Assessment Requirements for TLIF5024 Develop plans for emergency response and recovery of rail networks

Release: 1

Assessment Requirements for TLIF5024 Develop plans for emergency response and recovery of rail networks

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing and using rail industry standards, rules, codes of practice and guidelines
- applying relevant legislation and workplace procedures when developing plans for emergency response and recovery
- communicating effectively with others, particularly in relation to emergency response procedures and recovery planning
- identifying job hazards and taking required action to minimise, control or eliminate identified hazards
- identifying appropriate emergency response procedures for rail operational
- producing well researched, documented and supported emergency response and recovery policies, procedures and plans
- researching relevant rail network, emergency response procedures and recovery planning information
- reviewing changing regulatory information
- reviewing current emergency response procedures and making recommendations for improvement.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- changes in rail industry operations and technology with implications for degraded operations
- emergency management plan and workplace procedures
- key principles and practices associated with railway operations
- rail industry
- rail industry terminology, including terminology used in rail industry standards
- relevant rail safety, emergency management plan, work health and safety (WHS)/occupational health and safety (OHS) and environmental legislation related to rail operations
- safety management system.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in rail workplace operational situations or, where this is not available, in simulated workplace operational situations that replicate rail workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, rail industry standards, regulations, codes of practice, safety management system and operation manuals.
