Assessment Requirements for TLIX0010X Enable traceability in supply chains

Assessment Requirements for TLIX0010X Enable traceability in supply chains

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- analysing and reporting on traceability data
- collecting and analysing information related to supply chain traceability
- communicating with supply chain stakeholders
- determining legislative obligations including chain of custody and chain of responsibility
- developing and applying traceability data collection and documentation protocols
- developing and implementing policies, procedures and processes to support supply chain traceability
- identifying and remediating product and service data inconsistencies
- identifying high and low traceability risk points in the supply chain
- identifying product and service movements in the supply chain including vulnerabilities
- implementing and reviewing traceability strategy including Key Performance Indicators (KPIs)
- monitoring corrective actions and strategies including product and material recalls
- reviewing and reporting on supply chain traceability strategy
- undertaking risk mitigation for traceability data systems.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- circular economy principles in relation to addressing sustainable practices in supply chains
- communication methods and tools
- corrective actions and strategies including product and material recalls
- data analysis techniques
- high and low risk points in the supply chain
- information and data collection
- legislative obligations including chain of custody and chain of responsibility
- policies and procedures that support traceability

- product and service movements in supply chains including vulnerabilities
- recognition and remediation of product and services data inconsistencies
- remediation of supply chain issues and problems identified through traceability data
- review and report preparation
- risk mitigation
- supply chain stakeholders
- traceability standards
- traceability strategy and processes including Key Performance Indicators (KPIs).

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so. Where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to a range of

- exercises, case studies or other simulations
- materials and tools including supply chain digital equipment used in industry
- documentation including organisational policies and procedures, industry standards, regulations, codes of practice, operational manuals and equipment specifications.
