysis (JSA)  
• agreed procedures may include:  
  • company  
  • facility  
  • client  
  • toolbox  
  • permit to work |
| **Alarms** may include: | • audible  
• warning gestures  
• oral warnings |
• fixed system specific to installation

Unit Sector(s)
Drilling (Oil and Gas)

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIOGF301A Monitor, operate and maintain mud pits and equipment

Modification History
Not applicable.

Unit Descriptor
This unit covers the monitoring, operation and maintenance of mud pits and equipment in the drilling industry. It includes planning and preparing for operations, monitoring operation of mud pumps, and maintaining and repairing mud pumps. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:

- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, confirm and apply *work instructions* for the allocated task  
1.3. Identify, manage and report all potential *hazards*  
1.4. Resolve *coordination requirements* with others at the site prior to commencing and during work activities  
1.5. Confirm availability of necessary third party utilities in accordance with operational requirements  
1.6. Conform to safe working practices and current legislative and operational requirements |
| 2. Monitor operation of mud pump | 2.1. Visually inspect and listen to mud pumps for abnormal sounds and leaks  
2.2. Check lubricating system and identify and report faults  
2.3. Check pressure relief valve (PRV) setting  
2.4. Check flow path  
2.5. Charge *discharge* dampener with nitrogen, to correct pressure, as required  
2.6. Charge suction dampener to correct pressure |
| 3. Maintain and repair mud pumps | 3.1. Check all clamps when pump is turned off  
3.2. Lubricate gear end of pump and check oil levels in gear end of pump  
3.3. Replace defective *consumables*  
3.4. Check liners and swabs for size  
3.5. Identify faults or potential faults and report immediately |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to monitor, operate and maintain mud pits and equipment:

- apply legislative, organisation and site requirements and procedures for monitoring, operating and maintaining mud pits and equipment
- recognise and report equipment malfunction or failure
- supervise and train subordinates to provided standards
- work as directed by driller timely and efficiently
- check pumps visually and audibly
- check lubrication system
- set pressure relief valve
- check pressure of suction and discharge dampeners
- charge discharge damper with nitrogen
- check clamp
- lubricate and check oil levels in gear end of pump
- replace swabs, liners, valves, seats and wear plates of fluid end of pump
- prepare replacement parts for fluid end
- ensure correct liners and swabs are in use
- align correctly mud pump discharge valves
- use of mechanical lifting equipment
- read job instructions and manufacturers instruction

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to monitor, operate and maintain mud pits and equipment:

- mud pumps
- company and safety guidelines, procedures and practices
- specified maintenance procedures
- emergency signals and procedures
- safe operating procedures when operating equipment
- rig maintenance
- normal drilling operations
- non-routine drilling operations
- man management/rig management
• offshore technology
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:

- legislative, organisational and site requirements and procedures including:
  - Petroleum Submerged Lands Act (PSLA)
  - petroleum regulations
  - duty of care
  - manufacturer's guidelines and specifications
  - Australian standards
  - code of practice
  - Employment and workplace relations legislation
  - Equal Employment Opportunity and Disability Discrimination legislation
  - relevant permits

**Work instructions** may come from briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include:

- safety briefing/induction
- pre-tour safety meeting
- weekly safety meetings
- Job Safety Analysis (JSA)
- toolbox
- permit to work
- communication through a variety of channels including:
  - 2-way radio
  - hand signals
  - telephone
  - public address system
  - written work instructions
- use of safety equipment including
  - fire protection
  - First Aid
  - survival
- recording requirements including:
  - service and maintenance
  - replacement parts
  - pump operating logs
- use of personal protective equipment including:
  - eye protection
  - hearing protection
  - gloves
  - footwear
  - hard hats
  - respirators
  - consideration of toxic substances
  - maintaining continuous communication
  - reacting to on-site emergencies

### Hazards may include:
- working in proximity to drilling rig
- working in a variety of conditions including:
  - sun, rain, wind, storms
  - hot and cold
  - calm to severe weather conditions
  - 24 hour operation
- materials including:
  - flammable
  - toxic
  - corrosive
  - explosive
  - radioactive

### Coordination requirements may include:
- other equipment operators
- maintenance personnel
- supervisors
- site personnel

### Discharges may include:
- liquids
- gases
- solids

### Consumables may include:
- fluid
- liner
- valves
- seats
- wear plates
Unit Sector(s)
Drilling (Oil and Gas)

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIOGF302A Operate drilling fluids and mud pits

Modification History
Not applicable.

Unit Descriptor
This unit covers the operating of drilling fluids and mud pits in the drilling industry. It includes planning and preparing for operations; operating mud pits; operate, maintaining and repairing mud conditioning equipment; and monitoring mud.

Application of the Unit
This unit is appropriate for those working in offshore derrickman roles or as 'mud specialists' working on larger, more complex operations, at worksites within:

- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

 Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

</table>
| 1. Plan and prepare for operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, confirm and apply *work instructions* for the allocated task  
1.3. Identify, manage and report all potential *hazards*  
1.4. Resolve *coordination requirements* with others at the site prior to commencing and during work activities  
1.5. Confirm availability and status of necessary permits to work in accordance requirements  
1.6. Confirm availability of necessary third party utilities in accordance requirements |
| 2. Operate mud pits | 2.1. Give safety the highest priority during the operation and entry of mud pits  
2.2. Align valves in pits to ensure correct pit usage as directed  
2.3. Double check plugs for operation  
2.4. Seal or secure tanks to prevent accidental entry  
2.5. Set high and low *alarms* where applicable  
2.6. Operate mud pit room ventilation system as required  
2.7. Operate hoppers in accordance with procedures  
2.8. Operate dust extraction system during mixing, if applicable  
2.9. Check safety showers and eye washes are accessible and operational  
2.10. Supervise forklifts operations  
2.11. Store chemicals in appropriate storage area  
2.12. Read, interpret and place materials safety data sheet (MSDS) in an accessible place |
| 3. Operate, maintain and repair mud conditioning equipment | 3.1. Engage and/or adjust appropriate *equipment* as directed by supervisors or mud engineer  
3.2. Clean all equipment and visually inspect |
for leaks, proper operation, in accordance specifications
3.3. Identify faults or potential faults and report immediately
3.4. Perform periodic or scheduled preventative maintenance on all mud treatment units in accordance with specifications

| 4. Monitor mud | 4.1. Monitor and *record* mud properties and parameters  
4.2. Set alarms to monitor mud  
4.3. Check viscosity and weight of mud conform to specifications as directed by mud engineer  
4.4. Maintain appropriate volumes and types of drilling fluids as required by well program or company  
4.5. Use appropriate mixing procedures to obtain desired properties  
4.6. Apply proper safety procedures and equipment for mixing and handling of chemicals  
4.7. *Recognise warning signs of a kick* and report immediately |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to operate drilling fluids and mud pits:

- apply legislative, organisation and site requirements and procedures
- recognise and report equipment malfunction or failure
- supervise and train subordinates to provided standards
- work as directed by driller and assistant driller
- operate equipment in accordance with good oilfield practice and company policy
- align valves in pits for operability and safety
- operate and service mud treatment equipment
- perform periodic or scheduled preventative maintenance on mud condition equipment
- replace screens and cones on shakers and desilters/desanders
- operate and service transfer valve
- weigh mud and perform viscosity checks
- maintain volumes and types of drilling fluids as required
- use correct mixing procedures to ensure required properties in drilling fluid
- use correct safety procedures and equipment for mixing and handling chemicals in accordance with manufacturer's data sheet
- regularly monitor pit levels, mud properties and cuttings size
- perform numerical calculations including:
  - mud viscosity
  - mud weight
  - volume
  - uphole velocity
  - quantities
  - pressure
  - water loss

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to operate drilling fluids and mud pits:

- legislative and organisations safety guidelines, procedures and practices drilling operation procedures
- safe operating procedures when operating equipment
- functions of the mud pits
- warning signs of kicks
- troubleshooting techniques
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

1.6. Measure, label and record tubulars as required  
1.7. Operate front end loader in accordance with manufacturer's specifications |
| 2. Operate pneumatic and electric power tools | 2.1. Wear appropriate protective clothing and equipment  
2.2. Use tools in accordance with manufacturer's instructions |
| 3. Assist drill crew in running and recovery of BOP stack | 3.1. Assist operator of air tugger winches as directed  
3.2. Assist in positioning BOP  
3.3. Assist crew by supplying tools to the drill floor as required |
| 4. Provide labour for loading and unloading transport | 4.1. Use approved safety approach  
4.2. Use correct lifting techniques and use forklift in a safe manner |
| 5. Provide labour for making up drilling mud | 5.1. Comprehend materials safety data sheet  
5.2. Use protective clothing and equipment in accordance with data sheet recommendations  
5.3. Lift sack material correctly  
5.4. Use safety equipment correctly in event of personal contact with hazardous materials |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to carry out rig lease operations:

- apply legislative, organisation and site requirements and procedures for carrying out rig lease operations
- report regularly to and work as directed by the driller/derrickman timely and efficiently
- select and fit correct stinger/slings appropriate for loads
- transfer equipment by forklift
- place, measure, label and record details of tubulars
- operate power and pneumatic tools, wearing appropriate protective clothing
- assist in running/recovery of BOP stack
- operate air tugger winch
- assist in supply of transport equipment to drill floor and loading/unloading
- assist derrickman in making up drilling mud
- read:
  - work schedules
  - manufacturer’s instructions
  - materials safety data sheet

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to carry out rig lease operations:

- occupational health and safety obligations
- company and statutory guidelines, procedures and practices
- drill floor operations
- safe operational practices
- numerical tasks involving measurement, e.g. tapes, rulers, calibration devices
- normal drilling operations
- non-routine drilling operations
- man management/rig management
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<tbody>
<tr>
<td></td>
<td>- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
</tr>
<tr>
<td></td>
<td>- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
</tr>
<tr>
<td></td>
<td>- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
</tr>
</tbody>
</table>
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete rig lease operations

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Unit Sector(s)
Drilling (Oil and Gas)

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIOGN302A Operate mud pumps

Modification History
Not applicable.

Unit Descriptor
This unit covers the operation of mud pumps in the drilling industry. It includes planning and preparing for operation, monitoring mud pumps, and maintaining and repairing mud pumps. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain, confirm and apply *work instructions* for the allocated task  
1.3. Identify, manage and report all potential *hazards*  
1.4. Conform to safe working practices and current legislative and operational requirements  
1.5. Resolve *coordination requirements* with others at the site prior to commencing and during work activities  
1.6. Confirm availability of necessary third party utilities in accordance with operational requirements |
| 2. Monitor mud pumps | 2.1. Visually inspect and listen to mud pumps for abnormal sounds or noise  
2.2. Check piston lubricating system  
2.3. Check pop-off valve setting  
2.4. Check pressure of suction and discharge dampeners  
2.5. Charge discharge dampener with nitrogen, as required |
| 3. Maintain and repair mud pumps | 3.1. Check pony rod clamp when pump is turned off  
3.2. Lubricate gear end of pump and check oil levels in gear end of pump  
3.3. Identify faults or potential faults and report immediately  
3.4. Identify, *record* and/or report requirement for repair or maintenance of mud pumps  
3.5. Replace defective swabs, liner, valves, seats and wear plates of the fluid end of pump  
3.6. Ready replacement parts for fluid end of pump  
3.7. Check liners and swabs for correctness |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to operate mud pumps:

- apply legislative, organisation and site requirements and procedures for operation of mud pumps
- recognise and report equipment malfunction or failure
- supervise and train subordinates to provided standards
- work as directed by driller timely and efficiently
- check pumps visually and aurally
- check piston lubrication system
- set pop-off valve
- check pressure of suction and discharge dampeners
- charge discharge damper with nitrogen
- check pony rod clamp
- lubricate and check oil levels in gear end of pump
- replace swabs, liners, valves, seats and wear plates of fluid end of pump
- prepare replacement parts for fluid end
- ensure correct liners and swabs are in use
- align correctly mud pump discharge valves
- read:
  - job instructions
  - manufacturer's instructions

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to operate mud pumps:

- mud pumps
- company and statutory safety guidelines, procedures and practices
- emergency signals and procedures
- safe operating procedures when operating equipment
- rig maintenance
- normal drilling operations
- non-routine drilling operations
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:

- legislative, organisational and site requirements and procedures including:
  - occupational health and safety
  - duty of care
  - environmental
  - petroleum regulations
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation
- permits

### Work instructions may come from briefings, handovers, plans and work orders and may be written or verbal, formal or informal and may include:

- review of operational requirements
- maintenance and inspection of pumping equipment
- maintain fluid system to pumps
- review PTW requirements
- pre-tour safety meeting
- review of relative Job Safety Analysis (JSA)
- communication through a range of channels including:
  - 2-way radio
  - intercom
  - telephone
  - written instruction
  - oral instruction
  - hand signals

### Hazards may include:

- working in proximity to drilling rig
- working in a variety of conditions including:
  - day/night
  - storms and lightning
  - hot/cold
### Coordination requirements
- other equipment operators
- maintenance personnel
- supervisors
- site personnel

### Record
- service and maintenance
- replacement and parts
- pump operating logs

### Unit Sector(s)
Drilling (Oil and Gas)

RIIOGN303A Operate mud systems

Modification History
Not applicable.

Unit Descriptor
This unit covers the operating of mud systems in the drilling industry. It includes planning and preparing for operations; operating mud system; operating, maintaining and repairing mud conditioning equipment; operating and servicing transfer (butterfly) valves in mud pits; and recognising warning signs of kicks.

Application of the Unit
This unit is appropriate for those working in offshore derrickman roles or as 'mud specialists' working on larger, more complex operations, at worksites within:
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<p>| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |</p>
<table>

<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for operations | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Obtain, confirm and apply work instructions for the allocated task  
1.3. Identify, manage and report all potential hazards  
1.4. Resolve coordination requirements with others at the site prior to commencing and during work activities  
1.5. Confirm availability and status of necessary permits to work in accordance with requirements  
1.6. Confirm availability of necessary third party utilities in accordance with requirements |
| 2. Operate mud system | 2.1. Ensure compliance with good oilfield practice and company policy when operating equipment  
2.2. Align valves in pits to ensure correct pit usage as directed |
| 3. Operate, maintain and repair mud conditioning equipment | 3.1. Engage and/or adjust appropriate equipment as directed by supervisors or mud engineer  
3.2. Clean all equipment and visually inspect for leaks and proper operation, in accordance with specifications  
3.3. Identify faults or potential faults and reported immediately  
3.4. Identify, record and report requirement for repair or maintenance of mud conditioning equipment  
3.5. Replace screens or cones as necessary, on shakers, desilters, desanders in accordance with specifications  
3.6. Perform periodic or scheduled preventative maintenance on all mud treatment units in accordance with specifications |
| 4. Operate and service transfer (butterfly) valves in mud pits | 4.1. Align valves as appropriate  
4.2. Lubricate valve stems of butterfly valves as appropriate |
<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>
|   | 4.3. Clean and inspect transfer valves when pits are empty  
4.4. Replace or repair defective parts as necessary |
| 5. Recognise warning signs of kicks | 5.1. Monitor, adjust and report pit level  
5.2. Monitor and report mud properties  
5.3. Monitor and report size of cuttings  
5.4. Monitor and report volume of mud returns |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to operate mud systems:

- apply legislative, organisation and site requirements and procedures
- recognise and report equipment malfunction or failure
- supervise and train subordinates to provided standards
- work as directed by driller timely and efficiently
- operate equipment in accordance with good oilfield practice and company policy
- align valves in pits to ensure correct pit usage
- operate mud condition equipment, including shakers, degasser, desilter, desander, mud cleaner and agitators
- perform periodic or scheduled preventative maintenance on mud condition equipment
- replace screens and cones on shakers and desilters/desanders
- operate and service transfer valve
- weight mud for viscosity check
- maintain volumes and types of drilling fluids as required
- use correct mixing procedures to ensure required properties in drilling fluid
- use correct safety procedures and equipment for mixing and handling chemicals in accordance with manufacturer's data sheet
- regularly monitor pit levels, mud properties and cuttings size
- numerical calculations including:
  - viscosity
  - mud weight
  - volume
  - up hole velocity
  - quantities
  - pressure

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to operate mud systems:

- drilling operation
- functions of the mud pits
- warning signs of kicks and indicators
- company and statutory safety guidelines, procedures and practices
- safe operating procedures when operating equipment
- AOA policy procedure and practices
- rig maintenance
- normal drilling operations
- non-routine drilling operations
- man management/rig management
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</tr>
</tbody>
</table>
Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.

Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the operating of mud systems

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisational and site requirements and procedures |
| | manufacturer's guidelines and specifications |
| | Australian standards |
| | code of practice |
| | Employment and workplace relations legislation |
| | Equal Employment Opportunity and Disability Discrimination legislation |

RIIOHS201A Work safely and follow OHS policies and procedures

Modification History
Not applicable.

Unit Descriptor
This unit covers working safely and follow OHS policies and procedures in resources and infrastructure industries. It includes accessing and apply site safety procedures; applying personal safety measures and operational safety measures; maintaining personal wellbeing for job; and identifying and reporting incidents.

Application of the Unit
This unit is appropriate for those working in all roles, at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to work safely and follow OHS policies and procedures:

- apply legislative, organisation and site requirements and procedures for working safely
- source, interpret and apply safety information
- use and care of personal protective equipment
- apply safe lifting and handling techniques
- implement workplace reporting procedures
- communicate clearly and directly, listening carefully to instructions and information, responding to and clarifying directions
- apply teamwork to a range of situations, particularly in a safety context
- solve problems, particularly in teams and in dealing practically with safety issues such as recognising and responding to alarms
- show initiative in adapting to changing work conditions or contexts particularly when working across a variety of work areas and in choosing appropriate personal protective equipment for each context
- manage time, particularly in organising priorities and planning work
- take responsibility for self organisation of work priorities to follow site safe work procedures
- apply a range of mediums to learn
- apply and use appropriate technology in a safety context

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to work safely and follow OHS policies and procedures:

- equipment safety requirements
- personal protective equipment
- hazardous substances procedures and handling techniques
- materials safety data sheets (MSDS) information and its application
- isolation procedures
- lifting techniques, including for both manual and automated lifting
- OHS procedures
- primary and secondary ventilation
- site safety requirements and procedures
- participative procedures for workplace management of others (e.g. consultation, safety representatives, committees, dispute resolution)
- potential biological effects (e.g. circadian rhythms, sleep, alertness, fatigue, stress, effects of heat stress and hypothermia)
- drug and alcohol policy
- use of emergency equipment
- basic fire fighting techniques
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

|                        | • consistent timely completion of work that is safe and follows OHS policies and procedures | • Assessment of this competency requires typical
resources normally used in the work environment. Selection and use of resources for particular work sites may differ due to site circumstances.

- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete work safely and follows OHS policies and procedures

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RIIOHS202A Enter and work in confined spaces

Modification History
Not applicable.

Unit Descriptor
This unit covers the entering and working in confined spaces in resources and infrastructure industries. It includes planning and preparing for entry of confined spaces, entry and working in confined spaces, exiting confined spaces and cleaning up.

Application of the Unit
This unit is appropriate for those working in confined spaces (enclosed or partially enclosed) for the purpose of carrying out work or inspections and also is appropriate for those performing sentry or stand-by person roles, at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining
- General construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to enter and work in confined spaces:

- apply legislative, organisation and site requirements and procedures
- apply operational, maintenance and basic diagnostic procedures
- apply materials handling methods
- use atmospheric monitoring devices
- interpret JSAs/Safe work method statements

### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to enter and work in confined spaces:

- site and equipment safety requirements
- confined space entry and exit procedures, risks and regulations
- air contaminants and toxic gases
- breathing apparatus limitations
- equipment types, characteristics, technical capabilities and limitations
- site isolation and site control responsibilities and authorities
- materials safety data sheets (MSDS)
- project quality requirements
- industry terminology
- state and territory interpretations of a confined space
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
</table>
| Critical aspects for assessment and evidence required to demonstrate competency in this unit | - knowledge of the requirements, procedures and instructions for entering and working in confined spaces  
  - implementation of requirements, procedures and techniques for the safe, effective and efficient completion for entering and working in confined spaces  
  - working with others to undertake and complete the entering and working in confined spaces that meet all of the required outcomes  
  - consistent timely completion of entering and working in confined spaces that safely, effectively and efficiently meets the required outcomes |

| Context of and specific resources for assessment |  
- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.  
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.  
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.  
- Aboriginal people and other people from a non |
English speaking background may have second language issues.

- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular work sites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the entering and working in confined spaces

**Guidance information for assessment**

- Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Work instructions may include:

- plans
- specifications
- quality requirements
- operational details

### Safety requirements may be included in:

- site safety plans
- organisational policies and procedures
- statutory/regulatory authorities which may include:
  - federal
  - state and
  - local authorities
- verbal or written and graphical instructions
- signage
- work schedules/plans/specifications
- work bulletins
- charts and hand drawings
- memos
- maps
- materials safety data sheets (MSDS)
- diagrams or sketches
- safe work procedures or equivalent related to working in confined spaces
- regulatory/legislative requirements pertaining to working in confined spaces
- manufacturer's specifications and instructions
- organisation's work specifications and
| Safety requirements may include: |  
|----------------------------------|---|
| • OHS requirements               |  
| • personal protective clothing and equipment as prescribed under legislation, regulation and workplace policies and practices |  
| • use of tools and equipment      |  
| • workplace environment and safety |  
| • handling of materials          |  
| • use of fire fighting equipment  |  
| • use of First Aid equipment     |  
| • hazard control and hazardous materials and substances |  
| • safe operating procedures including recognising and preventing hazards associated with working in confined spaces, working in proximity to others, worksite visitors and the public |  
| • hazards and risks may include but not be limited to fires, underground services, excavations, traffic, hazardous materials, contaminated atmosphere and toxic gases |  
| • risks associated with confined spaces may include but not be limited to restricted means of entry and exit, atmosphere which contains potentially harmful levels of contaminant, unsafe oxygen levels or engulfment |  
| • respiratory protection devices are to include but not be limited to air purifying respirators and may include self contained compressed air breathing apparatus, supplied airline breathing apparatus and escape breathing apparatus and atmospheric monitoring devices |  

| Confined space entry permit, or work permits, may include: |  
|------------------------------------------------------------|---|
| • location of work                                          |  
| • duration of work                                          |  
| • size of work crew                                        |  
| • atmospheric testing requirements                          |  
| • personal protective equipment                             |  
| • hot work                                                  |  
| • stand-by personnel                                        |  
| • rescue arrangements                                       |  
| • other precautions (signs, barriers)                      |  

requirements
- instructions issued by authorised organisational or external personnel
- relevant Australian standards
| **Confined spaces** may include: | • storage tanks, tank cars, process vessels, boilers, pressure vessels, silos and other tank-like compartments  
• open-topped spaces such as pits or degreasers  
• pipes, sewers, shafts, ducts and similar structures  
• shipboard spaces entered through a small hatchway or access point, cargo tanks, cellular double bottom tanks, duct keels, ballast and oil tanks and void spaces (but not including dry cargo holds) |
| **Signage** may include: | • site safety signage  
• temporary signage for the benefit of motorists  
• pedestrians and barricades |
| **Environmental protection requirements** may include: | • organisational/project environmental management plan  
• waste management  
• water quality protection  
• noise

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to maintain amenities:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- access, interpret, apply and communicate technical information
- plan maintenance and servicing schedules
- dispose of environmentally sensitive materials
- communicate and negotiate with contractors or suppliers and worksite employees
- maintain records
- maintain and perform minor repairs on equipment
- use hand tools

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to maintain amenities:

- site personal and operational safety procedures
- worksite operating procedures
- worksite site chemical substance information system
- amenities equipment characteristics, uses and limitations
- manufacturer and site equipment maintenance systems
- stock control procedures related to the amenities operations
- legislative and enterprise records systems and requirements
- site environmental requirements and constraints

RIIOHS204A Work safely at heights

Modification History
Not applicable.

Unit Descriptor
This unit covers working safely at heights in resources and infrastructure industries. It includes: identifying the work requirements, work procedures and instructions for the task; accessing and installing equipment; performing work at heights; and cleaning up the work area.

Application of the Unit
This unit specifies the competency required to undertake safe working practices when working at heights or depths. This unit is appropriate for those working in a operational roles, at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

</table>
| 1. Identify work requirements | 1.1. Access, interpret and apply *compliance documentation* relevant to working safely at heights  
1.2. Identify the scope of the task  
1.3. Adhere to *OHS requirements* associated with working safely at heights, and the workplace environment throughout the work  
1.4. Inspect site to determine layout and physical condition, condition of structures, prevailing weather conditions, equipment requirements and potential hazards  
1.5. Identify and document scope of the task and proposed work practices/activities  
1.6. Identify, select and check safety equipment for serviceability  
1.7. Identify, manage and report potential risks and hazards |
| 2. Identify work procedures and instructions for the task | 2.1. Select materials, *tools and equipment*, including personal safety equipment, and check for serviceability  
2.2. Inspect/install fall protection and perimeter protection equipment ensuring adequacy for work and conformance to regulatory requirements  
2.3. Identify approved methods of moving tools and equipment to work area and minimise potential hazards associated with tools at heights  
2.4. Install *safety system* in accordance with requirements  
2.5. Select and install appropriate signs and barricades |
| 3. Access and install equipment | 3.1. Correctly fit, adjust and anchor fall protection and associated equipment  
3.2. Make appropriate arrangements to install required equipment  
3.3. Use recommended methods to access work area for people, tools and equipment  
3.4. Place tools and materials to eliminate or minimise the risk of items being knocked |
| 4. Perform work at heights | 4.1. Check access from ground to work area to ensure it is safe and in accordance with requirements  
4.2. Keep fall equipment in place and adjusted appropriately to all for movement during work  
4.3. Undertake manual handling of materials and equipment in accordance with requirements  
4.4. Locate materials and equipment ensuring that they are safely secured and distributed  
4.5. Check safety system periodically for compliance with requirements and procedures  
4.6. Monitor risk control measures to ensure that they are effective and appropriate to the task and work environment  
4.7. Reassess risk control measures, as required, in accordance with changed work practices and/or site conditions and undertake alterations |
|--------------------------------------------------|--------------------------------------------------------------------------------------------------|
| 5. Clean up work area | 5.1. Dismantle safety system in accordance with sequence and remove from worksite  
5.2. Clear work area and dispose of or recycle materials  
5.3. Clean, check, maintain and store tools and equipment |
**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

<table>
<thead>
<tr>
<th>Required skills</th>
</tr>
</thead>
<tbody>
<tr>
<td>Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to work safely at heights:</td>
</tr>
<tr>
<td>• apply legislative, organisation and site requirements and procedures</td>
</tr>
<tr>
<td>• access, interpret and apply technical and safety information</td>
</tr>
<tr>
<td>• apply diagnostic/faultfinding techniques</td>
</tr>
<tr>
<td>• apply environmental requirements</td>
</tr>
<tr>
<td>• apply isolation procedures</td>
</tr>
<tr>
<td>• work in varying weather conditions</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Required knowledge</th>
</tr>
</thead>
<tbody>
<tr>
<td>Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to work safely at heights:</td>
</tr>
<tr>
<td>• the names and functions of equipment, components and materials</td>
</tr>
<tr>
<td>• equipment manufacturer's instructions and specifications</td>
</tr>
<tr>
<td>• safe shifting and handling of tools and materials</td>
</tr>
<tr>
<td>• statutory and regulatory authority requirements</td>
</tr>
<tr>
<td>• the nature of work undertaken at heights</td>
</tr>
<tr>
<td>• heights safety systems</td>
</tr>
<tr>
<td>• the processes of providing for safe working practices</td>
</tr>
<tr>
<td>• safety equipment/systems and considerations to facilitate working safely at heights</td>
</tr>
<tr>
<td>• safe work methods</td>

</tbody>
</table>
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation | legislative, organisation and site requirements and procedures |
|                                 | manufacturer's guidelines and specifications |
|                                 | Australian standards |
|                                 | code of practice |
|                                 | Employment and workplace relations legislation |
|                                 | Equal Employment Opportunity and Disability Discrimination legislation |

| OHS requirements may include those associated with: | protective clothing and equipment |
|                                                  | use of tools and equipment |
|                                                  | workplace environment and safety |
|                                                  | handling of materials |
|                                                  | use of fire fighting equipment |
|                                                  | use of First Aid equipment |
|                                                  | hazard control |
|                                                  | hazardous materials and substances |

| Hazards may include: | falling objects |
|                     | removal of scaffold components |
|                     | inappropriate carrying of materials on ladders |
|                     | excessive bending or twisting in different work situations |

| Tools and equipment may include: | fall protection |
|                                  | perimeter protection |
|                                  | signage and barricades |
|                                  | ladders |
|                                  | lifting/load shifting equipment including: |
|                                  | hand trolleys |
|                                  | rollers |
|                                  | forklifts |
|                                  | chain blocks |
|                                  | hoists |
|                                  | jacks |
|                                  | scaffolds |
| Safety systems may include: | • elevated work platforms  
| | • lifting equipment (such as cranes)  
| | • scaffolds  
| | • handrails  
| | • foot walks  
| | • kickboards  
| | • safety harness  
| | • harness fixing points |
RIIOHS205A Control traffic with stop-slow bat

Modification History
Not applicable.

Unit Descriptor
This unit covers controlling of traffic with a stop-slow bat in resources and infrastructure industries. It includes: planning and preparing; coordinating traffic; operating radios; and cleaning up.

Application of the Unit
This unit is appropriate for those working in a operational roles, at worksites within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>
</thead>
</table>

---
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply *compliance documentation* relevant to controlling of traffic with a stop-slow bat  
1.2. Obtain, confirm and apply *work instructions* relevant to the allotted task  
1.3. Obtain, confirm and apply *safety requirements* from the site safety plan and organisational policies and procedures for the allotted task  
1.4. Identify, obtain and implement *signage and devices* requirements from the project traffic management plan  
1.5. Select *tools and equipment* to carry out tasks that are consistent with the requirements of the job; check them for serviceability and rectify or report any faults  
1.6. Identify, confirm and apply *environmental protection requirements* from the project environmental management plan |
| 2. Coordinate traffic | 2.1. Position or confirm temporary traffic signs and barriers in accordance with regulations  
2.2. Direct traffic in accordance with site traffic plan and away from services or areas of potential damage or danger  
2.3. Control vehicles and pedestrian traffic within the worksite to ensure safety of workers  
2.4. Monitor traffic, and make adjustments for changing *conditions*, and position waiting vehicles to allow for smooth traffic flow  
2.5. Use hand held stop/slow bats in accordance with regulatory authority approved procedures  
2.6. Use hand signals in accordance with regulatory authority approved procedures  
2.7. Report traffic offenders in accordance with regulatory authority approved procedures |
| 3. Operate radio | 3.1. Adjust *radio* controls for optimum reception/transmission results  
3.2. Transmit messages concisely and in |
| 3. Maintain radio power supply | accordance with operating procedures or best practice  
3.4. Check radio contact after nominated period of non contact |
|-----------------------------|---------------------------------------------------------|
| 4. Clean up                 | 4.1. Remove or cover signs and devices sequentially to provide warning to motorists during shutdown  
4.2. Clean, check, maintain and store tools and equipment in accordance with recommendations and standard work practices |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to control traffic with a stop-slow bat:

- apply legislative, organisation and site requirements and procedures

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to control traffic with a stop-slow bat:

- site and equipment safety requirements
- traffic controlling
- traffic management plans
- traffic control signage and barricades
- radio operations
- equipment types, characteristics, technical capabilities and limitations
- operational and maintenance procedures for equipment
- site isolation and traffic control responsibilities and authorities
- affects of travel speed and vehicle mass on stopping distances
- quality requirements
- JSAs/Safe work method statement
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for controlling traffic with a stop-slow bat</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient control of traffic with a stop-slow bat</td>
</tr>
<tr>
<td></td>
<td>• working with others to control traffic with a stop-slow bat that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely control of traffic with a stop-slow bat that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

|  | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
|  | • Evidence for assessment is best gathered using the outcomes of products and processes of the workplace context. |
|  | • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. |
|  | • Customisation of assessment and delivery environment to sensitively accommodate... |
### Cultural diversity

- Aboriginal people and other people from a non-English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to control traffic with a stop-slow bat

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Work instructions may be received via verbal or written and graphical instructions, signage, work schedules/plans/specifications, work bulletins, charts and hand drawings, memos, maps, materials safety data sheets (MSDS) and diagrams or sketches and may include:

- plans
- specifications
- quality requirements
- operational details
- safe work procedures or equivalent
- regulatory/legislative requirements
- manufacturers' specifications and instructions
- organisation work specifications and requirements
- instructions issued by authorised organisational or external personnel
- relevant Australian Standards

Safety requirements may include:

- those included in compliance documentation
- personal protective equipment
- safe operating procedures, including recognising and preventing hazards associated with:
  - uneven/unstable terrain
  - trees
  - pits
  - poles
  - trip hazards
  - dirt mounds
  - overhead services
- underground services
- bridges
- surrounding buildings
- obstructions
- structures
- facilities
- fires
- excavations
- traffic
- embankments
- cuttings
- hazardous materials
- recently filled trenches
- other machines
- personnel
- restricted access barriers
- traffic control
- working in proximity to others
- worksite visitors and the public
- safe parking practices, including:
  - ensuring access ways are clear
  - equipment/machinery is away from overhangs and refuelling sites
  - safe distance from excavations
  - secured from unauthorised access or movement

### Signage and devices

- temporary warning signs
- regulatory and traffic cones

### Signage and devices

- vehicle mounted signs and flashing lights
- guide signs
- warning signs
- barriers
- hazard markers
- bollards
- arrow boards

### Tools and equipment

- radio
- stop-slow bat
- high visibility vest
- traffic cones
- signage
### Tools and equipment

<table>
<thead>
<tr>
<th>May include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• warning lights and beacons</td>
</tr>

</tr>
<tr>
<td>5.1. Prepare <em>investigation reports</em> in accordance with specified standards</td>
</tr>
<tr>
<td>5.2. Present reports in a format, which ensures that findings, causes, options and courses of action can be readily understood by audience</td>
</tr>
<tr>
<td>5.3. Present the reports, including findings and <em>recommendations</em>, to the required audience</td>
</tr>
<tr>
<td>5.4. Review the investigation process and pass <em>recommendations</em> for process changes and improvements to the appropriate authority</td>
</tr>
</tbody>
</table>
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct safety and health investigations:

- apply legislative, organisation and site requirements and procedures
- locate, interpret and apply relevant legislative and operational information
- identify and/or confirm the linkages between factors and outcomes, causes and effects and direct/indirect causal relationships
- apply technical literacy and communicate sufficiently to interpret and apply common industry terminology, and interpret work procedures and processes
- speak in plain English and communicate orally with supervisors and other employees
- question and listen actively, e.g. when obtaining information of technical working practices
- write effectively to allow report writing
- plan and organise sufficiently to prepare and apply investigative processes
- apply teamwork skills sufficient to involve and engage the employers/supervisors in the investigation processes
- solve problems to assess technical mining issues
- apply presentation skills to deliver report to various levels of industry

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct safety and health investigations:

- legislation and regulations
- topic or subject area which is the target for the investigation
- theory of safety and health investigative research and analysis
- symptoms and possible immediate effects of post traumatic stress in an investigation situation
- appropriate industry context
- site procedures and conventions related to safety and health investigations
- site risk management processes and their applications
- conventions and requirements for written communications, including report writing
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Overview of assessment |  |
|------------------------|  |
| **Critical aspects for assessment and evidence required to demonstrate competency in this unit** | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following: |
|  | • knowledge of the requirements, procedures and instructions for conducting safety and health investigations |
|  | • implementation of requirements, procedures and techniques for the safe, effective and efficient completion of safety and health investigations |
|  | • working with others to undertake and complete safety and health investigations that meets all of the required outcomes |
|  | • consistent timely completion of safety and health investigations that safely, effectively and efficiently meets the required outcomes |

| Context of and specific resources for assessment |  |
|------------------------------------------------|  |
|  | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
|  | • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. |
|  | • Customisation of assessment and delivery environment to sensitively accommodate cultural diversity. |
|  | • Aboriginal people and other people from a non English speaking background may have second |
language issues.

- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete safety and health investigation

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisation and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• code of practice  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
|---|---|
| Investigations may involve a range of issues but will generally be related to: | • accidents, incidents or near misses  
• safety and health systems and issues  
• safety aspects of technical processes and procedures  
• safety aspects of equipment specifications and performance definition |
| Analysis of information may be divided into five main areas including: | • people  
• environment  
• equipment  
• procedures  
• organisation |
| Site security may require: | • signage  
• barricades  
• actions to treat and/or comfort victims and witnesses  
• temporary engineering and stability measures  
• security personnel  
• other relevant measures  
This is in order to:  
• create a safe environment  
• ensure the integrity of evidence |
| Information collection may include: | • reconstruction of events  
• interviews  
• statements  
• audio recording |
### Information sources may include:
- applicable commonwealth/state/territory legislation and codes of practice relating to the industry, dangerous and hazardous goods, environmental protection and OHS
- emergency procedures
- enterprise quality assurance procedures
- manufacturer's/documentation and handbooks
- materials safety data sheets
- worksite communications, management and inventory systems
- worksite safety management systems
- worksite's rescue service publications and information
- operations manuals or equivalent
- personal and work area work procedures and practices
- quality work specifications and procedures
- workplace operating procedures and policies

### Interview techniques and processes may need to be:
- managed to avoid prejudicing individual legal rights
- varied to avoid exacerbating post traumatic stress or similar symptoms for witnesses and involved parties

### Recording and reporting requirements are:
- in accordance with legislative and worksite policies and procedures

### Investigation report formats may be established on a site basis but are likely to include:
- objective(s)
- general overview
- research and information collection methodology
- analytical criteria
- findings (including essential and contributing factors)
- recommendations
- follow-up actions
- records of all relevant evidence

### Investigation recommendations may include:
- safety management systems
- processes and procedures
- behaviours/actions
- equipment and materials
• working environment

Unit Sector(s)
Occupational Health and Safety

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIOHS302A Implement traffic management plan

Modification History
Not applicable.

Unit Descriptor
This unit covers the competency required to implement a traffic management plans in the civil construction industry. It includes: planning and preparing; setting out, monitoring and closing down the traffic guidance scheme; and cleaning up.

Application of the Unit
These traffic management plans include those for public and private roads, parking areas and restricted access construction sites. This unit is appropriate for those working in a operational roles, at worksites within:

- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare | 1.1. Access, interpret and apply *compliance documentation* relevant to implement a traffic management plans  
1.2. Obtain, confirm and apply *work instructions* relevant to the allotted task  
1.3. Obtain, confirm and apply *safety requirements* from the site safety plan and organisational policies and procedures to the allotted task  
1.4. Identify, obtain and implement *signage and devices* requirements from the project traffic management plan  
1.5. Select *tools and equipment* to carry out tasks that are consistent with the requirements of the job, check them for serviceability and rectify or report any faults  
1.6. Identify, confirm and apply *environmental protection requirements* from the project environmental management plan to the allotted task  
1.7. Check the designated traffic controllers' training and qualifications for currency as per legislation  
1.8. Advise traffic controllers of the traffic flow requirements for the site |
| 2. Set out the traffic guidance scheme | 2.1. Select traffic guidance scheme to suit site conditions, traffic volumes and work activities  
2.2. Determine and ensure adherence to work schedule, maximum traffic delays, signals and site communications  
2.3. Ensure signs and devices are correctly positioned on the approaches to the work area in accordance with the traffic management plan  
2.4. Ensure that signs and devices are positioned and displayed on each approach according to Road Authority requirements and the traffic management plan  
2.5. Ensure signs and devices are positioned |
<p>| | |</p>
<table>

</table>
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to implement a traffic management plan:

- apply legislative, organisation and site requirements and procedures

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to implement a traffic management plan:

- site and equipment safety requirements
- state and territory traffic management legislation
- requirements set down by the Manual for Uniform Traffic Control Devices
- potential hazards
- traffic controlling
- traffic management plans
- basic signalling
- signs and devices
- radio operations
- equipment types, characteristics, technical capabilities and limitations
- operational, maintenance and basic diagnostic procedures
- site isolation and traffic control responsibilities and authorities
- processes for the calculation of travel speed
- quality requirements
- civil construction terminology
- JSAs/Safe work method statement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for implementing of traffic management plans</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient implementing of traffic management plans, which are to include:</td>
</tr>
<tr>
<td></td>
<td>▪ complying with State/Territory regulations on three separate live traffic projects, and</td>
</tr>
<tr>
<td></td>
<td>▪ one project controlling site construction vehicles</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the traffic management plans that meet all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely implementation of traffic management plans that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
|                                                  | • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job. |
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to implement traffic management plans

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>

Co-requisite units
Not applicable.
RIIOHS401A Supervise work in confined spaces

Modification History
Not applicable.

Unit Descriptor
This unit covers supervising work in confined space in resources and infrastructure industries. It includes: preparing for work; providing information; ensuring that the safety and health of personnel entering and working in a confined space is not affected; supervising entry and work; implementing emergency and rescue systems; and withdrawing from confined space and facilitate return to service.

Application of the Unit
This unit is appropriate for those working in supervisory or technical specialist roles, within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to supervise work in confined space:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply technical and safety information
- apply activity coordination and supervision procedures
- apply effective communication with a range of people in the workplace
- apply plant and equipment record requirements
- apply diagnostic/faultfinding techniques
- apply environmental requirements
- apply procedures for working at heights
- apply task analysis techniques
- apply atmospheric contaminants measurement procedures
- apply First Aid
- apply fire fighting techniques
- apply negotiation procedures with employers and employees

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to supervise work in confined space:

- legislation, standards and code of practice as they apply to confined spaces
- definition of confined space
- responsibilities of employers and employees, designers, manufacturers, suppliers and installers in general as they apply to safe work in confined spaces
- the process of hazard identification, risk assessment and control
- workplace strategies for implementing confined space legislation
- the effects of atmospheric contaminants entering the respiratory system
- effects on the human body such as:
  - oxygen deficiency
  - toxic contaminants
  - combustible contaminants
  - physical hazards such as engulfment and entrapment
  - physiological conditions such as asthma, epilepsy, phobias and physical fitness
- risks to workers handling hazardous substances in confined spaces
- risks from electric shock, explosion or fire, temperature changes, noise, and trips, slips and falls
- relationship between work environment and systems of work
- injury record systems
- consultation requirements and procedures with employees and employee representative
- control measures and the Hierarchy of Controls
- methods of systems isolation
- Safe Operating Procedures
- examination, testing and maintenance of control measures
- emergency procedures in confined spaces
- selection, use, training and maintenance of safety and rescue equipment
- implementation of emergency rescue procedures
- consultation techniques
- communication and observer systems
- record keeping requirements
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td>knowledge of the requirements, procedures and instructions for supervising work in confined spaces</td>
<td></td>
</tr>
<tr>
<td>implementation of appropriate procedures and techniques for the supervision of safe, effective and efficient work in confined spaces</td>
<td></td>
</tr>
<tr>
<td>working with others to plan, prepare and conduct work in confined spaces</td>
<td></td>
</tr>
<tr>
<td>provision of clear and timely instruction and supervision by the individual of those involved in working in confined spaces</td>
<td></td>
</tr>
<tr>
<td>evidence of the consistent successful supervision of work in confined spaces</td>
<td></td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non
| English speaking background may have second language issues. |
| Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances. |
| Where applicable, physical resources should include equipment modified for people with disabilities. |
| Access must be provided to appropriate learning and/or assessment support when required. |

| Method of assessment |
| This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods: |
| written and/or oral assessment of the candidate's required knowledge |
| observed, documented and/or first hand testimonial evidence of the candidate's: |
| implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes |
| consistently achieving the required outcomes |
| first hand testimonial evidence of the candidate's: |
| working with others to plan, prepare and conduct work in confined spaces |
| provision of clear and timely instruction and supervision by the individual of those involved in working in confined spaces |

| Guidance information for assessment |

</tr>
</thead>
</table>
| 1. Maintain familiarity with operational and safety activities | 1.1. Access, interpret and apply compliance documentation relevant to examining and maintaining safety in open-cut coal mines  
1.2. Obtain, analyse and confirm operational information in the form of handover reports, work instructions and verbal briefings  
1.3. Obtain and clarify operational forecast information related to the work area and confirm with appropriate management authorities  
1.4. Access, interpret and apply geological and survey data to complete all allocated tasks in accordance with site procedures  
1.5. Obtain, interpret and apply to all work activities, legislative and site requirements.  
1.6. Access and apply safety information and procedures throughout work  
1.7. Coordinate activities with others at site prior to commencement of, and during, the work activity |
| 2. Examine operations | 2.1. Conduct inspections as detailed in legislative requirements and site procedures  
2.2. Respond immediately to instances of non compliance to regulatory or other operational practices which endanger personnel  
2.3. Discuss inspection findings with responsible parties and initiate a response to restore operational safety and site compliance  
2.4. Record results of inspections and process records in accordance with legislative requirements and site procedures |
**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to examine and maintain mine safety:

- apply legislative, organisation and site requirements and procedures
- read, explain and apply:
  - technical information
  - site/legislative requirements
  - records and reports
  - briefings and handover details
  - job priorities
- apply geological and survey information
- apply procedures to recognise potential hazards and apply corrective measures according to site/legislative procedures
- apply feedback procedures
- apply technical reporting requirements
- apply investigation procedures
- apply reporting procedures

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to examine and maintain mine safety:

- site and equipment safety requirements
- legislative and site requirements and procedures
- site and legislative safety inspection requirements
- site geological, geographical and survey data
- shotfiring procedures and practices
- equipment characteristics, technical capabilities and limitations
- operational and maintenance procedures
- risk management procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

• Aboriginal people and other people from a non English speaking background may have second language issues.
• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
• Where applicable, physical resources should include equipment modified for people with disabilities.
• Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**
This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to plan, prepare and conduct the examination and maintenance of mine safety
  - provision of clear and timely instruction and supervision by the individual of those involved in the conduct of the mine safety

**Guidance information for assessment**
Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Not applicable.
RIIOHS403A Apply the mine occupational health and safety management plan

Modification History
Not applicable.

Unit Descriptor
This unit covers applying the mine occupational health and safety management plan in the coal and metalliferous mining industries. It includes: identifying and interpreting the requirements of the plan; applying the plan; and monitoring the effectiveness of the OHS control measures.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, within:

- Coal mining
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify and interpret the requirements of the Occupational Health and Safety Management Plan | 1.1. Access, interpret and apply *compliance documentation* relevant to mine occupational health and safety management plans  
1.2. Access, interpret and clarify the *Occupational Health and Safety Plan*  
1.3. Identify and clarify roles and responsibilities, as specified in the Occupational Health and Safety Plan and communicate and clarify individual responsibilities and tasks to relevant personnel  
1.4. Identify, obtain and allocate *resources and equipment* required for the application of the Occupational Health and Safety Plan  
1.5. Identify individual *training* needs  
1.6. Identify, report and review the *major hazards* at the mine site in accordance with the Occupational Health and Safety Plan and review established procedures  
1.7. Determine appropriate *controls for hazards* in accordance with the Occupational Health and Safety Plan and develop *risk* control measures in accordance with the Occupational Health and Safety Plan  
1.8. Identify potential *safety, health or hygiene risks* in accordance with the Occupational Health and Safety Plan |
| 2. Apply Occupational Health and Safety Plan | 2.1. Determine requirements of the Occupational Health and Safety Plan as applied to the mine site  
2.2. Assess and communicate the nature and scope of the *incidents* in accordance with the emergency plan  
2.3. Prepare an action plan in consultation with relevant work team members to maintain health and safety in accordance with the Occupational Health and Safety Plan  
2.4. Apply and monitor occupational health and safety plans and procedures in accordance with the Occupational Health and Safety Plan |
Plan
2.5. Apply procedures for monitoring, recording and reporting on hazards in accordance with the Occupational Health and Safety Plan

3. Monitor effectiveness of OHS control measures

3.1. Monitor the application of health and safety procedures and control measures in accordance with the Occupational Health and Safety Plan
3.2. Monitor the activities of the work group in relation to any major hazards identified at the mine site
3.3. Monitor the use, effectiveness and appropriateness of safety procedures including adequate personal protective equipment, systems and measures
3.4. Monitor systems and procedures for manual and assisted handling
3.5. Monitor the health aspects relevant to work activities and requirements
3.6. Monitor adequacy of control measures and revise where necessary
3.7. Action or recommend changes to improve the health and safety aspects of the job
3.8. Investigate and report any accident or near miss
3.9. Maintain OHS records of work injury, incidents, health and hygiene issues in accordance with OHS System and Plan and relevant legislation
3.10. Report OHS issues which need resolving by others
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to apply the mine occupational health and safety management plan:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply technical information
- communicate ideas and information
- plan and organise activities
- prepare and document procedures in a system
- apply and monitor mine site procedures and systems
- apply risk management processes and techniques
- conduct enquiries/investigations and prepare reports
- access, evaluate and apply data from monitoring systems and equipment / plant
- work with others and in teams
- identify health & hygiene training needs
- apply review and audit processes and techniques

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to apply the mine occupational health and safety management plan:

- legislative and industry OHS standards and compliance requirements
- appropriate work processes
- appropriate health and hygiene standards
- hazard identification and risk management
- observation and inspection methods
- potential impacts of drug and substance abuse on fitness for work
- personal protective equipment and measures
- manual handling codes and practices
- mine hazards associated with:
  - hazardous substances, dusts, noise, vibration
  - the mining processes
  - explosives (where used)
  - high-wall/low-wall failure and water ingress
  - mining equipment and haul roads
- emergency procedures
- plant isolation techniques
- conventional signage techniques
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery
environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to plan, prepare and apply mine occupational health and safety management plans
  - provision of clear and timely instruction and supervision by the individual of those involved in the application of the mine occupational health and safety management plan

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and
equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisation and site requirements and procedures |
| | manufacturer's guidelines and specifications |
| | Australian standards |
| | code of practice |
| | Employment and workplace relations legislation |
| | Equal Employment Opportunity and Disability Discrimination legislation |

| Occupational Health & Safety Plan and system: | Should be available for each mine. This would outline the system of managing the mine to ensure it can be operated safely and specific plans to control any established hazards. |

| Resources and materials may include: | selection and purchasing procedures |
| | materials safety data sheets (MSDS) |
| | risk assessment leading to standard operating procedures or plant mods |
| | health and safety audits |
| | training requirements for competency to operate |
| | maintenance procedures |

| Hazard is defined as: | a source of potential harm or a situation with a potential to cause loss |

| Training may include: | induction |
| | competency training for work activities |
| | safety meetings |
| | involvement in defining work procedures |
| | tool box talks and circular updating safety information |
| | safety training sessions |
| | input into work procedures or mine development plans |
| | safety, health and hygiene inspections |

| Major hazards in mines may include: | explosives and blasting |
| | potential for slope instability |
potential for fire or flooding  
potential for major machinery collapse  
health concerns, e.g. relating to specific materials being mined  
safety concerns, e.g. relating to the method of mining, material properties

| Controls for hazards may include: | • elimination | remove activity, engineering out hazards  
• substitution | use less hazardous materials, substances or processes  
• separation | isolate hazards from person by guarding, space or time separation  
• administration | adjusting the time or conditions of risk exposures  
• training | improving competency making tasks less hazardous to perform  
• personal protective equipment | (used as last resort) appropriately designed and properly fitted equipment to allow safety and health to be maintained in carrying out duties where there is some risk from exposure

| Risk is defined as: | • The chance of something happening that will have an impact upon objectives. It is measured in terms of consequences and likelihood

| Safety, health and hygiene risks may include those resulting from: | • shift work and lack of sleep resulting in fatigue  
• sanitation and hygiene requirements, including:  
  • potable water  
  • cleanliness and sanitation  
  • vermin control and eradication  
• chemical and hazardous materials, including:  
  • industrial chemicals  
  • diesel, oils, hydraulic oils  
  • asbestos  
  • explosives  
• dust, including:  
  • asthma, silicosis, asbestosis and other diseases of the lung  
  • failure of monitoring and analysis of dust,  
  • failure of dust control systems include filters, isolation, personal protective equipment  
• failure to apply mine transport networks and |
rules, including:
- route
- traffic rules
- signage and barriers
- failure to apply personal protection, including those for:
  - hearing
  - eyes (industrial, radiation, ultra-violet, infra-red radiation, dust)
  - respiratory protective devices
  - hand, head, hair, feet
  - protective clothing
  - safety belts and harnesses
- failure to apply safety signs
- stress and stressors, including:
  - drugs may, including:
    - alcohol, nicotine
    - prescription drugs
    - illicit drugs and substances
    - impact of drugs on fitness for work
      - vibration hazards resulting from:
        - hand operated equipment
        - drilling equipment
        - corrugated roads
        - springs and seating
          - noise management controls
          - heat/cold exposure protection

<table>
<thead>
<tr>
<th>Incident is:</th>
<th>any unplanned event resulting in, or having a potential for injury, ill health, damage or other loss</th>

<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify the effects and symptoms associated with workplace health and hygiene | 1.1. Access, interpret and apply compliance documentation relevant to health and hygiene management systems  
1.2. Identify the causal chain and focus of common diseases  
1.3. Identify the effects and symptoms of stress on employee health and effectiveness  
1.4. Identify the effects and symptoms of shift work on employee health and effectiveness  
1.5. Identify the effects and symptoms of alcohol and other drug/substance abuse on employee health and effectiveness |
| 2. Identify and monitor health and hygiene standards and systems | 2.1. Identify and interpret legislative, industry and site standards for health and hygiene  
2.2. Identify and monitor health and hygiene requirements within the mine operational planning and management systems  
2.3. Identify and monitor health and hygiene requirements within the mine safety management plans  
2.4. Monitor and review work injury recording systems as required by legislation and organisational guidelines  
2.5. Monitor and review sanitation and hygiene systems as required by legislation and organisational guidelines  
2.6. Monitor and review chemical and hazardous substances control systems as required by legislation and organisational guidelines  
2.7. Implement and monitor atmosphere and dust control measures in accordance with the ventilation management plan |
| 3. Implement and monitor health and hygiene protection measures for individuals | 3.1. Implement, monitor and review health and hygiene training systems and programs  
3.2. Implement and monitor personal protective equipment systems and measures and monitor the effectiveness of protection  
3.3. Resource, implement and monitor systems and procedures for manual and assisted handling |
|   | 4. Identify, implement and monitor control measures for operational health and hygiene hazards | 4.1. Identify, implement and monitor control measures and standards related to *mine lighting*  
4.2. Identify, implement and monitor control measures and standards related to *vibration*  
4.3. Identify, implement and monitor control measure and standards related to *noise*  
4.4. Identify, implement and monitor control measures and standards associated with exposure to extremes of *heat/cold*  
4.5. Identify, implement and monitor control measures associated with *equipment and materials*  
4.6. Identify, implement and monitor air quantity and quality control measures  
4.7. Identify, implement and monitor control measures and standards related to the handling, storage and conveyance of *explosives*  
4.8. Identify, implement and monitor control measures and standards related to radiation and radiation sources |
|---|---|---|
|   | 5. Audit and review systems in respect of health and hygiene measures | 5.1. Review the effectiveness of health and hygiene management, as part of both operational and safety hazard management systems, for compliance with legislation, industry practice and the appropriate mine management plan  
5.2. Investigate and respond to circumstances which give rise to or threaten the health and hygiene of individuals, or refer to the appropriate authority for response  
5.3. Audit and/or review the health and hygiene training program/content for currency, relevance and compliance  
5.4. Review and/or audit recording and reporting systems for compliance with legislation, industry and mine requirements |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to implement and monitor health and hygiene management systems:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply technical information
- communicate ideas and information
- plan and organise activities
- prepare and document systems and procedures
- apply risk management processes and techniques
- conduct enquiries / investigations and prepare reports
- access, evaluate and apply data from monitoring systems and equipment / plant
- work with others and in teams
- validate training analysis results
- apply review and audit processes and techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to implement and monitor health and hygiene management systems:

- legislative and industry health and hygiene standards and compliance requirements
- health and hygiene systems development processes and techniques
- procedures and techniques for establishing health and hygiene objectives and criteria
- health and hygiene management systems information procedures
- risk management and control theory and processes
- fundamentals of human disease and injury
- causes, symptoms and impacts of stress on employees
- potential impacts of drug and substance abuse
- individual medical standards and examination systems
- rehabilitation processes and techniques
- personal protective equipment and measures
- manual handling codes and practices
- sanitation and hygiene systems and procedures
- mine hazards associated with hazardous substances
- chemical information management systems (MSDS or equivalent)
- health hazards associated with atmosphere and the likely impacts on personnel
- atmosphere and dust control and protection systems
- health hazards and controls associated with mining processes and the likely impacts on personnel
- health hazards and controls associated with exposure to heat / cold conditions
- health hazards associated with:
  - explosives
  - radiation and radiation sources
  - equipment and plant
  - lighting
  - vibration
  - noise
- health and hygiene training requirements and systems
Evidence Guide

| allergic contact dermatitis |
| skin cancer |
| poisoning |
| nervous system disease |
| circulatory system disease |

Common disease related to routes:

| liver |
| of exit may include those involving: | • kidney  
• bladder  
• reproductive systems  
• cover the latency potential |
| Causes of **stress** (stressors) may include: | • environmental factors  
• bad workplace design  
• work hazards  
• job design  
• job monotony  
• contractual conditions  
• esteem values  
• relationship difficulties  
• lack of control  
• physical impairments |
| **Stress** effects may include: | • fatigue  
• anxiety  
• hypertension  
• depression  
• hostility and aggression  
• psychosomatic complaints  
• neuroses  
They may also be associated/linked with:  
• bronchial asthma  
• nervous rashes  
• diabetes  
• some cancers |
| **Shift work** responses are related to circadian rhythms (24 hour rhythms) and may result in: | • disturbed or inadequate sleep  
• fatigue  
• depression and neuroses  
• dependence on drugs  
• susceptibility to sickness  
• disturbed family and social life |
| **Alcohol and other drug/substances** may include: | • alcohol  
• nicotine  
• prescription drugs  
• other medicinal drugs  
• illicit drugs and substances |
| **Health and hygiene** legislative, industry and site, standards may include: | • policy  
• accountability  
• supervision  
• workforce involvement |
| **Physical Environment** | • physical environment  
| • risk assessment practices  
| • work planning  
| • external information  
| • medical/first-aid  
| • rehabilitation  |

| **Work Injury Recording Systems**  
may include: | • definitions (occupational injury, fatal injury, work days lost, employees, time frames)  
| • data management  
| • reporting parameters  
| • reporting  
| • investigation  |

| **Sanitation and Hygiene Infrastructures**  
may include: | • systems for water (potable) and waste water  
| • maintenance of cleanliness and sanitation  
| • toilets  
| • washing facilities  
| • hand basins  
| • crib rooms / dining areas  
| • shower / changing facilities  
| • vermin control and eradication  
| • drainage of stagnant water  
| • waste decaying wood  
| • refuse disposal  
| • sheltered reception areas  
| • regular checking processes  |

| **Chemical and Hazardous Substances**  
in mines may include: | • industrial chemical  
| • diesel  
| • hydraulics  
| • oils  
| • liquefied petroleum gas  
| • polyurethane  
| • asbestos  |

| **Chemical and Hazardous Substance Control Systems**  
may include: | • elimination  
| • substitution  
| • isolation and protection  
| • engineering controls (ventilation, containment etc)  
| • safe work practices  
| • personal protective equipment  
| • new product management measures (need, assessment, controls, surveillance, induction and training)  |
| **Atmosphere** and ventilation measures may include: | • identification of air standards (oxygen, impurities, contaminants, dust)  
• establishment of appropriate evaluation and air quality control systems  
• assessment of protection needs  
• authorisation for nominated activities  
• maintenance of adequate records of air quality levels |
| --- | --- |
| **Dust** control measures may include: | • establishment of a dust control program  
• monitoring and analysis of dust  
• identification and responses to dust problems  
• selection and application of appropriate methods to determine dust concentrations |
| **Training** and re-training may include: | • induction  
• on-the-job discussions  
• safety meetings  
• OHS committees  
• circulars  
• safety training sessions  
• encouragement incentives  
• input into developments  
• health and hygiene inspections |
| **Personal protection** may include those for: | • hearing  
• eyes (industrial, radiation, ultra-violet, infra-red radiation)  
• respiratory protective devices  
• hand (gloves)  
• head  
• feet (boots)  
• long hair  
• protective clothing  
• safety belts and harnesses  
• safety signs |
| **Mine lighting** requirements may include: | • general work areas  
• personal lighting for underground use  
• machinery mounted lighting systems  
• visual displays  
• emergency lighting systems |
| **Vibration** may contribute to, or result in: | • bone damage  
• stomach and digestive problems  
• heart problems  
• varicose veins |
- varicocle
- piles
- disruption to the nervous system resulting in:
  - weakness
  - fatigue
  - loss of appetite
  - irritability
  - headache
  - insomnia
  - impotence

| Vibration hazard analysis may include: | • extent of damage factors (time of exposure, vibration frequency rate, amplitude of vibration) |
| | • types of vibration (whole body vibration, VLF whole body vibration, LF whole body vibration) |
| | • hand-arm vibration (vibration white fingers) |

| Vibration controls may include: | • vibration surveys |
| | • establishment of vibration limits |
| | • establishment of targets for vibration limits |
| | • provision of training in vibration measurement |
| | • establishment, implementation and monitoring of vehicle / equipment design criteria (operation, seating, mountings, portable machinery) |

| Noise management controls may include: | • establishment of noise limits |
| | • regular measurement and recording of noise |
| | • engineering / design of noise controls |
| | • establishment of noise protection zones |
| | • identification |
| | • provision and testing of noise protection equipment |
| | • adequate training of personnel |
| | • an appropriate audiometric testing regime |

| Heat/cold exposure protection may include: | • adequate training of personnel |
| | • measurements of heat stress index |
| | • monitoring of index and employees |
| | • establishment of cool rest areas |
| | • provision of cool water |
| | • provision of canopies, cabins and appropriate clothing |

| Equipment and materials control | • selection and acquisition procedures |
measures may include:

- materials safety data sheets (MSDS)
- risk assessment
- health and safety audits
- work procedures
- training requirements for operation
- maintenance procedures

**Explosive** control systems may include:

- legislative requirements
- selection and procurement
- storage
- conveyance
- handling
- handling of old / deteriorated stock
- misfires
- entry after blasting
- charging
- inspections
- initiation
- storms
- electronic risks

### Unit Sector(s)

Occupational Health and Safety

### Competency field

Refer to Unit Sector(s).

### Co-requisite units

Not applicable.
RIIOHS405A Maintain standard procedures and safe working practices

Modification History
Not applicable.

Unit Descriptor
This unit covers the maintaining of standard procedures and safe working practices in the onshore and offshore oil and gas drilling industry. It includes: conducting daily rig maintenance and safety inspections, and complying with Government Regulations and Company Policies.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, within:
- Drilling

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Conduct daily rig maintenance and safety inspection | 1.1. Access, interpret and apply *compliance documentation* relevant to maintaining standard procedures and safe working practices  
1.2. Undertake rig safety checks before tour and discuss equipment problems with previous tour driller  
1.3. Spot check maintenance procedures against plans, identify and rectify anomalies and maintain records  
1.4. Conduct pre-tour occupational health and safety meetings with team members |
| 2. Comply with Government Regulations and Company Policies | 2.1. Communicate regulations and procedures for controlling work and hazards to team members both on the rig floor and in camp accommodation areas  
2.2. Allocate employees’ job responsibilities in accordance with regulations/company policies and within the bounds of their competence  
2.3. Ensure team work rules are understood, applied and modelled by all crew members  
2.4. Ensure regulations are obeyed by crew in line with statutory compliance  
2.5. Constantly assess rig operators against regulations and policies |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to maintain standard procedures and safe working practices:

- apply legislative, organisation and site requirements and procedures
- conduct rig inspections in accordance with statutory/company regulations
- allocate job responsibilities
- manage teams
- negotiate and resolve conflict
- apply policies and procedures
- communicate effectively to crews/teams
- maintain compliance
- maintain operating records
- solve problems

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to maintain standard procedures and safe working practices:

- government regulations
- company policies and procedures
- client policies and procedures
- occupational health and safety compliance
- rig safety procedures and reporting
- conflict resolution
- negotiation skills
- problem solving techniques
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</table>

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to ensure standard procedures and safe working practices are applied
  - provision of clear and timely instruction and supervision by the individual of those involved in applying standard procedures and safe working practices

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation | legislative, organisation and site requirements and procedures
|                                  | manufacturer's guidelines and specifications
|                                  | Australian standards
|                                  | code of practice
|                                  | Employment and workplace relations legislation
|                                  | Equal Employment Opportunity and Disability Discrimination legislation

| Records to be maintained include: | reports to rig manager
|                                  | short notes
|                                  | maintenance sheets
|                                  | safety checks
|                                  | inventories
|                                  | spare parts order lists
|                                  | employee evaluation forms

|                                | intranet or internet based

| Regulations may include: | Petroleum Acts relating to submerged lands
|                          | AETC (PSLA) Petroleum Submerged Lands Act (offshore)
|                          | occupational health and safety
|                          | environmental
Unit Sector(s)
Occupational Health and Safety

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIOHS601A Establish and maintain the OHS management system

Modification History
Not applicable.

Unit Descriptor
This unit covers the establishment and maintenance of the OHS management system in resources and infrastructure industries. It includes establishing and maintaining: the framework of the system; participative arrangements for the management of OHS, procedures for identifying hazard, assessing risk and treating risks; organisational procedures for dealing with unplanned incidents; an OHS training program; a system for OHS records; planning and preparing for the implementation of the system; and evaluation of the organisation's OHS system and related policies, procedures and programs.

Application of the Unit
This unit is appropriate for those working in management or technical specialist roles within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to establish and maintain the OHS management system:

- apply legislative, organisation and site requirements and procedures
- access and analyse archival and historical information related to the workplace safety matters
- access, interpret and apply technical OHS information
- apply and manage research techniques and activities
- apply OHS systems audit processes
- communicate effectively in the workplace
- apply procedures for developing and introducing practices to improve the work environment
- apply procedures for developing and maintaining risk management procedures and policies
- apply procedures for developing and maintaining statutory/legal and organisational policies and procedures
- explain complex information to superiors/subordinates
- apply records and documents maintenance requirements and procedures
- apply procedures for monitoring and deciding on changes to process
- provide coaching and mentoring support
- take a leading role in initiating action and making decisions
- use effective consultative mechanisms to negotiate processes and procedures appropriate to workplace safety

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to establish and maintain the OHS management system:

- OHS legislation, policies and code of practice requirements and procedures
- OHS auditing procedures
- legislative and site rules, policies, procedures and regulations
- company policies
- duty of care principles
- training design and management requirements and procedures
- emergency procedures
- strategic planning procedures
- human resource management requirements and procedures
- risk management processes and techniques
- action planning methods
- continuous improvement processes
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Critical aspects for assessment and evidence required to demonstrate competency in this unit</strong></td>
</tr>
<tr>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td>• knowledge of the requirements, procedures and instructions for establishing and maintaining OHS management systems</td>
</tr>
<tr>
<td>• implementation of procedures and techniques for the safe, effective and efficient establishment and maintenance of OHS management systems</td>
</tr>
<tr>
<td>• the identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td>• the identification of viable program options and the selection of procedures that best meet the required outcomes</td>
</tr>
<tr>
<td>• working with others to establish and maintain OHS management systems</td>
</tr>
<tr>
<td>• timely completion of the establishing and maintenance of OHS management systems</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
</tr>
<tr>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
</tr>
</tbody>
</table>
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required
  - identification of viable options and the selection of procedures that best meet the required outcomes
- first hand testimonial and documentary evidence of the candidate's:
  - working with others to establish and maintain of OHS management systems
  - timely gaining of approval of OHS management systems
  - provision of clear, timely required support and advice on the application of OHS management systems
### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

OHS (occupational health and safety) policy is:

- a statement by the organisation of its intentions and principles in relation to its overall OHS performance which provides a framework for action and for the setting of its OHS objectives and targets

Safety is:

- a state in which the risk of harm to persons or damage is limited to an acceptable level

OHS objectives are:

- goals in terms of OHS performance, arising from the OHS policy that an organisation sets itself to achieve, and which are quantified where practicable

Relevant positions will include:

- managers
- supervisors
- OHS officer/manager
- First Aid officers

Responsibility is:

- being accountable for the achievement of objectives

Occupational Health and Safety Management System (OHSMS) is:

- that part of the overall management system which includes organisational structure, planning activities, responsibilities, practices, procedures, processes and resources for developing, implementing, achieving, reviewing and maintaining the OHS policy, and so managing the OHS risks associated with the business of the organisation

OHS Management System

- commitment and policy
- planning
| principles are to include: | implementation  
|                         | measurement and evaluation  
|                         | review and improvement  
| **Consultation** processes may include: | OHS committees  
|                         | consultation with health and safety representatives  
|                         | issue resolution procedures  
|                         | participative/consultative procedures conducted by supervisory staff within the area of managerial responsibility  
| **Hazard** is defined as: | a source of potential harm or a situation with a potential to cause loss  
| **Existing and potential hazards** can be identified from: | checklists  
|                         | hazard identification processes  
|                         | accident and incident reports  
|                         | significant incident reports  
| **Monitoring** of activities may include: | review of written reports  
|                         | performance appraisal  
|                         | auditing procedures  
| **Hazard identification** is: | the process of recognising that a hazard exists and defining its characteristics  
| **Risk** is defined as: | the chance of something happening that will have an impact upon objectives. It is measured in terms of consequences and likelihood  
| **Risk assessment** is defined as: | the overall process of risk analysis and risk evaluation  
| **Risk control** is defined as: | that part of risk management which involves the implementation of policies, standards, procedures and physical changes to eliminate or minimise adverse risks  
| **Risk treatment** is: | the selection and implementation of appropriate options for dealing with risk  
| **Incident** is: | any unplanned event resulting in, or having a potential for injury, ill health, damage or other loss  
| **OHS legislation** may include: | maintenance of records for statutory/legal breaches  
|                         | provision of information and training  
|                         | regulations and code of practice relating to statutory/legal compliance  
|                         | site representatives and committees |

Co-requisite units
Not applicable.
RIIOHS602A Incorporate health and hygiene factors into mine management

Modification History
Not applicable.

Unit Descriptor
This unit covers incorporating health and hygiene factors into coal mine management. It includes: identifying the fundamentals of human disease and injury; incorporating health and hygiene factors into the work environment and mine safety management plans; establishing health and hygiene protection measures for individuals; establishing control measures for operational health and hygiene hazards; and incorporating health and hygiene factors within mine audit and review systems.

Application of the Unit
This unit is appropriate for those working in a management or technical specialist role, within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify the fundamentals of human disease and injury | 1.1. Access, interpret and apply *compliance documentation* relevant to *health and hygiene* management in coal mines  
1.2. Identify the *causal chain and focus of common diseases*  
1.3. Identify the causes, symptoms and impacts of *stress* on employee health and effectiveness  
1.4. Identify the potential impacts of *shift work* on employee health and effectiveness  
1.5. Identify the potential impacts of *drug and substance* abuse on employee health and effectiveness |
| 2. Incorporate health and hygiene factors into the work environment | 2.1. Identify, analyse and use legislative and industry standards as the basis for health and hygiene activities  
2.2. Incorporate health and hygiene factors into mine operational planning and management systems |
| 3. Incorporate health and hygiene factors into mine safety management plans | 3.1. Establish and resource *work injury recording systems*  
3.2. Establish *sanitation and hygiene* infrastructure and systems  
3.3. Establish *chemical and hazardous substances control* systems  
3.4. Establish atmospheric and *dust control measures*  
3.5. Establish and maintain *mine transport networks and rules* |
| 4. Establish health and hygiene protection measures for individuals | 4.1. Establish, review and update individual *medical recruitment and re-appraisal measures*  
4.2. Establish and resource health and hygiene training systems and programs.  
4.3. Establish and resource *personal protective equipment* systems and measures.  
4.4. Establish and resource systems and procedures for manual and assisted handling |
<p>| 5. Establish control measures for | 5.1. Analyse health hazards related to <em>mine</em> |</p>

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to incorporate health and hygiene factors into mine management:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply technical information
- communicate ideas and information
- apply procedures for planning and organising activities
- apply procedures for preparing and documenting policies, plans and procedures
- apply risk management processes and techniques
- apply procedures for conducting enquiries / investigations and preparing reports
- access, evaluate and apply data from monitoring systems and equipment / plant work with others and in teams
- apply review and audit processes and techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to incorporate health and hygiene factors into mine management:

- legislative and industry health and hygiene standards and compliance requirements
- health and hygiene policy requirements
- procedures and techniques for establishing health and hygiene objectives, targets, performance indicators and criteria
- health and hygiene management systems information support requirements and options
- risk management and control theory and processes
- continuous improvement processes and techniques
- fundamentals of human disease and injury
- causes, symptoms and impacts of stress on employees
- potential impacts of drug and substance abuse
- individual medical standards and examination systems
- rehabilitation options, processes and techniques
- personal protective equipment and measures
- manual handling codes and practices
- sanitation and hygiene infrastructure and operational requirements
- mine hazards associated with hazardous substances and the likely impacts on

# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• knowledge of the requirements, procedures and instructions for the incorporation of health and hygiene requirements into mine management</td>
<td>• implementation of procedures and techniques for the safe, effective and efficient incorporation of health and hygiene factors into mine management</td>
</tr>
<tr>
<td>• the identification of the relevant information and scope of the work required to meet the required outcomes</td>
<td>• the identification of viable program options and the selection of programs that best meet the required outcomes</td>
</tr>
<tr>
<td>• working with others to incorporate health and hygiene requirements into mine management</td>
<td>• timely completion of the incorporation of health and hygiene requirements into mine management</td>
</tr>
</tbody>
</table>

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.

- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those...
Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.

Aboriginal people and other people from a non English speaking background may have second language issues.

Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular work sites may differ due to site circumstances.

Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.

<table>
<thead>
<tr>
<th>Method of assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:</td>
</tr>
<tr>
<td>• written and/or oral assessment of the candidate's required knowledge</td>
</tr>
<tr>
<td>• observed, documented and/or first hand testimonial evidence of the candidate's:</td>
</tr>
<tr>
<td>• implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes</td>
</tr>
<tr>
<td>• identification of the relevant information and scope of the work required</td>
</tr>
<tr>
<td>• identification of viable options and the selection of options that best meet the required outcomes</td>
</tr>
<tr>
<td>• consistently achieving the required outcomes</td>
</tr>
<tr>
<td>• first hand testimonial and documentary evidence of the candidate's:</td>
</tr>
<tr>
<td>• working with others to incorporate health and hygiene requirements into mine management</td>
</tr>
<tr>
<td>• consistent and timely gaining of approval of</td>
</tr>
<tr>
<td><strong>Guidance information for assessment</strong></td>
</tr>
<tr>
<td>----------------------------------------</td>
</tr>
</tbody>
</table>

- health and hygiene requirements in mine management
  - provision of clear, timely required support and advice on the application of health and hygiene requirements in mine management
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>
<thead>
<tr>
<th>Relevant compliance documentation may include:</th>

Not applicable.
RIIPBE201A Conduct aeration process

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of aeration processes in the metalliferous mining industry. It includes planning and preparing for aeration activities, starting up equipment in sequence, operate and monitor equipment, conduct housekeeping activities, and shutting down in sequence and/or isolating equipment. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:

- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for aeration activities | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Receive, interpret and clarify shift changeover details  
1.3. Communicate with other personnel using approved communication methods  
1.4. Select personal protective equipment appropriate for work activities  
1.5. Perform equipment pre-start checks  
1.6. Identify, address and report potential risks and hazards  
1.7. Identify, address and report *environmental issues*  
1.8. Adhere to emergency procedures |
| 2. Start-up equipment in sequence | 2.1. Carry out *start-up procedures* and complete start-up checks according to plant configurations and system requirements  
2.2. Confirm plant is operational |
| 3. Operate and monitor equipment | 3.1. *Read* and interpret data from equipment *indicators* to determine aeration efficiency  
3.2. Continuously inspect and *monitor* operations/plant and catchment areas to identify process defects and potential problems  
3.3. Adjust equipment to approved *operating parameters* to optimise and maintain efficient aeration to meet product quality targets  
3.4. Pass on end of shift information to oncoming shift |
| 4. Conduct housekeeping activities | 4.1. *Clean plant* to maintain condition of all equipment  
4.2. Manage and report hazards |
| 5. Shutdown in sequence and/or isolate equipment | 5.1. *Shutdown* or isolate equipment based on process and safety requirements  
5.2. Perform *post shutdown* or isolation checks |
**Required Skills and Knowledge**

### Cultural diversity.
- Aboriginal people and other people from a non-English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment
This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the aeration process

### Guidance information for assessment
Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RIIPBE202A Conduct digestion process

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of digestion processes in the metalliferous mining industry. It includes planning and preparing for digestion operations, starting up equipment in sequence, operating and monitoring equipment, conducting housekeeping operations, and shutting down in sequence and/or isolating equipment. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for digestion operations | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Receive, interpret and clarify shift changeover details  
1.3. Communicate with other personnel using approved communication methods  
1.4. Select personal protective equipment appropriate for work activities  
1.5. Select appropriate type of auxiliary equipment for work activities  
1.6. Perform equipment pre-start checks to ensure equipment is ready for operation  
1.7. Identify, address and report potential risks and hazards  
1.8. Identify, address and report environmental issues  
1.9. Adhere to emergency procedures to ensure safety of personnel and plant  
1.10. Use approved dust suppression and extraction methods  
1.11. Ensure area is well ventilated before entry into work area |
| 2. Start-up equipment in sequence            | 2.1. Carry out start-up procedures and completes start-up checks according to plant configurations and system requirements  
2.2. Confirm plant is operational             |
| 3. Operate and monitor equipment             | 3.1. Read and interpret data from equipment indicators to determine efficiency  
3.2. Continuously inspect and monitor operations/plant and catchment areas to digestion process defects and potential problems  
3.3. Adjust equipment to approved operating parameters to optimise and maintain efficient digestion and to meet product quality targets  
3.4. Add reagents to approved operating parameters  
3.5. Carry out minor maintenance to maintain |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct the digestion process:

- apply legislative, organisation and site requirements and procedures for conducting the digestion process
- diagnose faults
- identify and manage hazards
- handle hazardous goods
- interpret reports
- lift (manual, cranes and loads)
- maintain records
- report defects
- apply safe work practices
- troubleshoot
- use hand and power tools

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct the digestion process:

- breakdown procedures
- contaminant identification
- digestion process (basic)
- emergency procedures
- environmental procedures
- equipment limitations and operating parameters
- equipment safety requirements
- hazardous goods procedures and consequences of spills and hazardous goods
- identifying repair requirements
- isolation procedures
- metallurgical and technical data (basic)
- OHS procedures
- operational procedures and checks
- pumping system and flow charts (pipeline and sprinkler systems)
- reagent types
• sampling
• site procedures
• site safety requirements
• types of ores (basic)
• wet and dry working procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct precipitation operations:

- apply legislative, organisation and site requirements and procedures for conducting precipitation operations
- end-point identification
- diagnose faults
- identify and address hazards
- handle hazardous goods
- interpret reports
- lift (manual, cranes and loads)
- maintain records
- report defects
- apply safe work practices
- use relevant hand and power tools

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct precipitation operations:

- breakdown procedures
- contaminant identification
- precipitation process
- chemistry - basic solubility
- sulphide precipitation
- neutralisation precipitation
- liquid and solid separation processes in precipitation and crystallisation
- flocculation agents
- filtration methods
- emergency procedures
- environmental procedures
- equipment limitations and operating parameters
- equipment safety requirements
- hazardous goods procedures and consequences of spills and hazardous goods
- identifying repair requirements
- isolation procedures
- metallurgical and technical data (basic)
- OHS procedures
- operational procedures and checks
- pumping system and flow charts (pipeline and sprinkler systems)
- reagent types
  - seeding and crystallisation processes
  - sampling
  - site procedures
  - site safety requirements
  - types of ores (basic)
  - wet and dry working procedures
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

RIIPBE204A Conduct reduction process

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of reduction processes in the metalliferous mining industry. It includes planning and preparing for reduction operations, starting up equipment in sequence, operating and monitoring equipment, conducting housekeeping activities, and shutting down in sequence and/or isolating equipment. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct reduction processes:

- apply legislative, organisation and site requirements and procedures for conducting reduction processes
- diagnose faults
- identify and address hazards
- handle hazardous goods
- interpret reports
- lift (manual, cranes and loads)
- maintain records
- report defects
- apply safe work practices
- use hand and power tools

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct reduction processes:

- breakdown procedures
- contaminant identification
- reduction process (basic)
- emergency procedures
- environmental procedures
- equipment limitations and operating parameters
- equipment safety requirements
- hazardous goods procedures and consequences of spills and hazardous goods
- identifying repair requirements
- isolation procedures
- metallurgical and technical data (basic)
- OHS procedures
- operational procedures and checks
- pumping system and flow charts (pipeline and sprinkler systems)
- reagent types
- sampling
- site procedures
- site safety requirements
- types of ores (basic)
- wet and dry working procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Critical aspects for assessment and evidence required to demonstrate competency in this unit</strong></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for conducting reduction processes</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of reduction processes</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the reduction processes in a way that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of reduction processes that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
</tr>
<tr>
<td></td>
<td>• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
</tr>
<tr>
<td></td>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
</tr>
<tr>
<td></td>
<td>• Customisation of assessment and delivery environment to sensitively accommodate</td>
</tr>
</tbody>
</table>
cultural diversity.

- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
| | - written and/or oral assessment of the candidate's required knowledge
| | - observed, documented and/or first hand testimonial evidence of the candidate's:
| | | - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
| | | - consistent achievement of required outcomes
| | | - first hand testimonial evidence of the candidate's:
| | | | - working with others to undertake and complete the reduction processes

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisational and site requirements and procedures |
|                                             | manufacturer’s guidelines and specifications                  |
|                                             | Australian standards                                         |
|                                             | Employment and workplace relations legislation               |
|                                             | Equal Employment Opportunity and Disability Discrimination legislation |

**Legislation** may include Acts and regulations dealing with:

- mining safety and health
- mine inspection
- OHS
- explosives

**Auxiliary equipment** may be anything that is portable and mobile that is not part of the fixed infrastructure, and may include:

- compressors
- distribution control systems (DCS)
- gantry cranes and attachments and other mobile equipment
- hand and power tools
- hoses (air and water)

**Pre-start checks** may include:

- availability of equipment (e.g. conveyor)
- detection of conditions that are unusual
- personnel availability
- job requirements
- levels
- walk through plant

**Environmental issues** may include:

- drainage
- dust (dump)
- emissions
- flora and fauna
- hazardous chemicals
- noise
- recycling
- run-off
- spills
- waste management and disposal
<table>

</table>
- density
- carbon levels
- restrictions
- air volume and pressure
- speed (e.g. pumps)
- unusual noises
- vibrations
- power
- temperature
- feed rates (rpm, amps)
- magnetic content

**Reduction** methods may include:
- open hearth furnace
- rotary kiln
- multi-hearth
- blast furnace

**Equipment and plant cleaning methods** may include:
- hosing with water
- high pressure cleaning

**Post-shutdown checks** are like pre-start checks.

**Materials** may include:
- ilminite
- coal car
- sulphur
- reagents

**Contaminants** are anything other than the ore. Common contaminants may include:
- oil
- fuel
- gases
- organic materials
- moisture

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to conduct roasting operations:

- apply legislative, organisation and site requirements and procedures for conducting roasting operations
- diagnose faults
- handle hazardous goods
- interpret reports
- lift (manual, cranes and loads)
- maintain records
- report defects
- apply safe work practices
- use hand and power tools

### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to conduct roasting operations:

- breakdown procedures
- contaminant identification
- roasting process
- operating parameters and roasting capacities
- cooling systems
- boiler operation
- concentrate blending
- calcine storage
- gas management systems
- emergency procedures
- environmental procedures
- equipment safety requirements
- hazardous goods procedures and consequences of spills and hazardous goods
- identifying repair requirements
- isolation procedures
- metallurgical and technical data (basic)
- OHS procedures
- pumping system
- reagent types
- sampling
- site procedures
- site safety requirements
- types of ores (basic)
- wet and dry working procedures
Evidence Guide

###tаблица:

**Monitoring the roasting process may include the checking of:**
- product composition (e.g. sulphate/sulphide %) blockages and spillages
- feed rates
- moisture levels
- overloads
- pressures
- power draw
- wear and tear
- emission (e.g. sulphides)
- Contaminants, that is, anything other than the ore. Common contaminants may include oil, fuel, gases, organic materials, moisture

**Indicator readings may measure:**
- temperature
- gas pressure
- air flows
- speed (e.g. cooling system pumps)
- unusual noises
- vibrations
- power

**Equipment or plant cleaning methods may include:**
- hammer and bar
- air lance
- shovel and wheel barrow
- vacuum
- hosing with water
- high pressure cleaning

**Roasting process may include:**
- fluid bed roaster
- tantaline roaster
- filtrate roasting

**Feed materials may include:**
- ore concentrate
- calcine
- other feed material

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for conducting calcinations activities</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of calcinations activities</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the calcinations activities in a way that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of calcinations activities that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery
environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the calcinations activities

Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Legislation may include Acts and regulations dealing with:
- mining safety and health
- mine inspection
- OHS
- explosives

### Auxiliary equipment may be anything that is portable and mobile that is not part of the fixed infrastructure and may include:
- conveyors
- compressors
- distribution control systems (DCS)
- feeders
- gantry cranes and attachments and other mobile equipment
- hand and power tools
- hoses

### Pre-start checks may include:
- availability of equipment (e.g. conveyor)
- detection of conditions that are unusual
- personnel availability
- job requirements
- levels
- walk through plant

### Environmental issues may include:
- drainage
- dust (dump)
- emissions
- flora and fauna
- hazardous chemicals
- noise
- recycling
- run-off
### Spills
- waste management and disposal
- water quality

<table>

</tr>
</tbody>
</table>
### Monitoring the calcining process

May include the checking of:

- blockages and spillages
- feed rates
- mineral content
- moisture levels
- in stream analysis (ISA)/on stream analysis (OSA)
- overloads
- pressures
- power draw
- wear and tear
- levels (sodium)
- particle size

### Calcining methods

May include:

- coke bedding
- fluid bed
- rotary kilns

### Equipment and plant cleaning methods

May include:

- hosing with water
- high pressure cleaning

### Post-shutdown checks

Are like pre-start checks.

### Methods to optimise the plant

May include:

- quantity of reagents
- oxygen levels

### Materials

Are wet and may include:

- hydrate (feed)
- filter cake
- gases (natural)
- oil
- air
- coke

### Contaminants

Are anything other than the ore. Common contaminants may include:

- oil
- fuel
- gases
- organic materials
- moisture

### Unit Sector(s)

Beneficiation
Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIPBE302A Conduct bacterial oxidation

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of bacterial oxidation in the metalliferous mining industry. It includes planning and preparing for bacterial oxidation process, starting up equipment in sequence, operating and monitoring sequence, conducting housekeeping activities, and shutting down in sequence and/or isolating equipment. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct bacterial oxidation:

- apply legislative, organisation and site requirements and procedures for conducting bacterial oxidation
- handle hazardous goods
- Identify and manage hazards
- apply lifting techniques (manual, automated)
- maintain records
- monitor operations
- report defects
- apply safe work practices
- use hand and power tools

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct bacterial oxidation:

- bacteria inhibitors
- bacterial oxidation plant (basic) and process
- break down procedures
- contaminants
- depressant identification and activator principles
- emergency procedures
- environmental procedures
- equipment processes, limitations and operating parameters
- equipment safety requirements
- hazardous good procedures and consequences of spills
- identifying repair requirements
- isolation procedures
- metallurgical and technical data
- nutrient types and how to use then
- OHS procedures
- operational procedures and checks
- site procedures
- types of ores and grades (basic)
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate
cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate:
    - working with others to undertake and complete the bacterial oxidation

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
| --- | --- |
| Legislation may include Acts and regulations dealing with: | • mining safety and health  
• mine inspection  
• OHS  
• explosives |
| Auxiliary equipment may be anything that is portable and mobile that is not part of the fixed infrastructure, and may include: | • forklift  
• gantry cranes and attachments  
• hand and power tools  
• hoses for water and air  
• loader and bobcat  
• pump systems |
| Equipment pre-start checks may include: | • availability of equipment  
• detection of conditions that are unusual  
• fluid levels  
• job requirements  
• personnel availability  
• work through plant |
| Environmental issues may include: | • drainage  
• emissions  
• flora and fauna  
• hazardous chemicals  
• noise  
• recycling  
• run-off  
• spills  
• waste management and disposal  
• water quality |
**Plant** may include:

- acid pumping system
- acid storage tank
- agitators and gearboxes
- air ducting and air sparge pipes
- bacterial oxidation / leaching tanks
- conditioning tanks
- cooling water pipelines
- counter current decantation thickeners
- flocculent mixing/storage/pumping system
- lime mixing/storage/pumping system
- limestone ball mill
- limestone storage and pumping system
- neutralisation circuit tanks
- nutrient hold tanks
- nutrient mixing tanks
- nutrient pumping systems
- pumps
- slurry pipelines

**Start-up procedures** may include:

- cameras and monitors
- distribution control system (DCS)
- interlocks
- isolations
- pipes and flanges
- pumping system
- valves
- visual and audio warning devices and lights
- water systems

**Indicator** readings may measure:

- air flows
- concentrations (e.g. dissolved oxygen)
- conductivity
- current
- densities
- heat - temperature
- levels
- mass flow
- pH
- power
- pressure
- reagent flows
- speed
- vibrations
### Bacterial oxidation methods may include:
- high temperature bacterial leaching
- low temperature bacterial leaching

### Monitoring may include the checking of:
- air flows
- air pressure
- bacteria concentration
- blockages and spillages
- cooling water flows
- densities
- dissolved oxygen
- feed rates
- in stream analysis (ISA)
- nutrient levels
- on stream analysis (OSA)
- overloads
- pH
- power draw
- pressures
- reagent flow
- temperatures
- wear and tear

### The methods used to optimise the plant may include adjustment to:
- air flow
- mass flow
- nutrient levels
- pH
- solids densities

### Post-shutdown checks are like pre-start checks.

### Site conditions may include:
- weather conditions
- working at heights

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to conduct filtering processes:

- apply legislative, organisation and site requirements and procedures
- apply lifting techniques (manual, cranes and loads)
- monitor operations
- report defects
- use safe work practices
- use hand and power tools

### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to conduct filtering processes:

- air systems
- contaminant identification
- emergency procedures
- environmental principles
- equipment operating parameters
- equipment safety requirements
- filtering procedures
- hazardous substance procedures and consequences of spills
- identifying repair requirements
- isolation principles
- metallurgical and technical data
- operational procedures and checks
- site procedures
- filtering safety requirements
- types of product (slurry etc)
**Evidence Guide**

RIIPBE304B Conduct heavy media separation

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of heavy media separation in the mining industry. It includes planning and preparing for heavy media separation, starting up equipment in sequence, operating and monitoring equipment, conducting housekeeping activities, and shutting down in sequence and/or isolating equipment. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:

- Metalliferous mining
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1. Plan and prepare for heavy media separation** | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Receive, interpret and clarify shift changeover details  
1.3. Communicate with other personnel  
1.4. Select personal protective equipment appropriate for work activities  
1.5. Select appropriate type of *auxiliary equipment* for work activities  
1.6. Perform equipment *pre-start checks*  
1.7. Identify, address and report potential risks and hazards  
1.8. Identify, address and report *environmental issues*  
1.9. Adhere to emergency procedures |
| **2. Start-up equipment in sequence** | 2.1. Carry out *start-up procedures* and complete start-up checks according to plant configurations and system requirements  
2.2. Confirm *plant* is operational |
| **3. Operate and monitor equipment** | 3.1. *Read* and interpret data from equipment *indicators*  
3.2. Continuously inspect plant  
3.3. Adjust equipment to optimise separation performance and product quality  
3.4. Control feed to plant  
3.5. *Monitor* and adjust *heavy media* levels  
3.6. Monitor and adjust levels of separating baths  
3.7. Monitor the efficiency of the heavy media separation process  
3.8. Carry out operator level maintenance  
3.9. Complete all required documentation  
3.10. Pass on end of shift information to oncoming shift or next shift |
| **4. Conduct housekeeping activities** | 4.1. Clean plant  
4.2. Identify, address and report hazards |
<p>| <strong>5. Shutdown in sequence and/or isolate equipment</strong> | 5.1. Shutdown and/or isolate equipment based on process and safety requirements |</p>
<table>

SkillsDMC
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to conduct heavy media separation:

- apply legislative, organisation and site requirements and procedures
- handle hazardous substances/identify hazards
- use lifting techniques (manual, automated)
- maintain records
- monitor operations
- report defects
- employ safe work practices
- use hand and power tools
- find plant faults

#### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to conduct heavy media separation:

- break down procedures
- contaminants
- emergency procedures
- environmental principles
- equipment operating parameters
- equipment safety requirements
- gravitation separation process (fines and heavy)
- hazardous substance procedures and consequences of spills
- heavy media types
- high pressure hazards
- isolation procedures
- metallurgical and technical data
- operational procedures and checks
- heavy media separation safety requirements
- site procedures
- types of ores and grades density
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</table>
environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate:
    - working with others to undertake and complete the heavy media separation

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisational and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Legislation may include acts and regulations dealing with:
- mining safety and health
- mine inspection
- OHS
- explosives

### Auxiliary equipment may be anything that is portable and mobile that is not part of the fixed infrastructure, and may include:
- gantry cranes and attachments
- hand and power tools
- pump systems

### Pre-start checks may include:
- availability of equipment
- detection of conditions that are unusual
- fluid levels
- job requirements
- personnel availability
- work through plant

### Environmental issues may include:
- drainage
- dust (dump)
- emissions
- flora and fauna
- hazardous chemicals
- noise
- recycling
- run-off
- spills
- waste management and disposal
- water quality

### Start-up procedures may include
- cameras and monitors
the inspection of:
- distribution control system (DCS)
- interlocks
- isolations
- pipes and flanges
- pumping system
- valves
- visual and audio warning devices and lights
- water systems

| **Plant** may include: | • heavy media circuit
|                       | • separating baths
|                       | • cyclones
|                       | • screens (drawing, washing, separating) |

| **Indicator readings** may measure: | • concentrations
|                                   | • densities
|                                   | • levels
|                                   | • pressure flows
|                                   | • viscosity

| **Monitoring** may include: | • air flows
|                            | • blockages and spillages
|                            | • feed rates
|                            | • power
|                            | • pressures
|                            | • temperatures
|                            | • wear and tear
|                            | • pressure oxidation

| **Heavy media** may include: | • magnetite
|                            | • ferrosilicon

| **Post-shutdown** checks are like pre-start checks |

| **The methods used to optimise the plant** may include: | • adjustment to heavy media levels
|                                                            | • pulp density
|                                                            | • stability of slurry
|                                                            | • viscosity

| **Materials** may include: | • heavy media
|                            | • slurry
|                            | • waste
|                            | • gangue minerals

| **Contaminants** are anything other than the slurry and nutrients. Common contaminants may | • oil
|                                                                                         | • plastic
|                                                                                         | • wood fibre

|                              | detection of conditions that are unusual |
|                              | personnel availability       |
|                              | walk through plant          |
|                              | isolation and/or lockout checks |
|                              | job requirements           |

| Environmental issues may include: | drainage |
|                                    | dust     |
|                                    | emissions |
|                                    | flora and fauna |
|                                    | hazardous chemicals |
|                                    | noise     |
|                                    | recycling |
|                                    | run-off   |
|                                    | spills    |
|                                    | waste management and disposal |
|                                    | water quality |

| Start-up procedure may include: | cameras and monitors |
|                                 | distribution systems  |
|                                 | drive belts           |
|                                 | screens               |
|                                 | fluid levels (grease, oil) |
- hoppers and launders
- interlocks
- isolations
- pipes and flanges
- conveyor systems
- elevators and screw feeders
- valves
- visual and audio warning devices

**Indicator readings** may measure:
- current
- grade
- heat
- unusual noises
- levels
- radiation

**Separation methods** may include:
- high tension
- sizing

**Separation quality targets** may include:
- grades
- consumption targets
- percentage of recovery

**Monitoring** may include:
- air flows
- blockages and spillages
- current draw
- feed rates
- power
- pressures
- wear and tear
- temperatures
- particle size
- throughput

**Equipment and plant cleaning methods** may include:
- shovels
- compressed air

**Equipment** may include:
- gantry cranes and attachments
- hand and power tools
- hoses (air)

**Plant** may include:
- compressors and blowers
- vibrating screens
- electrostatic rolls and plates
- dry stream analyser
- weightometers
- dryers and burners
### Methods used to optimise the plant

- adjust mineral cuts
- adjust feed input rate
- adjust temperatures
- adjust high tension settings

### Materials

- gas
- oil

### Contaminants

- wood fibre
- gravel
- silica

### Site conditions

- day and night
- weather conditions
- working at heights

RIIPBE306A Conduct leaching process

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of leaching processes in the metalliferous mining industry. It includes planning and preparing for leaching circuit operations, starting up equipment in sequence, operating and monitoring equipment, conducting housekeeping activities, and shutting down in sequence and/or isolating equipment. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
Elements and Performance Criteria

| 1. Plan and prepare for leaching circuit operations | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Receive, interpret and clarify shift changeover details  
1.3. Communicate with other personnel using approved communication methods  
1.4. Select personal protective equipment appropriate for work activities  
1.5. Select appropriate type of auxiliary equipment for work activities  
1.6. Perform equipment pre-start checks  
1.7. Identify, address and report potential risks and hazards  
1.8. Identify, address and report environmental issues  
1.9. Adhere to emergency procedures  
1.10. Use approved dust suppression and extraction methods  
1.11. Ensure area is well ventilated |
| 2. Start-up equipment in sequence | 2.1. Carry out start-up procedures and completes start-up checks according to plant configurations and system requirements  
2.2. Confirm plant is operational |
| 3. Operate and monitor equipment | 3.1. Read and interpret data from equipment indicators to determine leaching efficiency  
3.2. Continuously inspect and monitor operations/plant and containment areas  
3.3. Adjust equipment to optimise leaching  
3.4. Add reagents to achieve operating parameters  
3.5. Adjust flows to meet down stream requirements  
3.6. Carry out operator level maintenance to maintain condition of equipment  
3.7. Complete all required documentation  
3.8. Pass on end of shift information to oncoming shift |

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct leaching processes:

- apply legislative, organisation and site requirements and procedures for conducting leaching processes
- employ safe work practices
- fault finding
- handle hazardous substances
- identify hazards
- interpret reports
- maintain records
- monitor operations/report defects
- use hand and power tools
- use lifting techniques (manual, cranes and loads)

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct leaching processes:

- contaminant identification
- emergency procedures
- environmental principles
- equipment operating parameters
- equipment safety requirements
- hazardous substances procedures and consequences of spills
- isolation procedures
- leaching principles
- metallurgical and technical data
- operational procedures and checks
- pumping system and flow charts
- reagent types
- sampling
- leaching safety requirements
- types of ores
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

cultural diversity.

- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
|                      | - written and/or oral assessment of the candidate's required knowledge
|                      | - observed, documented and/or first hand testimonial evidence of the candidate's:
|                      |   - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
|                      |   - consistent achievement of required outcomes
|                      |   - first hand testimonial evidence of the candidate's:
|                      |     - working with others to undertake and complete the leaching process |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisational and site requirements and procedures |
| | manufacturer’s guidelines and specifications |
| | Australian standards |
| | Employment and workplace relations legislation |
| | Equal Employment Opportunity and Disability Discrimination legislation |
| Legislation may include Acts and regulations dealing with: | mining safety and health |
| | mine inspection |
| | OHS |
| | explosives |
| Auxiliary equipment may be anything that is portable and mobile that is not part of the fixed infrastructure, and may include: | compressors |
| | distribution control systems (DCS) |
| | feeders |
| | gantry cranes and attachments and other mobile equipment |
| | hand and power tools |
| | hoses (water and air) |
| Pre-start checks may include: | availability of equipment (e.g. conveyor) |
| | detection of conditions that are unusual |
| | fluid levels |
| | job requirements |
| | personnel availability |
| | walk through plant |
| Environmental issues may include: | drainage |
| | dust (dump) |
| | emissions |
| | flora and fauna |
| | hazardous chemicals |
| | noise |
| | recycling |
| | run-off |
| | spills |
### Start-up procedures may include:
- agitators
- cameras and monitors
- distribution control system
- drive belts
- hydraulic system
- interlocks
- launders
- pipes and flanges
- pumping system
- screen inspections
- scuttling pumps
- suppression systems
- valves
- visual and audio warning devices and lights

### Plant may include:
- agitators
- airlines
- conveyors
- filters
- grinding mills
- heat exchangers
- lines
- overhead sprinklers
- piping
- pumps
- reactors
- streamlines
- sumps/tanks
- thickeners and clarifiers

### The methods used to optimise the plant may include:
- oxygen levels
- quantity of reagents

### Indicator readings may include:
- air flows
- current (e.g. agitators)
- density
- flow
- levels
- power
- pressure
- restrictions
- speed (e.g. pumps)
### Leaching methods may include:
- acid
- alkaline
- bacterial leach
- dump (run of mine ore)
- heap (processed ore for leaching)
- *in situ*
- pressure

### Monitoring may include the checking of:
- blockages and spillages
- carbon levels and movement
- feed rates
- gas emission (e.g. cyanide)
- in stream analysis (ISA)
- mineral content
- on stream analysis (OSA)
- overloads
- particle size indicators (PSI)
- power draw
- pressures
- titrations
- wear and tear

### Equipment and plant cleaning methods may include:
- high pressure cleaning
- hosing with water

### Wet materials may include:
- agglomerated
- crushed
- slurry

### Dry materials may include:
- calcine (dry prior to adding)
- liquors (e.g. spent from electrolysis)

### Contaminants are anything other than the ore. Common contaminants may include:
- chemicals
- containers and packaging
- fuels
- metal
- oils
- plastic
- timber

### Post-shutdown checks are like pre-start checks.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct pressure oxidation:

- apply legislative, organisation and site requirements and procedures for conducting pressure oxidation
- handle hazardous goods
- identify and manage hazards
- apply lifting techniques (manual, automated)
- maintain records
- report defects
- apply safe work practices
- use hand and power tools

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct pressure oxidation:

- break-down procedures
- contaminants
- depressant identification and activator principles
- emergency procedures
- environmental procedures
- equipment processes, limitations and operating parameters
- equipment safety requirements
- hazardous good procedures and consequences of spills
- high pressures dangers and characteristics
- identifying repair requirements
- isolation procedures
- metallurgical and technical data
- OHS procedures
- operational procedures and checks
- pressure oxidation plant (basic) and process
- site procedures
REQUIRED SKILLS AND KNOWLEDGE

- types of ores and grades (basic)
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for conduct pressure oxidation
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of pressure oxidation
- working with others to undertake and complete the pressure oxidation in a way that that meets all of the required outcomes
- consistent timely completion of pressure oxidation that safely, effectively and efficiently meets the required outcomes

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the pressure oxidation

- feeders
- froth beams and sprays
- gantry cranes
- hoses (water and air)
- lubrication
- racks
- radiation gauges
- spray systems

**Equipment and plant cleaning methods** may include:
- (plant cleaning normally occurs during shutdown)
- degreasing
- forced air
- hosing with water
- high pressure cleaning
- suction

**Post-shutdown checks** are like pre-start checks
Materials may include:
- reagents
- slurry

Reagents may include:
- depressant (e.g. flocculent)

Contaminants are anything other than the ore. Common contaminants may include:
- plastic
- oil

Co-requisite units
Not applicable.
RIIPBE309B Conduct wet gravity separation

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of wet gravity separation in the mining industry. It includes planning and preparing for wet gravity separation, starting up equipment in sequence, operating and monitoring equipment, conducting housekeeping activities, and shutting down in sequence and/or isolating equipment. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:

- Metalliferous mining
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to conduct wet gravity separation:

- apply legislative, organisation and site requirements and procedures
- handle hazardous goods
- identify and address hazards
- interpret reports
- apply lifting techniques (manual, cranes and loads)
- report defects
- apply safe work practices
- use hand and power tools

#### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to conduct wet gravity separation:

- breakdown procedures
- contaminants
- emergency procedures
- environmental procedures
- equipment processes, limitations and operating parameters
- equipment safety requirements
- separation plant (basic)
- hazardous goods procedures and consequences of spills
- repair requirements identification
- isolation procedures
- metallurgical and technical data
- OHS procedures
- operational procedures and checks
- site procedures
- site safety requirements
- types of ores and grades (basic)
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for conducting wet gravity separation</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of wet gravity separation</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the wet gravity separation in a way that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of wet gravity separation that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery
<table>
<thead>
<tr>
<th>Environment to sensitively accommodate cultural diversity.</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Aboriginal people and other people from a non English speaking background may have second language issues.</td>
</tr>
<tr>
<td>• Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.</td>
</tr>
</tbody>
</table>

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the wet gravity separation

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

- legislative, organisational and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Legislation

- mining safety and health
- mine inspection
- OHS
- explosives
- environment

### Equipment

- gantry cranes and attachments
- hand and power tools
- hoses (water and air)
- pumps systems

### Pre-start checks

- availability of equipment
- detection of conditions that are unusual
- fluid levels
- isolation and/or lockout checks
- job requirements
- personnel availability
- walk through plant

### Environmental issues

- drainage
- dust
- emissions
- flora and fauna
- hazardous chemicals
- noise
- recycling
- run-off
- spills
- waste management and disposal
| **Plant** may include: | •attritioners  
• compressors and blowers  
• cyclones  
• elutriator  
• pumps  
• rotating screens/spirals  
• wet shaker tables |
|---|---|
| **Methods used to optimise the plant** may include: | • adjust mineral cuts (table and spirals)  
• adjust feed input rate |
| **Start-up procedure** may include: | • cameras and monitors  
• distribution systems  
• drive belts  
• fluid levels (grease, oil, water)  
• hoppers and launders  
• interlocks  
• isolations  
• pipes and flanges  
• pumping systems  
• screens  
• valves  
• visual and audio warning devices  
• water systems (sprayers and columns) |
| **Indicator readings** may measure: | • current  
• density  
• levels  
• pressure flows  
• unusual noises |
| **Separation methods** may include: | • high tension |
| **Separation quality targets** may include: | • consumption targets  
• density  
• grades  
• percentage of recovery  
• pH level |
| **Monitoring** may include: | • air flows  
• blockages and spillages  
• current draw  
• feed rates  
• power  
• pressures |

   5.2. Perform *post shut down* and/or isolation checks
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct flotation processes:

- apply legislative, organisation and site requirements and procedures for conducting flotation processes
- handle hazardous substances
- identify hazards
- use lifting techniques (manual, cranes and loads)
- maintain records
- monitor operations
- report defects
- employ safe work practices
- use hand and power tools
- find plant operating faults

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct flotation processes:

- contaminants
- emergency procedures
- environmental principles
- equipment and operating parameters
- equipment safety requirements
- flotation plant
- hazardous substances and consequences of spills
- isolation procedures
- metallurgical and technical data
- operational procedures and checks
- reagent types
- site procedures/flotation safety requirements
- types of ores and grades

| Start-up procedures may include | cameras and monitors |
the inspection of:

- distribution control system (DCS)
- drive belts
- filters
- fluid levels (grease, oil, water)
- hoppers and launders
- interlocks
- isolations
- pipes and flanges
- pumping system
- valves
- visual and audio warning devices and lights
- water systems (e.g. sprays and columns)

**Plant** may include:

- compressors and blowers
- conditioning tanks
- flotation cells and columns
- reagent dosing

**Indicator readings** may measure:

- concentrations
- current
- densities
- grade
- heat
- levels
- pressure flows
- unusual noises

**Monitoring** may include:

- air flows
- blockages and spillages
- check current draw
- feed rates
- in stream analysis (ISA)
- on stream analysis (OSA)
- particle size indicators (PSI)
- power
- pressures
- pulp density
- pulp levels
- temperatures
- wear and tear

**Floatation methods** may include:

- bulk flotation
- controlled potential sulphide (CPS)
- pre-float

**Floatation quality targets** may:

- concentrate grade
include:

- consumption targets
- density
- Eh (electro chemical potential)
- percentage of recovery
- pH level

**Equipment and plant cleaning methods** may include:

- hosing with water

**Post-shutdown** checks are like pre-start checks.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to conduct magnetic separation:

- apply legislative, organisation and site requirements and procedures
- handle hazardous substances
- identify hazards
- interpret reports
- use lifting techniques (manual, cranes and loads)
- monitor operation
- report defects
- employ safe work practices
- use hand and power tools
- find operational faults

### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to conduct magnetic separation:

- contaminants
- emergency procedures
- environmental principles
- equipment operating parameters
- equipment safety requirements
- separation plant
- hazardous substance procedures and consequences of spills
- identifying repair requirements
- isolation procedures
- metallurgical and technical data
- operational procedures and checks
- magnetic separation safety requirements
- types of ores and grades
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</tbody>
</table>
• Aboriginal people and other people from a non English speaking background may have second language issues.
• Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the magnetic separation

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RIIPBP202A Conduct air cleaning activities

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of air cleaning activities in the metalliferous mining industry. It includes planning and preparing for air cleaning operations, starting up equipment in sequence, operating and monitoring equipment, conducting housekeeping activities, and shutting down in sequence and/or isolating equipment. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an assistant role at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for air cleaning operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Plan and prepare work  
1.3. Receive, interpret and clarify shift changeover details  
1.4. Communicate with other personnel using approved communication methods  
1.5. Select personal protective equipment appropriate for work activities  
1.6. Select appropriate type of *auxiliary equipment* for work activities  
1.7. Perform equipment *pre-start* checks to ensure equipment is ready for operation  
1.8. Identify, address and report potential risks and hazards  
1.9. Identify, address and report *environmental issues*  
1.10. Adhere to emergency procedures to ensure safety of personnel and plant  
1.11. Use approved dust suppression and extraction methods  
1.12. Ensure area is well ventilated before entry |
| 2. Start-up equipment in sequence | 2.1. Carry out *start-up procedures* and complete start-up checks according to plant configurations and system requirements  
2.2. Confirm plant is operational |
3. **Operate and monitor equipment**

3.1. *Read* and interpret data from equipment *indicators* to determine *air cleaning* efficiency

3.2. Continuously inspect operations/plant and catchment areas to identify *air cleaning* process defects and potential problems

3.3. Adjust equipment to approved *operating parameters* to optimise and maintain efficient air cleaning and to meet product quality targets

3.4. Add any required reagents to approved *operating parameters*

3.5. Carry out minor maintenance to maintain condition of equipment

3.6. Complete all required documentation clearly, concisely and on time

3.7. Pass on end of shift information to oncoming shift

4. **Conduct housekeeping activities**

4.1. *Clean plant* to maintain condition of all equipment to ensure safe and efficient operations

4.2. Manage and report hazards to maintain a safe working environment

5. **Shutdown in sequence and/or isolate equipment**

5.1. Shutdown or isolate equipment based on process and safety requirements

5.2. Perform post *shutdown* or isolation checks
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct air cleaning activities:

- apply legislative, organisation and site requirements and procedures for conducting air cleaning activities
- diagnose faults
- identify and address hazards
- handle hazardous goods
- interpret reports
- lift (manual, cranes and loads)
- maintain records
- report defects
- apply safe work practices
- use hand and power tools

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct air cleaning activities:

- breakdown procedures
- contaminant identification
- air cleaning principles
- air cleaning systems
- emergency procedures
- environmental procedures
- equipment limitations and operating parameters
- equipment safety requirements
- hazardous goods procedures and consequences of spills and hazardous goods
- identifying repair requirements
- isolation procedures
- metallurgical and technical data (basic)
- OHS procedures
- operational procedures and checks
- pumping system and flow charts (pipeline and sprinkler systems)
- sampling
- site procedures
- site safety requirements
- wet and dry working procedures
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for conducting air cleaning activities
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of air cleaning activities
- working with others to undertake and complete the conduction of air cleaning activities that meets all of the required outcomes
- consistent timely completion of air cleaning activities that safely, effectively and efficiently meets the required outcomes

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to process lime products:

- apply legislative, organisation and site requirements and procedures for processing lime products
- handle dangerous materials
- read and interpret instrumentation
- interpret instructions and reports
- diagnose faults
- lift (manual, cranes and loads)
- maintain records
- apply safe work practices
- use hand and power tools
- work in confined spaces

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to process lime products:

- properties and composition of limestone
- breakdown procedures
- storage methods and capacities
- safety considerations with hot limestone
- dust extraction systems and plant
- feed systems, plant and equipment
- kiln/calcining processes, plant and equipment
- slaking processes, plant and equipment
- equipment limitations and operating parameters
- equipment safety requirements
- emergency procedures
- environmental procedures
- hazardous goods procedures and consequences of spills and hazardous goods
- identifying repair requirements
- isolation procedures
- technical data (basic)
- OHS procedures
- operational procedures and checks
- quality monitoring and control
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Environment to sensitively accommodate cultural diversity.  
|   - Aboriginal people and other people from a non English speaking background may have second language issues.  
|   - Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required. |

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge  
- observed, documented and/or first hand testimonial evidence of the candidate's:  
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes  
  - consistent achievement of required outcomes  
- first hand testimonial evidence of the candidate's:  
  - working with others to undertake and complete the processing of lime products  

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:
- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Shift changeover details** may include:
- shutdowns
- clearances/permits
- operating instructions for the shift
- safety issues
- environmental issues

**Routine safety checks** may include:
- trip hazards
- loss control inspections
- lighting
- signage
- emergency safety showers/lights
- asbestos

**Potential risks and hazards** may include:
- heat
- noise
- burnt lime
- conveyors
- steam
- stock pile
- fuel
- mobile equipment

**Pre-start checks** may include:
- detection of conditions that are unusual
- personnel availability
- job requirements for the shift
- walk through plant
- interlocks
- alarms
### Equipment
- vibratory feeders
- conveyors
- grizzlies
- holding bin
- skip hoist
- chutes and flaps
- kiln
- crusher
- bucket elevator
- silos
- bag house (de-dust and dust collection)
- rake classifier
- tanks, pumps, valves and scale traps

### Environmental issues
- drainage
- dust (dump)
- emissions
- flora and fauna
- hazardous chemicals
- noise
- recycling
- run-off
- spills
- waste management and disposal
- water quality

### Feed systems
- conveyors
- tramp metal magnet
- undersize grizzly
- rill tower and stockpile
- distributed Control Systems (DCS)

### Feeder plant and equipment
- storage/holding bin
- weigh hopper
- skip hoist
- service hopper and control flaps
- DCS

### Alarms and indicators
- flow
- current (e.g. agitators)
- density
- levels
- restrictions
- air flows
- pressure
- speed (e.g. pumps)
- unusual noises
- vibrations
- power
- temperature
- radiation levels

| Safety procedures may include: | • feeder plant:
| | • electrical checks/inspections on conveyors and all associated equipment
| | • mechanical checks/inspections on conveyors and all associated equipment
| | • checks/inspections control systems
| | • manual handling
| | • reporting incident/accident/near misses
| | • commission/de-commission the system
| | • emergency response
| | • Hot kilns:
| | • electrical checks/inspections on kilns and all associated equipment
| | • mechanical checks/inspections on kilns and all associated equipment
| | • control system checks/inspections
| | • commission/de-commission the system
| | • emergency response
| | • reporting incidents/accidents near misses
| | • Burnt limestone:
| | • personal protective equipment.
| | • housekeeping
| | • routine checks/inspections

| Kiln processing systems and media may include: | • combustion air
| | • cooling air
| | • hydraulic systems
| | • cooling oil
| | • fuel
| | • DCS and other control systems as may be used in refineries

| Product quality may be compromised by: | • over burnt limestone
| | • under burnt limestone
| | • milk of lime outside of parameters
| | • mechanical equipment breakdown
| | • electrical equipment breakdown
| | • control system fault
Adjustment or replacement of burner components may include:

- burner tips
- burner lances
- steam purge
- fuel supply
- filters
- gauges (e.g. flow, pressure)

Dust extraction plant may include:

- de-dust system
- bag house
- filter bags
- pulse air
- electronic and mechanical controls

RIIPBP302A Control operations in acid plant

Modification History
Not applicable.

Unit Descriptor
This unit covers the controlling of acid plant operations in the metalliferous mining industry. It includes assuming control of acid plant operations from a previous shift, managing acid plant operations, and passing control of the acid plant to the next shift. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a technician role at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Assume control of acid plant operations from previous shift | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Communicate with other personnel by approved methods  
1.3. Receive, interpret and clarify shift changeover information  
1.4. Ensure area is well ventilated before entry into work area  
1.5. Select personal protective equipment appropriate for work activities  
1.6. Perform *pre-start checks* to ensure correct equipment operation  
1.7. Identify, address and report potential risks and hazards  
1.8. Identify, address and report *environmental issues* |
| 2. Manage acid plant operations | 2.1. *Monitor* performance of acid *plant* components regularly  
2.2. Regulate flow of substrate between process components to maximise production  
2.3. Regulate heat exchangers in accordance with operational requirements  
2.4. Handle acid *plant* products and reagents safely at all times  
2.5. *Monitor* and adjust volume of gas through acid *plant*  
2.6. Regulate gas impurity removal systems  
2.7. Regulate by-product disposal in accordance with *plant* operating requirements  
2.8. *Monitor* available acid *plant* storage capacity |
| 3. Pass control of acid plant to next shift | 3.1. Complete all required documentation for shift handover  
3.2. Pass on all shift information to oncoming shift  
3.3. Review *plant* performance with oncoming shift |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to control acid plant operations:

- apply legislative, organisation and site requirements and procedures
- handle dangerous materials
- read and interpret instrumentation/interpret reports
- diagnose faults
- lift (manual, cranes and loads)
- maintain records
- apply safe work practices
- use hand and power tools

**Required knowledge**

Specific knowledge is required to achieve the performance criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to control acid plant operations:

- breakdown procedures
- contaminant identification
- sources of acid plant materials
- gas purification process
- drying process
- conversion and absorption
- storage methods and capacities
- emergency procedures
- environmental procedures
- equipment limitations and operating parameters
- equipment safety requirements
- hazardous goods procedures and consequences of spills and hazardous goods
- identifying repair requirements
- isolation procedures
- technical data (basic)
- OHS procedures
- operational procedures and checks
- pumping system
- reagent types
- sampling
- site procedures/site safety requirements
- types of ores (basic)
- wet and dry working procedures
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for controlling acid plant operations</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of acid plant operations control</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the control of acid plant operations that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of acid plant operations control that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
<table>
<thead>
<tr>
<th>Method of assessment</th>
<th>Guidance information for assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:</td>
<td>Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.</td>
</tr>
<tr>
<td>• written and/or oral assessment of the candidate's required knowledge</td>
<td></td>
</tr>
<tr>
<td>• observed, documented and/or first hand testimonial evidence of the candidate's:</td>
<td></td>
</tr>
<tr>
<td>• implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes</td>
<td></td>
</tr>
<tr>
<td>• consistent achievement of required outcomes</td>
<td></td>
</tr>
<tr>
<td>• first hand testimonial evidence of the candidate's:</td>
<td></td>
</tr>
<tr>
<td>• working with others to undertake and complete the control of acid plant operations</td>
<td></td>
</tr>
</tbody>
</table>
### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:

- legislative, organisational and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Legislation** may include acts and regulations dealing with:

- mining safety and health
- mine inspection
- OHS
- explosives
- environment

**Pre-start checks** may include:

- detection of conditions that are unusual
- personnel availability
- job requirements
- walk through plant

**Environmental issues** may include:

- drainage
- dust (dump)
- emissions
- flora and fauna
- hazardous chemicals
- noise
- recycling
- run-off/spills
- waste management and disposal
- water quality

**Monitoring the acid plant process** may include:

- gas temperatures
- blockages and spillages
- feed rates
- calcine content
- mercury levels/moisture levels
- on stream analysis (OSA)
- overloads/pressures
<table>

RIIPEO201B Conduct conveyor operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of conveyor operations in the coal and metalliferous mining industries. It includes: planning and preparing for conveyor operations, operating conveyors, and carrying out operator maintenance.

Application of the Unit
This unit applies to the movement of material via a conveyor system in the extractive process and is appropriate for those working in operational roles, at worksites within:

- Coal mining
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for conveyor operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the conduct of conveyor operations  
1.2. Obtain, interpret and clarify *briefings or handover details* for the allocated task  
1.3. Plan job to optimise production requirements  
1.4. Perform conveyor *pre-operational checks* prior to conveyor operation  
1.5. Resolve coordination requirements with others at the site prior to commencing and during work activities  
1.6. Identify, address and report *environmental issues and ground conditions*  
1.7. Identify, address and report *potential hazards and risks* |
| 2. Operate conveyor | 2.1. Adhere to emergency procedures to ensure safety of personnel, plant and equipment  
2.2. Activate audio and visual safety *indicators* before conveying operation commences  
2.3. Coordinate activities with others at site prior to the commencement of and during task activities  
2.4. Ensure safe operation of equipment and maintain site safety at all times  
2.5. *Monitor conveyor* performance utilising appropriate *indicators* to aid efficient operation  
2.6. Assess weight and dimension of materials to ensure conveyor is not overloaded nor exceeding *capacity of conveyor* in compliance with specifications  
2.7. Monitor conveying process to ensure that spillage is minimised  
2.8. Remove or manage *contaminants* upon identification  
2.9. Complete work according to agreed work plan and outcomes  
2.10. *Shutdown* conveyor in accordance with procedures and *safety requirements* |
| 3. Carry out operator maintenance | 3.1. Isolate conveyor before conducting minor maintenance  
3.2. *Clean conveyor* in accordance with standard operator procedures and safety requirements  
3.3. Inspect equipment and report faults and make equipment available for routine operational servicing  
3.4. Carry out minor maintenance and make minor adjustments to equipment  
3.5. *Inspect, test* and report conveyor after maintenance and/or *conveyor shift* and prior to return to service  
3.6. Clear worksite of tools, debris and defective components and restore to site and safety requirements  
3.7. Carry out reporting of defects |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct conveyor operations:

- apply legislative, organisation and site requirements and procedures
- interpret and apply legislative requirements and procedures
- interpret and apply site requirements and procedures
- interpret and apply manufacturer's manuals, requirements and procedures
- interpret and apply work requirements
- apply worksite hazards identification and response procedures
- organise work tasks
- apply maintenance and housekeeping requirements and procedures
- apply conveyor equipment operation and maintenance requirements and procedures
- apply diagnostic techniques
- apply hazardous substances handling procedures
- use communications equipment
- apply records maintenance requirements
- apply report preparation requirements
- work in a team

#### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to conduct conveyor operations:

- Legislative, manufacturer's and site requirements and procedures
- worksite coordination requirements
- site and equipment safety requirements and procedures
- site conveyor systems and related equipment configurations
- site conveyor systems equipment characteristics, technical capabilities and limitations
- conveyor operational procedures and checks
- night and day working conditions
- hazard identification and risk assessment and response procedures
- site environmental and ground condition requirements and constraints related to site conveyor systems
- production targets, optimum loading condition of belts
- materials transported and their characteristics
• minor maintenance requirements
Evidence Guide

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Briefings or handover details may include:
- status of system/permits
- machine defects/faults
- production and dogging plan
- work group details
- potential hazards
- maintenance plan

Pre-operational checks are those checks specified by the manufacturer prior to operating the item of equipment and may include:
- computer systems
- conveyor belt and components
- display instrumentation and gauges (indicators, gauges, laser levels)
- greasing components
- visual and audio warning devices and lights
- emergency stop systems

Environmental issues and ground conditions may include:
- culturally-sensitive sites and artefacts
- drainage
- dust
- emissions
- flora and fauna
- hazardous chemicals
- heritage legislation
- noise
- runoff
- spills
- water quality
- fire holes
**RIPEO201B Conduct conveyor operations**

| Potential hazards and risks may include: | • cracking  
• aquifers  
• power lines  
• overhead service lines  
• obstructions  
• structures  
• other equipment, vehicles, people  
• dangerous material  
• underground services  
• water  
• adjoining walls  
• abandoned equipment  
• adverse weather conditions  
• chemicals  
• contaminants  
• equipment  
• unsafe ground  
• unstable faces  
• overhanging rock |
|---|---|
| Indicators may include: | • computer indicators  
• conveyor indicators  
• optimising the system, including belt tracking and loading/transfer of material at transfer stations  
• ensuring all personnel are authorised and correctly attired  
• investigating, rectifying and/or reporting faults/defects  
• applying manufacturer manual and site standard operating procedures |
| Monitor conveyor may include: | • duration of operations  
• efficient and safe operating speed  
• operating limitations  
• type of activities performed  
• weight and/or load limitations  
• weather conditions |
| Capacity of conveyor may be affected by: | • animal carcases (sheep, cows, kangaroos)  
• cigarette buts  
• consumables  
• ear plugs  
• explosives  
• metal basket teeth |
| Contaminants may include: | --- |
- metal or steel rods
- old fencing
- old piping
- plastic
- timber
- rock bolts
- vent bags
- rubber

**Shutdown** must include:
- rectifying and/or reporting all faults/defects, conditions and outstanding faults
- restoring conveyor to condition for next start-up
- completing all logs and reporting requirements

**Safety requirements** and procedures may include:
- following access and permit procedures
- adjust for safety requirements as specified in Australian standards for conveyors
- procedures for clearing blocked chutes and excessive spills
- procedures for moving parts and pot machinery
- proving the equipment function and correct lamp is activated
- activating all safety devices
- testing lamp indicators

**Clean conveyor** may include:
- correct selection, use and storage of equipment
- conveyor being free from spillage and obstructions
- walkways clear and clean
- water from monitor and excess water clear of electrical equipment
- mobile plant organised for large spills

**Inspect and test** may include:
- conveyor conditions and wear
- excessive build up of material
- belts
- sensors and indicators
- idlers and pulleys
- frames
- motors and gear boxes
- fish plates and sleepers
- spill curtains

**Conveyor shifting** includes:
- removal of belt tension
- clean head and tail sections
| • issue permits  
| • anchor posts  
| • test runs  
| • position hopper |

| **1. Plan and prepare for operations** | 1.1. Access, interpret and apply *compliance documentation* relevant to the providing of deck support for conveyor-car high wall mining operation  
1.2. Obtain, interpret and clarify/confirm *work requirements* before proceeding, to provide deck support for *conveyor-car high wall mining* operation  
1.3. Access, interpret and apply *geological and survey data* required to complete the allocated work  
1.4. Carry out pre-start procedures  
1.5. Access and apply *safety information and procedures* throughout the work  
1.6. Recognise and *respond to emergency* and/or *hazardous conditions* throughout the work sequences |
| **2. Load and unload cars** | 2.1. *Coordinate* activities related to the loading and unloading of cars with others at the site prior to commencement of, and during, the work activity  
2.2. Carry out the *staging and positioning* of cars correctly in accordance with manufacturer instructions and site procedures/plans  
2.3. Carry out *cable connections* correctly |
| **3. Operate cars** | 3.1. Coordinate activities related to the operation of cars with others at the site prior to commencement of, and during, the work activity  
3.2. Carry out start-up, sequencing and shutdown procedures  
3.3. Remove surface dust from cars in accordance with site procedures and facilities.  
3.4. Pin and unpin cars in accordance with mining procedures and plans  
3.5. Complete work in accordance with the agreed plan and outcomes and within the operating capacities of the allocated equipment |
| 4. Carry out operator maintenance | 4.1. Carry out equipment inspections and fault finding  
4.2. Carry out routine operational servicing, lubrication and housekeeping tasks  
4.3. Carry out minor maintenance to manufacturer instructions and site requirements  
4.4. Provide operator support during preparation for, and conduct of, major maintenance tasks  
4.5. Process records |
**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to provide deck support for conveyor-car high wall mining operation:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- access, interpret and apply technical information
- apply hand-eye coordination
- work wearing noise protection equipment
- apply diagnostic techniques
- use hand tools
- apply equipment records maintenance requirements
- apply procedures for the dispose of environmentally sensitive fluids and materials
- apply chemical and fuel safety measures

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to provide deck support for conveyor-car high wall mining operation:

- site and equipment safety procedures
- site mining systems and procedures
- conveyor-car equipment characteristics, technical capabilities and limitations
- conveyor-car maintenance systems and procedures
- site geological and survey data
- mine gases and their properties / impacts
- deck based gas monitoring systems, processes and responses
- cable management procedures
- emergency retraction procedures
- emergency evacuation and fire procedures
- site environmental requirements and constraints related to conveyor-car high wall mining operations
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete deck support for conveyor-car high wall mining operation

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:
- legislative, organisation and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Work requirements** may be in the form of:
- shift briefings
- handover details, and/or
- work orders

**Conveyor-car high wall mining** system deck activities may include launch vehicle and conveyor-cars powered by:
- electric (over hydraulic) systems
- water supply
- IGG
- communications
- gas monitoring devices

**Work requirements** may include:
- equipment / plant identification / allocation
- nature and scope of the work
- working conditions
- achievement targets
- site lighting arrangements
- defects on machine
- hazards and potential hazards

**Geological and survey data** may include:
- go / no-go zones
- high-wall stability
- gas conditions
- other operational and safety related issues

**Safety information and procedures** may be contained in:
- legislation and regulations
- relevant Australian standards
- management plans
- manager’s rules
- mining plans
- OHS policy
| Emergency response may include: | • blast door operations  
• stand-off ramp operations  
• re-action cylinder operations  
• emergency retraction  
• evacuation  
• fire procedures |
| Hazardous conditions may include: | • wet weather  
• gas  
• fire  
• explosions  
• highwall collapse  
• falling material |
| Coordination with others may include: | • the functions of the system operator  
• the loader driver |
| Staging and positioning may include: | • method of staging  
• angle of launch  
• impact of weather  
• staging devices  
• lanyard systems |
| Cable connection procedures are for both electrical and gas monitoring cables and cover: | • moisture  
• water  
• damage  
• dirt  
• coal  
• grease |

**Unit Sector(s)**
Plant and Equipment Operation

**Competency field**
Refer to Unit Sector(s).

**Co-requisite units**
Not applicable.
RIIPEO203B Conduct stacker operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of stacker operations in the metalliferous and coal mining industries. It includes planning and preparing for stacker operations, operating the stacker, and carrying out operator maintenance.

Application of the Unit
This unit is appropriate for those working in operational roles, at worksites within:
- Metalliferous mining
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for stacker operations | 1.1. Access, interpret and apply **compliance documentation** relevant to the conducting of stacker operations  
1.2. Obtain, interpret and clarify/confirm **work requirements** and **shift details** before proceeding  
1.3. Access, interpret and apply **information on stockpile product, formation and conditions** required to complete the allocated work  
1.4. Carry out worksite inspection and rectify or report **hazards** or other notifiable conditions  
1.5. Access and apply **safety information and procedures** throughout the work |
| 2. Operate stacker | 2.1. **Coordinate** activities with others at the site prior to commencement of, and during, the work activity  
2.2. Carry out pre-start, start-up, park-up and shutdown procedures  
2.3. Operate controls to stack materials  
2.4. Act on monitoring systems and alarms or report  
2.5. Recognise and respond to **hazardous and emergency situations**  
2.6. Complete work in accordance with the agreed plan and outcomes and within the operating capacities of the allocated equipment  
2.7. Carry out **reporting** and complete and process documents |
| 3. Carry out operator maintenance | 3.1. Carry out plant and equipment inspections and faultfinding  
3.2. Carry out routine operational servicing, lubrication and housekeeping tasks  
3.3. Carry out minor maintenance to manufacturer's instructions and site requirements  
3.4. Provide operator support during preparation for, and conduct of, major maintenance tasks |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct stacker operations:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply technical information
- apply diagnostic techniques
- apply equipment hose down procedures
- apply procedures for preparation and communication of reports
- apply procedures for complying with environmental requirements
- apply procedures for disposal of environmentally sensitive fluids and materials
- apply procedures for working at heights

**Required knowledge**

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to conduct stacker operations:

- site and equipment safety requirements and procedures
- stockpile management processes
- stacker characteristics, technical capabilities and limitations
- stacker maintenance procedures/stacker operating procedures
- ore / coal type and quality
- blending specifications and techniques
- environmental requirements and constraints related to stacker operations
- recording and reporting processes
- impact of stacker operations on customer quality requirements

<table>
<thead>

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for conducting stacker operations
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of stacker operations
- working with others to undertake and complete stacker operations that meets all of the required outcomes
- consistent timely completion of stacker operations that safely, effectively and efficiently meets the required outcomes

#### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete stacker operations

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. | 1. Prepare for berthing | 1.1. Access, interpret and apply *compliance documentation* relevant to shore side *mooring operation*  
1.2. Receive, interpret and clarify details of mooring operations tasks to be performed by the *mooring crew*  
1.3. Select *personal protective equipment* appropriate for work activities  
1.4. Identify, address and report potential *hazards*, with action taken to minimise or eliminate risk to personnel, infrastructure, vessel and the environment  
1.5. Ensure that all *associated equipment* is available and in allocated position ready for securing ship |
| 2. Berth vessel | 2.1. Communicate clearly and in a timely manner with *personnel* using approved *communication methods*  
2.2. Receive instructions from shipping officer and carry out procedure for securing the vessel  
2.3. Ensure that all safety procedures and practices are followed |
| 3. Release vessel | 3.1. Communicate clearly and in a timely manner with personnel using approved communication methods  
3.2. Receive instructions from shipping officer for sequence of ships lines to be released  
3.3. Release ships lines  
3.4. Ensure that all safety precautions and procedures are followed |
**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct shore side mooring operations:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply technical information/maintain accurate records
- identify plant status
- use safety equipment
- apply berthing and release requirements and procedures
- apply procedures for operating equipment, electric capstan winches, safety hooks & quick release hooks
- apply diagnostic techniques to determine equipment faults and to rectify/report as required
- use oral and written communications techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct shore side mooring operations:

- potential equipment and site hazards
- procedures and relative documentation
- isolation devices type and purpose
- emergency, fire suppression, fire alert and disaster procedures
- relevant operational and maintenance procedures and associated documentation
- hazard identification and risk assessment response procedures
- equipment associated with mooring operations
- relevant OHS legislation and policies
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

**may include:**
- legislative, organisation and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Mooring operations

**may include:**
- throwing/heaving ship's lines
- capstan winch operation
- setting quick release hooks
- running out mooring line
- securing ship's lines
- releasing ship's lines
- preparing mooring area for operation
- making fast to wharf, dolphin or mooring buoy
- securing mooring lines

### Mooring crew

**may include:**
- contact person
- lines person
- capstan winch operator
- assistant

### Personal protective equipment

**may include:**
- site standard PPE
- life vests
- gloves
- torches
- safety cage

### Hazards

**may include:**
- dust and water
- heat
- obstructions
- structures
- line breakage or movement
- other equipment
- vehicle movement on wharf
line boat movement
- wind and waves (swell)
- falls
- failure of equipment
- damage to mooring lines
- damage to lead lines
- faulty or damaged machinery equipment
- moving or rotating equipment
- using equipment beyond SWL
- moving heavy ropes/lines
- unsafe lifting techniques
- slippery wharf area
- poor housekeeping

**Associated equipment** may include:
- radios
- ship loader
- lead lines
- safety hooks
- dolphins
- electrical capstan winches
- quick release hooks
- keeper arms

**Personnel** may include:
- shipping officer
- contact person
- ship's pilot
- ship's line crew
- capstan winch operator
- assistant
- port authority control tower

**Communication methods** may include:
- radio
- telephone

**Unit Sector(s)**
Plant and Equipment Operation

**Competency field**
Refer to Unit Sector(s).
Co-requisite units

Not applicable.
RIIPEO205A Conduct ship loading operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conducting of ship loader operations in metalliferous mining. It includes the planning and preparation for the operation, conducting loader and associates equipment operation and undertaking operator maintenance in all contexts to bulk load ore into bulk cargo vessels.

Application of the Unit
This unit is appropriate for those working in a operational roles, at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct ship loader operations:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- access, interpret and apply technical information
- apply diagnostic techniques
- use hand and power tools
- apply equipment hose down and chute cleaning requirements and procedures
- communicate using radios, phones other techniques
- apply procedures for complying with environmental requirements (e.g. using dust suppression equipment)
- apply procedures for the disposal of environmentally sensitive fluids and materials
- apply records maintenance requirements
- apply data entry procedures into computer based system
- apply procedures for working at heights

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct ship loader operations:

- site and equipment safety requirements and procedures
- ship-loader characteristics, technical capabilities and limitations
- ship-loader maintenance and operating procedures
- ore type and quality
- environmental requirements e.g. dust suppression and constraints related to ship-loading operations
- recording and reporting processes
- impact of ship-loader operations on customer quality requirements
- impact of ship-loader operations on vessel loading specifications
- layout of vessel and potential structural hazards
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete ship loader operations

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

RIIPEO206A Lay and recover cables and hoses

Modification History
Not applicable.

Unit Descriptor
This unit covers the laying and recovering cables and hoses in coal mining. It includes the planning and preparing for; laying and recovery of cables and hoses; and carrying out operator maintenance on cable laying equipment.

Application of the Unit
This unit is appropriate for those working in operational roles, at worksites within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for laying and recovery | 1.1. Access, interpret and apply *compliance documentation* relevant to the laying and recovering cables and hoses  
1.2. Obtain, interpret and clarify/confirm *work requirements* before proceeding  
1.3. Access and apply *safety information and procedures* throughout the work  
1.4. Identify, obtain and prepare *equipment* required for the work as per the plan |
| 2. Perform cable and hose laying and recovery | 2.1. Resolve coordination activities with others at the site prior to commencement of, and during, the work activity  
2.2. Carry out pre-start, start-up and shutdown procedures  
2.3. Carry out *cable and hose laying and recovery* by engaging controls to govern speed, direction and tension  
2.4. Lay excess cable safely  
2.5. Prepare and visually inspect cables for connection, and mark the location  
2.6. Recognise and respond to hazardous and emergency situations |
| 3. Carry out operator maintenance on cable laying equipment | 3.1. Carry out equipment inspections and fault-finding  
3.2. Carry out routine operational servicing, lubrication and housekeeping tasks  
3.3. Carry out minor maintenance to manufacturer’s instructions and site requirements  
3.4. Provide operator support during preparation for, and conduct of, major maintenance tasks  
3.5. Process records |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to lay and recover cables and hoses:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- access, interpret and apply technical information
- apply hand-eye coordination
- apply diagnostic techniques
- use hand tools
- apply environmental constraints during cabling operations
- apply equipment records maintenance requirements
- apply procedures for the disposal of environmentally sensitive fluids and materials

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to lay and recover cables and hoses:

- site and equipment safety requirements
- types, uses and characteristics of cables and hoses
- cable and hose safety
- cable and hose laying equipment characteristics, technical capabilities and limitations
- cable and hose laying and recovery operational and maintenance procedures
- maintenance procedures related to cable and hose laying operations
- basic geological, geographical and survey data
- hazard identification and response procedures
- site environmental requirements and constraints related to cabling operations
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for laying and recovering cables and hoses</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of the laying and recovering cables and hoses</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the laying and recovering cables and hoses that meet all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of the laying and recovering cables and hoses that safely, effectively and efficiently meet the required outcomes</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
<td></td>
</tr>
<tr>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
<td></td>
</tr>
<tr>
<td>• Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.</td>
<td></td>
</tr>
<tr>
<td>• Aboriginal people and other people from a non-English speaking background.</td>
<td></td>
</tr>
</tbody>
</table>
English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the laying and recovering cables and hoses

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Work requirements** may be from:
- shift briefings
- handover details, and/or
- work orders

**Work requirements** may include:
- the nature and scope of tasks
- achievement targets
- locations and routes
- equipment/plant allocation (including any defects)
- site lighting arrangements
- special arrangements
- coordination requirements/issues

**Safety information and procedures** may include:
- legislation and regulations
- relevant Australian standards
- management plans
- OHS policy
- code of practice
- manufacturer's instructions
- safe working procedures (or equivalent) including:
  - boarding and disembarking procedures
  - avoidance of water
  - cable handling safety
  - operational signal procedures

**Equipment** may include:
- cable reeler types including:
  - modified loaders
• trucks
• scrapers
• cable boat
• cabling equipment and functions including:
  • establishing cable towers
  • establishing crossovers
  • working over high wall gantry
  • operating cable reelers
  • replacing wheels or drums
  • using stockings
  • star pickets
  • ropes
  • slings
  • signs/markers
• other equipment including:
  • vehicles
  • graders
  • dozers

| Cable and hose laying and recovery may include: | • the use of controls and capabilities of allotted equipment and the replacing of wheels or drums on an as required basis |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to coordinate conveyor system shift:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- access, interpret and apply technical information
- apply equipment records maintenance requirements
- apply planning and organising techniques
- apply techniques to lead a diverse team
- apply diagnostic techniques
- apply procedures for complying with environmental requirements

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to coordinate conveyor system shift:

- mobile plant capabilities and limitations
- site and equipment safety requirements and procedures
- scope and limitations of operations related to this competency
- site conveyor systems and relocation coordination requirements
- relevant conveyor system and equipment characteristics, technical capabilities and limitations
- mine site geological conditions and survey data
- fire suppression, fire alert and disaster plan procedures
- hazard identification and risk assessment response procedures
- site environmental requirements and constraints related to conveyor/bucketwheel system
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to extend, retract and maintain conveyor componentry:

- apply legislative, organisation and site requirements and procedures for extending, retracting and maintaining conveyor componentry
- access, interpret and apply technical and safety information
- interpret and apply survey information and plans
- operate relevant plant and machinery
- communicate and coordinate activities with others
- apply diagnostic / fault finding techniques
- use relevant hand tools
- maintain equipment records
- comply with environmental requirements

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to extend, retract and maintain conveyor componentry:

- operational safety requirements
- mine operational procedures
- conveyor operations and componentry
- relevant conveyor assembly procedures
- relevant geological and survey information
- conveyor maintenance requirements
- site environment requirements and constraints related to conveyor work
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

RIIPEO301A Conduct conveyor-car high wall mining operations

Modification History
Not applicable.

Unit Descriptor
This unit covers conducting conveyor-car high wall mining operations in coal mining industries. It includes planning and preparing for operations, positioning the launch, mining coal, and carrying out operator maintenance.

Application of the Unit
This unit is appropriate for those working in a role assisting with conducting conveyor-car high wall mining operations within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for operations | 1.1. Access, interpret and apply **compliance documentation** relevant to the work activity  
1.2. Obtain, interpret and clarify / confirm **work requirements** before proceeding.  
1.3. Access, interpret and apply **geological and survey data** required to complete the allocated work in accordance with site procedures.  
1.4. Identify and obtain / schedule **resources** required for operations to support the mining sequence.  
1.5. Access and apply **safety information and procedures** throughout the work. |
| 2. Position the launch | 2.1. Co-ordinate activities related to the positioning of the launch with others at the site prior to commencement of, and during, the work activity.  
2.2. Carry out pre-start, start-up and shutdown procedures in accordance with manufacturer instructions and site procedures.  
2.3. Position the launch correctly in accordance with manufacturer instructions and site procedures/plans.  
2.4. Act on or report monitoring systems and alarms in accordance with manufacturer instructions and site procedures.  
2.5. Recognise and respond hazardous conditions in accordance with manufacturer instructions and site procedures. |
| 3. Mine coal | 3.1. Co-ordinate activities related to the mining of coal with others at the site prior to commencement of, and during, the work activity.  
3.2. Complete function tests on the miner and belts in accordance with manufacturer instructions and site procedures.  
3.3. Conduct and control mining procedures in accordance with manufacturer instructions and site procedures.  
3.4. Maintain supply of coal to the stacker in |
3. Conduct conveyor-car high wall mining operations

3.5. Act on or report monitoring systems and alarms in accordance with manufacturer instructions and site procedures.

3.6. Recognise and respond to hazardous and emergency situations in accordance with manufacturer instructions and site procedures.

3.7. Complete work in accordance with the agreed plan and outcomes and within the operating capacities of the allocated equipment.

4. Carry out operator maintenance

4.1. Carry out equipment inspections and fault finding in accordance with manufacturer instructions and site requirements.

4.2. Carry out routine operational servicing, lubrication and housekeeping tasks in accordance with manufacturer instructions and site authorised procedures and practices.

4.3. Carry out minor maintenance to manufacturer instructions and site requirements.

4.4. Provide operator support during preparation for, and conduct of, major maintenance tasks in accordance with site requirements.

4.5. Process records in accordance with site requirements.
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct conveyor-car high wall operations:

- apply legislative, organisation and site requirements and procedures for conducting conveyor-car high wall operations
- apply operational safety requirements
- access, interpret and apply technical information
- apply hand-eye coordination
- work wearing noise protection equipment
- apply diagnostic techniques
- use relevant hand tools
- maintain equipment records
- dispose of environmentally sensitive fluids and materials
- apply chemical and fuel safety measures

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct conveyor-car high wall operations:

- site and equipment safety procedures
- site mining systems and procedures
- conveyor-car high wall mining equipment characteristics, technical capabilities and limitations
- conveyor-car high wall mining maintenance systems and procedures
- site geological and survey data
- mining conditions and related methods / techniques
- mine gases and their properties / impacts
- gas monitoring systems, processes and responses
- site system monitoring capabilities and uses
- cable management procedures
- hazard identification and response procedures, including retraction, evacuation and fire
- site environmental requirements and constraints related to conveyor-car high wall mining operations
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</tbody>
</table>

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the insert unit information

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Monitoring systems and alarms** are those which indicate vital signs and out of specification activities/operations.

**Function tests** may include:

- chain conveyor
- cutter-heads
- traction
- shear-up/down
- camera sprays
- pan up/down
- water sprays
- steering wings
- stab-jack
- belt tracking
- propulsion

**Conveyor-car high wall mining** system may be powered by electric (overhydraulic systems) and include:

- launch vehicle
- stacker
- continuous miner
- conveyor cars

**Specific safety requirements** are to include:

- boarding and disembarking procedures
- relocation procedures
- shift blasting schedules
- advance and retraction procedures
- operational signal procedures

**Coordination** and monitoring requirements in relation to the positioning of the launch may include:

- pit preparation
- survey controls
- stacker positioning

**Coordination** requirements related to the mining coal may involve the
functions of pinman/deckman and the loader driver.

| **Operator controls** may include: |  
|-------------------------------|---|
| • TV/computer monitors |  
| • navigation screen |  
| • miner controls |  
| • conveyor controls |  
| • hydraulic pump controls |  
| • fault monitoring |

## Unit Sector(s)

Coal Mining (General)

## Competency field

Refer to Unit Sector(s).

## Co-requisite units

Not applicable.
RIIPEO302 Operate and monitor ore car dumpers

Modification History
Not applicable.

Unit Descriptor
This unit covers the monitoring and operation of ore car dumpers in the metalliferous mining industry. It includes preparing for car dumper operations by monitoring operation, carrying out equipment inspections and checks, maintaining equipment, and shutting down and/or isolating car dumpers. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:

- Metalliferous mining

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
# Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

## Elements and Performance Criteria

| 1. Prepare for car dumper operations | 1.1 Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2 Access and apply rail procedures while working in or around car dumpers  
1.3 Identify yard layout limit and locations of derailleurs  
1.4 Establish and maintain communication with other *personnel* using approved *communication methods*  
1.5 Assist rail operations to position ore cars safely in the car dumper |
| 2. Implement car dumper safety procedures | 2.1 Access and identify locations of emergency stops  
2.2 Locate first aid areas  
2.3 Identify and report potential risks and hazards  
2.4 Identify and report *environmental issues*  
2.5 Select *personal protective equipment* appropriate for work activities |
| 3. Monitor car dumper operations | 3.1 Check correct plant operation prior to start-up  
3.2 Receive, interpret and clarify shift changeover details  
3.3 Carry out car dumper *pre-start checks* on all *levels*  
3.4 Conduct prestart checks and ongoing plant inspection, take *equipment indicator readings* and identify, rectify and report defects and potential problems  
3.5 Interpret and respond to car dumper alarms, take actions and notify appropriate personnel  
3.6 Monitor the ore handling system, equipment operation and personnel safety |
| 4. Maintain car dumper | 4.1 Carry out rail isolations in preparation for maintenance |
RIIPEO302 Operate and monitor ore car dumpers

4.2 Clean plant to maintain condition, level, and work area hygiene

4.3 Inspect and maintain the work area

5. Shutdown car dumper equipment

5.1 Carry out car dumper shutdown procedures according to equipment configurations, system and safety requirements

5.2 Isolate fixed plant and equipment for maintenance

5.3 Perform post shutdown and isolation checks

5.4 Provide support for maintenance personnel

5.5 Complete all required documentation clearly, concisely and on time

5.6 Pass on shift change-over details to oncoming shift

Required Skills and Knowledge

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to monitor and operate fixed plant and equipment:

- apply legislative, organisation and site requirements and procedures for monitoring and operating fixed plant and equipment
- operate fixed plant/equipment
- apply safe work practices
- conduct isolations on plant/equipment to site requirements

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to monitor and operate auxiliary plant and equipment:

- Rail yard plant configuration and function
- Fixed plant/equipment configuration and function
- breakdown procedures
- emergency procedures
- troubleshooting techniques
- fixed plant and equipment limitations and operating parameters
- plant and equipment safety requirements
- isolation procedures
- occupational health and safety procedures
• operational procedures and checks
• site procedures
• site safety requirements
• environmental requirements and procedures
## Evidence Guide

equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate’s required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate’s:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidates:
  - undertaking and completing the monitoring and operation of auxiliary plant and equipment

Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

Range Statement

**Relevant compliance documentation** may include:

- legislative, organisational and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Personnel** may include

- rail operations
- plant operators
- plant control

**Communication methods** may include

- two way radios
- hand signals
- underground cap lamp signals
- team briefing
- shift changeover meeting
| **Levels** must include | • ground  
| | • barrel  
| | • trunnion  
| | • vault  
| | • apron  
| **Personal Protective Equipment** may include: | • safety boots  
| | • goggles/face shield  
| | • hearing protection  
| **Pre-start checks** may include: | • availability of equipment  
| | • detection of conditions that are unusual  
| | • job requirements  
| | • personnel availability  
| | • levels  
| | • communications  
| **Environmental issues** may include: | • dust (dump)  
| | • emissions  
| | • noise  
| | • run-off/spills  
| | • waste management and disposal  
| **Plant and equipment** may include: | • distribution control system (DCS)  
| | • motors/pumps and pumping systems  
| | • hydraulic systems and equipment  
| | • conveyors and conveyor systems  
| | • compressors and compressed air systems  
| | • fans and guards  
| | • conveyors/conveyor systems  
| | • rollers  
| | • grates  
| | • hoses (air and water)  
| | • scrubbers  
| | • gauges and meters  
| | • feeders  
| | • sumps  
| | • limit switches  
| | • car dumpers  
| | • car positioner  
| | **Equipment indicator readings** may include: | • levels  
| | • speed  
| | • unusual noises  
| | • vibrations  
| | • Computer monitoring  

### Start-up checks and procedures
may include the inspection of:

- cameras and monitoring
- interlocks
- distribution control system
- hydraulic systems
- pumps and pumping systems
- screen inspections
- valves
- visual and audible warning devices and lights
- suppression systems
- car positioner

### Monitor may include:

- blockages and spillages
- feed rates
- wear and tear
- levels

### Maintenance may include:

- lubrication
- minor adjustments to fixed operational plant
- assisting with temporary small repairs
- cleaning plant, equipment and work area
- reporting leaks
- reporting seal damage

### Clean may refer to cleaning methods that may include:

- hosing with water
- high pressure cleaning
- manual removal of build-up

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct pump operations:

- apply legislative, organisation and site requirements and procedures for conducting pump operations
- maintain, clean and operate equipment
- identify hazards
- handle hazardous goods
- maintain records
- monitor operations
- employ safe work practices
- fault finding
- use communications equipment
- use hand and power tools

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct pump operations:

- emergency procedures
- environmental principles
- equipment processes, technical capability and limitations
- equipment safety requirements
- isolation procedures
- material under pressure
- mine operational system
- occupational health and safety procedures
- operational procedures and checks
- pumping operations
- pumping safety requirements
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>

</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate
cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
  - written and/or oral assessment of the candidate's required knowledge
  - observed, documented and/or first hand testimonial evidence of the candidate's:
    - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
    - consistent achievement of required outcomes
    - first hand testimonial evidence of the candidate's:
      - working with others to undertake and complete the conduct of pump operations |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

Co-requisite units
Not applicable.
RIIPGP202A Handle reagents

Modification History
Not applicable.

Unit Descriptor
This unit covers the handling of reagents in the metalliferous mining industry. It includes planning and preparing for reagent handling, starting up equipment in sequence, mixing reagents, adding reagents, transferring and storing reagents, shutting down in sequence and/or isolating equipment, and conducting housekeeping activities. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an assistant role at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

7.2. Manage and report hazards |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to handle reagents:

- apply legislative, organisation and site requirements and procedures for handling reagents
- operate, maintain and clean equipment
- identify hazards
- handle hazardous substances interpret reports
- apply lifting techniques (manual, cranes and loads)
- monitor operations
- report defects
- apply safe work practices
- use hand and power tools

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to handle reagents:

- contaminant identification
- emergency procedures
- environmental procedures
- equipment limitations and operating parameters
- equipment safety requirements
- hazardous goods procedures and consequences of spills
- identifying repair requirements
- isolation procedures
- metallurgical and technical data (basic)
- occupational health and safety procedures
- operational procedures and checks
- reagent types and how to mix them
- site procedures
- site safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to operate compressors:

- apply legislative, organisation and site requirements and procedures for operating compressors
- distinguish between:
  - process gas
  - instrument
  - equipment (electrical/mechanical)
- maintain compressors
- identify causes of problems
- isolate problems to item of equipment

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to operate compressors:

- principles of compressor operation
- effects of temperature and compression ratio/the need for multi staging
- pressure/temperature relationships and effects on condensation (e.g. moisture and/or gas)
- control of output
- causes of, and remedies for surging
- methods of resolving problem
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>

  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the carrying out of bore-field operations

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:
- legislative, organisational and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Communication methods** may include:
- telemetry system
- satellite phone
- two-way radio

**Pre-start checks** may include:
- availability of equipment
- detection of conditions that are unusual
- vehicle and equipment for remote travel
- job requirements
- personnel availability
- walk through the plant/around settling pond/drive along pipe line

**Environmental issues** may include:
- drainage
- dust
- emissions
- flora and fauna
- hazardous chemicals
- recycling
- run-off
- spills
- waste management and disposal
- water quality

**Plant** may include:
- pumps (fixed)
- lines
- storage tanks/dams

**Monitor** may include the checking of:
- leakage
- blockages and spillages
- water levels
### Indicator readings may measure:
- current
- flow
- level
- pressure
- unusual noises (e.g. cavitation)
- vibrations

### Contaminants are anything other than the water. Most common contaminants may include:
- animals
- containers and packaging
- fuels and oils
- rubbish

### Clean equipment may involve methods that may include:
- dismantling
- flushing
- de-scaling

### Auxiliary service equipment may be anything that is portable and mobile that is not part of the fixed infrastructure, and may include:
- discharge lines
- sets (generator)
- hand and power tools
- hoses (water and air)
- level and pressure indicators
- pump system
- strainers

### Unit Sector(s)
Processing

### Competency field
Refer to Unit Sector(s).

### Co-requisite units
Not applicable.
RIIPGP205A Handle, store and use cyanide

Modification History
Not applicable.

Unit Descriptor
This unit covers the safe handling, storage and use of cyanide within the gold mining industry. It includes accessing and applying site cyanide safety procedures; applying personal safety measures; identifying and reporting incidents/hazards; protecting workers and the environment during cyanide handling and storage; managing cyanide process solutions and HCN gas emissions to protect human health and the environment; protecting workers’ health and safety from exposure to cyanide solutions and HCN gas; and applying emergency procedures.

Application of the Unit
This unit is appropriate for those working in operational roles, at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>
</thead>
</table>

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Access and apply site Cyanide safety procedures</td>
<td>1.1. Access, interpret and apply <strong>compliance documentation</strong> relevant to the safe handling, storage and use of cyanide 1.2. Apply <strong>mine site safe operating procedures</strong> for managing <strong>potential hazards, risks and emergencies</strong> 1.3. Apply mine site safety reporting procedures</td>
</tr>
<tr>
<td>2. Apply personal safety measures</td>
<td>2.1. Maintain a clean and tidy workplace 2.2. Use appropriate <strong>personal protective equipment</strong> 2.3. Apply correct hazardous substance safety procedures 2.4. Obtain permits and clearance before specialised work is carried out, according to site procedures</td>
</tr>
<tr>
<td>3. Identify and report incidents/hazards</td>
<td>3.1. Identify, manage and report potential hazards, risks and emergencies 3.2. Report incidents to approved personnel 3.3. Record clearly and concisely the details of any incident, hazards and/or injury</td>
</tr>
<tr>
<td>4. Protect workers and the environment during cyanide handling and storage</td>
<td>4.1. Identify quality control and quality assurance procedures, spill prevention and spill containment measures 4.2. Maintain and control unloading, storage and mixing facilities using routine inspections, preventive maintenance and contingency plans to prevent or contain releases and control and respond to worker exposures</td>
</tr>
<tr>
<td>5. Manage cyanide process solutions and HCN gas emissions to protect human health and the environment</td>
<td>5.1. Identify and apply operating systems and procedures designed to protect human health and the environment 5.2. Identify and apply management and operating systems designed to monitor and minimise cyanide use 5.3. Identify and apply measures to protect birds, other wildlife and livestock from adverse effects of cyanide process solutions 5.4. Identify and apply measures designed to</td>

</tr>
</tbody>
</table>
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to safely handle, store and use cyanide within the gold mining industry:

- apply legislative, organisation and site requirements and procedures
- apply hazards identification and control procedures
- apply incidents reporting requirements and procedures
- apply personal protective equipment requirements and procedures
- apply cyanide measurement systems (e.g. Titrations)
- apply personal and co-worker safety requirements and procedures
- apply cyanide materials safety data sheets (MSDS)

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to safely handle, store and use cyanide within the gold mining industry:

- emergency procedures
- equipment safety requirements
- hazardous substances procedures and handling techniques, including understanding of:
  - material safety data sheets (MSDSs) and their use
  - Dangerous Goods requirements and procedures
  - isolation procedures
  - mine site safety requirements
  - occupational health and safety procedures
  - site safety procedures
  - participative procedures for workplace management of OHS (e.g. consultation, safety representatives, committees, dispute resolution)
  - International Cyanide Management Code
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the safe handling, storage and use of cyanide within the gold mining industry</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of the handling, storage and use of cyanide within the gold mining industry</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the safe handling, storing and using of cyanide within the gold mining industry that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of the safe handling, storage and use of cyanide in the gold mining industry that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example,
language, literacy and numeracy demands of assessment should not be greater than those required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the safe handling, storing and using of cyanide in the gold mining industry

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:
- legislative, organisational and site requirements and procedures
- OHS legislation
- manufacturer's guidelines and specifications
- Australian Standards, including AS/NZS 4360
- industry guidelines and codes of practice
- International Cyanide Management Code
- safety and health management system
- hazardous substances management, including material safety data sheets (MSDS)

**Cyanide** may include:
- sodium cyanide briquettes
- flake calcium cyanide
- liquid sodium cyanide
- cyanide slurry solution

**Mine site safe operating procedures** may include:
- awareness and access to emergency exits
- carrying out safety checks (e.g. checking HCN levels)
- emergency procedures (e.g. Cyanide spills)
- First Aid procedures
- hazard identification and recognition procedures
- work access permit
- housekeeping standards
- decontamination procedures
- cyanide destruction procedures
- cyanide disposal procedures
- change management procedures
- observing smoking restrictions at certain locations or times or during specific activities
- observing site speed limits
- occupational health, safety and environment procedures around equipment, vehicles and personnel
- isolation and tagging procedures (e.g. out-of-service tags, danger tags, restrictive

RIIPGP301A Conduct drying activities

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of drying activities in the metalliferous mining industry. It includes planning and preparing for drying activities, starting up equipment in sequence, operating and monitoring equipment, conducting housekeeping activities, and shutting down in sequence and/or isolating equipment. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct drying activities:

- apply legislative, organisation and site requirements and procedures for conducting drying activities
- diagnose faults
- identify and manage hazards
- handle hazardous goods
- interpret reports
- lift (manual, cranes and loads)
- maintain records
- monitor operations
- report defects
- apply safe work practices
- troubleshoot
- use hand and power tools

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct drying activities:

- breakdown procedures
- contaminant identification
- drying process (basic)
- emergency procedures
- environmental procedures
- equipment limitations and operating parameters
- equipment safety requirements
- hazardous goods procedures and consequences of spills and hazardous goods
- identifying repair requirements
- isolation procedures
- metallurgical and technical data (basic)
- occupational health and safety procedures
- operational procedures and checks
- pumping system and flow charts (pipeline and sprinkler systems)
- reagent types
- sampling
- site procedures
- site safety requirements
- types of ores (basic)
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

RIIPGP302A Monitor and operate auxiliary plant and equipment

Modification History
Not applicable.

Unit Descriptor
This unit covers the monitoring and operation of auxiliary plant and equipment in the metalliferous mining industry. It includes preparing for plant equipment monitoring and operation, carrying out plant and equipment inspections and checks, operating and monitoring plant and equipment, maintaining plant and equipment efficiency, and shutting down and/or isolating plant and equipment. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:

- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for plant and equipment monitoring and operation | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Plan and prepare work  
1.3. Receive, interpret and clarify shift changeover details  
1.4. Establish and maintain communication with other personnel using approved communication methods  
1.5. Select *personal protective equipment* appropriate for work activities  
1.6. Carry out equipment *pre-start checks*  
1.7. Identify, address and report potential risks and hazards  
1.8. Identify, address and report *environmental issues*  
1.9. Follow emergency procedures  
1.10. Use dust suppression and extraction methods |
| 2. Carry out plant and equipment inspections and checks | 2.1. Check correct plant operation prior to start-up  
2.2. Check condition of *plant and equipment* for fault, identify damaged and inoperative equipment and report to relevant personnel  
2.3. Record check/inspection outcomes and hand over to oncoming shift personnel  
2.4. Physically, continuously inspect plant, take *equipment indicator readings* and identify and rectify defects and potential problems |
| 3. Operate and monitor plant and equipment | 3.1. Carry out plant and equipment *start-up checks and procedures* according to plant/equipment configurations and system requirements  
3.2. *Monitor* operating plant and equipment for correct, efficient performance  
3.3. Changeover auxiliary/ancillary plant to meet operational and maintenance requirements  
3.4. Interpret and respond to plant alarms, take remedial actions and notify appropriate personnel |
<table>
<thead>
<tr>
<th>RIIPGP302A Monitor and operate auxiliary plant and equipment</th>
<th></th>
</tr>
</thead>
</table>
| 3.5. Identify basic faults and adjustments and make repairs to running/operating plant where necessary to maintain plant performance  
3.6. Complete all required documentation clearly, concisely and on time  
3.7. Pass on end of shift information to oncoming shift | |
| 4. Maintain plant and equipment efficiency | 4.1. Carry out plant and equipment maintenance  
4.2. Check and adjust plant condition to maintain efficient operation  
4.3. Clear pipeline and pumping system blockages  
4.4. Maintain materials storage vessel levels to meet plant operating demands  
4.5. *Clean* plant to maintain condition of all equipment and work area hygiene  
4.6. Identify and report hazards  
4.7. Take and test samples | |
| 5. Shutdown and/or isolate plant and equipment | 5.1. Carry out plant and equipment shutdown procedures according to plant/equipment configurations, system or safety requirements  
5.2. Isolate plant and equipment for maintenance and plant configuration purposes  
5.3. Perform post shutdown or isolation checks  
5.4. Provide support for maintenance personnel and activities  
5.5. Pass on shift change-over details to oncoming shift |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to monitor and operate auxiliary plant and equipment:

- apply legislative, organisation and site requirements and procedures for monitoring and operating auxiliary plant and equipment
- operate auxiliary equipment
- lift loads (manual handling, cranes and loads)
- apply safe work practices
- use hand and power tools

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to monitor and operate auxiliary plant and equipment:

- plant configuration and function
- auxiliary equipment configuration and function
- breakdown procedures
- emergency procedures
- troubleshooting techniques
- sampling and testing purpose and procedures
- plant and equipment limitations and operating parameters
- plant and equipment safety requirements
- isolation procedures
- metallurgical processes and effects on product
- occupational health and safety procedures
- operational procedures and checks
- site procedures
- site safety requirements
- environmental requirements and procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisational and site requirements and procedures  
| | manufacturer's guidelines and specifications  
| | Australian standards  
| | Employment and workplace relations legislation  
| | Equal Employment Opportunity and Disability Discrimination legislation |

| Personal Protective Equipment may include: | rubber gloves  
| | rubber boots  
| | safety boots  
| | goggles/face shield  
| | PVC overalls and apron  
| | heat jacket  
| | spats  
| | hearing protection  
| | respirator  
| | clean are supply equipment |

| Pre-start checks may include: | availability of equipment  
| | detection of conditions that are unusual  
| | job requirements  
| | personnel availability  
| | levels  
| | communications |

| Environmental issues may include: | drainage  
| | dust (dump)  
| | emissions  
| | flora and fauna  
| | hazardous chemicals  
| | noise  
| | recycling  
| | run-off/spills  
| | waste management and disposal  
| | water quality |
| Plant and equipment may include: | • distribution control system (DCS)  
• motors/pumps and pumping systems  
• hydraulic systems and equipment  
• conveyors and conveyor systems  
• compressors and compressed air systems  
• pipes and flanges  
• storage vessels/tanks  
• valves  
• heat exchangers  
• fans and guards  
• dampers  
• pulleys  
• ICUs  
• drive belts  
• compressors  
• burners  
• gas train  
• conveyors/conveyor systems  
• rollers  
• grates  
• thickener plant  
• hand and power tools  
• hoses (air and water)  
• scrubbers  
• gauges and meters  
• agitators  
• silos/bins  
• cranes  
• screens  
• feeders  
• sumps  
• limit switches |
|---|---|
| Equipment indicator readings may include: | • current  
• flow  
• levels  
• pressure  
• speed  
• unusual noises  
• vibrations |
| Start-up checks and procedures may include the inspection of: | • agitators  
• cameras and monitoring |
- interlocks
- distribution control system
- launders
- hydraulic systems
- pumps and pumping systems
- screen inspections
- pipes and flanges
- drive belts
- valves
- visual and audible warning devices and lights
- suppression systems

**Monitor** may include:

- blockages and spillages
- feed rates
- overloads
- pressures
- power draw
- wear and tear
- emissions (e.g. cyanide)
- levels
- temperatures
- moisture content
- on-stream analysis (OSA)
- filtering
- corrosion

**Maintenance** may include:

- lubrication
- minor adjustments to operational plant
- temporary small repairs
- cleaning plant, equipment and work area
- fixing leaks
- adjusting seals

**Clean** may refer to cleaning methods that may include:

- hosing with water
- high pressure cleaning
- manual removal of build-up
- air spear
- de-greasing
- forced air
- suction

1.4. Communicate with other personnel  
1.5. Select *personal protective equipment* appropriate for work activities  
1.6. Identify, address and report *potential risks and hazards*  
1.7. Identify, address and report *environmental issues*  
1.8. Conduct visual and physical inspection of mobile equipment and plant before operations |
| 2. Deliver raw materials | 2.1. Clear conveyor belts at the earliest opportunity when stopped in an emergency  
2.2. Empty conveyor belts prior to stopping  
2.3. Remove tramp metals from materials to prevent damage to equipment and conveyors  
2.4. Convey materials to bunkers minimising spillage  
2.5. Operate mobile and fixed equipment efficiently |
**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to operate raw material feed systems:

- apply legislative, organisation and site requirements and procedures for operating raw material feed systems
- reclaim materials
- store materials
- store/blend materials
- deal with hazards
- communicate within work group
- report faults and variances

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to operate raw material feed systems:

- precautions necessary for safe working
- system for accessing safe working procedures
- use of protective clothing and equipment
- operating procedures
- quality procedures
- reclaiming operation
- tramp metal detection and removal
- conveyor belt procedures
- dangers presented by specific plant and equipment
- report faults
- limits of authority
- team working practices
- minimising conflict
- information to be communicated, to whom and when
- requirements on job holder of quality systems
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct milling/grinding:

- apply legislative, organisation and site requirements and procedures for conducting milling/grinding
- operate, maintain and clean equipment
- identify and manage hazards
- interpret reports
- apply lifting techniques (manual, cranes and loads)
- maintain records
- employ safe work practices
- use data control systems (DCS)
- use hand and power tools

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct milling/grinding:

- contaminant identification
- cooling system
- emergency procedures
- environmental principles
- equipment processes, limitations and operating parameters
- equipment safety requirements
- grinding media
- hazardous goods procedures and consequences of spills
- isolation procedures
- lubrication system
- metallurgical and technical data
- milling circuit components and functions/milling principles
- operational procedures and checks
- milling and grinding safety requirements
- types of ores
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

|                       | • written and/or oral assessment of the candidate's required knowledge
|                       | • observed, documented and/or first hand testimonial evidence of the candidate's:
|                       |   • implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
|                       |   • consistent achievement of required outcomes
|                       |   • first hand testimonial evidence of the candidate's:
|                       |     • working with others to undertake and complete the conduct of milling/grinding

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisational and site requirements and procedures |
| | manufacturer's guidelines and specifications |
| | Australian standards |
| | Employment and workplace relations legislation |
| | Equal Employment Opportunity and Disability Discrimination legislation |

| Personal protective equipment may include: | chemical/gas detectors |
| | eye protection (e.g. glasses) |
| | hearing protection (e.g. ear plugs) |
| | protection from the elements (e.g. sun block) |
| | protective clothing (e.g. gloves, safety boots, helmet, shin guards, long sleeved shirt and trousers)) |
| | respiratory devices |
| | safety harness when working at heights |

| Potential risks and hazards may include: | personal safety (e.g. crush injuries, burns, slips, trips, falls, chemical exposure, fatigue) |
| | plant (e.g. structural damage, emergency shut down) |
| | environment (e.g. seepage, emissions, chemical spills, pollution, anything detrimental to fauna and flora) |

| Environmental issues may include: | drainage |
| | dust |
| | emissions |
| | flora and fauna |
| | hazardous chemicals |
| | noise |
| | run-off |
| | spills |
| | waste management and disposal |
| | water quality |

| Safe operating procedures may | adhering to all site procedures |
include:

- awareness and access to emergency exits
- emergency procedures
- First Aid procedures
- hazard identification and recognition procedures
- hot work procedures
- observing electrical and mechanical procedures
- observing right of way of heavy equipment
- observing site speed limits
- occupational health safety and environment procedures around equipment, vehicles and personnel
- use of 2-way radio
- use of barricades and guards
- use of fire extinguishers
- use of materials safety data sheets (MSDS)
- tagging procedures (e.g. service tags, danger tags, restrictive operations tags)
- use of respiratory devices
- wearing equipment restraints
- wearing personal protective equipment
- working in confined spaces
- use of materials safety data sheets
- carrying out safety checks (e.g. safety showers and eye washes)
- hold worker access permit

RIIPHA302A Operate and monitor filter processes

Modification History
Not applicable.

Unit Descriptor
This unit covers the operation and monitoring of filter processes in the metalliferous mining industry. It includes preparing for filtering processes, starting up equipment in sequence, operating and monitoring equipment, and shutting down in sequence and/or isolating equipment. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for *filtering* process | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Plan and prepare work  
1.3. Receive, interpret and clarify shift changeover details  
1.4. Communicate with other personnel  
1.5. Check and test remote control and *monitoring systems* for correct operation  
1.6. Select appropriate type of *auxiliary equipment* for work activities and check for availability  
1.7. Identify, address and report potential risks and hazards  
1.8. Identify, address and report *environmental issues*  
1.9. Follow emergency procedures to ensure safety of personnel and plant  
1.10. Use approved dust suppression and extraction methods  
1.11. Ventilate work area before entry |
| 2. Start-up equipment in sequence | 2.1. Carry out *start-up checks and procedures* according to plant configurations and system requirements  
2.2. Confirm plant readiness for operation |
| 3. Operate and *monitor* equipment | 3.1. Take and interpret data from *indicator readings* to determine *filtering* efficiency  
3.2. Continuously monitor plant and identify defects and potential problems  
3.3. Adjust equipment to approved operating parameters to optimise performance, maintain efficient filtering and to meet product quality targets  
3.4. Control feed to equipment  
3.5. Monitor moisture in cake and density of filtrate  
3.6. Monitor *cleaning* processes  
3.7. Monitor and maintain air systems to specified moisture parameters  
3.8. Maintain cleanliness of pressure/vacuum |
<table>

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to operate and monitor filter processes:

- apply legislative, organisation and site requirements and procedures for operating and monitoring filter processes
- change filters
- identify hazards
- interpret reports,
- report defects
- apply safe work practices

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to operate and monitor filter processes:

- air systems plant and configuration
- contaminant identification
- emergency procedures
- environmental procedures
- filter plant configurations and functions
- filter plant operation
- plant and equipment limitations and operating parameters
- plant and equipment safety requirements
- filtering procedures
- hazardous goods procedures and consequences of spills
- troubleshooting techniques
- isolation procedures
- metallurgical and technical data (basic)
- OHS procedures
- operational procedures and checks
- site procedures
- site safety requirements
- ore characteristics
- confined space entry procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for agglomeration process | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Receive, interpret and clarify shift changeover details  
1.3. Check and test remote control and *equipment* for correct operation  
1.4. Select appropriate type of *auxiliary equipment* for work activities including availability  
1.5. Identify, address and report potential risks and hazards  
1.6. Identify, address and report environmental issues  
1.7. Follow emergency procedures to ensure safety of personnel and plant |
| 2. Start-up agglomeration circuit | 2.1. Carry out pre-start checks  
2.2. Establish that all agglomeration circuit drives are set to remote and *ready for operation*  
2.3. Ensure that all downstream equipment is operational and ready to receive the agglomerated product  
2.4. Ensure that all feed circuits (including specific feed blend requirements) to the agglomeration circuit are available and ready to operate  
2.5. Initiate plant operator sequence start |
| 3. Operate and monitor agglomeration circuit | 3.1. Read and interpret data from equipment indicators to determine agglomeration circuit efficiencies  
3.2. Continuously monitor circuit to identify defects and potential problems  
3.3. Adjust equipment within approved operating parameters to optimise performance, maintain efficient agglomeration and to meet product quality targets  
3.4. Monitor and adjust the feed rate  
3.5. Monitor and control the addition rate of *binding agent* |
| 3.6. | Monitor and control the dosing rate of *leaching solution* |
| 3.7. | Monitor and control the dosing concentration of leaching solution |
| 3.8. | Monitor and adjust the drum speed ratio |
| 3.9. | Complete all required documentation clearly, concisely and on time |
| 3.10. | Pass on end of shift information to oncoming shift |

| 4. | Respond to contingencies |
| 4.1. | Respond to *alarms* |
| 4.2. | Clear circuit blockages in accordance with site procedures |
| 4.3. | Perform manual start-up of individual items of equipment |
| 4.4. | Report maintenance issues as required |

| 5. | Monitor quality of agglomerate |
| 5.1. | Carry out *physical tests* to check quality of agglomerate |
| 5.2. | Organise *laboratory tests* to check quality of agglomerate |
| 5.3. | Respond to test information |

| 6. | Shutdown and maintain of agglomeration circuit |
| 6.1. | Initiate circuit shutdown |
| 6.2. | Perform post shutdown checks |
| 6.3. | Isolate equipment |
| 6.4. | Clean agglomeration circuit in preparation for *maintenance* requirements |
| 6.5. | Operate agglomeration drum using local control |
| 6.6. | Operate automated lubrication system and perform operator maintenance as required |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to operate an agglomeration circuit:

- apply legislative, organisation and site requirements and procedures for operating agglomeration circuits
- comply with site safety and environmental requirements
- identify, control and report hazards
- identify and report equipment maintenance requirements
- access, interpret and apply technical and safety information
- interpret and apply survey information and plans
- operate relevant plant and machinery
- communicate and coordinate activities with others
- apply diagnostic / fault finding techniques
- operate relevant auxiliary equipment
- maintain appropriate records

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to operate an agglomeration circuit:

- operational safety requirements and equipment
- site environment requirements
- emergency procedures
- mine operational procedures
- agglomeration drum operations and components
- conveyor operations and components
- pump operations and components
- plant and equipment limitations and operating parameters
- conveyor, pump and agglomeration drum maintenance requirements
- isolation standards and equipment isolation procedures
- confined space entry procedures
- metallurgical and technical data (basic)
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

RIIPRE201A Conduct solvent extraction

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of solvent extraction in the metalliferous mining industry. It includes planning and preparing for solvent extraction, starting up equipment in sequence, operating and monitoring equipment, conducting housekeeping activities, and shutting down in sequence and/or isolating equipment. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- Knowledge of the requirements, procedures and instructions for conducting solvent extraction
- Implementation of requirements, procedures and techniques for the safe, effective and efficient completion of solvent extraction
- Working with others to undertake and complete the solvent extraction in a way that meets all of the required outcomes
- Consistent timely completion of solvent extraction that safely, effectively and efficiently meets the required outcomes

#### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate
cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the solvent extraction |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

2.2. Monitor cleaning process according to specifications  
2.3. Identify cleaning process end-point  
2.4. Shutdown electrolysis according to specification |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to prepare and carry out electrolytic cleaning process:

- apply legislative, organisation and site requirements and procedures for preparing for and carrying out electrolytic cleaning processes
- reschedule materials to meet plant availability
- receive and deploy materials
- store scheduled materials
- facilitate smooth product flow
- communicate with work group, suppliers and customers
- deal with faults and variances

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to prepare and carry out electrolytic cleaning process:

- precautions necessary to ensure safety
- potential dangers inherent in specific plant and equipment
- safe working procedures and systems
- use of protective clothing and equipment
- handling of chemicals/dispatch of waste products
- storage and scheduling requirements for production
- plant requirements for various schedules
- service requirements and specifications
- manning and competence requirements
- fault finding, rectification and reporting
- materials specifications
- optimisation of processing
- standard operating procedures
- tolerances allowable in the quality system and when action should be taken
- production documentation requirements and procedures
- relevant quality assurance and inspection procedures and systems
- limits of authority
- teamwork practices and team building techniques
- minimising conflict and conflict resolution
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for preparing and carrying out electrolytic cleaning processes
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of electrolytic cleaning processes
- working with others to undertake and complete the electrolytic cleaning process in a way that meets all of the required outcomes
- consistent timely completion of electrolytic cleaning processes that safely, effectively and efficiently meets the required outcomes

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the electrolytic cleaning process

| | dust and fumes/emissions  
| | hazardous chemicals  
| | noise  
| | run-off/spills  
| | waste management and disposal  
| | water quality |
Unit Sector(s)
Refining

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIPRE203A Prepare for sintering activities

Modification History
Not applicable.

Unit Descriptor
This unit covers the preparation of sintering activities in the metalliferous mining industry. It includes preparing for sintering operations, discharging and storing raw materials, blending raw materials, and distributing raw materials in readiness for sintering. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for sintering operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Receive, interpret and clarify shift changeover details  
1.3. Communicate with other personnel using approved communication methods  
1.4. Select personal protective equipment appropriate for work activities  
1.5. Identify, address and report potential risks and *hazards*  
1.6. Complete computer systems and equipment pre-start checks  
1.7. Identify, address and report *environmental issues*  
1.8. Check record and identify outstanding maintenance inspections and record identified defects |
| 2. Discharge and store raw materials | 2.1. Discharge materials from *transportation* minimising spillage and/or delays |
| 3. Blend raw materials | 3.1. Construct required bed size by bedding materials to specification  
3.2. Maintain sufficient amount of materials to meet bed building requirements  
3.3. Blend materials in specified sequence |
| 4. Distribute raw materials in readiness for sintering | 4.1. Suppress dust using appropriate method  
4.2. Supply materials to required usage flow rates  
4.3. Store materials ready for use in designated area  
4.4. Accurately identify blended materials and transfer to designated area |
Required Skills and Knowledge

## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• knowledge of the requirements, procedures and instructions for preparing for sintering activities</td>
<td></td>
</tr>
<tr>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of sintering activities preparation</td>
<td></td>
</tr>
<tr>
<td>• working with others to undertake and complete the sintering activities preparation in a way that meets all of the required outcomes</td>
<td></td>
</tr>
<tr>
<td>• consistent timely completion of sintering activities preparation that safely, effectively and efficiently meets the required outcomes</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
<th>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.</td>
<td></td>
</tr>
<tr>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
<td></td>
</tr>
</tbody>
</table>
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

  - written and/or oral assessment of the candidate's required knowledge
  - observed, documented and/or first hand testimonial evidence of the candidate's:
    - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
    - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the sintering activities preparation

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
• manufacturer's guidelines and specifications  
• Australian standards  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
| --- | --- |
| Legislation may include Acts and regulations dealing with: | • mining safety and health  
• mine inspection  
• OHS  
• explosives |
| Hazards may include: | • rail and road movements  
• cranes  
• noise  
• wind borne dust  
• sharp objects  
• moving machinery  
• falling  
• falling objects |
| Environmental issues may include: | • drainage  
• dust and fumes  
• emissions  
• hazardous chemicals  
• noise  
• run-off  
• spills  
• waste management and disposal  
• water quality |
| Transportation may include: | • conveyor  
• truck |

| 1. Prepare materials for feeding into sinter strand | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Add (reagents) to meet production targets and sintering specifications  
1.3. *Monitor* and control moisture content of materials  
1.4. Monitor and control material feed rate  
1.5. Identify and remove *feedstock material* before processing begins |
| 2. Sinter materials | 2.1. Monitor and adjust correct suction rate throughout bed to ensure sintering is complete  
2.2. Identify and separate materials not meeting material size to raw material mix or other specified location  
2.3. Monitor and adjust temperature to maintain uniform distribution across the bed  
2.4. Screen hot sinter where applicable  
2.5. Check and confirm strand discharge chutes are working  
2.6. Confirm roll feeder is clear of debris and build-up  
2.7. Check and confirm condition of pallet seal and wind box to prevent leakage  
2.8. Check and confirm fire bars and spade pins are intact to minimise fall through of material  
2.9. Deposit blend across full width of strand  
2.10. Operate at full bed depth and constant waste gas temperature |
| 3. Cool and screen sinter and fines | 3.1. Receive and assess material size according to hearth layer requirements  
3.2. Maintain hopper levels ensuring contract feed to screening station  
3.3. Crush oversize material from scalping screens  
3.4. Monitor and cool sinter to the required temperature  
3.5. Monitor cooler operations to maintain required temperature, minimise air leakage, |

4.2. Check wastes and emission collection meets operational compliance |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to sinter materials:

- apply legislative, organisation and site requirements and procedures for sintering materials
- discharging materials
- bed materials
- stock materials
- communicate within work group
- report faults and variances

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to sinter materials:

- precautions necessary for safe working
- system for accessing safe working procedures
- use of protective clothing and equipment
- sinter feedstock
- sinter yield
- sinter feedstock additions
- operating procedures
- quality procedures
- blend profile to give optimum strand conditions
- sinter techniques and production
- cooling requirements
- screening
- hearth layer requirements
- importance of correct pallet side walls
- reasons for maintaining maximum depth of sinter in cooler pallets
- cooler air leakage
- danger of high temperature sinter/pellets on conveyors
- importance of no over size material after final cold fines screen
- temperature distribution
- combustion requirements
- suction requirements
- processing of sinter and fines
- effects of strand leakage's
- importance of correct strand disposition
- importance of roll feeder operation
- over size material
- hot screening
- dangers presented by specific plant and equipment
- report faults
- limits of authority
- team working practices
- minimising conflict
- information to be communicated, to whom and when
- requirements on job holder of quality systems
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</tr>
</thead>
</table>
| **1. Plan and prepare for electrowinning/electrorefining** | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Receive, interpret and clarify shift changeover details  
1.3. Communicate with other personnel  
1.4. Select personal protective equipment appropriate for work activities  
1.5. Select appropriate type of *auxiliary equipment* for work activities  
1.6. Perform equipment *pre-start checks*  
1.7. Identify, address and report potential risks and hazards  
1.8. Identify, address and report *environmental issues*  
1.9. Adhere to emergency procedures  
1.10. Use approved dust suppression and extraction methods  
1.11. Ensure area is well ventilated |
| **2. Monitor electrowinning/electrorefining** | 2.1. *Monitor*, gather and interpret data from equipment indicators  
2.2. Monitor and adjust solution volume, feed quality and rate of flow in cells  
2.3. Monitor cooling system according to site procedures  
2.4. Monitor and maintain temperature, voltage and amps.  
2.5. Continuously monitor operations  
2.6. Minimise and monitor emissions  
2.7. Complete all required documentation  
2.8. Pass on end of shift information to oncoming shift  
2.9. Conduct cell inspections  
2.10. Observe and follow electrical safety techniques |
| **3. Pull and strip plates** | 3.1. Ensure that electrowinning/electrorefining systems are safe for plate removal  
3.2. Pull and strip plates using appropriate equipment  
3.3. Inspect electrodes and identify rejects |
| 3.4. strip plates to site requirements  | 4.1. Shutdown or isolate equipment based on process and safety requirements  |
| 3.5. Stack and dispatch stripping products  | 4.2. Perform post shutdown or isolation checks  |
| 3.6. Clean plates for reuse  | 4.3. Plan for shutdown/isolation and returning cells to service  |
| 3.7. Handle stripping products safely  |  |

**4. Shutdown in sequence and/or isolate equipment**

| 4.1. Shutdown or isolate equipment based on process and safety requirements  |
| 4.2. Perform post shutdown or isolation checks  |
| 4.3. Plan for shutdown/isolation and returning cells to service  |

**5. Conduct housekeeping activities and return cell to service**

| 5.1. **Clean plant**  |
| 5.2. Identify, address and report hazards  |
| 5.3. Maintain bus-bar cleanliness  |
| 5.4. Isolate cell and remove scale from anodes and cell according to site requirements  |
| 5.5. Dispose of scale in accordance with site procedures  |
| 5.6. Return cell to service in correct sequence  |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct electrowinning/electrorefining operations:

- apply legislative, organisation and site requirements and procedures for conducting electrowinning/electrorefining operations
- carry out fault finding
- identify hazards
- handle hazardous substances
- interpret reports
- apply lifting techniques (manual, cranes and loads)
- maintain records
- report defects
- employ safe work practices
- use hand and power tools

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct electrowinning/electrorefining operations:

- breakdown procedures
- contaminant identification
- electrowinning/electrorefining principles
- electrical hazards
- emergency procedures
- environmental principles
- equipment operating parameters
- equipment safety requirements
- hazardous substances procedures and consequences of spills
- isolation procedures
- metallurgical and technical data
- operational procedures and checks
- pumping system and flow charts (pipeline and sprinkler systems)
- reagent types
- sampling
- site procedures
- electrowinning/electrorefining safety requirements
- types of ores
- wet and dry working procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
| | • knowledge of the requirements, procedures and instructions for conducting electrowinning/electrorefining operations
| | • implementation of requirements, procedures and techniques for the safe, effective and efficient completion of electrowinning/electrorefining operations
| | • working with others to undertake and complete the electrowinning/electrorefining operations in a way that meets all of the required outcomes
| | • consistent timely completion of electrowinning/electrorefining operations that safely, effectively and efficiently meet the required outcomes |

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those
| **Method of assessment** | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the electrowinning/electrorefining operations |
| **Guidance information for assessment** | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:
- legislative, organisational and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Legislation** may include Acts and regulations dealing with:
- mining safety and health
- mine inspection
- OHS
- explosives

**Auxiliary equipment** may be anything that is portable and mobile that is not part of the fixed infrastructure, and may include:
- compressors
- distribution control systems (DCS)
- feeders
- gantry cranes and attachments and other mobile equipment
- hand and power tools

**Pre-start checks** may include:
- availability of equipment (e.g. conveyor or gantry)
- detection of conditions that are unusual
- personnel availability
- job requirements
- fluid levels
- walk through plant

**Environmental issues** may include:
- drainage
- dust (dump)
- emissions
- flora and fauna
- hazardous chemicals
- noise
- recycling
- run-off/spills
- waste management and disposal
| **Monitoring** may include the checking of: | • water quality  
| | • management of residues  
| | • solution levels  
| | • spillages and hot spots  
| | • flow rates  
| | • pressures  
| | • power draw  
| | • emission levels  
| | • reagent addition  

**Post-shutdown checks** are like pre-start checks.

**Equipment and plant cleaning methods** may include:

- digging

**Plant** may include:

- tanks
- lines
- pumps
- piping
- cells
- plates
- fixed stripping machines
- monorails

**Indicator readings** may include:

- current flow
- solvent density
- restrictions
- air flows
- pressure
- unusual noises
- temperature

**Start-up procedures** may include:

- cameras and monitors
- interlocks
- distribution control system
- pumping system
- scuttling pumps
- pipes and flanges
- drive belts
- valves
- visual and audio warning devices and lights
- suppression systems
- cells and surround site
**Materials** may include:

- slurry
- solution
- reagents

| 5. Shutdown in sequence and/or isolate equipment |
| 5.1. Shutdown or isolate equipment based on process and safety requirements |
| 5.2. Perform *post shutdown* or isolation checks |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to conduct elution processes:

- apply legislative, organisation and site requirements and procedures for conducting elution processes
- control circuits
- fault finding
- hazard identification and management
- handle hazardous substances
- interpret reports
- apply lifting (manual, cranes and loads)
- maintain records
- report defects
- employ safe work practices
- use hand and power tools

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct elution processes:

- elution process principles
- circuit control systems
- breakdown procedures
- regeneration kiln operations
- heat exchanger application
- emergency procedures
- environmental principles
- equipment operating parameters
- equipment safety requirements
- hazardous substances procedures and consequences of spills
- isolation procedures
- metallurgical and technical data
- operational procedures and checks
- pumping system
- sampling
- elution safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the elution processes

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
• manufacturer’s guidelines and specifications  
• Australian standards  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
| --- | --- |
| Legislation may include Acts and regulations dealing with: | • mining safety and health  
• mine inspection  
• OHS  
• explosives |
| Auxiliary equipment may be anything that is portable and mobile that is not part of the fixed infrastructure, and may include: | • compressors  
• distribution control systems (DCS)  
• gantry cranes and attachments and other mobile equipment  
• hand and power tools  
• hoses |
| Pre-start checks may include: | • availability of equipment  
• detection of conditions that are unusual  
• personnel availability  
• job requirements  
• walk through plant |
| Environmental issues may include: | • drainage  
• emissions  
• hazardous chemicals  
• noise  
• recycling  
• run-off/spills  
• waste management and disposal  
• water quality |
| Start-up procedures may include: | • cameras and monitors  
• distribution control system  
• pumping system |
| **Plant** may include: | • elution columns  
• pumps  
• valves  
• reagent vessels  
• carbon regeneration kilns  
• heat exchanges |
|--------------------------|--------------------------------------------------|
| **Indicator readings** may include: | • flow/current  
• density  
• levels  
• restrictions  
• pressure  
• speed (e.g. pumps)  
• unusual noises  
• vibrations  
• power  
• temperature |
| **Equipment and plant cleaning methods** may include: | • hosing with water  
• high pressure cleaning |
| **Post-shutdown checks** are like pre-start checks. | |
| **Monitoring the drying process** may include the checking of: | • blockages and spillages  
• carbon content  
• gold content  
• on stream analysis (OSA)  
• overloads  
• power draw  
• temperature  
• wear and tear  
• emission  
• laboratory results |
| **The methods used to optimise the plant** may include: | • quantity of reagents  
• flow  
• temperature  
• pressure  
• current flow |
Materials may include:

- slurry
- reagents

RIIPRE303A Conduct gold room operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of gold room operations in the metalliferous mining industry. It includes planning and preparing for gold room operations, starting up equipment in sequence, operating and monitoring smelting equipment, preparing electrowinning products for smelting, conducting housekeeping activities, and shutting down in sequence and/or isolating equipment. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:

- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to conduct gold room operations:

- breakdown procedures
- elution process
- smelting process
- use of fluxes
- record keeping
- handling requirements for gold concentrates
- security requirements for gold processing
- emergency procedures
- environmental principles
- equipment limitations and operating parameters
- equipment safety requirements
- hazardous substance procedures and consequences of spills
- identifying repair requirements
- isolation procedures
- metallurgical and technical data
- OHS procedures
- specific operational procedures and checks
- pumping systems
- sampling
- gold room safety requirements
- types of ores
- the effects of wet and dry concentrates

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to monitor casting quality:

- apply legislative, organisation and site requirements and procedures for monitoring casting quality
- fault find
- work with/handling high temperature materials
- operate, maintain and clean equipment
- identify hazards
- interpret reports,
- apply lifting techniques (manual, cranes and loads)
- monitor system/plant
- report defects
- control quality
- employ safe work practices
- use hand and power tools

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to monitor casting quality:

- casting plant construction components and operation
- characteristics of molten metal
- the ability to distinguish between:
  - chemical (including combustion)
  - instrument
  - equipment (electrical/mechanical)
- ability to isolate problem to item of equipment
- hazards associated with hot molten metal
- safe working procedures with molten metal
- protective equipment for working with hot materials
- potential dangers inherent in specific plant and equipment
- safe working procedures and systems
- identification of reject castings
- storage and scheduling requirements for production
- service requirements and specifications
- fault finding, rectification and reporting
- standard operating procedures
- tolerances allowable in the quality system and when action should be taken
- relevant quality assurance and inspection procedures and systems
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

- run-off
- spills
- waste management and disposal
- water quality

### Pre-start checks

Pre-start checks may include:

- identification and reporting of defective auxiliary equipment
- work area hazards
- chipping gun operation
- sledgehammer
- hoists
- casting cooling tank plant and equipment

### Air and water supplies to casting area

Air and water supplies to casting area may include:

- plant compressed air
- instrument air
- fresh (potable) water
- process water
- chilled water
- fire supply water

### Ladles and launders

Ladles and launders may be cleaned by:

- digging out
- jack hammer
- chipping gun

### Preparation of ladles and launders

Preparation of ladles and launders includes:

- cleaning
- patching
- coating

### Maintenance

Maintenance may include:

- lubrication
- minor adjustments to operational plant
- cleaning plant, equipment and work area
- installation/removal of devices
- patching

### Production documentation

Production documentation may include:

- tonnages
- quality
- analysis/testing
- identity
- tracking
Burners may be:
- diesel
- natural gas

Equipment and plant cleaning methods may include:
- degreasing
- forced air
- hosing with water
- suction

Fault and variances may occur in:
- product
- plant
- equipment

Unit Sector(s)
Refining

Competency field

Co-requisite units
Not applicable.
RIIPRM501A Implement, monitor, rectify and report on contracts

Modification History
Not applicable.

Unit Descriptor
This unit covers the implementation, monitoring, rectifying and reporting on contracts in the resources and infrastructure industries. It includes implementation, monitoring and reporting administrative procedures, monitoring contract time frame and specifications, resolving contractual disputes and implementing contract completion. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a management or supervisory role at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Implement, monitor and report administrative procedures</td>
<td>1.1. Access, interpret and apply compliance documentation relevant to the work activity&lt;br&gt;1.2. Implement contract administration procedures for reviewing contract performance against performance criteria&lt;br&gt;1.3. Implement procedures for monitoring and rectifying performance&lt;br&gt;1.4. Develop and implement procedures for adjusting performance where performance does not meet contractual requirements</td>
</tr>
<tr>
<td>2. Monitor contract time frame and specifications</td>
<td>2.1. Undertake regular inspection of contract services to ensure compliance with contract specifications&lt;br&gt;2.2. Identify and document variations between the specified scope of services and the contract, and notify relevant personnel&lt;br&gt;2.3. Carry out testing of services in progress by the contractor in accordance with legislative, regulation and worksite requirements</td>
</tr>
<tr>
<td>3. Resolve contractual disputes</td>
<td>3.1. Investigate disagreements to identify cause and validity&lt;br&gt;3.2. Negotiate and agree terms of resolution&lt;br&gt;3.3. Follow contracted prescriptions for dispute resolution&lt;br&gt;3.4. Seek specified advice to resolve disputes&lt;br&gt;3.5. Seek appropriate technical/legal advice to clarify dispute issues</td>
</tr>
<tr>
<td>4. Implement contract completion</td>
<td>4.1. Review contract conditions and responsibilities with appropriate personnel to ensure satisfactory completion&lt;br&gt;4.2. Report contract completion to appropriate personnel&lt;br&gt;4.3. Evaluate contract performance against agreed benchmarks</td>
</tr>
</tbody>
</table>
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to implement, monitor, rectify and report on contracts:

- apply legislative, organisation and site requirements and procedures for implementing, monitoring, rectifying and reporting on contracts
- access, interpret and apply technical information and briefings to other staff
- apply the principles of contract management
- assess the risks and the hazards attached to contract management
- develop procedures appropriate to site operations for management of contracts
- plan and coordinate work
- identify training needs related to contract management
- interpret and apply contract specifications
- conduct testing of contracted services and products

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to implement, monitor, rectify and report on contracts:

- legislative and statutory requirements and the instructions relating to contract maintenance
- site operation procedures
- site design relating to contracted services
- contract management requirements
- risk management procedures
- inspection and testing of contracted services / products
- site reporting procedures
- review processes and techniques
- knowledge of contract design criteria
- training programs
- computer based systems
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>

</table>
and use of resources for particular worksites may differ due to the site circumstances.

- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment should sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge in undertaking the implementation, monitoring, rectification and reporting on contracts
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of processes for implementation, monitoring, rectification and reporting on contracts that best meet the required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:

RIIPRO201A Conduct crushing operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of crushing operations in the mining and extractive industries. It includes the planning and preparation for operations; operating the plant; and carrying out post operational procedures.

Application of the Unit
Crushing plants can be fixed, skid, wheeled or track mounted, and electrical or diesel powered. This unit is appropriate for those working in processing plant operator roles, at worksites within:

- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the conduct of crushing operations  
1.2. Obtain, interpret and clarify *work requirements* for the satisfactory completion of operations  
1.3. Select and use *personal protective equipment* appropriate for work activities  
1.4. Ensure area is well ventilated before entry  
1.5. *Inspect and prepare work area and equipment in coordination with others*  
1.6. Prepare a work plan  
1.7. Select appropriate type of *auxiliary equipment* for work activities  
1.8. Resolve coordination requirements with others at the site prior to commencing and during work activities |
| 2. Operate the crushing plant | 2.1. Carry out *pre-start, start-up, run and shutdown procedures*  
2.2. Select and modify the *operating technique* to appropriately meet *changing work conditions*  
2.3. Use dust suppression and extraction methods  
2.4. Conduct, control and *monitor* operations within the equipment limitations, maintaining crushing efficiency and effectiveness  
2.5. Act on or report performance monitoring systems and alarms  
2.6. Recognise and respond to *hazardous and emergency situations*  
2.7. Complete work in accordance with the agreed plan and outcomes and within the operating capacity of the allocated equipment |
| 3. Carry out post-operational procedures | 3.1. Inspect fault-find and report faults  
3.2. Carry out *operational maintenance, servicing, lubricating and housekeeping* tasks |
3.3. Maintain process and pass on records and reports
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct crushing operations:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- access, interpret and apply technical information
- applying the plant operating procedures
- apply production and equipment records maintenance requirements
- apply diagnostic techniques
- use relevant hand and power tools
- work wearing personal protective equipment
- apply hazard identification and management requirements and procedures
- complete forms
- apply hazardous goods handling techniques and management
- interpret reports
- use lifting techniques (manual, cranes and loads)
- identify and report defects
- apply procedures for working at heights and depths
- apply work orders/purchase requisition preparation requirements

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct crushing operations:

- site hazard identification and response procedures
- site risk control procedures
- site and equipment health and safety procedures
- site environmental requirements and procedures
- site quality requirements
- site communication procedures
- site product characteristics
- site operational procedures
- plant pre-start, start-up, operating and shutdown procedures and techniques
- plant components functions, characteristics, technical capability and limitations
- plant breakdown procedures
- plant isolation procedures
- site record keeping requirements
- site confine space work procedures
- site personal protective equipment requirements
- contaminant identification
- emergency procedures
- crusher components
- crushing principles
- hazardous goods procedures and consequences of spills
- repair requirements
- mobile equipment operation
- computer basic techniques
- monitoring and control systems
- spillage procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.

Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete crushing operations

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Work requirements may come from briefings, handovers, and work orders and may include:
- product details
- nature and scope of tasks
- achievement targets
- operational conditions
- geological data
- site survey data
- site layout and out of bounds areas
- worksite inspection requirements
- lighting conditions
- plant or equipment defects
- hazards and potential hazards
- coordination requirements or issues

### Personal protective equipment may include:
- chemical/gas detectors
- eye protection (e.g. glasses)
- hearing protection (e.g. ear plugs)
- protection from the elements (e.g. sun block)
- protective clothing (e.g. gloves, safety boots, helmet, shin guards, long sleeved shirt and trousers)
- respiratory devices
- safety harness when working at heights

### Inspect and prepare work area may include:
- identification of hazards
- selection and implementation of control measures for the hazards identified
- safeguarding site and non-site personnel by:
  - erection of barricades, posting of signs and
| **Coordinated crushing operations** | following of security procedures  
| --- | ---  
|  | • selection of appropriate equipment to ensure personnel safety and protection  
|  | • determination of appropriate path of movement for equipment  
|  | • floor, pad, access roads, ramps and bench requirements  
| **Coordination with others** may include with: | • yard persons  
|  | • laboratory personnel  
|  | • mobile plant operators  
|  | • maintenance personnel  
| **Auxiliary equipment** may be anything that is portable and mobile that is not part of the fixed infrastructure, and may include: | • gantry cranes and attachments  
|  | • hand and power tools  
|  | • hoses (water and air)  
|  | • mobile equipment  
|  | • flexi pumps  
|  | • air operated tools  
|  | • boulder buster  
| **Pre-start and start-up procedures** may include: | • walk around check of the plant  
|  | • checking and toping up fluid levels (including fuel)  
|  | • lubrication  
|  | • inspection of attachments to ensure security and identify defects  
|  | • instrument and control lever checks  
|  | • reporting defects and damage  
|  | • follow prescribed start-up sequence  
|  | • confirm plant is operational  
|  | • checking interlocks  
|  | • check for tags

|  | • pipe and flanges  
|  | • pumping system  
|  | • water systems  
|  | • hydraulic system  
|  | • lighting  
|  | • suppression system |
### Shutdown procedures
**may include:**
- following prescribed shutdown sequence
- securing equipment

### Operating techniques
**may include:**
- feed control
- crusher adjustment
- working safely around other machines and personnel

### Changing work conditions
**may include variations in:**
- rock types
- feed grading
- feed contamination
- weather conditions
- day and night

### Monitoring
**may include the checking of:**
- blockages and spillages
- current draw
- detecting noises and smells
- flow rates
- missing components
- oil leaks
- air flows
- pressures
- feed rates
- wear and tear
- contaminants, e.g.: oil, plastic, timber, misfire explosives, metal (e.g. bucket teeth etc)

### Hazardous and emergency situations
**may include:**
- personal safety (e.g. crush injuries, burns, slips, trips, falls, chemical exposure, fatigue)
- plant (e.g. structural damage, emergency shutdown)
- environment (e.g. seepage, emissions, chemical spills, pollution, anything detrimental to fauna and flora)
- confined spaces
- working alone
- personal injury
- unplanned shutdown
- fire
- electrical
- dust
- noise
- explosive devices
- reagents and their mixing procedures

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct screening and conveying operations:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- access, interpret and apply technical information
- applying the plant operating procedures
- apply production and equipment records maintenance requirements
- apply diagnostic techniques
- use relevant hand tools
- work wearing personal protective equipment

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct screening and conveying operations:

- site hazard identification and response procedures
- site risk control procedures
- site and equipment health and safety procedures
- site environmental requirements and constraints
- site quality requirements
- site communication procedures
- site product characteristics
- site operational procedures
- plant pre-start, start-up, operating and shutdown procedures and techniques
- plant components functions, characteristics, technical capability and limitations
- plant breakdown procedures
- plant isolation procedures
- site record keeping requirements
- site confine space work procedures
- site personal protective equipment requirements
- contaminant identification
## Evidence Guide

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation | • legislative, organisation and site requirements and procedures  
|                                 | • manufacturer's guidelines and specifications  
| may include:                    | • Australian standards  
|                                 | • code of practice  
|                                 | • Employment and workplace relations legislation  
|                                 | • Equal Employment Opportunity and Disability Discrimination legislation |

| Geological may include:         | • rock type and characteristics  
|                                 | • faults and joints  
|                                 | • water tables or other water sources |

| Survey data may include:        | • floor heights  
|                                 | • bench widths  
|                                 | • grades |

| Work requirements may come from briefings, handovers, and work orders and may include: | • product details  
|                                                                                       | • nature and scope of tasks  
|                                                                                       | • achievement targets  
|                                                                                       | • operational conditions  
|                                                                                       | • geological data  
|                                                                                       | • site survey data  
|                                                                                       | • site layout and out of bounds areas  
|                                                                                       | • worksite inspection requirements  
|                                                                                       | • lighting conditions  
|                                                                                       | • plant or equipment defects  
|                                                                                       | • hazards and potential hazards  
|                                                                                       | • coordination requirements or issues |

| Inspect and prepare work area may include: | • identification of hazards  
|                                           | • selection and implementation of control measures for the hazards identified  
|                                           | • safeguarding site and non-site personnel by:  
|                                           | • erection of barricades and posting of signs  
<p>|                                           | • selection of appropriate equipment to ensure personnel safety and protection |</p>

</table>

**Operational maintenance, servicing, lubricating and housekeeping tasks** may include:

- scheduled servicing
- changing wear components
- greasing
- equipment adjustments
- cleaning
- disposal of environmentally sensitive fluids and materials
- application of chemical and fuel safety measures

### Unit Sector(s)
Processing (General)

### Competency field
Refer to Unit Sector(s).

### Co-requisite units
Not applicable.
RIIPRO203A Operate programmable logic control systems

Modification History
Not applicable.

Unit Descriptor
This unit covers the operation of programmable logic controllers (PLCs) in extractive industries. It includes the preparation for and the operation and monitoring of operations using programmable logic controllers (PLCs).

Application of the Unit
This unit is appropriate for those working in operational roles, at worksites within:
- Extractive industries

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the operation of programmable logic controllers  
1.2. Identify and apply the *functions of the PLC* in accordance with site procedures and instructions  
1.3. Identify and locate the plant’s equipment by name, number/code and function |
| 2. Monitor and control operations | 2.1. Carry out *pre-start, start-up and shutdown* of the plant completely or partially in the sequence necessary to avoid plant or equipment damage or injury to personnel  
2.2. *Monitor* and *control* operations within the equipment limitations, maintaining plant efficiency and effectiveness  
2.3. Act on or report monitoring systems and alarms  
2.4. Recognise and respond to *hazardous and emergency situations*  
2.5. Maintain, process and pass on records and reports |
**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to operate programmable logic controllers (PLCs):

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- access, interpret and apply technical information
- applying the plant operating procedures
- apply production and equipment records maintenance requirements
- apply diagnostic techniques
- apply keyboard skills
- use relevant hand tools
- work wearing personal protective equipment

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to operate programmable logic controllers (PLCs):

- site hazard identification and response procedures
- site risk control procedures
- site and equipment health and safety procedures
- site environmental requirements and constraints
- site quality requirements
- site communication procedures
- site product characteristics
- site operational procedures
- process control pre-start, start-up, operating and shutdown procedures and techniques
- plant components functions, characteristics, technical capability and limitations
- process control breakdown procedures
- plant isolation procedures
- process control system corrective procedures
- site record keeping requirements
- site confine space work procedures
- site personal protective equipment requirements
- contaminant identification
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the operation of programmable logic controllers (PLCs)</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of the operation of programmable logic controllers (PLCs)</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the operation of programmable logic controllers (PLCs) that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of the operation of programmable logic controllers (PLCs) that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
Aboriginal people and other people from a non English speaking background may have second language issues.

Assessment of this competency requires typical resources normally used in the work environment. Selection and use of resources for particular worksites may differ due to site circumstances.

Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the operation of programmable logic controllers (PLCs)

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

May include:

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Functions of the PLC

May include:

- control levels
- densities
- torque
- pressures
- sequence of operations
- alarms
- production records
- motor amps
- interlocks

### Pre-start and start-up procedures

May include:

- walk around check of the plant
- instrument and control lever checks
- reporting defects and damage
- follow prescribed start-up sequence
- confirm plant is operational

### Shutdown procedures

May include:

- following prescribed shutdown sequence
- securing equipment

### Monitoring

May be by:

- computer screen
- dials and gauges
- lights
- closed circuit TV
- alarms

### Control

May be made by:

- keyboard input
- switches and buttons
- dials and gauges
### Hazardous and emergency situations

- confined spaces
- working alone
- personal injury
- unplanned shutdown
- environmental
- chemical
- fire
- electrical
- dust
- noise

### Unit Sector(s)

Processing (General)

### Competency field

Refer to Unit Sector(s).

### Co-requisite units

Not applicable.
RIIPRO204A Bulk package and store product

Modification History
Not applicable.

Unit Descriptor
This unit covers the bulk packaging and storage of the product in metalliferous mining industry. It includes the planning and preparing for operations, starting the equipment sequence, packaging and storing product, shutting down equipment and conducting housekeeping duties.

Application of the Unit
This unit applies to general and bulk packaging operations. This unit is appropriate for those working in a operational roles, at worksites within:
• Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to bulk package and store product:

- apply legislative, organisation and site requirements and procedures
- apply hazard identification procedures
- apply operations monitoring requirements and procedures
- use hand and power tools
- apply procedures for working at heights

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to bulk package and store product:

- breakdown procedures
- bulk packaging methods
- contaminant identification
- emergency procedures
- environmental procedures
- equipment processes, technical capability and limitations
- equipment safety requirements
- hauling procedures (mobile)
- hazardous good handling techniques
- hazardous goods procedures and consequences of spills
- isolation procedures
- lifting techniques (manual, cranes and loads)
- loading procedures
- metallurgical and technical data (basic)
- night and day working procedures
- OHS procedures
- operational procedures and checks
- packaging requirements
- road rules (mobile)
- security procedures
- site procedures
- site safety requirements
• storage requirements and procedures
• towing procedures (mobile)
• types of ores (basic)
• wet and dry working procedures
### Evidence Guide

RIIPRO205A Conduct blending plant operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conducting of blending plant operations in the metalliferous mining and extractive industries. It includes: the planning and preparation for operations; operating the plant; and carrying out post operational procedures.

Application of the Unit
This unit is appropriate for those working in a operational roles, at worksites within:

- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the conducting of blending plant operations  
1.2. Obtain, interpret and clarify *work requirements* for the satisfactory completion of operations  
1.3. *Inspect and prepare work area in coordination with others*  
1.4. Resolve coordination requirements with others at the site prior to commencing and during work activities |
| 2. Operate the blending plant | 2.1. Carry out *pre-start, start-up, run and shutdown procedures*  
2.2. Select and modify the *operating technique* to appropriately meet *changing work conditions*  
2.3. Conduct, control and monitor operations within the equipment limitations, maintaining blending efficiency and effectiveness  
2.4. Act on or report performance monitoring systems and alarms  
2.5. Recognise and respond to *hazardous and emergency situations*  
2.6. Complete work in accordance with the agreed plan and outcomes and within the operating capacity of the allocated equipment |
| 3. Carry out post-operational procedures | 3.1. Inspect, fault find and report faults  
3.2. Carry out *operational maintenance, servicing, lubricating and housekeeping tasks*  
3.3. Maintain, process and pass on records and reports |
**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

may include:

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Work requirements

may come from briefings, handovers, and work orders and may include:

- product details
- nature and scope of tasks
- plant configuration
- stockpiling requirements
- achievement targets
- operational conditions
- site layout and out of bounds areas
- worksite inspection requirements
- lighting conditions
- plant or equipment defects
- hazards and potential hazards
- coordination requirements or issues

### Inspect and prepare work area

may include:

- identification of hazards
- selection and implementation of control measures for the hazards identified
- safeguarding site and non-site personnel by:
  - erection of barricades and posting of signs
  - selection of appropriate equipment to ensure personnel safety and protection
- cleaning out bins
- stockpile floor and ramps requirements

### Coordination with others

may include with:

- yard persons
- laboratory personnel
- processing plant operators
- mobile plant operators
| Pre-start and start-up procedures may include: | • walk around check of the plant  
• checking and toping up fluid levels (including fuel)  
• lubrication/greasing  
• inspection of attachments to ensure security and identify defects  
• instrument and control lever checks  
• reporting defects and damage  
• follow prescribed start-up sequence  
• confirm plant is operational |
| Shutdown procedures may include: | • following prescribed shutdown sequence  
• securing equipment  
• emergency shutdown |
| Operating techniques may include: | • feed control adjustments  
• working safely around other machines and personnel  
• moisture control |
| Changing work conditions may include variations in: | • material types  
• feed grading  
• feed contamination  
• weather conditions  
• day and night |
| Hazardous and emergency situations may include: | • confined spaces  
• working alone  
• personal injury  
• unplanned/emergency shutdown  
• environmental  
• chemical  
• fire (plant and surrounds)  
• dust, noise and electrical |
| Operator service, maintenance and housekeeping tasks are those established and authorised for the site and may include: | • scheduled servicing  
• changing wear components  
• greasing  
• equipment adjustments  
• cleaning |

Required Skills and Knowledge

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct crushing and screening plant operations:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- access, interpret and apply technical information
- apply plant operating procedures
- apply production and equipment records maintenance requirements
- apply diagnostic techniques
- use relevant hand and power tools
- apply procedures for the disposal of environmentally sensitive fluids and materials
- apply chemical and hydrocarbon safety measures
- work wearing personal protective equipment
- apply particle size assessment techniques
- apply operation, maintenance and cleaning techniques
- apply hazard identification and management procedures
- apply hazardous materials handling procedures
- apply defect identification techniques and reporting requirements
- interpret reports
- apply lifting techniques (manual, cranes and loads)
- apply operations monitoring procedures
- applying safe work practices
- apply procedures for working at heights

**Required knowledge**

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to conduct crushing and screening plant operations:

- site hazard identification and response procedures
- site risk control procedures
- site and equipment health and safety procedures
- site environmental requirements and constraints
- site quality requirements
- site communication procedures
- site product characteristics
- site layout and plans

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to perform process control room operations:

- apply legislative, organisation and site requirements and procedures
- identify hazards
- handle hazardous goods
- interpret plans, reports, specifications
- apply operations monitoring techniques
- apply problem solving techniques
- apply defects reporting procedures
- apply safe work practices
- use computer and database management systems
- apply operational safety requirements
- access, interpret and apply technical information
- applying the plant operating procedures
- apply production and equipment records maintenance requirements
- apply diagnostic techniques
- work wearing personal protective equipment

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to perform process control room operations:

- colour codes (e.g. pipes)
- contaminant identification
- emergency procedures
- environmental procedures
- equipment processes, limitations and operating parameters
- *distribution control system* operation
- equipment safety requirements
- function of plant
- hazardous goods procedures and consequences of spills
- identifying repair requirements
- isolation procedures
- metallurgical and technical data (basic)
- occupational health and safety procedures
- operational procedures and checks
- optimal plant capacity and throughput
- physical layout of plant
- shutdown procedures
- site procedures
- site safety requirements
- start-up and shutdown procedures
- wet and dry working procedures
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>

RIIPRO303A Conduct sand wash plant operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the conduct of sand wash plant operations in extractive industries. It includes the planning and preparing for operations, operating the sand wash plant and carrying out post operational procedures.

Application of the Unit
This unit is appropriate for those working in operational roles, at worksites within:
- Extractive industries

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. # Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to conduct sand wash plant operations:

- apply legislative, organisation and site requirements and procedures
- apply operational safety requirements
- access, interpret and apply technical information
- applying the plant operating procedures
- apply production and equipment records maintenance requirements
- apply diagnostic techniques
- use relevant hand tools
- apply procedures for the disposal of environmentally sensitive fluids and materials
- apply chemical and fuel safety measures
- work wearing personal protective equipment

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to conduct sand wash plant operations:

- site hazard identification and response procedures
- site risk control procedures
- site and equipment health and safety procedures
- site environmental requirements and constraints
- site quality requirements
- site communication procedures
- site product characteristics
- site geological and survey data
- site operational procedures
- plant pre-start, start-up, operating and shutdown procedures and techniques
- plant components functions, characteristics, technical capability and limitations
- plant breakdown procedures
- plant isolation procedures
- site record keeping requirements
- site confine space work procedures
- site personal protective equipment requirements
- contaminant identification
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>Context of and specific resources for assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
<td>• This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
</tr>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the conducting of sand wash plant operations</td>
<td>• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of sand wash plant operations</td>
<td>• Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete sand wash plant operations that meets all of the required outcomes</td>
<td>• Aboriginal people and other people from a non English speaking background may have second</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of sand wash plant operations that safely, effectively and efficiently meets the required outcomes</td>
<td></td>
</tr>

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation | • legislative, organisation and site requirements and procedures
| may include: | • manufacturer's guidelines and specifications
| | • Australian standards
| | • code of practice
| | • Employment and workplace relations legislation
| | • Equal Employment Opportunity and Disability Discrimination legislation

| Work requirements may come from briefings, handovers, and work orders and may include: | • product details
| | • nature and scope of tasks
| | • achievement targets
| | • operational conditions
| | • site layout and out of bounds areas
| | • work site inspection requirements
| | • lighting conditions
| | • plant or equipment defects
| | • hazards and potential hazards
| | • coordination requirements or issues

| Inspect and prepare work area may include: | • identification of hazards
| | • selection and implementation of control measures for the hazards identified
| | • safeguarding site and non-site personnel by:
| | • erection of barricades and posting of signs
| | • selection of appropriate equipment to ensure personnel safety and protection

| Coordination with others may include: | • yard persons
| | • laboratory personnel
| | • mobile plant operators
| | • dredge operator
| | • maintenance personnel

| Pre-start, start-up and shutdown procedures may include: | • walk around check of the plant
| | • checking and topping up fluid levels (including fuel)
- lubrication
- inspection of attachments to ensure security and identify defects
- instrument and control lever checks
- reporting defects and damage
- follow prescribed start-up sequence
- confirm plant is operational
- following prescribed shutdown sequence
- securing equipment

### Operating technique
- feed control adjustments
- water flow adjustments in sprays, classifiers
- working safely around other machines and personnel

### Changing work conditions
- feed grading
- feed contamination
- availability and cleanliness of water
- weather conditions
- day and night

### Hazardous and emergency situation
- confined spaces
- working alone
- personal injury
- unplanned shutdown
- environmental
- chemical
- fire
- dust, noise and electrical

### Operational maintenance, servicing, lubricating and housekeeping tasks
- scheduled servicing
- changing wear components
- greasing
- equipment adjustments
- cleaning

---

RIIPRO401A Supervise processing operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the supervision of processing operations in the coal mining and extractive industries. It includes: planning, preparing for and initiating processing operations; and monitoring, adjusting and reporting on the execution of operations and maintenance activities.

Application of the Unit
This unit is appropriate for those working in processing plant supervisory roles within:
- Coal mining
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>

</thead>
</table>
| 1. Plan, prepare for and initiate processing operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the conducting of *processing operations*  
1.2. Access and share with team members the *geological and survey data* required to complete the processing operations  
1.3. Identify hazards, assess risks and ensure there are plans or processes to manage identified risks  
1.4. Prepare an action plan, in consultation with team members, which makes best use of the available *resources* and takes into account the requirements of the *processing plan* and other relevant requirements and procedures  
1.5. Acquire and make available the necessary *resources* for the safe, effective and efficient conduct of the operations |
| 2. Initiate processing operations and maintenance activities | 2.1. Assign responsibilities and issue clear and timely *instructions* to team members and others involved for the safe, effective and efficient operation of the processing plant  
2.2. Ensure hand over from shift to shift and that changes to operation are clearly informed  
2.3. Set up safe maintenance systems to meet the requirements of the *processing plan* and relevant requirements and procedures  
2.4. Initiate training activities to ensure competent team in all work activities |
| 3. Monitor, adjust and report on execution of the processing operations | 3.1. Ensure safe, effective and efficient execution of tasks  
3.2. Monitor processing operations performance to ensure achievement of planned outcomes  
3.3. Initiate adjustments to work programs to take into account non-achievement of planned outcomes  
3.4. Complete and submit reports as required  
3.5. Recommend changes to improve the safety, efficiency and effectiveness of the processing operations |
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to supervise processing operations:

- apply legislative, organisation and site requirements and procedures
- provide team leadership
- apply procedures for choosing operational techniques
- apply procedures for choosing and assigning plant and equipment
- apply techniques for developing and administering work plans

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to supervise processing operations:

- site risk, statutory compliance, health, safety, environmental, quality and communication requirements and procedures
- processing operations plan
- team leadership techniques
- operational techniques required for execution of the operations
- plant and equipment capabilities
- work planning techniques
- work monitoring methods
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation** may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Processing operations** may cover:
- process control systems
- automation
- processing equipment
- feeder systems
- stockpiling
- storage bins or silos
- safety systems
- production measurement systems

**Geological data** may include relevant site-specific information in relation to:
- rock or coal type and characteristics
- relative density of coal and other materials
- faults and joints
- presence of deleterious materials to be separated from coal or other raw feed
- predicted variations in raw feed quality across mine or with time in mining operations (short or long term)
- inter seams or hard or soft layers which may need separation from coal
- coal spontaneous combustion characteristics
- water tables or other water sources

**Survey data** may include relevant site-specific information in relation to:
- floor heights
- bench widths
- grades
- location within mine

**Resources** may include:
- budget
- labour
### Processing plan may include:
- Production targets
- Product mix requirements
- Product quality requirements
- Stockpiling requirements
- Range of plant to be used to meet requirements
- Maintenance schedule
- Storage and discharge of separated products
- Raw feed blending requirements
- Tailings deposition/treatment requirements and procedures
- Reporting and record requirements and procedures

### Instructions may issued in briefings, handovers, and work orders and may include:
- Nature and scope of tasks
- Achievement targets
- Refuelling arrangements
- Operational conditions
- Obtaining permits required
- Site layout
- Out of bounds areas
- Worksite inspection requirements
- Plant or equipment defects
- Hazards and potential hazards
- Coordination requirements or issues

RIIPRO402A Supervise recycled materials operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the supervision of recycled materials operations in a worksite in extractive industries. It includes the requirements for planning, preparing for and initiating recycled materials operations and monitoring, adjusting and reporting on the execution of the recycled materials operations.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, supervising recycled materials operations at surface worksites within:
- Extractive industries

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan, prepare for and initiate recycled materials operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the conducting of recycled materials operations  
1.2. Access and share with team members the *geological and survey data* required to complete the recycled materials operations  
1.3. Prepare an action plan, in consultation with team members, which makes best use of the available resource and takes into account the requirements of the *recycled materials plan*  
1.4. Acquire and make available the necessary *resources* for the safe, effective and efficient conduct of recycled materials operations  
1.5. Issue clear and timely *instructions* to team members and others involved, for the safe, effective and efficient conduct in the recycled materials operations in accordance with the recycled materials plan |
| 2. Monitor, adjust and report on execution of the recycled materials operations | 2.1. Ensure safe, effective and efficient execution of tasks in accordance with the recycled materials plan  
2.2. Monitor recycled materials operations performance to ensure achievement of planned outcomes  
2.3. Complete and submit reports as required by the recycled materials plan  
2.4. Recommend changes to improve the safety, efficiency and effectiveness of the recycled materials operations |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to supervise recycled materials operations:

- apply legislative, organisation and site requirements and procedures
- provide team leadership
- apply procedures for choosing operational techniques
- apply procedures for choosing and assigning plant and equipment
- apply techniques for developing and administering work plans

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to supervise recycled materials operations:

- site risk, statutory compliance, health, safety, environmental, quality and communication requirements and procedures
- recycled materials operations plan
- team leadership techniques
- operational techniques required for execution of the operations
- plant and equipment capabilities
- work planning techniques
- work monitoring methods
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</tbody>
</table>

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to plan, prepare and conduct recycled materials operations
    - provision of clear and timely instruction and supervision by the individual of those involved in the conduct of the recycled materials operations

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

RIIPRO501A Implement site processing plant operations

Modification History
Not applicable.

Unit Descriptor
This unit covers the implementation of processing plant operations on a worksite in extractive industries. It includes: preparation for, planning, initiating, monitoring and adjusting and reporting on the implementation of processing operations.

Application of the Unit
This unit is appropriate for those working in a management role or as a technical specialist, managing or advising on site processing plant operations in an extractive operation within:

- Extractive industries

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Geological may include:
- rock, sand and/or gravel type and characteristics
- deposit strata

### Survey data may include:
- drainage requirements
- site and neighbouring land form
- site and neighbouring boundaries and structures
- site and neighbouring roads and other infrastructure

### Parameters may include:
- legislative requirements
- development consent requirements
- operating hours limitations
- required production volumes
- product requirements
- quality requirements
- existing processing plant capacity
- catering for the rock, sand or gravel characteristics

### Internal and external stakeholders may include:
- site and off-site employees
- contractors
- equipment suppliers
- geologists, surveyors and/or draughtspersons
- regulatory authorities representatives
- community representatives
- site neighbours
Select and identify source of the equipment may include:
- site geological factors
- processing plan parameters
- availability of organisation's equipment
- availability of contractors equipment
- comparative costs of various options

Processing plan may include:
- risk management requirements
- occupational health and safety requirements
- environmental requirements
- hours of operation
- production targets, including total volume and hourly rate
- downtime targets
- product mix requirements
- product specifications
- raw feed delivery requirements
- raw feed selection requirements
- raw feed blending requirements
- raw feed and in-production surge pile requirements
- product stockpiling requirements
- quality testing requirements
- tailings deposition/treatment requirements and procedures
- reporting and record requirements and procedures

Resource may include:
- financial
- labour
- materials
- services
- plant and
- equipment

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to implement and maintain process control systems:

- apply legislative, organisation and site requirements and procedures
- apply procedures for monitoring and maintaining operations
- apply people and processes management techniques
- apply production operations analysis and review procedures
- apply projects and tasks management techniques
- apply human and physical resource coordinating procedures
- apply procedures to ensure delivery and maintenance of services to required specifications
- apply traffic, equipment and maintenance systems procedures
- apply techniques to evaluate new and used equipment
- apply performance audit procedures (finance, energy, safety, environment, quality assurance, legislative compliance and products)
- access and use appropriate technologies
- apply management report preparation and presentation requirements and procedures
- apply negotiating techniques (with internal/external customers, community and statutory/legal authorities)
- apply conflict resolution techniques

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to implement and maintain process control systems:

- programmable logic controllers
- metalliferous mining operations
- metalliferous mining products and services
- metalliferous mining plant and equipment
- team management
- quality system
- statutory control
- organisational objectives
- resource monitoring
- surveying
- environmental management
- OHS
- computer applications
- negotiation techniques
- statistics
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Determine processing plan design parameters | 1.1. Access, interpret and apply *compliance documentation* relevant to the designing of new or extensions to existing processing plant  
1.2. Identify, interpret and clarify relevant site *geological, hydrological, and survey data* and use it to develop and document the *processing plant design parameters*  
1.3. Identify, interpret and clarify relevant site *marketing information* and use it to develop and document the processing plant design parameters. |
| 2. Prepare processing plant design | 2.1. Involve *internal and external stakeholders* in the planning process in a way that uses their contribution effectively and gains their support for the outcomes of each *stage of the design process*  
2.2. Prepare the flowchart/schematic of the plant based on the processing plant design parameters  
2.3. Identify and analyse options and select the *primary items of plant and equipment* to be used in the process based on the processing plant design parameters  
2.4. Arrange and supervise the drafting of the general arrangement of the processing plant based on the flowchart/schematic, plant and equipment selected and the processing plant design parameters  
2.5. Arrange and supervise the drafting of the preliminary design of the processing plant based on the general arrangement and the processing plant design parameters  
2.6. Arrange and supervise the design of the process control system for the processing plant based on the preliminary design and the processing plant design parameters  
2.7. Determine and document *resource implications* of the implementation of the design  
2.8. Prepare and present the processing plant business plan/budget, including |
contingency plans, in accordance with the organisation's requirements

2.9. Arrange and supervise the drafting of the detailed design of the processing plant based on the approved preliminary design, process control system and processing plant design parameters

2.10. Identify and document the specifications for all plant and equipment items required by the processing plant design

3. Issue and provide support in the implementation of the design

3.1. Issue and explain the processing plant design to team members and others involved, to facilitate the safe, effective and efficient implementation of the processing plant design

3.2. Provide timely ongoing support and advice to those implementing the processing plant design

3.3. Ensure records and reports are maintained and issued

3.4. Monitor the processing plant design performance against the processing plant design parameters and development and operational budgets

3.5. Resolve anomalies in consultation with relevant stakeholders

3.6. Issue instructions for adjustments to the design and/or its implementation
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to design processing plant:

- apply legislative, organisation and site requirements and procedures
- interpret and apply geological data
- interpret and apply hydrological data
- interpret and apply survey data
- interpret plant design plans
- interpret and apply marketing data
- provide team leadership
- apply procedures for choosing development strategies
- apply procedures for choosing plant and equipment
- interpret and apply operational performance data

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to design processing plant:

- legislative and organisation's risk, statutory compliance, health, safety, environmental, quality and communication requirements and procedures
- geological data
- hydrological data
- survey data
- marketing information
- processing plant design parameters
- processing plant design options and procedures
- consultative and coaching techniques
- team leadership techniques
- operational techniques required for execution of the plan
- plant and equipment capabilities
- work planning techniques
- recording and reporting systems
- work monitoring methods
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Overview of assessment | The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:
| Critical aspects for assessment and evidence required to demonstrate competency in this unit | • knowledge of the requirements, procedures and instructions for the designing of processing plants
• implementation of procedures and techniques for the safe, effective and efficient completion of the design of processing plants
• the identification of the relevant information and scope of the work required to meet the required outcomes
• the identification of viable design options and the selection of options that best meet the required outcomes
• working with others to undertake and complete the design of processing plant
• consistent and timely completion of the design of processing plant |

| Context of and specific resources for assessment | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
• The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
• Customisation of assessment and delivery |

Unit Sector(s)
Processing (General)

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIPSM201A Tap furnaces

Modification History
Not applicable.

Unit Descriptor
This unit covers the tapping of furnaces in the metalliferous mining industries industry. It includes preparing for furnace tapping, tapping molten metal from furnaces, completing the tapping process, and maintaining tapping equipment. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for furnace tapping | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Establish and maintain communication with other personnel using approved communication methods  
1.3. Select *personal protective equipment* appropriate for work activities  
1.4. Identify, address and report potential risks and *hazards*  
1.5. Identify, address and report *environmental issues*  
1.6. Follow emergency procedures to ensure safety of personnel and plant  
1.7. Use approved dust suppression and extraction methods  
1.8. Ventilate work area before entry  
1.9. Check availability and operational readiness of all tools and *equipment* required for tapping  
1.10. Set up equipment ready for tapping to standard work procedures  
1.11. Correctly position holding vessels/ladles in readiness to receive molten metal and slag |
| 2. Tap molten metal from furnace | 2.1. Carry out *plant* and equipment *start-up checks* and procedures according to plant/equipment configurations and system requirements  
2.2. Drill, or make tap hole with oxy lance, and establish molten metal flow  
2.3. Ignite *burners* and correctly apply to ensure molten metal does not solidify  
2.4. Identify and control interference with molten metal flow to ensure quality and production targets  
2.5. Take samples at appropriate bath heights for metallurgical testing to quality requirements |
<p>| 3. Complete tapping process | 3.1. Insert and secure tap-hole seal to stop molten metal flow |</p>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to tap furnaces:

- apply legislative, organisation and site requirements and procedures for tapping furnaces
- troubleshoot
- work with/handle high temperature materials
- identify hazards
- interpret reports,
- use lifting techniques
- monitor system/plant
- report defects
- use fault finding, rectification and reporting techniques
- use safe work practices
- use hand and power tools

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to tap furnaces:

- principles of furnace operation
- characteristics of molten metal
- molten metal tapping procedures
- furnace tapping components
- trouble shooting
- combustion principles
- hazards associated with hot molten metal
- safe working procedures with molten metal
- protective equipment for working with hot materials
- potential dangers inherent in specific plant and equipment
- safe working procedures and systems
- dobie bar and clay gun positioning
- sampling methods
- despatch of waste products
- plant requirements for various schedules
- service requirements and specifications
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
</table>
| | • knowledge of the requirements, procedures and instructions for tapping furnaces  
| | • implementation of requirements, procedures and techniques for the safe, effective and efficient completion of furnace tapping  
| | • working with others to undertake and complete the furnace tapping in a way that meets all of the required outcomes  
| | • consistent timely completion of furnace tapping that safely, effectively and efficiently meets the required outcomes |

### Context of and specific resources for assessment

| | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.  
| | • Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.  
| | • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.  
| | • Customisation of assessment and delivery environment to sensitively accommodate |
cultural diversity.

- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
|                       | - written and/or oral assessment of the candidate's required knowledge
|                       | - observed, documented and/or first hand testimonial evidence of the candidate's:
|                       |   - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
|                       |   - consistent achievement of required outcomes
|                       |   - first hand testimonial evidence of the candidate's:
|                       |     - working with others to undertake and complete the furnace tapping |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Co-requisite units

Not applicable.
RIIPSM203A Produce pellets

Modification History
Not applicable.

Unit Descriptor
This unit covers the production of pellets in the metalliferous mining industry. It includes pelletising materials, and conditioning pellets for load out. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

</table>
| 1. Pelletise materials           | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. *Monitor* and maintain required pressure throughout the bed  
1.3. Confirm feeder is clear of debris and build-up  
1.4. Check and confirm condition of pallet seal and wind box to prevent leakage  
1.5. Deposit pellets across full width of the grate  
1.6. Operate at full bed depth and grate speed  
1.7. Identify, address and report *environmental issues*                                                                                                                                 |
| 2. Condition pellets for load out| 2.1. Maintain maximum depth of pellets on pallets  
2.2. Regulate temperature to plant requirements  
2.3. Minimise leakage of air  
2.4. Crush and screen oversize material  
2.5. Extract required quantity of *material* at specified size to satisfy user specifications  
2.6. Select personal protective equipment appropriate for work activities  
2.7. Maintain walkways free of spillage and scrap  
2.8. Follow safe working procedures at all times  
2.9. Carry out hand-over procedures |
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to produce pellets:

- apply legislative, organisation and site requirements and procedures for producing pellets
- troubleshoot
- apply precautions necessary for safe working
- use protective clothing and equipment
- apply operating procedures
- report faults
- recognise limits of authority
- apply team working practices
- communicate information
- use hand and power tools

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to produce pellets:

- breakdown procedures
- contaminant identification
- pelletising process
- emergency procedures
- environmental procedures
- equipment limitations and operating parameters
- hazardous goods procedures and consequences of spills and hazardous goods
- troubleshooting
- isolation procedures
- OHS requirements and procedures
- operational procedures and checks
- pumping system
- dust suppression systems
- hazards associated with by-products
- sampling purpose and procedures
- types of ores
- wet and dry working procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</table>
cultural diversity.

- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the pellet production

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisational and site requirements and procedures |
|                                             | manufacturer's guidelines and specifications               |
|                                             | Australian standards                                       |
|                                             | Employment and workplace relations legislation             |
|                                             | Equal Employment Opportunity and Disability Discrimination legislation |

| Legislation may include Acts and regulations dealing with: | mining safety and health |
|                                                          | mine inspection         |
|                                                          | OHS                     |
|                                                          | explosives              |
|                                                          | environment             |

| Monitoring the pelletising process may include the checking of: | blockages and spillages |
|                                                              | feed rates              |
|                                                              | mineral content         |
|                                                              | moisture levels         |
|                                                              | on stream analysis (OSA)|
|                                                              | overloads               |
|                                                              | pressures               |
|                                                              | power draw              |
|                                                              | wear and tear           |
|                                                              | emissions               |
|                                                              | levels                  |
|                                                              | corrosion               |

<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for casting | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Select *personal protective equipment* appropriate for work activities  
1.3. Place and operate all *runners*, dams and skimmers correctly  
1.4. Ensure that *tools* are at the correct temperature for effective operations  
1.5. Ensure that *casting equipment* is ready for correct operation  
1.6. Maintain tap hole correctly for efficient operation |
| 2. Cast ore and slag | 2.1. Follow safe working procedures at all times  
2.2. Use appropriate safety clothing and equipment provided  
2.3. Identify, address and report *environmental issues*  
2.4. Drain runners after cast as required  
2.5. Safely and correctly complete off blast activities  
2.6. Correctly secure and plug the tap hole  
2.7. Ensure that only iron enters the iron receiving vessel  
2.8. Correctly open and keep the tap hole clear during cast  
2.9. Operate correct *warnings* when instructed to activate item  
2.10. Ensure fume extraction and indicator lights, when under front side control, are operating efficiently |
| 3. Separate ore and slag | 3.1. Follow safe working procedures at all times  
3.2. Use appropriate safety clothing and equipment provided  
3.3. Segregate slag according to retained ore proportion and direct accordingly  
3.4. Contain slag flows within the runner system to minimise damage and spillage |
3.5. Ensure that tools are at the correct temperature throughout to reduce the risk of explosion
3.6. Correctly maintain runner system to ensure casting proceeds to specification

<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for casting operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Receive, interpret and clarify shift change over details  
1.3. Select *personal protective equipment* appropriate for work activities  
1.4. Select appropriate type of equipment  
1.5. Perform equipment *pre-start checks*  
1.6. Carry out *start-up procedures*  
1.7. Identify, address and report potential risks and hazards  
1.8. Communicate with other equipment operators  
1.9. Identify, address and report *environmental issues*  
1.10. Adhere to emergency procedures  
1.11. Ensure area is well ventilated  
1.12. *Mould, launder and ladle system* is adjusted, to operate within specifications |
| 2. Prepare moulds/launder system | 2.1. Dress *moulds*/launder system  
2.2. Check for defects against specifications  
2.3. Prepare moulding pit according to site procedures  
2.4. Dry product according to site procedures  
2.5. Strip and cleanout moulding pit where required  
2.6. Check cooling system for operation against specifications |
| 3. Cast metal | 3.1. *Teem/tap* liquid metal into ladles and/or launder system where required  
3.2. *Cast* liquid metal to moulds  
3.3. Take temperature and sample of the liquid to ensure pour meets specifications  
3.4. Identify need for, and adjust composition of pour with additives  
3.5. Monitor cast continuously |
| 4. Remove cast metal | 4.1. Knock off *mould plates* when mould has been bumped out |
| 4. | 4.2. Repair launders where required  
4.3. Identify and remove damaged and faulty mould  
4.4. Remove slides from ladles, repair and reposition slides  
4.5. Inspect for quality, chips and mark according to *site procedures and quality parameters*  
4.6. Prepare ingots, anodes or bullion for transport and storage according to work plans |
|---|---|
| 5. | 5.1. Shutdown and/or isolate equipment based on process and safety requirements  
5.2. Perform post *shutdown* and/or isolation checks |
| 6. | 6.1. Clean equipment  
6.2. Clean and store auxiliary services equipment  
6.3. Pass on end of shift information to incoming shift  
6.4. Complete all required *documentation* |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to cast ingots:

- apply legislative, organisation and site requirements and procedures for casting ingots
- deal with hazards
- receive and deploy materials
- monitoring and adjustment in process
- handle chemicals safely
- facilitate smooth product flow
- communicate skills
- deal with faults and variances

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to cast ingots:

- precautions necessary to ensure safety
- potential dangers inherent in specific plant and equipment
- safe working procedures and systems
- fume extraction requirements and methods
- power unit requirements
- specifications of moulds, bottom plates, trumpets, ingots, anodes, bullion
- application of process to different base metals
- teeming/tapping schedules
- ingot, anode and bullion weight and markers relationship
- specification and use of tiles
- storage and scheduling requirements for production
- plant requirements
- service requirements and specifications
- fault finding
- materials specifications

RIIPSM303A Operate a blast furnace

Modification History
Not applicable.

Unit Descriptor
This unit covers the operation of blast furnaces in the metalliferous mining industry. It includes performing plant condition monitoring, and operating a blast furnace under abnormal conditions. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Perform plant condition monitoring | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Select personal protective equipment appropriate for work activities  
1.3. Correctly and accurately identify and report problem areas to appropriate personnel  
1.4. Correctly inspect plant and equipment to schedule to prevent unplanned production halts |
| 2. Operate a blast furnace under abnormal conditions | 2.1. Follow safe working procedures at all times  
2.2. Use appropriate safety clothing and equipment provided  
2.3. Identify, address and report environmental issues  
2.4. Follow established procedures for abnormal operating conditions |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to operate a blast furnace:

- apply legislative, organisation and site requirements and procedures for operating a blast furnace
- troubleshoot
- apply precautions necessary for safe working
- use protective clothing and equipment
- apply operating procedures
- report faults
- recognise limits of authority
- apply team working practices
- communicate information
- use hand and power tools

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to operate a blast furnace:

- blast furnace operation principles and plant
- safe working procedures
- emergency procedures
- environmental procedures
- dealing with hazards associated with blast furnace operation
- communication within work group
- reporting of faults and variances
- working in teams
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>

</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate
cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:
- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the blast furnace operations |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
# Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| 1. Plan and prepare for furnace operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Receive, interpret and clarify shift changeover details  
1.3. Establish and maintain communications with other personnel using approved communication methods  
1.4. Select personal protective equipment appropriate for work activities  
1.5. Identify, address and report potential risks and hazards  
1.6. Identify, address and report environmental issues  
1.7. Check records and record outstanding maintenance inspections and identified defects |
| 2. Start-up furnace | 2.1. Complete computer systems and *equipment pre-start checks*  
2.2. Start-up *furnace* according to operating procedures  
2.3. Stabilise system to produce in-specification product at specified rates |
| 3. Monitor and control the smelting process | 3.1. Complete routine checks, log and paper work  
3.2. Recognise the signs of potential and actual problems  
3.3. Take action to minimise the impact on safety, health, the environment and business of potential and actual problems  
3.4. *Monitor* and trim plant to achieve required rates and quality while maximising plant efficiency  
3.5. Operate furnace according to operating requirements and procedures |
| 4. Shutdown furnace | 4.1. Determine *type of shutdown* required  
4.2. Give warning of shutdown  
4.3. Shutdown furnace system according to established operating procedures for type of shutdown |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to operate furnaces:

- apply legislative, organisation and site requirements and procedures for operating furnaces
- operate computers
- apply precautions necessary for safe working
- use protective clothing and equipment
- apply operating procedures
- report faults
- recognise limits of authority
- apply team working practices
- communicate information
- use hand and power tools

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to operate furnaces:

- principles of operation
- furnace components:
  - insulation (refractory)
  - physics of operation
  - chemistry of operation
- importance of flame patterns/flame impingement
- methods of resolving problem
# Evidence Guide

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to operate converters:

- apply legislative, organisation and site requirements and procedures for operating converters
- troubleshoot
- apply precautions necessary for safe working
- use protective clothing and equipment
- apply operating procedures
- report faults
- recognise limits of authority
- apply team working practices
- communicate information
- use hand and power tools

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to operate converters:

- principles of converter operation
- first charge procedures
- conversion process
- converter configuration, components and operation
- auxiliary equipment type, purpose operation
- air, water and oxygen systems and purpose
- personal protective equipment
- additives
- metal and slag blow purpose and method
- combustion principles
- trouble shooting of converter problems
- safe working
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</tbody>
</table>
cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the converter operations

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| **First charge** procedures refers to | ⦿ the initial start-up of new and refurbished vessels |
| **Converter problems** can include: | ⦿ uncontrolled emissions (gas or metal)  
⦿ electrical/mechanical failures  
⦿ standard of product received  
⦿ additives not up to standard |
| **Cooling media** may include: | ⦿ water  
⦿ air |
| **Type of shutdown** may include: | ⦿ hot shutdown for scheduled on-line maintenance  
⦿ cool shutdown to minimise temperature for refurbishment |
| **Burners** may be: | ⦿ diesel  
⦿ natural gas |
RIIPSM306A Supply molten metal and additives to furnaces

Modification History
Not applicable.

Unit Descriptor
This unit covers the supplying of molten metal and additives to furnaces in the metalliferous mining industry. It includes planning and preparing for elements, carrying out crane operations, and carrying out operator maintenance. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for operations | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Obtain and interpret work requirements in the form of shift briefings, handover details or work orders and clarify/confirm before proceeding  
1.3. Access and apply *safety information and procedures* throughout the work  
1.4. Identify, address and report potential risks and *hazards*  
1.5. Establish and maintain *communications* with other personnel using approved communication methods  
1.6. Prepare for work in accordance with relevant standards and codes, and manufacturers/site requirements  
1.7. Resolve coordination activities with others at the site prior to commencement of, and during, the work activity  
1.8. Carry out pre-start checks and record according to site requirements |
| 2. Carry out crane operations | 2.1. Prepare *load* for lift in accordance with crane limitations and rigging requirements  
2.2. Ensure no unauthorised entry to operating area  
2.3. Select, fit and use auxiliary *lifting* devices and equipment for designated purpose  
2.4. Carry out operations in cooperation with mobile plant and equipment to site procedures  
2.5. Perform correct, safe lifting and associated operations, above and with, operating furnaces containing molten metal to site procedures  
2.6. Pour molten metal into different size receivers so that spillage is minimised  
2.7. Contain molten metal when lifting and setting down to prevent spillage  
2.8. Use correct, safe technique to eliminate swing when lifting and transporting molten metal containers at recommended height to |
<table>
<thead>
<tr>
<th>furnaces/converters</th>

RIIPSM307A Control molten metal in holding furnace/vessel

Modification History
Not applicable.

Unit Descriptor
This unit covers the controlling of molten metal in a holding furnace/vessel in the metalliferous mining industry. It includes preparing for holding furnace operations, operating and monitoring holding furnace operations, and discharging matte and slag to matte and slag pots. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for holding furnace operations | 1.1. Access, interpret and apply compliance documentation relevant to the work activity  
1.2. Establish and maintain communication with other personnel using approved communication methods  
1.3. Select personal protective equipment appropriate for work activities  
1.4. Identify, address and report potential risks and hazards  
1.5. Identify, address and report environmental issues  
1.6. Follow emergency procedures to ensure safety of personnel and plant  
1.7. Check and test remote control and monitoring systems for correct operation  
1.8. Plan and put work area ventilation in place |
| 2. Operate and monitor holding furnace operations | 2.1. Carry out plant and equipment start-up checks and procedures according to plant/equipment configurations and system requirements  
2.2. Monitor holding furnace operations  
2.3. Monitor and receive matte and/or slag flow from furnace  
2.4. Control furnace rotation/tilting within recommended rate and angle parameters to efficiently separate matte and slag  
2.5. Control main and secondary burner operation to hold constant, recommended matte and slag temperature  
2.6. Carry out holding furnace drive equipment diagnoses to monitor and maintain correct, safe operation  
2.7. Check on holding furnace operations at regular intervals during the shift and rectify identified faults  
2.8. Plan and organise matte supply to converter with other personnel and adjust tonnage to meet requirements  
2.9. Maintain cleanliness of spouts to allow consistent, continuous flow of molten metal |
| 3. Discharge matte and slag to matte and slag pots | 3.1. Ensure pot area is clear of personnel and machinery before pouring commences  
3.2. Position pot correctly to avoid splash, spillage or damage  
3.3. Rotate vessel/pot at correct angle to ensure an even flow of matte and slag  
3.4. Assess matte and slag levels and pour slag and dispose of matte ensuring that pot is not overfilled  
3.5. Take and measure samples to ensure the slag and matte quantity is in an acceptable range |
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to control molten metal in a holding furnace/vessel:

- apply legislative, organisation and site requirements and procedures for controlling molten metal in a holding furnace/vessel
- troubleshoot
- apply precautions necessary for safe working
- use protective clothing and equipment
- apply operating procedures
- report faults
- recognise limits of authority
- apply team working practices
- communicate information
- use hand and power tools

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to controlling molten metal in a holding furnace/vessel:

- principles of holding vessel/furnace operation
- characteristics of molten metal (basic)
- molten metal pouring procedures
- furnace components and function
- troubleshooting
- combustion principles
- importance of flame patterns/flame impingement
- hazards associated with hot molten metal
- safe working procedures with molten metal
- protective equipment for working with hot materials
- potential dangers inherent in specific plant and equipment
- pot positioning
- sampling
- decanting
- despatch of waste products
- storage and scheduling requirements for production
- plant requirements for various schedules
- service requirements and specifications
- fault finding, rectification and reporting
- materials specifications
- standard operating procedures
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

### Environmental issues may include:
- drainage
- dust (dump)
- emissions
- flora and fauna
- hazardous chemicals
- noise
- recycling
- run-off/spills
- waste management and disposal
- water quality

**Monitoring may include:**
- blockages and spillages
- feed rates
- overloads
- pressures
- power draw
- wear and tear
- emissions
- levels
- temperatures
- on-stream analysis (OSA)
- filtering
- corrosion

**Furnace problems may include:**
- temperatures too high or too low during oxidation and charging
- air flow too low for burners
- fuel flow too low or too high, surging
- level in furnace too high or low
- metal splashes
- feed not to specification
- matte grade

**Fault and variances may occur in:**
- product
- plant
- equipment

**Burners may be:**
- diesel
- natural gas

**Pre-start checks may include:**
- availability of equipment
- detection of conditions that are unusual
- job requirements
- levels
- pressures
- flows
- communications
- cameras and monitoring
- interlocks
- distribution control system
- launders
- hydraulic systems
- pumps and pumping systems
- screen, pipe, valve
- visual and audible warning devices and lights
- suppression systems
- motors
- availability of oxygen and plant air
- cooling water supply
- diesel supply
- fans and draft systems
- compressors

### Equipment indicator readings
**may include:**
- current
- flow/levels
- pressure
- speed

### Maintenance
**may include:**
- lubrication
- minor adjustments to operational plant
- cleaning plant, equipment and work area

### Indicator readings
**may include:**
- alarms
- distribution control systems
- mimic panel
- screens
- temperature
- flow
- weight
- pressure

### Unit Sector(s)
Smelting

### Competency field
Refer to Unit Sector(s).

### Co-requisite units
Not applicable.
RIIPSM308A Monitor and maintain furnace gas efficiency

Modification History
Not applicable.

Unit Descriptor
This unit covers the monitoring and maintenance of furnace gas efficiency in the metalliferous mining industry. It includes preparing for plant and equipment operation, maintaining efficient operation of furnace gas plant and systems, controlling furnace gas emissions, maintaining efficient operation of furnace air injecting equipment, ensuring supply of additives, maintaining plant and equipment efficiency, and shutting down plant and equipment. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:

- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

---
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for plant and equipment operation | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Receive, interpret and clarify shift changeover details  
1.3. Establish and maintain communication with other personnel using approved communication methods  
1.4. Select personal protective equipment appropriate for work activities  
1.5. Select appropriate *auxiliary equipment* for work activities  
1.6. Carry out equipment *pre-start checks* to ensure equipment is ready for operation  
1.7. Identify, address and report potential risks and hazards  
1.8. Identify, address and report *environmental issues*  
1.9. Follow emergency procedures to ensure safety of personnel and plant  
1.10. Use approved dust suppression and extraction methods  
1.11. Ventilate work area before entry |
| 2. Maintain efficient operation of furnace gas plant and systems | 2.1. Carry out plant and equipment *start-up checks* and procedures according to plant/equipment configurations and system requirements  
2.2. Carry out *monitoring* and control on DCS  
2.3. Operate and maintain air operated breathing equipment for *furnace* off-line entry |
| 3. Control furnace gas emissions | 3.1. Carry out *plant and equipment start-up checks and procedures* according to plant/equipment configurations and system requirements  
3.2. Monitor and operate accretion build-up removal equipment to ensure efficient operation of air injection equipment  
3.3. Monitor furnace feed chutes for blockages and maintain to ensure optimum production  
3.4. Take samples of molten metal to confirm |
| 4. Maintain efficient operation of furnace air injection equipment | 4.1. Carry out plant and equipment start-up checks and procedures according to plant/equipment configuration and system requirements  
4.2. Monitor furnace conditions and operations to identify the correct, efficient operation of the furnace air injection equipment, and report to Control Room Operator  
4.3. Identify furnace inefficiencies and furnace air injection equipment and change/replace where necessary, ensuring minimum furnace down-time  
4.4. Clean furnace air injection equipment/device without causing damage  
4.5. Check and record furnace air injection equipment/device position, and recalibrates where outside operating parameters |
|---|---|
| 5. Ensure supply of additives | 5.1. Monitor and maintain condition of furnace feed materials  
5.2. Monitor furnace additives supply and report to Control Room Operator for action |
| 6. Maintain plant and equipment efficiency | 6.1. *Clean* plant to maintain condition of all equipment to ensure safe and efficient operations  
6.2. Identify and report hazards to maintain a safe working environment  
6.3. Interpret and respond to plant alarms, take remedial actions and notify appropriate personnel  
6.4. Check and adjust *plant condition* to maintain efficient operation  
6.5. Install and control stand-by furnace *burner* equipment to maintain safe furnace refractory temperatures  
6.6. Inspect air, gas, diesel and combustion supply equipment and replace/report faults, damaged or inoperable equipment to appropriate personnel  
6.7. Carry out *minor plant maintenance* and lubrication tasks  
6.8. Provide support for maintenance personnel where necessary to organisation's |
| 7. Shutdown plant and equipment | 7.1. Shutdown or isolate plant/equipment based on process and safety requirements  
7.2. Perform post shutdown or isolation checks  
7.3. Pass on shift changeover details to oncoming shift |
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following, as required to monitor and maintain furnace gas efficiency:

- apply legislative, organisation and site requirements and procedures for monitoring and maintaining furnace gas efficiency
- troubleshoot
- apply precautions necessary for safe working
- use protective clothing and equipment
- apply operating procedures
- report faults
- recognise limits of authority
- apply team working practices
- communicate information
- use hand and power tools

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following, as required to monitor and maintain furnace gas efficiency:

- principles of furnace operation/ furnace components
- gas paths
- insulation (refractory)
- combustion principles
- importance of flame patterns/flame impingement
- methods of resolving combustion/gas problems
- ability to isolate problem to item of equipment
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for monitor and maintain furnace gas efficiency</td>
</tr>
<tr>
<td></td>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of monitor and maintain furnace gas efficiency</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the monitoring and maintenance of furnace gas efficiency in a way that meets all of the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• consistent timely completion of monitoring and maintenance of furnace gas efficiency that safely, effectively and efficiently meets the required outcomes</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

|  | • This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills. |
|  | • Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances. |
|  | • The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of |
assessment should not be greater than those required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

| Method of assessment | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the monitoring and maintenance of furnace gas efficiency |

| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisational and site requirements and procedures |
| | manufacturer's guidelines and specifications |
| | Australian standards |
| | Employment and workplace relations legislation |
| | Equal Employment Opportunity and Disability Discrimination legislation |

| Legislation may include Acts and regulations dealing with: | mining safety and health |
| | mine inspection |
| | OHS |
| | explosives |
| | environment |

| Auxiliary equipment may be anything that is portable and mobile that is not part of the fixed infrastructure, and may include: | weighers |
| | compressors |
| | distribution control systems |
| | feeders |
| | gantry cranes and attachments and other mobile equipment |
| | hand and power tools |
| | hoses (water and air) |
| | pumps |

| Pre-start checks may include: | availability of equipment |
| | detection of conditions that are unusual |
| | job requirements |
| | personnel availability |
| | walk through plant |
| | communications |

<p>| Environmental issues may include: | drainage |
| | dust (dump) |
| | emissions |
| | flora and fauna |
| | hazardous chemicals |
| | noise |</p>

|                                               | code of practice |
|                                               | Employment and workplace relations legislation |
|                                               | Equal Employment Opportunity and Disability Discrimination legislation |

| Legislation may include Acts and regulations dealing with: | mining safety and health |
|                                                           | mine inspection |
|                                                           | OHS |
|                                                           | explosives |
|                                                           | environment |

| Auxiliary equipment may be anything that is portable and mobile that is not part of the fixed infrastructure, and may include: | weighers |
|                                                                                           | compressors |
|                                                                                           | distribution control systems |
|                                                                                           | feeders |
|                                                                                           | gantry cranes and attachments and other mobile equipment |
|                                                                                           | hand and power tools |
|                                                                                           | hoses (water and air) |
|                                                                                           | pumps |

| Pre-start checks may include: | availability of equipment |
|                              | detection of conditions that are unusual |
|                              | job requirements |
|                              | personnel availability |
|                              | walk through plant |
|                              | communications |

| Environmental issues may include: | drainage |
|                                   | dust (dump) |
|                                   | emissions |
|                                   | flora and fauna |
|                                   | hazardous chemicals |
- noise
- recycling
- run-off
- spills
- waste management and disposal
- water quality

**Equipment start-up checks and procedures** may include:

- draft systems
- cameras and monitors
- checking distribution control system (DCS)
- chutes
- display instruments, lights and gauges
- equipment stop engine lights
- hydraulic system
- isolations
- lighting
- suppression systems
- valves
- visual and audio warning devices and lights

**Cleaning methods** may include:

- degreasing
- forced air
- sweeping

**Monitoring** may include:

- blockages and spillages
- feed rates
- overloads
- pressures
- power draw
- wear and tear
- emissions
- levels
- temperatures
- moisture content
- on-stream analysis (OSA)
- filtering
- corrosion

**Plant alarms** may include those for:

- alarms
- distribution control systems
- mimic panel
- screens
- temperature
- flow
- weight
Minor plant maintenance may include:

- lubrication
- minor adjustments to operational plant
- cleaning plant, equipment and work area
- installation/removal of devices to allow safe maintenance
- fixing leaks

Unit Sector(s)
Smelting

Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIQUA201A Maintain and monitor site quality standards

Modification History
Not applicable.

Unit Descriptor
This unit covers the maintenance and monitoring of site quality standards in the resources and infrastructure industries. It includes planning and preparing for quality work outcomes, applying quality systems to individual work activities, and monitoring and reporting quality standards on a worksite. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an assistant role at worksites within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan, prepare for quality work outcomes | 1.1. Access, interpret and apply compliance documentation including quality standards relevant to the work activity  
1.2. Identify and agree on performance indicators for individual work with the appropriate persons  
1.3. Ensure work is completed within time, quality, cost and productivity parameters  
1.4. Plan work to facilitate the achievement of quality standards |
| 2. Apply quality systems to individual work activities | 2.1. Carry out work to relevant quality procedures  
2.2. Adjust and agree on performance indicators to meet changing circumstances with appropriate personnel  
2.3. Suggest and implement procedure improvements with relevant people including corrective actions  
2.4. Complete relevant quality documentation in accordance with site requirements |
3.2. Monitor work processes, report incidents and apply local risk control processes to minimise quality non-compliance  
3.3. Communicate information about variations in quality to appropriate personnel |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

<table>
<thead>
<tr>
<th>Required skills</th>

### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• knowledge of the requirements, procedures and instructions for maintaining and monitoring site quality standards</td>
<td>•</td>
</tr>
<tr>
<td>• implementation of requirements, procedures and techniques for the safe, effective and efficient completion of maintenance and monitoring of site quality standards</td>
<td>• working with others to undertake and complete the maintenance and monitoring of site quality standards that meets all of the required outcomes</td>
</tr>
<tr>
<td>• consistent timely completion of maintenance and monitoring of site quality standards that safely, effectively and efficiently meets the required outcomes.</td>
<td></td>
</tr>
</tbody>
</table>

#### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of
| **Method of assessment** | This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:  
- written and/or oral assessment of the candidate's required knowledge  
- observed, documented and/or first hand testimonial evidence of the candidate's:  
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes  
  - consistent achievement of required outcomes  
  - first hand testimonial evidence of the candidate's:  
    - working with others to undertake and complete the maintenance and monitoring of site quality standards |
| **Guidance information for assessment** | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Co-requisite units
Not applicable.
RIIQUA401A Apply a quality management system on site

Modification History
Not applicable.

Unit Descriptor
This unit covers the application of a quality management system on site in the resources and infrastructure industries. It includes implementing quality processes, making recommendations based on performance that has been monitored and reported on and consolidating opportunities for further development. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a supervisory role or as a technical specialist, at worksites within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Implement quality processes | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Actively encourage and support team members to participate in the site quality plan decision making processes and to assume responsibility and authority  
1.3. Provide information on the *site quality plan* in a language, style and format that is understood by *site personnel*  
1.4. Provide coaching and mentoring support to individuals and teams to maximise opportunities for implementation of the site quality plan  
1.5. Maintain the site quality plan while implementing the quality requirements of other site processes |
| 2. Make recommendations based on performance that has been monitored and reported on | 2.1. *Monitor* the organisation's systems and technology to identify ways in which planning and operations could be developed  
2.2. Strengthen customer service by using quality improvement techniques and processes  
2.3. Identify and recommend developments to the site quality plan to relevant personnel and apply appropriate recommendations |
| 3. Consolidate opportunities for further development | 3.1. Inform individuals and teams of savings and productivity improvements in achieving the site quality plan  
3.2. Document work performance and use the information to identify opportunities for the development of quality  
3.3. Manage quality records, reports and recommendations for development in accordance with the site quality plan requirements |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to apply a quality management system on site:

- apply legislative, organisation and site requirements and procedures for applying a quality management system on site
- promote and monitor quality processes on site
- gain the commitment of individuals and teams to quality principles and practices
- encourage ideas and feedback from other team members in developing and refining quality processes
- use available technology to monitor and review quality performance
- apply effective quality problem identification and problem solving techniques
- initiate processes to enhance the quality of individual and team performance
- maintain a focus on quality performance in achieving outcomes acceptable to customers

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to apply a quality management system on site:

- legal knowledge relating to a site quality plan
- key aspects of the organisation's quality system
- site quality plan procedures and requirements
- human resource management principles
- continuous quality improvement processes
- quality plan monitoring and review procedures and processes
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</table>
- Customisation of assessment and delivery environment should sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the application of a quality management system, on site provision of clear and timely instruction and supervision by the individual of those involved in the conduct of the application of a quality management system

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Compliance documentation may include: | legislative, organisation and site requirements and procedures |

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1.** Identify opportunities to develop the framework for quality management plans | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Document quality objectives and develop in *consultation with relevant personnel* to align with organisational objectives  
1.3. Identify *systems procedures* regarding quality management processes that may require review and/or further consultation with relevant personnel  
1.4. Apply the quality management plan in job descriptions and duty statements for all relevant *site personnel* |
| **2.** Implement processes for encouraging the development of ideas to support the site quality management plan | 2.1. Identify existing and potential quality issues and obtain ideas from site personnel regarding possible improvements, providing prompt consideration and feedback to maximise potential benefits  
2.2. Regularly advise all site personnel on the benefits of quality *site procedures and practices*  
2.3. *Document* and develop site procedures and practices in consultation with relevant personnel  
2.4. Identify, maintain and *monitor* the *information sources* and actively seek commitment to the implementation of quality management plans |
| **3.** Implement the site quality plan | 3.1. Document how the quality management plan will be introduced or enhanced at the worksite  
3.2. Provide information and *resources* for the implementation of the quality management plan in a form readily accessible to site personnel in a timely and consistent manner  
3.3. Provide appropriate training and support for site personnel on the implementation of quality management plan site procedures and practices  
3.4. Maintain site quality management plan records |
<p>| <strong>4.</strong> Monitor and update the quality | 4.1. Monitor the reviews of the systems |</p>
<table>
<thead>
<tr>
<th>Procedure</th>

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to implement, monitor and develop quality management plans:

- read, interpret, communicate and apply legislative, organisation and site requirements and procedures for implementing, monitoring and developing quality management plans including:
  - legislation relating to quality management
  - client quality requirements and procedures
  - organisational quality requirements and procedures
  - manufacturer's quality requirements and procedures
  - technical quality management information
  - quality management rules
  - quality management procedures
  - quality management regulations
  - basic statistical information
- develop and maintain site quality management procedures and practices
- facilitate quality management planning
- maintain relevant quality management documentation
- monitor and decide on changes to quality management processes
- provide leadership and guidance for quality management group activities
- actively encourage the free exchange of quality information
- analyse quality management ideas
- solve problems through negotiation

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes knowledge of the following as required to implement, monitor and develop quality management plans:

- organisation's quality policies, goals and objectives
- relevant legislative, client and manufacturer's quality requirements
- roles and responsibilities of relevant personnel within the organisation
- action planning methods
- human resource management processes
- methods of identifying appropriate action based on cost, health, safety, and quality issues
• work procedure/instruction writing
• quality management reporting and recording procedures
• worksite operating procedures
• quality issues identification processes
• quality issues assessment processes
• quality issues resolution processes
• quality management system documentation methods
• quality management research processes
• quality management security risk processes
• quality customer relations processes
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Critical aspects for assessment and evidence required to demonstrate competency in this unit</td>
</tr>
<tr>
<td>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</td>
</tr>
<tr>
<td>- knowledge of the requirements, procedures and instructions for implementing, monitoring and developing quality management plans</td>
</tr>
<tr>
<td>- implementation of procedures and techniques for the safe, effective and efficient implementation, monitoring and development of quality management plans</td>
</tr>
<tr>
<td>- the identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td>- the identification of viable options and the selection of quality management plans that best meet the required outcomes</td>
</tr>
<tr>
<td>- working with others to undertake and complete the implementation, monitoring and development of quality management plans</td>
</tr>
<tr>
<td>- consistent successful implementation, monitoring and development of quality management plans</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.</td>
</tr>
<tr>
<td>- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites</td>
</tr>
</tbody>
</table>
may differ due to the site circumstances.

- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment should sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge in undertaking the implementation, monitoring and development of quality management plans
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - identification of the relevant information and scope of the work to meet the required outcomes
  - identification of viable options and the selection of quality management plans that best meet the required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to undertake and complete the implementation, monitoring
| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |
**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<p>| Compliance documentation may include: | • federal, state and local government legislation and regulations including: |
| | • OHS including workplace safety, dangerous goods |
| | • equal employment opportunity |
| | • disability discrimination |
| | • public health |
| | • environmental management requirements and procedures |
| | • industrial |
| | • consumer protection |
| | • trade practices |

### Unit Sector(s)

**Quality**

### Competency field

Refer to Unit Sector(s).

### Co-requisite units

Not applicable.
RIIQUA601A Establish and maintain a quality system

Modification History
Not applicable.

Unit Descriptor
This unit covers the establishment and maintenance of a quality system in the resources and infrastructure industries. It includes establishing and maintaining the framework for the quality system, establishing a collaborative process, establishing and maintaining procedures for identifying and assessing quality issues, designing procedures for treatment of quality issues and evaluating the organisation's quality system. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in a management or supervisory role at worksites within:
- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>
</thead>
</table>

---
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Establish and maintain the framework for the quality system | 1.1. Access, interpret and apply *compliance documentation* relevant to the work activity  
1.2. Develop, document and have the *quality system* approved  
1.3. Include implementation responsibilities and duties of the quality system in job descriptions and duty statements for all *relevant personnel*  
1.4. Identify, source and provide the *resources* for the operation of the quality system in a timely and consistent manner  
1.5. Provide information on the quality system and its procedures in a readily accessible location and in a clear format for relevant personnel |
| 2. Establish a collaborative process | 2.1. Establish and maintain collaboration processes with relevant personnel and enact *consultation* processes  
2.2. Address issues raised promptly and appropriately in accordance with procedures for issue resolution  
2.3. Inform relevant personnel of outcomes resulting from collaboration |
| 3. Establish and maintain procedures for identifying and assessing quality issues | 3.1. Identify existing and potential *quality issues* and trends from the quality records system  
3.2. Implement and develop *system procedures* for the ongoing identification of existing and potential quality issues  
3.3. Monitor changes to the workplace to determine if additions or modifications to the quality system are required |
| 4. Design procedures for treatment of quality issues | 4.1. Implement and develop system procedures to treat quality in accordance with *legislation*, code of practice and trends identified from the quality system  
4.2. Implement and develop system procedures for applying interim solutions until permanent treatment measures are in place when measures to treat quality issues at their source are not practical |
| 4.3. Implement and develop system procedures for ongoing treatment of the quality system based on the hierarchy of control |
| 4.4. Monitor quality activities throughout the organisation, identify inadequacies and provide resources to implement appropriate quality measures |
| 4.5. Implement training programs to meet quality system training requirements as part of the organisation's general training program |

| 5. Evaluate the organisation's quality system |
| 5.1. Evaluate the effectiveness of the quality system within the goals and objectives of existing organisational boundaries |
| 5.2. Recommend appropriate improvements to the quality system |
| 5.3. Evaluate compliance with legislation and code of practice |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used. This includes the ability to carry out the following as required to establish and maintain a quality system:

- apply legislative, organisation and site requirements and procedures for establishment and maintenance of a quality system
- design quality work procedures and practices
- develop business plans incorporating the quality system
- develop quality resource plans
- manage quality systems implementation projects and tasks
- coordinate human, financial and physical resources
- audit the quality systems' performance
- implement quality change
- access and use appropriate technologies
- resolve conflict arising out of quality concern
- communicate ideas and information

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly for its application in the various circumstances in which this unit may be used.

This includes knowledge of the following as required to establish and maintain a quality system:

- quality system principles and practice
- best practice quality principles and techniques
- industry quality benchmarks
- information collection and review techniques
- organisation's quality exporting requirements
- organisation's resource acquisition processes
- organisation's operations
- organisation's products and services
- organisation's plant and equipment
- continuous improvement principles
- organisational strategic and quality objectives
- human resource policies and practices
- risk management, principles, strategies and applications
- customer/client relations techniques
- organisational change and development processes
- computer applications
- negotiation techniques
- statistics
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites
may differ due to the site circumstances.

- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment should sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge in undertaking the establishment and maintenance of a quality system
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate requirements, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - identification of the relevant information and scope of the work required
  - identification of viable options and the selection of a quality system that best meet the required outcomes
  - consistent achievement of required outcomes
  - first hand testimonial evidence of the candidate's:
    - working with others to undertake and complete the establishment and maintenance of a quality system

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Quality system may include:
- quality policy
- quality system and site procedures
- site-specific work instructions
- consultative processes
- product specifications
- service standards
- quality records
- quality policies
- quality procedures
- quality programs

Relevant personnel may include:
- managers
- supervisors
- quality officer/manager
- laboratory personnel
- all site personnel
- contractors

Resources may include:
- people
- finance
- buildings/facilities
- technology
- information

Consultation may include:
- consultation with environmental and laboratory personnel
- issue resolution procedures
- collaboration
- employee representatives
<table>

</tr>
</thead>
</table>
| 1. Plan and prepare for the operation and maintenance of site services and infrastructure systems and equipment | 1.1. Access, interpret and apply compliance documentation relevant to applying and monitoring site services and infrastructure systems  
1.2. Plan and prepare for the operation and maintenance of site services and infrastructure systems and equipment  
1.3. Identify, hazards associated with the installation and operational requirements of site services and infrastructure equipment and evaluate risks and apply controls  
1.4. Access and interpret site procedures  
1.5. Identify individual training needs |
| 2. Apply and monitor systems for the operation and maintenance of site services and infrastructure systems and equipment | 2.1. Assess the impacts of equipment and systems on work processes and record and report processes to meet equipment and site requirements  
2.2. Apply and monitor operational and maintenance programs and procedures in accordance with site requirements  
2.3. Apply and monitor procedures for reviewing and modifying work processes  
2.4. Apply and monitor site procedures throughout the work and report, where appropriate, in accordance with site requirements  
2.5. Participate in systems audit and review requirements in accordance with site and legislative requirements  
2.6. Apply and monitor emergency response and evacuation plans and procedures in accordance with site requirements |
| 3. Apply systems maintenance procedures | 3.1. Schedule and carry out inspections, repair and maintenance activities in accordance with site requirements  
3.2. Record, report and monitor maintenance requirements and activities in accordance with site requirements |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to apply and monitor site services and infrastructure systems:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply:
  - legislative and site requirements and procedures
  - technical information
  - records and reports/briefings and handover details
  - manufacturer's instructions
- apply hazard and risk management procedures
- apply operations, services, fixed plant and infrastructure systems and equipment management procedures
- apply work planning and coordination procedures
- apply procedures to identify training needs
- apply systems maintenance and modification procedures

Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to apply and monitor site services and infrastructure systems:

- legislative, Australian standards and site procedures for site services and infrastructure
- emergency response and evacuation planning processes and techniques
- audit review process and techniques
- isolation and safe control of energy sources including electrical, hydraulic, pneumatic, diesel
- safety design features of site services and infrastructure systems
- computer based systems
- training systems
- fire prevention and fire fighting systems
- safety design features for maintenance of site services and infrastructure systems
- maintenance and modification systems
- stores systems
- roadway maintenance and drilling
- protection systems
• reticulation systems
• specifications for site services and infrastructure
• identifying and clearly communicating key issues
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

RIIRAI402A Apply and monitor site plant and resource management plan

Modification History
Not applicable.

Unit Descriptor
This unit covers applying and monitoring the site plant and resource management plan in resources and infrastructure industries. It includes: planning, preparing for and initiating management plan activities; and monitoring, adjusting and reporting on the execution of the plan.

Application of the Unit
This unit is appropriate for those working in supervisory or technical specialist roles, within:
- Civil construction
- Coal mining
- Extractive industries

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>

</tr>
</thead>
</table>
| **1. Plan, prepare for and initiate management plan activities** | 1.1. Access, interpret and apply *compliance documentation* relevant to *site plant and resource management plan* activities  
1.2. Access and share with team members the *geological, hydrological and survey data* required to complete the management plan activities  
1.3. Prepare an action plan, in consultation with involved people, which makes best use of the available resource and takes into account the requirements of the management plan and other relevant requirements and procedures  
1.4. Acquire and make available the necessary *resources* for the safe, effective and efficient conduct of management plan activities  
1.5. Issue clear and timely *instructions* to people involved for the safe, effective and efficient conduct in the management plan activities in accordance with relevant requirements and procedures |
| **2. Monitor, adjust and report on execution of the plan** | 2.1. Ensure safe, effective and efficient execution of management plan activities in accordance with relevant requirements and procedures  
2.2. Monitor management plan performance to ensure achievement of planned outcomes  
2.3. Initiate adjustments to work programs to take into account non achievement of planned outcomes  
2.4. Complete and submit reports as required by the management plan and other relevant requirements and procedures  
2.5. Recommend changes to improve the safety, efficiency and effectiveness of the management plan |
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to apply and monitor the site plant and resource management plan:

- apply legislative, organisation and site requirements and procedures
- provide team leadership
- apply procedures for the selection of operational techniques
- apply procedures for the selection and assignment of plant and equipment
- apply work plan development and administration procedures

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to apply and monitor the site plant and resource management plan:

- site risk, statutory compliance, health, safety, environmental, quality and communication requirements and procedures
- site plant and resource management plan
- team leadership techniques
- operational techniques required for execution of the plan
- plant and equipment capabilities
- work planning techniques
- work monitoring methods
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</table>
environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial evidence of the candidate's:
  - working with others to plan, prepare and apply site plant and resource management plans
  - provision of clear and timely instruction and supervision by the individual of those involved in the application of site plant and resource management plans

### Guidance information for assessment

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to implement mine transport systems and production equipment:

- apply legislative, organisation and site requirements and procedures
- provide information/briefings and handover details
- apply hazard identification and risks assessment processes
- apply transport systems and production equipment management procedures
- apply work planning and coordination procedures
- apply training needs identification procedures
- interpret and apply manufacturer’s instructions
- apply maintenance and modification surveys and audits

Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to implement mine transport systems and production equipment:

- legislative and site requirements and instructions including transport rules, no-go zones for mobile equipment, maintenance schemes, SOPs training, statutory testing on diesel vehicles, battery charging, underground fuel depots, conveyor belts
- site operation procedures
- assessment of geological structures
- site plans
- site design relating to production and transport systems and equipment
- production and transport systems and equipment management requirements
- site environmental monitoring requirements
- risk management procedures
- production and transport systems and equipment statutory inspection requirements
- site transport systems design and functionality
- site reporting procedures
- emergency response and evacuation planning processes and techniques
- maintenance and modification systems
- audit review processes and techniques
- site document control requirements
- production and transport equipment and systems; the types, uses, characteristics and limitations appropriate for safe operation at the site including braking systems
- energy sources including electrical, hydraulic, pneumatic, diesel
- safety design features of production and transport systems including traffic control devices
- safe operating procedures relating to production and transport equipment
- stores systems
- specification design criteria including access, noise, dust, lighting, ergonomics, remote control, physical clearance, confined space, visibility, seating vibration and machine equipment and personal protection
- development, administration and review of procedures that apply to the system
- raining plan
- standard operating procedures relating to production and transport equipment
- safety design features for maintenance of production and transport equipment
- use of computer based systems for production and transport systems
- fire fighting systems and precaution rules
Evidence Guide

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

#### Relevant compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and Workplace Relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

#### System may comprise:
- policy, standards, procedures and tools/protocols

#### Transport systems include capacities for personnel, equipment/materials and may be:
- wheeled transport including:
  - rubber-tyred man transport
  - multipurpose vehicles
  - load haul dump
  - forklifts
  - front end loader
  - skid steer loader
  - grader
- rail transport may include:
  - locomotives (electric/diesel)
  - rail mounted personnel carriers
  - rolling stock
- tracked vehicles may be fixed or mobile and may include:
  - shearer carrier
  - personnel carriers
  - chock recovery vehicles (mules)
  - site dozer
- shaft and drift winding systems may include product, personnel and material including:
  - head gear
  - cages and skips
- winding apparatus
- communications
- control system discharge
- loading facilities
- counter balances
- conveyor system including:
  - conveyor belts
  - drive heads
  - tail ends transfer points
  - surge bins
  - inter seam bins
  - fabricated bins
  - chain conveyors
- product slurry pumping including:
  - batching stations
  - dewatering systems
  - water reticulation pumping stations

**Production equipment** (manual or remote control) may include:

- shearer
- armoured faced conveyor
- pantech
- hydraulic roof supports
- stage loader
- face drill rigs
- shuttle cars
- ram cars
- ratio/breaker feeders
- breaker line support
- roof bolters (mobile and hand held)
- rib bolters
- road header
- continuous miners
- in-seam miners
- high wall miners
- auger miners
- loaders
- shotfiring
- hydraulic mining

**Specifications** may include, but not be limited to:

- performance requirements
- costs
- dimensions
| **Site requirements** are also known as: | • Standard Operating Procedures (SOP)  
• safe working procedures  
• safe operating procedures  
• standard working procedures |
| **Hazard is defined as:** | • a source of potential harm or a situation with a potential to cause loss |
| **Risk is defined as:** | • the chance of something happening that will have an impact upon objectives. It is measured in terms of consequences and likelihood |
| **Audit is defined as:** | • a systematic examination against defined criteria to determine whether activities and related results conform to planned arrangement, and whether these arrangements are implemented effectively and are suitable to achieve the organisation's policy and objectives |
| **Maintenance may be divided into:** | • predictive  
• preventative  
• breakdown |

Unit Descriptor
This unit covers implementing site plant and resource management plans in resources and infrastructure industries. It includes: preparing for, developing, initiating, monitoring and adjusting the management plan.

Application of the Unit
This unit is appropriate for those working in management or technical specialist roles, within:

- Civil construction
- Coal mining
- Extractive industries

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. |
| Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| **1. Prepare for development of the management plan** | 1.1. Access, interpret and apply *compliance documentation* relevant to the implementation of the *site plant and resource management plan*  
1.2. Assess the required production/work targets, and other outcomes required in the site or mine plan  
1.3. Obtain, review and interpret the site *geological, hydrological and survey data* relevant to the operation of the site and the implementation of the management plan  
1.4. Identify and document the site plant and *resources* that are to be covered by the management plan |
| **2. Develop the management plan** | 2.1. Involve *internal and external stakeholders* in the planning process in a way that uses their contribution effectively and gains their support for the outcomes  
2.2. Develop and document the management plan in accordance with the relevant requirements and procedures  
2.3. Set targets and other requirements for the site plant  
2.4. Identify and acquire the resources required for the implementation of the management plan  
2.5. Identify work tasks within the management plan  
2.6. Identify and arrange any training required for personnel involved in the application of the management plan  
2.7. Prepare and present the management budget in accordance with requirements |
| **3. Initiate, monitor and adjust the implementation of the management plan** | 3.1. Assign responsibilities and issue and explain the management plan to team members and others involved, for the safe, effective and efficient implementation of the plan  
3.2. Provide timely ongoing support and advice to those applying the management plan  
3.3. Ensure records and reports are maintained |
and issued in accordance with the management plan requirements and other relevant *legislative and organisational requirements*

3.4. *Monitor* the management plan performance against the organisation and site's requirements and the budget; resolve anomalies in consultation with relevant stakeholders and issue appropriate instructions for adjustments to the plan and/or its implementation
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to implement site plant and resource management plans:

- apply legislative, organisation and site requirements and procedures
- provide team leadership
- apply procedures for the selection of administrative and operational techniques
- apply work plan development, initiation and administration requirements and procedures
- interpret and apply operational and maintenance data

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to implement site plant and resource management plans:

- site risk, statutory compliance, health, safety, environmental, quality and communication requirements and procedures
- organisation plant and resource management policy, objectives and procedures (where they exist)
- mine plant and resource management options and procedures
- administrative and operational techniques required for execution of the plan
- work planning techniques
- team leadership techniques
- consultative and coaching techniques
- work monitoring methods
- recording and reporting systems
- training systems
Evidence Guide

required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate’s required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate’s:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of options that best meet the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial and documentary evidence of the candidate’s:
  - working with others to undertake and complete the implementing of site plant and resource management plans
| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. | • provision of clear and timely required support and advice on the implementing of site plant and resource management plans |
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

<table>
<thead>
<tr>
<th>May include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>legislative, organisation and site requirements and procedures</td>
</tr>
<tr>
<td>manufacturer's guidelines and specifications</td>
</tr>
<tr>
<td>Australian standards</td>
</tr>
<tr>
<td>code of practice</td>
</tr>
<tr>
<td>Employment and workplace relations legislation</td>
</tr>
<tr>
<td>Equal Employment Opportunity and Disability Discrimination legislation</td>
</tr>
</tbody>
</table>

### Site plant and resource management plan may cover:

<table>
<thead>
<tr>
<th>May cover:</th>
</tr>
</thead>
<tbody>
<tr>
<td>risk management requirements</td>
</tr>
<tr>
<td>occupational health and safety requirements</td>
</tr>
<tr>
<td>security requirements</td>
</tr>
<tr>

</tr>
</tbody>
</table>
Survey data may include:

- site and neighbouring land form
- site and neighbouring boundaries and structures
- site and neighbouring roads and other infrastructure
- approved limits of extraction
- title details

Resources may include:

- budgets
- skilled labour
- materials
- services
- fuel, power
- plant and equipment

Internal and external stakeholders may include:

- organisation
- customers
- site and offsite employees
- contractors
- equipment suppliers
- geologists, surveyors and/or draughtspersons
- regulatory authorities representatives
- community representatives
- site neighbours

Unit Sector(s)
Resources and Infrastructure

Competency field
Refer to Unit Sector(s).

Co-requisite units

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to implement site services and infrastructure systems:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply:
  - technical information
  - briefings and handover details
  - site/legislative requirements
  - records and reports
- apply hazard identification and risk management processes
- apply work planning and coordination requirements and procedures
- apply training needs analysis procedures
- interpret and apply manufacturer instructions
- apply maintenance and modification systems implementation requirements and procedures

### Required knowledge

Specific knowledge is required to achieve the performance criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following as required to implement site services and infrastructure systems:

- legislative, Australian standards and site specific requirements
- emergency response and disaster planning processes and techniques
- audit review process and techniques
- site procedures
- site design relating to site services and infrastructure systems
- energy sources, including electrical, hydraulic, compressed air, diesel
- safety design features of site services and infrastructure systems
- computer based systems
- training programs
- fire fighting systems and precaution rules
- safety design features for maintenance of site services and infrastructure systems
- maintenance and modification systems
- stores systems
- roadway maintenance and drilling
- protection systems
- reticulation systems
- specifications for site services and infrastructure
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Site requirements
- site plans
- electrical rules
- gas drainage
- compressed air
- electrical/mechanical equipment
- inspection requirement
- environmental management
- explosion barriers
- communication
- emergency procedures
- risk management
- recording and reporting
- sites rescue
- OHS
- manufacturer instructions
- standard work procedures
- training
- fire fighting
- handling and storage of dangerous goods
- local government
- power authorities

### Site procedures
- standard operating procedures (SOP)
- safe working procedures
- safe operating procedures
- standard working procedures

### Site procedures
- transport systems
- conveyor systems
- systems of mining
- ventilation system
- gas management
- site water management
- site communication systems
Hazard is defined as:
- a source of potential harm or a situation with a potential to cause loss

Risk is defined as:
- the chance of something happening that will have an impact upon objectives
- it is measured in terms of consequences and likelihood

Manufacturer's specifications may include:
- performance requirements
- costs
- dimensions
- capacity
- occupational health and safety requirements
- training requirements
- key selection criteria

Audit is defined as:
- a systematic examination against defined criteria to determine whether activities and related results conform to planned arrangement, and whether these arrangements are implemented effectively and are suitable to achieve the organisation's policy and objectives

Reporting and recording systems include site requirements and consist of:
- phones
- radios
- computer systems
- verbal and written

Emergency response systems may include:
- refuge chambers and changeover stations
- designated escape ways
- places of safety
- alarm systems
- guidance systems
- emergency communication systems
- escape apparatus and systems
- sites rescue capability
- first response stations
- quick fill stations

# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to select and install surface plant and equipment:

- apply legislative, organisation and site requirements and procedures
- apply procedures for the drafting and interpretation of specifications/interpret tender documents
- apply procedures for the drafting and interpretation of contract management documents
- apply and manage purchasing procedures
- apply capital expenditure applications preparation requirements and procedures
- apply contract management requirements and procedures
- apply procedures for the assessing of operating capacity
- apply procedures for the assessing of the compatibility of items of plant and equipment
- apply procedures for determining ownership cost
- apply procedures for determining operating cost targets
- apply procedures for determining product support requirements
- apply procedures for identifying market considerations
- apply procedures for identifying operational considerations

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to select and install surface plant and equipment:

- risk management
- statutory compliance requirements
- development approval, mining licences (or equivalent)
- OHS requirements
- environmental management requirements
- quality requirements
- purchasing requirements and procedures
- capital expenditure requirements and procedures
- contract management requirements and procedures
- administration requirements (including records and reports)
- plant and equipment characteristics
- specification requirements
- contract requirements
- operating cost record and analysis procedures
- product support requirements
- market information
- operational requirements
- approved suppliers
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to implement the surface mine mechanical plant management plan:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply:
  - technical information
  - site/legislative requirements
  - records and reports
  - briefings and handover details
- apply hazard identification and risk management requirements and procedures
- apply work planning and coordinating requirements and procedures
- apply training needs analysis processes
- interpret and apply manufacturer instructions
- apply effective communication techniques
- apply and monitor data from monitoring systems and equipment

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to implement the surface mine mechanical plant management plan:

- legislative and statutory requirements for mechanical plant and equipment
- the emergency response and disaster processes and techniques
- audit review processes and techniques
- mechanical engineering standards
- safety critical function of mechanical equipment
- mine operating procedures for mechanical plant and equipment
- options to control hazards and risks relating to mine mechanical plant and equipment, including fire protection and prevention, lifting and towing systems, storage of hazardous substances and the interrelationship between people and mechanical equipment
- energy sources, including protection and reticulation systems for electrical, hydraulic, compressed air, diesel
- mine fires; the types, sources of ignition and possible impacts on plant and equipment
- a basic knowledge of computer based systems relating to the monitoring, and
operation of mine mechanical plant and equipment
- fire fighting systems
- specification for mine plant and equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the implementation of surface mine mechanical plant management plans</td>
</tr>
<tr>
<td></td>
<td>• implementation of procedures and techniques for the safe, effective and efficient implementation of surface mine mechanical plant management plans</td>
</tr>
<tr>
<td></td>
<td>• the identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• the identification of viable options and the selection of options that best meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• working with others to undertake and complete the implementation of surface mine mechanical plant management plans</td>
</tr>
<tr>
<td></td>
<td>• consistent successful implementation of surface mine mechanical plant management plans</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those
<table>

</table>

- provision of clear and timely required support and advice on the implementation of surface mine mechanical plant management plans
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisation and site requirements and procedures  
• manufacturer’s guidelines and specifications  
• Australian standards  
• code of practice  
• Employment and workplace relations legislation  
• Equal Employment Opportunity and Disability Discrimination legislation |
| --- | --- |

### Mine mechanical plant management plan establishes the procedures for maintaining a safe environment and may include:

- hazard identification and quantification
- risk assessment
- authority and responsibility
- controls established to manage identified risks
- reporting and communication
- document control
- audit and review

**and may include procedures for:**

- control of hazardous environments
- fire protection and prevention
- control of noise, dust and other emissions initiated from or created by mechanical equipment
- mine plan
- working at heights
- lifting and towing systems
- hazards associated with transport equipment and other plant
- inter relationship between people and mechanical equipment
- control of hazards for energy dissipation and isolation
- control of hazardous substances
- interaction and/or failure of transport and production equipment
- training and education
### Training applies to:
- mine workers
- tradespeople
- permanent employees
- contractors
- mine officials
- other special requirements

### Mechanical plant management system
Establishes procedures for maintaining safe equipment, including:
- hazard identification and quantification
- risk management
- consultation
- authority and responsibility
- controls established to manage identified risks
- reporting and communication
- document control
- audit and review

### Hazard is defined as:
- a source of potential harm or a situation with a potential to cause loss

### Hazardous environment may include:
- coal storage bins
- reclaim tunnels
- confined spaces
- gases
- restricted work area
- flammable environments are those related to heat sources, fuel sources and ignition sources, e.g. engine wiring, hydraulics in engine bays

### Hazards and risk control procedures identified in the mine mechanical plant management plan may include:
- explosion initiate from mechanical equipment
- fire initiate and/or supported by mechanical equipment
- hazardous substances used for mechanical equipment
- toxic substances generated by mechanical equipment
- the release of uncontrolled kinetic energy (unplanned movements) on mechanical equipment
- the interaction and/or failure of transport and production equipment
- the use and storage of high pressure fluids
- moving and rotating parts on mechanical equipment
- fluid injection incidents
- dangerous goods, e.g. LPG, flammable liquids
| **Hazards associated with transport equipment and other plant** may include: | • tyre and rim failure  
• interaction between light and heavy vehicles  
• overhead power lines  
• restricted vision  
• equipment working around draglines |
|---|---|
| **Interrelationship with mechanical equipment in the surface environment** may include: | • access systems  
• guarding  
• remote and/or automatic control  
• restricted working areas  
• safe standings/operating zones  
• ergonomics and vibrations  
• vision  
• manual handling  
• working at heights  
• emergency egress systems |
| **Audit** is defined as: | • a systematic examination against defined criteria to determine whether activities and related results conform to planned arrangement, and whether these arrangements are implemented effectively and are suitable to achieve the organisation policy and objectives |
| **Maintenance** is to restore or keep at the level at which it was originally designed, by: | • inspecting and testing plant and equipment  
• monitoring plant and equipment  
• servicing equipment  
• repairing equipment  
• overhauling equipment |

**Unit Sector(s)**
Resources and Infrastructure

Not applicable.
RIIRAI506A Implement, monitor, rectify and report on inventory control system

Modification History
Not applicable.

Unit Descriptor
This unit covers the requirements to implement, monitor, rectify and report on inventory control system in the resources and infrastructure industries. It includes: implementing, monitoring, rectifying and reporting on inventory control system.

Application of the Unit
This unit is appropriate for those working in a management role or as a technical specialist, managing or advising on inventory control systems within:

- Civil construction
- Coal mining
- Drilling
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>
</thead>
</table>

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Implement inventory control system | 1.1. Access, interpret and apply *compliance documentation* relevant to implementing, monitoring, rectifying and reporting on inventory control systems  
1.2. Identify *resources*, both human and technical, required to support implementation, and put in place  
1.3. Implement *record keeping procedures*  
1.4. Implement *processes for controlling stock*  
1.5. Implement reporting processes  
1.6. Communicate system to stakeholders |
| 2. Monitor inventory control system | 2.1. Establish procedures for monitoring inventory control system  
2.2. Audit inventory control system according to *organisational* specifications  
2.3. Implement discrepancy reporting procedures  
2.4. Supervise production of inventory system reports  
2.5. Analyse inventory reports  
2.6. Identify major trends  
2.7. Identify and document areas requiring adjustment and notify relevant personnel |
| 3. Rectify inventory control system | 3.1. Develop procedures for adjusting procedures and performance  
3.2. Undertake modifications to inventory control system according to organisational procedures  
3.3. Test modifications and make further modifications where necessary  
3.4. Record and report modifications to relevant personnel |
| 4. Report on inventory control system | 4.1. Document results of inventory control in accordance with organisational specifications  
4.2. Inform relevant parties of the results of inventory control according to organisation’s guidelines |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to implement, monitor, rectify and report on inventory control system:

- apply legislative, organisation and site requirements and procedures
- apply procedures for identifying and interpreting trends from inventory records
- read, interpret and apply inventory information
- apply diagnostic techniques
- apply inventory system relationship to manufacturing process
- apply inventory system recording and reporting requirements and procedures
- apply records maintenance requirements
- apply oral and written communication techniques
- apply safe working practices
- apply standard operating procedures

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to implement, monitor, rectify and report on inventory control system:

- site and equipment safety requirements
- monitoring of documentation
- auditing procedures
- software characteristics, technical capabilities and limitations
- reporting systems
- archiving
- record keeping procedures
- sources of stock / inventory information
- continuous improvement processes
- work roles
### Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Critical aspects for assessment and evidence required to demonstrate competency in this unit</td>
</tr>
</tbody>
</table>

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions to implement, monitor, rectify and report on inventory control system
- implementation of procedures and techniques to safely, effectively and efficiently implement, monitor, rectify and report on inventory control system
- the identification of the relevant information and scope of the work required to meet the required outcomes
- the identification of viable options and the selection of pit plans that best meet the required outcomes
- working with others to implement, monitor, rectify and report on inventory control system
- consistently and successfully implement, monitor, rectify and report on inventory control system

<table>
<thead>
<tr>
<th>Context of and specific resources for assessment</th>
</tr>
</thead>
</table>

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those
required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate’s required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate’s:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of options that best meet the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial and documentary evidence of the candidate’s:
  - working with others to implement, monitor, rectify and report on inventory control system
| Guidance information for assessment | Consult the SkillsDMC User Guide for further information on assessment including access and equity issues. |

• provision of clear and timely required support and advice on the application of inventory control systems
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation | • legislative, organisation and site requirements and procedures  
| may include: | • manufacturer’s guidelines and specifications  
| | • Australian standards  
| | • code of practice

| 3.5. Report on non-compliances revealed by audit |
# Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

## Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to implement the mechanical plant management plan in underground coal mine:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply:
  - technical information
  - site / legislative requirements
  - records and reports
  - briefings and handover details
- apply hazard identification and risks management procedures
- apply plant and equipment management requirements and procedures
- apply work planning and coordination procedures
- apply training needs analysis
- interpret and apply manufacturer instructions
- apply effective communication techniques
- apply and monitor data from monitoring systems and equipment

## Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to implement the mechanical plant management plan in underground coal mine:

- legislative and statutory requirements for mechanical plant and equipment
- the emergency response and disaster processes and techniques
- audit review processes and techniques
- mechanical engineering standards
- safety critical function of mechanical equipment
- mine operating procedures for mechanical plant and equipment
- explosion protection techniques
- hazards associated with diesel engines
- options to control hazards and risks relating to mine mechanical plant and equipment, including fire protection and prevention, lifting and towing systems, storage of
- hazardous substances and the interrelationship between people and mechanical equipment
- energy sources, including protection and reticulation systems for electrical,
hydraulic, compressed air, diesel
• mine fires; the types, sources of ignition and possible impacts on plant and equipment
• a basic knowledge of computer based systems relating to the monitoring, and operation of mine mechanical plant and equipment
• fire fighting systems
• specification for mine plant and equipment

Training applies to:

- mine workers
- tradespeople
- permanent employees
- contractors
- mine officials
- other special requirements

Mine mechanical plant management plan establishes the procedures for maintaining a safe environment and may include:

- hazard identification and quantification
- risk assessment
- authority and responsibility
- controls established to manage identified risks
- reporting and communication
- document control
- audit and review

And may include procedures for:

- explosion protection of mechanical equipment
- control of flammable environments
- fire protection and prevention
- control of hazardous substances initiated from or created by mechanical equipment mine plan
- disruption to the mine ventilation system,
- lifting and towing systems
- inter relationship between people and mechanical equipment
<table>
<thead>
<tr>
<th><strong>Hazard</strong> is defined as:</th>
<th>• a source of potential harm or a situation with a potential to cause loss</th>
</tr>
</thead>
</table>
| **Hazards and risk control** measures identified in the underground mine mechanical plant management plan may include: | • explosion protection of mechanical equipment  
• fire initiate and/or supported by mechanical equipment  
• hazardous substances used for mechanical equipment  
• toxic substances generated by mechanical equipment  
• the release of uncontrolled kinetic energy (unplanned movements) on mechanical equipment  
• the interaction and/or failure of transport and production equipment  
• the use and storage of high pressure fluids  
• moving and rotating parts on mechanical equipment  
• fluid injection incidents  
• dangerous goods, e.g. LPG, flammable liquids |
| **Hazardous environment** may include but is not limited to: | • coal storage bins  
• reclaim tunnels  
• confined spaces  
• gases  
• restricted work area  
• flammable environments are those related to heat sources, fuel sources and ignition sources for e.g. engine wiring, hydraulics in engine bays |
| **Interrelationship with mechanical equipment** in the underground environment may include: | • access systems  
• guarding  
• remote and/or automatic control  
• restricted working areas  
• safe standings/operating zones  
• ergonomics and vibrations |

| **Safe work procedure** may include: | • cutting and welding in coal mines  
• energy isolation and dissipation  
• confined spaces |
• vision
• manual handling
• working at heights
• emergency egress systems

Hazards associated with transport equipment and other plant may include:
• tyre and rim failure
• interaction between light and heavy vehicles
• overhead power lines
• restricted vision
• equipment working around draglines

Mechanical plant management system establishes procedures for maintaining safe equipment, including:
• hazard identification and quantification
• risk management
• consultation
• authority and responsibility
• controls established to manage identified risks
• reporting and communication
• document control
• audit and review

Audit is defined as:
• a systematic examination against defined criteria to determine whether activities and related results conform to planned arrangement, and whether these arrangements are implemented effectively and are suitable to achieve the organisation's policy and objectives

Maintenance is to restore or keep at the level to which it was originally designed, by:
• inspection and testing of plant and equipment
• monitoring of plant and equipment
• servicing of equipment
• repairing of equipment
• overhauling of equipment

RIIRAI508A Implement mine services systems

Modification History
Not applicable.

Unit Descriptor
This unit covers the implementing of mine services systems in the coal mining industry. It includes: planning and preparing for implementation of mine services systems and equipment; implementing installation and commissioning procedures; implementing systems for the operation and maintenance of mine services systems and equipment; and implementing systems for audit, review of mine services systems and equipment.

Application of the Unit
This unit is appropriate for those working in a management role or as a technical specialist, managing or advising on mine services systems within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>
</tr>
</thead>
</table>

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare for implementation of mine services systems and equipment | 1.1. Access, interpret and apply *compliance documentation* relevant to the implementing of mine services systems  
1.2. Identify the purpose of *mine services systems* and equipment in accordance with the system of mining  
1.3. Identify and record *site requirements* for the implementation of mine services systems and equipment  
1.4. Identify and implement *safety systems*  
1.5. Access and interpret the *specification* for the required mine services equipment  
1.6. Identify, clarify and communicate roles and responsibilities  
1.7. Implement the program to satisfy identified mine services training requirements  
1.8. Access and interpret standard operating procedures |
| 2. Implement installation and commissioning procedures | 2.1. Identify *hazards* associated with the installation of mine services equipment and systems, and evaluate and respond to *risks*, in accordance with established procedures  
2.2. Integrate new and existing work systems and processes to achieve optimum performance  
2.3. Implement standard operating procedures  
2.4. Implement mine services equipment installation and commissioning procedures  
2.5. Install equipment at the worksite in accordance with manufacturer instructions and site procedures  
2.6. Commission equipment and systems in accordance with the manufacturer specifications and site procedures  
2.7. Modify equipment and systems to satisfy required changes arising from the commission process  
2.8. Implement *emergency response* and evacuation plans and procedures in accordance with site requirements  
2.9. Implement *protection systems* in |
### 3. Implement systems for the operation and maintenance of mine services systems and equipment

| 3.1. Implement operational procedures for mine services systems and equipment according to site requirements |
| 3.2. Implement maintenance procedures for mine services systems and equipment according to manufacturer and site requirements |
| 3.3. Implement and apply procedures for reviewing and modifying work processes |

### 4. Implement systems for audit, review of mine services systems and equipment

| 4.1. Audit mine services system standards for compliance with legislative and site requirements |
| 4.2. Audit mine services and equipment maintenance standards for currency and compliance with legislative and site requirements |
| 4.3. Audit mine services and equipment for compliance with legislative and site requirements |
| 4.4. Audit *reporting and recording systems* for compliance with legislative and site requirements |
| 4.5. Audit emergency response and evacuation plans and procedures for compliance with site requirements |
| 4.6. Audit the training program for currency, relevance and compliance with site requirements |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to implement mine services systems:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply:
  - technical information
  - site/legislative requirements
  - records and reports
  - briefings and handover details
- apply hazard identification and risk management processes
- apply work planning and coordination requirements and procedures
- apply training needs analysis
- interpret and apply manufacturer instructions
- apply maintenance survey procedures

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to implement mine services systems:

- legislative Australian standards and site-specific requirements
- emergency response and disaster planning processes and techniques
- audit review process and techniques
- open cut mine operating procedures
- mine design relating to mine services systems
- power sources, including electrical, hydraulic, compressed air, diesel
- safety design features of mine services systems
- computer based systems
- training programs
- fire fighting systems and precaution rules
- safety design features for maintenance of mine services systems
- maintenance surveys
- stores systems
- training systems
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• knowledge of the requirements, procedures and instructions to implement mine services systems</td>
<td>• implementation of procedures and techniques for the safe, effective and efficient implementation of mine services systems</td>
</tr>
<tr>
<td>• the identification of the relevant information and scope of the work required to meet the required outcomes</td>
<td>• the identification of viable options and the selection of options that best meet the required outcomes</td>
</tr>
<tr>
<td>• working with others to undertake and complete the implementation of mine services systems</td>
<td>• consistent successful implementation of mine services systems</td>
</tr>
</tbody>
</table>

## Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery
environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required

<table>
<thead>
<tr>
<th>Method of assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:</td>
</tr>
<tr>
<td>- written and/or oral assessment of the candidate's required knowledge</td>
</tr>
<tr>
<td>- observed, documented and/or first hand testimonial evidence of the candidate's:</td>
</tr>
<tr>
<td>- implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes</td>
</tr>
<tr>
<td>- identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td>- identification of viable options and the selection of options that best meet the required outcomes</td>
</tr>
<tr>
<td>- consistently achieving the required outcomes</td>
</tr>
<tr>
<td>- first hand testimonial and documentary evidence of the candidate's:</td>
</tr>
<tr>
<td>- working with others to implement mine services systems</td>
</tr>
<tr>
<td>- provision of clear and timely required support and advice on the application of mine services systems</td>
</tr>
<tr>
<td>Guidance information for assessment</td>
</tr>
</tbody>
</table>
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

| May include: | legislative, organisation and site requirements and procedures |
|             | manufacturer's guidelines and specifications |
|             | Australian standards |
|             | code of practice |
|             | Employment and workplace relations legislation |
|             | Equal Employment Opportunity and Disability Discrimination legislation |

### Mine services systems may include:

- design
- development
- establishment
- installation
- operations
- protection
- maintenance
- monitoring
- recording
- reporting process
- communication systems, including:
  - oral
  - phones
  - radios
  - electronic
  - microwave
  - telemetry

### Site requirements may include:

- mine plan
- electrical rules
- electrical/mechanical equipment
- communications
- emergency procedures
- risk management
- recording and reporting
- mines rescue
- OHS
- manufacturer’s instructions
- standard work procedures
- training
- fire fighting
- handling and storage of dangerous goods
- local government
- local power authority

| Safety systems may include: | • legislation (legal requirements)  
|                           | • location  
|                           | • site layout  
|                           | • purpose  
|                           | • environmental control (spontaneous combustion, gas, noise, water, heat, dust)  
|                           | • protection systems (guarding, fire protection and suppression, electricity, lightning arresters, ventilation in explosives magazines and earthing) |

| Specifications may include: | • performance requirements  
|                            | • costs  
|                            | • dimensions  
|                            | • capacity  
|                            | • safety and health requirements  
|                            | • training requirements  
|                            | • key selection criteria |

| Standard operating procedures (SOP) are also known as: | • safe working procedures, safe operating procedures and standard working procedures |

| Hazard is defined as: | • a source of potential harm or a situation with a potential to cause loss (definition from AS/NZS 4360:1999 Risk Management) |

| Mine services may include: | • power (air, gas, electricity, water, diesel, low energy source)  
|                           | • water, wastewater  
|                           | • fire fighting  
|                           | • gas drainage  
|                           | • fuel  
|                           | • waste disposal  
|                           | • condition monitoring  
|                           | • dust suppression and refrigeration  
|                           | • safety services, including:  
<p>|                           | • risk assessment process |</p>
<table>
<thead>
<tr>
<th>Risk is defined as:</th>
<th>the chance of something happening that will have an impact upon objectives. It is measured in terms of consequences and likelihood.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Specifications may include:</td>
<td>performance requirements, costs, dimensions, capacity, OHS requirements, training requirements, key selection criteria.</td>
</tr>
<tr>
<td>Emergency response systems may include:</td>
<td>refuge chamber, designated escape ways, evacuation procedures, alarm systems, guidance systems, emergency communication systems, self-aided escape apparatus, mines rescue capability.</td>
</tr>
<tr>
<td>Protection systems may include:</td>
<td>explosion barriers, electrical protection, compressed air protection, hydraulic protection, environment protection, falling and rollover protection, mechanical protection, frictional ignition protection, guarding, personal protection.</td>
</tr>
<tr>
<td>Audit is defined as:</td>
<td>&quot;A systematic examination against defined criteria to determine whether activities and related results conform to planned arrangement, and whether these arrangements are implemented effectively and are suitable to achieve the organisation policy and objectives.&quot; (AS/NZS 4804: 2001)</td>
</tr>
<tr>
<td>Reporting and recording systems include site requirements</td>
<td>phones, radios, computer systems.</td>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to implement mine fixed plant and infrastructure systems:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply:
  - technical information
  - site/legislative requirements
  - records and reports
  - briefings and handover details
- apply hazard identification and risk management processes
- apply work planning and coordination procedures
- apply training needs analysis
- interpret and apply manufacturers’ instructions
- apply maintenance survey procedures

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to implement mine fixed plant and infrastructure systems:

- legislative, statutory, Australian standards and site-specific requirements for plant and infrastructure, including:
  - mine plan
  - electrical rules
  - electrical/mechanical equipment
  - communications
  - emergency procedures
  - risk management
  - recording and reporting
  - mines rescue
  - OHS
  - Manufacturer's instructions
  - standard work procedures
  - training
  - fire fighting
• handling and storage of dangerous goods
• local government requirement
• local power authority
• open cut mine operations systems and procedures
• stores systems
• protection systems
• reticulation systems
• specifications for fixed plant and infrastructure
• audit processes
• mine design principles and procedures relating to fixed plant and infrastructure
• power sources, including electrical, hydraulic, pneumatic and diesel
• computer based systems
• training programs
• fire fighting systems and precaution rules
• safety design features for maintenance of fixed plant and infrastructure
• maintenance surveys
• training systems
• emergency response and evacuation planning processes and techniques
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions to implement mine fixed plant and infrastructure systems
- implementation of procedures and techniques for the safe, effective and efficient implementation of mine fixed plant and infrastructure systems
- the identification of the relevant information and scope of the work required to meet the required outcomes
- the identification of viable options and the selection of options that best meet the required outcomes
- working with others to implement mine fixed plant and infrastructure systems
- consistent successful implementing of mine fixed plant and infrastructure systems

#### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required to meet the required outcomes
  - identification of viable options and the selection of options that best meet the required outcomes
  - consistently achieving the required outcomes
  - first hand testimonial and documentary evidence of the candidate's:
    - working with others to implement mine fixed plant and infrastructure systems
    - provision of clear and timely required support and advice on the applying the

RIIRAI510A Implement, monitor, rectify and report on interfaces between electrical and mechanical componentry

Modification History
Not applicable.

Unit Descriptor
This unit covers implement, monitor, rectify and report on interfaces between electrical and mechanical componentry in the coal mining industry. It includes: determining the requirements; planning rectification work; and rectifying the electrical and mechanical interface componentry.

Application of the Unit
This unit is appropriate for those working in a management role or as a technical specialist, within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Determine requirements of electrical and mechanical interface | 1.1. Access, interpret and apply compliance documentation relevant to implement, monitor, rectify and report on the interfaces between electrical and mechanical componentry  
1.2. Examine components defect reports  
1.3. Inspect components according to site, legislative and manufacturer procedures  
1.4. Prepare reports detailing the equipment modifications requirements |
| 2. Plan rectification work on electrical and mechanical interface componentry | 2.1. Use available information from maintenance and test results to ensure accurate problem identification  
2.2. Identify componentry faults and causes  
2.3. Report fault rectification requirements  
2.4. Obtain specialist advice / assistance where required  
2.5. Isolate/tag componentry for rectification work |
| 3. Rectify electrical and mechanical interface componentry | 3.1. Dismantle componentry parts in accordance with manufacturer requirements and safe working procedures  
3.2. Assess componentry parts for serviceability  
3.3. Undertake modifications according to manufacturer specifications/specialist advice  
3.4. Replace componentry parts according to manufacturer specifications/safe working procedures  
3.5. Test componentry for safe working with proscribed specifications  
3.6. Record repaired / modified componentry details  
3.7. Notify appropriate personnel of repairs / modifications |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to implement, monitor, rectify and report on interfaces between electrical and mechanical componentry:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply:
  - technical information
  - site / legislative requirements
  - records and reports
  - briefings and handover details
- apply the principles of mine design
- assess the risks and consequences attached to mechanical systems
- apply work planning and coordinating procedures
- apply procedures for managing confined spaces
- apply training needs analysis
- interpret and apply manufacturers’ instructions
- apply maintenance survey procedures
- liaise with other parties
- coordinate others
- use information management
- apply problem solving techniques
- apply analysis techniques
- use measuring equipment
- apply report writing techniques
- facilitate meetings
- apply operational and safety requirements
- read, interpret and apply technical instrument information
- apply diagnostic techniques
- apply environmental constraints in rectification operations
- apply equipment records maintenance requirements
- apply procedures for the disposal of environmentally sensitive fluids and materials

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to implement, monitor, rectify and report on interfaces between electrical and mechanical componentry:
• legislative, statutory, Australian standards and site specific requirements for maintenance of mechanical systems, including communications, emergency procedures, risk management, recording and reporting, mines rescue, OHS, manufacturer instructions, standard work procedures, training, fire fighting, handling and storage of dangerous goods, local government and power authority requirements
• mine operating systems and procedures, including transport systems, conveyor systems, systems of mining, ventilation systems, gas management systems and mine water management systems
• stores systems
• underground roadway and drilling
• protection systems
• reticulation systems
• specification for mechanical systems
• audit procedures
• mine design principles and procedures relating to mechanical systems
• company organisation
• computer based systems
• training programs
• safety design features for maintenance of mechanical systems
• maintenance surveys
• work role definitions
• reporting methods and alternatives
• community expectations
• consultative strategies
• alternative documentation systems for procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

RIIRA1510A Implement, monitor, rectify and report on interfaces between electrical and mechanical componentry

Date this document was generated: 26 July 2014

- working with others to implement, monitor, rectify and report on the interfaces between electrical and mechanical componentry
- provision of clear and timely required support and advice on the implementing, monitoring, rectifying and reporting on the interfaces between electrical and mechanical componentry

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

---

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant compliance documentation**

- legislative, organisation and site requirements and procedures
- manufacturer’s guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

**Electrical componentry** may include componentry in:

- power systems
- electrical protection systems
- mine cabling
- remote control systems
- communication systems

**Mechanical componentry** may include:

- hydraulic components
- air system components
- rope system components
- transmission systems components
Unit Sector(s)
Resources and Infrastructure

Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIRAI601A Establish and maintain the site infrastructure and fixed plant systems

Modification History
Not applicable.

Unit Descriptor
This unit covers establishing and maintaining the site infrastructure and fixed plant systems in the mining and extractive industries. It includes establishing and confirming the site’s operational strategy; developing and testing the detailed site infrastructure and plant proposals; and obtaining and recording site infrastructure and plant system approvals.

Application of the Unit
This unit is appropriate for those working in management or technical specialist roles, within:

- Coal mining
- Extractive industries
- Metalliferous mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>

### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Establish or confirm the site's operational strategy | 1.1. Access, interpret and apply *compliance documentation* relevant to establishing and maintaining the site infrastructure and fixed plant systems  
1.2. Complete and/or confirm feasibility analysis  
1.3. Obtain and/or confirm *statutory/legal approvals*  
1.4. Carry out *title searches*  
1.5. Prepare detailed plans, budgets, financial models, in accordance with the feasibility analysis for fixed plant and *infrastructure* requirements of the site  
1.6. Prepare requirements for *fixed plant* and infrastructure within the general site *development* proposal and submit to the organisation, board or executive for endorsement  
1.7. Collect, analyse and organise strategic resource planning information in preparation for decision making  
1.8. Estimate impacts on the organisation business plans, and the financial benefit from fixed plant or infrastructure changes  
1.9. Assess hazards associated with the planned option and develop plans to manage identify risks |
| 2. Develop and test the detailed site infrastructure proposal | 2.1. Access, identify and interpret the legislative, statutory and likely site requirements related to infrastructure  
2.2. Identify the requirements for and purpose of infrastructure items in accordance with site design and system of mining  
2.3. Develop *specifications* for infrastructure items from a comprehensive analysis of site requirements  
2.4. Identify infrastructure options from an analysis of all relevant technical, operational and financial information  
2.5. Select preferred infrastructure options on the basis of projected performance against |
| 3. Develop and test the detailed site plant proposal | 3.1. Access, identify and interpret the **legislative, statutory and site requirements** related to required fixed plant  
3.2. Identify the requirements for and purpose of fixed plant in accordance with site design and system of mining  
3.3. Identify supporting **mobile plant** requirements  
3.4. Develop specifications for plant from a comprehensive analysis of site requirements  
3.5. Identify plant options from an analysis of all relevant technical, operational and financial information  
3.6. Select preferred plant options on the basis of projected performance against specification requirements  
3.7. Assess by visit and confirm potential sites for fixed plant, entered on the site plan |
| 4. Obtain and record site infrastructure and plant system approvals | 4.1. Prepare detailed proposals for the site infrastructure components, layout, specifications and costs  
4.2. Prepare detailed proposals for the site plant items, specifications, the locations of fixed plant and costs  
4.3. Prepare detailed proposals for supporting plant items and costs  
4.4. Obtain formal approvals for the proposed site infrastructure and plant systems in accordance with enterprise policies  
4.5. Vary the site infrastructure and plant systems records to reflect any approval conditions and finalised in preparation for implementation |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to establish and maintain site infrastructure and fixed plant systems:

- apply procedures for the development and review of business plans
- apply resource plan development requirements and procedures
- apply project budget preparation requirements and procedures
- apply title search procedures
- apply statutory and legal approval application procedures
- apply project management strategies
- apply techniques to implement change
- access and use appropriate technologies
- apply procedures for the preparation and presentation of management reports
- apply negotiation techniques with internal/external customers, community and statutory/legal authorities
- apply conflict resolution techniques
- access, interpret and apply:
  - technical information
  - site/legislative requirements
  - records and reports
  - briefings and handover details
- apply the principles of site design
- apply hazard identification and risk management processes
- apply work planning and coordination processes
- apply training needs analysis
- interpret and apply manufacturer's instructions
- apply maintenance survey procedures

**Required knowledge**

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to establish and maintain site infrastructure and fixed plant systems:

- business planning
- computer applications
- financial models
- site design
- mining operations, plant and equipment
- negotiation techniques
- organisational change and development
- organisational objectives
- planning and strategic management
- project management
- resource quantification
- risk management
- statutory/legal control
- surveying
- titles management
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
</table>
| Critical aspects for assessment and evidence required to demonstrate competency in this unit | - knowledge of the requirements, procedures and instructions for establishing and maintaining site infrastructure and fixed plant systems  
- implementation of procedures and techniques for the safe, effective and efficient completion of the establishing and maintenance of site infrastructure and fixed plant systems  
- the identification of the relevant information and scope of the work required to meet the required outcomes  
- the identification of viable program options and the selection of programs that best meet the required outcomes  
- working with others to undertake and complete the establishing and maintenance of site infrastructure and fixed plant systems  
- timely completion of establishing and maintenance of site infrastructure and fixed plant systems |

| Context of and specific resources for assessment | - This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.  
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those |
required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required

Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required
  - identification of viable options and the selection of option that best meet the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial and documentary evidence of the candidate's:
  - working with others to undertake and complete the establishing and maintenance of site infrastructure and fixed plant systems
<table>
<thead>

<tr>
<td>---------</td>
<td>----------------------</td>
</tr>
</tbody>
</table>
| 1. Design/selection specifications for the system | 1.1. Access, interpret and apply compliance documentation relevant to establishing and maintaining mine mechanical plant, services and infrastructure systems.  
1.2. Establish design/selection specifications for the mine mechanical plant, services and infrastructure systems from a comprehensive analysis of operating requirements.  
1.3. Identify design/selection options from an analysis of all relevant technical, operational and financial information, interface with existing plant where appropriate, including hazard identification and risk analysis.  
1.4. Select the preferred plant, equipment and services options on the basis of performance against specification requirements. |
| 2. Establish installation, testing and commissioning systems and procedures | 2.1. Assess the hazards, analyse and evaluate risks associated with the installation of plant, equipment and services in accordance with site procedures.  
2.2. Establish procedures for installing, testing and commissioning plant, equipment and services.  
2.3. Plan and prepare for integration of new and existing systems and procedures to achieve optimum performance.  
2.4. Identify resources required for the implementation of mine mechanical plant, services and infrastructure systems.  
2.5. Determine training needs. |
| 3. Establish operational parameters and maintenance requirements for plant, equipment or services | 3.1. Incorporate the operational parameters and operational/maintenance risk assessment for plant, equipment and services into site documentation in accordance with site and legislative requirements.  
3.2. Establish maintenance plan for plant, equipment and services from site and legislative requirements and incorporate. |
| 4. Install, commission and test mine mechanical plant, services and infrastructure systems | 4.1. Conduct a risk assessment for the installation, commissioning and testing of mechanical plant, services and infrastructure systems  
4.2. Install mechanical plant, services and infrastructure systems  
4.3. Commission and test equipment compliance in accordance with design specifications and site requirements  
4.4. Respond to non-compliance or other discrepancies/deficiencies revealed by commissioning and testing |
|---|---|
| 5. Implement mine mechanical plant, services and infrastructure | 5.1. Identify and interpret the legislative and site requirements related to the implementation of mine mechanical plant, services and infrastructure systems  
5.2. Forecast, obtain and allocate/schedule resources required for the implementation of mine mechanical plant, services and infrastructure systems  
5.3. Identify, clarify and communicate to all personnel roles and responsibilities, related to the implementation of mine mechanical plant, services and infrastructure systems  
5.4. Implement mine mechanical plant, services and infrastructure systems training program  
5.5. Consult with relevant stakeholders and implement changes to mine mechanical plant, services and infrastructure systems and implementation procedures |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to establish and maintain mine mechanical plant, services and infrastructure systems:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply:
  - technical information
  - site / legislative requirements
  - records and reports
  - briefings and handover details
- apply the principles of mine design
- apply hazard identification and risk management processes
- apply work planning and coordination procedures
- apply training needs analysis
- interpret and apply manufacturers’ instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to establish and maintain mine mechanical plant, services and infrastructure systems:

- legislative and site-specific requirements for mine plant, services and infrastructure
- emergency response and disaster planning processes and techniques
- audit review process and techniques
- mine operating procedures for mine plant, services and infrastructure
- mine design relating to mine plant, services and infrastructure
- energy sources, including protection and reticulation systems for electrical, hydraulic, compressed air, diesel
- safety design features of mine services and infrastructure
- a basic knowledge of computer based systems related to the monitoring and operation of mine plant, services and infrastructure
- training programs
- fire fighting systems
- safety design features for maintenance of mine plant, services and infrastructure
- stores systems
- specifications for fixed plant and infrastructure
RIIRA1602A Establish and maintain mine mechanical plant, services and infrastructure systems

Date this document was generated: 26 July 2014
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example,
| Language, literacy and numeracy demands of assessment should not be greater than those required on the job. |
| Customisation of assessment and delivery environment to sensitively accommodate cultural diversity. |
| Aboriginal people and other people from a non English speaking background may have second language issues. |
| Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances. |
| Where applicable, physical resources should include equipment modified for people with disabilities. |
| Access must be provided to appropriate learning and/or assessment support when required. |

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required
  - identification of viable options and the selection of options that best meet the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial and documentary evidence of the candidate's:
  - working with others to establish and maintain mine mechanical plant, services

**Infrastructure** refers to fixed plant and equipment which may include:

- fabrication and construction areas
- servicing areas
- re-fuelling points
- workshops and equipment
- equipment storage areas
- bathrooms
- water treatment plant
- buildings and structures e.g. bins, silos, crushers, feeders
- storage facilities
- coal preparation plant
- cranes
- sewerage treatment plant
- emergency facilities (equipment)
- testing equipment
- stockpile and coal load out.
- conveyor systems
- pipelines
- compressors
- haulage winches
- process treatment plant
- air conditioning
- pumps and stations
- ventilation fans
- winders
- battery charging stations
- generators
- gas plant

**Site documentation and training** policy may include:

- legislative requirements
- management plans and procedures

**Hazard** is defined as:

- a source of potential harm or a situation with a potential to cause

**Risk** is defined as:

- the chance of something happening that will have an impact upon objectives. It is measured in terms of consequences and likelihood

**Maintenance** is to restore or keep:

- inspecting and testing plant and equipment

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Develop production and transport systems | 1.1. Access, interpret and apply **compliance documentation** relevant to establishing and maintaining mine **transport systems** and **production equipment**  
1.2. Identify the requirements for and purpose of production and transport systems in accordance with the system of mining  
1.3. Identify systems options from an analysis of all relevant technical, operational and financial information  
1.4. Establish **specification** for the production and transport system from a comprehensive analysis of operating requirements  
1.5. Select the preferred systems options on the basis of performance against specification requirements |
| 2. Select equipment for production and transport systems | 2.1. Identify the requirements for and purpose of production and transport equipment against systems requirements  
2.2. Conduct a detailed scoping of the operational requirement and develop key selection criteria, including **hazard** identification and **risk** analysis  
2.3. Establish specification for the required production and/or transport equipment  
2.4. Select the preferred equipment solutions on the basis of performance against specification requirements |
| 3. Establish installation and commissioning systems and procedures | 3.1. Establish systems to identify hazards and analyse and evaluate risks associated with the installation of production and transport systems and equipment  
3.2. Plan and prepare for integration of new and existing mine production and transport systems and processes  
3.3. Establish procedures for installing and commissioning production and transport systems and equipment  
3.4. Establish systems and procedures, to satisfy identified production and transport systems training requirements |

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to establish and maintain mine transport systems and production equipment:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply:
  - technical information
  - briefings and handover details
- apply the principles of mine design
- apply hazard identification and risk management processes
- apply work planning and coordination procedures
- apply training needs analysis
- interpret and apply manufacturers' instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to establish and maintain mine transport systems and production equipment:

- legislative requirements and instructions, including transport rules, maintenance schemes, standard operating procedures, training, testing on diesel vehicles, battery charging, underground fuel depots, conveyor belts
- mine operation procedures
- geological structures
- mine plans
- mine design relating to production and transport systems and equipment
- production and transport systems and equipment management requirements
- site environmental monitoring requirements
- risk management procedures
- production and transport systems and equipment legislative inspection requirements
- mine reporting procedures
- emergency response and evacuation planning processes and techniques
- audit review processes and techniques
- production and transport equipment and systems; the types, uses, characteristics and limitations appropriate for safe operation at the mine site
- energy sources including electrical, hydraulic, pneumatic, diesel
- safety design features of production and transport systems
- standard operating procedures relating to production and transport equipment
- stores system
- specification design criteria, including noise, dust, lighting, ergonomics, remote control, physical clearance, confined space, visibility, seating vibration and machine equipment and personal protection
- training programs
- a basic knowledge of computer based systems relating to production and transport systems
- fire fighting systems
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<p>| Method of assessment |
|This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods: |
|• written and/or oral assessment of the candidate's required knowledge |
|• observed, documented and/or first hand testimonial evidence of the candidate's: |
|• implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes |
|• identification of the relevant information and scope of the work required |
|• identification of viable options and the selection of options that best meet the required outcomes |
|• consistently achieving the required outcomes |
|• first hand testimonial and documentary evidence of the candidate's: |
|• working with others to establish and maintain mine transport systems and production equipment |</p>
<table>

</tr>
<tr>
<td>• provision of clear, timely required support and advice on the implementation of mine transport systems and production equipment</td>
<td></td>
</tr>
</tbody>
</table>
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

Transport systems include capacities for personnel, equipment / materials and product and may be:
- wheeled, which may include:
  - rubber tyred man transport
  - multipurpose vehicles
  - load haul dump
  - forklifts
  - front end loader
  - skid steer loader and grader
- railed, which may include:
  - locomotives (electric / diesel)
  - rail mounted personnel carriers
  - rolling stock
  - drift haulage systems
- tracked, which may be fixed or mobile and may include:
  - shearer carriers
  - personnel carriers
  - chock recovery vehicles (mules)
  - mine dozer
  - skidded
- conveyor systems, which may include:
  - conveyor belts
  - drive heads
  - tail ends transfer points
  - surge bins
- inter seam bins
- fabricated bins
- product slurry pumping systems, which may include:
  - batching stations
  - dewatering systems
  - watering reticulation pumping stations
- shaft/drift winding systems, which may include product, personnel and material and may comprise:
  - head gear
  - cages and skips
  - winding apparatus and communications
  - control system
  - discharge and loading facilities
  - counter balances

**Production equipment** may include:
- shearer
- armoured face conveyor
- pantech
- chocks
- stage loader
- face drill rigs
- shuttle cars
- ram cars
- ratio feeders
- breaker line support
- roof bolters (mobile and hand held)
- rib bolters
- road header
- continuous miners
- in-seam miners
- high wall miners
- auger miners
- loaders
- shotfiring
- hydraulic mining

**Specifications** may include, but are not limited to:
- performance requirement
- costs
- dimensions
- capacity
- OHS requirements
<table>
<thead>
<tr>
<th><strong>Hazard</strong> is defined as:</th>
<th>• a source of potential harm or a situation with a potential to cause loss</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Risk</strong> is defined as:</td>
<td>• the chance of something happening that will have an impact upon objectives. It is measured in terms of consequences and likelihood</td>
</tr>
<tr>
<td><strong>Standard operating procedures</strong> (SOP) are:</td>
<td>• also known as safe working procedures, safe operating procedures and standard working procedures</td>
</tr>
</tbody>
</table>
| **Maintenance** may be divided into: | • predictive  
  • preventive  
  • breakdown |
| **Audit** is defined as: | • a systematic examination against defined criteria to determine whether activities and related results conform to planned arrangement, and whether these arrangements are implemented effectively and are suitable to achieve the organisation's policy and objectives |

**Unit Sector(s)**

Resources and Infrastructure

**Competency field**

Refer to Unit Sector(s).

**Co-requisite units**

Not applicable.
RIIRAI604A Establish and maintain mine services and infrastructure systems

Modification History
Not applicable.

Unit Descriptor
This unit covers establishing and maintaining mine services and infrastructure systems in underground coal mines. It includes: designing mine services and infrastructure systems; selecting plant, equipment or services; establishing installation and commissioning systems and procedures; establishing management systems for the operation and maintenance of plant, equipment or services; planning and preparing for the implementation of mine services and infrastructure; and establishing management systems to audit and review mine services and infrastructure systems.

Application of the Unit
This unit is appropriate for those working in a management role or as a technical specialist, within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

<table>

6.5. Establish procedures for incorporating feedback into the audit/review system  
6.6. Establish procedures for response to instances of non-compliance or other discrepancies/deficiencies revealed by audit |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to establish and maintain mine services and infrastructure systems:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply:
  - technical information
  - site / legislative requirements
  - records and reports
  - briefings and handover details
- apply the principles of mine design
- apply hazard identification and risk management processes
- apply work planning and coordination procedures
- apply training needs analysis
- interpret and apply manufacturers' instructions

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to establish and maintain mine services and infrastructure systems:

- legislative and site-specific requirements for mine services and infrastructure
- emergency response and disaster planning processes and techniques
- audit review process and techniques
- mine operating procedures for mine services and infrastructure
- mine design relating to mine services and infrastructure
- energy sources including protection and reticulation systems for electrical, hydraulic, compressed air, diesel
- safety design features of mine services and infrastructure
- a basic knowledge of computer based systems related to the monitoring and operation of mine services and infrastructure
- training programs
- fire fighting systems
- safety design features for maintenance of mine services and infrastructure
- stores systems
- specifications for fixed plant and infrastructure
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisation and site requirements and procedures |
|                                             | manufacturer's guidelines and specifications |
|                                             | Australian standards |
|                                             | code of practice |
|                                             | Employment and workplace relations legislation |
|                                             | Equal Employment Opportunity and Disability Discrimination legislation |

| Mine services may include, but not be limited to: | water |
|                                                  | wastewater |
|                                                  | compressed air |
|                                                  | fire fighting |
|                                                  | gas drainage |
|                                                  | fuel |
|                                                  | electrical reticulation |
|                                                  | waste disposal |
|                                                  | condition monitoring |
|                                                  | communication |
|                                                  | stone dust handling systems |
|                                                  | mine refrigeration systems |
|                                                  | sewerage handling systems |

| Infrastructure refers to fixed plant and equipment which may include: | fabrication and construction areas |
|                                                                      | servicing areas |
|                                                                      | re-fuelling points |
|                                                                      | workshops |
|                                                                      | dams |
|                                                                      | explosives magazines |
|                                                                      | training facility |
|                                                                      | bathrooms |
|                                                                      | HV switch rooms |
|                                                                      | lamp cabin |
|                                                                      | laboratory |
|                                                                      | storehouses |
- equipment storage areas
- on site residential housing
- site access (road, rail, air)
- battery rooms
- water treatment plant
- sewerage treatment plant
- offices
- emergency facilities (First Aid, fire)
- coal preparation plant
- stockpile and coal load out
- lathes
- presses

## Competency Field

### Resources and Infrastructure

### Unit Sector(s)

Refer to Unit Sector(s).

### Co-requisite units

Not applicable.
RIIRAI605A Establish and maintain an underground mine mechanical plant management system

Modification History
Not applicable.

Unit Descriptor
This unit covers C mechanical plant management systems in underground coal mines. It includes: identifying, analysing and evaluating hazards and risks associated with the use of mechanical equipment in an underground coal mine; identifying, analysing and evaluating hazards and risk control options and measures; establishing the mine mechanical plant management system; implementing the mechanical plant management system; and auditing and reviewing the system.

Application of the Unit
This unit is appropriate for those working in a management role or as a technical specialist, within:

- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

**Elements and Performance Criteria**

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify, analyse and evaluate hazards and risks associated with the use of mechanical equipment in an underground coal mine | 1.1. Access, interpret and apply **compliance documentation** relevant to establishing and maintaining underground mine **mechanical plant management systems**  
1.2. Identify, evaluate and clarify mine conditions which contribute to explosive atmospheres  
1.3. Identify, evaluate and clarify conditions which contribute to **flammable environments**  
1.4. Identify, evaluate and clarify **hazards** caused by disruption to the mine ventilation system  
1.5. Identify, analyse and evaluate hazards and **risks** relating to mechanical plant |
| 2. Identify, analyse and evaluate hazards and risk control options and measures | 2.1. Identify, analyse and evaluate explosion protection control techniques for mechanical equipment  
2.2. Identify, analyse and evaluate fire protection and prevention methods and systems on mechanical equipment  
2.3. Identify, analyse and evaluate methods and systems to control engine pollutants from mechanical equipment  
2.4. Identify, analyse and evaluate methods and systems to control hazardous substances initiated from or used by mechanical equipment  
2.5. Develop systems to maintain the integrity of safety critical functions of mechanical equipment  
2.6. Develop systems to control hazards for **energy** dissipation and isolation systems on mechanical equipment  
2.7. Develop systems to control hazards in lifting and towing systems for mechanical equipment  
2.8. Develop systems to protect people in their **interrelationship with mechanical equipment** in the underground environment  
2.9. Develop systems to prevent failure of |

<td>Evaluate the uses of mine monitoring and information systems to control hazards and risks on mechanical equipment</td>
</tr>
</tbody>
</table>

3. **Establish the mine mechanical plant management system**

<p>| 3.1. | Access, interpret and clarify the legislative and site requirements related to mechanical plant and equipment |
| 3.2. | Establish mechanical plant objectives, systems, descriptions and responsibilities and incorporate into the mechanical plant management system |
| 3.3. | Consult with relevant stakeholders in the development of the mechanical plant management system |
| 3.4. | Design mechanical plant management systems to satisfy the <em>operational systems and conditions</em> of the mine |
| 3.5. | Incorporate maintenance and inspections systems to ensure the equipment is safe to operate |
| 3.6. | Incorporate systems to monitor and test the performance of safety critical functions on mechanical plant and equipment |
| 3.7. | Incorporate systems to control noise, dust, other emissions and other hazardous substances |
| 3.8. | Incorporate systems to develop <em>safe work procedures</em> |
| 3.9. | Incorporate systems for the management of mechanical contractors |
| 3.10. | Develop and establish mechanical <em>engineering standards</em> |
| 3.11. | Develop and establish mechanical equipment information recording and reporting procedures, including defect reporting and rectification |
| 3.12. | Establish a program, including systems and procedures, to satisfy mechanical equipment <em>training</em> requirements |
| 3.13. | Incorporate audit and review requirements and update procedures into the mine mechanical plant management |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>
| 4. Implement the mechanical plant management system | 4.1. Identify, forecast, obtain and allocate/schedule resources required for the implementation of the mechanical plant management system  
4.2. Communicate to all personnel, including contractors, roles and responsibilities, as specified in the mechanical plant management system  
4.3. Implement the mechanical plant training program  
4.4. Consult with relevant stakeholders and implement changes to mechanical plant management system |
| 5. Audit and review the mechanical plant management system | 5.1. **Audit** mine mechanical engineering standards for compliance with statutory and mine site requirements  
5.2. Audit mine mechanical equipment monitoring systems operations for compliance with statutory and mine site requirements  
5.3. Audit the maintenance program and procedures for compliance with the Mechanical Plant Management System and statutory requirements  
5.4. Audit recording and reporting systems for compliance with the Mechanical Plant Management System  
5.5. Audit mechanical plant management training program for currency, relevance and compliance with the requirements of the Mechanical Plant Management System  
5.6. Establish procedures for non-compliances revealed by audit and modify the management plan where appropriate  
5.7. Review the Mechanical Plant Management System |
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to establish and maintain an underground mine mechanical plant management system:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply:
  - technical information
  - site / legislative requirements
  - records and reports
  - briefings and handover details
- apply the principles of mine design
- apply hazard identification and risk management processes
- apply work planning and coordination procedures
- apply training needs analysis
- interpret and apply manufacturer instructions
- apply effective communication techniques
- access, evaluate and apply data from monitoring systems and equipment

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to establish and maintain an underground mine mechanical plant management system:

- legislative and statutory requirements for mechanical plant and equipment
- the emergency response and disaster planning processes and techniques
- audit review processes and techniques
- mechanical engineering standards
- safety critical function of mechanical equipment
- mine operating procedures for mechanical plant and equipment
- mine design relating to mechanical plant and equipment
- options to prevent failure of winding and personnel transport equipment
- options to control hazards and risks relating to mine mechanical plant and equipment, including explosion protection, fire protection and prevention, lifting and towing systems, hazardous substances and the interrelationship between people and mechanical equipment
- energy sources, including protection and reticulation systems for electrical, hydraulic, compressed air, diesel
- mine fires; the types, sources of ignition and possible impacts on plant and equipment
- a basic knowledge of computer based systems relating to the monitoring, and operation of mine mechanical plant and equipment
- fire fighting systems
- specification for mine plant and equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</tbody>
</table>

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required
  - identification of viable options and the selection of options that best meet the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial and documentary evidence of the candidate's:
  - working with others to establish and maintain an underground mine mechanical plant
| Guidance information for assessment | Consulate the SkillsDMC User Guide for further information on assessment including access and equity issues. |

- consistent and timely gaining of approval of an underground mine mechanical plant management system
- provision of clear, timely required support and advice on the implementation of an underground mine mechanical plant management system
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

<table>
<thead>
<tr>
<th>May include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>legislative, organisation and site requirements and procedures</td>
</tr>
<tr>
<td>manufacturer’s guidelines and specifications</td>
</tr>
<tr>
<td>Australian standards</td>
</tr>
<tr>
<td>code of practice</td>
</tr>
<tr>
<td>Employment and workplace relations legislation</td>
</tr>
<tr>
<td>Equal Employment Opportunity and Disability Discrimination legislation</td>
</tr>
</tbody>
</table>

### Mechanical plant management system

Establishes procedures for maintaining safe equipment including:

- hazard identification and quantification
- risk management
- consultation
- authority and responsibility
- controls established to manage identified risks
- reporting and communication
- document control
- audit and review

### Flammable environment

May include but is not limited to:

- coal storage bins
- reclaim tunnels
- confined spaces
- gases
- dust
- restricted work area
- flammable environments, i.e. those related to heat sources, fuel sources and ignition sources

### Hazard

Is defined as:

- a source of potential harm or a situation with a potential to cause loss

### Risk

Is defined as:

- the chance of something happening that will have an impact upon objectives. It is measured in terms of consequences and likelihood

### Hazards and risks

To be identified, analysed and clarified in the MPMS include:

- explosion initiated from mechanical equipment
- fire initiated and/or supported by mechanical equipment
### Interrelationship with mechanical equipment in the underground environment may include:

- access systems
- guarding
- remote and/or automatic control
- restricted working areas
- safe standings/operating zones
- ergonomics and vibrations
- vision
- manual handling
- working at heights
- emergency egress systems

### Hazards associated with transport equipment and other plant may include:

- tyre and rim failure
- interaction between vehicles
- restricted vision and clearance
- power reticulation

### Operational systems and conditions may include but are not limited to:

- methods of mining (e.g. longwall, place change, bord and pillar)
- weather
- grades
- water
- drilling and explosives
- road and rail design
- dredging and pumping
- electrical reticulation
- productivity
- environmental considerations
- coal preparation and handling
- methane drainage

- hazardous substances used for mechanical equipment
- toxic substances generated by mechanical equipment
- the release of uncontrolled kinetic energy (unplanned movements) on mechanical equipment
- the interaction and/or failure of transport and production equipment
- the use and storage of high pressure fluids
- moving and rotating parts on mechanical equipment
- fluid injection incidents
- dangerous goods e.g. LPG, flammable liquids
- strata failure
| Safe work procedure will include, but is not limited to: | • cutting and welding in underground coal mines  
• energy isolation and dissipation  
• confined spaces |
|---|---|
| Engineering standards may include but are not limited to: | • mechanical plant maintenance procedures  
• system for the modification and rectification of mechanical equipment  
• systems for erection of plant |
| Training applies to: | • mine workers  
• tradespeople  
• permanent employees  
• contractors  
• mine officials  
• other special requirements |
| Audit is defined as: | • a systematic examination against defined criteria to determine whether activities and related results conform to planned arrangement, and whether these arrangements are implemented effectively and are suitable to achieve the organisation's policy and objectives |

**Unit Sector(s)**

Resources and Infrastructure

RIIRAI606A Establish and maintain mine closure management systems

Modification History
Not applicable.

Unit Descriptor
This unit covers establishing and maintaining mine closure management systems in the metalliferous mining industry. It includes: identifying and evaluate the criteria to establish mine closure management systems, the hazards and risks for mine closure, geological and geotechnical information for mine closure, mining engineering principles and practices; establishing the mine closure system; and auditing and reviewing the effectiveness of the mine closure system.

Application of the Unit
This unit is appropriate for those working in a management role or as a technical specialist, within:

- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to establish and maintain mine closure management systems:

- apply legislative, organisation and site requirements and procedures
- read, interpret, apply and communicate technical information, rules, procedures, regulations
- read, interpret and apply legislation
- access, interpret and apply technical information
- access, interpret and apply mine survey information
- access and analyse archival and historical information related to the mine
- develop and maintain risk management procedures and policies
- provide leadership and guidance for group activities
- apply effective communication techniques
- facilitate and document risk control planning
- apply records and document maintenance requirements
- apply procedures for monitoring and determining changes to process
- explain complex information to superiors/subordinates
- provide coaching and mentoring support
- adopt communications styles appropriate to listeners and situations, including selecting an appropriate time and place
- take a leading role in initiating action and making decisions
- listen actively, ask questions, clarify points and rephrase others' statements to check mutual understanding

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to establish and maintain mine closure management systems:

- accessing, evaluating and applying data from organisational systems
- action planning methods
- advanced negotiation skills
- advanced written and oral communication methods
- community safety control responsibilities
- environmental management
- geophysical control systems
• human resource management
• mine operating procedures
• organisational goals and objectives
• rehabilitation requirements and techniques
• reporting and recording procedures
• risk control and management systems
• safety and health rules, policies, procedures and regulations
• statutory and site rules, policies, procedures and regulations
• statutory/legal controls
• work procedure/instruction writing
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of the requirements, procedures and instructions for the establishing and maintenance of mine closure management systems</td>
</tr>
<tr>
<td></td>
<td>• implementation of procedures and techniques for the safe, effective and efficient completion of the establishing and maintenance of mine closure management systems</td>
</tr>
<tr>
<td></td>
<td>• the identification of the relevant information and scope of the work required to meet the required outcomes</td>
</tr>
<tr>
<td></td>
<td>• the identification of viable program options and the selection of programs that best meet the required outcomes</td>

<td>• consistent and timely establishing and maintenance of mine closure management systems</td>
</tr>
</tbody>
</table>

### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those.
required on the job.
- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

### Method of assessment

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required
  - identification of viable options and the selection of options that best meet the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial and documentary evidence of the candidate's:
  - working with others to establish and maintain mine closure management systems
  - consistent and timely gaining of approval of
<table>

<tbody>
<tr>
<td>• provision of clear, timely required support and advice on the implementation of mine closure management systems</td>
</tr>
</tbody>
</table>

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.
## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation may include:
- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Historical information may include:
- caving characteristics
- existence of previous workings within the ore body
- fill characteristics
- hanging wall and footwall technical data
- hydrology
- mass blasts
- over and underlying and adjacent rock formations
- permeability of rocks and faults
- physical property testing results of rock types
- pillar strengths and dimensions
- Radon gas content
- sedimentology aspects of the mine site relating to subsidence
- sulphide dust explosions
- underground fissures and water sources

### Resources may include:
- people
- buildings/facilities
- finance
- equipment
- power/energy
- technology

### Hazard is:
- a source of potential harm or a situation with a potential to cause loss

### Risk
- the chance of something happening that will have an impact upon objectives. It is measured in terms of consequences and likelihood

### Geological and hydrogeological information
- caving characteristics
- direction and competency of faults or inliers
- fill characteristics
- hanging wall and footwall technical data
- induced collapse
- intrusions and deformities
- over and underlying rock type
- permeability of rocks and faults
- physical properties
- subsidence
- sulphide content of ore
- underground fissures and water sources

### Stress
- horizontal and vertical tectonic induced stress
- mining induced stress

### Mining systems
- bord and pillar
- cut and fill
- sub-level mining
- open stoping
- panel stoping
- bench stoping

### Structure
- competency of fill
- competency of ground support
- direction of mining
- influences of stresses and depth
- pillar sizes
- production sequencing
- size of mine opening
- stress regimes and base characteristics
- systems of mining
- underground opening characteristics
- water ingestion
Mine **design** may include in whole or in part:

RIIRAI607A Establish quarry operations

Modification History
Not applicable.

Unit Descriptor
This unit covers establishing quarry operations in the extractive industries. It includes: preparing for the initiation of operations; establishing the human resource requirement for the operation; and establishing the system for physical resource acquisition.

Application of the Unit
This unit is appropriate for those working in a management role or as a technical specialist, within:
- Extractive industries

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for the initiation of operations | 1.1. Access, interpret and apply *compliance documentation* relevant to establishing quarry operations  
1.2. Access, interpret and clarify the approved site development plan in consultation with internal and external *stakeholders*  
1.3. Prepare detailed business and marketing plans/budgets/financial models and contingency plans for the operation |
| 2. Establish the human resource requirement for the operation | 2.1. Access, interpret and clarify requirements and procedures relating to human resource management  
2.2. Establish parameters for employment of site personnel in accordance with site needs  
2.3. Select and appoint site management personnel in accordance with organisation’s requirements and site parameters  
2.4. Identify potential training needs and develop training plan in consultation with site manager  
2.5. Develop and implement position descriptions in consultation with site manager and in accordance with requirements and procedures and the site parameters  
2.6. Establish site personnel selection procedures in consultation with site manager and in accordance with requirements and procedures |
| 3. Establish the system for physical resource acquisition | 3.1. Access, interpret and clarify requirements and procedures relating to the acquisition of physical resources  
3.2. Identify the *physical resources* required for the safe, effective and efficient operation of the site  
3.3. Establish, communicate and ensure the application of parameters for acquisition of physical resources in accordance with site needs and requirements and procedures  
3.4. Facilitate and monitor the acquisition of physical resources required for the safe, |
effective and efficient operation of the site.
## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to establish quarry operations:

- apply legislative, organisation and site requirements and procedures
- apply business plan development requirements and procedures
- apply resource plan development requirements and procedures
- apply project budget preparation requirements and procedures
- apply title search procedures
- interpret survey data
- apply procedures for gaining of statutory/legal approvals
- apply tender specifications preparation requirements and procedures
- apply negotiation techniques and contract finalisation requirements and procedures
- apply procedures for the implementation of project management strategies
- apply procedures for the implementation of change
- access and use appropriate technologies
- apply management report preparation and presentation requirements and procedures
- apply techniques for negotiation with internal/external customers, community and statutory/legal authorities
- apply conflict resolution techniques

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to establish quarry operations:

- quarry design
- market research
- statutory/legal control
- titles management
- organisational objectives
- resource quantification
- project management
- financial models
- fundamentals of contract law
- planning and strategic management
- human resource policies and practices
• industrial awards/enterprise agreements
• business planning
• risk management
• customer/client relations
• organisational change and development
• quarry operations, plant and equipment
• computer applications
• negotiation techniques
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

and advice on the implementation of quarry operations

### Guidance information for assessment
Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Relevant compliance documentation

- legislative, organisation and site requirements and procedures
- manufacturer's guidelines and specifications
- Australian standards
- code of practice
- Employment and workplace relations legislation
- Equal Employment Opportunity and Disability Discrimination legislation

### Stakeholders

- senior management
- operating managers
- project managers
- other employees
- regulatory authority representatives
- tenderers
- contractors
- community
- suppliers
- customers

### Physical resources

- fixed and mobile plan
- equipment
- buildings
- infrastructure
- power/energy

| 1. Determine site development parameters | 1.1. Identify, interpret and clarify relevant compliance documentation and use them in the development and document site development parameters  
1.2. Identify, interpret and clarify relevant marketing information and use it to development and document site development parameters |
| 2. Identify and secure development site | 2.1. Identify sites with the potential of meeting the required parameters for the quarry development  
2.2. Identify and interpret the titles and zoning on potential development sites  
2.3. Obtain permission required for the investigation of potential quarry development sites  
2.4. Organise and manage the investigation of potential development sites  
2.5. Determine the most suitable quarry site based on the outcomes of the investigations and the development parameters and cost of acquisition, development and operation of the site  
2.6. Obtain required organisational approvals and secure the development site |
| 3. Prepare site development plan | 3.1. Involve internal and external stakeholders in the planning process in a way that uses their contribution effectively and gains their support for the outcomes  
3.2. Identify and document the options for the end use of the site  
3.3. Organise and manage community consultation on the proposed site development  
3.4. Organise and manage the design and documentation of the preliminary plan of the pit development based on the geological, hydrological and survey data and relevant legislative and organisation requirements and procedures  
3.5. Organise and manage the design and |
3.6. Organise and manage the design and documentation of the preliminary plan of the processing plant to meet the site development parameters and based on the geological, hydrological and survey data and relevant legislative and organisation requirements and procedures

3.7. Organise and manage the design and documentation of the preliminary site access and infrastructure to meet the site development parameters and based on the geological and survey data and relevant legislative and organisation requirements and procedures

3.8. Organise and manage the assessment and documentation of the environmental impact of the proposed site development

4. Obtain site development consent

| 4.1. Organise and manage the preparation of the development application and the required accompanying documentation |
| 4.2. Identify and provide support required for the site development application |
| 4.3. Communicate the progress and outcomes of the development application to relevant stakeholders |
### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

#### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to establish quarry development:

- apply legislative, organisation and site requirements and procedures
- interpret and apply geological data
- interpret and apply hydrological data
- interpret and apply survey data
- interpret and apply marketing data
- provide team leadership
- apply procedures for the selection of development strategies
- apply procedures for the selection of plant and equipment
- apply development plans development and initiation procedures

#### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to establish quarry development:

- legislative and organisation's risk, statutory compliance, health, safety, environmental, quality and communication requirements and procedures
- geological data
- hydrological data
- survey data
- marketing information
- site development parameters
- site development options and procedures
- consultative and coaching techniques
- team leadership techniques
- operational techniques required for execution of the plan
- plant and equipment capabilities
- work planning techniques
- recording and reporting systems
- work monitoring methods
Evidence Guide

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

### Required skills

Specific skills are required to achieve the performance criteria in this unit, particularly for the application in the various circumstances in which this unit may be applied. This includes the ability to carry out the following as required to establish and maintain the mine electrical installations, reticulation and protection systems:

- apply legislative, organisation and site requirements and procedures
- access, interpret and apply:
  - technical information
  - site/legislative requirements
  - records and reports
- apply the principles of electrical installations, reticulation, control and protection system theory
- apply procedures for the evaluation of designs and installations of electrical installations, reticulation, control and protection systems at a mine in terms of safety requirements
- apply risk management processes for the risks associated with and consequences of failure of electrical installations, reticulation, control and protection systems at a mine
- apply risk management processes for the risks associated with and consequences of changes to electrical installations, reticulation, control and protection systems at a mine
- apply develop procedures, for the management, operation, testing and maintenance of the mines electrical installations, reticulation, control and protection systems
- apply procedures for the planning, coordination and documentation of work on the mines electrical installations, reticulation, control and protection systems
- apply training needs analysis

### Required knowledge

Specific knowledge is required to achieve the Performance Criteria of this unit, particularly its application in a variety of circumstances in which the unit may be used. This includes knowledge of the following, as required to establish and maintain the mine electrical installations, reticulation and protection systems:

- legislative and site requirements, inspections, and reporting procedures
- electrical protection theory, including earthing systems, coordination and fault level calculations, step and touch potential management
- fault discrimination and fault clearance characteristics of equipment
- mining electrical protection systems, including earth continuity monitoring, earth leakage protection, earth fault current limitation and relevant standards
- typical low and high voltage switching and distribution systems on mines
- transient over-voltages, harmonics and lightning theory, hazards and protection schemes
- hazards associated with high energy systems in mining
- mining cables, faults and consequences, cable protection systems, standards and cable repair
- classification of hazardous areas and explosion-protected electrical equipment principles, general requirements, verification, testing and standards
- automatic control system hazards, protection schemes and standards
- electromagnetic interference hazards, protection schemes and standards
- management and control of processes for change to software and hard wired based systems
- electromagnetic interference hazards, protection schemes and standards
- radio remote control systems hazards, protection schemes and standards
- safety protective devices associated with welding machines such as Voltage Reducing Devices
- the principles of electrical installations, reticulation, control and protection system theory
- the risks associated with and consequences of failure of electrical installations, reticulation, control and protection systems at a mine
- the risks associated with and consequences of changes to electrical installations, reticulation, control and protection systems at a mine
### Evidence Guide

disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.

- Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
- Aboriginal people and other people from a non English speaking background may have second language issues.
- Assessment of this competency requires typical resources normally used in a civil works environment. Selection and use of resources for particular worksites may differ due to site circumstances.
- Where applicable, physical resources should include equipment modified for people with disabilities.
- Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate's required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate's:
  - implementation of appropriate procedures and techniques for the safe, effective and efficient achievement of the required outcomes
  - identification of the relevant information and scope of the work required
  - identification of viable options and the selection of options that best meet the required outcomes
  - consistently achieving the required outcomes
- first hand testimonial and documentary evidence of the candidate's:
  - working with others to establish and

| maintain the mine electrical installations, reticulation and protection systems | • consistent and timely gaining of approval of mine electrical installations, reticulation and protection systems
• provision of clear, timely required support and advice on the implementation of mine electrical installations, reticulation and protection systems |
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Relevant compliance documentation may include: | legislative, organisation and site requirements and procedures |
| | manufacturer's guidelines and specifications |
| | Australian standards |
| | code of practice |
| | Employment and workplace relations legislation |
| | Equal Employment Opportunity and Disability Discrimination legislation |

| Mine power supply systems include: | from extra low through to high voltage switching and distribution systems on mines as well as mine earthing systems, UPSs, generators/alternators |

| Electrical protection system for mine sites will include: | over current and earth fault protection systems |
| | earth continuity monitoring systems and devices |
| | earth leakage protection systems and devices |
| | earth fault current limitation systems |
| | frozen contactors (loss of vacuum) systems and devices |

| Electrical protection systems in mines shall include, but not be limited to: | protection against short-circuit |
| | over-current |
| | earth fault |
| | earth leakage |

| Mine cables may include: | feeder |
| | trailing and reeling cables |
| | all other cabling used for power reticulation, control, data and signalling in the mining environment |

| Hazards may include: | electric shock |
| | burns |
| | electric arcing and explosions |
| | electric ignition of flammable gases and dusts |
| | transient over-voltage |
- lightning
- uncontrolled operation of machinery
- loss of communications
- failure of protection systems
- hazardous area electrical equipment for mines, including certified explosion protected electrical equipment for underground and surface mines

### Communications systems

**Communications systems** may include:

- Telephone
- Radio
- PED
- microwave and
- hardwired systems for voice and data communications

### Control systems

**Control systems** are systems that automatically control equipment such as:

- winders
- wash plant
- other related operational production systems / processes
- mobile machinery
- conveyors
- longwall

### Remote control systems

**Remote control systems** include systems used to operate fixed, transportable and mobile mining machinery from a distance. They may be:

- radio controlled
- infra red control
- umbilical control

### Safe electrical work procedures

**Safe electrical work procedures** may include:

- identification and classification of hazardous areas
- restoration and removal of power
- isolation
- electrical testing
- welding
- electric shock protocols
- purging

---

**Unit Sector(s)**

Resources and Infrastructure
Competency field
Refer to Unit Sector(s).

Co-requisite units
Not applicable.
RIIRA610A Establish and maintain mechanical standard and engineering practices for transport and production equipment

Modification History
Not applicable.

Unit Descriptor
This unit covers establishing and maintaining mechanical standard and engineering practices for transport and production equipment in the coal mining industry. It includes: developing the transport and production systems; selecting equipment for the transport and production systems; establishing systems and procedures to install and commission equipment; establishing systems for the operation and maintenance of production and transport systems and equipment; and establishing systems for audit and review of production and transport systems and equipment.

Application of the Unit
This unit is appropriate for those working in a management role or as a technical specialist, within:
- Coal mining

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Elements describe the essential outcomes of a unit of competency.</th>
<th>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</th>

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Develop production and transport systems | 1.1. Access, interpret and apply *compliance documentation* relevant to establishing and maintaining mechanical standard and engineering practices for transport and production equipment  
1.2. Identify the requirements for, and purpose of, production and *transport systems* in accordance with the system of mining  
1.3. Identify systems options from an analysis of all relevant technical, operational and financial information  
1.4. Establish *specification* for the production and transport system from a comprehensive analysis of operating requirements  
1.5. Select the preferred systems options on the basis of performance against specification requirements |
| 2. Select equipment for production and transport systems | 2.1. Identify the mechanical requirements for and purpose of transport and *production equipment* against systems requirements  
2.2. Conduct a detailed scoping of the operational requirement and develop key selection criteria, including *hazard* identification and *risk* analysis  
2.3. Establish specification for the required production and/or transport equipment  
2.4. Select the preferred equipment solutions on the basis of performance against specification requirements |
| 3. Establish systems and procedures to install and commission equipment | 3.1. Establish systems to identify hazards and analyse and evaluate risks associated with the installation of production and transport systems and equipment  
3.2. Plan and prepare for integration of new and existing mine production and transport systems and processes  
3.3. Establish procedures for installing and commissioning production and transport systems and equipment  
3.4. Establish systems and procedures, to satisfy identified production and transport |
